This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

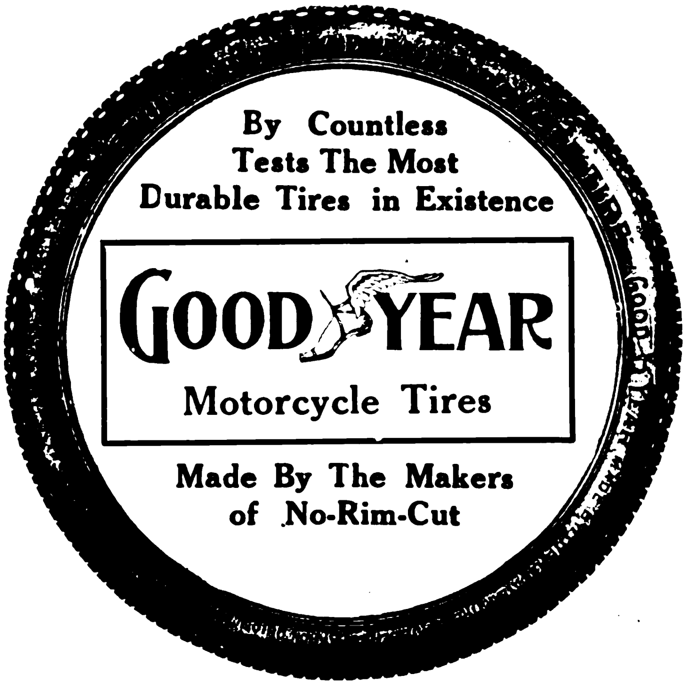
The Leading Motorcycle Tires Thicker Treads—Tougher Fabrics Construction Unusual—Unequalled

Motorcyclists everwhere are enthusiastic over Goodyear Motorcycle Tires.

These tires save time—save trouble—save scads of money hitherto spent either for repairs or for new tires. They outlast all other makes. They render **Goodyear Service.**



Thicker Treads

The puncture is one of the chief causes of motorcycle tire trouble. So to lessen the **danger** of puncture, we build our motorcycle tires with extra thick treads. These treads are thicker than found on most any other motorcycle tire. So Goodyears not only come nearer to being puncture-proof, but they give most mileage.

Materials—Fabrics

The Rubber used in Goodyear Tires is New, Live and Properly compounded. Like all the materials used, this rubber is the very best and highest grade that money can buy.

We also use a **fabric** different from that commonly used. Our fabric possesses unusual tensile strength. Instead of weaving it **closely,** we weave it loosely, in such a manner that later every thread may be thoroughly embedded in rubber. Thus, the threads, separated, can not rub together, cause internal friction and develop weak spots in the tire.

Our Great Endurance Test

Every Motorcycle tire made—including our own—undergoes this test—the severest that we can devise to try out a tire's endurance—the same test given our No-Rim-Cut Tires.

In this test we place our tire on a heavily-weighted endurance machine. We wear it down by countless revolutions on a surface rougher, harder on the tire than the average road.

Then every other tire gets the same test.

Our tire must outlast—outwear all other makes. Failing in this, it is abandoned and we perfect one that **does.**

Thirteen Years' Experience

During these years we have studied the tire problem from every angle. We have spent vast sums of money in sifting down principles, materials, methods, theories. Our aim was the ideal—the tire of perfect service. We focused on the problem the brains and skill of the world's greatest tire experts.

One outcome was Goodyear No-Rim-Cut Auto Tire—a tire which leaped into astonishing popularity with a record of sales that in one year's time—1911—exceeded all others.

Another outcome was the Goodyear Motorcycle tire—offered you today at the price you'd expect to pay for any standard tire.

Let us tell you more about these tires. They hold more world's records than all other tires combined.

BULLETIN

San Francisco, Dec. 22.—Goodyears win all events at Oakland Motordrome. Five-mile amateur, Walker; six-mile pro., Wolters; ten-mile pro., Wolters.

Los Angeles, Dec. 24.—Goodyear Stock and Blue Streak Tires win first, second and third in every race on program.

Goodyear Motorcycle Tires hold all world's Amateur and Professional Speed Records.

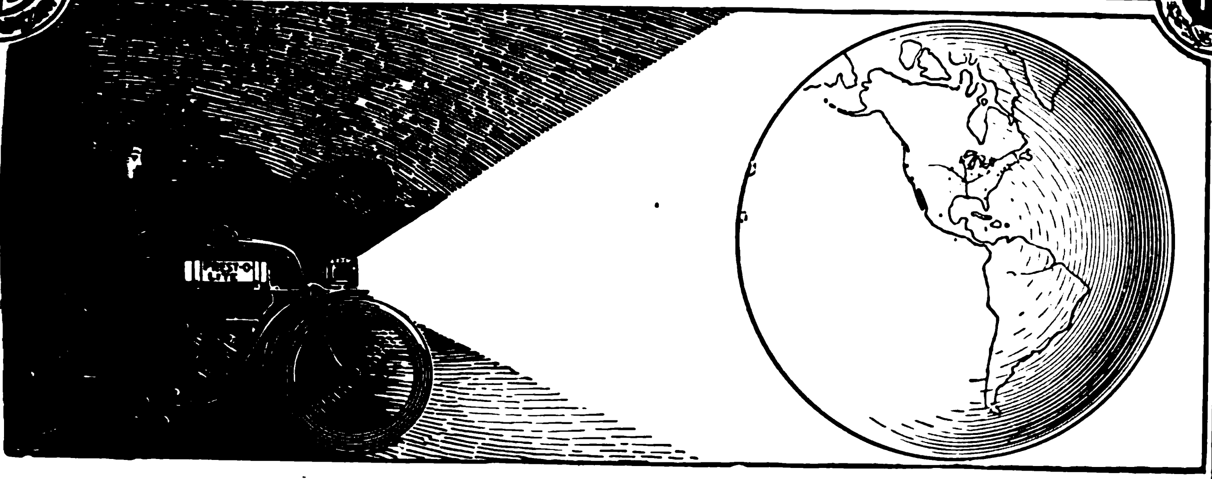
"THE LIGHT UNIVERSAL"



Wherever You Find Motorcycles There You Will Find

PREST-O-LITE

Practically All Experienced Owners Use It!
Over 10,000 Wise Dealers Handle It!

Insist Upon It. On Your Motorcycle.

Don't try to get along with the unsatisfactory, unreliable service of the generator, or imitation gas tank. One accident caused by poor, undependable light will cost many times the price of Prest-O-Lite. Thousands of owners have discarded the generator for Prest-O-Lite after a short experience. Be guided by those who know. Get Prest-O-Lite.

When you buy you should be particular about details that mean added expense later. Don't accept a generator. Get a lighting system that you can depend upon. If you take a substitute for Prest-O-Lite you will regret it before you've used your machine a month. Without good light the machine is not of full value.

The Prest-O-Lite Company manufactures Prest-O-Lite. "The Light Universal"; Prest-O-Starter, that eliminates the crank; Prest-O-Tire Tubes, that displace the pump; Prest-O-Tire Tanks; Prest-O-Carbon Remover and the Prest-O-Welder. Ask for information and literature for any or all of them.

MOTORCYCLES
12

CORBIN BRAKES

—make bicycling and motorcycling SAFE at all times on any road.

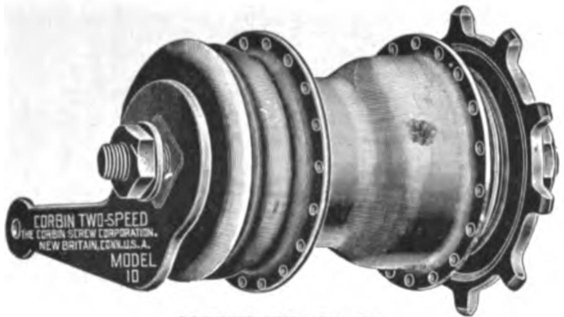
A slight back pedaling pressure operates the CORBIN, which is located in the

Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment.

The CORBIN MOTORCYCLE BRAKE has a V-shaped drum and a triangular friction band. This yields 50 per cent. more braking surface than the old flat band type. Riders of high powered machines should be Corbin equipped for this reason alone.

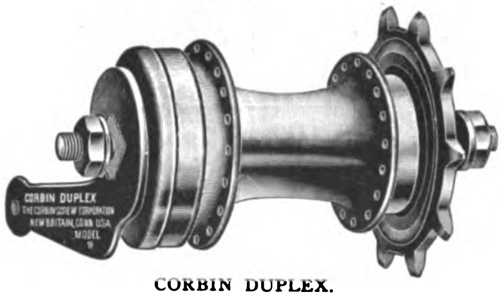
Chain interference is impossible with the Corbin Brake. The releasing mechanism is entirely outside, making the action easier and more reliable. The Corbin can be fitted to either belt or chain driven Motorcycles.

BRAKES FOR BICYCLES



CORBIN TWO-SPEED.

The Corbin Two-Speed Coaster Brake is invaluable for hill climbing and wind resistance. Added to this is the element of safety in having your machine under complete control.



CORBIN DUPLEX.

The Corbin Duplex has been the standard in Coaster Brake construction for 13 years. Either of these Brakes can be fitted to any make of bicycle.

Your Guarantee of Corbin efficiency and reliability is the Manufacturers' 13 years experience.

No matter where you may ride you're always in Corbin territory. Sold by leading Jobbers and Dealers everywhere. Insure SAFETY by specifying CORBIN and insisting upon it.

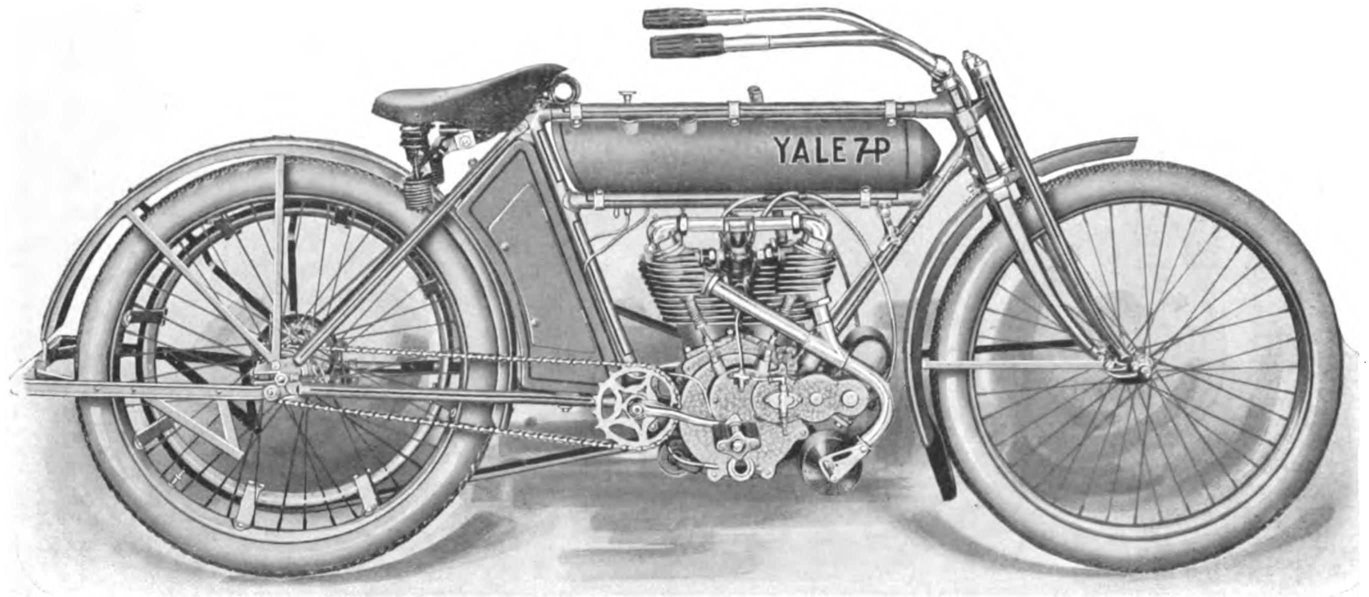
RIDE A YALE—THEY NEVER FAIL



YALE QUALITY

QUALITY of materials and methods of manufacture gauge the selling price of any article.

A CHEAPLY made article sells at a low price.

A HIGH class article made of first quality materials by improved manufacturing methods sells at a correspondingly high price.

THERE ARE several grades of most any article manufactured. Each sells at the price set by quality or value to the consumer.

TODAY THIS is true of the motorcycle. The **YALE** is, by the materials and methods employed in its production, a high-class motorcycle and sells at a price based on cost to produce and ability to give satisfactory service.

EVERY PIECE and part is treated in the most scientific way. Every detail looked after in the most careful manner, from selecting the steel best suited for drop forging motorcycle parts to copper plating the spokes before they are nickeled.

THERE ARE more forgings used in **YALE** construction than in any other motorcycle built.

EVERY ROD, rod end, bolt and nut is copper plated before being nickeled.

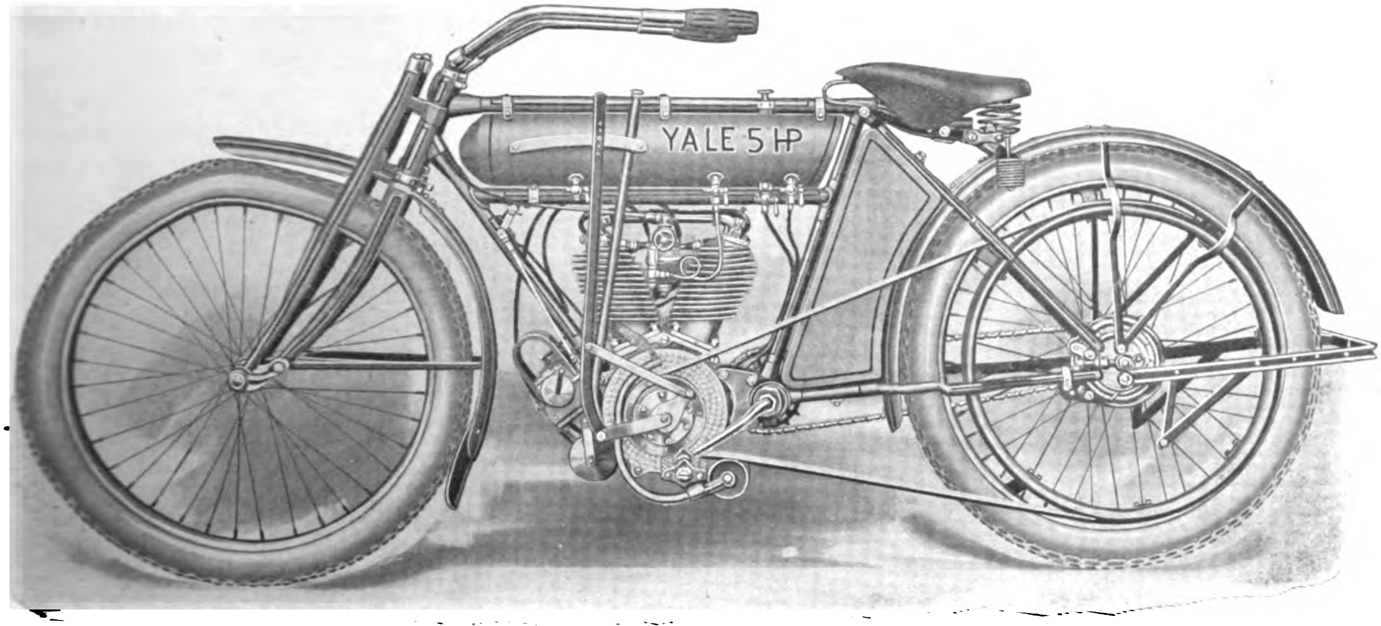
THE FINISH is another proof of the care taken in building these famous machines. First, a coat of anti-rust is baked on, then hand rubbed with pumice. A coat of grey enamel is then sprayed on, of absolute uniform thickness. A thorough baking follows, after which a hand pumice rubbing.

THREE COATS of enamel are applied in this manner, after which the blue stripe is put on. Then a dip in high luster varnish and another baking completes the job.

THIS IS only a sample of the care exercised in the **YALE** factory and is a **GUARANTEE** to the rider that he is getting the **BEST.**

WE ARE strong advocates of direct side by side comparison. Compare the **YALE** handle bars, fork, frame, grip control, tires, spokes, finish, etc., with those of any other machine and the vast superiority of the **YALE** is immediately apparent.

RIDE A YALE—THEY NEVER FAIL



AND CONSTRUCTION

RUN THE YALE alongside of any motorcycle listed at or about the same price. Look the two over. See how *much* bigger, better, and stronger the **YALE** is. See how much heavier the construction is. See if it *does* not seem more practical to invest in a **YALE** than in some cheap machine. The additional price guarantees you additional strength and security.

ASK ANY YALE agent what Consolidated protection in allotted territory means.

HE WILL tell you **ABSOLUTE PROTECTION** and prompt receipt of all inquiries from that territory.

ASK ANY YALE agent what Consolidated service means. He will tell you "Shipment of machines on the day his order reaches the factory."

LOW PRICE is not everything and you, Mr. Dealer, will find this true before the season is over.

THERE ARE many Packard and Pierce cars sold each year in spite of the fact that you can buy a fair car for $500.00.

YOU WILL find in every town a certain number of people who demand the best, who buy only the best, and are perfectly willing to pay for quality of material and workmanship.

YOU CAN sell these **PARTICULAR** people in your town a **YALE.** Better write today for full information. Agents wanted in unoccupied territory.

A RENEWED RESOLVE

Resolved:

That the Standard Company maintain the same high standard in the quality of the material, design and workmanship of its products and the same high excellence of business efficiency that has characterized its past endeavors. To this business policy can be attributed the upbuilding of this vast enterprise whose reputation and business dealings are world-wide.

DIAMOND "E" SPOKES

One of the many products of the Standard Company, stand preeminent in their class. Their quality and temper are unquestionably superior to all others. This is why when spokes are needed Diamond "E" Spokes are always thought of first.

THE STANDARD MOTORCYCLE PEDAL

No. 3

is a justly celebrated companion to Diamond "E" Spokes. They excel in the amount of comfort they give as well as the high quality they represent. No other pedals are so luxuriously cushioned and caparisoned as the Standard No. 3. The foot finds not only restful ease but safe security, in the deeply corrugated rubber pads. The twentieth century motorcycle is never rightly in the "comfort" category until equipped with The Standard No. 3 Pedals.

OTHER PRODUCTS:

Emergency Axles, Sager Motorcycle Toe Clips, Bridgeport and Standard Bicycle Pedals, Sager and Standard Toe Clips

THE STANDARD COMPANY

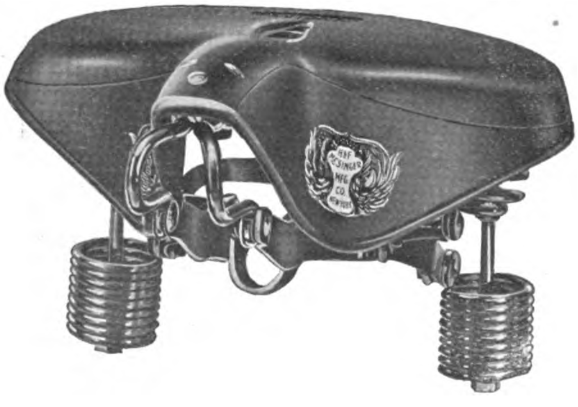
All Rough Roads Stop Here

The wonderful new spring system embodied in the late models of MESINGER Motorcycle Saddles make them the easiest riding saddles in existence.

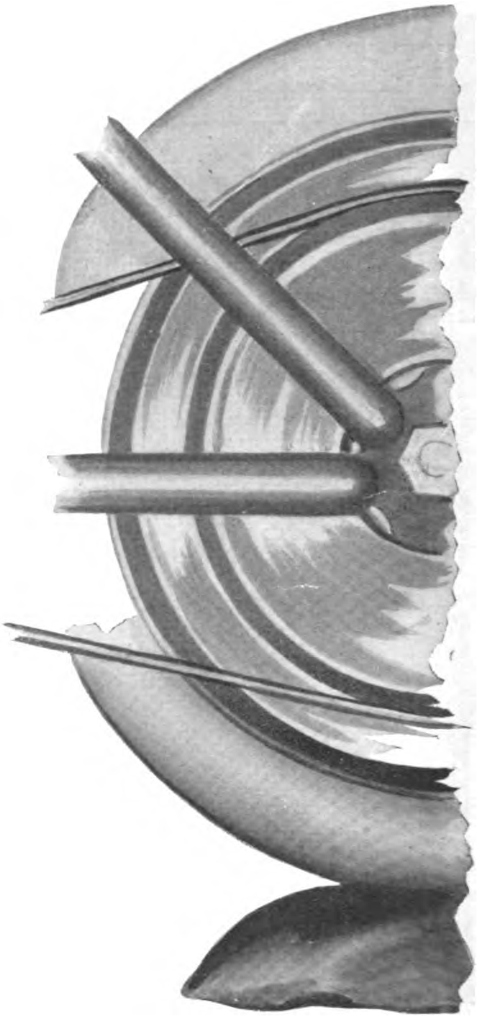
The wearying and wearing effects of the usual ride and the usual road and the **usual saddle** are experiences of the past to the MESINGER owner.



Standard No. 4, Showing Open Front Springs

The new Shock Absorber takes what the rider used to take. It invites long trips and assures perfect comfort.

Almost every dealer can give you a demonstration. If the one you know cannot, please drop us a line.



H. & F. MESINGER

1801-1807 First Avenue New York City

REASONS WHY

Mesinger Saddles Are Superior Saddles

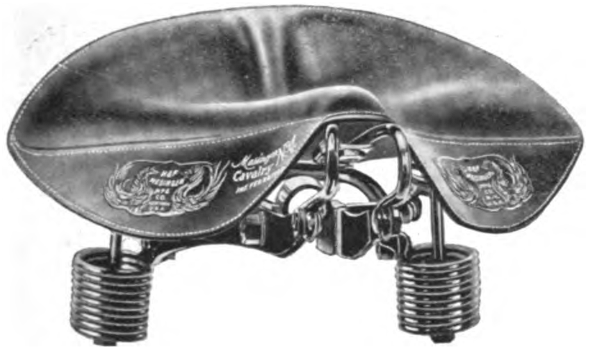
MATERIAL.—In no other saddle is such a high grade of leather used. It doesn't stretch all out of shape after a little hard riding over rough roads. The springs, the truss and other metal parts—these all bear out excellence of material.

WORKMANSHIP.—Our shop men have grown old in the saddle industry. Making good saddles has been reduced to a fine art with them. In no other factory is there such a collection of expert saddle makers as here.

DESIGN.—This saddle is shaped right to hold the rider in a firm, comfortable position. The distinctive Mesinger shock-absorbers smooth out all roads.

"ASK THE RIDER AND WATCH HIM RIDING"

QUALITY IS THE SECRET OF OUR PRE-EMINENCE



MESINGER CAVALRY No. 4

Winner of Many Tourist Trophies

Mesinger Saddles can be imitated but not equaled

They occupy a premier position in the saddle-making industry of the world, and MESINGER has come to mean saddle perfection.

In Mesinger Saddles, the little details have been cared for as thoroughly as the big fundamental points. That's what makes **Mesinger Quality.**

What the Mesinger saddle does in actual use is proof of the excellence of the material used and the skill of its designers.

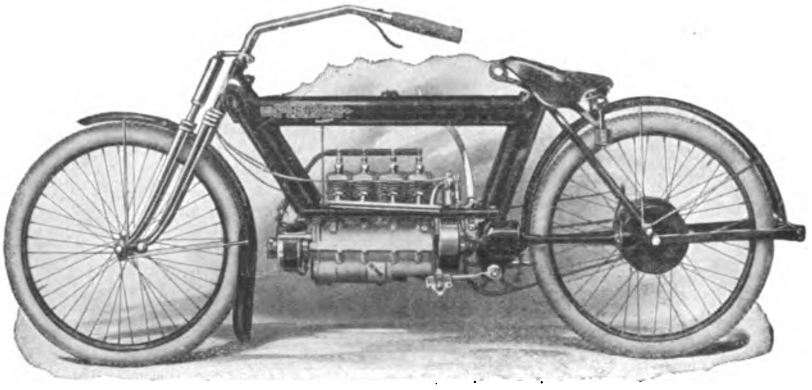
THE SUPERIORITY OF PIERCE MOTORCYCLES

IS INCONTESTABLY PROVEN BY THE LETTER PRINTED BELOW

Single and Four Cylinder Models



They're Vibration-less

READ THIS

TACOMA, Wash., November 22, 1911.

THE PIERCE CYCLE CO.,
Buffalo, N. Y.

Gentlemen:

After experimenting with two different makes of twin-cylinder motorcycles with unsatisfactory results, we decided to try the Pierce Arrow Four Cylinder on our delivery system. On May 9th we put one of your machines on our runs, which totals about 150 to 165 miles every 24 hours, seven days in a week, through rain, hail, snow and mud.

Our machine, at the date of writing, registers on our Warner autometer 14,681 miles, with a total of 9,537 deliveries.

Proud to say that our expense of upkeep to date amounts to just $6.80.

October 21st, our business had increased to such an extent that two more of your machines were purchased from your N. W. distributors, F. R. & J. E. Bunker, and have placed our order with them for the first 1912 Pierce Four that you ship to Tacoma.

We attribute our success to your Pierce Four Cylinder motorcycles and the Technical Service rendered by your local distributors.

E. A. FRIEND & CO., Quick Delivery Despatch.

Pierce 1912 Models make a complete line. Will you be one of the 400 prominent dealers who will sell Pierce Motorcycles for 1912?

SPLITDORF PLUGS

"Always There"

SPLITDORF PLUGS are a standard in the motorcycle world, and their quality has been demonstrated in thousands of track and road struggles.

A "record of performance" of SPLITDORF PLUGS would be to all intents and purposes a complete motorcycling record—such is the sweeping hold of SPLITDORF efficiency on racer and "road-plugger" alike.

> The fastest single cylinder racing work of the 1911 season was done on a machine using SPLITDORF PLUGS—the White Thor IV. Mathews made 1 mile in :46, 5 miles in 4:11 on this machine at Riverview.
>
> At Cleveland, Sept. 10, he rode 5 miles on a dirt track in 4:48; at Syracuse, Sept. 16, he rode 5 miles on a dirt track in 4:46, and one mile in :53 1/5 on a machine using SPLITDORF PLUGS.
>
> Wenk, the most consistent amateur winner at Riverview, in Chicago, rode a Thor with SPLITDORF PLUGS, giving others a handicap ranging from 200 yards to a lap and a half.
>
> At Winnipeg, Canada, Oct. 14, Joe Baribeau rode an Indian with SPLITDORF PLUGS, 100 miles on a dirt track in 100:14 3/5.
>
> At San Jose, Cal., Oct. 15, Ben Broderick, on an Indian, with SPLITDORF PLUGS, rode 100 miles in 98:11.
>
> At Terre Haute, Ind., Oct. 15, E. E. Baker, Indian, rode 100 miles on a ½-mile dirt track in 2:23:35 2/5, with V. O. Scanling, Indian, second—both using SPLITDORF PLUGS.

But why continue? SPLITDORF PLUGS are STANDARD—for track or road work they are INVINCIBLE.

Within the Reach of All

There is no longer any excuse for one who wants a motorcycle to delay purchasing one. High-grade motorcycles are now obtainable from reliable dealers in Greater New York on easy terms. High-grade motorcycles are now within the reach of all. The Motorcycle Dealers' Association of Greater New York has been formed and incorporated to do business on the most economical basis, protect prospective buyers and assure purchasers of satisfactory treatment. Every member of this association can be thoroughly depended upon for honest business dealings, satisfactory service at all times, and the lowest possible prices for high-grade machines and repair work.

You Pay on the Instalment Plan

To help the man who wants a machine on instalments, every member of this association is offering machines on the easy-payment plan, under uniform terms. Take your pick of machines, go to any dealer mentioned below, and you will be sure to get satisfactory results.

The terms of one are those of the others, and it is only by this co-operation of the Greater New York dealers that such inducements can be offered. During 1912 do business only with members of the Motorcycle Dealers' Association of Greater New York, and you will reap the benefit in better treatment, better service, prompt attention, and always the lowest possible prices.

The following is an accurate directory of all motorcycle dealers in Greater New York and vicinity who have been thoroughly investigated by the New York Dealers' Association, and have been found worthy of recommendation to anyone expecting to buy a motorcycle, whether for cash or on the instalment plan:

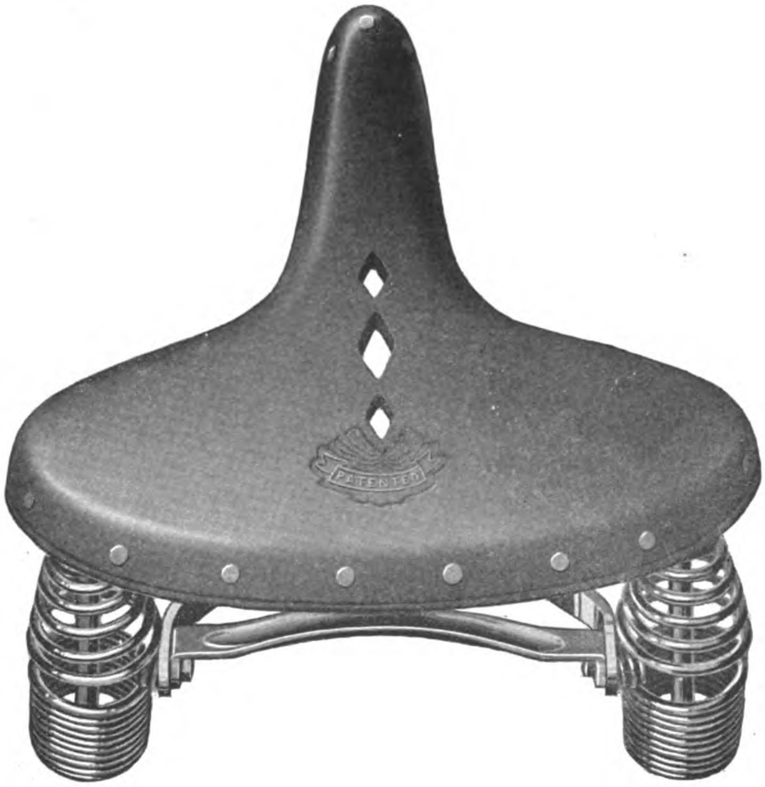
FIVE FEATURES

1. No nose coil. This gives a lower saddle position and a clean appearance.
2. Larger seating room and narrow nose; the best riding qualities.
3. The spring action is new and cannot be bottomed. The yoke on the plungers in the springs is all one piece and is hinged at the top, allowing the yoke to stay in the center of the springs at all times. The reason for this is that the radius of circle the top takes when in action shortens when the top swings down; this throws the top of the yoke out of center and the hinging at the top takes care of this. It will prevent all broken springs because there is no cramping.
4. The brace between the side trusses in the rear is channeled and round, making it easy to pick up and handle machine.
5. The clamp has been made much stronger and four rivets are placed closely together in the rear of the top, holding it to the cantel. Ten rivets in all are used.



THE NEW TROXEL MOTORCYCLE SADDLE
(Patent Applied For)

FIVE MORE FEATURES

6. The adjusting bolt is flat on two sides and is adjusted from the front by running a nut up on a screw. The flat sides also stop the top from twisting at the nose.

7. The finest oak tanned leather, of a dark chocolate color, is used.

8. The Troxel is the first motorcycle saddle that has been designed especially for the motorcycle trade by a motorcyclist who has ridden thousands of miles on inferior saddles.

9. The workmanship throughout is that of experienced saddle makers.

10. There's nothing else on the market the equal of the new Troxel.

Patent Applied for.

Is the Name of Our New Motorcycle Garment

THE LUCKY WINNER OF THE $50 PRIZE

is Mr. P. R. Bomeisler, Jr., of East Orange, N. J., who suggested the name, because, as he says: "It not only covers all the rider's clothes, but also covers all the requirements of the motorcyclist." We also take pleasure in sending a little present to the following who sent in names that were worthy of consideration, but were not adopted:

Charles Eich, Youngstown, Ohio.
S. M. Kaufman, Chicago, Ill.
F. L. P. Small, Winnipeg, Man.
B. S. Chilson, Fayetteville, N. Y.
Murray Fahnestock, Allegheny, Pa.
M. B. Morris, Jr., Edina, Mo.
Mich. E. Toepel, New York City.
C. L. Wilson, Scipio, Ind.
Mrs. Harry W. Miller, Chicago, Ill.
D. C. Alexander, Atlanta, Ga.
A. H. Bailey, Atlanta, Ga.

We wish to thank all those who contributed suggestions and wish them all a Happy New Year.

PROTECT YOUR CLOTHES AND HEALTH

BY WEARING

NATHAN'S NEW MOTORCYCLE GARMENT

Which is made of a dark, double-texture mackintosh, which does not show dust or grime. It is the only garment that enables the cyclist to make a trip over muddy or dirty roads without leaving even a speck on his clothing. When he stops at a hotel or restaurant he can remove the garment in a jiffy, and his clothes are just as neat as when he put them on. No extra leggings required.

Make Your Equipment Perfect

SEA LION BELT CEMENT
CHICAGO BELTING COMPANY

You would not think of buying a fine horse and an expensive buggy and then going to the harness shop to get a cheap harness. We won't take up space to argue this for it is too absurd, yet many motorcycle riders buy a high grade machine with a powerful engine and then hitch them up with a poor belt.

Remember, too, that a belt of the highest grade costs very little more than ordinary belts. White Strip flat belts, White Strip V belts and Sea Lion Waterproof belts represent the highest type of motorcycle transmission developed up to the present time. The rider takes no chance in their purchase for they are absolutely guaranteed.

KOKOMO
STUDDED TREAD

The materials entering into the construction of a tire are important factors, but something more than the best materials are necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

Kokomo Tires

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

GARGOYLE

Mobiloil

PROPER OIL IS A BUSINESS PROPOSITION

It is a simple business proposition that so valuable a mechanism as a motorcycle should be operated under the best possible conditions. This is only another way of saying that the oil used should be of the highest quality and able to perform what is universally admitted to be the most difficult service required of a lubricant. Wear of the parts, loss of power, and general and rapid depreciation will infallibly follow the use of a lubricant that does not possess the ability to stand up under work. Mobiloils have been prepared with an understanding of what is required of them; and the methods of manufacture used give them the essential qualities to the highest possible degree.

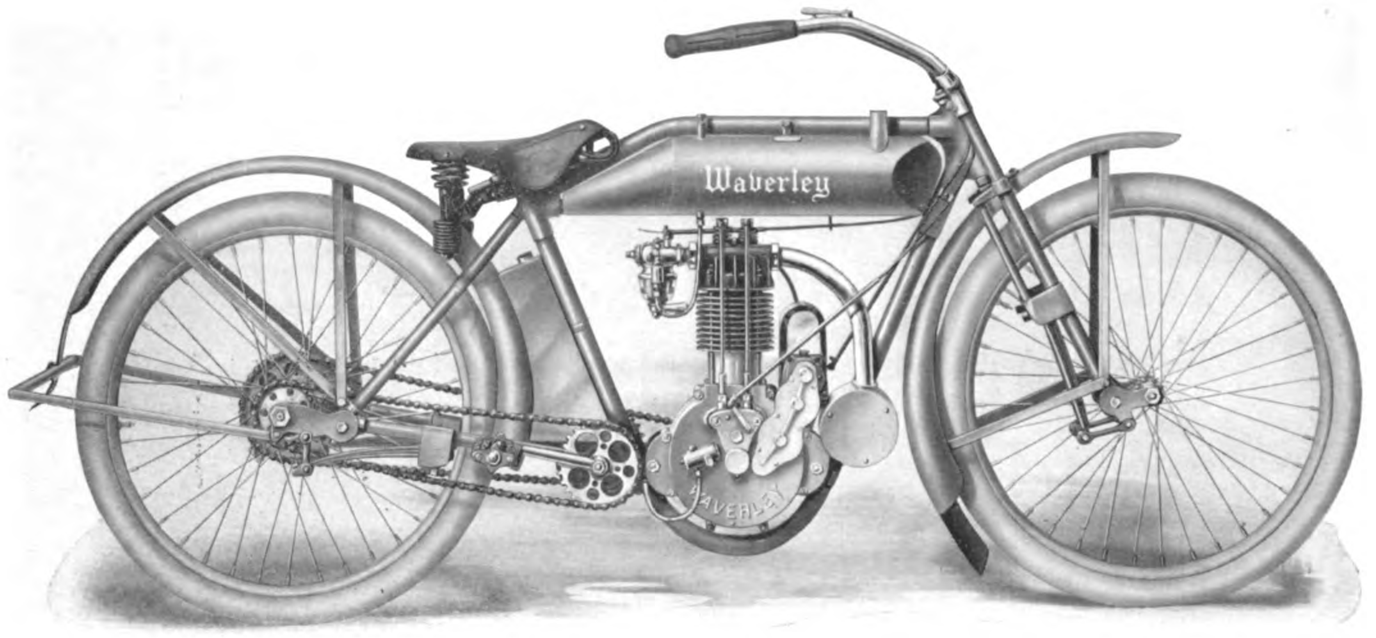
Waverley Model A-4



The Height cf Metercycle Excellence

The sensation of 1911 was the **Waverley** motor that not only ran away from the singles but held its own with the twins.

We are now building this motor in a motorcycle that is **Waverley** quality all through.

Every good feature of all the others, combined with a real cushioned frame—not a frame weakened by joints and hinges, but a rigid frame supported on a set of leaf springs that provides entire relief from all road conditions without in any way detracting from the strength and rigidity of the frame.

This is just one feature of superiority, and the **Waverley** is plump full of them.

Our advance circular gives all the details, such as free motor clutch, overhead mechanical valves, a real muffler, unbreakable cushion fork and many others.

Write for it today.

We want a few live agents of the better class who sell high grade goods on a quality basis and to such only we offer a liberal proposition.

AT MADISON SQUARE GARDEN

Last Motor Show In Big Amusement Place Opens Auspiciously—Crowds Are Larger and Interest Keener Than Ever Before.

THE NEW YORK
PUBLIC LIBRARY
547965
ASTOR, LENOX AND
TILDEN FOUNDATIONS.
R 1913 L

"THE best ever" is the unanimous sentiment expressed regarding the Twelfth Annual Automobile Show—the last show to be held in the historic Madison Square Garden—with the motorcycle exhibiting in the first section this week. With sixteen manufacturers showing *the best* in "motorcycledom," and nearly seventy accessory producers exhibiting everything that has been thought of as a necessity or a luxury for motorcyclists the "Home of Shows" holds the interest of the dealers and riders from all parts of the country for hours—and even then something good is sure to be missed.

Those in charge seemed to have done their utmost to make the present show in every way—decorative effect, number and interest of exhibits, etc.—a fitting close to the history of Madison Square Garden, which has harbored the motor shows since their inception twelve years ago, and the regular exhibition of motorcycles since 1907. Whether or not this last show marks also the last time that the motorcycle will be a part of the automobile show, the motor two-wheelers branching out in a show of their own next year, is, of course, problematical. To say such an event is simply a possibility is putting it mildly, for if the strong sentiments of some of the manufacturers can be taken as a forecast, 1913 will see the First Annual Motorcycle and Accessory Show in New York.

At 7:30 last Saturday night it seemed almost an impossibility that the exhibition hall would be in a presentable appearance by eight o'clock, the time set for the opening of the doors, but on close inspection, when the bugle signalled the eventful hour, the show was nearer actual completion than ever before, and in a very short time a record crowd was critically eyeing the exhibits. There are several classes who attend a show of this kind. Some go simply out of curiosity, perhaps because they have been given a pass and desire to kill time; some to show allegiance to the machine they ride; some to find out what new parts or accessories are on the market which will add to their comfort or the power of their machines or, if they be dealers, to keep up to the times with their stock; and, finally, some go to inspect every exhibit most thoroughly and critically. The latter class of visitors has largely predominated at the present show, or at least up to the time of writing, and this fact augurs well for the current year in the motorcycle industry, for when the majority of inspectors ask question after question the constantiy growing interest in the motorcycle is conclusively demonstrated.

The Garden foyer is banked on each side with thick boxwood hedges, with here and there a niche in which is seen a marble figure sculptured by the eminent Martini. In the arena the visitor is confronted by a large fountain casting up sparkling streams of water, in back of which is a statue representing the "Era of Motors." The splashing water is made irridescent by hidden electric bulbs. About the fountain are eight bust figures mounted on pedestals ten feet high, arched by garlands of natural flowers. Hanging from above is a striking gold and crimson canopy, weighing three tons, which is claimed to be the largest single piece of decorative fabric ever woven. The decorative scheme is of an Oriental garden in crimson and gold, with lattice construction. Last year's plan of having the elevated platform and balcony above the arena boxes project over the main floor, and the scheme of covering the high rear seats so as to make a sort of mezzanine floor, has been repeated this year.

Revealing a strong trend toward standardization, fewer models of each make are shown, and the predominating improvements are toward the comfort of the rider. Spring seat parts are seen on many of the machines, and the rigid and spring types of frame have each gained advocates; half of the makers are using magnetos exclusively—chain transmission has made great gains, with the clutch very popular and two-speeds next in favor. Refinements in forks and frames are prominent, and the use of overhead rocker valves is more popular, while tanks have been enlarged in many models. Two machines are shown for the first time—the Flanders and Henderson, the latter a four-cylindered crank-starter model without pedals. Improvements in tires, magnetos, spark plugs, carbureters, speedometers, lamps and horns, are evident; in fact, there are tons of accessories, in such profusion as to bewilder the visitor. Full details and specifications of the exhibits will be found in the following pages.

MOTORCYCLE SECTION OF THE MADISON SQUARE GARDEN SHOW

SHOW PERSONALS

G. N. Pyatt, Frank Sample and A. P. Egan make up the Show staff of the Havoline Oil Co.

G. C. McCullough, New York manager for the Pennsylvania Tire Co., is in charge of the company's stand.

Secretary John P. Grace is the "man of the hour" at the Show headquarters of the Byrne-Kingston Company.

Heading the staff at the stand of J. H. Williams & Co., are A. S. Maxwell, M. P. Lande and A. L. Whittemore.

James Rohde, Eastern salesman for the Eisemann Magneto Co., is acting as demonstrator of the Eisemann line.

At the Janney-Steinmetz stand N. W. Schlater is unfolding the interesting story of how his firm produces non-leaking tanks.

Charles O. Tingley is being assisted by William McCullom in pointing out the most attractive features of the Tingley exhibit.

Sales Manager G. T. Briggs, of Indianapolis, heads the reception committee at the headquarters of the Wheeler & Schebler Co.

J. W. Drown is the representative who is succeeding in answering innumerable queries at the Standard Roller Bearing Company's stand without losing his smile.

The Garden exhibit of the Hawthorne Mfg. Co., of Bridgeport, Conn., is in charge of Thomas M. Dunham, manager of the company's motorcycle accessory department.

A. J. Inderreiden, New York branch manager for the Warner Instrument Co., may usually be found in the center of an interested group of visitors at this company's booth.

Visitors to the Show headquarters of the Houpert Company found N. W. Durnin, Jr., prepared to explain how the firm turns out gears and castings that satisfy a dozen of the leading foreign makers of high grade cars, not to speak of the American builders.

M. E. LOGUE is in charge of the Diamond Rubber Company's exhibit.

W. W. TOTMAN is presiding at the booth of the Whitney Mfg. Co., assisted by H. L. Sevin.

F. S. LAWRIE and D. S. Spacke are explaining the new Spacke De Luxe motors to throngs of visitors.

THE president of the Veeder Mfg. Company, D. J. Post, is on the jom with E. B. Smith at their exhibit.

W. G. SCHACK is as "Emblematic" as usual, which, in the present instance, means that he is as busy as the busiest.

"BIG CHIEF" George H. Hendee is encouraging his large tribe of "Indians" by almost constant attendance at the show.

F. H. GROTH has been appointed manager of the motor cycle department of the B. F. Goodrich Tire Co., Akron, Ohio.

DR. G. B. GIBSON, secretary and treasurer of the F. A. M., was also noted among the arrivals at "Showville" on Wednesday.

J. M. SHACKLEFORD and J. B. Todd have the assistance of the various branch managers in the Empire Tire Company's booth.

MANY cycling enthusiasts of former days are seen in the "press room" at the Garden, among them John Wetmore and "Charlie" Duryea.

G. H. HAMILTON, of the Federal Rubber Company, and president of the F. A. M., "dropped" into the Garden from Columbus, A., on Tuesday morning.

T. W. HENDERSON, president, and W. G. Henderson, the designer, are explaining the new addition to the motorcycle family, the Henderson four-cylinder.

THE Federal Rubber Company is well represented by B. C. Dowse, president; H. A. Gittens, G. H. Hamilton, Marcus Allen, W. D. Kirkpatrick and B. E. Longthon.

GUERNSEY VAN RIPER, the F. A. M. "Publicity Man," was on the job early Saturday morning, loading his guns preparatory to firing a broadside of F. A. M. literature at the metropolitan press.

THE Schickel two-cycle motorcycle is being explained by Norbert H. Schickel, president of the Schickel Motor Company, assisted by William C. Schickel, Bruno Benzinger, R. M. Hillis and L. J. Carling.

FROM Erie, Pa., representing the Continental Rubber Company, came Sales Manager W. J. Surre, W. S. Tullis, W. M. Johnson and R. Sisson. F. W. Fee, the Chicago branch manager, is also on the job.

THE New Departure Mfg. Co. has a big force looking out for its interests, including DeWitt Page, secretary of the company; Fred Hughes, J. J. Jennings, S. B. Dusinberrie, A. E. Griffith, M. J. Horton and T. N. Biddle.

SECRETARY T. W. GUTHRIE, J. C. Manternach and Advertising Manager G. L. Dodge are helping L. B. Rockwell, the New York representative, to boost the Standard Welding Company's products at their exhibit.

"WHITE THOR" HANDIN is taking orders 'as fast as he can write 'em" for the "White Man's Hope" at the Aurora Automatic Machinery Company's booth, assisted by E. W. ("Shorty") Matthews, T. K. Lee, W. L. Hays and H. A. Gliesman.

J. B. WEBB, of the United States Tire Company, has been appointed special Eastern representative for that company, stating January 15th. Webb formerly covered the New York territory, but has been working toward the larger field for some time.

ELLIS WHITTIER, secretary; Ralph D. Webster, vice-president; J. C. Ferguson, sales manager; A. B. Steele, M. C. Yeomans, A. C. Rice, and F. L. Ellis, the mechanical engineer and inventor of the clutch, are endeavoring to "Eclipse" everything else at the show.

IN addition to the regular New York staff, including Advertising Manager A. H. Bartsch, the following branch managers of the Bosch Magneto Company are at their booth: F. D. Morman, from Toronto; A. D. Altree, Chicago; M. Toast, Detroit, and George Miller, from San Francisco.

MANY feel that no cycling event of any importance, particularly in the metropolitan district, is quite complete without the presence of "Happy Days" Pitman, and he is at the show every day early and late, extending to his multitude of friends —for every one is a friend of "Pit"— his usual greeting, "Happy days to you, sir."

PRESIDENT E. A. HAWTHORNE, Vice-President Wm. A. Cook, Secretary E. S. Hawthorne, E. J. Madden, Horace Hawthorne and Thomas M. Dunham were seen at the exhibit of the Hawthorne Mfg. Co., manufacturers of the "Old Sol" products.

F. J. WESCHLER, chairman of the Motorcycle Manufacturers' Show Committee, arrived in the "Big Village" from the "Indian Camp" on Tuesday.

A. B. COFFMAN, of the Consolidated Mfg. Co., and president of the Motorcycle Manufacturers' Association, was there at the sound of the bugle on Saturday night.

MESSRS. Buffum, Errant and Chapple are on the job for the "Flying Merkel."

COASTER BRAKE LEADERS UNDER INDICTMENT.

A BATCH of indictments have been handed down by a Federal Grand Jury, sitting in Buffalo, against the Licensed Coaster Brake manufacturers, charging that they form a combination in violation of the Sherman anti-trust law, by obtaining control of 90 per cent. of the business of manufacturing and selling coaster brakes. Eighteen individuals and six corporations are charged with "conspiracy." They are as follows:

Edwin E. Jackson, Jr., Frederick R. Huntington, James P. Drouillard and William A. Graham, of New York City; Albert R. Rockwell, Dewitt Page, Charles T. Treadway and Gales P. Moore, of Bristol, Conn.; Charles Glover and Clarence A. Earl, of New Britain, Conn.; David L. Whittier, Ralph D. Webster, Leonard S. Whittier and Edward J. Dunn, of Elmira, N. Y.; Simon Florsheim and John D. Hurley, of Chicago, Ill.; Kelly R. Jacoby and Emmett M. Jackson, of Middletown, Ohio; New Departure Manufacturing Company, Corbin Screw Corporation, Aurora Automatic Machinery Company, Eclipse Machine Company, Miami Cycle & Manufacturing Company and Buffalo Metal Goods Company.

The indicted men have been notified to appear before a United States justice on Friday, the 12th inst., in Buffalo, to plead on the indictments.

De Witt Page, of the New Departure Manufacturing Company, referred to the Federal action as follows:

"We feel that this is purely a patent matter, and, as we hold the brake patents, that we are well within our rights. I have had no time to look over the indictments in full, but the officers of this company believe that this investigation will strengthen us, and we welcome it. If we are not right, we shall be glad to have the government put us right. We have always tried to co-operate with the government, and simply look for the same treatment from it."

No complications of any character are anticipated as a result of the action taken by the government.

SHOW HUMOR

WELL, WHAT'S THE ANSWER?

AND in all the excitement some one asked: "If Jake De Rosier broke the world's record, what can the Eclipse brake?" That isn't all; the guilty party escaped in the crowd, and is still at large.

CORBIN BRAND CIGARS.

A. H. HARROP and Otis M. Scripture, of the Corbin Screw Corporation, are giving out Corbin Brake buttons, with the injunction to "Use Corbin brakes and never go broke." The Corbin folks also sent down 250 cigars for the dinner of the Dealers and United Cyclists (Corbin screw shaving with Corbin broke shavings as wrappers).

HAT CARDS IN DEMAND

JUST before the opening of the show the New Departure Co. sent out several thousand hat cards bearing this inscription: "You d—n fool, this ain't your hat." On the reverse side of the card is a diagram showing the quickest and easiest way to get from the entrance of the New Departure stand. Needless to say, the cards made quite a hit and were to be seen on all sides.

HAD HIM GUESSING

THE Bosch Magneto Company has a very large model of a spark plug, aproximately three feet in length, hanging in the center of their booth. Early on Tuesday evening, a faddishly dressed youth examined the exhibit very thoroughly and then, after studying the large spark plug for some time, called Advertising Manager Bartsch and asked anxiously:

"Will you please tell me what make machine that goes on?"

IT WAS A FALSE ALARM

WEBB, of the United States Tire Company, was inquiring around the Garden on Tuesday if it would be all right—as long as he had ten tickets for the dealers' banquet on Wednesday night—if he ate the shares of ten men. This would have meant ten portions of oysters, ten portions of sardines, ten portions of fish, ten portions of chicken, and so on down the line. As this was the dealers' first affair of the kind, they by no means desired any casualties reported, and as soon as the committee heard of Webb's decision they called a conference, where they discussed many plans pro and con, until the final decision was reached in the "wee small hours" to request the attendance at the dinner of two physicians, one, it was thought, not being sufficient. Webb acted very judiciously at the dinner, however, and the anxiety on the part of the committee proved unwarranted, in spite of the fact that it had been stated that the genial tire man had been fasting for several days in preparation.

"PIT'S" RECORD SQUASHED.

IT was reported on good authority that "Happy Days" Pitman had a dose of his own medicine at the show. The report states that "Pit" had made up his mind before the opening of the show to endeavor to break a record in the number of old friends met there, and early in the week he boastfully claimed such a record. This reached the ears of the chairman of the Competition Committee, however, and in spite of "Pitt's" official position as referee, his plan was nipped in the bud by the receipt of the following letter:

"Dear Pit: It has reached the ears of the chairman of the friendship competition committee that you are claiming a record in the number of old friends met at the Madison Square Garden Show. As this committee is maintained for the purpose of encouraging the sport of friendship and the renewal of old friendships, and as the occasional winning of a trophy in such an event is the greatest encouragement, I must, as chairman of this committee, appeal to you to cease your claim, because of the large number you have attained making it impossible for the younger generation to reach anywhere near your mark. Further, I must disapprove of your record because of the fact that you were not properly equipped—with duster, cap, etc.

(Signed) JEREMIAH P. THORN,
"Chairman."

GOOD WORK IN ENGLAND.

THAT American machines are capable of standing up under the stress of long road trials in winter weather was demonstrated recently in reliability runs held in England and Ireland. In the Sheffield and Hallamshire M. C. trial, December 26, from Sheffield to Bridlington and return, 170 miles, F. B. Roper, piloting an Indian machine and side-car, took first prize.

SHOW BUSINESS

CLAIMS FIRST SALE.

SALES MANAGER HANDIN, of the Aurora Automatic Machinery Company, has put in a claim for the honor of making the first sale at this year's show. Early on Saturday morning, just as it was being unpacked, T. J. Lee, a dealer from Paterson, N. J., purchased a White Thor four at $175. Handin further stated on Monday afternoon that he had received orders for twenty-seven machines.

HENDERSON PLEASED HIM.

PRESIDENT T. W. HENDERSON, of the Henderson Motorcycle Company, sold the first Henderson machine to C. H. Foster, manufacturer of the Gabriel horns, on Monday morning. Mr. Foster stated that the machine was for his son and that he would place a ten-tube Gabriel horn on it the first time it was used.

FIVE HUNDRED SHICKELS.

FIVE hundred machines will be the first factory output of the Shickel Motor Company, was the statement of President N. H. Shickel. The first machines will be ready for delivery about February 1. He stated further that the reason that they did not go ahead and place the Schickel two-cycle machine on the market after the last shows, was because the number of inquiries received by the company was so great that they realized their inability to supply the demand immediately, and thought it best to await further developments and increased facilities.

POWER IN DEMAND.

F. S. LAWRIE, of the F. W. Spacke Co., states that the number of inquiries he had received regarding the firms 9 h. motor is so large that it is plainly evident that there was a great demand for a motor of this type.

"LOOKED GOOD" TO GITHENS.

H. A. GITHENS, of the Federal Rubber Company, said Monday: "Without a doubt this is the best show ever held. In the first place, the show itself is nearer complete than ever before, and I have never seen such large crowds and such keen interest. On Monday, which is usually considered an off day, the building is crowded from morning until night. It certainly looks well for the industry during this year and those to follow."

BEST OF ALL.

IN an interview on Tuesday, A. B. Coffman, of the Consolidated Mfg. Co., manufacturers of the Yale motorcycle, and president of the Motorcycle Manufacturers' Association, said:

"From every standpoint, the 1912 motorcycle show, now being staged as part of the automobile show in Madison Square Garden, is the most satisfactory exhibition we have ever held.

"While there are no radical changes in motorcycle construction," continued Mr. Coffman, "the 1912 models now exhibited at the Garden represent another step in the development of these popular single-trackers. Year by year there are changes and refinements, and now we are very near the goal of the perfect motorcycle.

"Last year the motorcycles were exhibited during the second week of the Automobile Show—with the commercial cars and trucks. Before that we had exhibited with the pleasure cars, but our space was in the basement, and not in all ways satisfactory. This year, however, we are completely satisfied. Our machines are being shown during the first week, and we have good space in one of the balconies."

LOGUE'S OPINION.

M. E. LOGUE, of the Diamond Rubber Company, stated that the inquiries at the show were more numerous than ever before, and that the demand was constantly increasing for corrugated tires rather than the flat types. "Naturally," he said, "the reduction in price of motorcycles will sell more machine and bring about a correspondingly heavy demand for tires."

SECRETARY PAGE, of the New Departure Mfg. Co., stated that the company's business has shown a ninety-five per cent. increase during the past year, and that the factory is running twenty-two hours a day.

GEORGE P. JENKINS and Henry Heyer are showing the M. M. machines at the exhibit of the American Motors Company. President W. T. Marsh arrived on Wednesday morning.

E. C. KICHERER, E. F. Howard and J. I. Swegles assisted Sales Manager John Yoke in showing the Flanders "4."

HUNDREDS AT DINNER

Banquet Tendered at the Earlington by the New York Dealers' Association and United Cyclists.

JUST as we are going to press the dinner tendered the motorcycle and accessory manufacturers by the Motorcycle Dealers' Association, of Greater New York, in conjunction with the United Cyclists, is in progress at the Hotel Earlington, and is apparently a greater success than was even anticipated, with one of the most representative gatherings seen in recent years in the cycle industry. A very strong sentiment is evidenced that the dinner, with the outcome of the united efforts of manufacturers, dealers and riders to boost the sport, will mark the opening of a new and greater era for cycling in the East.

A unique feature is the fact that two toastmasters are presiding alternately—President H. A. Gliesman, of the Dealers' Association, and President J. A. Hall, of the United Cyclists. The following speakers are on the program: Hon. Alfred E. Steers, Borough President of Brooklyn; Hon. George R. Lunn, Mayor of Syracuse, N. Y.; Hon. Lewis L. Fawcett, Justice of the Supreme Court; George M. Hendee, president of the Hendee Mfg. Co.; George H. Hamilton, president of the F. A. M.; Fred I. Willis, secretary and treasurer, National Association of Cycle Jobbers; A. B. Coffman, president of the Motorcycle Manufacturers' Association and the Consolidated Mfg. Co.; J. Leo Sauer, chairman F. A. M. Legal Action Committee; Mark Eisener, counsel of Dealers' Association; W. F. Remppis, of the Reading Standard Co., and others.

Letters of regret were read from Wm. H. Taft, President of the United States; John A. Dix, Governor of New York; Woodrow Wilson, Governor of New Jersey; Chas. E. Hughes, Justice of the United States Supreme Court; Wm. A. Prendergast, Comptroller of New York; Wm. J. Gaynor, Mayor of New York; Andrew Carnegie, John Wanamaker and several others.

The national colors properly decorated the large banquet hall, and on either side of the toastmasters rested the first prize offered and won in the first recognized bicycle race in the United States in Brockton, Mass., July 4, 1898, and the first prize for the first century road championship of America, run under the auspices of the Boston Bicycle Club in 1885. Both prizes are the highly valued possession of the winner—cyclings' best-known and esteemed "vet"—Will R. (Happy Days) Pitman, now official F. A. M. referee, who is always on hand when there is an opportunity to reminisce about cycling.

MACHINES on SHOW

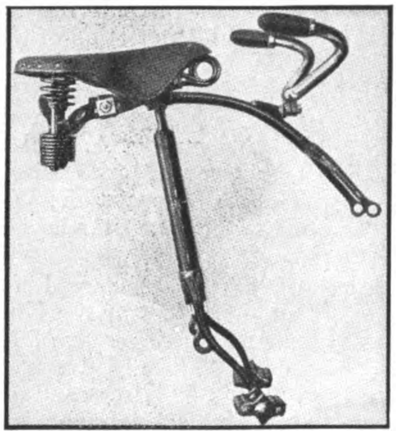
FULLY described when the 1912 announcements were made by their manufacturers, and their features emphasized in the New York Show Forecast of Motorcycle Illustrated, the sixteen makes of machines on exhibition in Madison Square Garden this week are already well known to the readers of this paper. Accordingly, only the general specifications of each type are given herewith, affording the dealer and prospective purchaser an opportunity to comprehend at a glance just what each manufacturer has to offer. The machines shown are arranged alphabetically according to the names by which they are known by the trade, as follows: Emblem, Excelsior, Flanders, Harley-Davidson, Henderson, Indian, Merkel, M. M., Minneapolis, New Era, Pierce, Pope, Reading-Standard, Schickel, Thor and Yale.

EMBLEM.

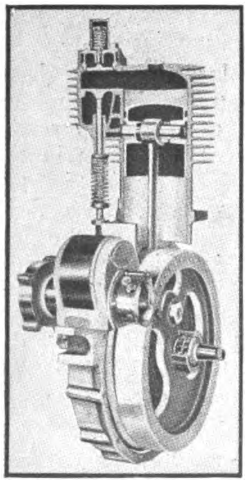
Emblem Manufacturing Co., Angola, N. Y.

Models and prices:

7 h. twin	$250
4 h. single, battery	175
4 h. single, magneto	200
5 h. single, battery	200
5 h. single, magneto	225



Emblem Tandem Attachment.



Emblem Motor.

Among new features of the Emblem line for 1912 are greater front and rear mudguard clearance, longer front forks, shorter frame head, three-stem handlebar lock, lower top frame tube to afford lower saddle position, low goose-neck saddle spring, improved rear fork ends and mounting for stand. Oil compartment in front, with oil pump in front part of tank; celluloid oil pump barrel, smaller battery case with improved fastener, thinner flanges on cylinder, ground cylinders, improved oil retention packing for crankshaft, better base compression release, larger mainshaft and connecting-rod bearings, improved valve mechanism, large clutch discs running in oil and new contact breaker cam.

The 7 h. twin has automatic inlets, hand pump lubrication, one speed, cushion plunger fork, V-belt drive, magneto or dual ignition, multiple disc clutch on main shaft, rigid frame with trussed loop, one brake, coaster; tires, 28 x 2½ inches. Control is by double-grip system; clutch operated by hand latch, and brake by pedal. The gasoline tank holds 2 gallons and the oil reservoir 2 quarts.

EXCELSIOR.

Excelsior Motor Mfg. & Supply Co., Chicago, Ill.

Models and prices:

7 h. twin	$250
6 h. twin	225
4 h. single, magneto	200
4 h. single battery	175

Bosch magneto on all but battery model. Straight line open bottom frames, with top tube curved to a long radius to get a low saddle position, tubular and wall re-enforcements in frame, cradle type spring fork with five leaves, anchored to the fork-crown at the butt and to yoke at the end of the scroll. Spring seat post embodying recoil and shock springs with adjusting collars for fitting to the weight of the rider, three points of attachment for handlebars, one piece cylinders, mechanically operated valves on twins and singles, valve gearing adjustable with positive locking devices, and three-ring pistons with oil grooves. Bronze bearings on motor shaft and crankpin. Centrifugal lubrication from flywheel duct to crankpin and walls. Magneto in front of crankcase. Chain drive on 4 h. single and 7 h. twin, option of belt on one model of 4 h. single, belt only on another 4 h. model and on 6 h. twin. Two chains used in transmission, one from motor shaft to countershaft, covered, with Eclipse free engine clutch in countershaft acting as compensating device; second drive from clutch to rear wheel sprocket. Belt models have regular lever operating idler with spring tensioning device, and in addition an Eclipse free-engine clutch, the latter being operated by a link attached to the idler lever. New shape of tanks, with capacity of 2 gallons of gasoline and 2 quarts of oil, new and characteristic "X" trademark. Bore and stroke of 4 h. motors, 3 21/64 and 3½ inches; of 6 h. twin, 3 and 3½ inches; of 7 h. twin, 3 21/64 and 3½ inches. Woodruff keys used to fasten sprockets, flywheels, etc. Coaster brake fitted on all models. Twisting grip controls for spark and throttle.

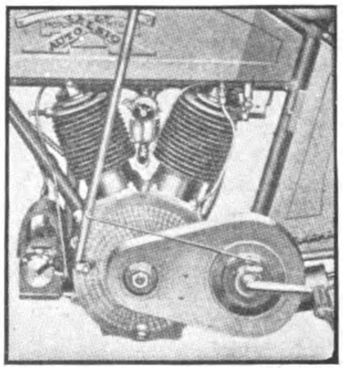
FLANDERS.

Flanders Mfg. Company, Pontiac, Mich.

Models and prices:

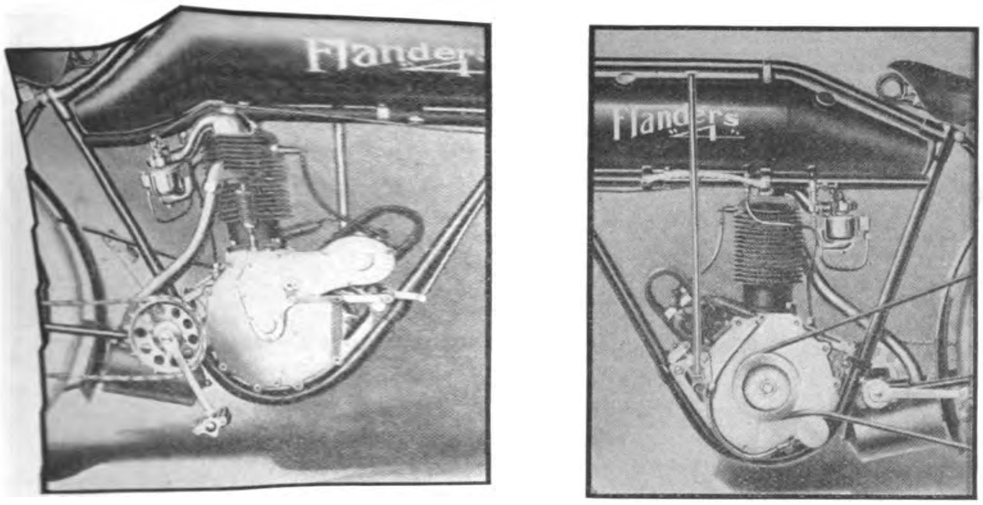
4 h. single with magneto ignition	$175

Splitdorf magneto used, fitted in front on foot attached to crankcase and gear driven. Automatic inlet valve over exhaust valve. Bronze bearings on crankpin and motorshaft. Rigid trussed loop frame, cushion plunger fork, double grip control and handlever with spring idler for flat belt drive. Oiling flow regulated by valve operated by



Excelsior 7 h. Chain Twin.

Excelsior Fork.



Two Views of the Flanders Power Plant.

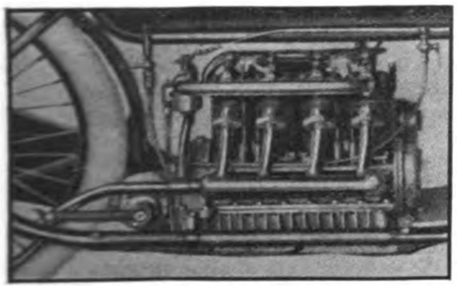
link from throttle connection, gravity system with sight-feed. Tanks, stream line type with recessed filler caps. Gasoline capacity, 1½ gallons; oil, 1½ quarts. Cylinder dimensions, 3¼ inches bore, 3.6 inches stroke. Troxel saddle, Thor or Eclipse coaster brake, wheelbase, 53½ inches; weight, 160 pounds; 2½-inch tires, special Kingston carbureter.

HENDERSON.

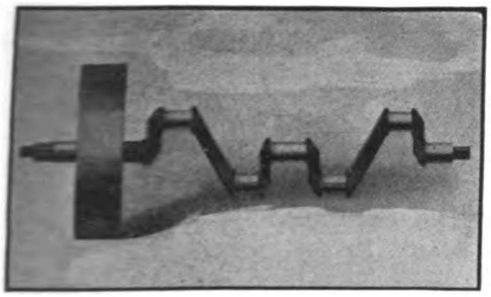
Henderson Motorcycle Company, 268 Jefferson Avenue, Detroit, Mich.

Models and prices:

7 h. four-cylinder	$235



Henderson Motor and Crankshaft.



Magneto ignition gear driven from valve shaft. Mechanical inlet valves placed over exhause valve, inlet operated by rockers. Exhaust leads to expansion chamber and thence to long exhaust pipe at rear. Trapezoidal underslung frame, enclosed chain drive from disc clutch mounted on countershaft, the latter driven by bevel gearing from the motor-shaft. Brakes and clutch operated by pedals, both on wide aluminum foot-board in front of motor. Front wheel fitted with wide aprons, preventing splash. Provision for two saddles on top tube. Plunger type spring forks, 28 x 2½-inch tires, 2½-inch bore and 3-inch stroke, long cylindrical oil and gasoline tanks, lubrication by gear pump, carbureter at rear of motor with single inlet manifold.

HARLEY-DAVIDSON.

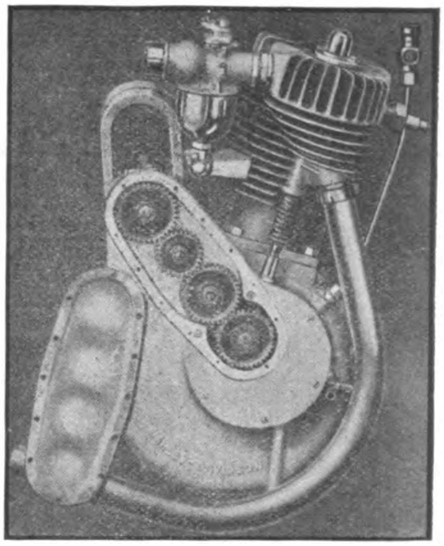
Harley-Davidson Motor Company, Milwaukee, Wis.

Models and prices:

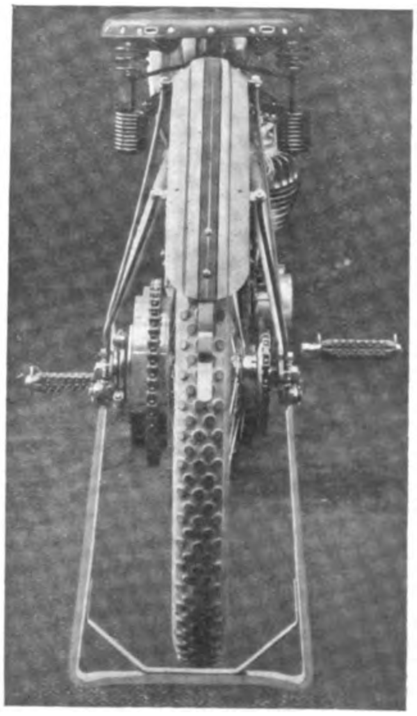
7 h. twin	$285
6½ h. twin	275
4 h. single, magneto	235
4 h. single, battery	200

Bosch magnetos on all but latter model. Magneto in rear on all models, driven by gearing. Floating seat with double springs for shock and recoil, flat belt transmission on all but 7 h. model. Idler operated by hand lever through toothed arc. Reinforced frame head, drop-forged rear stay jaws, side guards on front wheel mudguards, improved stand, new forward position of filler caps, top tube dropped to accommodate floating seat device, sprink fork of cushion type with springs enclosed, eccentric pedal hanger, semi-automatic vacuum feed lubrication system, enclosed grip control, chrome vanadium steel connecting rods, 55-inch wheelbase on single cylinder, and 56½ inches on twin models. Single cylinder motors, 3 5-16 bore and 3½-inch stroke; 6½ h. twin has bore of 3 inches and stroke of 3½ inches; 7 h. twin has 3 5/16-inch bore and 3½-inch stroke. 28-inch wheels with 2½-inch tires on all models. Free-wheel multiple disc clutch in rear hub operated by lever on seat-mast in addition to hand-lever for idler for $10 extra, except on 7 h. model. Belt on 4 h. models, 1¾-inch double-ply flat belt, waterproof and endless. On 6½ h. twin, 2-inch flat belt. Valve lifting mechanism on this model is independent of throttle control. Makes of saddles and tires optional.

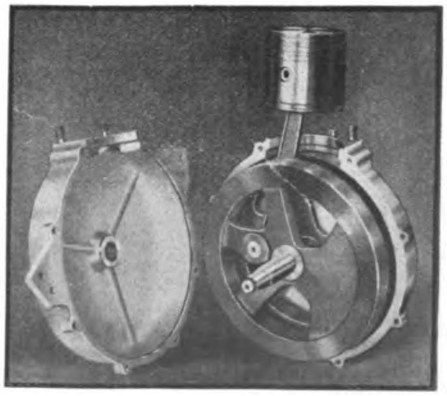
The 7 h. chain drive model employs roller chain transmission through countershaft in connection with free-wheel device. The first drive chain is adjustable by an eccentric in the counter shaft, and the final drive chain by means of rear axle slide screws. The pedal chain is adjusted by a second eccentric on the countershaft. Silencer springs are fitted to the mechanically operated inlet valve mechanism on the twin models, while the inlet valves on the singles are automatic.



Harley-Davidson Motor.



Harley-Davidson Free Wheel.



Harley-Davidson Crank-Case, Etc.

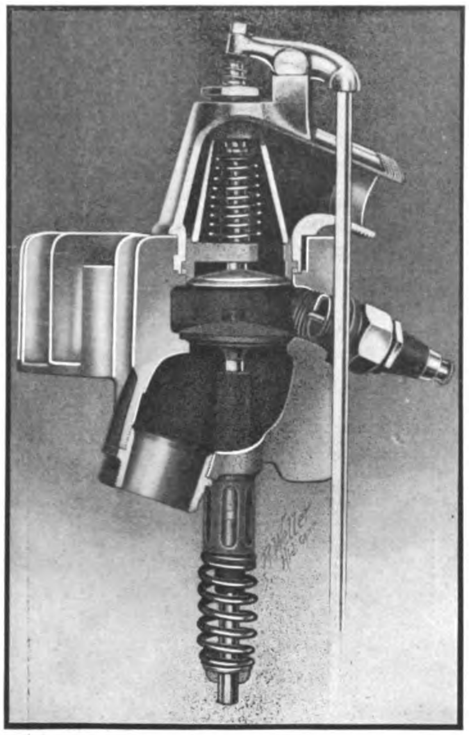
The new chain-drive Harley-Davidson is illustrated and described on another page of this issue.

INDIAN.

Hendee Mfg. Co., Springfield, Mass.

Models and prices:

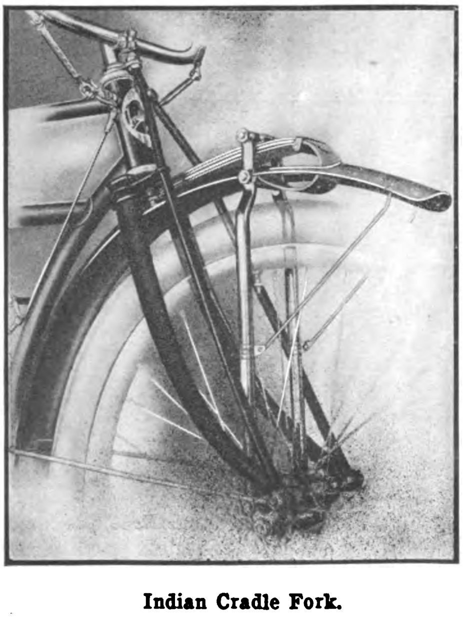
7 h. T. T. model	$300
7 h. T. T. model, two speed	325
7 h. twin model	225
4 h. T. T. model, two speed	275
4 h. T. T. model	250
4 h. single	200



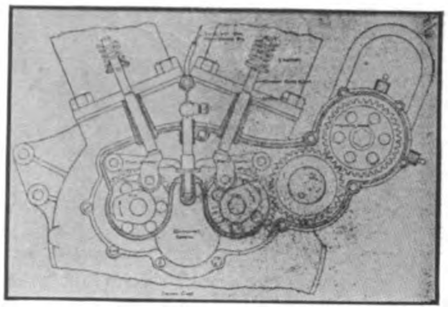
Indian Mechanical Valves.

Bosch magneto, armored type, on all models fitted on foot in front of crankcase. Free engine clutch of Indian multiple-disc type on all models. Mechanical inlet valves, rigid trussed-loop frame, cradle scroll spring fork, two jet carbureter with by-pass, combination filler-cap and priming syringe, large tanks with 2½ gallons of gasoline and 2 quarts of oil. Re-inforced frame, 19 inches in height, automatic positive pump lubrication system, roller chain drive with guarded sprockets on primary drive. Coaster band brake on regular models and double hand-and-pedal-controlled brake on T. T. models. Two-speed gear of sliding dog-clutch type on bottom bracket with clutch lever on right side and change gear handle on top tube, right side. Metal tool boxes, 28-inch wheels and 2½-inch tires; 53-inch wheelbase on regular and 55 inches on T. T. models. Kick starter on T. T. models and rear hub with Timken roller bearings. Motor base oil level indicator, cylinder priming cups, redesigned front cylinder on twins, heavier grip controls, new valve lifters on 5 h. singles, keyed handlebar stems, increased size of crankpin, larger valves and heavier springs.

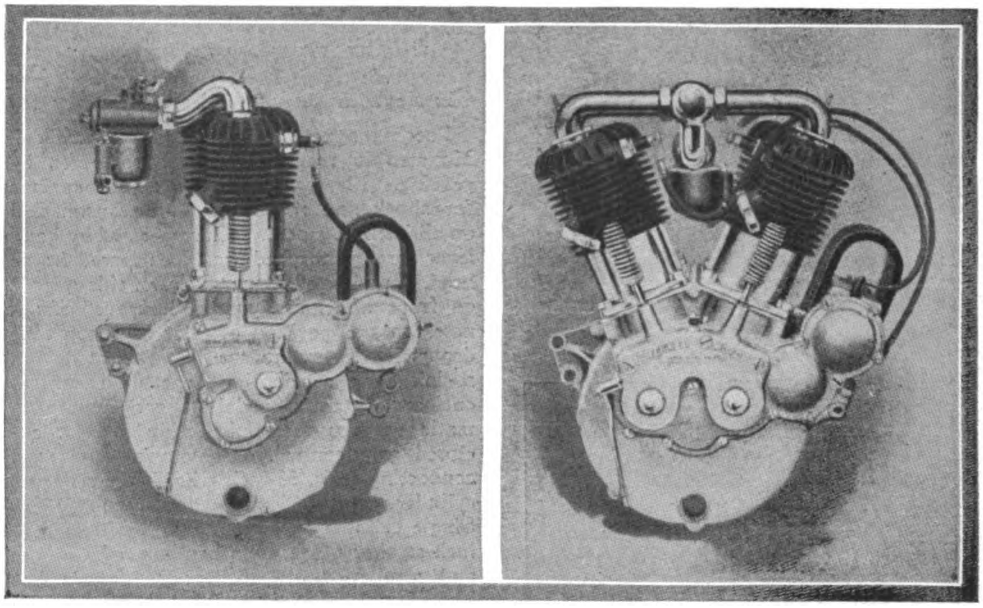
Motor dimensions: 4 h. models, 3¼ x 3 43/64 inches bore and stroke; twins, same bore and stroke, and practically identical in other dimensions. Metal tool boxes and auxiliary hand pumps for use in filling crankcase, etc., for emergencies or when racing, on all models. Knockout hub on all front axles and similar device on rear axles of T. T. models. Option of belt drive on 4 h. regular model, fitted with flat belt, idler lever working over notched quadrant on cylinder and free-engine clutch, enabling independent adjustment of belt tension and movement of clutch lever. Side car attachment will be furnished soon as an extra.



Indian Cradle Fork.



Traverse Section of Merkel Motor, Showing Valve Mechanism and Magneto Drive.



Merkel Single and Twin Motors.

MERKEL.

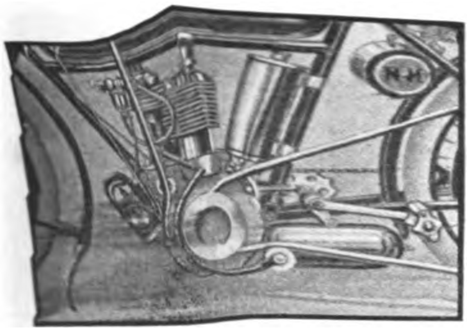
Miami Cycle & Mfg. Co., Middletown, Ohio.

Models and prices:

7 h. twin	$275
6 h. twin	250
4 h. single	225
4 h. single	200

Bosch magneto, free engine clutch and automatic inlet valves are fitted on all models. First three models have spring frame of Merkel patent while last model has rigid frame. Option of either V-belt or chain drive on all models. Chain drive machines have compensating sprocket and belt drive has 1¼-inch V-belt. Free engine clutch is of the multiple disc type and is operated from the handlebar. Motors are full ball-bearing, and lubrication is automatic with auxiliary force pump. Band brake on belt drive machines and Musselman armless coaster on chain models. Extra wide front and rear mudguards on all models. Motors: 4 h., 3.45 inch bore and 3.25 inch stroke; 6 h. motor, 3.25 inch bore and stroke; 7 h. motor, 3.45 inch and 3.25 inch stroke. Troxel or Mesinger saddle as desired. Tanks hold 7 quarts of gasoline and 3 pints of oil. Luggage carrier, $5 extra. Tandem attachment with pedals and bars, $25 extra. All models have cylindrical tanks with Torpedo front head. Carbureter of Merkel make with metal bowl and metal float. Control by wire from grips, with all mechanism housed in bars.

Flywheels and shafts are forged in one piece. Main shaft of each flywheel is part of steel forging. Exhaust valves in one piece, cut from bar, gears all outside of crankcase. Cams lift rockers fitted with rollers and jumpers are fitted on twin motors to effect the valve lift. Twin models are also made in racing type as specials, with drop handlebars and spring operated lubricating pump mounted on top tube. Special models have chain transmission and are without clutch. These models have been winners in many speed events and are widely recognized by the characteristic Merkel orange color and the curved shape of tanks.



M. M. Single.

M. M.

American Motor Co., Brockton, Mass.

Models and prices:

8 h. twin	$275
"Four fifty"	200
4 h. magneto special	160
4 h. battery	140

Bosch magneto on all models except the last. 26-inch wheels, flat belt, hand idler with spring tension, five-leaf spring fork, bell crank grip control, automatic stand, double expansion muffler and Mesinger cavalry saddle on all models. Cylinder priming cups; on twin, four ring pistons, increased tire clearance, vanadium steel in springs and hand pump lubrication; roller bearings with oil rings and Schebler carbureter on twin and 4½ h. models. Option of V-belt and 28-inch wheels. Wheelbase 56 inches on twin and 54 inches on 4½ h. model. On V-belt machines, expanding drum clutch. Schebler carbureter on 4 h. battery and magneto models.

MINNEAPOLIS.

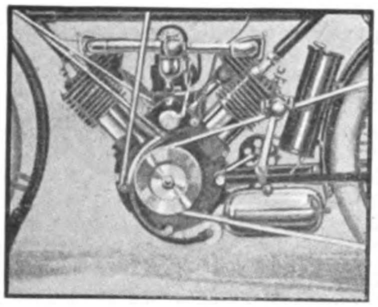
Minneapolis Motorcycle Company, 517 Seventeenth Street, South, Minneapolis, Minn.

Models and prices:

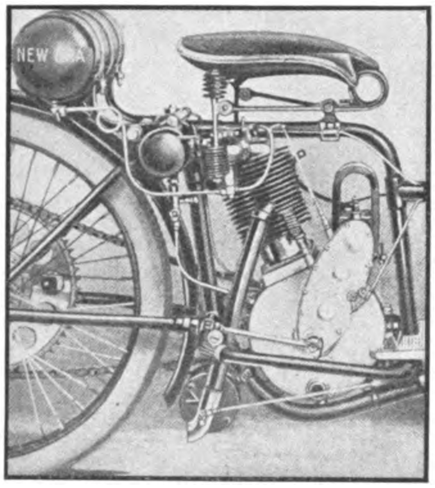
5 h. chain drive, two speed gear	$285
5 h. belt drive, two speed gear	285
5 h. belt drive	240
5 h. chain, two speed gear with van	375

Single-cylinder motor on all models, bore and strokes 3½ and 3¾ inches, respectively. Side-by-side mechanical valves, magneto ignition with magneto on foot at rear of cylinder, special one-inch Schebler carbureter, force-pump lubrication, double-grip control, 26 or 28 x 2½-inch tires, re-inforced steel tubing frame; Thor coaster brake, on all models. Triple spring fork on all except van model. Spring frame of special type, $15 extra.

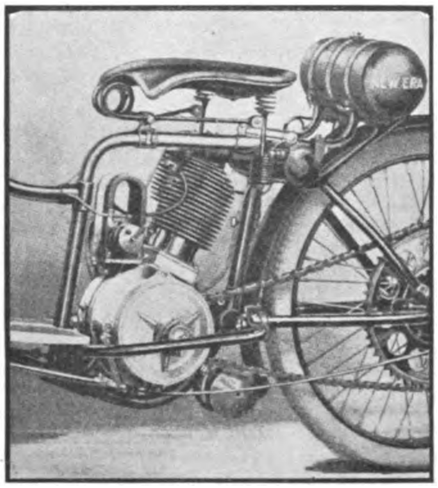
Two-speed gear of planetary type in unit construction with motor, multiple disc clutch operated from lever on handlebar, gear actuated by vertical lever on top tube. Belt two-speed model has belt operated by lever which controls idler and has no clutch. Plain belt model is not of unit construction. Ball bearing of Schafer type in transmission and clutch. Tandem attachment, $15 extra. Eccentric pedalling chain adjustment in hanger. Van has capacity of 300 pounds and may be had as separate attachment for $125. This is an ideal commercial vehicle for light delivery in either form.

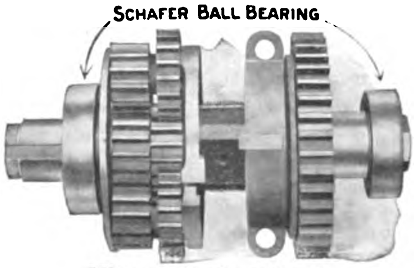


M. M. 90° Twin.



NEW ERA
Two Views of the Motor Seat, Tank, Etc.





Minneapolis Two-Speed.

NEW ERA.

New Era Autocycle Co., Dayton, Ohio.

Models and prices:

4 h. single	$285
4 h. delivery van.	

Bosch magneto in front of motors, sight feed lubrication, cushion plunger fork, two-speed planetary change gear, rigid trussed cradle frame, mechanical valves, roller chain final drive, internal expanding band brake and 28 by 2½-inch tires. Two speed gear mounted on the motor shaft and controlled by foot pedals, interlocked with brake pedal to prevent engaging either speed when brake is on and disengaging either speed by application of brake. Handle starting; no regular pedals. Form seat and gasoline tank on rear of frame, capacity 1¾ gallons. Oil tank in rear of seat mast, capacity, 3 pints. Aluminum footboard, re-designed cylinder and exhaust pipe, heavier rims, motor inclined from vertical. One piece flywheels and crankshaft, borne on radial ball-bearings. Tandem attachment, $15 extra.

POPE.

Pope Manufacturing Co., Hartford, Conn.

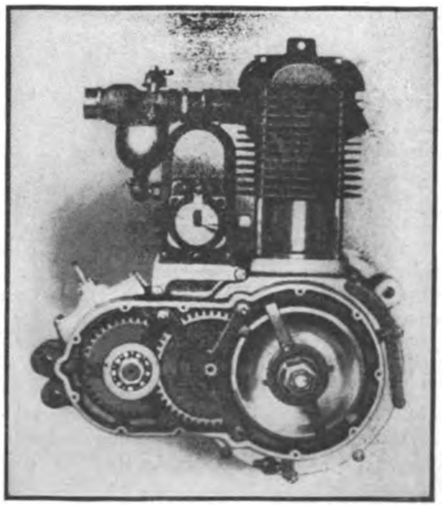
Models and prices:

3 h. single	$175

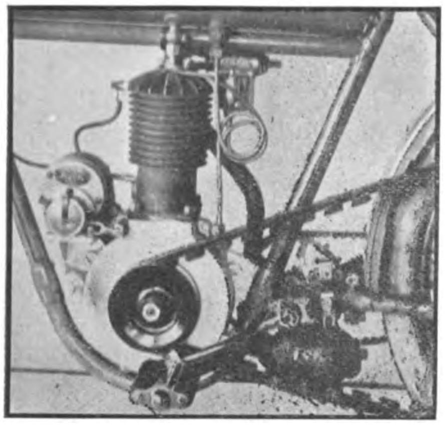
Herz magneto mounted on foot in front of crankcase, foot also forming bearer for motor, automatic inlet valve, hand pump lubrication, rigid trussed loop frame, reinforced, cradle spring fork, V-belt drive, camelback top tube, 26 by 2¼-inch tires; gasoline tank capacity, 1¾ gallons; oil, 1 quart; horizontal flanges on cylinder body and radial vertical flanges on head. Persons Champion saddle with leather tool bag, wheelbase, 51 inches. Adams stand, double grip control.

INCREASE IN BAND BRAKES.

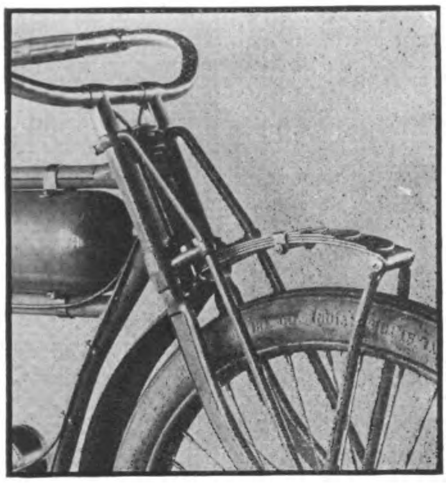
Tendencies of the 1912 season are toward the increased use of the band brake, no less than three prominent makers employing them regularly on their chain-drive models, and one of these on all models in addition to the coaster. In addition to the chief advocate of the coaster-operated band brake, another recruit among the brake makers has brought out an internal expanding band type. Which will predominate, the coaster or the band, time alone will tell.



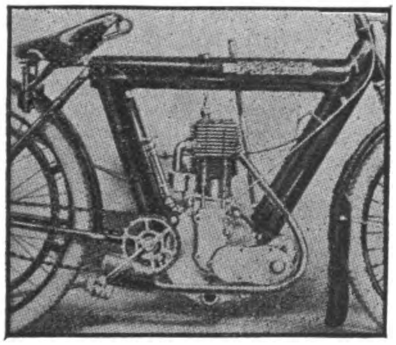
Minneapolis Unit Power Plant.



Pope Motor.



Pope Fork.



Pierce Single Motor.

PIERCE.

Pierce Cycle Company, Buffalo, N. Y.

Models and prices:

7 h. four-cylinder, magneto	$400
5 h. single, magneto	265
5 h. single, magneto	250
5 h. single, magneto	225

The $250 and $265 models are new throughout for 1912. The engine is redesigned, with longer stroke, larger valves, larger exhaust tube and muffler, quieter gearing for valves, magneto insulated against oil, wider piston rings, flat rear pulley, spring tank caps, new fork cushion, larger handlebar tubing and lower bars, improved carbureter, lower frame head, throttle grip starting index and roller contact grips.

Splash lubrication in addition to pump, redesigned crankcase, wider piston rings, pinned, oil-tight motor base and oil gauge in base are among the refinements shown in the Pierce four-cylinder. It has new valve lifters, right hand gear-set and clutch control, taper and key fly-wheel mounting, keyed gears and larger clutch pins. The 5 h. model which lists at $265 has V-belt drive, cushion plunger fork, mechanical valves, multiple disc clutch on motor-shaft, rigid tank-in-the frame construction, band brake and 28 x 2½-inch tires. The 5 h. magneto single, at $225, and the $250 magneto single are without the clutch. The Pierce is the only advocate of the tank-frame construction exhibiting.

READING STANDARD.

Reading Standard Company, Reading, Pa.

Models and prices:

7 h. twin	$290
4 h. single, magneto	225
4 h. Tourist single	250

All types Bosch-equipped, mechanical valves, double-grip control. Twin model has gravity feed and hand pump, cushion plunger fork, internal gear and chain drive, rigid frame with keystone truss, two brakes, coaster and band, and 28 x 2½-inch tires. It has one speed and is supplied with clutch. Control of the brakes is by hand lever and pedal; the gasoline tank has a capacity of 2½ gallons, and oil tank one-half gallon.

The $225 single has flat belt drive as standard. The same type with double equipment, double brakes, foot-rests, lubricataing systems, belt tensioners and double control is referred to as the Tourist type, listing at $250; clutch fitted on twin for $10 extra. The twin and light-equipment single are new models of the R-S. Chief among features of the former are the protected magneto, low-chain speed, foot-rests, double-braking system, undergeared drive and unusually efficient lubricating.

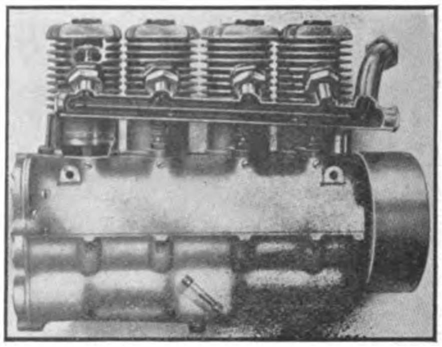
SCHICKEL.

Schickel Motor Co., 59 Garden Street, Stamford, Conn.

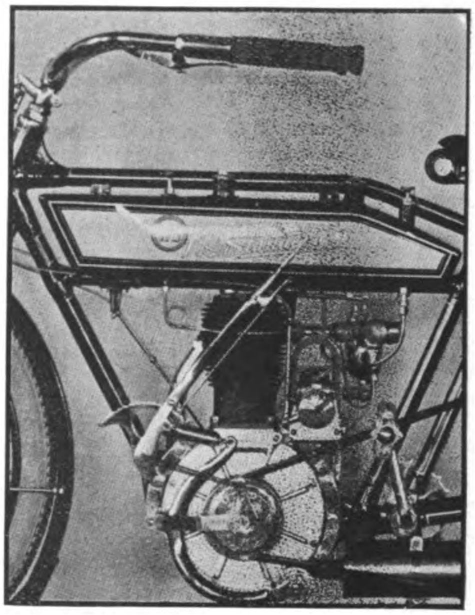
Models and prices:

5 h. single, two stroke	$225

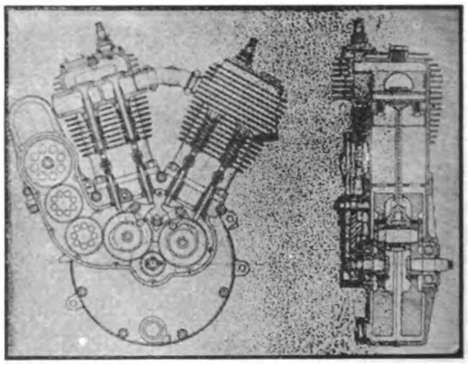
Two stroke valveless motor, 3⅜-inch bore and stroke, 57-inch wheelbase, 28 by 2¾-inch tires, flanged mudguards, high tension magneto, twist-grip controlled free engine and throttle, spark advance lever and compression release lever on handlebar, tank forming top member of frame and of 3 gallon capacity. Motor carried on ball-bearings, flywheel, crankpin and motor-shaft in one piece; ball-bearing connecting-rod big end and pinch fit on wristpin, which works in bush in piston. Magneto housed in cylindrical extension of crankcase, and rocked to give advance or retard of spark. Filler cap forms measure for quantity of oil, which is injected with gasoline in cylinder. Frame members brazed together and aluminum tank ends cast around joint. Idler for flat belt drive. Double spring fork, keystone girder frame, coaster brake, hinged mudguard on rear wheel with patent latch for easy removal of rear wheel. Cylindrical tool compartment in gasoline tank; motor fastened at two points on crankcase and at center of head; conical compression relief valve in front of head and spark plug in rear.



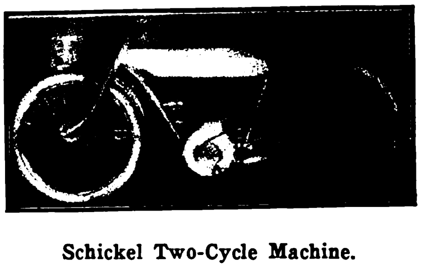
Pierce Four Cylinder Motor.



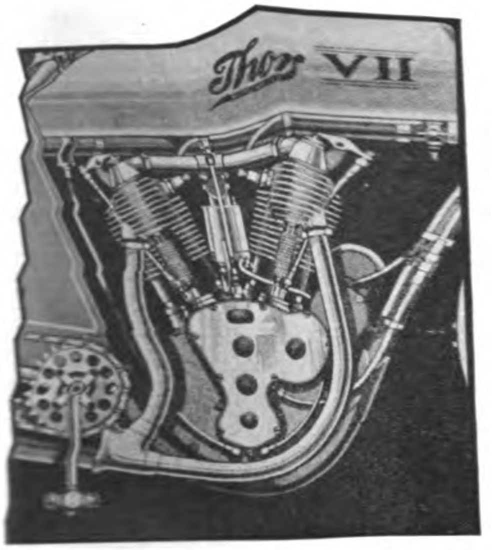
Reading Standard Single.



R. S. 7 h. Twin Motor.



Schickel Two-Cycle Machine.



THOR.

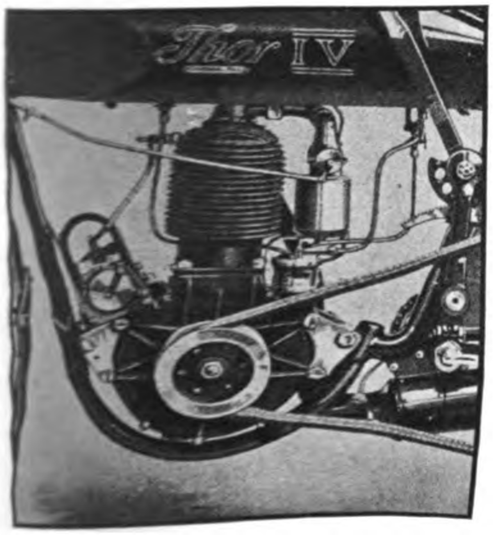
Aurora Automatic Machinery Co., Thor Building, Chicago, Ill.

Models and prices:

7 h. twin	$300
5 h. single	250
4 h. single	175

Bosch magneto on twin and 5 h. single models; 4 h. type has battery ignition. Undergeared chain drive on all models. Camelback frame, truss spring forks, overhead rocker, mechanically-operated inlet valves on two larger models, magneto in front of motor, simplified oil-pump drive, larger and neater tanks, longer handlebars, side guards on front wheel, mudguards, multiple jet carbureter, spring seat post, newly-designed exhaust piping and characteristic white color.

On twin and single 5 h. models, magneto is armored; motors are duplicated, except as to number of cylinders. Tank capacity is 3 gallons of gasoline and 1 gallon of oil. A planetary two-speed gear, fitted into the rear hub and operated in connection with the clutch lever, is an extra, listed at $25, on the 7 h. twin. Multiple disc clutches operated by side lever are fitted to all three models. The angle between the cylinders on the twin is 50 degrees, establishing a precedent in motorcycle construction and enabling the use of a crankcase with great strength at the top and at the cylinder flange seats. Cylinders are mounted at equal angles with the horizontal.



YALE.

Consolidated Mfg. Co., Toledo, Ohio.

Models and prices:

7 h. p. twin	$285
5 h. p. twin	260
4 h. p. magneto single	235
4 h. p. battery single	210

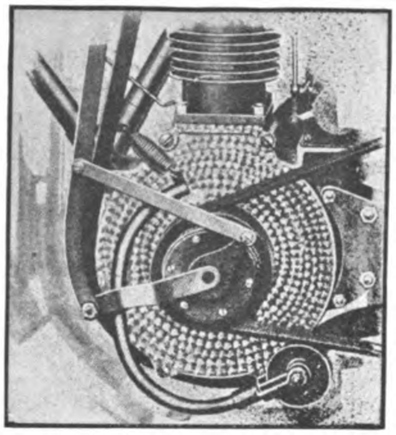
Bosch magneto on all but battery single model. Magneto mounted in front of crankcase on twins and in rear of cylinder on single model. All inlet valves are automatic. Sager type, double plunger spring forks, free-engine clutch operated by hand lever, flat belt drive with hand-lever operated spring idler, three-stem handlebar fastening, wider mudguards, eccentric yoke adjustment for pedalling chain, 2¼-inch tires on all models. Options on V- or flat-belt and coaster or band brake. On the twin cylinders, the cooling flangers are horizontal. Mechanical oilers on twins and gravity lubrication on singles. Distinctive gray coloring with blue stripes on all models. Automatic stand, wider mudguards, with priming cups on 5 and 7 h. models.

Four h. motors have 3¼-inch bore and 3 43-64 inch stroke; 5 h. motor has 2¾ inch bore and 3 43-64 inch stroke. Cylinder dimensions of the 7h. twin are the same as those of the 4 h. singles. Grip control is of the double wire type, with ample movement for spark and throttle. Flat belt is 1¾ inch face, 2-ply water-proofed leather, while V-belt is 1⅛-inch size. Both pulleys are lagged on all models. The free-engine clutch is of the Eclipse type, operated by flat link from the hand-lever. Heitger carbureters are fitted to all Yale machines, and the saddles are either Troxel, Eagle or Mesinger Standard No. 4. An option of either Corbin, Eclipse or Musselman. Wheelbases are 57½ inches and weight 185 pounds. A double spring tandem attachment, complete with saddle and handlebars, is offered at $20 extra.

FOR SIDE-CAR USERS.

THAT the side-car may be comfortable in cold weather is seen to by a fitting developed by an English accessory house in the form of a heater placed on the floor of the side-car body. The heater is a flat metal box with two connections, one by flexible tubing directly to the exhaust piping and the other on the opposite side being the exhaust outlet. The heating medium is consequently the exhaust gas, and the muffler can be dispensed with if desired, as the capacity of the box is such as will allow of sufficient expansion of the gases to reduce the noise of the exhaust. This heater keeps the feet and legs warm and is used in addition to the regular wraps. For riding in cold weather or on cool nights in the spring and autumn some such device is essential, and by such means side-car riding will become an all-the-year-round sport.

Other forms of protection used by our British cousins for protecting the side-car passenger from the weather are front doors on flat dashed attachments, "torpedo" or "scuttle" fronts with side doors, tops and wind-shields. Considering the mild winters over there the passengers are well protected.



Yale Single Motor.

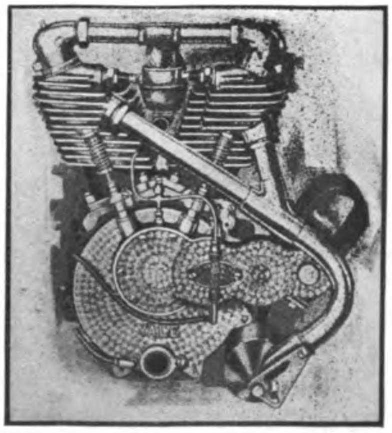
NO DISCOUNT REQUIRED

Chairman Estabrook Points Out That F. A. M. Repair Shop Contract Does Not Demand Bargain Rates.

CHAIRMAN ESTABROOK'S latest registered repair shop bulletin:

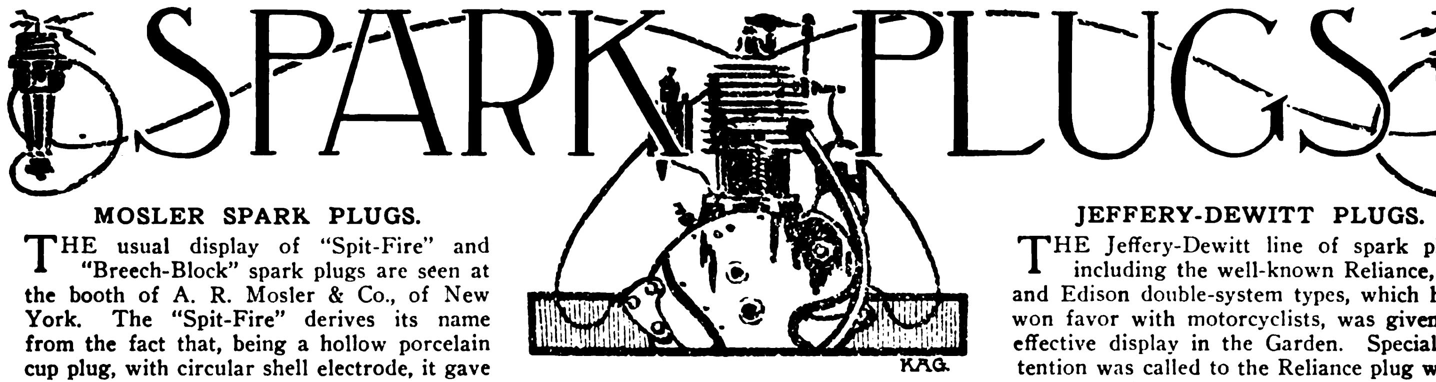
John Steele, 185 Patterson street, Paterson, N. J.; J. B. Quinn, 201 Ridge street, Fall River, Mass.; Whipple & Forman, 51 Genesee street, Auburn, N. Y.; C. J. Mitchell, Temple, Tex.; W. A. Myers, Lycoming Opera House, Williamsport, Pa.; P. N. Thompson, 826 Dodge street, Lake Geneva, Wis.; Sonneborn's Sons, 713 Main street, La Porte, Ind.; Apex Bicycle Company, 12 12th street, Portland, Ore.; Fred Strowbridge, 324 West Dominick street, Rome, N. Y.; G. A. Allen, 44 Church street, Livermore Falls, Me.; Baltimore Gun and Bicycle Works, 336 West Second street, Albany, Ore.; Turlock Cyclery, Hotel Carolyn Building, Turlock, Cal.; Wolverine Auto-Cycle Company, 59 South Jefferson avenue, Battle Creek, Mich.; C. A. Sherman, Middleboro, Mass.; Garrison Motor Company, 454 Monroe street, Memphis, Tenn. Re-issues: Andrew Kraus, 6 Genesee street, Auburn, N. Y.; James Mayo, 222 Penn street, Reading, Pa.; Harley-Davidson Sales Company, Union City, Ind.

For the benefit of repairers who are withholding their registration on account of a supposed 10 per cent. discount formerly required of registered shops, Chairman Estabrook states that the F. A. M. contract does not call for this or any discount. Send your address and the chairman will forward full information.



Yale Twin Engine.

SPARK PLUGS



MOSLER SPARK PLUGS.

THE usual display of "Spit-Fire" and "Breech-Block" spark plugs are seen at the booth of A. R. Mosler & Co., of New York. The "Spit-Fire" derives its name from the fact that, being a hollow porcelain cup plug, with circular shell electrode, it gave a jet of ignited mixture from the cup when the spark passed. The body of the "Breech-Block" plug is formed with three threaded and three blank sectors, and fits into a nipple or false body screwed into the regular engine aperture. The threaded sectors mesh with similar sectors in the nipple when the plug is in place, but when a handle attached to the plug is given one-third of a revolution the threaded sectors on the plug are brought opposite blank sectors in the nipple, allowing the plug to be removed by lifting it clear. By so doing the empty nipple serves also as a priming or relief cup, at the same time allowing the ready cleansing of the plug. Both plugs are made in both metric and English threads and for either battery or magneto ignition.

RED HEAD SPARK PLUGS.

EMIL GROSSMAN COMPANY, 250 West 54th street, New York, makes the "Red Head" spark plugs for motorcycle service. These plugs are noticeable for their simplicity of construction and their ease in dismounting for repair. The cores are porcelain and the plugs are of the two-point type, center electrode and shell point. The hexagons on these plugs are of special dimensions and can best be handled by wrenches put out by the makers, one wrench being used for the core hexagon and the other for the lower hexagon.

BEST SPARK PLUGS.

IN the Best spark plug, shown at the stand of the Best Ignition Company, of 200 West 64th street, New York, special attention was called to the button head of the product which acts as a condenser and therefore permits of the production of a hotter spark than is possible with a single wire electrode. Provision is made for the expansion and contraction of the electrode without causing pressure upon the porcelain, so that danger of breaking is reduced to the minimum. The plug serves equally well for battery or high tension magneto service and can be taken apart and re-assembled quickly.

SPLITDORF SPARK PLUGS.

SPLITDORF "Common Sense" spark plugs for the motorcycle, manufactured by C. F. Splitdorf, 261-65 Walton avenue, New York, are fitted with copper asbestos gaskets and a copper gasket is spun over the threads of the shell against the shoulder, which prevents leakage at that point. The plug is made up of a taper pin or center-piece, around which mica sheets are wound to the required thickness. The center pin is then forced into a bushing having a taper hole and the outer end of the pin is covered with mica washers which are held in place by a nut and washer. The bushing and center-piece are then screwed into a shell having a very small opening into the firing chamber through which the spark point protrudes. The smallness of this opening tends to eliminate sooting. The firm also produces motorcycle coils in four types, long and short; long with two secondary leads for two cylinder motors, and a two-cylinder coil for the twin engine.

JEFFERY-DEWITT PLUGS.

THE Jeffery-Dewitt line of spark plugs, including the well-known Reliance, J-D and Edison double-system types, which have won favor with motorcyclists, was given an effective display in the Garden. Special attention was called to the Reliance plug which is distinctive for its ability to spark consistently when submerged in water. In the firm's special plug for use on motorcycles having magneto ignition the central electrode or insulated sparking point is a solid piece of platinum-iridium instead of the ordinary platinum tip. Cement, nuts, gaskets, etc., are eliminated and compression leakage is prevented by the Jeffery-Dewitt method of baking the electrode in the porcelain.

CHAMPION SPECIALS.

DESIGNED for use with either magneto or coil and constructed with a special regard for the requirements of the motorcycle, the spark plug offered by the Champion Spark Plug Company, of Toledo, Ohio, for single-tracker service has met all the expectations of its manufacturers and users throughout the 1911 season and will be continued in the company's line for the coming year. The company also continues its Champion Misskip detector for locating ignition troubles. This device has glass windows in an insulated body within which the spark is shown. Copper-asbestos caskets and imported cable are also found in the Champion line.

MEZGER SPARK PLUGS.

HAVING perfected a soot-proof spark plug which has met all the expectations of automobilists for some time past C. A. Mezger, inc., of 15 Canal place, New York, is now experimenting with a plug specially designed for the motorcycle. Only the automobile types were on display at the show, but it is announced that the product for the motorcycle is in such shape that it can soon be marketed. It will follow the lines of the standard Mezger plug on a smaller scale.

V-RAY SPARK PLUGS.

V-RAY spark plugs in motorcycle sizes are put out by the New York V-Ray Sales Company, of Syracuse, N. Y. There are four side electrodes and one center one, so that sooting of any one will not effect the others, and consequently the operation of the plug. All packing is internal, and the plugs are self-cleaning.

NEW YORK COIL CO.

NEW YORK COIL COMPANY, 338 Pearl street, New York, makes coils for single and twin motorcycles. The coil for twin motors has the primary leads from one end of the coil box and the secondary from the sides. The single cylinder coil is similarly fitted, but with one secondary lead.

ONE of the most successful road races held in California of late was over 68 miles of fine natural highway between Bakersfield and Delano.

FRAMES, TANKS, PEDALS, Etc.

STANDARD TUBING.

THE tubular parts of a motor cycle in their entirety, as furnished by the *Standard* Welding Company, of Cleveland, O., are mounted on a display board in that company's booth, and attract a great deal of attention. They show very clearly the number of parts supplied to the manufacturers of motorcycles by that company. Other boards have mountings of stock tubing, rims and belt pulleys. A new rim designed to meet the demand for wide tires is also exhibited. It is of much heavier stock and made in two diameters, 26 and 28 inches for 2½, 2¾ and 3 inch tires.

SAGER
MOTORCYCLE TOE CLIP

Standard Pedal; Sager Toe Clip.

STANDARD PEDALS.

THE Standard Company, of Torrington, Conn., has a very extensive display of its products. The Standard motorcycle pedal No. 3, which has rubbers of special design with deep corrugations, giving a firm foothold, of course, attracts most attention from motorcyclists. Here also is seen an extensive display of toe clips, spark plugs, nipples, spokes and an emergency axle. The latter is of three-quarter inch steel, with right and left threads, allowing it to be used on either side; 5-32-inch bearings are used, with dust caps of novel construction.

SHEET METAL STAMPINGS.

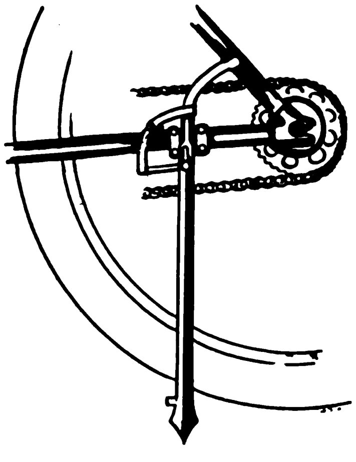
SHEET metal stampings of all kinds were to be found in the attractive display of the Briscoe Manufacturing Company, of Detroit, Mich., in which users of two as well as four wheeled power machines found much to interest them. The firm also markets tools and other products of high grade, but in view of the fact that its plant has been recently equipped with the most modern machinery for sheet metal stamping this department received unusual attention.

CASTINGS FOR THE INDIAN.

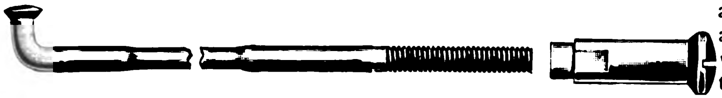
SALES MANAGER FROMME received visitors at the stand of the Manufacturers' Foundry Company, of Waterbury, Conn., and allowed no motorcyclist to depart without learning that the firm supplies castings which go into Indian machines. The company specializes on cylinder castings for both air and water-cooled motors, and does not draw the line at motor boats and aeroplanes.

PEDALS AND PUMPS.

STEVENS & COMPANY, New York City, showed their line of pedals, pumps, and other accessories.



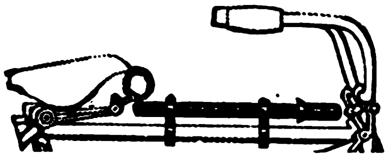
Majestic Stand. Majestic Mfg. Co., Worcester, Mass.



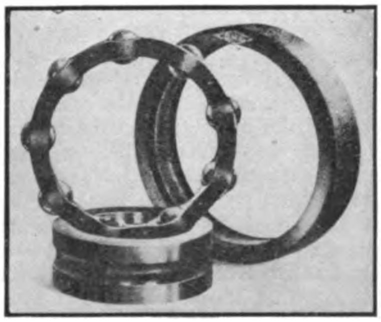
Standard Spoke.

JANNEY-STEINMETZ TANKS.

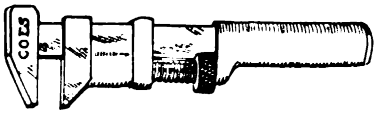
JANNEY, STEINMETZ & CO., of Philadelphia and New York, featured their tank line in the Garden exhibit. The firm has produced gasoline tanks for use on the New Era motorcycles, and is prepared to make them in any shape for motorcycle use. The tanks are made rivetless and of the round end type for general use, but the firm is seriously considering the installation of machinery which will permit it to enter the motorcycle field on a broader basis. A clock faced tire gauge for general use, the product of the United States Gauge Company, of 67 Wall street, New York, was also shown at this stand.



Bridgeport Brass Co., Bridgeport, Conn.



Standard Roller Bearing Co., Philadelphia.



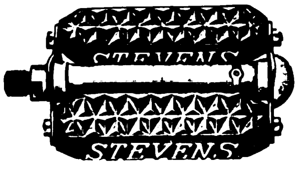
Coes Mfg. Co., Worcester, Mass.

M. M. COAST BRANCH

Los Angeles Agency Will Soon Be Changed to Factory Headquarters, With a Hustling Staff in Charge.

IT is announced that the M. M. agency at Los Angeles, Cal., which has been in charge of Lincoln Holland for some time past, will be changed to a factory branch at an early date, and that arrangements will be made to cover the entire coast territory most advantageously from this headquarters. The branch will be in charge of Lester French, and his assistants will be William A. Smith and Mr. Holland, the former being identified with the wholesale department and the latter with the retail end of the business.

Manager French was graduated in mechanical engineering from Havard and has long been interested in the American motorcycle field. He has written for automobile and motorcycle journals and all his time not actually given up to business has been devoted to furthering the cause of the single-tracker for years past. He acted as manager of the M. M. branch in Buffalo, N. Y., for two years, and produced results which were not overlooked by the company when a man of technical as well as sales experience was needed for the coast headquarters. The change will be made at once.



Stevens Pedal.

WILLIAMS DROP FORGINGS.

DROP forgings of all descriptions, with assorted drop-forged wrench sets as one of the most interesting features, made up the display of J. H. Williams & Co., of Brooklyn, N. Y. At least a dozen different sets made up the wrench exhibit which is designed to meet every emergency in which such a tool might prove of value.

BRAKE LINING.

RAYBESTOS brake lining was the motorcycle feature in the exhibit of the Royal Equipment Company, this product having already won its way to such popularity that the stand attendants were called upon to do little more than call it to the attention of visitors.

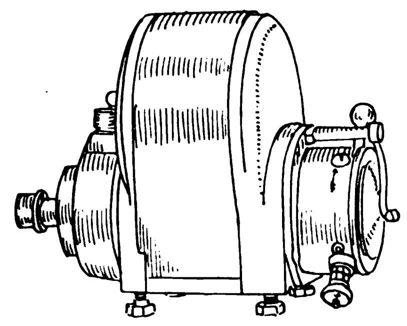
SHAFTS AND GEARS.

GEARING and shafts made up the bulk of the H. J. Houpert display in the Garden, with special emphasis on the gears. The firm, with headquarters at 351 West 52d street, New York, has turned out shafts and gears of incassable steel for a number of the leading foreign and American manufacturers of motor cars, and its plant is capable of meeting any demand made upon it for these products.

J. HARRY SAGER, bicycle and motorcycle spring frame patentee, of Rochester, N. Y., was, as usual, among the show exhibitors.

1912 HERZ MAGNETO.

THE Herz magneto is now constructed with double U shaped magnets, carefully ground and fitted over each other. The side plates of the magnets are also accurately ground, to secure a straight surface for the aluminum side plates, making a dust and waterproof joint. On the inside of the magnets are attached two pole pieces, also accurately ground, and the armature is closely fitted to leave only a minute clearance. With this close fitting armature a very high efficiency of the magnetic lines is obtained, and as a result a very hot spark. At the top and bottom of the pole pieces are fastened metal plates closing up the pole housing to prevent dust or moisture entering and getting between the armature and the pole pieces.



The armature and condenser have been improved, preventing flashes at the platinum points, thus increasing the life of these parts almost indefinitely. On the shaft end of the armature, in front of the secondary contact ring, is a reflector disc to throw off oil or moisture entering from the gear-case to the wall of the bearing-box, and there is also a hole in the base of the magneto to drain off any water or oil that might accumulate at this point.

The platinum points in the contact breaker are of larger dimensions, the old ones being 3 m/m (equal to .115 diameter), whereas the new ones measure 3½ m/m (equal to .139 diameter). The screw itself is also much larger, thus making it much stronger in every way. To facilitate adjustment, the check-nut holding the screw is extended further out from the steel block and a recess is milled out in the base, right below this hexagon nut, to permit the free use and operation of the wrench. There is also a gauge plate provided and attached to the flat wrench, to be used in adjusting the points to obtain the correct gap. In addition to the flat wrench the company supplies a socket wrench which fits to the flat end of the platinum point screw. This, in connection with the flat wrench, simplifies the adjustment of the points. The sight hole drilled in the contact-breaker base, right behind the platinum points, instead of being open as heretofore, is now protected by a mica disc. This hole, of course, is provided to see if the end surfaces of the points are clean and bear flat and close to each other.

The armature runs on high-grade ball bearings which will retain sufficient lubrication in themselves to last for an entire season. The bearing boxes now fit over a shoulder extending from the side plates, securing a perfect alignment of the armature, and prevent the binding of same against the pole pieces.

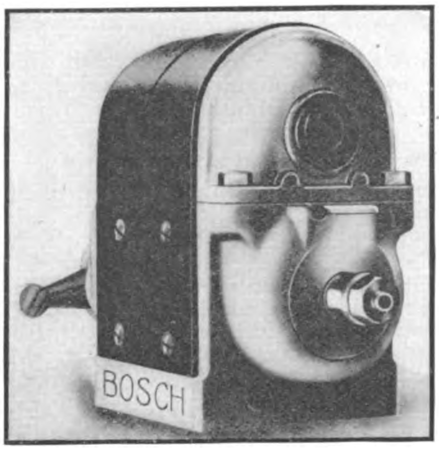
TWO BOSCH SPECIALS

Magneto Types ZE1 and ZEV for Motorcycles Are Now So Enclosed that They Defy the Elements.

MOTORCYCLISTS who visited the Bosch stand were shown types ZE1 and ZEV of the company's magnetos, designed for use on the motor two-wheeler and embracing the standard Bosch principle as regards true high tension and having the same characteristics as the enclosed automobile types exhibited at the stand.

The type ZE1 eventually will be supplied for all single-cylinder motorcycles which employ the DA2 type, while the ZEV type will be supplied for those twin-cylinder motors which now employ the DAV type. The principal dimensions correspond identically in each case so that one type may be replaced by the other without alteration to the magneto or the base plate.

Although previous types of the Bosch magneto have been practically water-tight, in the sense that rain and mud would do them little harm, the Z types have been absolutely enclosed so that the operating parts are thoroughly protected from the elements and will work satisfactorily with water actually running over them. The water-tight or enclosed construction is obtained by fitting to both ends of the magneto a new type of end plate. At the driven or shaft end of the machine the end plate is divided into halves; the lower portion carries the ball bearing for the shaft, while the top carries the carbon holder.



Bosch Armored Type.

This carbon holder, instead of being more or less exposed, as in the DA2 and DAV types, is now contained in the space under the arch of the magnets, and the secondary cable, in the case of the ZE1 type, enters through the center of the end plate and is held in position by a screw from the inside of the end plate. When this cable is in position the entire terminal is absolutely water-tight so that there is no possibility of a short-circuit occurring, even though the magneto be drenched with oil or water. It is only necessary to remove the two screws which hold a portion of the end plate together, in order to gain access to the carbon holder or cable terminal.

At the contact breaker end of the magneto the end plate is in one piece, extending from the base of the top of the magnets. Felt packing is dovetailed into both end plates, and thus absolutely tight joints are assured. The space between the magnets is treated in a similar manner, and the lubricators, or oil wells, are also covered carefully, so that the entire construction is such as to make the ingression of water, oil or dust impossible.

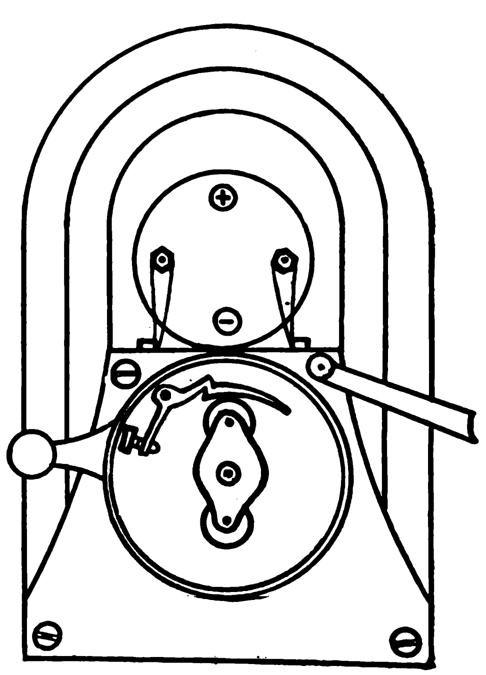
The short-circuit or switch terminal is also arranged with ingenuity, so that when the cable is in position there is not the slightest possibility of the ignition being accidently cut off by water or mud. The contact breaker follows the usual line in regard to design. The end plates referred to above are cast of aluminum alloy, which gives the instrument a neat, workmanlike appearance.

EISEMANN MAGNETOS.

EISEMANN - LAVELLETTE MAGNETO COMPANY manufactures types ED and EF magnetos for single or twin cylinder motorcycles, the first having one set of magnets and the second two sets. The twin machines are made for either 45 or 90-deg. motors, and the ED model is also made in aluminum, for lightness, weighing less than eleven pounds.

"NO-LAG" MAGNETO.

AMERICAN Circular Loom Company has brought out the "No-Lag" magneto, for use on motorcycles of one or two cylinders. The current generated on the armature is alternating, and is then transformed in a separate coil carried within the arch of the magnets and taken off as secondary direct current. The contact breaker by its construction in the two-cylinder model does away with the use of stationary segments, as in this machine the contact-breaker is stationary and the rotating piece is formed to give the requisite break intervals as required by the angle between cylinder explosions. Dual ignition is effected by merely connecting the leads of a set of batteries to posts on the coil, when the actual contact breaker of the magneto is used to effect the timing. The two-cylinder magneto is known as the M. A. V. type.



"No-Lag" Magneto.

SPLITDORF MAGNETO.

C. F. SPLITDORF, New York, is showing the model U magneto for single cylinder motors, and V 2 for both 42 and 45 degree twin cylinder motors, in which are featured a centrifugal circuit breaker, a contact roller with changeable surface, a two-piece armature, rendering any replacement a simple matter; ample exterior insulatory surfaces, reducing probability of short circuit by mud or water, and alternative position of brushes to accommodate different types of twin engines. Both models are designed to rotate at one-half engine speed. The two *models* are identical in appearance, following the general adopted lines of high grade magneto exterior construction, two U-shaped magnets mounted on bronze base, with armature mounted on ball bearing shaft revolving between poles of magnets. The armature is of the usual H type, but is made in two parts, the joint being in the center; the high and low tension windings are assembled on an insulated collar, the whole being placed on the shank of one part of the armature. The other shank is then inserted, and the entire construction is secured by bolts fastening the armature together.

The contact breaker is fastened to and revolves with the armature shaft. By the arrangement of the breaker arm, its operation is performed almost entirely by centrifugal force, thus obviating much dependence on springs, the breaker arm is also provided with four wearing surfaces, so that when one is worn out, by turning the roller with the fingers a new surface is brought into action. By partially cutting away one side of the armature shuttle wing, brass segments being fitted to preserve the balance, perfect synchronization of firing a two-cylindered engine is obtained. The timing arrangement permits of starting the machine at a walk, while the advance (20 or more degrees if desired), is ample for quite high speeds.

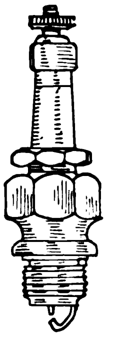
THE MARBURG LINE..

ALL sizes of the latest type of Mea magnetos, handled in the United States by Marburg Bros., Inc., Broadway and 58th street, New York City, were shown at the Garden Show and will also be exhibited in Chicago. During the past year several improvements have been made in the general design and construction of the Mea machine, the most striking of which to the casual observer is the method employed to protect the magneto under all weather conditions. Several forms of Mea magnetos are now entirely enclosed, and the hardest downpour of rain does not endanger their efficiency. For 1912 the Mea is produced in the dual type for all sizes.

In addition to the Mea line of magnetos Marburg Bros. exhibited S. R. O. ball bearings and Marburg-Hagen automobile springs. The company which produces the former is credited with operating in Switzerland the oldest factory for the manufacture of annular ball bearings in existence.

CARBON REMOVERS.

FOR motorcyclists as well as other motor vehicle users is provided the "Wonder Worker" line of carbon removers, engine finishes, belt compound, magneto oil, and valve grinding compound, the product of the Hall-Thompson Company, Hartford, Conn. The "Charter Oak" oils for air-cooled motors are also specialties of this company.



"Red Head."

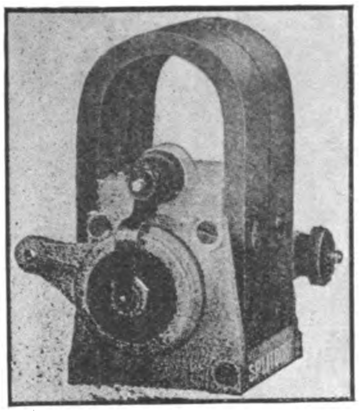
Pittsfield Coil.



Splitdorf Magneto.

LUBRICANTS

THE VACUUM OIL LINE.

MOBILOIL "B," with heavy body, is the special offering of the Vacuum Oil Company, of Rochester, N. Y., for motorcycles. It is prepared especially for air-cooled gasoline engines, holds up compression well under heat, leaves a minimum of deposit and has given many motorcyclists entire satisfaction from a standpoint of economy.

HAVOLINE OILS.

IN the Havoline oil line, marketed by the Havoline Oil Company, 17 Battery place, New York, is a special lubricant for motorcycles, prepared to meet the requirements of the motor two-wheeler in all kinds of weather and put up in cans of a handy size. Tour books, each containing twenty routes from principal cities of the country are being prepared by the company and visitors to the Havoline stand in the show received mailing cards with which to make application for the touring booklets as they are desired.

GRAPHITE LUBRICANTS.

"OILDAG," a compound of deflocculated graphite for mixing with lubricating oil, held the attention of motorcyclists at the stand of the International Acheson Graphite Company, of Niagara Falls, N. Y. When thoroughly mixed with the lubricant "Oildag" is credited with imparting new snap to the motor, reducing oil and gasoline consumption, increasing compression and eliminating plug and carbon troubles. It is supplied in condensed form for mixing with 1, 5, 10 or 50 gallons of oil. The firm also makes "Gredag" lubricants, blends of Acheson graphite and high grease, for general motor and transmission use, and a number of other lubricating products with graphite as a base.

TEXACO LUBRICANTS.

TEXACO oil, shown by the Texas Company, of Houston, Tex., and New York, has been used to good effect in motorcycles, being credited with obviating a number of common troubles. It is not inclined to pit cylinders or corrode valves and holds sufficient body at the temperature of the cylinder to give the best possible compression. It is put up in one and five-gallon cans with special pouring spout.

E-Z-WAY LUBRICANTS.

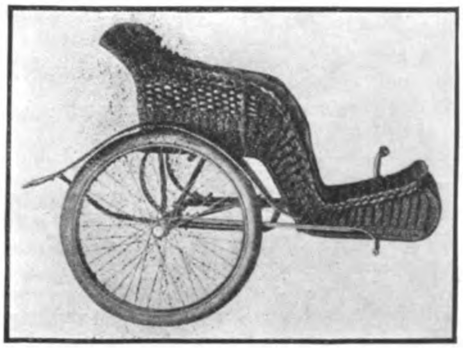
ONE of the offerings of the E-Z-Way Motor Grease Company, of 116 Broad street, New York, is a combination grease can and gun, the grease being forced from the spout in a flat ribbon as a patent handle is turned to press the contents of the can to the end. It is argued that this system affords greater economy than any other.

MOTOROL FOR MOTORCYCLES.

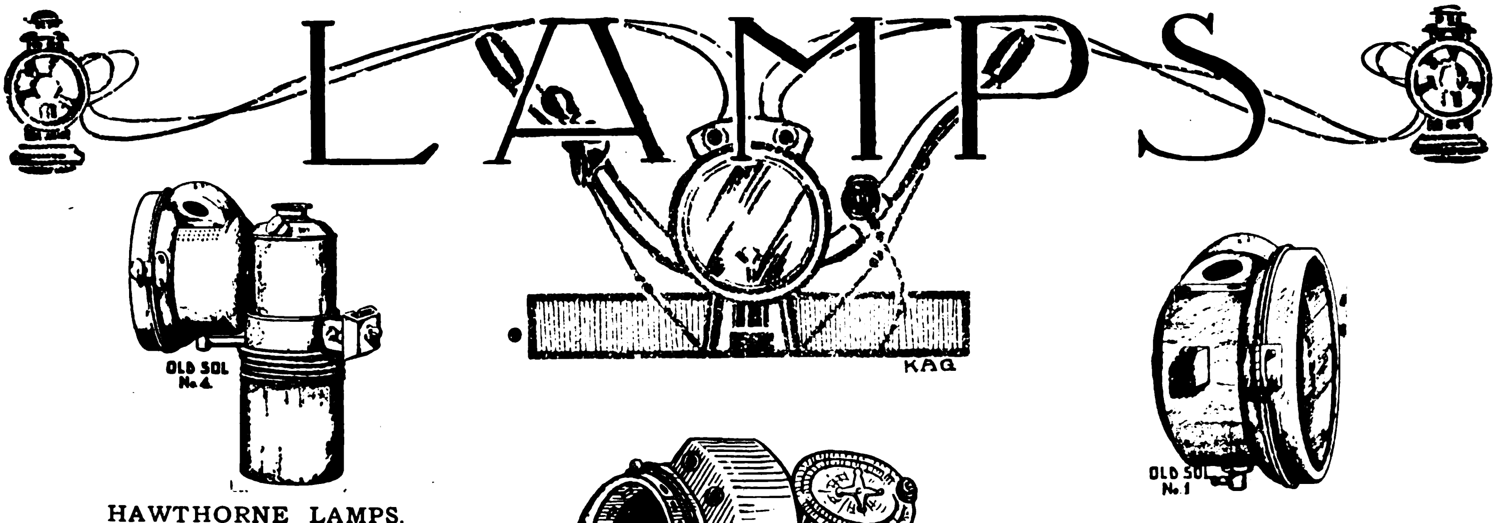
MOTOROL, the product of the New York and New Jersey Lubricant Company, was the feature of motorcycle interest in the firm's show exhibit. It is credited with unusual lubricating efficiency and freedom from carbon. Tests have also demonstrated its economy.

MAJESTIC SPECIALS.

THE Majestic Mfg. Co., of Worcester, Mass. represented by C. Darling and T. Crabtree, has located its show headquarters at the Ascot Hotel, diagonally across from Madison Square Garden, where motorcyclists who are interested in the firm's line of specialties are being cordially received. Of unusual interest is the company's Majestic sidecar which has made rapid strides in popularity of late. It is stanch in construction without being cumbersome, and combines comfort with a proper regard for mechanical makeup. A tandem attachment of new design is also being marketed by the company, and a tubular luggage-carrier, combining lightness with strength and unusual carrying surface, is another offering. The firm includes in its line the Majestic belt fastener, the imported Wata-Wata belt and other motorcycle specialties. Mr. Crabtree also represents the Standard Specialty Co., which offers the Standard siren and belt fasteners among other specials for the single-tracker.



Majestic Side Car.



HAWTHORNE LAMPS.

"OLD SOL" lamps, produced by the Hawthorne Mfg. Co., of Bridgeport, Conn., are unchanged in style from last season in the types numbered from 1 to 4, except that lamps 1 and 2 (with separate generator), are of heavier gauge brass and have the front glass held in place by a bolted-in sash rim. Lamps 3 and 4 (self-contained generator type), are also of heavier gauge brass and have specially reinforced shoulders to support the lantern on the upper part of the generator. The bracket bands are now made from steel stampings instead of brass castings as formerly; in this way the same brackets will serve for lamp 3 or 4, it being possible to attach either by simply changing the bracket bands.

Generator No. 5 remains the same in form and carbide capacity, but the bottom part is now clamped to the upper section by side bolts furnished with "optical" screws of large diameter. The new models are No. 8, listed as the largest and most powerful motorcycle lamp manufactured. A small separate generator lamp corresponding in size to "Old Sol" No. 3, a tail lamp, an improved self-contained bicycle lanmp and a separate generator carriage lamp. No. 8 is credited with projecting a light of about 1,500 candlepower.

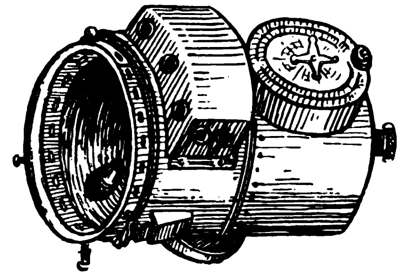
A feature of the "Old Sol" line is the series of four brackets which are used in pairs so that they will attach lamps 1, 3 or 8 to any make of motorcycle.

SOLAR LAMPS.

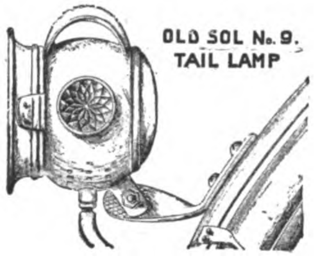
REQUIREMENTS of the motorcyclists have not been overlooked by the designers of the Badger Brass Company's comprehensive line of Solar lamps and several types to interest the owner of a power two-wheeler were seen in the Garden Show. Solar lamps are of heavy-gauge, one-piece brass, and are fitted with a special lens and a reflector which has shown remarkable efficiency. Although designed primarily for long and dependable service these lamps sacrifice nothing in appearance. They are supplied with brackets for fitting to any make of machine.

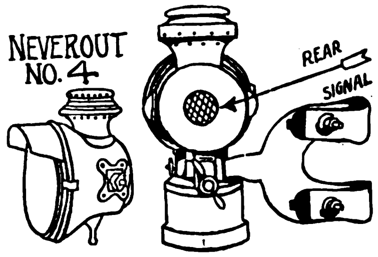
"NEVEROUT" LAMPS.

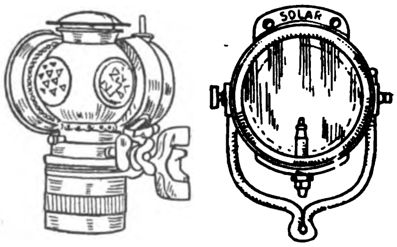
THE "Neverout" motorcycle oil lamp, the lamp that burns for ten hours with one filling and shows a red rear light, made in gun-metal, brass or nickel finish, and equipped with a patented glass covered reflector of German silver, is burning itself into prominence at the exhibit of the Rose Manufacturing Company, of Philadelphia.



Motor Car Equipment Co. Combined Lamp and Generator.







HANDIN TO BE REFEREE.

J A. HANDIN, sales manager of the Aurora Automatic Machinery Company, manufacturers of the Thor, is understood to be slated for referee at the Chicago Riverview Stadium Motordrome for the coming season.

LAMPS, HORNS, SPARK PLUGS, ETC.

PRACTICALLY all accessories needed by the motorcyclist are carried by the Motor Car Equipment Company, 55-M Warren street, New York, in standard styles and at attractive prices. A feature of the firm's lamp display is the new combination headlight and generator, which is almost as compact as the lamp alone in former patterns. The generator is coupled to the lamp in such a way that the apparatus appears as one piece, giving compactness and a good appearance.

SPACKE MOTORS.

THE F. W. Spacke Company, of Indianapolis, Ind., has on exhibition a complete new line of De Luxe motors in four sizes, 4 h. p. single, 5 h. p. single, 7 h. p. twin and the 9 h. p. twin special. The latter attracted particular attention because of its unusual size and its possibilities for developing as high as 12 horsepower. The noteworthy improvements on all of these motors are the one piece crankshaft, one-part crankcase with cover, improved cam and magneto drive, oil-tight motor, positive oiling system, large valves, reduced number of parts, large ball bearings mounted in steel lined pockets, and simplified frame fastening.

The one-piece crank-shaft is claimed to eliminate the dangerous tendency to spring in these parts. In the valve arrangement both valves are arranged in opposed positions in one pocket, thus reducing the waste combustion chamber to a minimum and assuring full efficiency for the motor. Further, a free air passage is provided between cylinder and valve chamber, a point which helps to keep the motors much cooler in operation. Both valves are mechanically operated, the inlet valve being controlled by a vertical push rod and overhead rocker arm.

FRANKLIN DIE-CASTINGS.

DIE-CAST bearings for motor shafts, big-ends and for gear-box shafts are some of the regular foundry work of the H. H. Franklin Manufacturing Company, Syracuse, N. Y. This firm makes die-cast distribution case covers and timer and magneto-train case covers for a number of the larger motorcycle manufacturers, as well as oil-pump casings for positive feed lubrication systems on air-cooled motors (Yale, Indian).

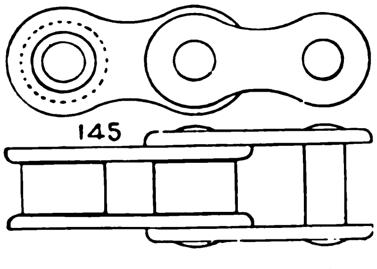
BELTS and CHAINS

DIAMOND CHAIN.

FINDING that its special chain for motorcycle service has met every requirement the Diamond Chain & Mfg. Co., of Indianapolis, Ind., is continuing it without change for 1912. This chain is one-quarter of an inch wide, with pitch of five-eighths of an inch, and its ultimate strength is rated at about 3,000 pounds. It is made up with hard rivets, full polished blue sides with reamed holes and polished, straw-tempered hard rollers with steel bushings. It is listed as No. 150 in the company's output.

WHITNEY CHAINS.

WHILE a new type of silent chain was shown by the Whitney Manufacturing Company, of Hartford, Conn., for other than motorcycle use, the transmission agent for motor two-wheelers remains unchanged for 1912. Despite this fact the motorcycle chain was not the object of least attention in the firm's display of its comprehensive line at the show.

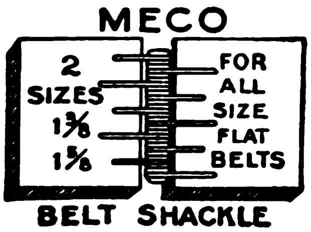


HUDSON BELTING.

THE Hudson Belting Co., of Worcester, Mass., has developed a "No-Stretch" flat motorcycle belt which is guaranteed to be waterproof as well as stretchless. Having perfected the product the company decided to offer an extra inducement in another direction for 1912, and the belts are now sold at a reduced price, the money-back-if-you-want-it guarantee still holding good. One of the company's "No-Stretch" belts recently finished 6,280 miles of running through all kinds of weather without having caused trouble.

MECO BELT FASTENER.

ONE of the specialties being featured by the Motorcycle Equipment Company, of Hammondsport, N. Y., for 1912, is the Meco Belt Shackle. This is a hinge-joint, wire hook belt connection adaptable to a flat belt of any width. It is only necessary to insert the end of the belt between the teeth of the fastener and drive in the prongs flush with the belt surface. The connection may be attached on the road without tools. It is guaranteed not to pull out, tear the end of the belt or make a noise when passing over the pulleys. The fasteners are sold at 25 cents for a box of three, or 75 cents for a box containing a dozen. The Motorcycle Equipment Company has the exclusive rights in the United States.



WHITE STRIP BELTS.

THE White Strip V belt is the latest addition to the motorcycle accessories manufactured by the Chicago Belting Co. While the firm has made V belts for some time, it has only recently incorporated the White Strip feature in its V belting, and the new belt has many new points of merit that commend it to the motorcyclist. It combines strength and flexibility and at the same time presents a great area of friction surface to the pulleys. Its distinctive feature is the construction of the lugs or squares of leather riveted on the inside of the belt. These lugs are cut with the V inverted so that in rounding the pulley the lugs interlock, presenting a perfect friction surface to the sides of the pulley grooves.

The White Strip referred to consists of specially prepared material, the tensile strength of which is over three times that of the best oak tanned leather, 3/16 inch thick. In a recent test the breaking strain was shown to be 19,000 pounds to the square inch of area; the breaking strain of 3/16 inch oak leather is about 6,000 pounds.

CONTINENTAL-ERIE TIRES.

CONTINENTAL-ERIE motorcycle tires are made in the anti-slip or studded type of tread only, the tread being of unusual thickness and so constructed as to withstand severe usage. The fabric in these tires is made from long staple cotton, and is exceptionally strong. Special care is taken to have tire beads fit the rim perfectly, and all the tires are made with the improved flap shown in the illustration. Continental-Erie motorcycle tubes are made on the same lines as the firm's inner tubes for automobile service, being of the laminated type—made up of several distinct plies—and strongly reinforced at the valve base. The tubes are seamless throughout, and are made either endless or with butt end.

The Continental-Erie motorcycle grip is made with an inner lining of fabric throughout, so that it is impossible to break the grip off at the end of the bar. The use of the fabric also permits of utilizing a softer and more resilient rubber which reduces hand strain. The firm also produces tire repair sleeves, inside vulcanized patches and blow-out patches.

UNITED STATES TIRES.

THE main attraction at the attractively decorated booth of the United States Tire Company was the new studded tread United States Tire. This is the first time that a strictly "United States" tire has been seen, as heretofore that company has been showing the G. & J., the Morgan & Wright, etc. Another specialty at the exhibit was the Corrugated Bailey Racing and Board Track tire. A point that the company was impressing on the visitors was the fact that over forty per cent. of the motorcycles shown at the Garden were equipped with United States tires, which are all made now in the Indianapolis factory.

WHITTAKER TIRE CHAINS.

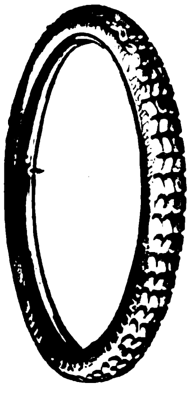
WHITTAKER motorcycle tire chains are made up with side linkings of the Triumph pattern and cross chains of German steel, bone hardened and connected to the side chains with loop-end hooks. They may be attached to nearly all standard wheels. The sizes are 26 by 2½, 28 by 2½ and 30 by 2¾ inches, the price in each case being $3. The chain, which is the product of the Whittaker Chain Tread Co., 12 Pearl street, Boston, Mass., has given excellent service under road tests.

SCHRADER TIRE GAUGE.

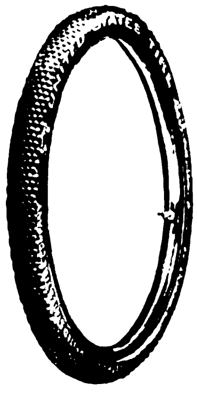
THE Schrader Universal tire valves, the universal equipment for motorcycle and bicycle tires, and the Schrader Universal Tire Pressure Gauge, which actually registers at all times the amount of air pressure in tires, are attractively displayed at the booth of A. Schrader's Son, Inc., of New York.

TINGLEY REPAIR OUTFIT.

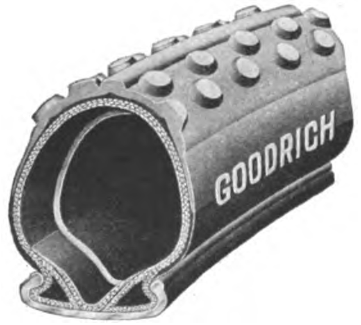
AT the stand of Charles O. Tingley & Co., of Rahway, N. J., there was an unusually large display of automobile and cycle sundries, special attention being given to the firm's tire solder, patches, cement, blow-out patches and vulcanizing fluid. For the coming season special stress is being placed upon the advantages of the Tingley tire solder, a compound of recent marketing. It may be used for tube repairs of almost any size and nature.



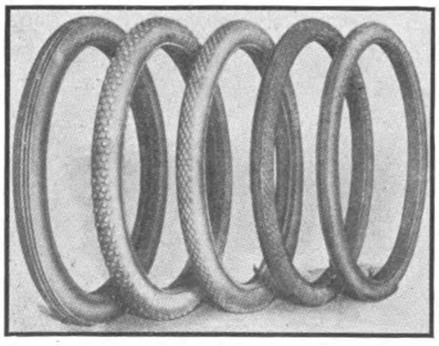
U. S.



U. S.



Goodrich Studded Tread.



The Goodyear Quintet.

GOODRICH THREE-INCH TIRE.

THE illustration shows the new Goodrich White Tread 3-inch motorcycle tire. It is made with four plies of fabric and the toughest material that can be secured. The heavy service required of motorcycles to-day, with larger machines, more powerful engines and extra loads, demands larger tires, and the 3-inch style has been brought out to meet that need. The larger size makes easy riding and proves more economical in the long run.

The Goodrich 3-inch tire may be had in either the corrugated tread or the new large stud tread, with the center rib. This center rib reduces the wear on the studs, gives more rubber in the tread, makes steering easier and riding smoother than with any other studded tread. Naturally, the Goodrich Tough White Tread is adhered to.

The new tire is 29 x 3 inches, single clinch only, and will fit a 28 x 2½ rim, provided the mudguards give sufficient clearance.

AJAX NON-SKID TIRE.

RECTANGULAR beveled corrugations individualize the tread of the Ajax non-skid tire, which is produced for motorcycles as well as automobiles by the Ajax-Grieb Rubber Company, with general offices at Broadway and 58th street, New York, and a large factory in Trenton, N. J. The tire's non-skid properties are evident at a glance, and its extra heavy construction points to mileage results of the kind that will give the user economy and the manufacturer prestige.

PENNSYLVANIA TIRES.

PENNSYLVANIA tires of the vacuum-cup tread type, having rendered as satisfactory service on motorcycles as on automobiles and bicycles, attracted marked attention from visiting motorcyclists at the show stand of the Pennsylvania Rubber Company. The company's tire for motorcycles is made to the same standard of strength as its automobile casings, and, being in its third season, it no longer lacks proof of its service qualities. In addition to providing a non-skid tread the vacuum cups afford a heavy wearing surface, making it possible for the company to market them with a guarantee of 4,000 miles. This tire is unchanged from its construction of last season.

STEVENS PUMP LINE.

STEVENS Standard motorcycle pedals and Bluemel's celluloid frame pumps—the Sterling, with embossed handle and the trade-mark in gold, 15 inches long and ⅞ of an inch in diameter; the Reliable, embossed handle, 15 inches long and 11-16 of an inch in diameter—are shown in a tasteful display at the booth of Stevens & Co., of New York.

NO DIAMOND CHANGES.

THE Diamond Tire Company is showing particularly the Corrugated and the Bailey Tread tires, no new features being apparent.

GRAY SPECIALTIES.

"SELBST-GEMACHT" tire compound is a product of the Gray Specialty Company, of Newark, N. J. This compound permanently repairs stone cuts, punctures, dig-outs, and is self-vulcanizing. It is applied by merely filling the cut, kneading in the compound thoroughly, and allowing it to set for a short time

THE YOUNG SPECIALTIES.

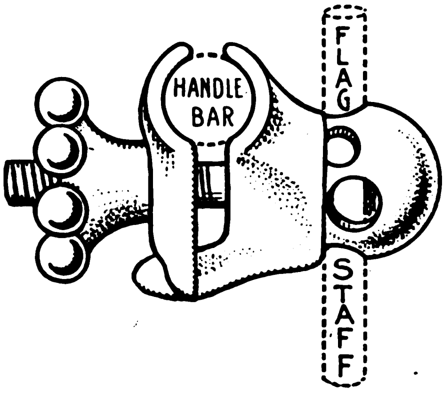
RUBBER repair accessories, oils, greases and belt dressings were featured in the comprehensive exhibit of O. W. Young, of Newark, N. J. The full Young line as shown in former years was on display, with several innovations in cements, vulcanizing compounds and patches for emergency tire and tube repairs.

ROLLER BEARINGS.

BANTAM Anti-Friction Company, of Bantam, Conn., is making roller bearings for motor crankshafts and gear devices. The bearings are of the shell and cage type, the rollers being cylindrical. The Chadwick automatic road guide, recently described in these columns, is also produced by this company.

NOONAN LAMP BRACKETS.

THE A. S. Noonan Tool Works, Rome, N. Y., makes a specialty of a lamp bracket to carry any size of automobile or motorcycle lamp, attached by clamps to the handlebar. Two brackets are used for carrying a large headlight in any position on the bars. A pennant holder for carrying flags anywhere on the machine is also featured. A pillion seat of spring steel frame with footboard and leather cushion and back is another novelty for 1912.



Noonan Pennant Carrier.

COMBINATION WRENCH.

A VALUABLE addition to the list of combination wrenches is the "Hercules," for which the American Thermo Ware Company, of 16 Warren street, New York, has the sole sales rights in the United States and Canada. It is unusually compact, being 4 inches long when closed, and 7½ inches long when open. It weighs 10½ ounces, and affords openings of all sizes from the tank key to three-quarters of an inch. The wrench is made of special tool steel carefully hardened. The blades are held together by a rivet and cannot get lost; each blade opens independently after the manner of a jack-knife blade. Considering its size and weight, the "Hercules" is one of the most valuable tools on the market for the motorcyclist.

THE KELLOGG LINE.

AIR gauges, grease guns, hand pumps, primers and valve grinders are among the garage accessories of interest to the motorcyclist as displayed by the Kellogg Manufacturing Company, of Rochester, N. Y.

SPEED INDICATORS

STANDARD SPEEDOMETER.

FOR 1912 the Standard Thermometer Company, 65 Shirley street, Boston, Mass., has produced a new form of flexible shaft drive to be used in connection with its computing instrument for motorcycles. The improved shaft is neater in appearance, smoother in operation and is not likely to be damaged. The flexible shaft runs through a rigid tube for about half the distance, this tube being held at either end so that it cannot shift its position, although it allows the spring fork full action. The bevel gear at the lower end of the tube is provided with a self-contained ball-bearing. The flexible tubing in the new form extends from the upper end of the tube to the instrument and needs no binding as it is only long enough to permit of free action of the fork. Minor changes in the speedometer itself render it more durable and less susceptible to vibration than in the past.

VEEDER CYCLOMETERS.

THE full line of Veeder cyclometers are being shown at the booth of the Veeder Manufacturing Company, Hartford, Conn. The new motorcycle bracket for the standard Veeder motorcycle trip cyclometer is adjustable, allowing for its attachment to all makes of motorcycles. The bracket is made to project forward so as to clear the truss forks used on many of the machines.

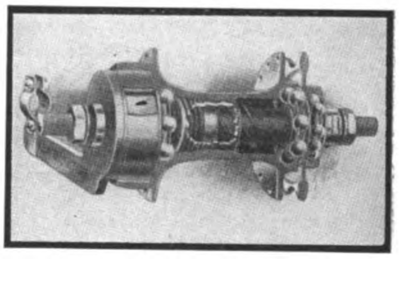
WARNER CYCLE-METER.

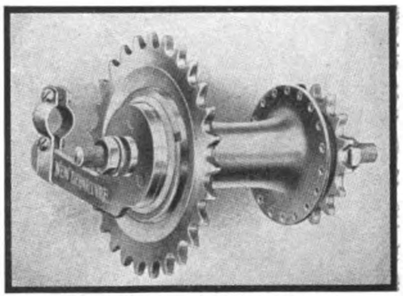
ONE of the most attractive offerings at the stand of the Warner Instrument Company, of Beloit, Wis., was the Warner Cycle-Meter which is constructed on the magnetic principle demonstrated to such good effect years ago in the Warner Cut-Meter and in the Warner computing instrument for motor cars. It is unchanged from the type which gave general satisfaction last year.

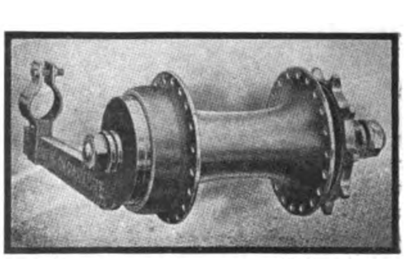
STEWART SPEEDOMETERS.

THREE types of motorcycle speedometers for 1912 were shown by the Stewart & Clark Manufacturing Company, of Chicago, listing at $15, $20 and $25. The first, cataloged as model 43, has a 3-inch, 60-mile dial, with 100,000-mile season odometer, but no trip register. The second instrument has the same sized dial, 75-mile speedometer, 100,000-mile season odometer and 100-mile trip register. It can be reset to any tenth of a mile. The $25 instrument has a 90-mile speedometer, odometer and trip register, as in the type last described, and can also be reset to any tenth of a mile. The large dials, plain figures and steady pointer make the Stewart products especially adaptable for motorcycle use. They are driven from either the front or rear wheel.

NEW DEPARTURE 1912 BRAKE TYPES.



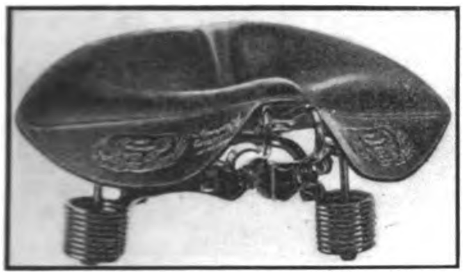




SADDLES TOOL BOXES Etc.

MESINGER SADDLES.

A FEATURE among the motorcycle saddles shown, and typical of Mesinger construction is the shock absorber, now in use for three years. So successful has this device been that it has come to be the chief distinction by which the product of the H. & F. Mesinger Mfg. Co., of 1801-7 First avenue, New York, is recognized. Its triple function may be stated as: First, damping any rebound and shock due to rough riding; second, reduction of side-sway to a minimum under all conditions; third, steadying the action of the compound springs in the center, which is of special importance in preventing crystallization and breakage of the springs.



Front View of Mesinger.

Changes in saddles of the Mesinger make for 1912 are in the material used only, contributing more than ever to greater safety and structural strength. All spring parts are of steel, no castings of any nature being employed for this season's product. On the standard type saddle, the pommel has been made narrow. Full steer-hide with extra re-enforcements is used for the seat. The cavalry type saddle, a veteran of ten years' service, now includes the number 4, specially recommended for long distance riding, and this particularly typifies a very high standard in saddle construction. Only skilled artificers can produce the seat top, and the latter is well padded with curled hair. The racing type of saddle is the only one made especially for such service, and has been in use by a large number of professional and trade riders in competitions in America and Europe.

The illustrations give front and quartering views of the cavalry types, and show the curved front spring, the post clamps, the hollow in the top and the narrow pommel very distinctly.

THE NEW PERSONS.

AFTER exhaustive experiments and tests the Persons Mfg. Co., has perfected the new motorcycle saddle which it will feature for 1912, and riders who saw it for the first time at the Show were impressed with its possibilities.

It will be noticed that the customary front spring has been eliminated, which makes it possible to secure a much lower saddle position. This is found to be a very important and desirable feature by all riders of experience, as the center of gravity is lowered, thereby minimizing the liability to skid, besides making it possible for even a short limbed rider while in the saddle to place his feet firmly on the ground to balance his machine. A one-piece, high-arched bridge of drop-forged steep is used in the rear construction, giving ample clearance to prevent bumping the mudguard, in view of the low position obtained forward.

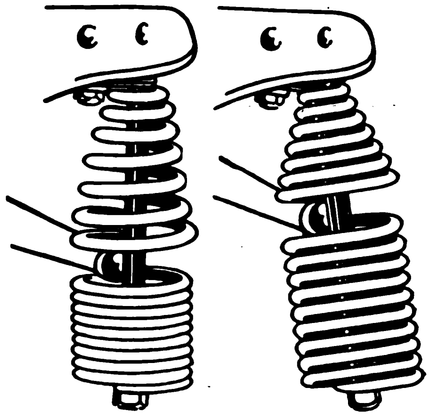
While this new saddle will be known as "Model R," signifying "Rigid Front," it will be noted that the pommel is hinged to the trusses to properly compensate at this point for the spring action at the rear of the saddle. On account of this "Rigid Front" construction the possibility of side-sway is overcome, thus giving the rider a firm, though springy, and comfortable seat.

More strain is perhaps thrown on the pommel of a saddle of this type than when a front spring is used, but this feature is amply overcome by the practice of the Persons Co., in using solid, copper, hand-set rivets at the pommel, and as the leather tops are cut from pure oak tanned, extra heavy, unsplit, steer hides, specially tanned by the makers for this purpose, the danger of tops pulling loose at the pommel is eliminated. The front spring construction can also be supplied if desired. This type will be known as "Model S." Both styles for 1912 have wider and deeper tops than were used in the 1911 model, giving the rider a seat of ample area.

The arrangement of the rear springs is the same as heretofore, the trusses being of cold rolled steel and the clamp entirely of drop steel forgings.

TROXEL SADDLES.

COMFORT, dependability and long life are characteristics of all of the products of the Troxel Manufacturing Company, of Elyria, Ohio, and these qualities are even more strongly emphasized for the 1912 season. The new model for the motor two-wheeler has no nose-coil, resulting in a lower saddle position and giving a clean appearance. The nose is narrow and there is more seating room, with superior riding qualities. The spring action is new and bottoming is impossible; the connecting yoke on the plungers is in one piece and hinged at the top, allowing the yoke to stay in the center of the springs at all times.



Troxel Spring Construction.

The brace between the side trusses in the rear is channeled and rounded, enabling the machine to be easily picked up and handled. The clamp has been made much stronger and four rivets have been placed together on the cantle-back holding the top to the cantle. Ten rivets are used in all. The adjusting bolt is flat on two sides and is operated from the front by running a nut up on a screw. The flat sides also prevent twisting of the top at the nose.

Another Troxel novelty is a flared-end mud-splasher, the sides being turned over the sides of the wheel and being four inches deep. Another saddle model has the same leather and springs as the new one, but measures 13½ by 15½ inches and is adapted for touring. A steel frame tool-box for top bar mounting is another novelty, the steel frame keeping the box to shape and effectively protecting the tools.

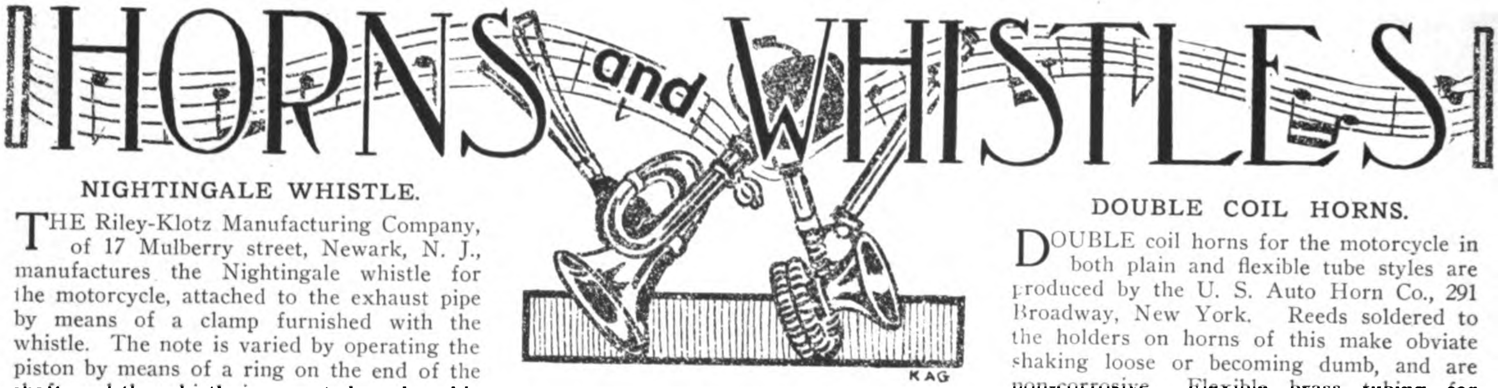
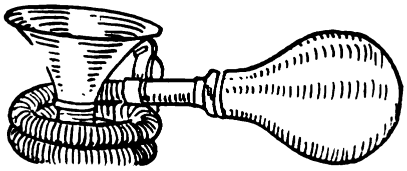
HORNS and WHISTLES



NIGHTINGALE WHISTLE.

THE Riley-Klotz Manufacturing Company, of 17 Mulberry street, Newark, N. J., manufactures the Nightingale whistle for the motorcycle, attached to the exhaust pipe by means of a clamp furnished with the whistle. The note is varied by operating the piston by means of a ring on the end of the shaft, and the whistle is mounted so that this can be effected easily from the saddle.



Riley-Klotz Mfg. Co., Newark, N. J.

STROMBERG CARBURETER.

STROMBERG MOTOR DEVICES CO., 64 East 25th street, Chicago, Ill., is bringing out a new carbureter for motorcycles. The carbureter casting embodies both float-chamber and mixing-chamber, and there are three jets communicating with the inlet connection through a single top-jet around which the primary air is taken. Communication between this jet and the inlet pipe is through a curved pipe. The throttle drum is placed in a horizontal chamber at one of which is the horizontally sliding auxiliary air valve and at the other the inlet connection. The throttle by its rotation for low speeds cuts off more or less of the opening of the curved tube previously mentioned and when opened admits the jets to suction in succession. The float is a hollow metal ball acting on the needle valve by a ring and is put in from below, the cover being on the under side of the chamber.

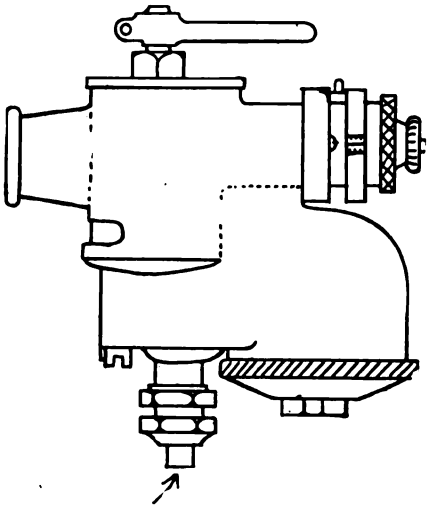


EXHIBIT IN BUFFALO.

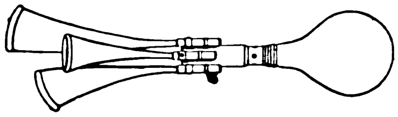
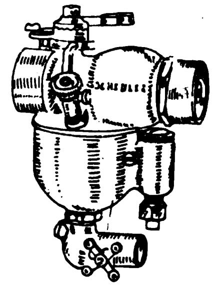
THE only exhibitor of motorcycles at the Buffalo (N. Y.) motor show, held in the Seventy-fourth Infantry Armory, was the Neal, Clark & Neal Company. The firm's display included five models of the Indian, ranging from the big seven to the 4 h. single with magneto ignition.

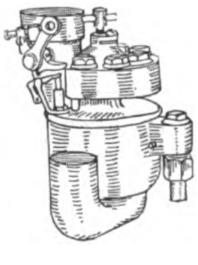


Autocrat Horn. Amer. Thermo. Wale Co.

CARBURETERS



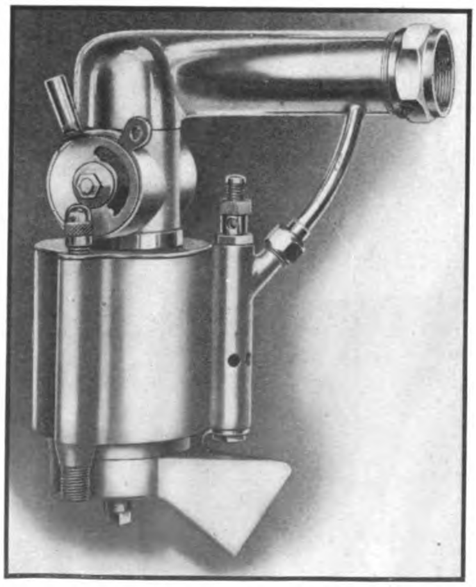
Schebler.



Kingston.

THE SCHEBLER CARBURETER.

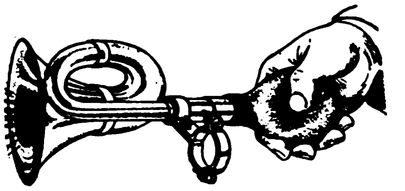
MODEL "H" of the Schebler carbureter, intended for motorcycle use and produced by Wheeler & Schebler, of Indianapolis, Ind., follows the lines of the firm's other mixers in design, and has given such uniform satisfaction that it shows no changes for 1912. This type of the Schebler is made in two sizes only, the ¾-inch size designed primarily for motorcycles, and the 1-inch size which is adapted to small high-speed motors.



Indian Carbureter.

DOUBLE COIL HORNS.

DOUBLE coil horns for the motorcycle in both plain and flexible tube styles are produced by the U. S. Auto Horn Co., 291 Broadway, New York. Reeds soldered to the holders on horns of this make obviate shaking loose or becoming dumb, and are non-corrosive. Flexible brass tubing for horns and speedometers is also a specialty of this company.



Motorcycle Equipment Co., Hammondsport, N. Y.

ASSISTS IN MIXING.

"SPEEDO" is a device for assisting the operation of mixing, used in connection with a carbureter, and is handled by the Motor Car Equipment Company. A valve within the device is arranged to be operated by the suction of the motor, and recedes from its seat as the speed rises and more air is required. Where the air enters the inlet pipes the device is fitted with a perforated pipe which breaks up the spray and assists in mixing.

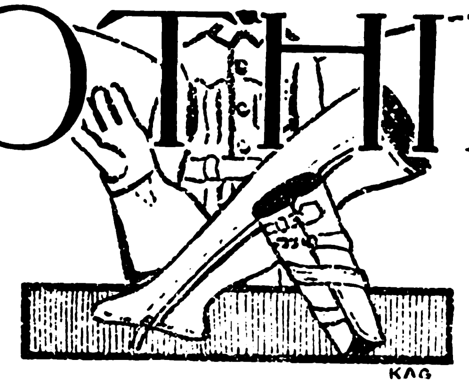
HAYES METAL BOXES.

METAL tool and battery boxes in several shapes and unusually attractive in appearance were featured in the show exhibit of the Hayes Manufacturing Company, of Detroit, Mich. The Hayes boxes are made of high grade steel, with enamel baked on, and all covers are pressed into shape, with round corners. Joints are electrically welded and the sides and ends are of one piece with a rolled bead at top and bottom. The Hayes special lift lock is fitted, the lift member of the locking device closing down over the lock proper when the box is shut, in such a way as to prevent strain upon the fastening from rough road service and falls.

OPEN LOCKPORT QUARTERS.

MEMBERS and friends of the Lockport (N. Y.) M. C. killed two birds with one stone, so to speak, when they enjoyed a fine spread on January 2 at the Niagara House, the annual banquet also serving as a celebration to mark the opening of the club's new headquarters. The rooms were formally thrown open on New Year's morning, and practically all the members of the organization were on hand to inspect them. The club had been looking forward for some time to occupying the quarters and enthusiasm was not lacking when the members of the squad at last found themselves in their own home.

CLOTHING



NORTHROP GLOVES AND LEGGINS.

GLOVES that will stand up under the hardest tests and remain efficient, and leggins that will give similar service and at the same time retain their shape, are of the "Northrop" brand, made by the Syracuse & Elbridge Glove & Mitten Co., Syracuse, N. Y. The gloves are double-palmed, reinforced under the thumbs and seamless in front of the fingers. They are soft and pliable and remain so, being good fits. The wrist-strap and patent fasteners are used. The leggins are made from the centers of the skins, and are bound with a patent binding, which holds them to shape when subjected to wet weather and hard usage. Like the gloves, they are good fitters, and come with Brega, fork or any reliable type of modern fastener, as desired. A well-arranged catalogue illustrates the "Northrop" line, and will be sent on request.

NATHAN "KOVERAUL" SUIT

FROM scores of appropriate names suggested for its new motorcycle costume, the Nathan Novelty Mfg. Co., of 84A Reade street, New York City, has decided upon "Koveraul" as being most strikingly descriptive of the outfit's chief characteristic, its thoroughness in protecting the clothing of the rider. From now on the firm's improved suit will be sold under this name. It is made of dark, double-texture mackintosh, which does not readily show dust or grime, and is designed for long service. The coat may be worn either tight-fitting or box shape, the adjustment being made by taking up an invisible belt. A military collar fits snugly at the neck, and the sleeves have adjustable tabs at the wrists for wind protection. Ball and socket fasteners are used throughout instead of buttons and buttonholes

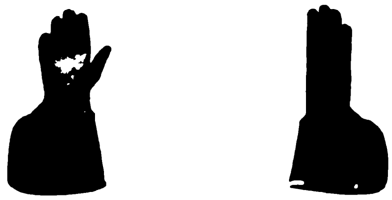
The trousers are roomy, after the fashion of riding breeches, and at the knee they fit snugly like leggings. Side openings give easy access to the inside pockets of the wearer. The coat retails at $7 and the trousers at $6. They are sold separately or as a suit. The company continues its full line of high grade leggings for 1912, in addition to the Nathan tool rolls, lamp covers, motorcycle and magneto covers, tool bags, special mudguards and other up-to-date accessories.

HARDY GOGGLES.

HINGED-CENTER GOGGLES, made to conform to the face so that dust and wind are excluded and absolutely clear vision insured, are made by F. A. Hardy & Co., 10 South Wabash avenue, Chicago. These goggles have no uncomfortable cloth or chenille binding, being made entirely of glass except for the hinged center-piece and the section that rests against the forehead; these are gold-filled material. For use when dust is unusually troublesome the goggles may be fitted with silk sides. The hinged center-piece, in connection with four different curves of the inner edge of the lenses, permits of exact adjustment to individual requirements. Being open on the sides for ordinary use the Hardy goggles do not overheat the eyes and afford proper ventilation while giving protection. They are made in four shapes, two in regular size and two of large size.

MORRISON-RICKER GLOVES.

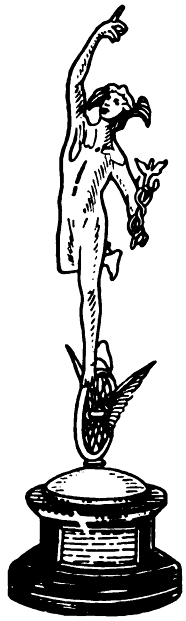
GLOVES for the motorcyclist, in new styles, will be shown by the Morrison-Ricker Manufacturing Company, of Grinnell, Iowa, at the New York, Chicago and Boston shows, the chief style being a "Rist-Fit" model with double re-enforced palm, which is shown in the accompanying illustration. The double re-enforcement tends to lengthen the services, gives greater protection to the hand and ensures a firm grip on the handlebars. The fair sex is not neglected, as there will be a model with gauntlet in handsome leather, satisfying in both durability and finish.



Morrison-Ricker Gloves.

These and other "Rist-Fit" models are illustrated and described in the Morrison-Ricker Company's Style Book, which is just off the press. A copy will be mailed on application to the company.

AT the exhibit of the Hendee Manufacturing Company is one of the most beautiful trophies ever won by an American machine. This trophy has just been released from the Custom House. It was imported from England by the Hendee Manufacturing Co. to be exhibited in their space at the New York and Chicago shows.



Early last spring when the Hendee Manufacturing Co. finished their design for their 1912 model, it was decided to enter five of them in the Senior Tourist Trophy races on the Isle of Man, Great Britain, under the auspices of the Autocycle Union of Great Britain.

The trophy, which was presented to that organization by the Marquis of Mouzilly-St. Mars in 1907, is a handsome silver figure of Apollo, and is valued at $1,000.

The race was run July 3, 1911; there were 59 starters, consisting of the crack motorcycle racers of Europe, and the distance was 187½ miles. The Indian finished first, second and third.

After the Chicago show the trophy will be returned to England for the 1912 race.

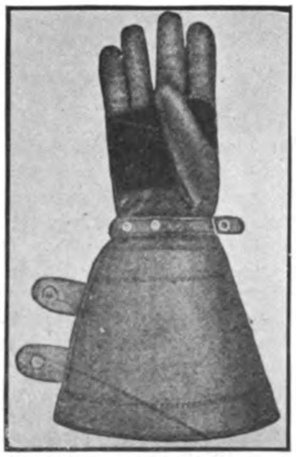
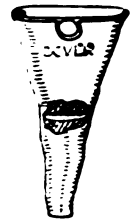
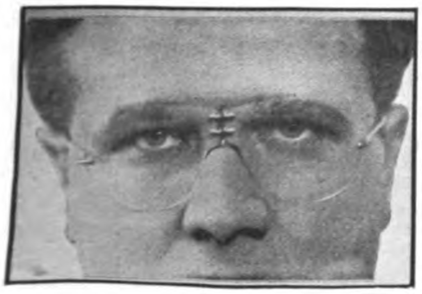
Autocrat Mask and Goggles. Amer. Thermo-Ware Co.



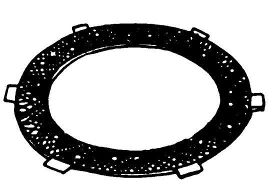
Syracuse & Elbridge.



Dover Funnel.



F. A. Hardy Autoglas Goggles.



Raybestos Liner.

DIE-CAST PRODUCTS.

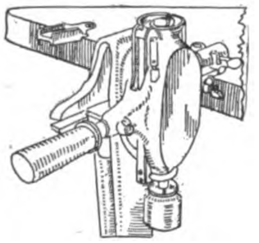
A COMBINATION oil and grease cup for use on motorcycles is one of the specialties of the Doehler Die Casting Company, Court and Ninth streets, Brooklyn, N. Y. The cup is die-cast throughout and is self-closing with absolutely free passage for oil or grease. The lid has a butt to the rear of the hinge, and on this presses a steel ball held up by a spring, the device being fitted into a side pocket away from the hollow of the cup. A slot in the base of the hollow enables the cup to be screwed into its seat by a few turns of a screw-driver. Other die-cast specialties are distribution case covers, timing-gear covers and crank-cases.

POCKET FLASHLIGHTS.

AMONG other offerings of interest to the motorcyclist the National Carbon Company, of Cleveland, Ohio, showed an unusually attractive line of pocket flashlights in vest and coat pocket sizes and in tubular form. To the rider who has known road trouble at night they told their own story of usefulness.

SHALER VULCANIZER.

SHALER electric vulcanizers, sloganed at the company's stand in the show as "Dollar-getters for the work bench," interested motorcycle dealers and repairmen as well as automobilists. The company, which is located in Waupun, Wis., distributed a helpful booklet on tire and tube repairs.



Shaler Vulcanizer.

USING VANADIUM.

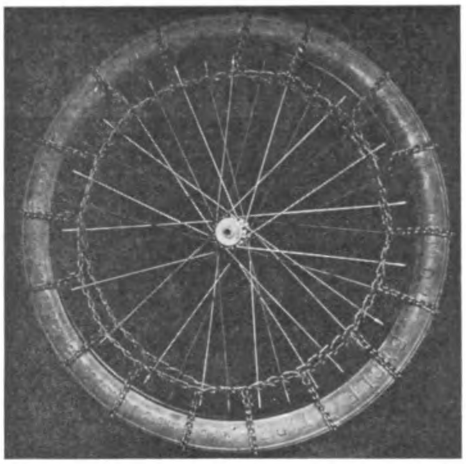
THE use of vanadium in conjunction with steels or bronzes has been carried to a highly satisfactory point by the American Vanadium Company, Frick Building, Pittsburgh, Pa., and fitments for the two-wheeler made with such alloys are vanadium cast iron crank-cases, connecting-rods and shafts. Vanadium alloys have been in successful use in all kinds of motor vehicle service, and are adapted for motorcycle construction and in other cases where strength, light weight and long life are desirable.

NEW BALL-BEARING TYPE.

A BALL-BEARING which employs a full set of balls and a retainer without nuts nor screws is a feature of the bearings made by the Imperial Bearing Company, Detroit, Mich. The retainer consists of two rings, one plain and the other having tongue-shaped separators facing toward the plain ring and separating the race of balls. The retainer allows of sufficient flexibility for the balls to dilate under load and this contributes to silence in operation of the bearing. The bearing may be said to be international in character, as the steel used is German, the balls of English origin, and the manufacture American. The sizes range from 0.39 of an inch to 3 inches, with three different weights, and are adaptable for use on magnetos, motor shafts, connecting-rods, etc.

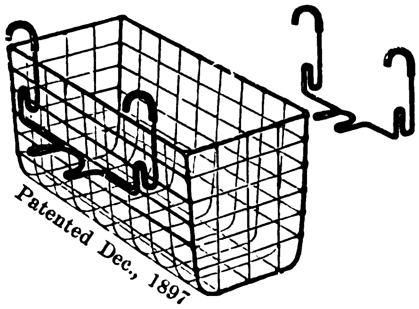
BAKER'S EXTENSIVE LINE.

SIXTY-FOUR pages in a new two-color catalog are needed to tell the story of how well F. A. Baker & Co., 10 Warren street, New York City, are prepared to cater to the accessory needs of motorists. Even with this broad-gauge publicity the company is unable to bring out all the desirable features of its specials, among which are improved exhaust whistles, waterproof clothing, container and generator lamps, imported goggles, Spartan belts, high-grade horns and lamps, Majestic tandem attachments, Baker's specially designed spark plugs, and tires and their accessories.



Baker Tire Chain.

One of the most popular articles in the Baker line for motorcyclists given to winter riding is the firm's tire chain. It is furnished for 26 and 28-inch wheels and in special types for either chain, shaft or belt-driven machines. It is applicable only to the rear wheel, as standard forks do not afford sufficient clearance to permit of its proper attachment to the front wheel. It can be fitted or taken off in less than three minutes and is suitable for a tire of any diameter up to and including 2¾ inches. The chain is strong and dependable without being cumbersome, and has given entirely satisfactory service under severe tests.



Dowe Luggage Carrier.

SPECIAL R. I. V. BEARINGS.

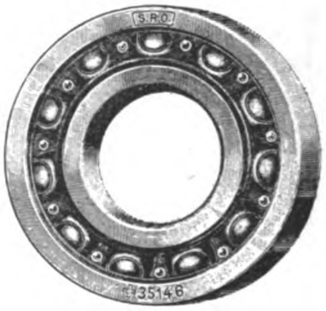
IN addition to ball-bearings of the R. I. V. type for radial and thrust loads, the R. I. V. Co., 1771 Broadway, New York, makes special bearings for magnetos and valve guides and for adapting in place of the old cup-and-cone type used on bicycles and some models of motorcycles. The valve-guide bearings are put in place of the roller and have shown excellent service under all sorts of conditions.

"MOTOBESTOS" BRAKE LINING.

CLUTCHES and band brakes employ asbestos compound linings, and one of these is "Motobestos," the product of the Calmon Asbestos & Rubber Works of America, 103 John street, New York. This fabric is of pure asbestos in which fine brass wires are embedded, with the threads woven into a solid mass and impregnated with a waterproof compound. The resulting fabric is thus practically indestructible and proof against oil and dirt. It retains its elasticity, and is guaranteed not to squeak.

NOVEL MOTORCYCLE GARAGE.

SHOULD the non-city-dwelling motorcyclist wish for a ten-by-twelve garage of steel with wire glass panes, he should apply to J. R. Ashley & Co., or 527 Fifth avenue, New York. This firm specializes in fireproof structures for motor vehicles, with walls, roof, etc., on the interlocking unit system, so as to allow of being readily taken down and yet be burglar-proof. The price is rated at one-third as much as that of a similar structure in masonry.



S. R. O. Ball-Bearing.
Imported by Marburg Brothers, New York.

HOLLINGSHEAD PRODUCTS.

OILS of "Whiz" trademark for the motor, cup greases and soapstone are products of the R. M. Hollingshead Company, of Camden, N. J. The line for 1912 has been augmented by a carbon decomposer, a valve grinding compound put up in twin flat circular boxes for the pocket, small pocket-size canisters for emery and corundum, and a new hand-soap known as "Washeasy," the latter in a flat circular pocket box.

"RHEINLAND" BALL BEARINGS.

IMPORTED ball-bearings of "Rheinland" make with special adapters are made in three weights and 30 sizes for the Rhineland Machine Works, 140 West 42d street, New York, the American agents. The adapters act as shallow pockets for the balls and enclose them partially, but without friction. An unique form of flexible ball-bearing has a curved-top "false" outer race fitted within a correspondingly curved inside-portion of the outer race, permitting the balls and "false" race to adapt themselves to slight mis-alignments of the shafts without binding or grinding the balls on one side. Although the bearings are for radial loads, an axial load of 25 per cent. can be carried by any of the series.

"AZALEA" MOTOR PARTS.

"AZALEA" anti-friction metal for bearings and vanadium-aluminum for crankcases are specialties of the Vanadium Metals Company, of Pittsburgh, Pa. Victor vanadium-bronze for connecting rods and like motor parts is also a feature of this company's products.

J. LEO SAUER . . . . . . President
H. N. CONDICT . . . . Secretary

CIRCULATION, 10,800; NET, 9,025

THE Shows, despite the many criticisms to which they are undoubtedly open, are nevertheless all but indispensable. That's rather bromidic, but we believe it states the solemn truth. One cannot very well estimate to what extent the trade would be loser were there no motor exhibitions. Certain manufacturers are satisfied that the loss would be nil or nearly so, and inasmuch as these annual displays have for years been part and parcel of the development of the industry, it is not possible to demonstrate, by comparison or the results of experience, that the adverse critics are entirely in the wrong.

The fact remains that the Shows are stimulative, of at least keener, healthier competition, and what can be better for any trade? It is here that the exhibitors meet annually on equal terms, and under exactly the same conditions battle for popular approval and endorsement. And while so doing the competing makers learn what is wanted by those with whom they would do business. These two important features are inseparable from all well regulated Shows, and alone they constitute an unanswerable argument in their favor.

It is generally conceded that the Show now in progress in Madison Square Garden is the most promising, from a motorcycle standpoint, of any ever held in the national metropolis. From the very start it was apparent that the public was displaying more than a casual interest in the motor-driven two wheelers on show in the second balcony, just beneath the gorgeous oriental canopy which hangs from the roof girders. Whether popular prices or simply an awakening to the possibilities and attractions of the motorcycle are responsible for the favorable attitude everywhere evinced, the fact remains the *esprit de corps* of the Show is encouragingly different from that revealed on previous occasions of a similar nature.

On the other hand, anything less than the substantial enthusiasm evoked on all sides would have been sorely disappointing to the trade. The motorcycle has demonstrated its right to universal popularity, and if it does not achieve a goodly share of it during the next two or three years it never will. But failure to win out, now that public prejudice has been allayed and a genuine buying interest taken its place, is simply impossible.

At the New York Show, even the few who come to find fault soon discover that fault-finding is entirely out of order. The fast and powerful little beauties are making a tremendous hit and at least so far as the motorcycle is concerned, the 1912 Show in the Garden is a huge success.

This country has at least a million young and middle-aged men who can spare the price at which standard models are purchasable, and who will buy soon after they have learned just what a modern motorcycle is and of what it is capable. The estimate is not a bit too high. To reach those thousands of potential prospects is the question. The machines are right, the prices within easy reach of the multitude. But the latter will not become aware of the fact except through the systematic organization of sales and wide, effective and scientifically-supported publicity. The dealer living in the atmosphere of ten, five or even a year ago has no place in the scheme of today, nor has the manufacturer who lacks the ability or the inclination to assist deserving agents. The fossilized will disappear, are disappearing, in fact, making room for those whose species invariably come forward at the psychological moment to energize and give lasting vitality to every promising business.

Nineteen Twelve is having an auspicious inaugural at the Garden. The balance of the year's story should be just as interesting and just as satisfactory as the opening chapter.

MOTORCYCLE TOURING THROUGH EUROPE

Rainy Weather, With Muddy Roads Now and Then, Characterize Journey of American Tourists Through the South-Western Part of Germany—Some Interesting Experiences

PART V—*Stuttgart, Heidelberg and Strasburg*

By JOSEPH ESLER

CONTINUED rains and several minor accidents marked the trip of the American motorcyclists, Esler and Streiff, from the Neckarsulm district in Germany to Heidelberg, the ancient university town, and then on to Frankfort. German hospitality remained the same, however, and whenever assistance was needed it was quickly forthcoming. As a result the tourists suffered only slight delays. The present instalment of Esler's article finds the travelers preparing to bid farewell to the N. S. U. factory staff and the riders of Heilbronn.

The writer noticed that in all the leading cities of Germany the "stadt" theatre is one of the finest buildings. It is always owned by the city and during the winter months the best plays are produced. This policy of municipal management is also carried into other fields with success.

While we were preparing to leave Heilbronn Streiff's ill luck continued on his trail. He had the misfortune to break off one of his teeth on some German "black bread" that was several days old, and consequently very hard. One of the Heilbronn motorcyclists, who was a dentist, offered to supply a new tooth with the understanding that Streiff would give him a testimonial to the effect that the work was up to the mark. Naturally, the offer was accepted, and Streiff now carries a Heilbronn souvenir in his mouth.

A Sunday Outing.

On Sunday we enjoyed an outing in a small village a few miles from Neckarsulm, the occasion being a church picnic. About a dozen members of the N. S. U. staff were present and it goes without saying that we had a good time. The picnickers walked home in a body about 10 o'clock at night, singing the old folk songs of Germany.

When we visited one of the moving picture halls Streiff had the pleasure of seeing himself ride into Berlin on his machine, that is, he saw the film which was prepared on his entrance into the capital. The pictures were quite clear, but, of course the series was short. However, it seemed to please the patrons of the place and it gave us a rather unusual sensation to hear the film applauded. We remained in the city for several days because of a heavy rain, but as soon as traveling was passably safe we took to the road again.

Esler Travelling in Luxury Through the Streets of Stuttgart.

Off for Stuttgart.

Despite the protracted storm we found the roads in fair condition and on the way to Stuttgart we encountered little trouble. There were only two or three muddy stretches, but there were hills aplenty and in passing through some of the smaller towns we found narrow, poorly paved streets. We left Neckarsulm at noon after having some photographs taken at the factory, and no sooner had we passed outside the city than I found that my free engine clutch was not working properly. Before I reached Heilbronn, 5 kilometers away, it was racing in great shape although it was pulling the machine only at a walking pace.

Upon examination we found the clutch entirely too free, and full of oil, and after considerable tinkering we got it into working condition again. Our actual start for Stuttgart was made at 4 p. m. At first small town we struck Streiff was obliged to change spark plugs, and a short time later as we neared the city his belt fastener broke. This was quickly repaired and at 6 o'clock we rolled into Stuttgart, just in time to find J. Wieland, the N. S. U. agent, closing his shop.

At Country Fair.

We noticed that the streets seemed to be crowded and that the people were in holiday attire, and Agent Wieland explained that an annual "volksfest" was being held. The program was similar to those we have at country fairs in the States. After having lunch with Herr Wieland we set out with a small party to view the city. Among the points of interest were the old palace of the "Kings of Wurtemburg," dating from the 13th century, and the more recently erected palace where the Kaiser stops on his yearly visit to the city. While sitting in a cafe we were pleasantly surprised to meet H. C. Barth, a German who had spent several years in Milwaukee. Incidentally he was well posted on the product that made Milwaukee famous.

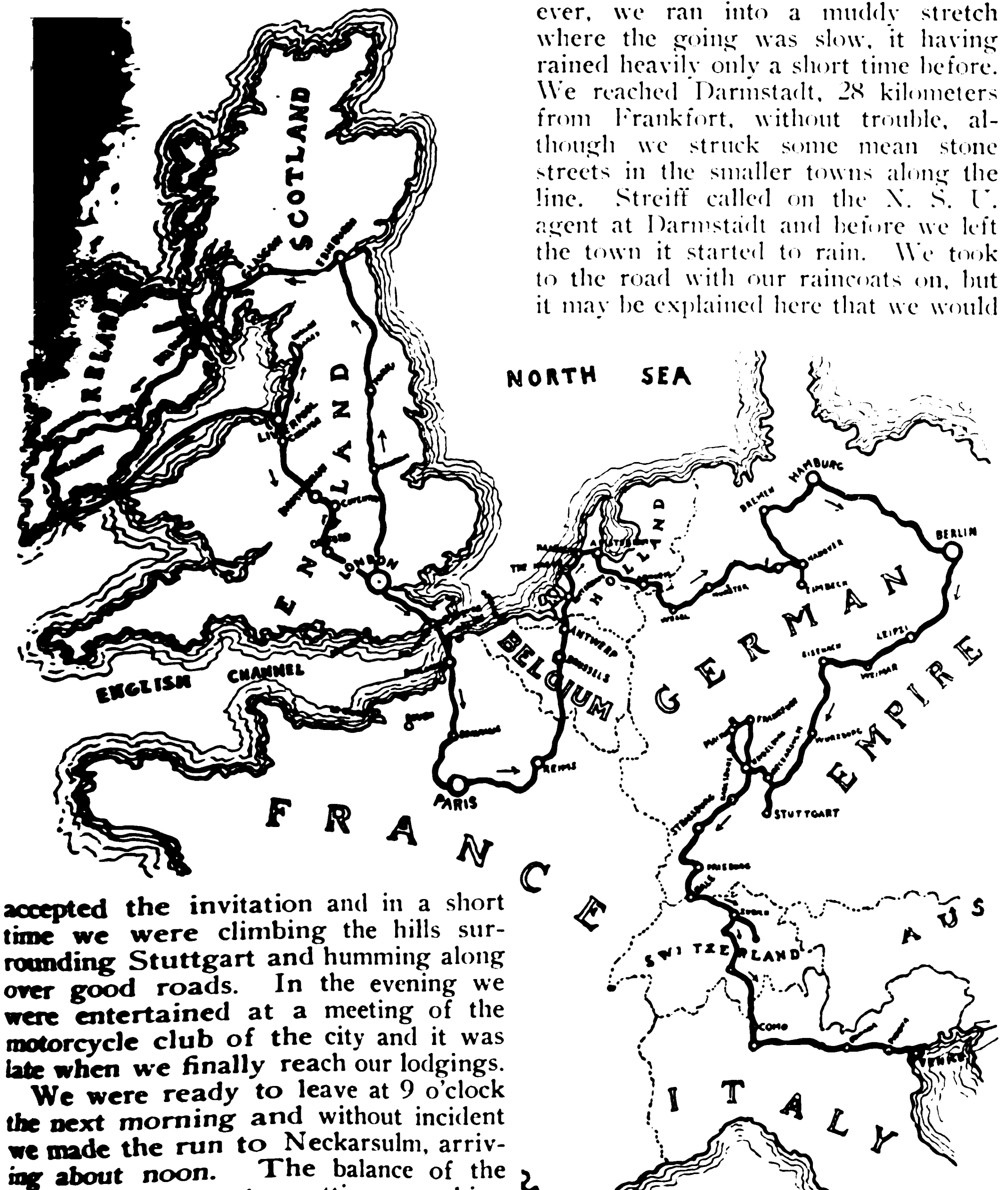
I was invited to spend the night with

Arthur Gikeleiter, a well-known racing cyclist of Stuttgart, and Streiff put up at the home of the N. S. U. agent. We were cordially received at the big Bosch factory when we visited it for an inspection. Robert Bosch, owner and inventor of the Bosch products, displayed great interest in our tour and looked over our photographs. Finally we were taken in tow by C. Frankenburg, the engineer at the Bosch plant, and under his direction we were shown everything of interest about the place. The factory employs 3,500 hands on an 8-hour-a-day schedule, and the force spirit of co-operation among the workers was evident on all sides.

An Automobile Trip.

Later we visited Manager Hermann, of the Peter Union Tire branch, who invited us to accompany him on an automobile tour of the city. We gladly accepted the invitation and in a short time we were climbing the hills surrounding Stuttgart and humming along over good roads. In the evening we were entertained at a meeting of the motorcycle club of the city and it was late when we finally reach our lodgings.

We were ready to leave at 9 o'clock the next morning and without incident we made the run to Neckarsulm, arriving about noon. The balance of the day was given up to getting everything in shape for our trip to Frankfort, which we made on the following day. We figured on reaching Frankfort in four or five hours, but several mishaps delayed us. We had ridden only a block when my machine developed an alarming rattle and I jumped off to find my band brake out of commission. I rode back to the factory and found that the nut on the rear axle had been stripped, letting the brake tear loose. I had a new tread turned on the axle and we made a fresh start for Frankfort.



MAP SHOWING OUR ROUTE

In Old Heidelberg.

We had good roads all the way to Heidelberg, along the Neckar river, and the scenery was fine. It had rained the night before but the roads were in good condition and we made fast time. We pulled into Heidelberg at noon and inspected the famous old university before we continued on our way to Frankfort.

The roads were very good and we were able to maintain a 40-mile-an-hour clip for some time. Near the city, however, we ran into a muddy stretch where the going was slow, it having rained heavily only a short time before. We reached Darmstadt, 28 kilometers from Frankfort, without trouble, although we struck some mean stone streets in the smaller towns along the line. Streiff called on the N. S. U. agent at Darmstadt and before we left the town it started to rain. We took to the road with our raincoats on, but it may be explained here that we would not have started had we known what we were going to run into.

Esler and an N. S. U. Agent in Front of Goethe Memorial in Strasburg.

Stalled in the Rain.

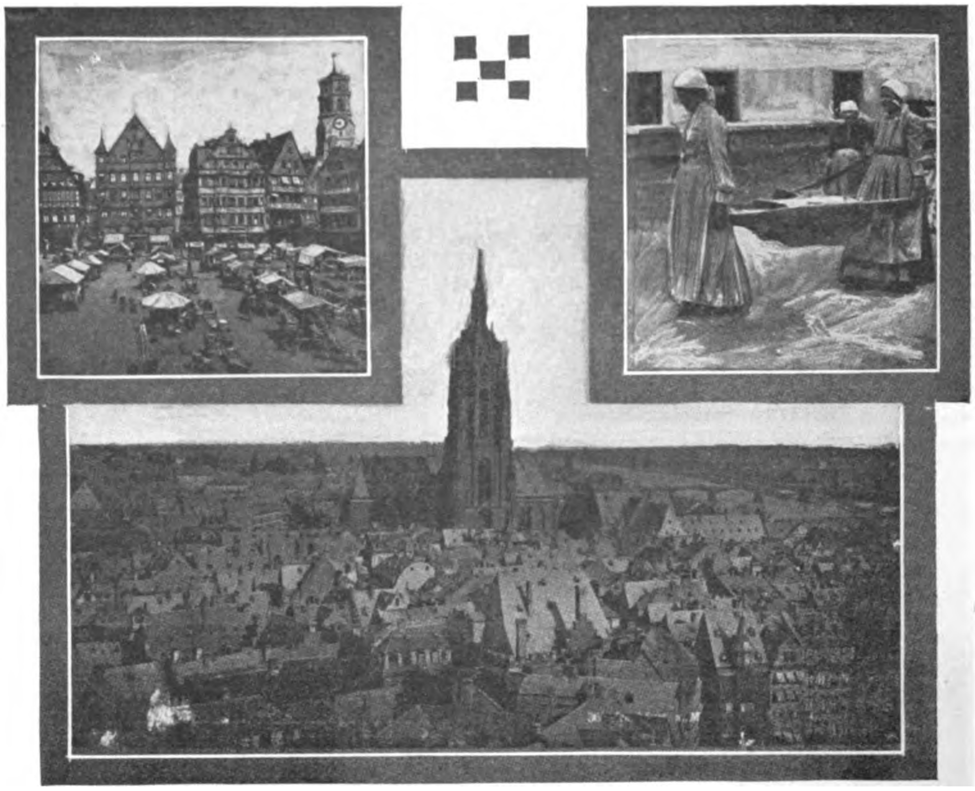
Several miles outside the city my machine skidded on a car track and I went down. When I righted the mount I found one of the pedals missing. Streiff in the meantime continued on his way to Frankfort and the agency manager there, Wilhelm Glocker, met him five miles outside of the city and with an automobile and escorted him in. Meanwhile I managed to get under way with one pedal, but not until I was soaked from head to feet. At New Essenburg, 5 kilometers from the city, I found that my engine was hitting on only one cylinder but I limped along and finally reached Frankfort about 6 p. m.

When I arrived I found that Streiff had put on dry clothing and made arrangements to stay overnight at the home of the agency manager, so I did likewise. In the evening we visited a circus and on the following day we made a trip to the home of the poet Goethe, after a delightful run along the River Mainz. We were told that Frankfort is one of the richest cities of Europe.

Streiff's Machine Exhibited.

In the meantime arrangements had been made to exhibit Streiff's machine in a show window on one of the main streets, where it attracted much attention. We were invited to attend a meeting of the Frankfort Radfahrer Verein, the motorcycle organization of the city. There we met about 20 riders and passed a pleasant evening. On the president's table was a motorcycle cylinder in which the members place their dues, and a bell connected with it is rung when the meeting is to be called to order. The idea struck us as quite novel.

On Saturday we rode to Wiesbaden, a city of 100,000 people, and noted for



Top, Left—Stuttgart Market Place. Top, Right—Women Doing Men's Work. Bottom—A View of Frankfort-on-the-Main.

its mineral baths. From there we went to Mainz and finally returned to Frankfort over an excellent road. Our run for the day was 54 miles, and we got back to Frankfort again just in time to escape another wetting. On Saturday we were guests of the Peter Union Tire Company, as Streiff was using their tires, and T. M. Franklin, a genial Englishman, was delegated to show us the sights. We witnessed a theatrical performance and then went to a club.

A German Hill-Climb.

On Sunday the Radfahrer Verein held a hill-climb at Feldberg, 25 kilometers from the city, and while I was enjoying a rest Streiff went out with the club. He was the fifth contestant to reach the top of the hill, despite the fact that he was using a borrowed machine and did not know the road well.

After delaying several hours on the following day to dodge the rain we set out again after Streiff had put a new steel-studded tire on his rear wheel. We reached Heidelberg at 6 p. m. on Monday after going out of our way several miles to avoid a stretch of the main road that was being repaired. Heidelberg is 60 miles from Frankfort by a good road. The streets in some of the villages, however, had very uneven stone pavements.

Streiff in an Accident.

While riding on a street car in Frankfort we were approached by a gentleman who asked Streiff if he was the "welt-riser"—meaning globe-trotter—and upon being assured that he had guessed corectly he introduced himself as a representative of the Diamond Tire Company in Germany. We were a bit surprised to hear this for we had taken it for granted that the European tire companies monopolized the field. He stated, however, that there was a good sale of the Diamond product.

After riding into Heidelberg over a bridge which spans the Neckar river, we lost no time in finding a restaurant. Later we located a hotel and wonder of wonders! it was a temperance establishment, something we did not expect to find in the land of the ever-ready stein. As we were pulling out of Heidelberg on Tuesday morning Streiff ran into a milk wagon, or to be more exact the horse drawing the wagon collided with Streiff. The damage to the machine was considerable. A lot of spokes were broken out of the front-wheel, the front forks were twisted out of plumb, the handlebar grips were broken and there were many other minor breaks.

On the Way to Strasburg.

The woman who was driving the wagon wanted to know who was going to pay for the milk which had been upset all over the street and Streiff, in turn, asked who was going to have his machine repaired. There was a lengthy argument and we finally hustled back to Heidelberg where repairs were made. We made another start at 4:30 p. m. and headed for Strasburg, 126 kilometers distant. Streiff was not anxious to go back through the village in which he had the accident but we got by the fatal spot without trouble.

We reached Durlach, 5 kilometers from Karlsruhe, about 6 p. m. and at this point I was obliged to run my machine upon the curb to avoid being struck by a horse. When I examined my mount I found that the Jones speedometer had been damaged, that a pedal was bent, the handlebars twisted and my rear tire flat. I made repairs with the assistance of Streiff, who came back to help, and we put up for the night in Durlach.

Caught in the Rain Again.

On Tuesday morning we started once more for Strasburg and found a good road most of the way. I had some spark plug trouble but was not seriously delayed. When we were ready to make our noon stop it started to pour rain and we put up at a small town and had dinner. I had been bothered by poor running of my machine for a number of miles and decided to clean my carbureter, which I found very dirty. Then I rode to Sherzheim, 5 kilometers distant, where I found Streiff taking a piece out of his belt which had started to slip because of the heavy rain. We decided to remain in this village overnight as there was no promise of an improvement in the weather.

I went to Strasburg by train to have my nose-glasses repaired for the seventh time and when I returned Streiff was in bed. He had been unable to find anything worth seeing in the village. When we turned out at 7 o'clock the next morning the sky was clear. We pulled away from Sherzheim without delay and reached Strasburg in good time, although I was forced to push my mount for several blocks to the N. S. U. agency, owing to carbureter trouble.

TWO TORONTO SHOWS.

THE Toronto Motorcycle Club has made arrangements to have a rest room and booth at the show of the Toronto Automobile Trade Association, to be held February 21-28. Officers will be in charge during the entire week, and an advertising campaign will be carried on by literature and personal solicitation. Needless to say, applications from intending members will be received on the spot. A number of dealers will exhibit at the show: Percy A. McBride, the Excelsior agent, and H. Kipp, the Indian dispenser, having been fortunate enough to secure space on the ground floor of the building. Others will be located in the galleries. A rival show is to be held at the St. Lawrence arena during the same period as the association's exhibition, and several of the dealers will have displays there also.

BIG ENGLISH RUN

Over One Hundred Entrants in Successful Trial from London to Exeter and Return—Many Side-Cars.

THAT our British cousins are really enthusiasts on motorcycling may be judged by the number of entries for the run from London to Exeter and return, held December 26-27. There were 119 entries all told, three of which were cars and the remainder motorcycles. Of the latter, 71 were solo mounts, 41 were fitted with side-cars and 4 were runabouts or duo-cars.

As was to be expected, the 3½ h. single machine was entered in great numbers, there being 56 all told, with 16 of the 8 h. twins. The other powers represented were: 5 h., 11 entered; 2¾ h., 11 entered; 6 h., 9 entered; 7 h., 6 entered; 4 h., 3 entered; 4¼ h., 2 entered; 2 h., 1 entry. The field represents practically every machine made or sold in the British Isles.

DALLAS WANTS A TRACK.

SEVERAL enthusiastic members of the Lone Star Motorcycle Club of Dallas, Texas, of which George Huter is president, are planning to have a first class race track for the benefit of the club members. Nothing definite has as yet been decided upon, but it is said that action will be taken soon. Dallas now has the fastest one mile dirt track in the State, but on account of several accidents during the three days' race meet in October, 1910, racing was prohibited by the city.

SIDE-CARS IN DEMAND

Coming Summer Will Find Scores of Fair Enthusiasts Accompanying Toronto Riders on Their Trips.

TORONTO, Ont.—No more will Miss Toronto suffer in silence and no longer will the charge be laid that motorcycle riders are selfish in their sport, because, judging by present prospects, there will be enough side-cars in use in the Canadian motorcycle center next summer to take care of all the feminine enthusiasts in the place. Hardly a member of the Toronto M. C., from the rawest recruit to the official head himself, has not been afflicted with the latest form of motorcycle ailment, the side-car craze, and inquiries are coming in from all sides for the baskets, even in this midwinter season.

A local distributing firm, John Millen & Son, recently received a trial consignment of five cars from the old country, and before the shipment was unpacked had disposed of the lot. This has led to the placing of an order for fifty more, and practically every dealer in town is making preparations to stock the equipment for next season's trade. On account of the preferential tariff between Canada and Great Britain, the Millen people have been able to put a particularly inviting proposition before the local agents and there has been quite a response.

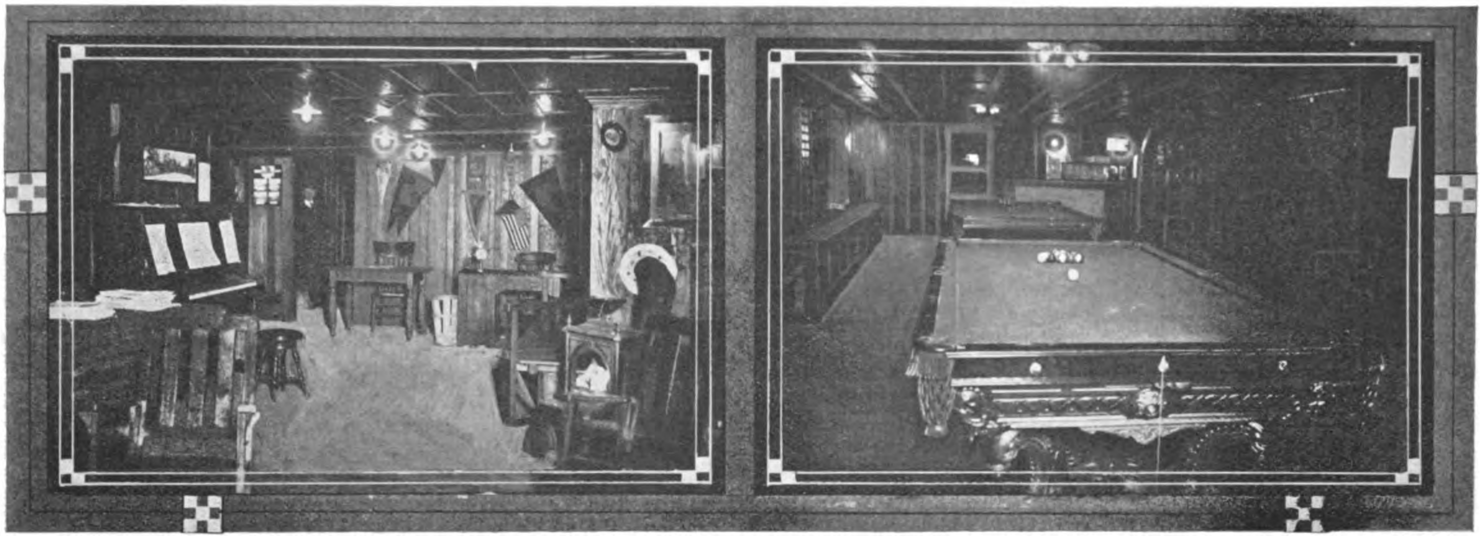
The presence of a large number of British-made machines in Toronto, for which the English "chairs" are particularly fitted, has stimulated the demand, but owners of American models are not far behind in the matter, even though in many cases alterations have to be made before cars can be attached. The local Pierce agent, Walter Andrews, has been among the first to show that side-cars can be fitted to his line, in spite of the peculiar construction of Pierce machines. Andrews has already attached a car to his demonstrating four-cylinder mount for use in conveying prospective purchasers. W. E. Amoss, the Flanders' hustler, has also adopted the side-car for a similar purpose, and others are following suit.

TRAYMORE OFFICERS.

FOLLOWING are the officers elected by the Traymore M. C., of Philadelphia, Pa., at its semi-annual meeting: A. J. Schickling, president (re-elected); Harry Gerlach, vice-president; Clem Kieffer, treasurer, and Henry Warker, secretary (re-elected). William German was retained as recording secretary.

During 1911 the club has successfully managed a bowling tournament, a Marathon race, a pool tournament, a motorcycle meet, and a number of other events. Rapid progress was made by the organization, and there are indications that it will be equally successful during the coming season.

OAKLAND CLUB'S HANDSOME HEADQUARTERS BESPEAK A HUSTLING ORGANIZATION



ON 100 PER CENT. BASIS

Oakland Club Decides That All Members Must Join F. A. M.—Fine Turnout of Riders in Big Civic Parade.

PLANS were approved recently for making the Oakland (Cal.) M. C. a 100 per cent. F. A. M. organization, and hereafter the entrance fee will include Federation dues, so that no member can fail to have the matter of affiliation attended to. At the present time the club is on a 75 per cent. basis as regards affiliation with the F. A. M.

On New Year's eve the club figured prominently in a demonstration given under the direction of civic bodies of the city to mark the opening of a new electric road, nearly 400 motorcyclists being in line. Many of the machines carried passengers of the fair sex, and the turn-out was the largest of its kind ever seen in Oakland.

One of the photographs shows the pool room in the club's quarters, with the candy, tobacco and soda water stand in the background, and the other gives a view of the meeting chamber which is used ordinarily as a lounging room. These pictures indicate that the club is well provided for in the matter of headquarters.

TIGHT FINISHES ON OAKLAND BOWL

Ward, Wolters and Seymour Split Honors in One of Season's Best Meets—Armstrong Wins Exciting 10 Mile Pro.

OAKLAND, Cal.—Sunday, December 24, at the Oakland Motordrome, furnished about the best meet of the season. The crowd was very large and the day perfect. One accident marred an otherwise flawless program; Wolters, who certainly must carry a rabbit's foot with him, took a tumble and slid down the track some forty feet, without serious injury. His body was fairly covered with small splinters, and his machine got a bad shaking up, but he was able to pick himself up and walk to the paddock.

During the races Cook and Masson were up in their Curtiss machines, and there were also two automobile races. Wolters met his accident just as he crossed the line a winner in the first event, a three-mile race. He was out of the remaining races, and Ward, Seymour and Armstrong were left to fight them out. Summary:

Three-mile professional, first heat—Won by Wolters (Excelsior); Armstrong, second (Excelsior); Albright, third (Indian). Time, 2:06 1-5.

Three-mile professional, second heat—Won by Seymour (Indian); Ward, second (Indian); T. Samuelson, third (Indian).

Six-mile professional, final—Won by Ward (Indian); Armstrong, second (Excelsior); Albright, third (Indian). Time, 4:11 1-5.

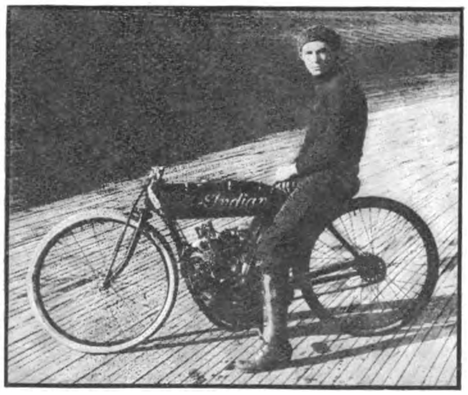
Five-mile amateur handicap, stripped stock—Won by Walker (Indian); Lorenson, second (Indian); Kohl, third (Indian).

In the final heat of the six-mile professional Ward rode a magnificent race. He shot into the lead and remained there. His time was one-fifth of a second more than the world's record, made by Wolters several Sundays ago. In this race Seymour fell out on account of engine trouble.

The sensational race of the day was the ten-mile professional free-for-all. It was a closely contested affair, and seemed to be any one's race until Armstrong, by a clever bit of jockeying, whirled himself across the line a winner. Balke was an easy second.

AN OAKLAND STAR.

OAKLAND, Cal.—The accompanying photograph shows "Whirlwind" Albright who has been giving splendid exhibitions of skill at the Oakland races. Albright rides one of the eight-valve Indians, and has made a consistently good showing. Albright, "Handsome" Al. Ward and "Cyclone" Seymour are the unmarried racers at the saucer, and now that Leap Year is at hand, their friends fear they will not be long outside the ranks of benedicts, each having a large following of feminine race fans.



PLAN JOINT MEETS.

SAN FRANCISCO, Cal.—There has been some talk in San Francisco of forming a little traveling company of motorcycle and automobile racers to travel to the various cities in the state and pull off joint meets. The plan is this: Three fast motorcycles and three light automobiles will be taken by the squad to give races. In addition, there will be amateur events at the various places.

HARK! DIXON IS TALKING.

SAN FRANCISCO, Cal.—In the accompanying photograph Official Announcer George E. Dixon is seen breaking a startling bit of news to the throng of racing fans at the Oakland Motordrome. Dixon is one of the most popular attaches of the big bowl, and his sense of humor has stood him in good stead on several occasions when he was called upon suddenly to address the crowd. At one time Dixon was a crack bicycle rider, but he is now prominently identified with the Santa Cruze Portland Cement Company.

MONICKERS OF SPEEDSTERS.

SAN FRANCISCO, Cal.—The following list of nick-names have been given to the various riders that have been piling up laurels for themselves in San Francisco. Each name, like that much whistled tune, has a little meaning all its own.

Al Ward enjoys the appellation of "Handsome Al," and there is no mistaking the reason "Whirlwind" has been handed to Albright, and "Cyclone" justly applies to Ray Seymour. The two Samuelsons, from the Mormon State, are called as of yore the "Prides of Provo."

As everyone knows, Balke is always called "Fearless." Earl Armstrong, the Denver rider, by reason of his scarlet dome, is always on the alert when any one sings out "Denver Red."

Ed. Hasha, the latest addition to the corps of racers at the motordrome, goes by the handle of "Speedy," and last, but not least, we have the smasher of records, cool-headed "Farmer Joe" Wolters.

TORMEY MAKES A NOISE.

FOUND: In San Francisco, hidden under a pile of Goodyear Blue Streak racing tires and order slips, one James Tormey. F. A. M. publicity bureau please copy.

Not long ago Chairman Thornley, of the F. A. M. competition committee, addressed a letter to Tormey which was returned to New York carrying postmarks of several cities. The envelope contained a check for a five-dollar protest fee which was being returned to the genial salesman, and in order that it might be properly forwarded Dr. Thornley requested that Tormey make his address known. The request appeared in the columns of MOTORCYCLE ILLUSTRATED under the caption "Make a Noise, Tormey," and a friend writes from the coast to state that Tormey is really making a noise out there in more ways than one. Mail may be addressed to him in care of the Goodyear Tire & Rubber Company, San Francisco.

HASHA IN OAKLAND.

OAKLAND, Cal.—"Speedy" Hasha, the Southern racer, appeared on Sunday, December 31, at the Oakland Motordrome for the first time during the present race series. The Indian eight-valve machine he straddles is reported a wizard, and he intends to rush Wolters for some of the prize money that has so easily fallen to "The Farmer" during the meets.

Hasha arrived in San Francisco accompanied by his wife. He has been all through the Southern States, Georgia, Alabama, Tennessee and Texas, doing fast time on dirt tracks. He is a little fellow, with a keen eye and a glad smile. How he keeps on his machine during some of the spurts that he makes is a wonder to the onlookers, and regular fans say that he buckles himself to the saddle to keep from being blown off.

THE WEIGHT PROBLEM.

G. K.—The total weight of 280 pounds should be sufficiently easy for a 4 h. single machine on good roads, and the majority of hills. Of course, if the hills are steep, slow progress only can be expected. Great speed cannot, of course, be looked for, but the pace should be enough to satisfy a good rider. A two-speed gear would of course enable you to go anywhere that the wheels will get traction, with much greater weight than that mentioned.

PLAN QUARTERLY TRIALS

Springfield Enthusiasts Suggest Holding Series of Tests for Machines of All Classes During 1912.

R. W. ELLINGHAM, superintendent of the Hendee Manufacturing Company's plant in Springfield, and other active motorcyclists of the Massachusetts city, are interested in plans for a series of quarterly trials to be held during 1912, along the lines of the popular quarterly trials in England. It has been suggested that four cities be represented, each one to direct the running of one of the tests, and to afford variety a special hill-climb and a 24-hour reliability contest will probably be included in the program. It is the intention to have as many classes as possible in order that no motorcyclist need be barred, and side-cars, tri-cars and fore-cars will also be admitted.

The plan has been received with enthusiasm in Springfield and vicinity, but as yet it has been discussed only informally. It is believed that at least fifty riders could be interested in the series, and that the tests would prove to be the most successful American motorcyclists have known. Superintendent Ellingham talked the matter over with F. A. M. officials at the Madison Square Garden show, and received such encouragement that steps will probably be taken to put the plans into effect at an early date.

ARMSTRONG LIKES 'FRISCO.

SAN FRANCISCO, CAL.—Earl Armstrong, the Denver racer, who has been here for the present meet, and who has been pushing Wolters pretty hard lately, hopes to locate in this territory. Armstrong has a motorcycle and bicycle business in Denver which he wishes to sell, and will go into business in California. Armstrong is a very popular rider and has made many friends since his arrival here.

AN EARLY START.

CARLES H. SEYLER, a hustling agent in Waterloo, Ontario, proves that he is always up with the times, and usually a bit ahead, by calling attention to the fact that Waterloo motorcyclists will have a high-class racing program on July 1 and 2. Canadian riders have already established a reputation for thoroughness in the arranging of their meets, and the fact that the Waterloo boys are now discussing plans for the events to be staged in sunny July gives an insight into the brand of enthusiasm which is now enlivening motorcycle circles in the Dominion.

SIDE-SLIP PREVENTION.

A NUMBER of excellent hints on the prevention of side-slip are made by "Ubique" in *The Motorcycle*, of London, and are here given:

"Gear low.

"Do not drive fast nor too slow; strike the happy medium.

"Keep off the camber of the road.

"Cross car lines at as nearly a right angle as possible.

"See that your wheels track.

"Avoid side-play in your spring forks.

"Do not go in for the lowest possible saddle position, but arrange the saddle so that you can comfortably put your feet on the ground, and keep it as far forward as possible.

"Do not carry heavy articles on handle-bars or forks.

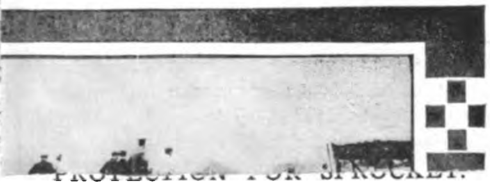
"Use any good make of non-skid tire (rubber tread preferred).

"Do not let in your clutch with a bang, and do not take corners at speed.

MOTORCYCLE LICENSES.

L. A. OSBORN.—Having an Ohio State license, a rider can travel anywhere in the state, with the possible exception of some parks or special roadways. As a holder of an Ohio license, you will be exempt as a non-resident rider in Kentucky, Virginia and North Carolina, the latter state only while passing through. The time is limited in the other states to about 14 days (two periods of 7 days each). This is the latest information for January, 1912, but many states change their laws in this month, and such changes will be published in our columns. See our forthcoming Motorcycle Manual also. Tennessee has no provision for non-residents, and we advise your writing to the Secretary of State, Nashville, for information on the date you intend to run through that state. A motorcyclist in your state will be required to take out a license.

CASTC[illegible] street, Salt Lake City, [illegible]; J. F. Gorman, 2231 First avenue, South, Seattle, Wash.; no state commissioner for Nevada; Verne Maskell, 980 Vancouver avenue, Portland, Ore.; Dr. R. Y. Leslie, 616 Chamber of Commerce Building, Pasadena, Cal.



PROTECTION FOR SPROCKET.

SPROCKETS on the rear hub on the pedal line side become quite foul during muddy weather, and an English motorcycle supply house makes provision for preventing this by a circular celluloid cover with curved edges, slotted for the chain. This cover is clipped to the stay or fork on the right hand side, and effectually protects the chain and sprocket without interference with their operation.

NEW HAMPSHIRE SHOW.

THE fourth annual motor vehicle show in Keene, N. H., which is promoted by the Consolidated Motorcyclists will be held February 21-23. All communications with reference to the exhibit should be addressed to C. C. Wilber, 64 Main street, Keene.

ESTABROOK BULLETINS

Late Club News Hot from the Publicity Forge of the Bangor Boomer—That Short Grass Club Tour.

THE chairman has been permitted to view the plans and itinerary of the Central District Tour which will be conducted under the auspices of the Short Grass Club of Kansas, during the summer of 1912, and feels justified in saying that this will be the greatest event of the kind ever attempted by motorcyclists.

It would be unfair to give even a line on this in advance of the information which will presently be given to the trade papers. However, riders who can reach this tour with one or two days' traveling should begin now to lay their plans and get into communication with Vice-President B. J. Patterson, of Pratt, Kan., who will furnish details and otherwise advise with prospective tourists. Gee! but this tour is going to be a hummer, and the rider who misses it will lose an opportunity of a lifetime. It is not going to be a high-cost affair, either, but it will be a high-class and novel one, and riders should watch the papers for the announcements.

Hutchinson, Kan., is a thrifty Western city with about 25,000 inhabitants, in which [illegible] fully up [illegible] canvas of the motorcyclists of his city in the interests of an F. A. M. club, and having pledged enough riders to insure success, he is now applying for literature. The Phoenix Cycle Company has a well-equipped motorcycle, bicycle and general repair shop, which will presently be registered with the F. A. M.

A movement is on foot in Augusta, Ga., to organize an F. A. M. club to join the ranks soon. Chester Story is planning to run some local races, the proceeds of which will be donated to the embryo club.

SIGNS of progressiveness in Enid, Okla., are already to hand and Ivan King, of East Randolph street, is presently to affiliate a 100 per cent. F. A. M. club.

Dr. La Salle, Atlantic district, vice-president, is recovering from an attack of illness.

MORE REGISTERED SHOPS

Chairman Estabrook's List of F. A. M. Dealers and Repairmen Is Now Being Enlarged Almost Daily.

THE following repair shops have been registered with the F. A. M. during the past ten days.

F. D. Johnson, 619 Walnut street, McKeesport, Pa.; P. I. Haynes & Co., 45 N. Third street, Columbus, Ohio; Appleton Motorcycle Company, 760 College avenue, Appleton, Wis.; F. W. Huels, 115 State street, Madison, Wis.; W. H. Wolfe, 1011 Chestnut avenue, Altoona, Pa.; G. W. Webb, 2210 Fourth avenue, South Minneapolis, Minn.; J. Carriker, Orange, Cal.; B. B. Millison, 114 S. Fifth street, Steubenville, Ohio; W. E. Metzger Company, 351 Woodward avenue, Detroit, Mich.; A. McCarthy & Son, 915 Frederick avenue, St. Joseph, Mo.; Richardson Brothers, 439 Court street, San Bernardino, Cal.; J. E. Swank, 338 South Sandusky avenue, Bucyrus, Ohio; E. O. Weeber, 174 Central avenue, Albany, N. Y.; T. E. Lindsay, 59 N. Sixth street, Zanesville, Ohio; T. M. Caldwell, Telephone Block, Amarillo, Tex.; S. J. Van Pelt, Washington C. H., Ohio; Warsaw Motorcycle Company, 120 W. Market street, Warsaw, Ind.; Brockton Sporting Goods Company, 11 N. Main street, Brockton, Mass.; Frank H. Drew Company, 226 S. Second street, Cedar Rapids, Iowa.

All registered F. A. M. repair shops are local recruiting stations for the F. A. M., where literature pertaining to the organization is always on tap and where copies of the motorcycle journals may be consulted. Touring or visiting members or other riders can always obtain reliable information at the registered shops, and the dealers are beginning to realize that this policy of co-operation is an extremely valuable one.

WINNIPEG CLUB INTERESTED.

B. S. BRAMMALL, treasurer of the Winnipeg (Man.) M. C., has written to Chairman Estabrook, of the F. A. M. membership committee, with reference to the conditions bearing upon affiliation with the Federation, and the chairman has forwarded literature and an explanatory letter from which he expects early returns.

HAROLD MELINS, of Hollowville, N. Y., intends to spend the spring and summer months en tour. When road conditions permit, he will make a trip to Georgia, and thence he will follow the southern route across the continent to California. On his return he will strike north from Ft. Worth, Tex. Mr. Melins expects to organize and affiliate a local club before taking his departure south.

SWELLING F. A. M. RANKS

Records Show That Nearly Two Hundred and Fifty Names Were Added to the List in December.

F. A. M. renewals for December are reported by Secretary Gibson as follows for the various districts: New England, 17; Atlantic, 24; Peninsular, 3; Gulf, 3; Lake, 39; Central, 6; Southwestern, 16; Pacific, 6; total, 114. New members were taken in as follows during the month: New England district, affiliated, 3; unaffiliated, 6; Atlantic district, affiliated, 18, unaffiliated, 21; Peninsular district, affiliated, 15, unaffiliated, 8; Gulf district, affiliated, 4, unaffiliated, 1; Lake district, affiliated, 78, unaffiliated, 18; Central district, affiliated, 20, unaffiliated, 7; Southwestern, affiliated, 14, unaffiliated, 8; Pacific district, affiliated, 5, unaffiliated, 2; Canadian district, affiliated, 2, unaffiliated, 1; Insular district, unaffiliated, 2. Total, 233.

The new members are distributed throughout the States as follows: Massachusetts, 7; Connecticut, 1; Rhode Island, 1; New York, 21; New Jersey, 3; Pennsylvania, 12; Maryland, 3; Tennessee, 5; Georgia, 3; Florida, 14; Mississippi, 1; Texas, 4; Oklahoma, 1; Indiana, 11; Illinois, 11; Ohio, 64; Wisconsin, 2; Michigan, 6; Missouri, 2; Kansas, 19; Nebraska, 4; Iowa, 3; Minnesota, 1; California, 14; Arizona, 1; New Mexico, 1; Oregon, 2; Montana, 1; Colorado, 6; Idaho, 2; Washington, 2; Canada, 3; Philippine Islands, 2.

BANGOR BREVITIES.

THE Galveston, Tex., M. C. members were up a little before daylight January first and succeeded in capturing the honor of sending twenty-five men over the home plate before the Rushville boys reached the diamond.

Fifteen new registered repair shops were entered on the roster last week besides three re-issues. This feature of the F. A. M. bids fair to become very popular, all-around worth to members individually.

The National organization is just now on the threshold of its activities for usefulness and in a position to do something for the promotion of each of the several objects for which it stands.

F. A. M. STATE COMMISSIONERS

Secretary Gibson's National List Shows Strong Line-Up of Federation Boosters—Morton Issues Call to Arms for Workers in the Empire State.

STRIKING proof of activity throughout the F. A. M. districts is given in the list of state commissioners which has just been made public by National Secretary G. B. Gibson. The list shows that only six states in the Union are now without such officials, and it is stated that these vacancies will soon be filled. The task of locating capable and willing commissioners to direct Federation affairs in the various States has been found to be anything but simple, and the fact that so many satisfactory appointments have been made indicates that the vice-presidents have not been sparing in energy and initiative. In each instance the State commissioner is a motorcyclist who has shown his fitness for the office by a broad conception of F. A. M. principles and unfailing interest in the welfare of the national organization and its individual members. Much depends upon the State commissioner, and it is evident that this has been kept in mind by the district heads as appointments were made.

Each State commissioner is desirous of getting into communication with as many active workers as possible in his territory in order that he may name local representatives, and to this end riders in every State are invited to file their names, with an offer to accept a local appointment, if possible. In nearly all the States there is a scarcity at present of energetic local commissioners, and the State officials are particularly anxious to hear from "live wires" who can spare a little of their time for the advancement of the Federation.

State Commissioner Robert S. Morton, of New York, reports that he has been able to line up comparatively few local workers of late, despite the fact that he has given up much of his time to scouting for them, and he now issues a call to arms. The genial Bob is convinced that no state in the Union has more desirable Federation "timber" than New York, and he is determined to get in touch with it.

"There is a lot of work to be done," says the versatile commissioner, "and if we are to carry it through with the best possible results we must have not only the moral support of all the riders, but actual, shoulder-to-the-wheel assistance. I do not believe any Federation member is a laggard; if he were he would not be wearing his F. A. M. symbol, but I do believe some of the boys could display more initiative. They are a bit slow in getting into the harness, but I have noticed that when they do settle down to work they deliver the goods. The difficulty lies in getting them warmed up to their task, and it is this warming process that is holding us back a bit just now. I want local commissioners all over New York State, and I'm bound to get them if I have to follow the example of my friend Sherlock Holmes and go out on the trail of each individual. The boys will save me just that much additional work by stepping forward without further delay and offering their services."

Secretary Gibson's list of state commissioners to date is as follows:

E. M. Estabrook, 76 Lincoln street, Bangor, Me.; Harry C. Dean, 67 Mechanic street, Keene, N. H.; Daniel C. Johnson, 16 Forest street, Bellows Falls, Vt.; W. F. Mann, 1000 Boylston street, Boston, Mass.; B. A. Swenson, 298 Blackstone street, Providence, R. I.; George W. Baker, Box 983, Hartford, Conn.; R. S. Morton, 845 Greene avenue, Brooklyn, N. Y.; W. T. Reed, 1492 Princess avenue, Camden, N. J.; E. B. Connell, 423 S. Highland avenue, Pittsburgh, Pa.; no state commissioner for Delaware; William Wood, 712 North Monroe street, Baltimore, Md.; T. O. Wansleben, 728 11th street, N. W., Washington, D. C.; no state commissioner for Virginia; R. C. Sharp, Box 186, Huntington, W. Va.; O. B. Peacock, 8th and Chestnut streets, Chattanooga, Tenn.; no state commissioner for North Carolina; L. I. Straus, care of Carolina Merkel Co., Sumpter, S. C.; Otto G. Von Lang, Troop I, 11th Cavalry, Fort Oglethorpe, Georgia; J. D. Hanna, Box 231, Tampa, Fla.; E. G. Reese, Letohatchie, Ala.; S. C. Ragan, Jr., Box 353, Vicksburg, Miss.; P. E. Pullman, Barrett avenue and Broadway, Louisville, Ky.; C. B. Cornwell, 1623 South Broadway, St. Louis, Mo.; no state commissioner for Louisiana; D. C. Crooks, 1519 24th street, Galveston, Tex.; A. F. Griebel, 1221 Louisiana street, Little Rock, Ark.; J. A. Campbell, 1329 Stillwater avenue, Dayton, Ohio; Harry Graff, American Central Life Building, Indianapolis, Ind.; A. F. Gregor, 294 Forrest avenue, W., Detroit, Mich.; C. H. Lang, 35 East Adams street, Chicago, Ill.; C. A. Carpenter, 190 5th street, Milwaukee, Wis.; Ira W. Stewart, Y. M. C. A., St. Paul, Minn.;F. R. Jenkins, 210 5th street, Des Moines, Ia.; M. E. Harding, 106 East 6th street, Topeka, Kan.; Charles Gabus, South Auburn, Neb.; John Malm, Kuhn, N. D.; P. N. Bushnell, Aberdeen, S. D.; G. H. Toncray, 1512 Stout street, Coronado Building, Denver, Col.; R. D. Barnard, Box 62, Anaconda, Mont.; C. E. Williams, 934 10th street, Douglas, Ariz.; no state commissioner for Wyoming; no state commissioner for New Mexico; L. R. Boone, 125 North 3d street, Chickasha, Okla.; M. E. Bowers, Box 25, Fruitland, Ida.; William P. Fowler, 42 West South street, Salt Lake City, Utah; J. F. Gorman, 2231 First avenue, South, Seattle, Wash.; no state commissioner for Nevada; Verne Maskell, 980 Vancouver avenue, Portland, Ore.; Dr. R. Y. Leslie, 616 Chamber of Commerce Building, Pasadena, Cal.

A "Few" Machines Paddocked During the Recent Race Meet in Columbus, O.

With the Clubs

RIDERS IN PHILIPPINES

Contrary to General Opinion, Motor Two-Wheeler Is Rapidly Gaining In Popularity Throughout the Islands.

MANY persons associate sports and pastimes in the Philippines with the gentle art of wielding the native bolo or casting the boomerang at the head of a retreating native, but in spite of this supposition the number of motorcyclists in the Islands has increased more than 700 per cent. in the last three years. In 1908 travel by motorcycle in the Islands was restricted to a small area adjacent to the principal cities, and at that time less than 50 motorcycles were in use. At present there are over 400 machines being ridden daily.

The number of private owners who are riding purely for pleasure is a little less than half the total, the balance being owned by the Insular Government and ridden primarily on government business. This augurs well for the stability of the motorcycle and presages a brilliant future for the power two-wheeler in the islands composing the archipelago.

The Insular Government has been making rapid progress in improving such roads and trails as formerly existed, until now there are several hundred miles of good roads which will compare favorably with highways in the States. As far back as 1909 it was possible to make a straight-away run of 250 miles from Manila to Baguio, passing over the Benguet mountains at that, as was demonstrated by H. S. Alexander, a government inspector. It took him two days to cover the route, as road conditions at the time were of all sorts, and many miles of bridgeless trails had to be navigated, while fuel stations were few. A story of that trip reads something like a trip from Philadelphia to California or from California to Colorado Springs.

A motorcycle club in the Philippines is among the possibilities, and this club will affiliate with the F. A. M. as soon as organized, or interest in the latter organization is keen among the motorcyclists there. No competitive events have as yet been indulged in, with the exception of an occasional "brush" in friendly rivalry, but these conditions are also likely to change in the near future, for the sporting proclivities of the Americans and other foreigners cannot for long remain passive. To sum up, it may well be prophesied that motorcycling will soon become listed among the leading sports of the Islands.

NEWARKERS MAY COMBINE.

AS the result of an impromptu conference held recently the New Jersey and Newark motorcycle clubs, both holding forth in Newark, N. J., will probably consolidate. There are indications that any differences which have existed in the past between the organizations have been forgotten, and that the way is open for a thoroughly amicable merging of interests by the riders of the city. When Walter Goerke's new motorcycle establishment was opened in Newark recently members of both clubs met at the store and talked over old times. It was suggested that with all the motorcyclists of the city rounded up under one banner Newark would have the strongest club of its kind in the state.

BUSINESS AND PLEASURE

Every Rider in Sidney Squad Finds Work for His Machine Aside from Ordinary Road Trips.

THERE are no more genuinely enthusiastic motorcyclists in the ranks than those who use their machines for both business and pleasure, and the accompanying photograph shows a group of Yale riders of Sidney, Ohio, who credit much of their satisfaction to this happy combination.

The riders shown in the first row of the picture, from left to right, are: Howard Brautigam, scientific farmer; Leo Peters, expert cigar maker; Homer Monroe, news agent; Burte Foote, printer and engraver; Paul Monroe, Yale agent; Charles Aftermatt, hollow-ware polisher; Kenneth Hutchison, clerk in Sidney post office; Al. Yarber, "trouble-hunter" for the Sidney Telephone Company. These riders find almost daily opportunities to use their machines in business. The two enthusiasts standing in the rear are William Snevely and Winfield Monroe, who are just about to purchase motorcycles and join the road squad.

NAPA RIDERS BUSY

California Squad Adopts Several Novel Plans to Maintain Interest and Boom Its Membership.

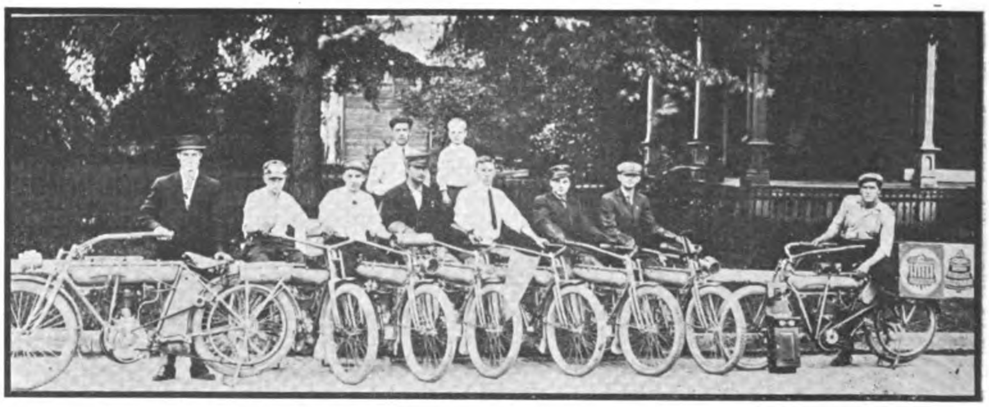
WHEN the Napa (Cal.) motorcyclists gathered for their last meeting they found time to outline numerous plans for the coming season, in addition to electing new officers. In future the club will give a banquet in connection with the last run in each month, at some point on the route of the trip if possible. Should the weather prove unsuitable for road work the feast will be spread at one of the hotels in Napa, so that the riders are bound to enjoy a social program on the date set aside.

Captain Hancock and Secretary Fisher submitted another scheme at the meeting which has been taken up to assist in bringing the boys out for the regular runs. The riders on each trip will receive a ribbon pennant, inscribed with the date and the destination for the day, and the member holding the greatest number of pennants at the end of the season will be awarded a medal or some other valuable trophy. The membership committee also announced that it will allow a month's exemption from dues to each rider who brings in a new member.

Needless to say, with these plans being applied practically, the club is booming and its outlook for 1912 is excellent. Officers have been elected as follows for the coming term: W. Thomas, president; O. Fisher, secretary; F Tanascia, treasurer, and W. Hancock, captain.

NEW GYM EQUIPPED.

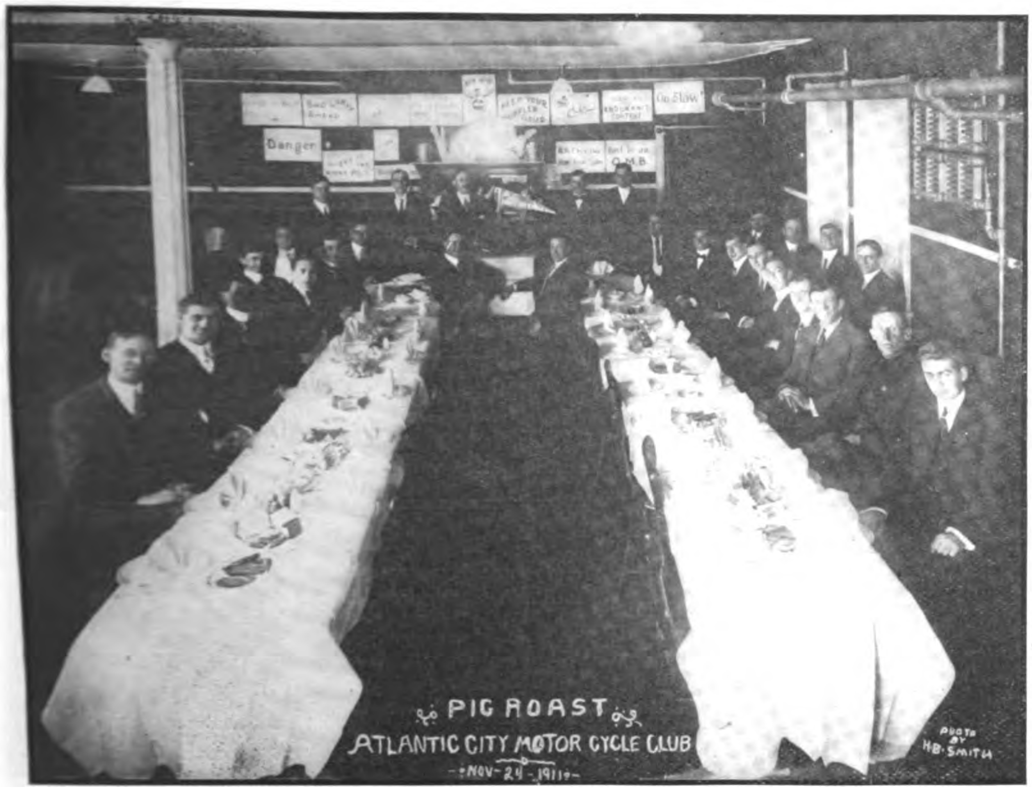
THE Columbus (Ohio) M. C. has completed the work of equipping its new club house at 48 East Eighth avenue with a gymnasium. In the gym can be found a punching bag, boxing gloves and all other appropriate apparatus.



Part of the Sydney, O., Squad of Yale Riders.

ACTIVE SQUAD IN ATLANTIC CITY

After Scoring Success With Annual Banquet, Jerseymen Hold Endurance Run to Camden—Planning for a Permanent Home.



WHEN the Atlantic City (N. J.) M. C. held its second annual banquet recently every member who checked in finished with a perfect score and the affair was most successful. The accompanying photograph shows the club entrants awaiting the starter's gun, and a casual inspection will disclose the fact that nothing was lacking as far as the "festive board" was concerned. At the head of the table, with a club pennant floating proudly above him, will be seen the porker whose presence contributed materially to the effectiveness of the menu. From left to right the officers seated at the end of the table are as follows: William Shannon, treasurer; Albert C. Stephany, president; William Hornlein, vice-president; and William F. Specht, Jr., secretary.

On the Sunday following the banquet the club held an endurance run to Camden and return, passing through May's Landing, Malaga, and Pitman to Camden, and returning via Hammonton, Egg Harbor City, New Gretna, Absecon and Pleasantville to Atlantic City. The following contestants finished with perfect scores: Frank Blackman, 4 h. Harley-Davidson; Thomas Newman, Thor 4; George Armstrong, 7 Indian; William Hornlein, 7 Thor; J. E. Stokes, 4 h. Harley-Davidson; Ralph Jennie, Thor 4; G. T. Haines, Thor 4; Edward Willis, 4 h. Harley-Davidson; William Shannon 4 h. Minneapolis; William Specht, 4 h. Harley-Davidson, and William Steir, 4 h. Harley-Davidson. Charles Stinsman, 5 h. Emblem, was 17 minutes late at Egg Harbor City, and Walter Compton, 4 h. Harley, was 2½ minutes behind the schedule at the same control. In the spring the club will hold a run for the purpose of breaking the tie between the perfect score riders so that the prizes may be awarded.

The Atlantic City club came into existence two years ago with eight members, and it now has forty-one riders on the list. The organization is on a 100 per cent. F. A. M. basis and is determined to continue this policy

---

"EVERY young man should have a wholesome hobby," says a well-known physician, "and my observations of late lead me to believe that he cannot do better than procure a motorcycle and use it in moderation."

NO WINTER LULL

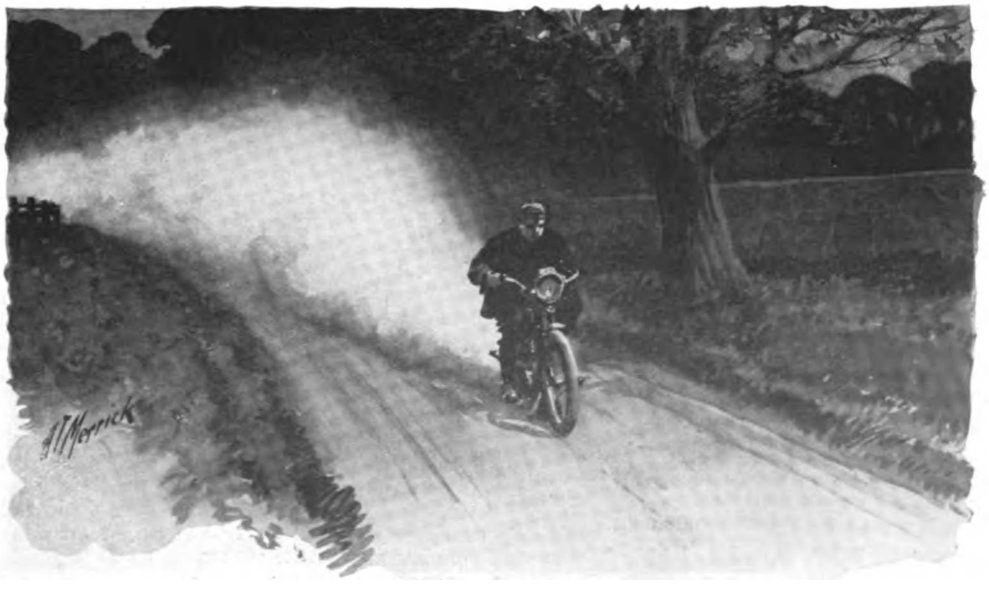
Lively Business Meetings and Social Programs Carry St. Louis Squad Through the Winter Months.

ALTHOUGH only the hardiest members of the South Side M. C., of St. Louis, Mo., have ventured out on the road of late, there has been no falling off in club interest, and the organization is enjoying a most prosperous winter season. The clan meets twice a month and between business sessions social programs are arranged, so that the usual period of cold-weather inactivity is being avoided. The special program for November included a smoker, and on December 16 the club held a masquerade dance, which added materially to the treasury. For January the chief social event will be the annual banquet, at which the new officers will be installed. The staff has been chosen as follows: C. B. Cornwall, president; F. Greenfield, vice-president; G. Schmidt, secretary-treasurer; G. Kalhorn, corresponding secretary; H. Gates, captain; J. Winkler, lieutenant, and G. Hussman, sergeant-at-arms.

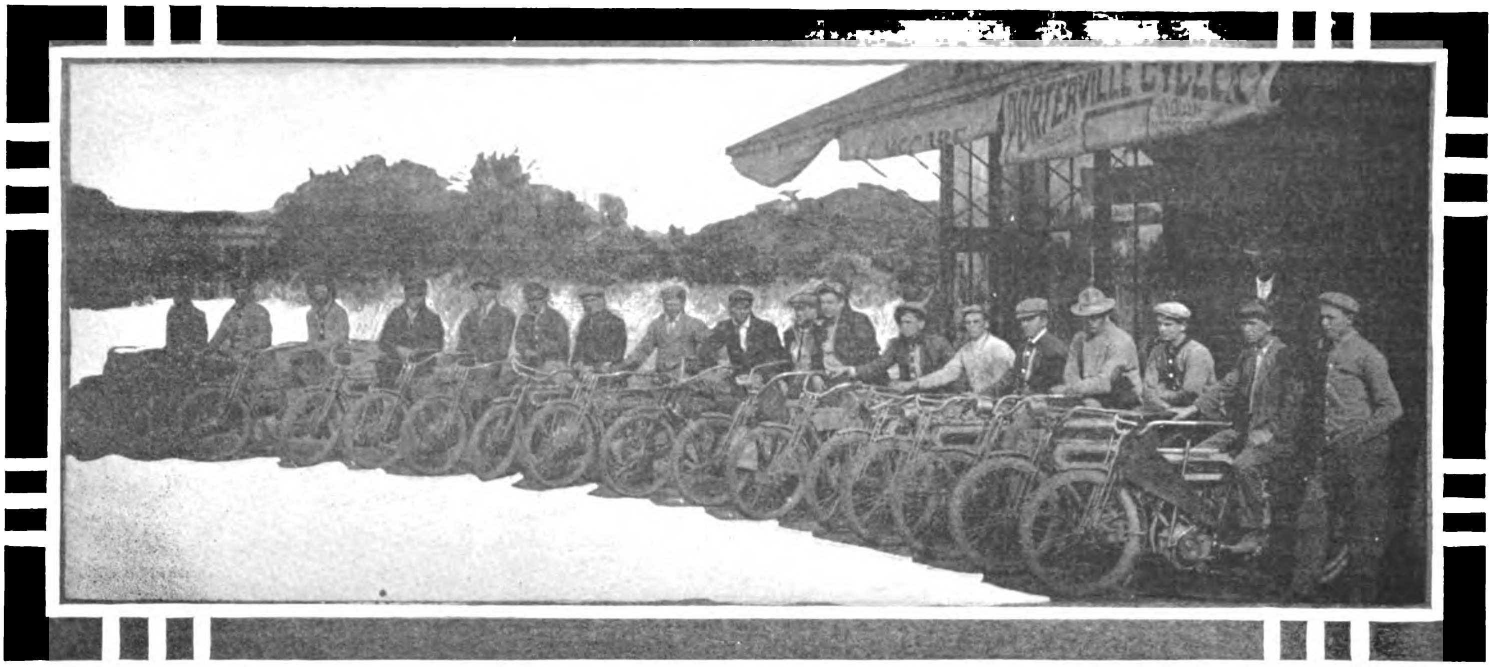
The club made it a practice throughout the last year to hold a run every Sunday, arrangements being made to stop for a chicken dinner at some point on the route. After the feast there was always a spirited motorcycle confab, and late in the afternoon the riders started for home in pairs. This system has been responsible for the unusual interest displayed, and it will be followed for the coming season. Each year the club sets aside a liberal sum for the purchase of trophies which go to the three members attending the most runs during the season. The squad is on a 90 per cent. F. A. M. basis and has adopted several novel methods of boosting the Federation.

PETALUMA HAS CLUB.

MOTORCYCLISTS of Petaluma, Cal., have organized a club and elected the following officers: Bert Goodwin, president; H. Lauritzen, secretary, and R. Schluneggard, treasurer. It is the intention to close the charter list in about a week and steps will then be taken to open permanent quarters.



Annual Club Run of the Speedsters' Touring Club. Best Attended Turn Out in Their History, Forty in Line. Lift the Dust and Find the Other Thirty-nine.



A Line-Up of Part of the Porterville M. C., a Live California Organization.

BALTIMORE OFFICERS

Two Clubs of the Monumental City Chose the Staffs for the Coming Year During New Year's Week.

TWO of the motorcycle clubs of Baltimore held elections of officers New Year's week. The leaders of the Maryland M. C. for 1912 are: Frank O. Boyd, president; August Zimmerman, vice-president; William Wood, treasurer; Elmer Snyder, secretary; W. S. Standiford, captain; William F. McCauley, first lieutenant; Herbert Stubbs, second lieutenant; Bert Heinz and Howard Essig, executive committee.

The club came into existence about a year ago with six charter members, and has grown during the past year to eighty members. The officers are working hard to have 100 on the roll before the expiration of the winter season.

The Chesapeake M. C. elected the following officers: William L. Allers, president; John H. Lupton, vice-president; George W. Coggins, secretary-treasurer; Ed. T. McCauley, assistant secretary-treasurer; A. F. Fischer, captain; Ferd Plitt, first lieutenant; Elmer C. Roof, second lieutenant; John L. Strube, third lieutenant. Frederick Kuhl and W. R. Gaither, with the officers, form the board of directors.

POST HEADS NEW JERSEY CLUB.

GEORGE POST, one of the best known motorcyclists in northern New Jersey, who has been chosen as president by the North Jersey M. C., of Newark, for the coming term is already outlining plans for a record-breaking season. H. Norman Davis, as recording secretary, and Peter Cunningham, as financial secretary, are holdovers, but Elmer Crosbie, as treasurer, is a new official. For years past Post has been a leader in every movement taken up by the club and the organization will undoubtedly maintain its present high standard under his guidance.

FOR SOLAR LAMPS.

WATT SHIPP, of Salem, Ore., manufacturer of the Shipp lamp brackets, will in future supply the Badger Brass Company, of Kenosha, Wis., with his product for regular equipping of Solar lamps.

BOOM PROVIDENCE TRACK PLANS

Committee Named to Push Project at Annual Meeting of Providence M. C. —Buffington Heads Club Officials for 1912.

THERE was a large turn-out of members of the Providence (R. I.) M. C. when the annual meeting was held on January 3, and many plans for advancing the cause of the powered two-wheeler during 1912 were given attention. One of the chief topics for discussion was the proposed track which the club is striving to have erected in time for racing early in the coming season, and a committee made up of J. K. Crawford, B. A. Swenson and C. A. Anderson, all veteran riders, was appointed to take up the plans and submit a full report as soon as possible.

It is the intention to have the club dispose of fifty per cent. of the shares in the track enterprise, with the understanding that private capital will cover the remainder. There are indications that little difficulty will be experienced in raising funds as interest in the project runs high. The promoters count on having a three or four lap circuit, with a grand stand, suitable dressing rooms and all the other accommodations which go to make such a project successful.

At the annual meeting a report was submitted with reference to the quarters which the club will occupy in the new Swenson building, now in course of construction. The rooms in question will be admirably suited to club needs, and in view of the fact that Mr. Swenson is one of the most active workers for the advancement of the organization, it may be taken for granted that he will leave nothing undone to arrange the new quarters most advantageously. In addition to the pool room, card room and reading and lounging roon there will be a large hall which may be used by the club on special occasions. The Swenson building is well located at the junction of Broad, Friendship and Blackstone streets.

It was announced that the annual dinner of the club will be held on Sunday, January 28, in Perkins' parlors, and the committee in charge of arrangements for the affair reported that expense had been disregarded in the preparation of the menu. Owing to the fact that the dinner will be given on Sunday the boys were warned against using their cut-outs, but this is not expected to detract in any way from the success of the program.

After the business session on January 3 the officers of the club for 1911 were congratulated upon the manner in which they fulfilled their duties and Secretary J. G. Edwards was given a rising vote of thanks.

Officers for 1912 were elected as follows: E. L. Buffington, president; Frank E. Domina, vice-president; John G. Edwards, secretary, re-elected; B. A. Swenson, treasurer, re-elected; Charles A. Anderson, captain; Albert V. Howe, first lieutenant; Edward A. Lutz, second lieutenant.

Having learned that the Providence club had plans under consideration for a track, George J. Kreamer, who has had wide experience in track construction, made a trip to the Rhode Island city a few days ago for a conference with the promoters. He found them enthusiastic. Proprietor Perkins of Narragansett Park had in mind the construction of an automobile saucer, but was informed by Kreamer that a track of the circumference proposed would have to be banked nearly forty feet high to hold the racing cars at top speed.

Mr. Perkins finally agreed to furnish half the money needed for such an enterprise if the Providence club would guarantee the balance. Treasurer B. A. Swenson and other officials of the organization stated that the club was satisfied with this arrangement, and the deal was clinched. Jeffrey Crafford was appointed to select an attorney, who will prepare articles of incorporation. The company will capitalize at $15,000, with $10,000 paid in. The present plans call for a half-mile circuit inside the mile dirt track at Narragansett Park. Mr. Kreamer is preparing drawings which will be submitted to the Providence club in about a week.

CEDAR RAPIDS BANQUET.

ONE of the most active motorcycle organizations in Iowa is the Cedar Rapids club, which is shown at its annual banquet, in the photograph herewith. The club was organized in March, 1911, with twenty-eight charter members and it now has nearly 100 riders within its ranks. The last season was a most successful one for the squad, financially as well as socially, and a still better showing is counted upon for 1912.

IN NEW HOME

Utica Club Starts Year by Occupying Permanent Quarters, and Outlook Is Unusually Bright for 1912.

THE Utica Motorcycle Club held its annual meeting and banquet on January 4 and elected officers for the ensuing year as follows: President, Homer G. Bulkley; vice-president, Charles Alt; secretary-treasurer, John J. Weiler. It was voted to put over the election of captain and lieutenants until the first meeting in April.

The club is starting the year in its new home in the National Bowling Alley building, 120 Lafayette street. The rooms are conveniently situated in the central part of the city and are well adapted to the needs of the organization. In the rear of the building is a large covered court where machines can be stored, and the bowling alleys are on the lower floor.

The motorcyclists are located in the same building with the Utica Motor Boat Club and the Aviators' Club. It is a rather happy coincidence that the somewhat allied clubs should have adjoining rooms, and a feeling of good fellowship has already sprung up between these kindred spirits.

The house committee is busy re-decorating and furnishing the club rooms, and it is expected that within a short time the rooms will present a very attractive appearance. The newly appointed entertainment committee is planning a number of social attractions which they will be ready to offer at the next meeting, January 18. Enthusiasm in the club is at a high pitch at present, and the membership committee is starting a campaign for new recruits with every prospect of excellent results.

SITES OFFERED FOR BALTIMORE BOWL

Electric Park Lease Would Come High—Howard French Now in New York to Confer With F. A. M. Officials.

BALTIMORE, Md., January 6.—Plans for the big motordrome here are rapidly assuming shape. Howard A. French is on the job with both feet and he is not allowing anything to slip by him. A few days ago two letters arrived from Jack Prince, who is now in Los Angeles, Cal. Prince seems to be more enthusiastic than ever over the prospect of a track for this city, if one can judge from the tone of his letters. He will not be able to leave the coast before February 1, and asks that the final arrangements be left open until he reaches this city.

The only thing worrying Prince is that a ruling of the F. A. M. may prohibit him from building the half-mile track he has his heart set upon. He calls attention to a resolution suggested by Chairman Thornley, in which sanction would be withheld for all tracks under half a mile, unless they are perfectly circular. It will be impossible for Prince to build a half-mile circular track here, and he is wondering what can be done should the regulation referred to be adopted. He has asked Howard A. French to take the matter up with the F. A. M. officials in New York and ascertain the exact status of the question. French is attending the New York Automobile Show and will look into the matter while in the metropolis.

The question of a site is still hanging fire. The unreasonable demand of the owners of Electric Park in the price they set upon the place for a lease prohibits its selection. However, they may modify their demands. Several other excellent sites have been suggested to Mr. French and they will be investigated within the next two weeks. One enthusiast offered a site in a splendid location, but the lot is surrounded on all sides by houses and it is felt that a motordrome there would bring forth too many protests. It is not the intention of the promoters to antagonize any section, and for this reason the offer had to be declined. A park in the western section of the city has been said to be just the place and it has been reported that the price is extremely low. All these matters will be looked into before Prince arrives, so that all that will be left for him will be to go over the field, see that everything has been arranged to suit him and then build the track. Those interested in the project look for early action.

TORONTO CLUB ELECTS

Fred. Johnson Heads Canadian Clan Which is Laying Plans for Unusual Activity During 1912.

THE Toronto Motorcycle Club, which, upon the drawing up of affiliation papers, will be the fourth club in the F. A. M. in point of membership, with its list of 185 members, held its annual election-fest on January 3, when the following officers were placed in power: Hon. president, Rev. J. D. Morrow; president, Fred Johnston; vice-president, William Self; secretary-treasurer, Tom Anderson, 53 Chicora avenue; executive board, McMulkin and Summers; racing committee, Stoner, Scott, Marshall, Frankland, Young, Davis, Sutherland; social committee, Case, Stillaway, Neilson; auditors, Thompson, Stillaway.

In his inaugural address President Fred Johnston outlined the prospects for the coming summer and made the declaration that he looks for better results under F. A. M. auspices. He asked for more systematic press work among the local papers, and impressed the need of more parliamentary deportment at the business meetings. A notice of motion was entered favoring the establishment of permanent quarters, while a resolution was passed directing the club to submit a proposition to the F. A. M. for better protection for affiliated clubs, especially where it concerns Canada. Messrs. Kipp, Anderson and McLean were delegated to interview F. A. M. officials at New York during show week.

The Dunlop trophy awarded to the club for the three-day endurance run last fall was officially accepted. Joe Baribeau, the Winnipeg rider, who holds a 100-mile 100-minute record, was present at the meeting, and extended greetings from the Winnipeg organization.

MAIL CARRYING ECONOMY

Wisconsin Worker for Uncle Sam Covers 25-Mile Route with Average Daily Outlay Less Than Fifteen Cents.

LAST April William Shauger, R. F. D. carrier on a route leading out of Black Creek, Wis., bought a 4 h. Harley-Davidson machine and started to cover his 25-mile course on it. In a short time he had figured the trip so carefully that he used only half a gallon of gasoline in making it, and his average expense for covering the route was less than 15 cents. He collects at ninety-nine boxes and has an average of seventy-five stops per day. As a rule he completes the trip in three hours and is able to devote the afternoon to his farm work.

Despite some outside opinions to the contrary, Wisconsin has many districts in which good roads are common and where R. F. D. carriers are able to use their machines most effectively.

MOTORCYCLE SAVED A LIFE.

RECENTLY physicians announced that anti-toxin was needed to save the life of six-year-old Jeremiah Shea, whose home is in a country place near Marshalltown, Iowa, and there seemed to be no way in which the medicine could be obtained in time. Stories of the motorcycle's sensational accomplishments came to the mind of one of the physicians, however, and he telephoned to a pharmacy in Marshalltown, explaining the nature of the case. Forty minutes later a motorcyclist pulled up at the Shea home with the precious anti-toxin after a hair-raising dash over country roads, and the boy's life was saved.

A PUZZLED NOVICE.

EDITOR, MOTORCYCLE ILLUSTRATED: We often hear of things done by amateurs that make one laugh, but I met a fellow on the road this week who had anything I ever saw beaten to a standstill. He had gone out for a spin and when six miles away from home his motor stopped. Upon examination he noticed that the L on the bottom of his Schebler was gone. (Note how quickly the trained mind grasps the situation.) He immediately procured a piece of wood, whittled it to fit and plugged up the hole. This, of course, did not remedy the trouble, and when I met him he had traversed only four of the six miles between himself and home. On taking out the plug and giving the commutator screw half a turn (reason for stopping), the motor went off as fine as ever, and that fellow is still trying to figure out what that hole is for. LELAND WRIGHT.

Bordentown, Pa.

G. & K. PENNANTS.

ATTRACTIVE pennants distributed by Graton & Knight, of Worcester, Mass., makers of Spartan belts, are being passed out to dealers at the show by W. W. Shoemaker. They are made up with a blue background on which gold lettering calls attention to the fact that G & K belting has been before the public since 1851. The pennants are in demand by dealers who find them of value as window and showcase decorations. They may be obtained by application to Mr. Shoemaker at the Garden.

NEW JERSEY TAGS.

FOR the first time New Jersey motorcyclists are now being supplied with State license tags, instead of being allowed to make out or obtain their own numbers. The fee remains the same, two dollars. In the past some machine owners did not take the trouble to have their mounts numbered in any way, and this laxity has brought about the decision to supply a uniform tag which must be displayed at all times.

TWO CLEAN SCORES.

FRANK J. MURPHY, of Sacramento, Cal., riding his Pope machine, has made perfect scores in the last two endurance runs of the Sacramento M. C. In the eight-hour contest of December 10, over the mountainous Placerville-Auburn route, the roads were in particularly bad condition owing to the recent rain, but Murphy came through with his score intact.

THE police department of San Diego, Cal., now has five motorcycle officers, three new machines having been added to the equipment recently.

AGE NO HANDICAP

R. F. D. Carrier Covers Rough and Sandy Oklahoma Route by Motorcycle, Although Past Half-Century Mark.

D. S. HUFFMAN, R. F. D. carrier No. 3, out of Waurika, Okla., uses a Wagner motorcycle on his 28-mile route through sandy and hilly country and reports that it has cut down his work about one-half. Despite the fact that he is 55 years old, Huffman experiences no trouble in handling his mount, even over the worst trails, and he is of the opinion that he will be able to make his rounds by motorcycle for years to come.

Huffman had never ridden a bicycle when he decided to become a motorcyclist, but he was soon so well acquainted with his machine that he was able to cover the 28-mile route in an hour and a half, including stops for collections and deliveries and hard going through sandy stretches. Another Waurika carrier, with a route similar to Huffman's, still uses a horse and wagon and requires almost a whole day to complete his trip.

NOVEL DELIVERY MACHINE.

F. W. DICKINSON, who some time ago incorporated the Automotor Company, of Columbus, Ohio, with $50,000 capital stock, has brought it into actual being by leasing a plant at 1181 Parsons avenue. The following officers have been elected: F. W. Dickinson, president; William Caskey, vice-president; Frank Lodeman, treasurer, and A. F. Dickinson, secretary. The company purposes manufacturing a light delivery car wholly unlike any now in use. It really consists of a body suspended between two steel tube motorcycle frames, and employs wire-spoked wheels and other motorcycle characteristics. It mounts a 5 h. motor and is rated at 1,000 pounds capacity.

NEW YEAR'S RUN

Eleven Riders Out of Field of Fourteen Finished Severe Test of the Columbus M. C.

OUT of fourteen starters on the New Years' run of the Columbus M. C., who left Columbus at 9 a. m. January 1, eleven completed the trip to Springfield and return. Several, after suffering a number of spills, gave up and returned to the city. It had been announced that the trip would be made regardless of weather conditions. West of West Jefferson, Ohio, there were stretches where re-surfacing had been going on and the road was almost impassable.

There was a contest to see who should arrive at Springfield first and the first four finishing were: Otto Tresemer, Indian, first; Harley Frank, Emblem, second; L. P. Birkenbach, Yale, third, and Howard Snyder, Emblem, fourth. Others finishing were Earl Inskeep, George Fadley, Al Peak, Al Engle, W. H. Snyder, Robert M. McNabb and M. H. Horst. L. P. Birkenbach and Otto Tresemer continued the run to Dayton, Ohio, and returned to Columbus the following day.

HEIL'S GOOD SHOWING.

NORMAN E. HEIL, of Paterson, N. J., who was one of two motorcycle riders recently awarded silver medals for the most consistent riding in the North Jersey Motorcycle Club's endurance run of October 29, rode a Flying Merkel. His mount was the only twin among twenty-five makes entered to finish the run of nearly 200 miles with a perfect score. His actual running time was nine hours.

BIG ILLINOIS SQUAD.

ILLINOIS now has about 4,000 motorcyclists, and with the power two-wheeler gaining rapidly in popularity in all parts of the state it is quite likely that this number will be increased about half during the 1912 season.

CARRIED NO TOOLS

Phoenix Rider Covered 240 Miles on Pierce Without Even a Pocket Knife for Emergency Repairs.

TO prove that he has unlimited confidence in the Pierce machines, G. W. Hamilton, representing the Pierce agency in Phoenix, Ariz., recently made a trip consuming seven hours, over all kinds of roads, without carrying tools of any kind. It was his original intention to make Roosevelt his turning point, but this run was made so easily that he decided to continue, and finally reached Globe without having made an enforced stop. The distance for the round trip is over 240 miles, and about half the route is through mountainous country.

It is worthy of note that Hamilton did not even carry a pocket knife which might be used as a screw-driver in an emergency, and that the ride carried him through unsettled districts where he would have been seriously embarrassed had he experienced trouble with his mount. Nine quarts of gasoline and one quart of oil were used on the run, and the outlay for the round trip was 95 cents. The accompanying photograph shows the nervy scout at the famous Roosevelt dam, one of the greatest irrigation projects in the United States.

HOT ON THE TRAIL

Columbus M. C. Lays New Plans at Enthusiastic Meeting for Capturing 1912 F. A. M. Meet.

AT an enthusiastic meeting of the Columbus Motorcycle Club at the new club rooms, 48 East Eighth avenue, further plans were laid for an active campaign to secure the 1912 convention of the F. A. M. for the Buckeye Capital. It was the unanimous belief that Columbus is the logical location for the convention as it is centrally located, is provided with many and good hotels and has a good track. The support of the Columbus Chamber of Commerce, the Retail Merchants' Association, city officials and business organizations generally has been enlisted in the campaign.

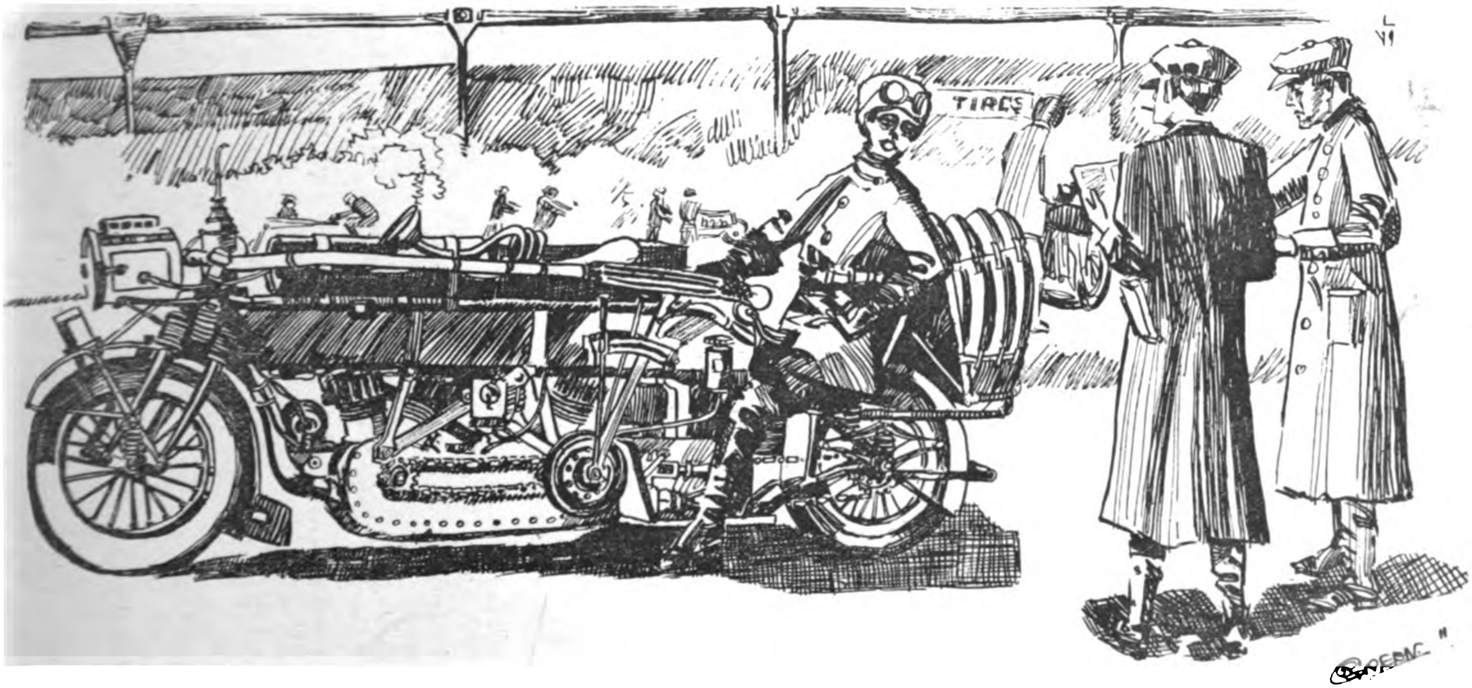
President Sarver will name a committee in the near future the duties of which will be to confer with the national officers and to lead in the movement.

EXCELSIORS IN LEAD.

AT a recent meeting of the Columbus Motorcycle Bowling league the Excelsiors captured two out of three games from the Harley-Davidsons and the Flying Merkels took two out of three from the Indians. The scores were: Excelsiors, 868, 653 and 757; Harley-Davidsons, 793, 743 and 699; Indians, 707, 685 and 775; Flying Merkels, 790, 699 and 654. Weekly meetings of the league will be held for the remainder of the winter.

BIG COLUMBUS SQUAD.

THE records of the city auditor of Columbus, Ohio, show that 594 motorcycles were licensed in the Buckeye Capital during the year 1911. This record shows a large increase over the number licensing machines in 1910. Motorcycle dealers and others in Columbus believe that there will be at least 1,000 machines in actual use during the year 1912.



A PEEP INTO THE FUTURE Entrant asks to withdraw from endurance run because the distance is only 800 miles, the schedule but forty miles per hour and half the route over rocky hills; too easy to be interesting, he says.

Dealers Department

KENTON'S NEW SHOP.

KENTON, Ohio, is to have an up-to-date and thoroughly equipped motorcycle repair shop and supply store, conducted by the Kenton Motorcycle Company, in which local men are interested. The motorcycle men have secured the quarters on South Detroit street, formerly occupied by Haley & Swartz, and will have it remodeled and fitted for a first-class shop and supply store. The entrance will be arranged so that machines may be taken into the basement directly from the sidewalk, and the repairing will be done in the basement. On the first floor the salesroom will be located.

ANOTHER "WHITE HOPE."

THE Franklin Cycle and Supply Company, of Columbus, Ohio, agent for Thor, Excelsior and Reading-Standard, has placed a number of unique advertisements in the local papers, exploiting the new 1912 white frame Thor. "A new 'white hope' discovered, the first appearance in Columbus," and other lines of that character have been used on the sporting pages of the newspapers, and the advertisements have attracted considerable attention. P. A. Vogel, secretary and manager of the company, handles its advertising campaign.

NOVEL SALES SYSTEM.

THE Blevins Auto Sales Company, of Toledo, Ohio, has adopted a novel method of distributing Flanders motorcycles, for which the firm is agent in the Toledo territory. Manager Griffith, of the motorcycle department, uses a motor truck with a large platform on which the power two-wheelers are displayed effectively as the demonstrators make the rounds of the smaller towns throughout northern Ohio.

TO NAME SUB-AGENTS.

W. H. Snyder, manager of the American Machine Company, of Columbus, Ohio, central Ohio agent for the Emblem, will soon start on a tour of his territory for the purpose of placing sub-agencies in the larger towns in the district. He will have at least half a dozen sub-agents who will cover the entire territory consisting of 14 counties.

FERD. MERCIER, of Brooklyn, has joined the Central Motor Company, 1220 Bedford avenue, that city, and will hereafter ride Excelsiors. Mercier turned professional toward the end of the last riding season, and won a number of events as a pro when riding *Indian machines.*

YALE BRANCH IN TOLEDO.

IN order to better serve the Yale riders of Toledo and vicinity, the Consolidated Manufacturing Company has opened a retail store at 145 Michigan street, Toledo, Ohio.

NEW HEADQUARTERS.

A. B. & B. M. HOWELL, Columbus (Ohio), agents for the Pope and New Era, have moved into a new location at 186 South High street where they have three times the space of the old store. The salesrooms are in the front and a modern repair shop in the rear.

ATTENDING THE SHOW.

A NUMBER of Columbus, Ohio, dealers are attending the New York Show. W. H. Snyder, manager of the American Machine Company, agent for the Emblem; L. P. Birkenbach, agent for the Yale, and C. E. Barr, of the Barr Motorcycle Company, agent for the Indian, are among the Buckeye visitors.

NEW CANADIAN WIGWAM.

H. M. KIPP, of Toronto, the representative of the Hendee Manufacturing Company for Canada, made the announcement this week that the home of the Indian in the Canadian metropolis will in future be located at 384 Spadina avenue, where spacious quarters are available. With the opening of the new store a large stock of 1912 Indian flyers and English side-cars will be shown. Since taking the Indian agency three years ago, no. less than 159 machines have passed through Kipp's hands, sales having doubled each succeeding season. Believing that the coming summer will see a great demand for side-cars, Kipp has laid in a stock of twenty "chairs" of different design.

GASOLINE
MOTORCYCLES
CHICAGO MOTORCYCLE WORKS
EXCELSIOR
MOTORCYCLES EXCELSIOR

Chicago Motorcycle Works, Excelsior Agency.

MEMBERS and friends of the Dayton (Ohio) M. C. will enjoy a banquet on February 1, at which covers will probably be laid for about 200 persons.

JOINS INDIAN CAMP.

JOE BARIBEAU, the Canadian speedster who recently came into prominence through a remarkable 100-mile grind, has joined the Indian racing staff. When he left Canada the Winnipeg M. C. gave a social program in his honor. The club members and friends who attended made up a theatre party and Joe reciprocated by donating a handsome silver cup to the club. It will be competed for in an annual 50-mile race, the rider winning it three times to hold it permanently.

HUTER HAS AGENCY.

GEORGE HUTER, of Dallas, Texas, is handling the Harley-Davidson motorcycles for 1912 in his section of the State. His store is located at 517 S. Ervay street, Dallas, where he will keep a number of machines and a full line of parts on hand, as well as accessories. He is also a booster for the Aurora Brand motorcycle clothing, for which he has the state agency.

BUSY DALLAS AGENCY.

THE American Motor Company, of Texas, which is an independent branch house, will handle the Flying Merkel along with the M. M. and Peerless motorcycles for 1912. H. A. Simpson, former State Commissioner of the F. A. M., is proprietor of this concern which has one of the best stores in Dallas. Mr. Simpson is North Texas distributor of the Merkel machines.

SIEBOLD TAKES AGENCY.

H. M. SIEBOLD, located at the corner of High and Gay streets, Columbus, Ohio, has taken the local agency for the Marathon. He has also taken the local agency for the Thor from the Franklin Cycle and Supply Company, which is the Thor distributor in central Ohio.

MERKEL IN ONTARIO.

A VETERAN bicycle man of Toronto, Canada, A. E. Humphrey, 364 Queen street West, has secured the 1912 Merkel motorcycle agency for the Province of Ontario. In order to get acquainted with motorcycle trade methods, Mr. Humphrey visited the New York show this week, incidentally taking in the Merkel banquet.

In the Dublin and District M. C. reliability trial, December 27, an Indian machine, driven by C. B. Franklin, was the only mount entered to receive full marks for reliability and hill climbing. The weather and road conditions were bad.

The New Harley-David

FOR sometime we have been shipping 1912 Harley- enough now to begin stirring things up in motor dealers tell us that if we had built their machine to

The Ful-Floteing Seat has made good every claim we made for it, **and then some.** You don't have to take our word for it—try it **yourself.** The Free-Wheel Control has created a furore in sections where riders have had just enough experience with "Free-Engine Clutches" to want **something better,** and in other localities it has filled a long felt want for a device that would permit the Harley-Davidson to start without pedaling and would facilitate easier handling in heavy traffic, etc.

> *"I have ridden my new Harley-Davidson enough to be more than pleased with it. The wheel is a wonder. I never expected to see anything like it. I never rode an easier, smoother, quieter motorcycle in my life and I have been riding them for the last seven years. My job will be a pleasure for me in the future because I have something to ride that does not jolt the life out of me.*

Harley-Davidson Motor Co., 1

son In Police Service

Davidson's. These machines have been out just long ycle circles. We have had any number of riders and order, we could not have pleased them more.

> *"In running the Harley-Davidson over the streets here I find that it runs so quiet that pedestrians cannot hear me approaching, making it very dangerous to them as well as myself. I find even with the muffler cut-out open it does not make enough noise so I will have to equip my machine with some kind of a warning device.*
>
> *Very truly yours,*
> *HENRY B. LEWIS"*

The writer of the accompanying letter, Henry B. Lewis, a motorcycle policeman of Fort Worth, Texas, tells what he thinks of the new Harley-Davidson with Ful-Floteing Seat and Free-Wheel Control. Seven years experience with motorcycles of various makes has naturally made Mr. Lewis a pretty good judge of motorcycle value. When we are continuously receiving letters like his, we cannot help but realize that our efforts to produce an **unusual** motorcycle are **appreciated** by our riders and our dealers. A great business man once said, "A satisfied customer is the best kind of an advertisement." If this is true, it is self evident that the **Harley-Davidson is well advertised.**

68 C Street, Milwaukee, Wis.

TREMENDOUS GAINS

In circulation, particularly during the closing months of 1911, have earned the title:

"THE PAPER WITH 10,000 CIRCULATION"

FOR

MOTORCYCLE ILLUSTRATED

The Press Run of this Issue is 10,950 copies, its actual circulation more than 10,800, of which nearly 90 per cent., or, to be exact, 9,025 copies, is net and paid.

Below are the 1911 figures, showing exactly the total and net circulation of each issue of **MOTORCYCLE ILLUSTRATED** last year.

CIRCULATION STATEMENT OF MOTORCYCLE ILLUSTRATED

The undersigned, President and Treasurer of Motorcycle Publishing Co., publishers of "Motorcycle Illustrated," vouches for the accuracy and absolute correctness of the circulation figures given herewith.

R-S DIRECTORS CHOSEN

New Board Elected at Recent Meeting of Stockholders Approves Plans for a Vigorous Sales Campaign.

AT the meeting of stockholders of the Reading-Standard Company, Reading, Pa., the following directors were elected to serve for the ensuing year: J. B. Fricker, Reading, Pa.; G. Jahn, New York City; C. A. Earl, New Britain, Conn.; Charles T. Treadway, Bristol, Conn.; F. R. Wilhelmy, Cleveland, Ohio; Abner S. Deysher, Reading, Pa.; Ralph Webster, Elmira, N. Y.; F. A. Lemal, New York City; William F. Remppis, Reading, Pa. Officers will be elected by the board of directors at their next meeting.

All financial arrangements having been satisfactorily concluded and complete plans for 1912 approved, the company is ready to take up a vigorous and aggressive campaign for the extension of R.-S. business during the coming season. The company reports unusual interest in its new models, and the booking of orders for motorcycles as well as bicycles is far in excess of the showing last year at this time. Immediate deliveries are being made of belt models and the twins will be ready for shipment at an early date. The company is exhibiting in the Madison Square Garden Show and will also have a fine display in Chicago.

EXCELSIOR IN GEORGIA.

THE Alexander-Seewald Company, the well-known bicycle and automobile supply house of Atlanta, Ga., and T. C. Butler, Jr., have contracted to handle the Excelsior machines in Atlanta and northern Georgia. The company will conduct a complete motorcycle store and repair shop, and will also do a jobbing business in supplies and motorcycle appurtenances. A catalog, now being made, will soon be out. Believing in the future of the motorcycle business in general, and in the good qualities of the Excelsior in particular, the company plans to do an instalment business. Mr. Butler, who is well known in trade circles, is in full charge of the motorcycle department.

PIERCE AGENCY MOVED.

THE J. A. Seitz Company, agent for the Pierce machines in Syracuse, N. Y., is now occupying a new $200,000 building which was completed about January recently. In addition to the large and well arranged salesroom, the new quarters will provide a fully equipped repair shop, and the company will lack nothing that might add to its facilities for accommodating the riders of its district.

CORBIN CHANGES.

CLARENCE A. EARL has been appointed general manager of the Corbin Screw Corporation division of the American Hardware Company, for the reorganization of their properties that has been recently effected, and Charles Glover, former president of the Corbin Screw Corporation, has been elected vice-president of the American Hardware Company, in charge of the mechanical operations of all of the plants. The Corbin Screw Corporation Division is at New Britain, Conn.

Clarence A. Earl.

The promotion of Mr. Earl to the position of general manager will be gratifying to his many friends connected with the bicycle and motorcycle industries. He started with the Corbin interests nineteen years ago as office boy in the New York office, has traveled on the road for a number of years and has been connected with the New Britain factory for the past ten years. On last Thursday Mr. Earl entertained eighty-five of the department heads of the Corbin Company at a dinner in Hond's Cafe, Hartford, Conn., during which he stated that plans had been formulated to greatly enlarge the scope of the business of the Corbin division of the American Hardware Company. The dinner was a sort of get-together affair.

The coaster brake business of the corporation is one that is showing a gratifying increase each year, and during 1911 this department showed an increase of 33 per cent. over 1910.

IVES TO BUILD MONARCH

Under This Name New Single and Twin Models Will Soon Be Turned Out From Former Reliance Plant.

SINCE the plant of the Reliance Motorcycle Company, in Owego, N. Y., was taken over by W. H. Ives and associates at the recent sale rapid progress has been made in the reorganization of the factory staff, and it is offically announced that work will proceed at once on two new machine models to be marketed under the name Monarch. Deliveries will be made on singles about February 10 and thirty days later the firm, which has been organized as the Ives Motorcycle Corporation, will be prepared to ship its twin model. Both types will be magneto equipped. Preparations for getting out machines had been going on quietly for several months prior to the formal sale of the property so that there will be little or no delay in putting the well-fitted plant in full swing.

The new corporation held a meeting on January 6, the following officers being elected: W. H. Ives, president and general manager; Frank T. Carroll, vice-president, and H. T. Patten, secretary-treasurer.

While minor details in the specifications of the machines have not been decided upon preliminary descriptions forwarded from the plant indicate that the mounts will measure up well. The single, slated at 4½ h., will have a bore of 3⅜ and stroke of 3¾ inches, giving a displacement of 33.55 cubic inches. Mechanical valves are used. Steel-rimmed, single clinch, 28-inch wheels will be used, the wheel base will be 56 inches, Eclipse or Corbin band brake will be fitted, and the tanks will be larger than those used on the old Reliance machines. The gasoline reservoir will have a capacity of 2½ gallons, and the oil tank one gallon. Lubrication will be by sight feed, with auxiliary pump. Flat belt transmission will be standard, with 1⅛-inch V-belt optional. An Eclipse free engine clutch will be fitted at an extra charge of $10, and the machine will be listed at $200.

The twin specifications call for an 8 h. motor, with mechanical valves and displacement of 67.00 cubic inches. This model in frame, handlebars, wheels, wheelbase, brake, tanks, transmission, control, lubrication, ignition and finish it will follow the makeup of the single. The Mesinger saddle No. 4 will be standard equipment and 28 x 2½-inch studded tread tires will be fitted on the single, and 28 x 2¾-inch for the twin. The twin will be listed at $250 and an Eclipse free engine pulley will be supplied as a regular fitting. The single will scale at 200 pounds and the twin at 220.

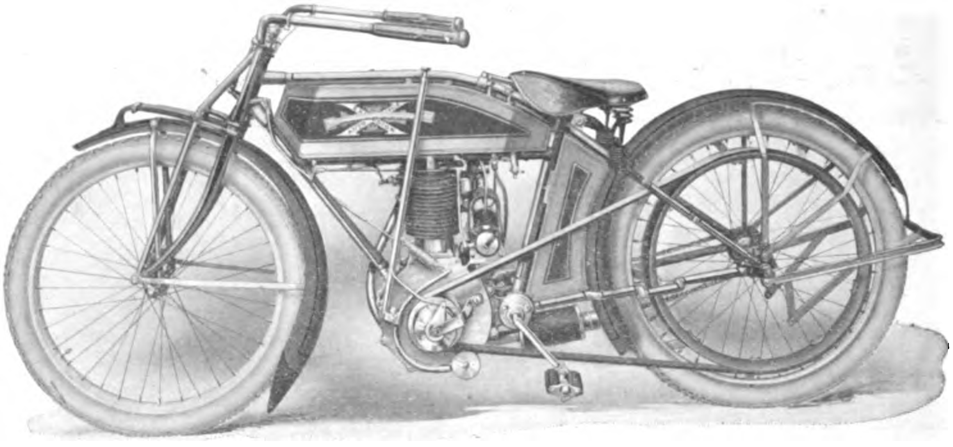
A spring fork of the double type will be fitted as will a spring seat-post.

RADICAL CHANGES IN NEW EXCELSIOR

Chain Drive Types and a New Twin 7 Are Extra Models for the 1912 Season—Free Engine Clutch Cradle Spring Fork, Spring Seat and Re-designed Frame and Tanks Are Features.

RADICAL changes characterize the 1912 Excelsior product, from the power plant and transmission down to the trademark. These changes include: a cradle spring fork; chain drive, spring seat-post free engine clutch, new magneto position; frame design, mechanical inlet valves and combination clutch and belt-tension control, the latter two being noticeable on the singles. There are four models: a 4 h. single chain drive, a 4 h. single belt drive, a 6 h. twin belt drive and a 7 h. twin chain drive model. The prices are, respectively: $200 for the singles and $225 and $250 for the twins.

The single 4 h. motor of Excelsior make has the inlet valve over the exhaust in a common chamber as on the twin model of 1911. The inlet is mechanically operated through a long push-rod attached to the end of a rocker pivoted in trunnions formed integral with the dome. The magneto is fitted behind the cylinder on this motor, and the gear train is housed in a smooth regular casing, contributing to cleanliness and fine appearance. The form of the distribution casing has been changed to accommodate the additional gearing for the mechanical inlet valve operation, and has an equally attractive and clean appearance. On the 6 h. belt twin, there have been practically no changes, but the 7 h. twin, chain drive, is an enlarged model of the 6 h. of 1911, with such modifications as are necessary to adopt it to the use of the chain. The magneto on the twin models is fitted in front of the motor, low down and well protected by the mudguard on the front wheel.



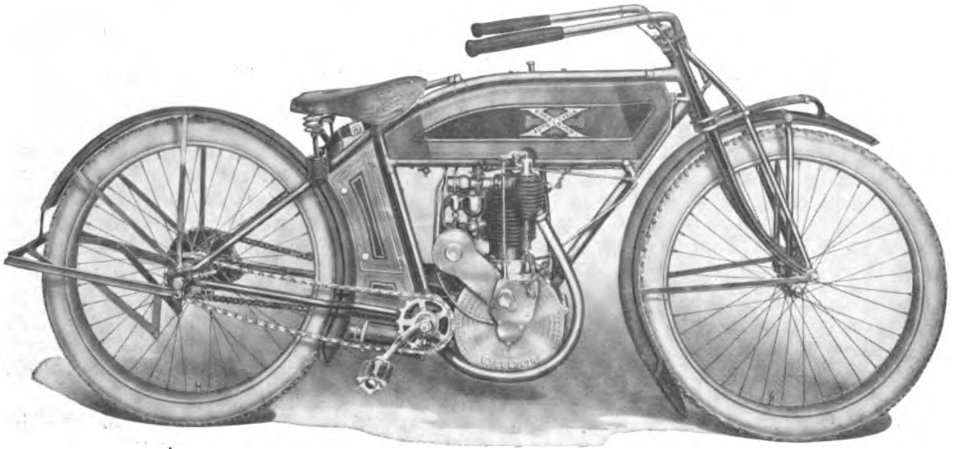
Excelsior 4 h. Belt Drive Magneto Single.

On the belt models, a regular flat-belt tensioning device with lever, as in previous Excelsior models is fitted, but in addition to this an Eclipse free-engine clutch is provided on the motor shaft in place of the pulley on former models. The idler lever is connected to the clutch operating lever by a link, so that the following action occurs: When the lever is moved forward, the clutch first engages, and then the tension is put on the belt, while a further movement forward has no effect on the clutch, but tends to increase the belt tension. A movement of the lever in the backward direction, naturally, first slacks the belt and finally releases the clutch. This form of double control by one lever is unique in motorcycle practice, and it is very probable that this arrangement will effect an increase in the useful life of the belt. The simplicity of the arrangement is most noticeable.

On the chain-drive models, the first chain drives from the motor sprocket to a countershaft, whose sprocket is formed integral with the clutch, also of Eclipse manufacture. As in the belt models, a lever pivoted on the crankcase operates the clutch, while the pedal shaft extends through the hollow center of the countershaft. The final drive is by chain to a sprocket on the rear wheel, but unlike the first drive there is no protection for this chain. A light and readily removable cover is fitted to the first drive, protecting the latter from dirt and water and the rider from oil, etc.

A new type of frame characterizes the 1912 models. The top tube is dropped toward the rear, giving low saddle-position, while this construction makes possible a unique shape of tank, having a capacity of two gallons of gasoline and three pints of oil on the single models, and of 2¼ gallons of gasoline and two quarts of oil on the twins. The new trade-mark is distinctive, being an X covering a rectangular cross with the words "Excelsior Autocycle" on the X. There is fitted a spring seat post, incorporating the usual recoil and shock springs within the hollow seat tube, while the saddle itself is mounted on a lever pivoted to the top tube and attached to the spring seat plunger by a clevis joint. This allows of a smooth, floating motion when the rider is in the saddle and effectively prevents shocks being felt.

At the lower end of the plunger are two adjusting collars for regulating the tension of the spring, lock-nuts being fitted to retain the collars in place. Regulation for the weight of the rider is made on the lower spring by means of these collars. Any forward or rearward motion of the whole seat device is allowed for by an elliptical mouth to the hollow seat tube, and the vertical movement of the spring allows of but one inch travel. The fork is of the cradle or coach-spring type, the spring being of five leaves and anchored to the fork crown. The lower leaves are recurved to a scroll and the ends are attached to a yoke, which in its turn is fastened to the axle rockers. The axle is at the center of these rockers, the pivot being the ends of the rigid fork-members. Steering is thus very easy, and strength is amply provided for by truss members from the rigid fork member ends to the heads, with posts from the fork crown. The control is similar to that on former models, and the metal tool box behind the seat mast is continued. It is announced that another model of 4 h. will shortly appear, listing at $175 with battery ignition, and $185 with magneto ignition, both being on the lines of the 1911 single. The magneto used for the present season is the Bosch.



Excelsior 4 h. Single, Chain Drive.

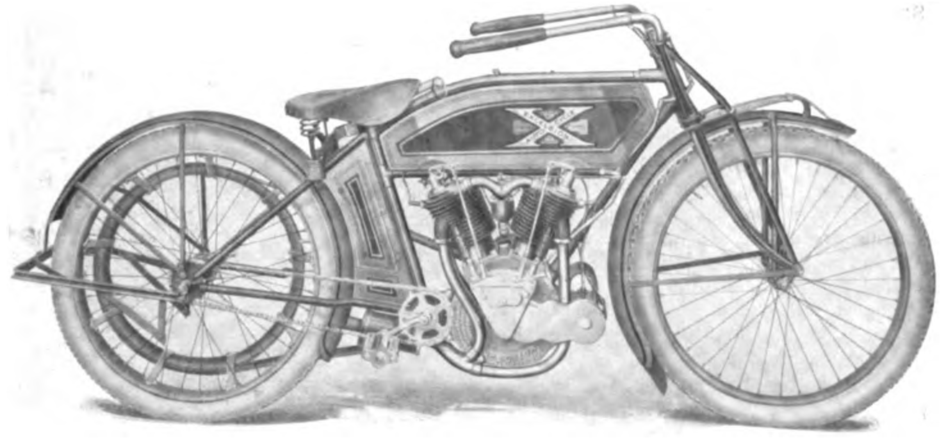
TAKES INDIAN SUB-AGENCY.

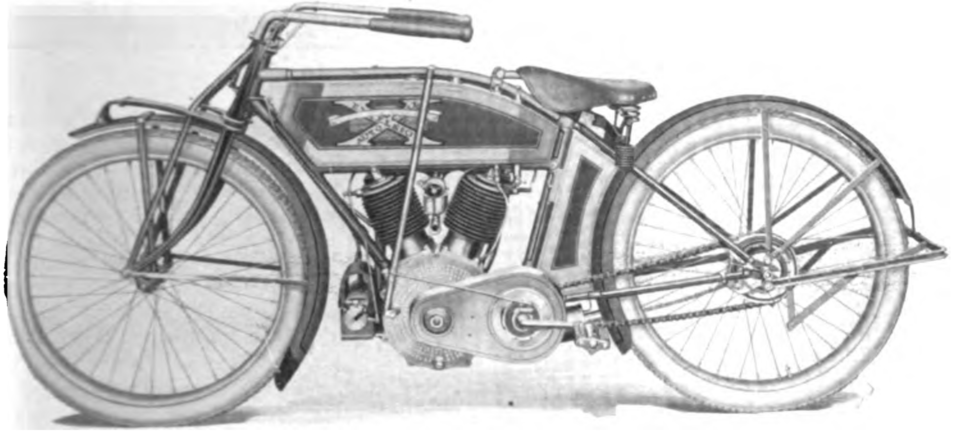
WALTER POWERS, who has been operating a repair shop for motorcycles at 1194 North High street, Columbus, Ohio, under the name of the Motorcycle Inn, has taken the sub-agency for the Indian from the Barr Motorcycle Company, the distributor. Mr. Powers recently completed an addition to his repair shop and salesrooms.

1912 TWIN EXCELSIORS

Top—6 h. Belt Drive Twin, with Free Engine Clutch

Bottom—7 h. Chain Drive Twin, Clutch Equipped.





WHY "WATTY" NEEDS ORDERS.

H. A. Wattenscheidt, who appears in the accompanying photograph, is widely known to the automobile and motorcycle accessory trade as "Watty." For some time

past he has been one of the most popular salesmen on the staff of A. R. Mosler & Co., and the manner in which he has acquainted dealers and motor vehicle users with the merits of the "Spit-Fire" spark plugs has been as satisfactory to the patrons as to the Mosler company. In addition to the many practical arguments he is prepared to advance in behalf of the "Spit-Fire" plugs, "Watty" now has another reason for wanting to round up orders; he has just invested in a pedigreed dog and has discovered that [illegible] real money to support such a pet.

LESTER BACH has taken the 1912 agency for the Flanders in Bucyrus, Ohio, and [illegible]. He has several demonstrators at the Paxton Garage on South Sandusky [illegible]

WOLTERS USED BLUE STREAKS.

JOE WOLTERS, who established a new 10-mile record by traveling the distance in 6:54 at the Oakland motordrome recently, gives due credit to the Blue Streak tires with which his Excelsior machine was equipped.

Prior to Wolters' sensational whirl the 10-mile record was held by Jake De Rosier, who, in setting the one-hour record, also on Blue Streaks, made the distance in a fraction more than 7.01. Wolters cut this to 6:58 and now holds the palm with 6:54, his fastest mile being made in :41 2-5.

TO ORGANIZE IN BUFFALO.

THROUGH the initiative of John Henry, of the Vim Cycle and Hardware Company, of Buffalo, a number of cycle and motorcycle manufacturers, jobbers and dealers of that city met at Mr. Henry's office last Monday and decided to organize. Mr. Henry addressed the meeting, emphasizing the value of concerted action. The project has met with a hearty reception throughout Buffalo, and a large attendance is expected at the meeting to be held in Mr. Henry's office next Monday, the 15th inst., when the association will be permanently organized and officers elected.

NEW CLUB IN HAMILTON.

FOLLOWING are the officers of the recently organized Hamilton (Ont.) M. C.: N. Chambers, president; T. Picard, vice-president; K. R. Spencer, secretary-treasurer. House and racing committees were also named and the club is prepared to keep on the move during 1912, which promises to break records.

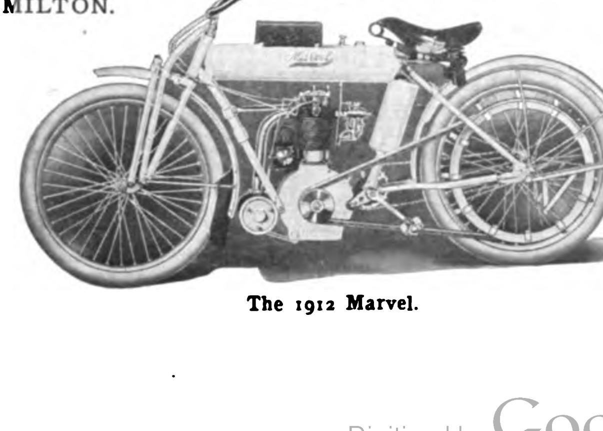
MARVEL FOR 1912

Overhead Valve Construction Is Continued and Motor, as in Last Year's Type, Rates at 4-5 Horsepower.

MARVEL valve construction, following Curtiss motor practice in this as in other lines, will be continued for the 1912 season. The valves, as in previous models, are fitted in the head of the cylinder and operated by a walking-beam, one cam and rod actuating the beam. The motor is of 3⅝ and 3¼ bore and stroke, respectively, and has the cylinder offset, being the chief example of this and the valves-in-head construction in this country. The same method of bearing the motor by yokes attached to the crankcase, and by links to the cylinder head will be retained, as well as the method of valve-lifting, control, V-belt transmission, and Marvel lubricating system. The accessibility to the gearing for magneto drive and valves has also the same provision as in the past season, and the tank-frame construction is likewise repeated, bulkheads to prevent leakage being characteristic of tank construction in this make. The fork, luggage carrier and stand are also continuations of well-tried Marvel design. The motor is rated at 4-5 horsepower, and weighs 45 pounds. The machine complete, with tool-kit and tools, weighs 160 pounds and is listed at $225.

RETURNS TO THOR FOLD.

E. J. KNIGHT, a former Thor representative, and lately connected with the Wilson Weather Coat Company, has sold out his interest in the latter concern and has returned to the sales department of the Aurora Automatic Machinery Company. He is well known in the industry and has a large following.



The 1912 Marvel.

MINNEAPOLIS VAN

Sturdy Quick Delivery Outfit, Which Has Stood Severe Tests is Continued for 1912 Season.

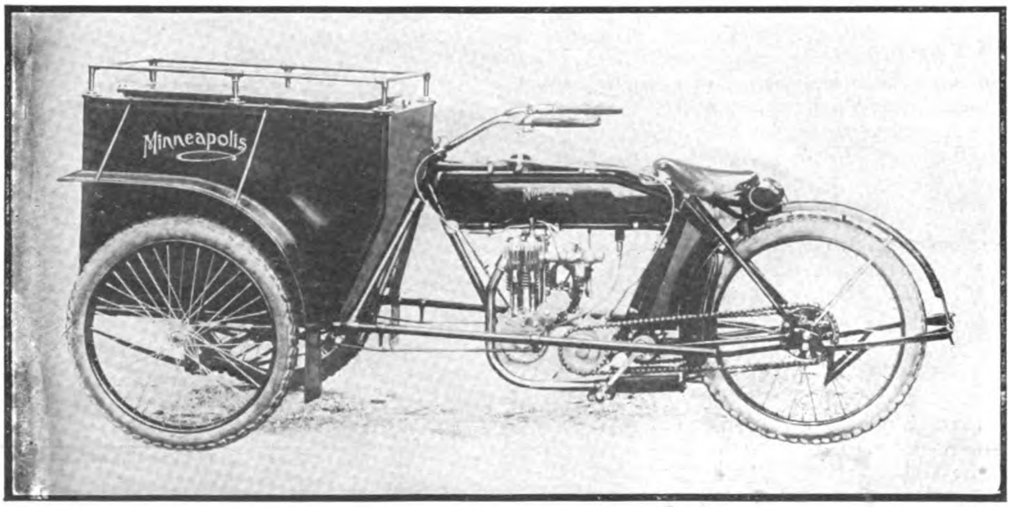
THAT the Minneapolis Motorcycle Company is determined to do its part toward solving the light delivery problem is indicated by the continuance of its tri-car van model which gave excellent returns last year. It is estimated that this machine can be operated at a cost of little more than one-half a cent a mile; and the construction is so simple and sturdy throughout that any boy of average intelligence will experience no difficulty in handling it.

The machine proper is the same in every particular as the company's model "N," having a unit power plant with two-speed transmission, multiple disc clutch, free engine and clutch control on the handle-bar. The capacity of the van is 300 pounds. The complete outfit is listed at $375 and the van alone is sold for $125.

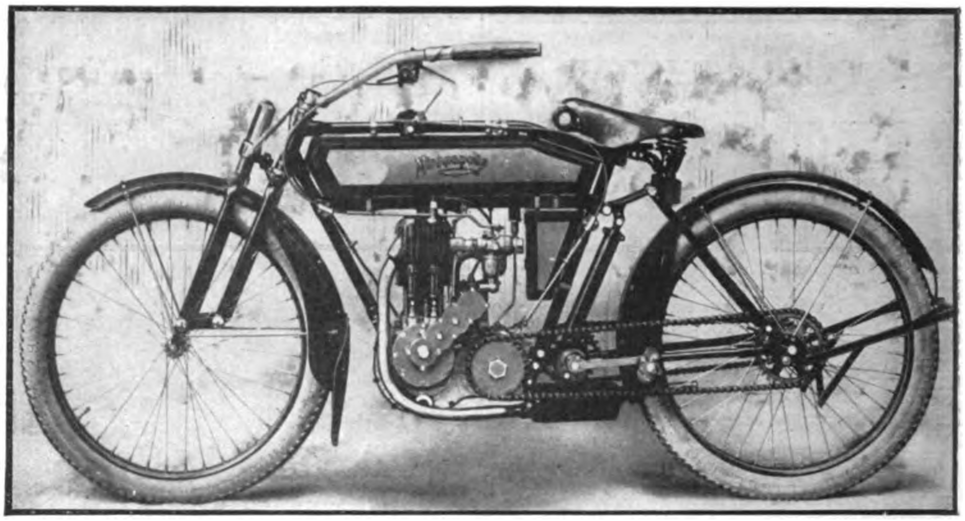
Models "N," "R" and "P" of the Minneapolis line for 1912 may be had with the company's improved spring frame device at an additional charge of $15, and there are indications that the special construction will be much in demand. With the Minneapolis spring frame the weight of the rider as well as the main frame of the machine and the power plant is suspended between the triple spring fork and rear cushion, allowing for unusual ease in riding and prolonged life of the machine in general. Acting in the knowledge that even the best spring seats subject the rider to considerable vibration, the company decided to produce a frame springing device capable of being attached to any of its standard models at the option of purchasers, and it is announced that the special construction has met all tests satisfactorily. It is credited with obviating danger of sidesway and is stanch enough to withstand the roughest usage.

SAVES TIME AND EFFORT.

GEORGE BAUER, "trouble hunter" for the Milwaukee fire and police alarm systems, now uses a motorcycle regularly in making his rounds and finds that he is able to render better service with less trouble than in the past. It is needless to add that the saving of time effected is another feature which appeals to Bauer.



Minneapolis Delivery Van.

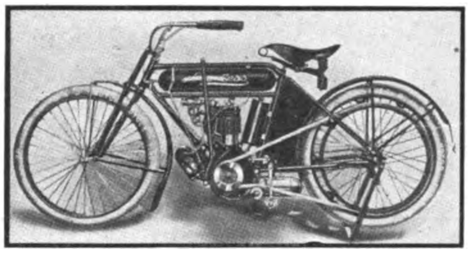


Minneapolis Model "N," with Spring Frame.

PEERLESS "BIG FIVE"

Improved Product of Boston Company Shows Increased Power and a Number of Desirable Refinements.

ADDITIONAL evidence that the big 5 h. single motor has many devotees is given in the advent of the Peerless 3¼ x 4-inch motored machine, the product of the Peerless Motorcycle Company, of 187 Columbus avenue, Boston, Mass. This mount, with flat belt transmission as regular fitting, or with V-belt optional, is listed at $225.



Peerless 5 h. Single.

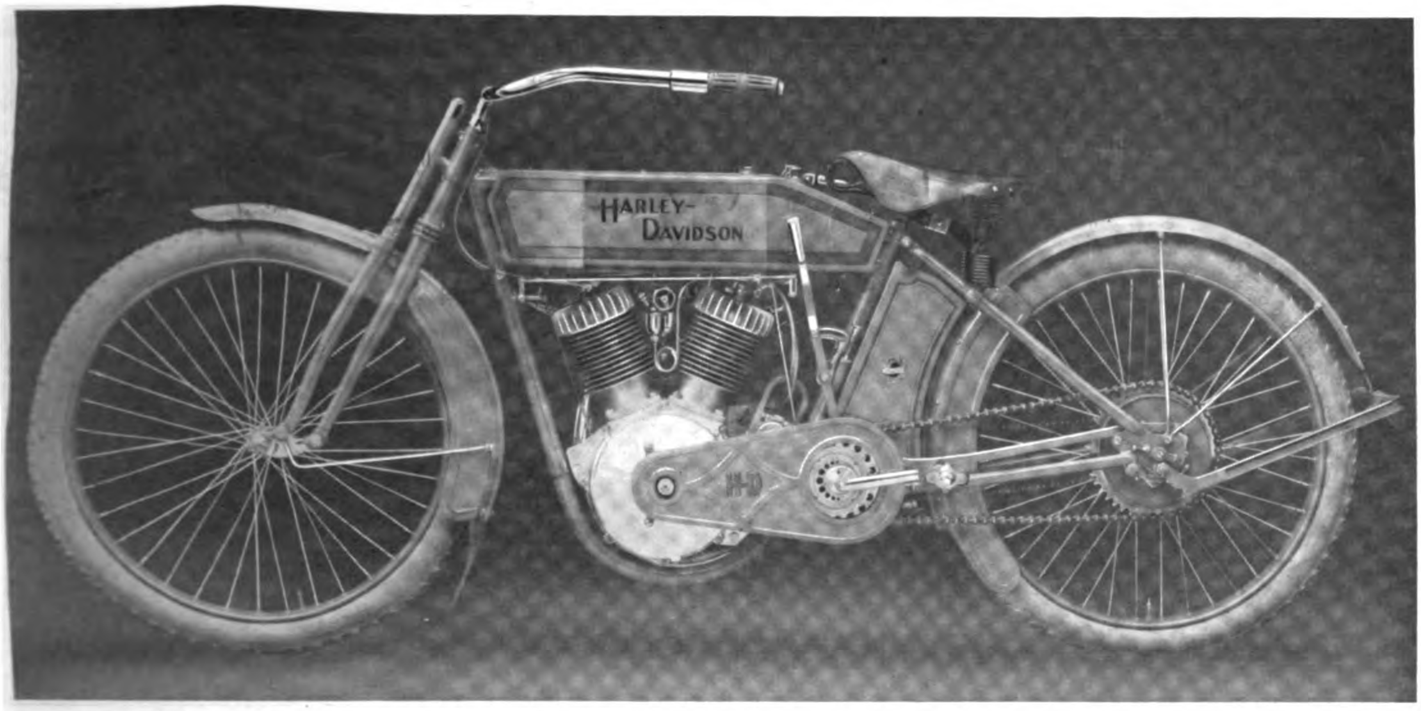
The big-end bearing of the Peerless motor is of the roller type, as are also the shaft bearings, and oil rings are fitted to prevent oil leakage and insure tightness. The motor is set vertically in the frame, with its head secured to the lower bar, and the crankcase forms the lower part of the "diamond" frame. The valves are of generous size, the inlet being 1⅜ and the exhaust 1½ inches in diameter. The flywheels weigh 32 pounds, and there are four rings fitted to the piston. Lubrication is by positive feed oil-pump, operated from the rider's seat and located at the side of the special oil tank. The carbureter used is the "Kingston" special, with ball air valves. Ignition is by Bosch magneto.

The muffler embodies a triple expansion chamber and is one of the quietest on the market, eliminating back pressure at the same time. Transmission is by three-ply mineral-tanned leather belt, 1¾ inches wide. The optional V-belt will be 1 inch wide, and a variable pulley will be fitted. On the flat belt machines, free engine and belt-tension are controlled by a hand-operated idler, working over a notched sector on the tank at the left. An extra fitment for the V-belt mount is an Eclipse clutch, listed at $15 additional. The handle-bars have a graceful rise and arch, and Rough Rider twisting grips are fitted. The left grip controls the valve lift, and the right the throttle. A lever on the tank controls the magneto.

The frame is re-enforced at the joints and the front fork is of the coach-spring type with 5 leaves. Capacity of tanks: Gasoline, 6 quarts; oil, 1½ quarts. A box is fitted at the rear of the frame for tools, etc. Wheels are 28 inches with heavy spokes, there being thirty-six in each wheel. Tires are 2½ inches in profile. Channel type mudguards with side flaps protect the rider from dirt and water. A Mesinger Cavalry saddle is regular equipment. The weight is 185 pounds.

TWENTY TONS OF CATALOGS.

JUST 20¼ tons of paper will go into the catalogs now being prepared to tell the 1912 story of Harley-Davidson machines, according to figures compiled when the stock arrived recently from the paper manufacturers. The broad publicity policy represented by this outlay may be gauged by the fact that the paper, if cut to a strip a foot wide, would reach from Boston, Mass., to Philadelphia, Pa., from Chicago, Ill., to St. Louis, Mo., or from Santa Fe, N. M., to Denver, Col. This is the largest consignment of catalog paper so far received by the Harley Company, which means a great deal.



CHAIN-DRIVEN HARLEY

First High-Powered Twin of the Milwaukee Factory Is One of the Surprises of Garden Show.

WHILE each of the Harley-Davidson types of previous manufacture show numerous features calculated to impress the thoughtful motorcyclist for 1912, the real surprise from the Milwaukee factory comes in the form of a 7-8 h. twin machine with chain drive, the latter detail marking a complete departure for the Harley designers. Although this is the first chain-driven mount to be marketed by the company, it is far from being an untried offering, inasmuch as painstaking experiments with several 7 h. chain twins have been conducted during the last year.

In the past there have been three main objections to the chain drive, jerk, or vibration, noise and the difficulty of keeping the chains adjusted properly. The first and last of these objections have been disposed of in the new Harley-Davidson by the Free-Wheel control and independent chain adjustments, while the matter of noise has been reduced to a negligible consideration by the use of unusually large sprockets throughout the transmission

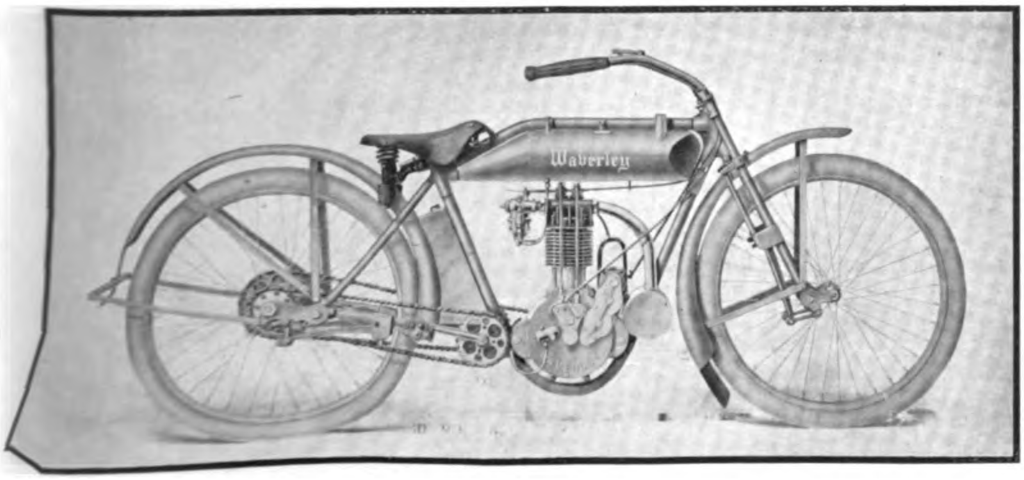
WAVERLY FOR 1912

Improved Mount with Overhead Valves, Cushioned Frame and Other Refinements Offered for New Season.

IMPROVED in several important points and featuring a cushion frame and overhead valves, the Waverly machine for 1912, produced by the Waverly Manufacturing Co., of Jefferson, Wis., is attracting the attention of motorcyclists. It has a bore of 3⅛ and stroke of 3 13/32, extra large imported F & S ball bearings on drive shaft, cylinder turned on the outside to insure uniform expansion and vanadium steel drop forgings throughout. The machine lists at $225, f. o. b. factory, with free engine clutch.

Ignition.—Ball bearing Bosch magneto with enclosed gear drive.

Frame.—Thoroughly re-inforced at vital points. Vanadium steel leaf springs adjustable for weight of rider. No sliding plungers to "hit bottom." Springs are noiseless in operation; require no lubrication. The saddle, pedals and handle bars move in unison, insuring stability and perfect balance on bad roads, not obtainable by any other construction.



Fork.—Waverly spring fork thoroughly re-inforced. Springs interchangeable with those on rear; no sliding joints to collect dust and dirt. Noiseless in operation.

Transmission.—Diamond roller chain drive with extra large noiseless sprockets; regular gear, 4½ to 1.

Carbureter.—Heitger improved automatic with auxiliary jet. Glass bowl showing gasoline level at all times.

Valves.—Extra large one piece nickel-steel, both mechanically operated; over-head construction insuring maximum power; intake and exhaust valves are interchangeable.

Lubrication.—Waverly mechanical oil pump, consisting of but two moving parts; adjustable without stopping motor; no check valves to become clogged; the only pump on the market which will handle dirty oil.

Muffler.—Specially designed cast aluminum muffler; absolutely silent; sufficiently large to require no cut-out.

Control.—Right grip controls compression release; left grip controls the throttle. Separate finger lever to advance spark. Particular attention is called to the fact that the compression release and spark advance can be operated independently.

Tanks.—Separate gas and oil tanks; capacity gas, 2 gallons; oil, 2 quarts. Outside joints easily repaired in case of accident. Gasoline shut-off built into tank.

Handle Bars.—Double stem, telescoping into the extended fork sides. Fitted with "rough rider" grips. *Wheelbase.*—56½ inches. *Wheels.*—36 extra heavy spokes.

Hubs.—Improved Corbin band brake. Special heavy front hub with ⅜-inch balls and knock-out axle. *Tires.*—Goodyear studded 2½-inch detachable.

The Waverly company announces the removal of its Milwaukee factory to Jefferson, Wis., where greatly increased manufacturing facilities have been provided for in the shape of a modern plant especially adapted to motorcycle manufacture. This plant was erected by the Waverly company late in the fall of 1911. The company will maintain its Chicago office, located at 440 Marquette building, to better care for its interests in that city and adjacent territory.

Announcement of 1912 Improvements

THE 1912 Standard Speedometer has the flexible shaft running in a rigid tube at the lower end and in a flexible tube above. The rigid tube is fastened with a swivel nut so that the axle can oscillate freely without affecting the shaft. This arrangement eliminates breakage and presents a more pleasing appearance. New style ball bearings at the bevel joint take both radial and thrust loads. New models to fit practically all machines. The speedometer of utmost accuracy. The fact that 26 police departments use the Standard is proof of its superior dependability and certainty.

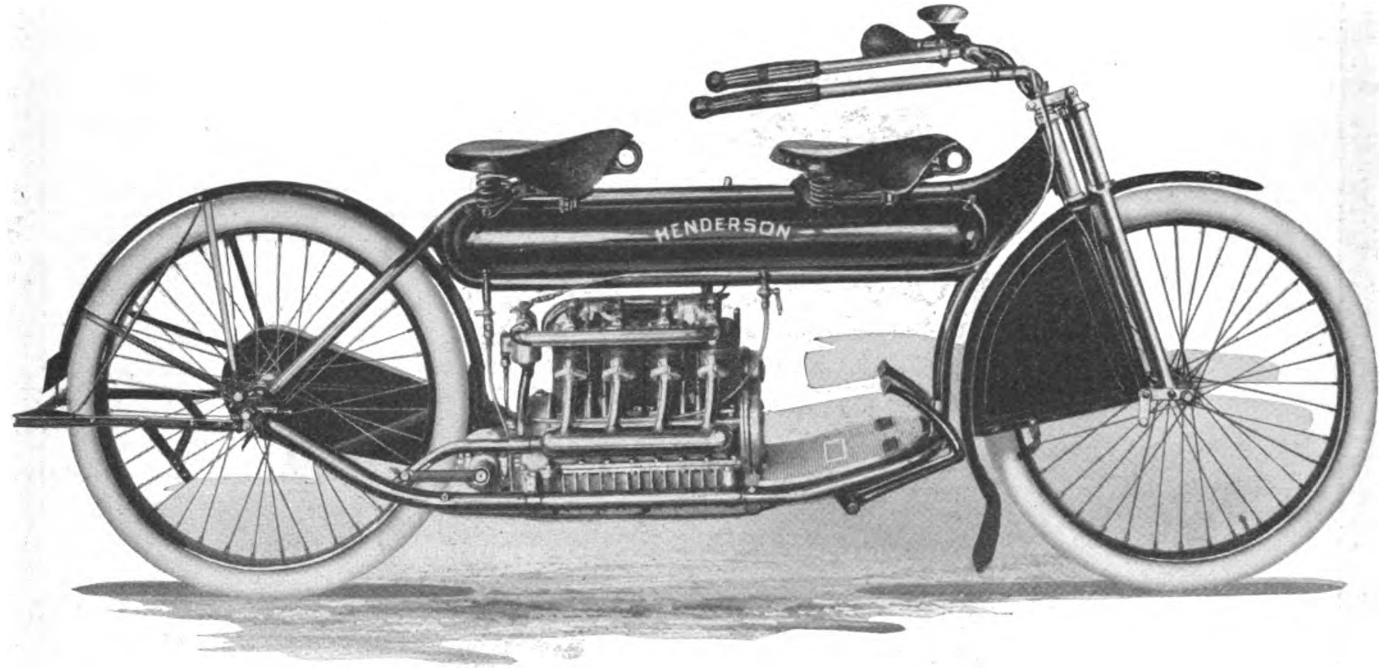
DETROIT CHICAGO SAN FRANCISCO TORONTO

1912 Development

The only really new machine exhibited at the New York Show is the Henderson 4-cylinder. Look at any other machine made—all have detail changes from the 1911 models, minor refinements, etc., but no really new ideas. All on old-time main ideas. In contrast, examine the

HENDERSON



An absolutely new machine. In designing it, the originator was not hampered by conventions or time-honored traditions of how motorcycles *have been* made, but worked along the idea of how motorcycles *should be* made.

And experienced riders who have tried out the machine hail it with enthusiasm—the more experience they've had with old-style machines the more enthusiastic they are over the Henderson. They say the four-cylinder motor is the smoothest, quietest, most flexible motor they have ever seen. Its hill-climbing power and quick acceleration when called on make it wonderfully effective in getting over all conditions of roads. The absence of vibration and low center of gravity insures great comfort and ease of handling. The positive lubrication system insures freedom from oiling trouble. Starts like a motorcar, by use of a hand crank and a well-tried Eclipse clutch. Big footboards and saddle well forward give comfortable riding.

7 H. P. **Four-Cylinder Motor** **$325**

HENDERSON MOTORCYCLE COMPANY
268 Jefferson Avenue **Detroit, Michigan**

All the Live Ones

who have seen this machine say it will be an immensely profitable agency proposition for any dealer. It will give any dealer undisputed pre-eminence over all other machines in his territory. The discriminating buyer—both the man who wants the best machine made regardless of price and the man who wants the most value for his money—will invariably be the purchaser of a Henderson, for this is a machine in a class by itself. No effort is made to compete with any other on a price basis. It is not necessary. The machine which leads the way in scientific design and holds its superiority by its greater ability and more pronounced adaptability to adverse road conditions, will never be bothered by the competition of the ruck of machines of earlier design which have been outgrown by the riders who know.

The dealer who has delayed writing to us about this should get in line quick. All the live ones are hurrying to get contracts for territory before another man beats them to it. If your application isn't already in, write quick, for we are closing up fast for 1912 and you can't afford to let another man get ahead of you. The secret of success lies in grasping the opportunity at hand. The chance for a Henderson agency is the one big opportunity for the motorcycle dealer. Write us now!

HENDERSON MOTORCYCLE COMPANY

NO MORE JOLTS OR JARS

What You Have Been Waiting For—

A Motorcycle With a Spring Frame That *Actually* Gives Comfort

The various spring seat devices now in use only lessen, in a trifling degree, the incessant jarring that occurs while riding a motorcycle, and do not absorb the shocks to the frame. Our spring frame gives absolute ease to the rider and protects the motor from the usual wear and tear.

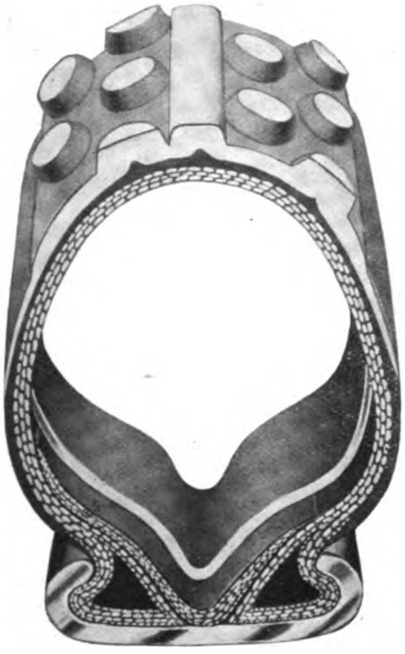
PRICE AND QUALITY

QUALITY is not always measured by price. A wrench made of solid gold would cost more, but wouldn't work as well as a steel one. We don't claim that Goodrich Motorcycle Tires are better because they cost more, but they cost more because they are made better.



There's always some reason for a high price. You naturally want to know why you can't get the Goodrich White Tread Large Stud as cheap as some other tires.

In the first place, it isn't lack of facilities. The factory of the B. F. Goodrich Company is the largest rubber works in the world. The most modern labor-saving and cost-reducing machinery known is used in making our tires.

Neither does the Company charge a high price just to make a large profit. Firms doing that don't last forty years and grow as the B. F. Goodrich Company has. Our principle has always been value first and profit afterward.

The reason for the higher price is that there's something more in Goodrich Tires which the others haven't got. It's extra quality, and it's worth the difference.

"Best In The Long Run"

"V" BELT FASTENER.

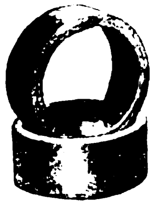
SPARTAN FLAT BELT.

80 PER CENT.

of the 1912 Motorcycles Will Be Fitted With

SPARTAN BELTS

FLAT AND "V"



PULLEY LAGGING.

TIRE SLEEVES.

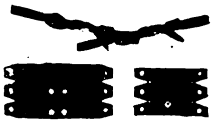
SPARTAN "V" BELTS

In making "V" Motorcycle belting, two or three plies (two on the regular, three plies on the Giant belts) of SPARTAN leather are fastened together with Spartan Cement, which is absolutely water and heat proof. The belting is given a final stretching, and then the two-ply "blocks" are steel riveted to the belting proper, so as to give the required depth of friction surface to the sides. The special construction of the "blocks," which are undercut, enable the belts to conform more readily to the small engine pulley and render them much more pliable than any other Motorcycle "V" Belt.

SPARTAN FLAT BELTS

These belts, like the "V" Motorcycle belts, are made of SPARTAN leather, which is especially adapted for Motorcycle use. They will not slip when wet; stretch less than other belts, and not affected by water, oil or atmospheric changes. In making the flat belts two plies of carefully selected SPARTAN leather are cemented together with Spartan Cement, which is water and heat proof, then thoroughly stretched (four separate stretchings) on special machines of our own design. We recommend plain or unstitched belts. OUR SPARTAN CEMENT WILL HOLD.

MUD SPLASHERS.



NON-SKID TIRE BANDS.

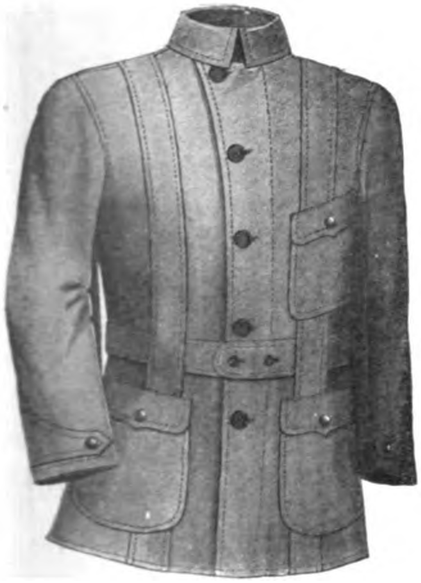
MOTORCYCLE AURORA BRAND **CLOTHING**

STRENGTH IN EVERY FIBRE

and quality in every thread, are the reasons for their great service-giving characteristic. These two features alone would produce long wear, but the wearing quality is further prolonged by the addition of a perfect tailor-made fit combined with style—that perfectly fitting clothes add greatly not only to their life but to the appearance of the wearer as well is universally known. Our suits are expertly tailored and made to individual measurements. They are designed and built especially for the particular clothing requirements of the motorcyclist.

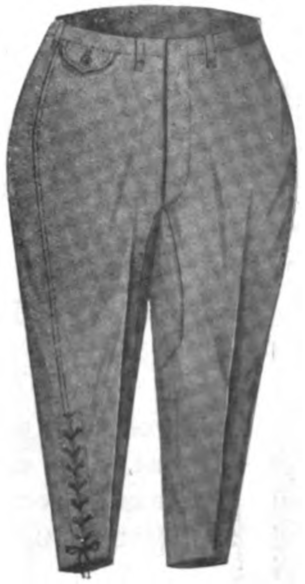


COAT and TROUSERS

The illustrations show the jaunty and serviceable Norfolk cut coat, fully pocketed, and the riding trousers. We can also furnish long trousers made the same way. Both are made of the best material and from the combined efforts of our highly skilled workmen. They are fashioned for practical comfort as well as style. Made in the following materials: English Roseberry, English Whipcord, Fustian, Petrels, and Khaki.

We invite Club Secretaries to get in touch with us. All inquiries promptly and cheerfully answered.

To dealers who wish to sell our popular and attractive line, we will send samples of goods and complete suits if requested.



Riders say that the Aurora Brand Suits are the only motorcycle suits worth wearing, and they ought to know.

Aurora Brand Suits have gone through several of the severest F. A. M. endurance runs and have stood the test as no other suits could have stood them.

THE NEW

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

This and other new types of New Departure motorcycle coaster brakes can be seen at Space No. 223, Balcony, Madison Square Garden.

"WELL," MR. JOLTER!

What do you think of the spring seat post proposition now after seeing the 1912 models? You have read one manufacturer's big ad of their "non-sinking" seat, and others featuring their spring seat posts. Here is the reason:

Last year the Adams Shock Absorber was introduced to the trade and riding public, and its easy riding qualities created the demand for additional saddle springing which culminated in the present devices on 1912 models.

But one feature they didn't get. The A. S. A. gives a vertical action to the whole saddle instead of a tilted or pivoted action, so you get the spring on the front of the saddle also.

Bring your mount up to date by equipping with an

ADAMS SHOCK ABSORBER

(Patented)

The Shock Absorber that absorbs the shocks. Models ready for Excelsior, H-D, Indian, Thor, Pierce, Minneapolis, Wagner, Flanders, Yale, Pope and others.

Free engine by multiple-disc clutch running in oil.

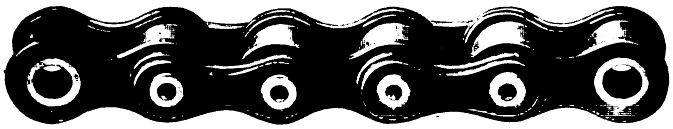
Handle bar, elongated, of new type.

Luggage carrier of tubes. Two speed transmission if desired.

American F. N. Co., Newtonville Station, Boston, Mass.

Transmission Efficiency

The service of a motorcycle depends primarily upon the power delivered to the rear wheel. No matter how powerful the motor, its work is wasted unless it is used right. For consistent, effective service, the transmission must be absolutely dependable and of maximum efficiency. The racing men recognize this and practically all use



DUCKWORTH CHAINS

on their machines. Efficiency is as important on the machine for road service as on the racer. Insist on the best. Be particular. Say "Duckworth" to insure transmission quality when buying your new machine. Duckworth chains have the WEARING QUALITIES. Duckworth Repair Links are in demand by riders. Why? Simplicity and Sureness.

It will mean money saved in a season's riding to find out more about this. Information free. Write us.

guaranteed to be in A1 condition 28 x 2¼ but which will fit 28 x 2½ rims, Goodrich, G. & J., M. & W., and Hartford, Single and Double Clinch; Bailey Tread, Basket Weave, Studded and Corrugated

AT THESE VERY LOW PRICES

26 and 28 x 2¼, $3.50.

Bailey treads, 25c extra.

Write for complete list of Bargain Prices

A rider can get splendid use from these shoes and pay very little money. They will certainly tide him over a good many months and more. We bought a large consignment, at a low figure, so can offer them at much reduced prices. It's a snap that ought to be snapped right away.

HERE'S ANOTHER

$125.00 buys the Model A, **MERKEL LIGHT,** a motorcycle of sterling quality and fine running ability—brand new, of course. This machine hasn't some of the minor refinements of the regular Model Merkel, but however, is a high grade motorcycle in every way.

SPECIFICATIONS

Frame—22-inch truss loop, latest style; 14 and 16 gauge tubes; double top bar. Forks—Light special cushion. Motor—Thor, 2¼-2¾ H. P. Transmission—Chain (⅝-inch pitch roller). Handle Bars—With double grip control. Ignition—Special coil, standard batteries (3). Tank—(3 in 1). Contents, 5 quarts gasoline, 1 quart oil, 3 standard batteries. [*Notice.*—The arrangement of batteries is so simple and positive that there is no chance for short circuit or loose batteries.] Coaster Brake—Thor. Wheels—28-inch, steel rims; 26-inch wheels optional. Tires—2¼-inch Morgan & Wright or Kokomo. Finish—Rubens red; option black. Grips—Light, flexible. Saddle—Empire No. 3. Pedals—Standard rubber motorcycle No. 3. Wheel base—54 inches. Speed—5 to 40 miles per hour.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One-piece crank shaft.
One-part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Silent Motor.
Large ball bearings mounted in steel lined pockets.
Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

FOUR SIZES

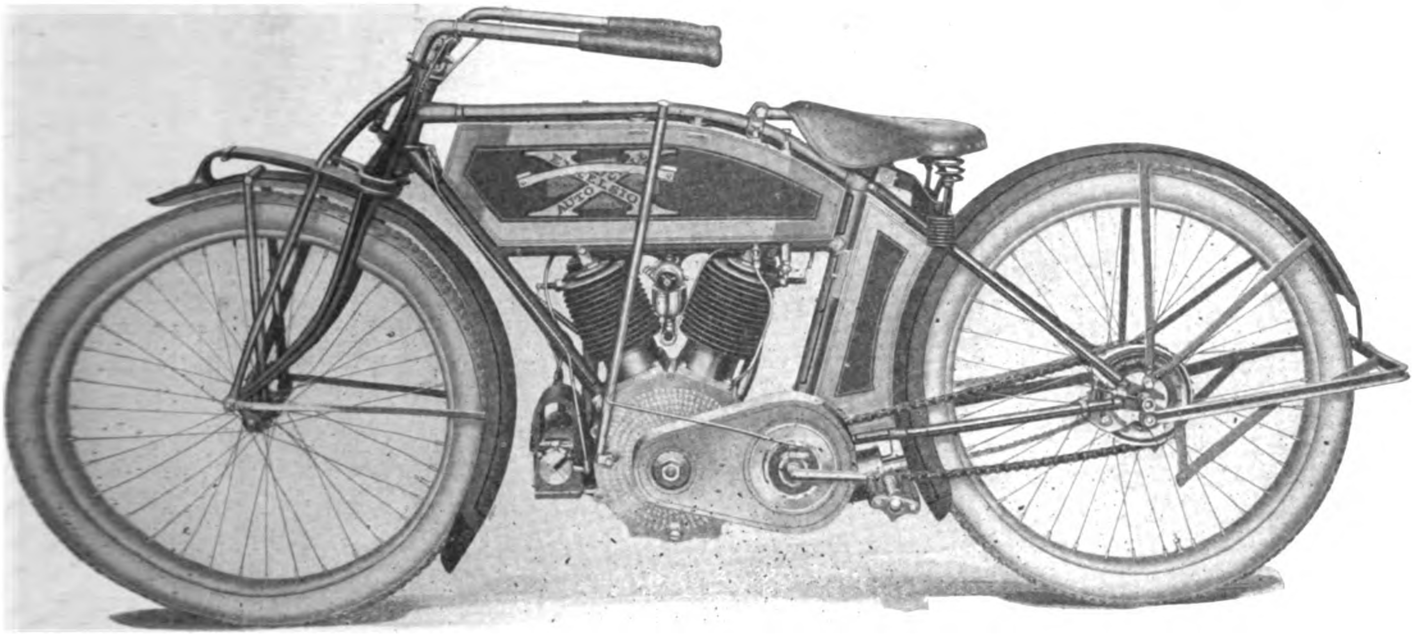
COMPARE THEM POINT BY POINT



EXAMINE 1912 EXCELSIOR FEATURES

It will then be easy to see why the Excelsior

ALWAYS MAKES GOOD

A few of the improvements which will keep the Excelsior in the lead again this year are the new cradle spring fork, the adjustable shock absorbing seat post, enclosed Bosch magneto and Eclipse type multiple disc clutch.

The spring fork is the result of long experimenting in the design of motorcycles. Our perfected fork at once combines utmost strength with wonderful freedom of motion.

Our spring seat post will take up the vibrations of the roughest roads; it is the simplest and easiest on the market.

You should see these and the many other Excelsior improvements, Six models, belt and chain, 4, 6 and 7 H. P., $175 to $250.

Don't miss the Excelsior Exhibit at the Chicago Show,

FEDERAL TIRES

Federal Motorcycle Tires are produced in the best equipped and most modern tire making plant in the world with the same care that enters into the making of Federal Automobile Tires.

In the use of Federal Tires motorcyclists are assured the utmost in resiliency, endurance, economy, strength, comfort and service.

Federal Tires absorb road irregularities, decrease tire expense, increase tire mileage, diminish tire troubles and make possible greater speed.

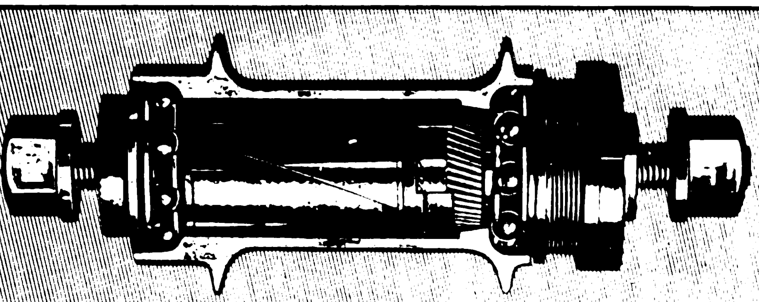
"If it's Federal—it's right"

Corrugated Tread For the average road	**Studded Tread** For wet slippery roads

Federal Tires are supplied through leading dealers.

An interesting and valuable tire book mailed free—Write for it.

Federal Rubber Manufacturing Co., Milwaukee, Wis.



Musselman Bicycle Brake

Looks just like ordinary hub—weighs but 25 ounces—no springs, levers, braces or complicated mechanism—but one-third as many working parts as in other brakes—no side arm or lock washer—no slipping, clicking or rattling—free in coasting—positive and sensitive in driving and braking—fits any bicycle.

MUSSELMAN
COASTER BRAKE
"The little fellow with the Big Grip"
M

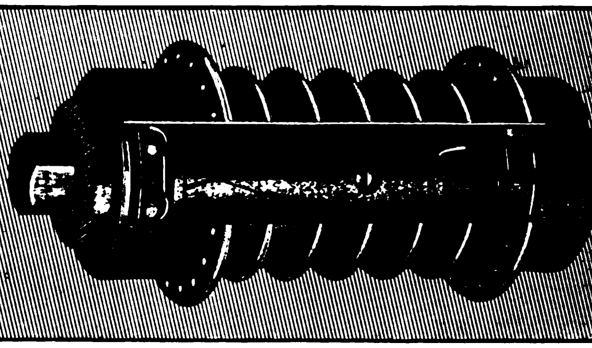
JUST suppose we could reduce the number of working parts of an engine by two-thirds and secure greater efficiency, would we get the business? That's just what we have done in Coaster Brakes and explains why we are getting the trade.

MIAMI The Miami Cycle & Mfg. Co. MIAMI
MIDDLETOWN, OHIO
MEMBERS OF M.M.A

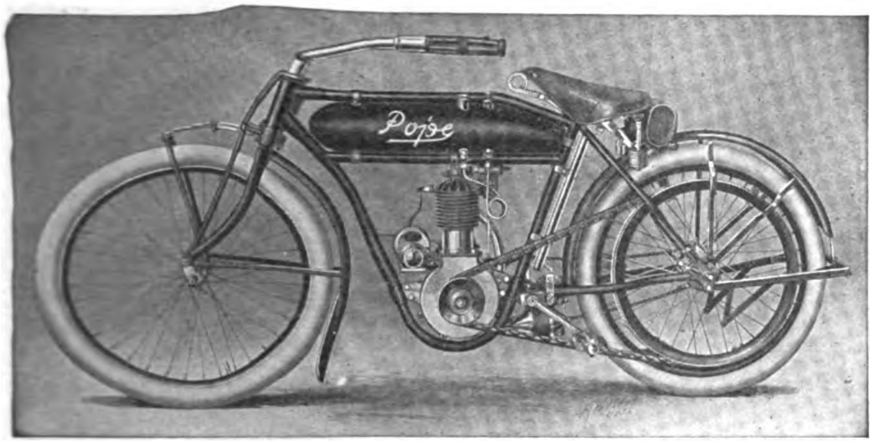
2

Musselman Motorcycle Brake

Note cooling flanges—15 sq. in. of braking surface—short pitch, giving unusual leverage in braking—large axle to prevent bending—no side arm, hence no leverage on rear forks—hold sufficient grease for season's lubrication—large bearings—costs no more than inferior makes.



We Have WRITTEN EVIDENCE



TO PROVE

THAT

POPE MOTORCYCLES

($175, with MAGNETO)

(1) Are, Regardless of Price, the Best All-Round Machines Built.
(2) Can Go Anywhere and Do Anything Any 4-Horsepower Machine Does.
(3) Have Performed Equal To and In Some Cases Outstripped High-Powered Twin Machines.
(4) Are Regular Little POPE-HARTFORD AUTOMOBILES With Plenty of Reserve Power for Every Emergency of the Road.
(5) Are great on Steep Grades and Wonders on Rough or Sandy Roads.
(6) Run Equally Well in All Sections of this Country and Abroad.
(7) Are Constructed to Stand Up and Wear Wonderfully Well.
(8) Are Just the Right Weight for Durability, Convenience and Easy-Riding Qualities.
(9) Are Simple to Operate and Easy to Handle, Even for Women Riders.
(10) Can be Started on a Quarter Turn of the Pedals.
(11) Have Quiet, Smooth-Running Motors.
(12) Can be Throttled Down Slower than Most Machines.
(13) Are Most Economical in the Consumption of Oil and Fuel.
(14) Are Perfect Score Machines in Reliability and Endurance Contests.
(15) Have Satisfied Various Riders So Well, not even a Bonus would Tempt them to Sell or Exchange for Other Makes.

Would you like to see our evidence covering the above points and many others? It is in our book of testimonials sent on application.

PERSONS DUPLEX COMPOUND SPRINGS (Patent No. 959591) give clean and free play to both pairs of springs and their supports. No obstructions between them to destroy free action.

THE SPRINGS ABSORB THE SHOCKS.

Each pair, the upper and the lower, varies from the other in diameter of coil, diameter of wire, pitch of coil, direction of coil, length of wire in coil and direction of action. When under load the upper springs begin to compress **BEFORE** the lower ones extend. Neither pair is in "tune" or sympathy with the other, and neither will transmit the vibration received by the other.

THE HIGH-ARCH BRIDGE GIVES LOWEST POSITION WITHOUT BUMPING MUD GUARD.

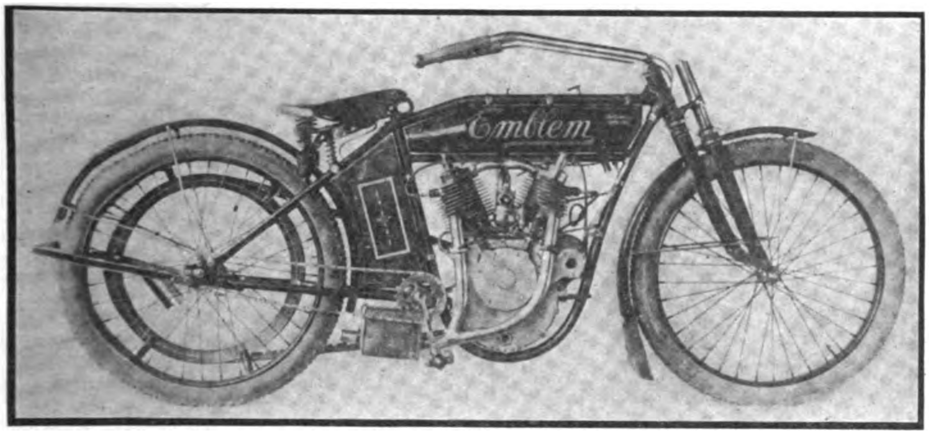
Emblem Motorcycles

"They are Different because they are Better"



EVERYTHING that is best in modern motorcycle construction is incorporated in Emblem Motorcycles for 1912. Almost every motorcycle boasts of some of these improvements—Emblem Motorcycles have them all, including the Free Engine Clutch. Compare the entire line of famous Sturdy Emblem Motorcycles with any other first class make and you will see the great difference in price, and at the same time more dollar-for-dollar value than in any other make of motorcycle manufactured. The 1912 EMBLEM is racy looking, possesses unlimited speed and reserve power, and is built to withstand the roughest possible service, because nothing but the finest material possible to buy enters into its construction. Improved factory methods and co-operative labor have made it possible to give you all this value at a minimum cost.

See the Machine that has made good at Chicago Show

EXHAUST TUBE.
LOOP TUBE.

THE BACKBONE OF YOUR MACHINE

is the *tubing* of which it is constructed.

The *boast* of the *largest* motorcycle manufacturer is that he has *never* had a frame go wrong in *ordinary* usage and this manufacturer uses "**Standard**" Tubing entirely; also our rims, mud guards and pulley belt rims.

At the recent Madison Square Garden Show, New York City, *sixteen* motorcycle exhibitors displayed sixty-five models. Of the sixty-five models, *fifty-seven* were made in whole or in part of "**Standard**" Tubing.

Fourteen of the sixteen exhibitors, the country's *best* and *largest* motorcycle manufacturers use "**Standard**" Tubing and price is *not* their reason—it's *quality*.

They have tried *other* tubing but it *failed*. It did *not* give the *combination* of *lightness*, *strength* and *finish* that a *first-class* motorcycle frame requires and which the use of "**Standard**" Tubing *insures*.

When you order your machine, it *would* be well to ask what tubing it is made of, or better still write us and we will tell you *who* uses it.

Remember the *strength* of the *frame* and *rims* of your motorcycle *dictates* its capacity to carry *heavy* loads or to "*Speed her up.*"

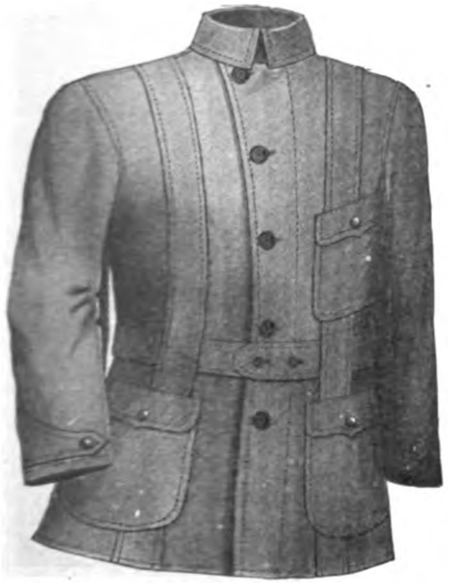
MOTORCYCLE AURORA BRAND CLOTHING

STRENGTH IN EVERY FIBRE



and quality in every thread, are the reasons for their great service-giving characteristic. These two features alone would produce long wear, but the wearing quality is further prolonged by the addition of a perfect tailor-made fit combined with style—that perfectly fitting clothes add greatly not only to their life but to the appearance of the wearer as well is universally known. Our suits are expertly tailored and made to individual measurements.

COAT AND TROUSERS

The illustrations show the jaunty and serviceable Norfolk cut coat, fully pocketed, and the riding trousers. We can also furnish long trousers made the same way. Both are made of the best material and from the combined efforts of our highly skilled workmen. They are fashioned for practical comfort as well as style. Made in the following materials: Engish Roseberry, English Whipcord, Fustian, Petrels and Khaki.

Bosch Magneto D. U. 1, No. 5 Guarantees Easy Starting

MR. BUYER—To what use do you intend putting your machine during this coming season, commercial or pleasure?

The man who uses a machine in his business, must have a machine that will be in working condition ten hours a day, 366 days in the year, minimum fuel consumption and up-keep, simplicity in construction and one easily handled, that a novice can run it.

The man who buys a machine for pleasure purposes only must have one that is powerful enough to keep him at the front of the bunch, up hill and on the level and in this day and age one of the best ways to do that is to own a machine with a *real* two speed transmission, three point suspension form seat and spring fork, long wheel base, so that he can hold to the roughest roads and as a last and biggest item a motor, powerful, willing and always on the job. You will find all of these items embodied in the 1912 New Era.

MR. DEALER—Are you a live wire? If so, get in on ***the one big best bet*** in agency propositions. Write for catalogue and particulars.

THE NEW ERA AUTO-CYCLE CO.

22 DALE AVENUE **DAYTON, OHIO**

Agents–STOP and consider

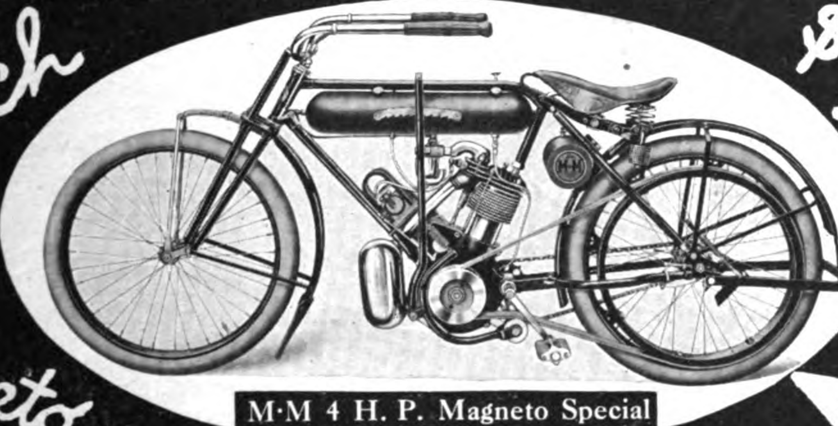
what we are offering—Here is positively the Most Motorcycle for the money—offered this season.

A machine with thirteen years' proof behind it — not a new and untried experiment—Possesses latest 1912 improvements.

Where else can you find a full grown, 4 H. P. motorcycle with standard equipment throughout—including Bosch high tension magneto—for $160? It's a proposition that defies competition.

Bosch Magneto

$160.



M·M 4 H. P. Magneto Special

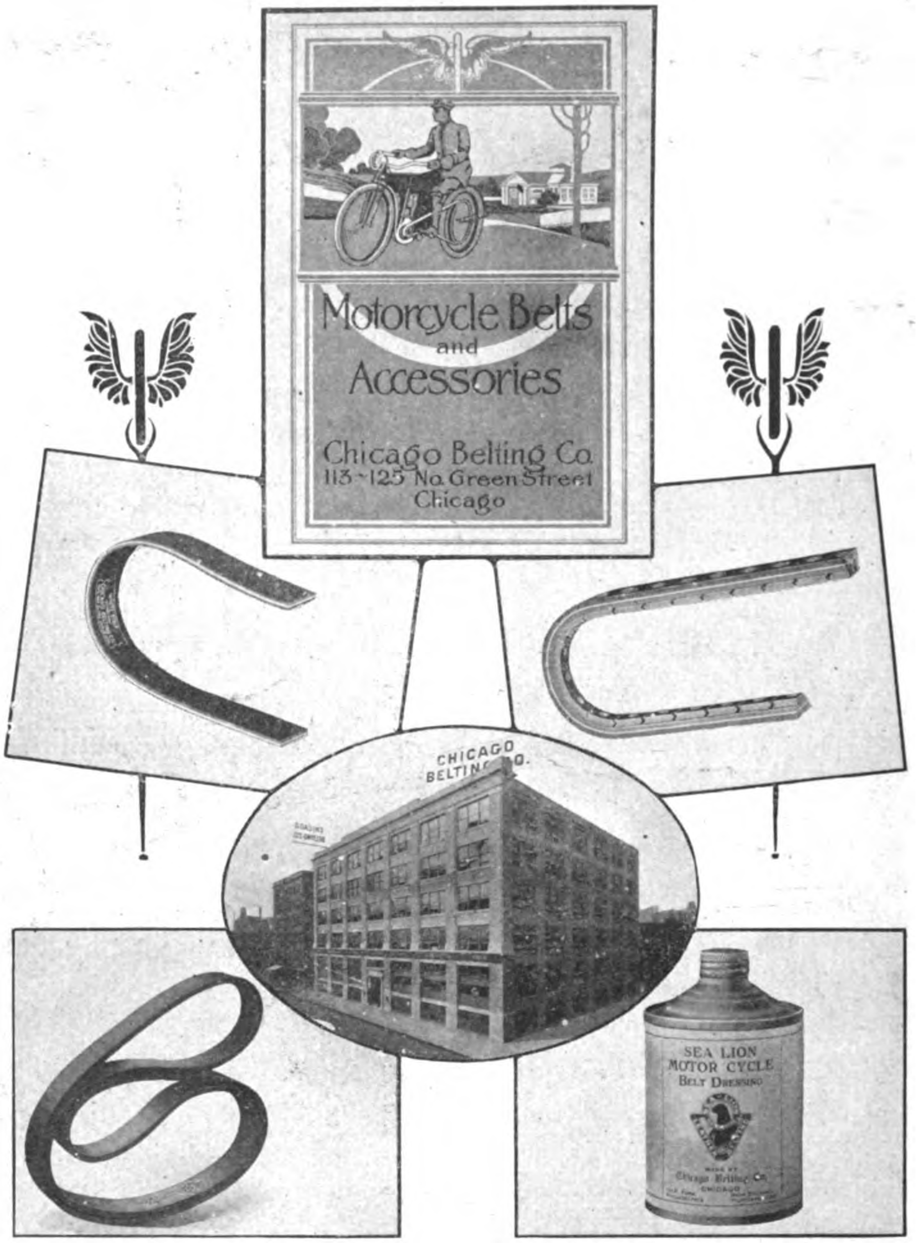
Since announcing the M·M "Special" line at $140 and $160 we have been closing up agencies right and left. Agents receiving machines wonder how we can turn out such a wonderfully fine motorcycle at such a low price.

The secret is simply this:—Our thirteen years in the industry have given us an experience and equipment without a parallel in the country and furthermore all the water, the hot air and big expense has been boiled out of our proposition. You get the benefit in high quality and low prices. The live ones are ordering their demonstrators now.—Get your application in early.—Write to-day.

AMERICAN MOTOR CO., 716 Centre St., Brockton, Mass.

THE BOOK, THE BELTS, AND THE PLANT

Our new catalogue tells all about our belts and other leather accessories.
Every Jobber, every Dealer, and every Rider should have a copy.



WHITE STRIP STRETCHLESS FLAT BELTS

SEA LION BELT DRESSING

—

IMPERIAL MUD GUARD BOOTS

We want jobbers to catalogue our belts, and will furnish electrotypes free upon request.
The endorsement of the rider is the best argument for our belts.

We have one of your SEA LION belts on our 1910 Harley-Davidson that we have run 10,500 miles and looks to be good for a good many more, although it is now getting a little too long; we intend to send it in soon and have it shortened. This belt has been run through all kinds of weather and for at least 500 miles has pulled two passengers. Yours truly,
(Signed)
I. S. KNOWLES & SON,
Kingsley, Iowa.

I have used your WHITE STRIP belt on my Excelsior 4 during the past season, which time I have ridden about 10,000 miles. It has proved to be very satisfactory in every respect, and I can truly say that it is far superior to any belt on the market. "It don't stretch." Very truly yours,
(Signed) GERALD V. RALPH,
Huron, S. Dak.

I have ridden one of your WHITE STRIP motorcycle belts for ten months (July, '10, to June, '11), and have gone 8,000 miles through rain, snow and mud, so I know what I am talking about when I say you can make good belts.
(Signed) K. FUNSTEN,
Dorris Motor Car Co.,
St. Louis, Mo.

Your SEA LION belt lasted me over 6,000 miles, the first 3,000 in and around San Francisco and the last 3,000 up here in this sandy country, which will soon tell what a belt is made of. The belt you turn out has them all wiped off the slate for wear, reliability and longevity, and any person giving your belts the proper care should last them between 6,000 and 10,000 miles. Yours sincerely,
(Signed) ED. G. SLOAN,
Doyle, Calif.

R-S

If you want the finest and most complete motorcycle on the market today you want a

1912 Reading Standard

FINEST, because we use the highest grade of material obtainable. Of course it costs more, but in the long run it means a great saving of up-keep expense, which appeals to the rider.

MOST COMPLETE, because we have two singles, belt or chain drive. One Big Twin with single chain drive and undergeared transmission. Free engine clutches, adjustable foot rests, double oiling system, double braking devices, R-S adjustable shock absorbing seat post, hand and foot operated belt idler and clutch control, luggage carrier and tool case, and numerous other exclusive features as regular equipment. We were the first to bring out a mechanically operated inlet valve motorcycle motor, and this feature, together with the imported ball bearings, and integral cam and gear construction makes the R-S Motor the most powerful and easiest running motor on the market.

We Shall Exhibit at Chicago Show February 5-10

Two Colors—Brown or Sylvan Green.

RIDERS
GET INTO LINE
THE
ECKEL'S
3"
WHEEL

Do not store your motorcycle for the winter. Get it out and equip it with the Eckel 3" Wheel and a non-skid automobile tire. Then ride on all kinds of roads. You can't skid and your tire will wear forever. The tire in the cut has been run several thousand miles in snow, slush and mud and no signs of wear are in evidence.

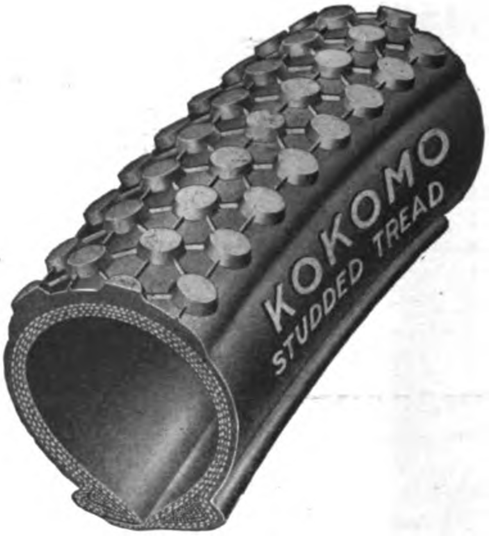
The wheel consists of a heavy steel rim measuring 2¼" across the clinchers as against the 1½" of the ordinary rim. It is a trifle smaller than the ordinary rim to allow clearance of the forks, and to properly fit a 3" automobile tire. Extra heavy spokes and nipples are used, and the rim is spoked on any make brake hub shell that may be specified. With one of these wheels your rear tire does not need to be inflated as hard as stone to prevent rim cutting. With a big, soft rear tire you enjoy easy riding qualities unknown with the ordinary tire and rim. When your motorcycle is equipped with the Eckel 3" wheel and an automobile tire, tandem riding is a howling success.

Get busy and order one of these wheels today. Be sure to specify the make of brake shell you want used and the color of the rim. Correspondence invited.

Price, exclusive of tire.................. $9.00

EARLE S. ECKEL

WASHINGTON (Warren County) NEW JERSEY



The materials entering into the construction of a tire are important factors, but something more than the best materials are necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

KOKOMO TIRES

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

ANNOUNCEMENT

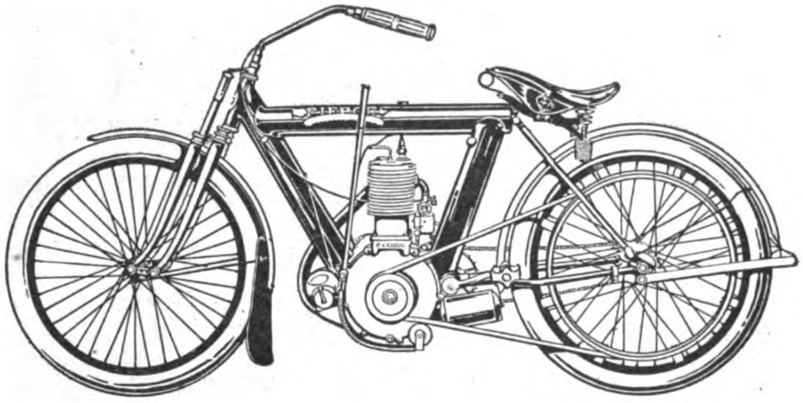
¶ Owing to the large circulation and wide distribution of MOTORCYCLE ILLUSTRATED we are extending the time limit on closing date of the Prize Contest begun in the December twenty-eighth issue, until February first. This will give those readers who live far away an equal chance with those residing near by. The name of the winner will be published in our advertisement appearing February eight in MOTORCYCLE ILLUSTRATED. See the December twenty-eighth issue for details.

ECLIPSE MACHINE COMPANY

Elmira, New York

Does it Cost Too Much to Own a Good Motorcycle?

At the New York Show a certain motorcycle manufacturer was asked why he did not make a large tubing frame like the Pierce. He replied, "It costs too much."



YES!

Pierce workmanship and material always did cost too much for other manufacturers to equal.

AS A RESULT

Pierce frames are at least three times as strong as any small tubing frame.

Pierce engines have greater efficiency and lasting properties than other motors.

Pierce transmission and all working parts are unapproached by the products of other factories.

THE TRUTH
ABOUT
SPARTAN BELTS

We could materially reduce the price but also the quality on Spartan Motorcycle Belts by substituting "Oak" tanned leather for Spartan, but we won't do it. Spartan tanned leather **only** insures a belt capable of withstanding the severe use and often abuse, given it by a motorcycle drive. This secret process tannage makes the Spartan Belts of a uniform degree of quality and efficiency and guarantees a belt not affected by climatic conditions, heat, oil or water. Spartan Motorcycle belts are always

FOREMOST IN QUALITY AND HIGH MILEAGE

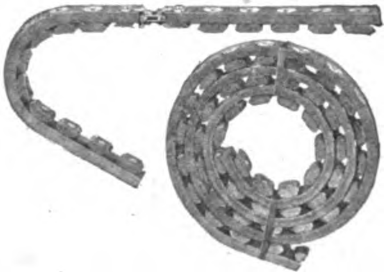
Do you suppose Motorcycle manufacturers, valuing their reputation for a "quality" product, will use any but a high grade belt?

80 PER CENT.

of the total number of Motorcycle manufacturers will equip their belt drive 1912 models with

SPARTAN BELTS

SPARTAN FLAT BELT.



SPARTAN "V" BELT.

SPARTAN BELT DRESSING

prolongs the life of Spartan and other belts to an appreciable extent. It is really more of a food than a dressing and revitalizes the belt and brings it back to its original pliability and efficiency. Can be obtained wherever Spartan Belts are sold. Try it on **your** belt and watch the results.

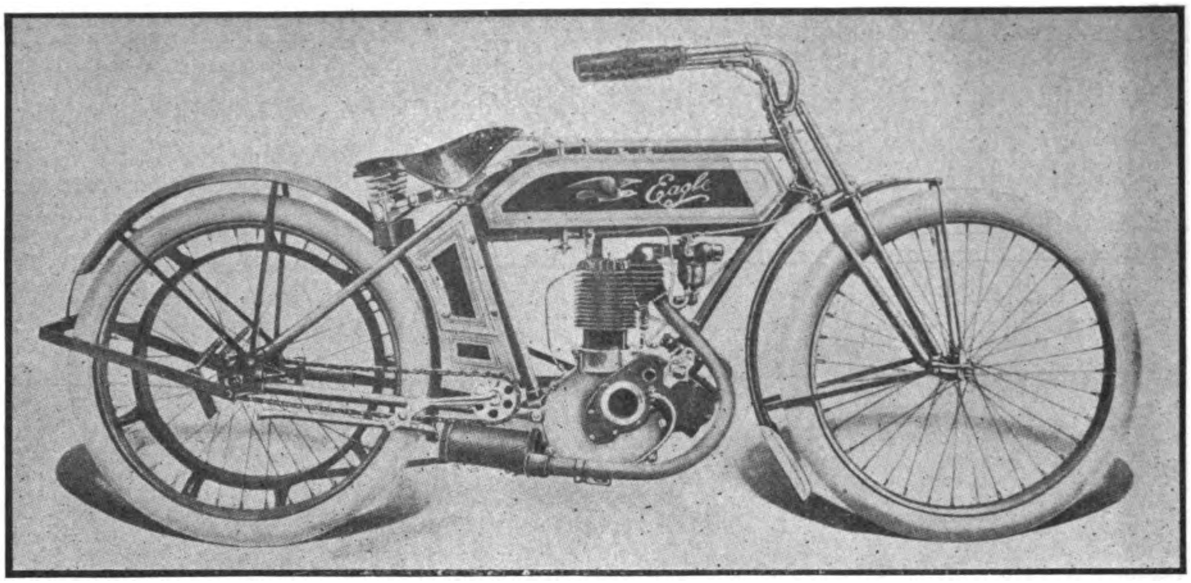
EAGLE BIG "5"

"The Simple Single With Twin Power"



THE REAL LIVE ONE FOR 1912

The Eagle long stroke motor was the first to be adopted in this country and has today the longest stroke of any American motorcycle.

Bosch Magneto, roller bearings throughout, and free-engine, $225.

So much has been said and written on the many advantages of this type of motor over the ordinary motor, it is needless for us to add more than a summary of its chief points, which are:

GREATER POWER and **FLEXIBILITY** at slower speeds, which are especially desired on heavy, long hills, mud roads, crowded city sections, etc.

SMOOTHER, QUIETER OPERATION, owing to the moderation in number of revolutions per minute.

LONGER LIFE—LESS VIBRATION because of a slower running engine Less wear and tear and lower operating temperature.

MORE ECONOMICAL because more power is derived from the same amount of gasoline; less cylinder oil is consumed, owing to a cooler running motor.

THE EAGLE "5" positively has the lowest and most comfortable saddle position of any American made motorcycle, with foot rest giving two distinct foot positions. The appearance of the machine speaks for itself. It is a winner.

Other models, 4 H. P. single at $200; 9 H. P. twin at $275.

The EAGLE Agency is a live one.

Don't lose the opportunity. Write today, before the other fellow gets ahead of you.

MOTORCYCLE ACCESSORIES THAT ARE RIGHT

THE ERO LINE OF TANDEM ATTACHMENTS

Luggage Carrriers, etc., are built for service by men who know from practical experience the hard service to which such accessories are subjected. The articles shown are just a few of our leaders, and we make and sell everything you need to complete your motorcycle.

Our 1912 catalog is now ready for distribution. It's worth a lot of money to you, but a postal card will get it.

WRITE FOR IT TODAY

Ero Tandem Attachment, Model 3

A low priced but thoroughly substantial tandem attachment that may be quickly fitted to any modern motorcycle. Built for service without unnecessary weight or complications. Price, complete with saddle and dust guard, $10.00.

Ero Stand Lock and Release

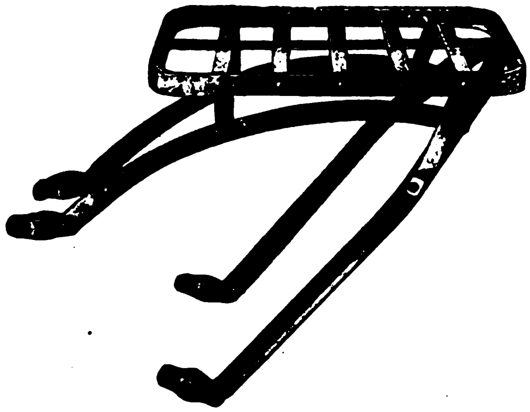
MODEL 116

One of the most unpleasant features of motorcycling has been the soiling of the hands in locking and unlocking the stand, as the position of the lock is such that it is always covered either with dust or mud.

The Ero stand lock not only does away with all this but is a positive lock, preventing the stand from falling out on the road. With this attachment it is only necessary to press the trigger with the foot, when the stand will instantly drop out. If the stand is lifted into position with a spring such as the Ero stand spring, it is then only necessary to press the foot, first upon the trigger to release the lock, and then follow the pressure down till the stand strikes the ground.

It is made of the best material and enameled, making it an ornament to any motorcycle as well as one of the greatest conveniences ever offered the rider. It is readily and easily attached by the same screws or rivets that attach the clip spring to the mud guard, requiring no extra screws or bolts. Mailed postpaid on receipt of 50 cents.

MOTORCYCLE
Belt Dressing
ERO
ERO
MANUFACTURING COMPANY



Ero Luggage Carrier, Model 4

The strongest and most durable luggage carrier ever made. Easily and readily attached to any motorcycle.

Made of channel and best quality bar steel. Will carry any load the wheel will stand.

Price, complete with all attaching clips, $3.50.

Ero Motorcycle Belt Dressing

90% of the trouble encountered with motorcycle belts is really on account of lack of proper treatment.

The first essential to satisfactory motorcycle service in a motorcycle belt is that it be kept in proper condition; that it is clean, pliable and waterproof.

Ero Motorcycle Belt Dressing gives all these qualities and is guaranteed not to rot the stitching or in any way injure the cement. Almost any of the motorcycle belts now in use will prove good belts if properly treated with Ero dressing, while no belt, no matter how good originally, will give satisfactory service without it. It saves the motorcyclist time, trouble and expense.

Put up in ½ pt. cans with screw top. Price, each, 50 cents.

1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm, bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1:5, 4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handle bar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

There is every reason in the world
why your new 1912 machine or the
one you now ride should be fitted with

UNITED STATES TIRES

They are unquestionably the strongest motorcycle tires ever built.

Where else will you find a tire that actually combines all the strong points which served to make two brands (Morgan & Wright and G & J) famous from one end of the country to the other.

Where else will you find a tire made by processes and machinery selected from the two finest motorcycle tire-making plants in the world.

UNITED STATES TIRES

stand alone in this respect.

You riders who select United States Tires as your coming season's equipment will be sure of this—that you are getting the greatest possible value for your tire money—that you are getting a tire which will add to your riding pleasure, subtract from your trouble and delays, multiply your tire mileage and divide your tire expense.

Despite their extra strength and extra service, United States Tires cost you nothing extra to buy.

80% of all riders use them. 100% of all motorcycle makers furnish them gladly as 1912 equipment because they recognize them as

THURSDAY, JANUARY 25, 1912

THE CHICAGO SHOW NEXT

The Wagner the Only Machine in Addition to the Sixteen Which Were Exhibited at Madison Square Garden—Big Western Show Opens Monday, February 5—Exhibitors Classified.

UNDER the management, as heretofore, of S. A. Miles, the Chicago Motor Show, held annually in the big Armory and the Coliseum, opens next week. Motorcycles, however, will not be placed on exhibition until after the pleasure four-wheelers have had their turn. The little fellows of the gas engine family will have their say for six days, beginning Monday, February 5.

As in former years, the trade eagerly anticipates the results of the big show in the Middle Western metropolis; even more so than in the past, because of the altogether satisfactory manifestation of a wide and deep interest by the public at Madison Square Garden recently. It is conceded that in order to prove of greater value than the New York Show, the Chicago affair will have to smash all old records by several miles. None can be found who doubts that this will be the outcome. Optimism, based upon conditions that point to an approximate doubling of last year's business, will be the happy keynote at Chicago.

Seventeen makes of motorcycles will be shown, including all that were seen at the New York Show, the Schickel Manufacturing Company having recently obtained space for the second week, although not in the motorcycle section. The lone addition to the machines exhibited in the Garden will be the Wagner, the features of which are illustrated and described elsewhere in this issue.

The accessory line will not be as complete as it was the first week of the New York Show. However, most of the leading motorcycle parts and accessory firms will be represented, if not by having space, then, at least, by the members of their sales staffs, a number of representative firms having found it impossible to secure the desired accommodations.

Group pilgrimages by club members, dealers and others will be made to the show centre from places as far as a thousand miles away, and it is believed that the turn-out of folks interested in the sport, as manufacturers, agents and riders, will easily be the largest to ever gather in one city during the course of a single week.

Although the numerous and important trade meetings which added weight and formality to the New York Show will be lacking, arrangements more or less elaborate, though all informal, are being made for the entertainment of trade visitors. But then the Chicago Show is above all things else a business proposition, this feature fully compensating for whatever purely entertainment deficiencies it may reveal.

The machines and accessories, and the spaces assigned to them, which will be shown in the Chicago Coliseum, are as follows:

MOTORCYCLES.

Minneapolis, 79; Flanders, 81, 82; Thor, 94, 95; Henderson, 114; Harley-Davidson, 124, 125, 126; Yale, 127, 128, 129; Wagner, 130; Excelsior, 131, 132; Reading-Standard, 133, 134, 135; Indian, 136, 137, 138, 139; New Era, 142, 143, 144; Pope, 145, 146; Emblem, 147, 148, 149, 150; Pierce, 151, 152; Merkel and Racycle, 153, 154, 155; Schickel, 1 (Coliseum Gallery).

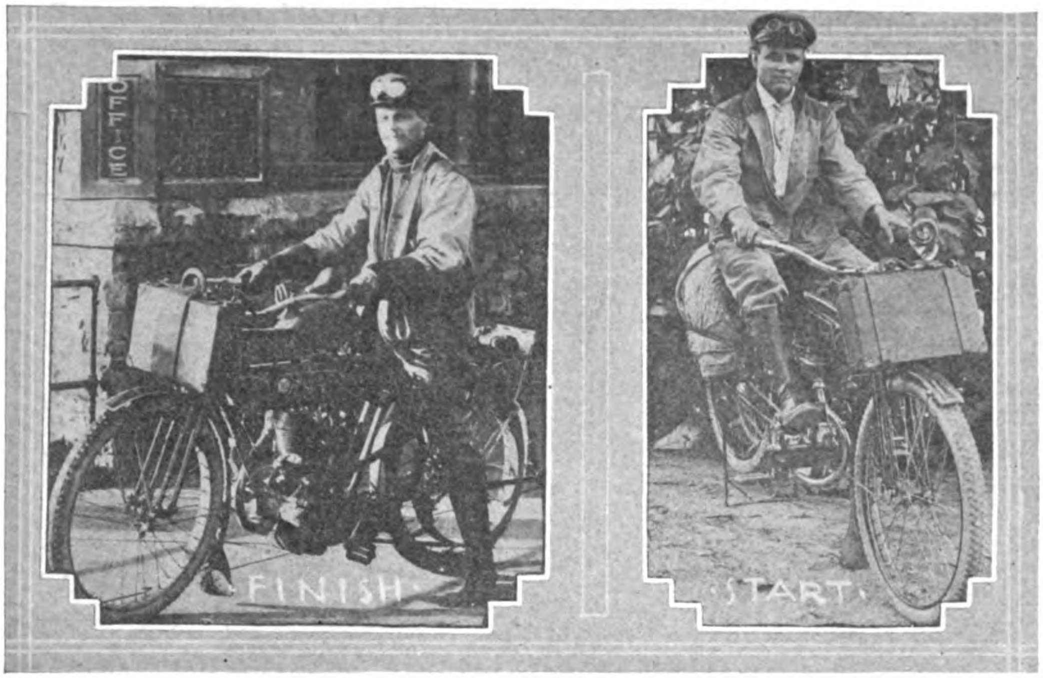
Miscellaneous.—Van Cleef Bros., 31.



RACING CONTRACTS

Riders Contemplating Them Are Urged to First Consult Chairman of Competition Committee.

CHAIRMAN THORNLEY of the F. A. M. Competition Committee, is desirous of having publicity given to the fact that riders making contracts with track promoters or managers, should first submit such contracts to him. While this is by no means an order from the Chairman, the fact remains that a number of contracts were signed by riders last year which, it subsequently developed, did not properly protect their interests. Then, also, there were contracts so worded that the rider did not know just what he had agreed to do. Difficulties of this and of a similar character will be avoided if the riders contemplating the signing of contracts will first consult with Dr. Thornley, who will be only too pleased to make such suggestions and give such advice as will help the rider to do justice to his own circumstance.

CROSSED NINE STATES.

ON his run of 2,850 miles, from San Angelo, Tex., to Syracuse, N. Y., which was completed recently, Henry Ragsdale, a Reading-Standard rider, passed through nine States and the Province of Ontario, Can. His actual riding time was 18 days. Ragsdale left San Angelo on September 27 and arrived in Syracuse on November 9. He had six punctures and only two delays because of mechanical trouble. In each case repairs were quickly made. The Texan is now working in the Franklin automobile factory in Syracuse.

TWO MATCH RACES.

HARRY KECK, Merkel 7, and Eddie Mosher, Indian 7, both well-known in motorcycle circles of Savannah, Ga., have been matched to race on February 22 and Earl McCone and J. E. Hodge, also of Savannah, will furnish another match event. These riders have been at loggerheads for some time past over their speed qualifications and the coming races were arranged to settle the city championship question. The race for the twin machines will be over a 50-mile course.

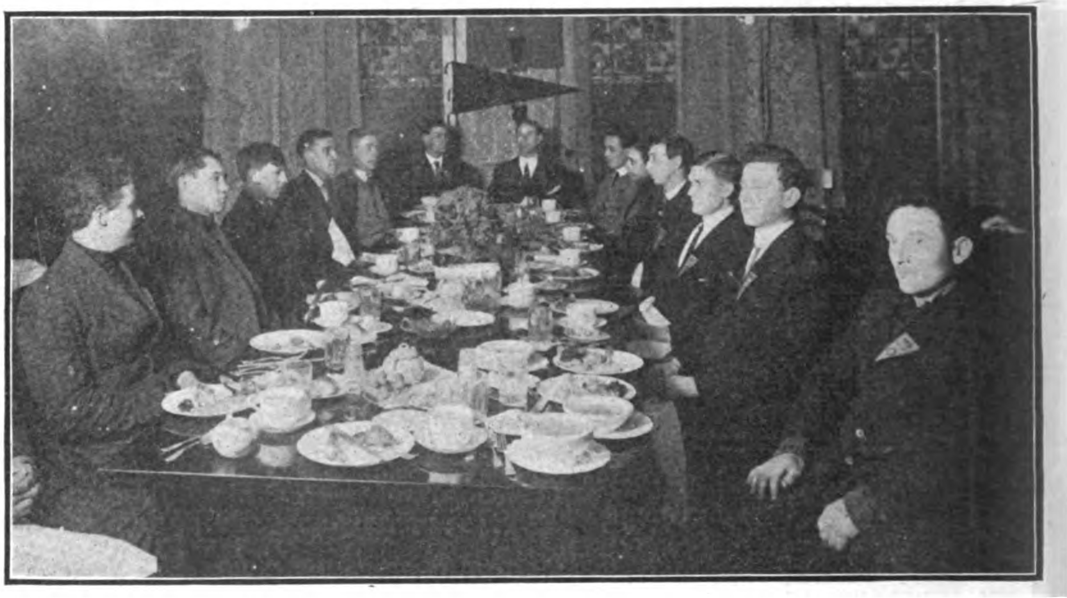
BOARD TRACK IN NEWARK

Plans Have Been Approved for $12,000 Bowl at Electric Park—First Meet Early in May.

PLANS have been practically completed for a $12,000 board track to be erected at Newark, N. J., the project being in the hands of the New Jersey Motorcycle Club. At a recent meeting rough drawings and specifications were considered and the club went on record as favoring the construction of a quarter-mile bowl in Electric Park, the site of the old Vailsburg bicycle track, and directly across the street from the Newark Velodrome where bicycle races are held during the summer.

The new track with grandstand and bleachers will cost at least $12,000. All this amount won't be necessary at once, however, as the lumber for the plant, the biggest item of expense, will be furnished by a local concern willing to take its payment by collecting 25 per cent. of the gross receipts of each meet with 6 per cent. added until the bill is paid. A stock company will be formed and 125 shares of stock at $50 a share will be issued and the whole issue is expected to be subscribed for by the members of the Motorcycle Club and their friends.

The track will be built at an angle of 54 degrees, and will be a perfect oval capable of standing 100 miles an hour on a 7 h. motorcycle. Two months will be necessary for the construction and it is expected to be ready for the opening meet by May 1. The big profits made at the bicycle track were the means of stirring the motorcyclists to action.



HOW FOSTORIA CLUB GROWS.

SEVEN new members were taken in at the last meeting of the Fostoria (Ohio) M. C., bringing the membership up to 27 riders. Plans for several club runs were discussed, and it was announced that the club will be unusually active during the coming season. Following the business session a banquet was served. The accompanying picture shows thirteen diners but there were fourteen on hand; smoke from the flashlight powder evidently shut one of the members out of the picture. Despite quite cold weather on New Year's Day eight of the club riders made a run of about 40 miles, and there is every indication that the present club interest will be maintained.

AN ANALYSIS OF THE 1912 MACHINES

Worked Out From a New Point of View, Namely, That of Specifications, Contrasting the Leading Makes of Motorcycles on the 1912 American Market.

In order to enable the dealer and the prospective purchaser to readily pick out the machine or machines incorporating the specifications and equipment required, we publish herewith an analysis, in an entirely new form, of the leading makes of motorcycles on the 1912 market. It will be noted that this analysis has been prepared from the viewpoint of motor, transmission and frame construction details, and that the equipment is also shown. With the aid of the information below, the purchaser will find it possible, to a certain extent and within the limitations of the models listed, to *assemble* his own machine. The table shows, for example, what machines have certain valve arrangements, certain types of variable gears, etc. In the matter of equipment, including tires, saddles, carbureters, etc., liberal options are the general rule, and for that reason the names of the equipment manufacturers are mentioned only where these articles are announced as exclusively fitted. The data printed herewith will be found valuable for reference.

HORSEPOWER.

Eight—M. M. twin.

Seven—Indian twin; Emblem twin; Excelsior twin; Harley-Davidson twin; Merkel twin; Thor twin; Yale twin; Reading-Standard twin; Pierce four; Henderson four.

Six-and-one-half — Harley-Davidson twin.

Six—Excelsior twin; Merkel twin; N. S. U. twin; F. N. four.

Five—Eagle single; Emblem single; Minneapolis single; Pierce single; Schickel (two-stroke) single; Thor single; Yale twin; Peerless single; Militaire single.

Four-and-one-half—Greyhound single; M. M. single.

Opposite Sides—Pierce four; F. N. four; Bi-Car four.

Inlet Over Exhaust—Detroit; C. V. S.; Eagle; Excelsior; Emblem; Flanders; Greyhound; Harley-Davidson; Haverford; Indian; Henderson; Merkel; M. M.; New Era; N. S. U.; Pope; Thiem; Thor; Yale; Wagner; Peerless.

Side by Side—Iver-Johnson; Minneapolis; Militaire; Pierce single; Reading-Standard.

In Head—Curtiss; Marvel; Waverley.

Valveless—Schickel two-stroke.

INLET VALVES.

Mechanical—Curtiss; Detroit; Excelsior; Harley-Davidson twins; Henderson; Indian; Iver-Johnson; Marvel; New Era; F. N.; N. S. U.; Pierce; Reading-Standard; Thor twin and 5 single; Waverley; Minneapolis.

Automatic—C. V. S.; Eagle; Emblem; Excelsior single; Flanders; Greyhound; Harley-Davidson single; Haverford; Merkel; Militaire; M. M.; Peerless; Pope; Thor single four; Wagner; Yale.

No Valve—Schickel two-stroke.

BORES AND STROKES.

Long Stroke—Greyhound, 3¼ x 4¼; Yale 5, 2¾ x 3 43/64; N. S. U. twin 6, 3 x 3¾; M. M. twin and 4½, 3¼ x 4; Haverford, 3¼ x 4; Peerless, 3¼ x 4; Eagle, 3 5/16 x 4; N. S. U. 3½ twin, 2 13/32 x 3; New Era, 3.215 x 3.75; Emblem 4, 3½ x 4; Excelsior twin 6, 3 x 3½; Harley-Davidson 6½ twin, 3 x 3½; Henderson, 2½ x 3; Iver-Johnson, 3¼ x 3¾; Pierce 5 single, 3½ x 4; Curtiss 4-5, 3¼ x 3 11/16; Marvel, 3¼ x 3 11/16; Indian, 3¼ x 3 43/64; M. M. special, 3¼ x 3 43/64; Yale single and 7 twin, 3¼ x 3 43/64; Flanders, 3¼ x 3.6; Thor 4, 3¼ x 3.6; Thor 7 twin, 3¼ x 3.6; Emblem 5, 3¾ x 4; Minneapolis, 3½ x 3¾; Pierce single, 3½ x 3¾; Wagner 4 single, 3¼ x 3½; Thor 5, 3.57 x 3.80; Detroit, 3 5/16 x 3½; Harley-Davidson single and 7 twin, 3 5/16 x 3½; Excelsior single, 3 21/64 x 3½; Excelsior 7 twin, 3 21/64 x 3½; Emblem twin, 3⅜ x 3½; Reading-Standard single and twin, 3 13/32 x 3 15/32; Waverley, 3⅜ x 3 13/32.

Square—Curtiss 3½ single, 3¼ x 3¼; Merkel 6 twin, 3¼ x 3¼; Schickel, 3⅜ x 3⅜; Wagner, 3¼ x 3¼.

Short Stroke—Merkel single and 7 twin, 3.453 x 3.25; Pierce four cylinder, 2 7/16 x 2¼.

CYLINDER AND HEAD CASTING.

One Piece—Yale; Pierce; Pope; Flanders; Excelsior; Thor; Henderson; Reading-Standard; Schickel; Emblem; New Era; Merkel; Harley-Davidson; F. N.

Two-Piece—Indian; Minneapolis; M. M.

MOTOR BEARINGS.

Ball—Minneapolis; Pierce, double on singles; Thor 5 and 7 twin; Reading-Standard; Schickel; New Era; Emblem; Merkel.

Roller—Thor single 5 and 7 twin; Thor 4 single; Harley-Davidson chain twin; M. M. 4½ single; Excelsior twin big-end.

Plain — Flanders; Harley-Davidson other than chain twin; M. M. twin and single 4's; Pope; Indian; Pierce four cylinder; Yale; Excelsior; Henderson; Wagner; Detroit; Eagle; Greyhound; Iver-Johnson; N. S. U.; Thiem; F. N.

LUBRICATION SYSTEMS.

Force Feed—Indian; Pierce four cylinder; Waverley; Yale.

Gravity Feed — Curtiss; Detroit; Eagle; Excelsior; Flanders; Greyhound; Harley-Davidson; Henderson; Merkel; New Era; Reading-Standard; Wagner.

Hand Pump—Emblem; Haverford; Iver-Johnson; Minneapolis; M. M.; N. S. U.; Pierce single; Yale; **Peerless.**

Injection—Schickel, **with gasoline.**

(Continued on next page.)

CARBURETER.

Schebler—Detroit; Eagle; Excelsior; Harley-Davidson; Haverford; Peerless; Iver-Johnson; Minneapolis; M. M. 4½ single and twin; Reading-Standard; Schickel; Wagner.

Heitger—Curtiss 4-5; Emblem; Greyhound; Marvel; Waverley; Yale.

Breeze—Pierce; Pope; Henderson.

Kingston—Flanders; M. M. special.

Hedstrom—Indian.

Curtiss—Curtiss.

Merkel—Merkel.

New Era—New Era.

N. S. U.—N. S. U.

Thor-Thor.

F. N.—F. N.

IGNITION.

Battery—Curtiss, C. V. S., Thiem, Harley-Davidson single, M. M. special, Thor, Yale and Wagner, one model each.

Bosch Magneto—Curtiss; Detroit; Eagle; Excelsior single and twin; Greyhound; Harley-Davidson; Haverford; Henderson; Indian; Iver-Johnson; Marvel; Minneapolis; M. M.; New Era; N. S. U.; Peerless; Reading-Standard; Thor; Waverley; Yale; F. N.

Herz Magneto—Emblem; Excelsior single; Pierce; Pope; Wagner.

Splitdorf Magneto—Flanders.

Eisemann Magneto—Schickel.

U. & H. Magneto—Schickel.

MAGNETO POSITION.

Front—Curtiss; Excelsior twins; Emblem; Harley-Davidson; Flanders; Indian; Merkel; New Era; M. M. singles; Pierce; Peerless; Yale twins; Pope; F. N.; N. S. U.

Rear—Minneapolis; Reading-Standard; Excelsior singles; Waverley.

Between Cylinders—M. M. twin.

Side—Schickel, in case on right; Henderson, on left.

WEIGHTS.

225 to 250—Minneapolis, 225; Henderson, 250; F. N., 250.

200 to 225—Greyhound, 200; New Era, 200; Reading-Standard twin, 200; Yale 7 twin, 200.

175 to 200—M. M. twin, 175; Wagner 4, 175; Merkel 6, 180; Merkel 7, 180; Waverley, 180; Eagle, 185; Peerless, 185; Pierce single, 185; N. S. U. 6 twin, 190; Yale single and 5 twin, 190; Pierce four cylinder, 195.

150 to 175—Marvel, 150; M. M. special, 155; Curtiss 4-5, 160; Flanders, 160; Haverford, 160; M. M. 4½, 160; Pope, 160; Thor 5, 165; Wagner 3½, 165; Merkel single, 170.

Less than 150—Curtiss 3½, 140; N. S. U. 3½ twin, 140.

TRANSMISSION.

Chain—Excelsior 7 twin; Harley-Davidson 7 twin; Henderson; Indian; Merkel; Minneapolis; New Era; Reading-Standard twin; Thor; Waverley.

V-Belt—C. V. S.; Curtiss; Emblem; Iver-Johnson; Marvel; M. M.; Merkel; N. S. U.; Pierce single; Pope; Wagner; Yale; Thiem.

Flat-Belt—Detroit; Eagle; Emblem; Excelsior, except 7 twin; Flanders; Greyhound; Harley-Davidson, except 7 twin; Haverford; Indian single; Minneapolis; M. M.; Pierce single; Reading-Standard single; Schickel; Wagner; Yale; Peerless.

Shaft—F. N.; Pierce; Detroit Bi-Car.

FREE ENGINE.

Idler—Detroit; Eagle; Emblem; Excelsior, except 7 twin; Flanders; Greyhound; Harley-Davidson, except 7 twin; Haverford; Indian single; Minneapolis; M. M.; Peerless; Pierce single; Reading-Standard single; Schickel; Wagner; Yale.

Multiple Disc Clutch (Eclipse)—Curtiss; Emblem; Excelsior; Greyhound; Haverford; Henderson; Marvel; Merkel; M. M.; Pierce single; Reading-Standard single; Wagner; Waverley; Yale.

Multiple Disc Clutch (Other Types)—Harley-Davidson (H.-D.), in rear hub; Indian (Indian twin); Minneapolis (Minneapolis); Reading-Standard (R.-S.).

Double Cone Clutch—Iver-Johnson.

TWO-SPEED GEAR.

Planetary—Minneapolis, in unit power plant; New Era, on motor shaft; N. S. U., on motor shaft.

Dog-Clutch—Indian, on counter shaft.

Sliding Gear—Pierce; F. N.

BRAKES.

Coaster (Eclipse)—Emblem; Henderson; Reading-Standard; Yale; Schickel.

TIRES.

United States—Detroit; Excelsior; Henderson; Indian; Minneapolis; M. M.; N. S. U.; Pierce; Pope; Yale, 2¾; Thor.

Goodyear — Emblem; Excelsior; Flanders; Indian; Merkel; Minneapolis; Wagner; Waverley; Yale, 2¾.

Goodrich—Iver-Johnson; Emblem.

Diamond—Emblem; Excelsior; Merkel; Yale, 2¾.

Kokomo—Haverford; Peerless; M. M.

Empire—Emblem.

Continental—Erie; Excelsior; Yale, 2¾; Emblem; Harley-Davidson; Merkel.

Optional—Curtiss; Eagle; Greyhound; Harley-Davidson; Marvel; Reading-Standard.

WHEELBASES.

65—Henderson.

64—Militaire.

62½—New Era.

60—Detroit; Pierce four cylinder.

58—Curtiss 4-5; Marvel.

57½—Yale.

57—Excelsior single and twins; Harley-Davidson 7 twin; Schickel.

56½—Harley-Davidson 6½ twin;

56—Curtiss 3½; Emblem twin and 5 single; Greyhound; Iver-Johnson; M. M. twin.

55½—Thor; Waverley.

55—Excelsior single; Harley-Davidson single; Indian T. T.; Minneapolis; Reading-Standard.

54—Eagle; Haverford; M. M. 4½; N. S. U.; Pierce single.

53½—Flanders; Wagner.

53—Indian; Merkel; M. M. special.

SADDLES.

Mesinger—Eagle; Emblem; Greyhound; Harley-Davidson; Indian; Merkel; M. M.; Pierce; Waverley; Yale.

Troxel—Detroit; Emblem; Excelsior; Flanders; Harley-Davidson; Merkel; N. S. U.; Thor; Wagner; Yale.

Persons—Detroit; Harley-Davidson; Haverford; Peerless; Iver-Johnson; Pope.

New Era—New Era form seat.

Optional—Curtiss; Marvel; Minneapolis; Reading-Standard.

NUMBER OF MODELS

One—Haverford; Detroit; Peerless; Flanders; Greyhound; Iver-Johnson; Henderson; F. N.; Marvel; New Era; Pope; Schickel; Waverley.

Two—Curtiss; N. S. U.; Wagner.

Three—Emblem; Harley-Davidson; Pierce; Reading-Standard; Yale.

Four—Excelsior; Merkel; Minneapolis; M. M.; Thor.

Six—Indian.

GASOLINE CAPACITY.

3 gallons—Thor 5 and twin; Schickel.

2 gallons—Curtiss; Eagle; Peerless; Emblem; Excelsior single; Iver-Johnson; Marvel; Minneapolis; Reading-Standard twin; Thor single; Wagner; Waverley; Yale.

2¾ gallons—Excelsior, except single.

2½ gallons—Indian; Harley-Davidson 7 twin.

2¼ gallons—Henderson.

1¾ gallons—Excelsior single; Merkel; Reading-Standard single.

1½ gallons—Detroit; Flanders; Greyhound; Harley-Davidson, except 7 twin; Haverford; M. M. 4½; N. S. U.

1¼ gallons—Pope.

OIL CAPACITY.

4 quarts—Harley-Davidson 7 twin.

3½ quarts—Harley-Davidson single and 6½ twin; Minneapolis.

3 quarts—Greyhound.

2½ quarts—Wagner.

2 quarts—Curtiss; Emblem; Henderson; Indian; Iver-Johnson; Marvel; Merkel; Pope; Reading-Standard; Waverley; Yale.

1½ quarts—Detroit; Eagle; Peerless; Excelsior twins; Flanders; Haverford; M. M. 4½ and twin; New Era; Thor single.

1 quart—Excelsior singles; M. M. specials.

Less than 1 quart—Schickel, uses oil measure with mixing with gasoline.

SPRING FRAMES AND SEAT-POSTS.

Spring Frame—Merkel; Detroit Bi-Car; N. S. U.

Spring Seat Post—Reading-Standard; Harley-Davidson; Wagner; Excelsior.

Spring Rear Construction—Waverley.

FORKS.

Coach Spring—Indian; Pope; Haverford; Peerless; M. M.; Excelsior; Waverley.

Single Plunger—Reading-Standard; Pierce; Thor single; New Era; Minneapolis; Emblem; F. N.; Flanders; N. S. U.

Double Plunger—Schickel; Yale; Thor; Wagner; Harley-Davidson; Henderson; Pierce single.

Truss—Curtiss; Marvel.

FRAMES.

Loop Type—Thor; Emblem; Pope; Harley-Davidson; Wagner; Waverley; Merkel; Indian.

Keystone Type—Yale; Excelsior; M. M.; Reading-Standard; Schickel; Minneapolis; Peerless; Eagle.

Trapezoidal Type—Henderson; F. N.

Tank Keystone Type—Pierce; Detroit.

Drop-and-Loop Type—New Era.

PRICES.

$140—M. M. battery single.

$160—M. M. magneto single.

$175—Emblem 4 battery; Excelsior 4 battery; Flanders; Thor 4 battery; Pope 3½.

$200—Emblem 4 magneto and 5 single; Excelsior 4 magneto; Harley-Davidson 4 battery; Indian single; Merkel single; M. M. 4½.

$210—Yale 4 battery single.

$225—M. M. twin; Excelsior 6 twin; Indian 7 twin; Merkel single; Pierce single; Reading-Standard single; Schickel; Emblem magneto 5.

$235—Harley-Davidson 4 magneto; Yale 4 magneto.

$240—Minneapolis belt drive.

$250—Emblem 7 twin; Excelsior 7 twin; Indian 4 T. T.; Merkel 6 twin; Pierce 5 single magneto; Thor 5 single; Reading-Standard Tourist; F. N. Glider.

$260—Yale 5 twin.

$265—Pierce 5 single magneto.

$275—Harley-Davidson 6½ twin; Indian 4 T. T. 2-speed; Merkel 7 twin.

$285—Harley-Davidson 7 twin; Minneapolis belt or chain 2-speed; New Era; Yale 7 twin.

$290—Reading-Standard twin.

$300—Indian 7 twin T. T.; Thor 7 twin; F. N. Standard.

$325—Indian 7 twin T. T. 2-speed; Henderson four cylinder.

$400—Pierce four cylinder; F. N. 2-speed.

A GLIDDEN TOUR?

PLANS for a national tour for motorcyclists, along the general lines of the annual Glidden tour for motor car owners, were launched at the close of the New York Show by A. B. Coffman, of Toledo, Ohio, and A. J. Musselman, of Chicago. They suggested that a 2,000-mile route be mapped out with at least a ten-day schedule, the destination being the city in which the next F. A. M. convention is to be held. As the convention city will not be decided upon for some time, the present plans are merely tentative, but there is every indication that they will be taken up with enthusiasm and carried to success. Messrs. Coffman and Musselman were assured by President Hamilton, of the F. A. M., that they will have his hearty co-operation, and other Federation officials have expressed themselves as thoroughly in sympathy with the movement.

The originators of the plan will donate two handsome trophies, a cup valued at $150 for trade riders, and another cup for private owners, to be valued at $100. That competition for these prizes will be keen goes without saying. It is the intention to have the trade riders' cup competed for each year, but the private owner who captures the award in his division annually will hold it. Owing to the uncertainty with reference to the scene of the next Federation assembly, nothing can be said concerning the tour proper beyond the announcement that pathfinders will be used and the route posted as for the Glidden tours. Despite the fact that hundreds of riders were prevented from giving up the time necessary for the tours to the last convention in Buffalo they aroused considerable interest, and it is argued that one big tour, drawing riders from all parts of the country, and with handsome trophies awaiting the winners, should bring out hundreds of riders.

PROPOSALS TO CANADA

F. A. M. Board of Directors Gives Hearing and Submits Offers to Secretary Anderson, of the Toronto Club.

AT the recent meeting of the F. A. M. Board of Directors in New York City, Secretary Anderson, of the Toronto Motorcycle Club, of Toronto, Canada, was given a hearing in order to afford him an opportunity to acquaint the Federation directors with the attitude of Dominion motorcyclists towards the F. A. M. As a direct result of the conference, Mr. Anderson took back with him to Canada an outline of the conditions under which the American organization would welcome the affiliation of Canadian clubs, and give such clubs Federation support when affiliated.

The proposition made by the F. A. M. directors may be briefly summed up as follows:

The Federation agrees to grant racing sanctions in Canada only to affiliated clubs. The American riders who are members of the F. A. M. will have general permission to compete at race meets conducted by affiliated Canadian clubs, but by no other Canadian organizations. Canadian riders, in order to compete in F. A. M. meets in Canada, must be members of the F. A. M. Conversely, Canadian F. A. M. riders shall not compete, under penalty of suspension, at race meets conducted by unaffiliated Canadian clubs. The F. A. M. reserves the right to grant board track sanctions to Canadian promoters other than affiliated clubs, but insofar as dirt track racing is concerned, there will be no exceptions to the above proposals.

The above is considered more or less tentative, the idea being to give Canadian clubs a basis upon which to work. It is not improbable that the boys across the international border will have a counter-proposition to make, the directors having instructed Mr. Anderson and the secretaries of other Canadian clubs, to communicate with Director Sauer, Chairman of the National Committee on Legal Action, with a view to bringing about a final settlement of the present controversy.

The fact remains that satisfactory progress is being made, and that the riders of the two countries have been brought into closer touch with one another. The principal question involves that of protecting Canadian clubs who affiliate, and it was the sentiment of the Board of Directors that every reasonable effort should be made to protect affiliated Canadian clubs as far as is in the power of the Federation to do so. The solution of the Canadian problem is now considered as only a matter of time.

THERE are now 200 motorcyclists in Reading, Pa., and it is likely that the number will be doubled during the coming season.

BOARD TRACK FRANCHISES

F. A. M. Directors Favor a One-Year Term and the Prohibition of More Than One Track In Any City, Regardless of Its Size.

WITH five members present in person, and two represented by proxy, the F. A. M. Board of Directors, at a meeting held in New York, Friday, January 12, adopted a set of board track resolutions which in a way combine the good points in both the Hamilton and Thornley proposals. The resolutions are featured by a provision that no contract with a board track builder, promoter or manager, for the present at least, shall be made to cover a period of more than one year. The point next in importance about the resolutions is that they provide for exclusive franchises within a distance of twenty-five miles, in each city, from the track first constructed. There was a strong sentiment among the directors in favor of making the mileage limitation less than twenty-five miles, and the longer distance was approved largely upon the recommendations of Dr. J. P. Thornley, chairman of the Competition Committee. It was Dr. Thornley's opinion that any attempt to operate two tracks in one city, no matter how large, under different managements, would lead to endless trouble, particularly among the riders. On the other hand, the time limitation was set at one year for the reason that the directors, in view of the experimental character of the proposition, were unwilling to bind the Federation for a longer period until the experiment had been tried out and found satisfactory.

There were present at the meeting President George H. Hamilton, Chairman Dr. J. P. Thornley, of the Competition Committee; former President Fred I. Willis, Director Howard French and Chairman J. L. Sauer, of the National Committee on Legal Action. Represented by proxies were directors Earle L. Ovington and W. E. Collins, making a total representation of seven out of the board's membership of nine. The meeting was of an informal nature, each resolution of the series being discussed until so worded as to have the unanimous endorsement of those present.

Many radical changes were made in the original Thornley resolutions, particularly in the matter of contract periods, mileage limitations and the fees to be paid by promoters. In the latter particular, it was finally decided to base the charges for exclusive franchises upon the size of the city in which the track was to be constructed, as follows:

In cities of one million and more inhabitants, $750 a year; less than one million, and more than five hundred thousand, $500; less than five hundred thousand and more than two hundred thousand, $250; less than two hundred thousand, $125. A perusal of the resolutions, printed in full below, will disclose the fact that the provisions are very moderate, as are also the fees which promoters are required to pay. It will also be noted that all agreements made with a board track promoter are to provide that the enjoyment of an exclusive franchise shall depend upon a promoter's conducting each and every meet in conformity with the rules and regulations of the organization, in default of which the chairman of the Competition Committee, with the approval of the Board of Directors, is authorized to suspend a franchise. The resolutions in full are as follows:

"WHEREAS, It has been found by actual experience that properly built and properly banked board tracks are the safest and most satisfactory tracks for motorcycle racing,

"BE IT RESOLVED, That the Federation of American Motorcyclists is heartily in favor of the building of approved board tracks and that it will be our policy to protect, as far as reasonable, the builders and promoters who first put up board tracks in any community; and further be it

"RESOLVED, That the charge for regular sanction for races and exhibitions on all board tracks, for each calendar day, shall be twenty-five ($25) dollars; and furthermore be it

"RESOLVED, That the chairman of the Competition Committee is hereby authorized, after having in each case given thirty days' notice to the president of the F. A. M., and having received no majority objection from the Board of Directors, to make agreements with board track promoters, owners or managers, upon certain conditions as hereinafter set forth:

"Upon payment in advance of a certain sum, as hereinafter set forth, by a board track promoter, owner or manager, the chairman of the Competition Committee, after giving notice as above provided for, may enter into an agreement with one promoter, owner or manager in each city, not to grant sanctions for racing on any other board track within a distance of twenty-five miles, for a period of one year; provided, however, that such agreements may permit the operation of another track within the distance, but in another State; or in another city of more than 200,000 population; and furthermore be it

"RESOLVED, That such agreement may at any time be voided by the chairman of the Competition Committee, with the approval of the F. A. M. Board of Directors, if the rules for competition of the F. A. M. are not properly observed; and further be it

"RESOLVED, That such agreement may be renewed from year to year, preference in each case being given to the owners, promoters and managers of existing tracks, provided they have conducted their meets during the previous year satisfactorily and in conformity with the rules; and furthermore be it

"RESOLVED, That the basis of such agreements shall be the payment, in advance, of the following fees per annum:

"In cities of one million or more inhabitants, seven hundred and fifty ($750) dollars a year; in cities of less than one million and more than five hundred thousand inhabitants, five hundred ($500) dollars per year; in cities of less than five hundred thousand and more than two hundred thousand inhabitants, two hundred and fifty ($250) dollars a year; in cities of less than two hundred thousand inhabitants, one hundred and twenty-five ($125) dollars a year; and furthermore, be it

"RESOLVED, That the making of such agreement by the F. A. M. does not insure the promoter that regular sanctions will be granted to him at any time; it simply insures that no sanction will be granted to any other board track, within the distance agreed upon, for the period of the contract; and furthermore, be it

"RESOLVED, That promoters of board tracks, making agreements as above, shall be required to apply to the chairman of the Competition Committee for regular sanctions, and pay for them in each instance, just as though no agreement were in existence. The agreements shall provide that the promoters making them shall not hold outlaw meets on their tracks or permit others to hold such meets; and furthermore, be it

"RESOLVED, That it shall be the duty of the chairman of the Competition Committee to withhold, suspend or cancel sanctions for violations of the rules, just as though no agreement as above referred to had been made; and furthermore, be it

"RESOLVED, That any and all rulings of the chairman of the Competition Committee involving the suspension, canceling or withholding of sanction shall be subject to appeal to the Board of Directors direct. That in the making or renewal of agreements, a promoter who has carried on motorcycle racing under F. A. M. sanction satisfactorily and fairly for the longest period shall be given the preference, and that no agreement will be made for a second board track within the distance above stated until the promoters of the first track have had ample opportunity to refuse a renewal of their agreement; provided always that promoter of such a track has satisfactorily lived up to the rules and regulations of the F. A. M.; and furthermore, be it

"RESOLVED, That the payment of fees for agreements as above mentioned, shall be made to the chairman of the Competition Committee, when the agreement is executed. All agreements shall provided that the track shall be completed and in operation not more than 90 days from the date of the agreement, after which the chairman of the Competition Committee shall be at liberty to issue regular sanctions to another board track either in existence and proposed; and be it further

"RESOLVED, That all fees collected for such agreements shall be turned over immediately to the National treasurer to be devoted primarily to the expenses of the Legal Committee up to one thousand ($1,000) dollars per annum, and thereafter, all sums in excess of one thousand ($1,000) dollars so collected shall go into the National treasury to be used at the direction of the Board of Directors; furthermore, be it

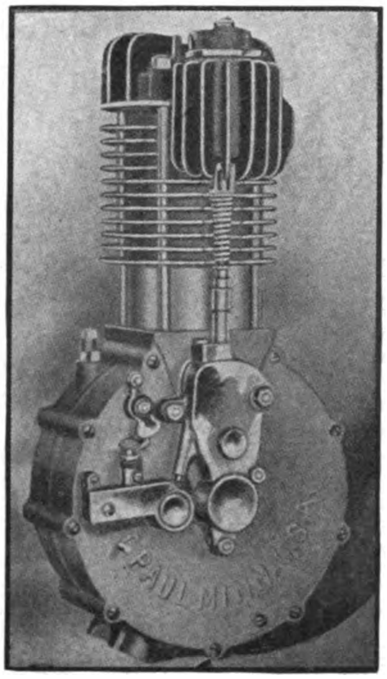
"RESOLVED, That the chairman of the Competition Committee shall co-operate with the chairman of the Legal Committee in drawing up a proper contract embodying the above provisions, and the chairman of the Legal Committee is hereby authorized to employ efficient counsel in order that such agreements may be so drawn as to protect the interests of all concerned."

1912 WAGNER SHOWS IMPROVED MOTOR

Exhausts Through Auxiliary Tube to Muffler Instead of Through Frame Loop as in Former Models—Wide Range of Options Provides Unusually Attractive Line for Coming Season.

AN interesting feature of the motorcycle display in the Chicago Show, which was not included in the New York exhibition, will be the Wagner line for 1912, embracing two standard models and five types. The improved "4-'12" model, with flat belt and idler or V-belt and free-engine clutch, is supplied with either magneto or battery ignition, and the popular "M" model may be had with the same transmission equipment and magneto or batteries. The fifth type is the "M" model with battery ignition and without free-engine clutch.

With the exception of a cylinder head of new design, which permits the exhaust gases to pass through an auxiliary tube to the muffler, instead of through the frame loop as in former models, and some minor mechanical refinements, the Wagner 4 h. motor is continued as in the past. It has a bore of 3¼ and stroke of 3⅓ in model "4-'12," and a stroke one-quarter of an inch shorter in model "M." Wagner motors are of the single-cylinder, vertical type with the head cast separately. The cylinder is secured to the crankcase by means of four vertical studs which pass through the cylinder head and are surmounted by nuts. The cooling flanges are deep and very thin so that the best radiation is insured. The piston carries three rings, two at the top and one at the bottom, with a wide oil groove between them. The "I" beam connecting-rod is drop-forged, and the fly-wheels are large and well balanced. High-grade aluminum is used in the crankcase which is guaranteed oil-tight. Compression relief valves are provided in both the cam case and crankcase. The valves are of large diameter, made from nickel steel, and the exhaust valve is heavily re-inforced at the neck. The inlet valve is automatic.



Wagner R. F. D. Equipment.

The machines show the well-known Wagner diamond loop frame, recognized as one of the sturdiest on the market, and either a shock-absorbing fork or the Wagner rigid twin type may be had. The special construction of the latter affords unusual strength and rigidity. The auxiliary fork is made of Shelby seamless steel tubing and the cushion springs are long and large; recoil springs are provided to absorb reaction and vibration. The rocker plates have wearing surfaces of full width and there is no tendency toward side-sway. Positive lubrication to all working joints is provided through oil cups. The shock-absorbing fork is regular equipment on all models with 2½-in. tires. The Wagner rigid twin fork and 2¾-in. tires will be furnished, when specified.

Lubrication is by vacuum hand force pump or automatic sight drip feed. For the former the pump handle is located on top of the tank within easy reach; there are no valves to open and at one stroke the pump fills automatically, the charge being then forced to the crankcase. The force pump will be regular equipment, but when specified the automatic drip feed will be furnished without extra charge.

The Schebler carbureter is a special model designed with particular regard for the requirements of the Wagner machines, and is credited with unusual economy and flexibility. The battery

models are equipped with three dry cells which are carried in a water-tight case between the seat-mast tube and the rear fork. The coil is carried in another compartment under the battery case. On the magneto models the Herz instrument is used.

Transmission on both models is by belt. Both pulleys on the flat belt types are heavily lagged with tough, waterproof leather. The rear pulley is rolled from one piece of high-grade steel and is of exclusive Wagner design. The rear lagging is endless and stitched, another Wagner feature worthy of note.

The Troxel-Eagle saddle is standard equipment, and a spring seat attachment is provided at an extra charge of $5. The machines are fitted with the Eclipse brake and New Departure front hub. In both models the wheels are 28-ins. With the Wagner twin fork 2¾-in. tires will be regular equipment; with the shock-absorbing fork a 2¾-in. tire will be fitted on the rear wheel for $1.25 extra. M. & W. Nobby tread tires will be supplied on both wheels for $2.40 extra. On the "4-'12" model 28 x 2½ United States or Goodyear heavy studded tread tires are standard, and on the "M" model Goodrich or United States 28 x 2½-in. tires are fitted regularly.

The "4-'12" model is offered with French gray finish only, and the "M" model may be had in either French gray or Wagner red. Following are the prices, f. o. b. factory: Battery model, "4-'12," flat-belt and idler or V-belt and free-engine clutch, $175; same model with magneto, $200; model "M," battery ignition, flat-belt and idler or V-belt and free-engine clutch, $165; same model with magneto, $185; model "M," battery ignition, without free engine, $160.

ALLENTOWN OFFICERS.

FOLLOWING are the officers of the Allentown (Pa.) M. C.: E. A. Hagenbuch, president; Harry I. Albright, vice-president; Charles Geisinger, secretary; Henry M. Shelly, treasurer; Lloyd Taylor, captain; Charles Siegfried, first lieutenant; Morris Fillman, second lieutenant; H. F. Schubert, bugler; William McClosky, color bearer; Robert Ruch and Edward Strauss, mechanicians.

NEW ZANESVILLE STAFF.

WILLIAM WILLIAMS heads the official staff of the Zanesville (Ohio) M. C. for 1912 and his associate officers are as follows: Earl Garrett, vice-president; Lee Malone, secretary; J. S. Whitworth, treasurer; Clarence Stouder, captain; William Heydenrich, lieutenant.

MOTORCYCLES IN DEMAND.

ALL motorcyclists in Germany are now subject to an order to report with their machines for military duty owing to elaborate plans which are being perfected as a result of the country's strained relations with several of the European powers.

NOT AFRAID OF BLIZZARD.

EVEN the blizzard that swept St. Louis, Mo., during the week of January 8 failed to dampen or cool the enthusiasm of the members of the South Side M. C. who turned out in large numbers to their annual banquet and installation of officers. The banquet was held on the evening of January 12. Mr. Cornwall, acting as toastmaster, called upon every member for a short speech and none failed to respond. Referring to the outlook for the coming season Mr. Cornwall suggested that the club should have permanent quarters and the boys took up the idea with enthusiasm. It is likely that a committee will be named at the next meeting to devise ways and means of obtaining suitable rooms.

SEATTLE OUTLOOK BRIGHT.

SEATTLE, WASH.—Seattle motorcycle dealers report having had much more satisfactory business in 1911 than during 1910. Several have outgrown their present quarters and in the near future a number of important changes will be made in motorcycle row.

Seattle's boulevard system has been greatly improved during the past few months, and this in a way has had a tendency to increase sales. Collections are reported good. Dealers report an abundance of good prospects and are making preparations for a busy spring. The coming season will be the busiest Seattle motorcyclists have known.

IN KANSAS CITY.

A special squad of rifle-armed police on Merkels and Indians, make matters interesting for law-breakers in Kansas City. The eight husky individuals shown in the picture to the left are putting a Merkel to one of the severest tests to which a motorcycle has ever been subjected. The Spartan belt is the transmission equipment.

MOTORCYCLE AND BIPLANE

Two Photographs, Taken at Widely Separated Points, are Combined to Produce Novel Effect.

TWO negatives went into the making of the accompanying photograph, which shows George W. Cooper, a Chicago motorcyclist, in the foreground, and Beatty, the well-known aviator, swooping about with his biplane in the background. The picture is forwarded by T. A. Cooper, of 532 Millard avenue, Chicago, whose interesting story of a tour by motorcycle from the Windy City to New York appeared in a recent issue of MOTORCYCLE ILLUSTRATED.

FOUR NEW NAMES ON MAKERS' ROSTER

Motorcycle Manufacturers' Association Now Has Twenty-One Members, All Primed for a Record-Breaking Season—Good Attendance at Busy Session in New York.

CONSIDERABLE business of importance was transacted at the winter meeting of the Motorcycle Manufacturers' Association, at the Hotel Astor, New York City, on January 11, not the least interesting feature being the admission of four new members, the Minneapolis Motorcycle Company, Minneapolis, Minn.; the Black Hawk Motor Company, of Rock Island, Ill.; the Henderson Motorcycle Company, of Detroit, Mich., and the Schickel Motor Company, of Stamford, Conn. The association now has twenty-one manufacturing firms on its roster.

When routine business had been disposed of there was a general discussion with reference to the results obtained during 1911 and the plans to be put into effect for the advancement of the motor two-wheeler in the current year. There was no end of enthusiasm and all the reports submitted tended to bear out the prediction that 1912 will mark the opening of a new epoch for the motorcycle, due to the distinctly favorable attitude now being assumed by the general public.

Referring to the trade outlook, on behalf of the association, President A. B. Coffman said:

"Having finally overcome the bulk of the prejudices which were entertained by the public at large the motorcycle enters upon the 1912 season with every prospect of establishing a new record for popularity, and consequently for sales. No longer can it be claimed consistently that the motorcycle is dirty, noisy and undependable; years ago there may have been some excuse for such a classification, but these terms do not apply to the up-to-the-minute single-tracker any more than they do to the modern touring car. In short, we have obviated and lived down the only serious faults laid at our door, and this fact is being recognized from coast to coast.

"With the fundamentals of construction well established manufacturers have been called upon to do little more than refine their products for the last year or two, and this refining process has developed a line of machines as attractive in exterior makeup as they are dependable in operation. The machines are right and the prices are right and as for sales—well, let the 1912 season tell its own story.

"The Motorcycle Manufacturers' Association is well satisfied with the progress made during the last year and we are convinced that the business of 1912 will prove as satisfactory to the makers as to dealers and riders. Our association has been, and will continue to be, active in furthering the interests of retail dealers throughout the country, and every movement calculated to advance the motorcycle and the interests of its followers will have our best attention. Now let us have co-operation."

President A. B. Coffman (Consolidated Manufacturing Company), Toledo, Ohio, occupied the chair at the meeting and the others present were as follows: George M. Hendee and F. J. Weschler (Hendee Manufacturing Company), Springfield, Mass.; J. A. Handin (Aurora Automatic Machinery Company), Chicago; W. G. Schack (Emblem Manufacturing Company), Angola, N. Y.; Arthur Davidson (Harley-Davidson Motor Company), Milwaukee, Wis.; J. F. Cox (Pope Manufacturing Company), Hartford, Conn.; W. F. Remppis (Reading Standard Company, Inc.) Reading, Pa.; W. A. Johnson (Pierce Cycle Company) Buffalo, N. Y.; H. N. Kirk (Excelsior Motor Manufacturing and Supply Company) Chicago; Jesse Campbell (New Era Auto-Cycle Company), Dayton, Ohio; C. B. Knudsen (Minneapolis Motorcycle Company), Minneapolis, Minn.; W. T. Marsh (American Motor Company), Brockton, Mass.

THREE PITTSBURGH SHOWS.

PITTSBURGH is to have three automobile shows during the next two months, opening on January 27, February 3 and February 17. They will be held in the spacious Duquesne Garden and Exposition Hall. It is stated that motorcycles will figure in each of the shows.

A ROAD race from Wichita, Kan., to Topeka and return, 240 miles, is being planned by the Wichita M. C. for July 4.

CYCLE JOBBERS DISSOLVE

Failure to Decide Upon Plan for Incorporation Leads to Formal Dissolution at New York Meeting.

FOLLOWING the decision that a satisfactory plan of incorporation could not be agreed upon, the National Association of Cycle Jobbers was formally dissolved at the meeting held in New York City on January 11.

A plan for incorporation was taken up and discussed and finally referred to the directors who went into executive session. They submitted a report to the effect that as the association could not decide upon arrangements for incorporating steps might properly be taken to dissolve the body. A resolution to this end was introduced and carried. Later it was stated that the cycle jobbers may form another organization along social lines in the near future.

RACES for Washington's Birthday are being planned by the Charleston (S. C.) M. C. Entries are encouraging and a lively progam is expected.

Part VI—Zurich, Lucerne,

By JOSEPH

OVER fine roads and through a region of entrancing scenery, Esler and Streiff made their way out of the domain of the Kaiser and over the German border into Switzerland. They had remained beyond their allotted period of thirty days in Germany and were eager to test their machines on the Swiss trails. The present instalment of their story deals with experiences in the Alps and covers a trip by train through the famous St. Gothard tunnel. Without serious delays they chugged over the Italian foothills beyond the tunnel and then coasted down miles of well-kept roads and through quaint villages into the picturesque lake district of northern Italy, on the road to Milan.

On arriving in Strasburg, we lost no time in visiting the famous cathedral which, we were informed, was in course of construction for many years. Its cost can hardly be computed. When the Germans took Strasburg from the French in 1870, the cathedral was damaged to the extent of half a million dollars. A wonderful old clock in the structure still reckons time accurately. Whenever the clock strikes the hour, two huge bells ring in the strokes, so that they may be heard for miles in fair weather. We climbed to the top of the main tower, 331 steps, and enjoyed a fine view of the city.

Strasburg, with its little tile-roofed buildings, is most picturesque. We crossed the river Rhine over one of the many bridges, and our attention was called to numerous house-boats along the river banks. On investigating we

TOURING
PART SIX

St Gothard and Milan.

ESLER.

found them all occupied by women who were washing clothes. It was explained that the women paid a small sum for the privilege of doing their washing in this way, as it is much handier for them than doing the work at their homes. We also inspected many fine statues, one of them recently erected to Kaiser Wilhelm I., and another to the poet Goethe.

Moving Pictures Again.

In the evening we visited a motion picture theater and again saw the film of Streiff riding into Berlin. The Pathe firm took these pictures and is sending them all over the world. When we retired that night, there was a heavy fog and we predicted rain for the next day. We left the city at 9 o'clock the following morning through the fog, Herman Doll, the N. S. U. agent, riding out with us. After traveling a short distance, Herr Doll struck a large dog and was thrown, but as he was riding a lightweight machine and going slowly, the only damage was a bent pedal.

Ten miles outside the city we bade our friend farewell and set out over a good road to Freiburg, 50 miles from Strasburg. Except for a few bad spots in the villages, the road was in excellent condition, and we made good time. We ate dinner in Freiburg, called on the N. S. U. agent, filled our tanks and headed for the Swiss border, 40 miles distant.

Farewell to Germany.

We were glad to leave Germany, not because we had failed to enjoy ourselves—our stay in the Kaiser's domain had been most pleasant—but because

16

we longed to get into the mountains of Switzerland. We rode over a fine highway to the German frontier, climbing into the foothills about 20 kilometers from the boundary line. We reached the German border at 4 p. m. and had our papers signed, showing a letter from the N. S. U. factory to explain why we had remained in the country over our period of thirty days. A short time later we were busily engaged in answering the questions of the Swiss officials. They stamped our triptyque, refused a tip from Streiff and started us on our way.

In five minutes we were in Basel, where we hunted up the N. S. U. agent, Friederich Banscher, and put up for the night. After eating we enjoyed an automobile trip with the agent, and attended a meeting of the Basel motorcycle club. One of the subjects discussed was the quality of Swiss gasoline. They refer to its gravity test in hundreds, 680 or 700, for instance, instead of 68 or 70, as we do in the States. Gasoline in Switzerland costs about twice as much as in the United States, and the quality is no better.

On the Road to Zurich.

We were ready to start at 9 o'clock the next morning, but a heavy rain held us up for several hours. When the weather improved, we set out for Zurich. Talk about mud! It reminded us of the far-famed gumbo of Illinois and Missouri. We covered only ten miles in an hour. We climbed one bad hill and finally rolled into the city at 5 p. m. We had been told that we must ride more slowly in Switzerland, as the regulations were quite rigid, but we found it possible to cut out even a better pace than in Germany, slowing up only in the villages.

On the road between Basel and Zurich we noticed many carts loaded with casks of wine, the production of which is one of the chief industries of the district. In Zurich we placed our machines in the N. S. U. agency and hunted up friends of Streiff, Mr. and Mrs. Weber, who had returned to their native city after 22 years' residence in California. They received us warmly. We spent the following day in sightseeing with Mr. Weber as our guide. We climbed to the heights surrounding the city, and were able to see the snow-capped mountains in the distance. We lingered for some time to enjoy the wonderful view. In our walk we passed a fine hotel on the crest of a hill, its management being in the hands of the Women's Temperance Union.

A Trip by Train.

On Monday we gave the machines a careful inspection, as we realized that some severe grades would have to be conquered in the next stages of the trip. Streiff decided to visit an uncle who lives near Schwanden, 100 kilometers from Zurich, and as the roads were in poor condition following heavy rains, we made the journey by train. We left Zurich at 1.30 p. m. and rolled into Schwanden at 5 o'clock. Then we were obliged to do a little climbing in the hills, as Streiff's uncle lived at Thome, a short distance from the larger city.

On our arrival we were given a hearty welcome. Streiff's uncle made his home in California for 30 years, and returned to Switzerland four years ago to live with his aged father. We noticed that steel ties are used for some of the Swiss railroads, which shows that they are not behind the times. The equipment of the trains is better than we found in Germany, but far behind that commonly encountered in the United States. We traveled fifty miles for about fifty cents.

The Start for Italy.

When we turned out on the following morning, it was raining and a mountain trip which we had looked forward to was postponed. For weeks we had been in the rain belt, and now we were getting both rain and snow. We returned to Zurich by a train which required three hours and twenty minutes to cover the fifty miles. We spent the night at the Weber home, and in the morning went to the N. S. U. agency for our machines. At 11 a. m. we left Zurich for Lucerne, where we arrived in an hour and a half. There we saw the famous "Lowen Denkmal," the massive figure of a lion carved out of solid rock as a memorial to the Swiss soldiers who fell in the French revolution of 1792. Lucerne is one of the most popular resorts of Switzerland, and almost every second building is a hotel.

We rode along Lake Lowerzer to Schwiz, where we had to climb a very muddy hill. We reached Brunnen at 4 o'clock and filled our tanks with Swiss gasoline at 45 centimes a litre, about 40 cents a gallon. From Brunnen we traveled along the lake over a road cut out of solid rock, and passed through several tunnels. One of these rock tunnels is called Axenstrasse.

Impressive Mountain Scenery.

We passed many goats on the way, all with bells dangling from their necks, and were told that these animals gave a very fair quality of milk. As we proceeded the scenery became more impressive and many of the views held us spellbound. We were surprised to find that many of the Swiss recognized us at once as Americans. In Germany we had been mistaken for Danes and even for Italians, but the crafty Swiss seems to be better able to place his visitors. We rode for some time at from 20 to 30 miles an hour, but finally had to cut our pace down to about 10 miles, as the villages were very close together.

We left Amsteg, 74 kilometers from Zurich, at 5 p. m., and in the next two kilometers we climbed from an altitude of 1,697 feet to 3,019 feet, this height being reached at Gurtnellen. This was going up pretty rapidly, but there was more to come. We stopped for the night at Goschenen, 3,605 feet above sea level. The scenery in this district baffles description.

At St. Gothard Tunnel.

Goschenen is at the beginning of the famous St. Gothard Tunnel, through which the railroad runs to Italy. The tunnel is double-tracked and is about seven miles long. We were told that there was two feet of snow in the St. Gothard pass, and that we could not ride through on our machines. Accordingly we decided to go over by train.

Early on Thursday morning we left the hotel, bound for the Goschenen Alps, which could be seen plainly from the town. We walked for three hours, always climbing, and finally reached an altitude of 10,000 feet. Here we found a little colony of mountaineers who told us it was another hour's climb to the big glacier we had started out to see, so we decided to forego the pleasure of viewing it.

A Small World After All.

When we arrived back in Goschenen we pulled up at a hotel in time to encounter a young man who was carrying a huge pail of milk. We questioned him as to the rates in the hotel and during the conversation learned that he had lived in San Francisco, having left there when eleven years old to accompany his parents to Switzerland. Further inquiries elicited the information that his name was Joe Furger, and Streiff finally discovered that he and Joe had played together in Frisco as boys, thereby proving that the world is not such a big place after all.

We found that the charge for transporting our machines by train through the tunnel to Airolo, 15 kilometers, would be 30 cents, and our own fares 40 cents each. We emptied the gasoline from our tanks and were ready to start. In 30 minutes we were at our destination, where we quickly replenished our fuel supply from bottles which we had carried in our hip pockets. This is a plan which all foreign tourists may follow to advantage, as considerable trouble is caused through having to empty the tanks before placing the machines on trains and boats.

Quick Shift of Scenery.

On entering the tunnel at Goschenen the last words we heard were in German, and the first words to reach our ears on detraining at the end of our short ride were in Italian. With such rapidity are the scenes shifted in this wonderful country. The district south of the St. Gothard pass is peopled almost entirely by Italians, and the traveler might well imagine that he was already out of Switzerland. We began the descent at Airolo, 3,500 feet above sea level, and by the time we reached Biasca, where we stopped for the night, we had dropped over 2,000 feet. Our road followed the rushing and roaring Tessine river, and the downward ride was glorious.

It was our intention to ride beyond Biasca that day, but Streiff had a little trouble with his machine, and it was quite dark when we reached the town. We stopped at an Italian hotel, but experienced difficulty in obtaining sleeping quarters. Fortunately, however, we found some German-Italians, who helped us to make our wants known.

Over the Italian Border.

We left Biasca at eight the next morning bound for Milan, 154 kilometers distant, over a good road. After passing through Lugano, a noted resort, we encountered stiff grades in the foothills of the Italian Alps. Streiff made the ascent by dismounting several times and using his two-speed continuously, but my free engine clutch was out of order and my spark control disarranged and I could not make headway. As I sat by the roadside, the driver of an automobile offered me a tow and I jumped at the offer. I hitched onto the car with two straps, and so made the remainder of the climb.

To our surprise the descent was much less precipitous than we had expected, and we rode through many villages with narrow cobbled streets without incident. The highways were always crowded with men, women, children, carts and donkeys, and even cows, but we managed to avoid hitting any of them. We reached the Swiss border at 2 p. m. and passed the customs officials. Then we pushed our machines over to the Italian customs office. We expected all kinds of trouble here but did not experience any. An Italian who had worked in the United States assisted us, and we were soon allowed to pass. The only fee charged was 50 centimes (10 cents).

In the Lake Region.

We jumped onto our machines and headed for Como, one of the principal cities in the north Italian mountain country. It is on the shore of Lake Como, ranked as one of the most beautiful of the Italian lakes. One of the highest hills in this district is ascended by a cog-wheel railroad called "Funicolare." As we were riding out of the town I heard a racket on my machine and discovered that the engine sprocket had lost all of its teeth. As I did not have another I was obliged to put up in Como overnight.

Streiff continued on his machine to Milan, where I found him the next day at noon. While we were on our way to the agency where Streiff had his machine on display, we saw what appeared to be a fire engine, but it proved to be a huge milk can swung between two wheels and drawn by a horse. It was the queerest looking outfit we had yet seen. We had some trouble in finding a lodging place, but finally obtained a room, and the next day being Sunday, we enjoyed a rest.

CORTLAND TO HAVE MEET.

THE Cortland (N. Y.) M. C. has applied for a sanction to cover a race meet at the Cortland County Fair Grounds on July 4. Seven events are slated and plans are under way to make the meet the most successful one ever held in Central New York. By way of offering inducements to the fastest riders in the East the club is going down into its treasury for prizes to the value of $495.

PLAN RACING LEAGUE.

CLUBS in Richmond, Muncie, Indianapolis, Anderson, Marion and Rushville, Ind., are considering the organization of a league to promote motorcycle meets at several points in the Hoosier State.

INSPECTOR ON MOTORCYCLE.

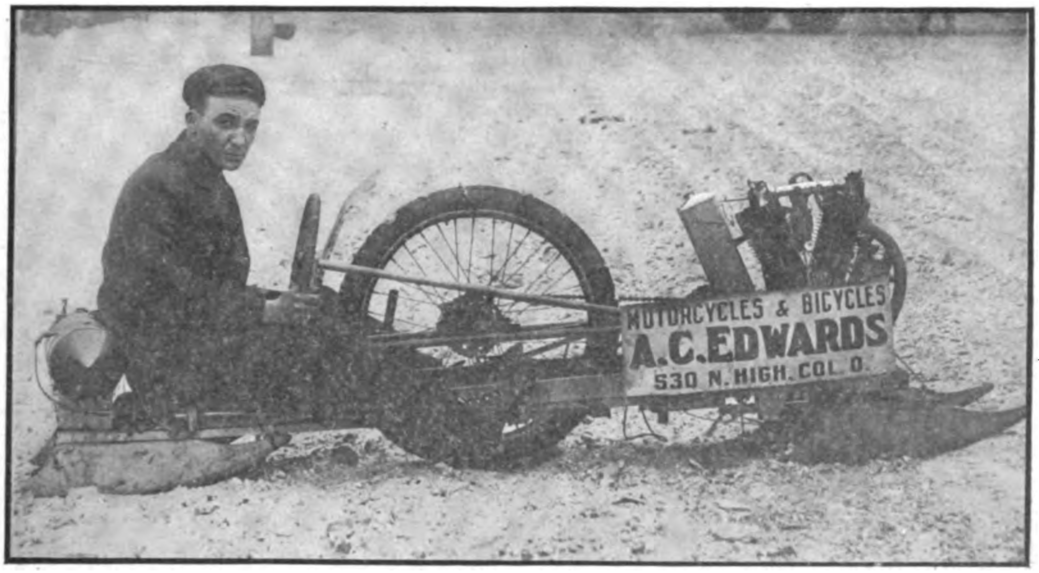
JACKSONVILLE, FLA., has purchased a motorcycle for the use of its inspector of building materials and sidewalks.

Peter Cefalin, Atlanta, Ga., and "lady" on a Flying Merkel.

MANY TACOMA PROSPECTS.

TACOMA, WASH.—During the past few months Tacoma's motorcycle dealers have made enviable sales records and they report conditions considerably better than during the same period in 1910. While a good many machines of the various makes have been purchased in this city a greater number have been purchased for use in the small towns in this vicinity. The dealers report more good prospective purchasers this year than ever before. A great deal of work has been done in Tacoma during the past year in improving and paving the streets and this has had a tendency to increase the sale of machines.

IT is likely that the two assistant chiefs of the fire department in Reading, Pa., will soon be equipped with motorcycles.



A MOTOR-DRIVEN SLEIGH.

ONE of the most unique contrivances ever propelled by a motorcycle engine is the sleigh shown in the accompanying photograph and operated by A. C. Edwards, an inventive dealer, of Columbus, Ohio. Edwards writes that he has attracted much attention as he chugged through the streets, and it is easy to credit this statement. He reports that he has been unable to learn the speed possibilities of the outfit owing to heavy traffic in the city but states that he has covered about 35 miles an hour with the throttle almost closed, and he has found the sport fascinating.

BOARD TRACK FRANCHISES.

THE keynote of the recent board track franchise session of the F. A. M. directors was: "We are experimenting; let us take no long chances." The result was that the directorate authorized the making of exclusive franchise agreements for a period of one year at a time, said agreements to be renewable under certain conditions entirely within the control of the chairman of the Competition Committee.

There may be some objection to fixing the distance at twenty-five miles. On the other hand, the directors expect to be criticized by promoters for their insistence upon confining the term of absolute exclusiveness to one year. In the mind of the writer, these two criticisms balance one another, and make the resolutions the best that could be adopted in view of the uncertainty which attaches to the entire proposition.

It may develop that no promoter will accept the provisions of these resolutions and that builders of board tracks will decide instead to take their chances with the ordinary sanctions and leave their enterprises open to possible competition. It were just as well perhaps to have this occur and, in the interval, give the directors an opportunity to place the entire matter before the National Assembly next summer. Conservatism characterized the attitude of the Board towards the two resolutions before it, and every proposition that smelt of radicalism was quite summarily rejected. If board track promoters do not like the resolutions, they can easily afford to wait until the time when, if ever, the F. A. M. will have something better to offer.

AN F. A. M. UNIFORM.

A. B. COFFMAN'S suggestion, offered to the Federation's Board of Directors, that the F. A. M. adopt an official uniform, finds instant favor in the eyes of all who are trying to elevate the plane of the sport. Clothes may not always make the man, and still half of the value of the impression made by the motorcyclist upon the bystander and prospect rests with the former's appearance. The other fifty per cent. has to do with the diminution of the volume of noise produced by the motor's exhaust. It isn't surprising, therefore, that the president of the Motorcycle Manufacturers' Association should propose that the F. A. M. take action to the end of inducing its many thousand members, by standardizing their riding habits, to supply the sport with the appearance of greater cleanliness and a higher degree of personal self-respect.

Given noiseless machines, operated by attractively-clothed riders, and the last word will have been spoken for the universal popularization of the motorcycle. The directors of the F. A. M., as may well have been anticipated, are heartily in accord with the sentiments expressed by the gentleman from Toledo, and the adoption of an F. A. M. uniform, fully adapted to the requirements of the sport and of such specifications as to afford the clothing manufacturers an opportunity to produce moderately-priced official suits, is now practically assured. In other words, the Federation, by establishing a standard, will promote the sale of neat and durable uniforms by those whose business it is to make motorcycle clothing. The F. A. M. will simply set its seal of official approval upon a suit or suits of a certain description, and it is more than likely that such action by the Federation will greatly benefit the manufacturers and, to a much greater degree, the sport throughout the country.

SERVICE.

SALES MANAGER KNUDSEN, of the Minneapolis Motorcycle Company, called on us recently and, in the course of a most interesting conversation, relieved his mind of two or three very clever sales ideas. After no little urging—for Knudsen is modesty personified—he promised to put his views in writing one of these days, for publication in the columns of this paper. We can assure our readers of something out of the ordinary.

Without attempting to anticipate one of the strongest points emphasized by the Minneapolis manager of sales, we cannot help expressing our cordial agreement with him in his opinion that perhaps the greatest general need of the trade at the present time is *better service after* the sale has been made. The best possible service is the *sine qua non* of the motor trades and, for reasons one need not go far to find, it is not what it ought to be in the motorcycle business. There are a few strikingly creditable exceptions to prove the rule, but, generally speaking, there is no department of this industry in which there is more room for improvement.

A reliable machine, effective publicity and an energetic, harmonious sales organization are, of course, indispensable. But the responsibility, or rather the opportunity, of the manufacturer does not stop there. Marketing facilities have already been brought to a high state of efficiency, but the service subsequently rendered to owners is not what it should be. Dispatch in the filling of orders for parts is a crying need (a few cases always excepted), while woefully lacking is that close co-operation between rider, dealer and manufacturer to the end of giving the former the service to which he is entitled, and of making him an enthusiast, not merely for a month or a season, but for years.

The motorcycle is subject to terrific wear and, if not given proper attention, rapid deterioration in value. The guarantee which it carries should therefore mean something. It is true that small manufacturers find it difficult to have representation wherever necessary, and also that the average dealer is not so situated as to meet anything above the most ordinary part replacement and repair requirements of riders. But the fact remains that the attractiveness of this sport, and the value of the motorcycle as a commercial vehicle, will be measured largely by the character of the service rendered to the owner. To be eminently successful the manufacturer must first solve the service problem.

INDIANAPOLIS BOOSTERS TAKE NEW GRIP

Indiana Club is to Be Reorganized and Plans Are Being Considered for Board Saucer and a 200-Mile Speedway Race—Spirited Conference of Manufacturers, Dealers and Riders.

WITH a view to developing new interest in motorcycle affairs in Indianapolis, Ind., manufacturers, dealers and riders of the Hoosier capital held a conference on January 14, from which a number of important movements will probably result. There was talk of a reorganized club to be conducted on a broad basis, and to include, if possible, all the riders of the city, and plans for a board saucer and a 200-mile race on the Indianapolis Speedway were among the other topics discussed. The reorganization of the Indiana M. C. is assured, and the outlook for the other projects is quite promising. The meeting was brought about by W. A. Gibson, of the Empire Tire Company, and was held at the Hotel Denison.

Of late interest in the affairs of the Indiana club has lagged, and a disagreement over the advisability of serving intoxicants in the club headquarters caused a further falling off in attendance at the meetings. At the recent conference it was decided that dealers should be placed on the board of directors—which is contrary to the club's policy in the past—and that intoxicants should be barred from the clubrooms. The dues will be reduced about one-half, and it is believed that the membership can be boosted to 200. The present dues are $12 a year, with a $2 initiation fee. There are now 750 licensed motorcyclists in the city.

While the board track proposition is as yet rather nebulous, the dealers believe it can be brought to a head, and there is talk of organizing a stock company to finance the scheme. Committees have been named to communicate with track officials in other cities in order that full information may be at hand when the Indianapolis boosters meet again. The matter will receive further consideration at a session of the reorganized Indiana club to be held following the Chicago show. This meeting will be preceded by a banquet in the Hotel Denison, in Indianapolis. Harry Graf, Erwin Baker, John Merz and J. Kinney have been named as a committee to attend the Chicago show and talk with men of board track experience.

While in Chicago the same committee is to confer with the manufacturers concerning the proposed 200-mile speedway race. If the plan is looked upon with favor by the manufacturers it is likely that the Indiana club will take steps at once to stage the big event. It is stated that plenty of backing is at hand for such an underaking.

Two sites have been mentioned as suitable for the proposed board track. One is the old Wonderland Amusement Park and the other is a tract just west of the ball park.

SNYDER SUBMITS REPORT

After Attending New York Show, Columbus Booster Thinks His City Can Land F. A. M. Meeting for 1912.

UPON the return of W. H. Snyder, manager of the American Machine Company, from the New York Show, the Columbus (Ohio) Motorcycle Club and business organizations of the capital city, started an active campaign to secure the 1912 meeting of the F. A. M. The claims of Columbus will be based, to a great extent, on the fact that the city possesses an unusually good dirt track.

Another point advanced by those campaigning for the assembly is the excellent hotel facilities of the Buckeye capital. Columbus is easily accessible from all parts of the East and Middle West, and riders from the Atlantic seaboard and as far west as St. Louis can reach Columbus in from one to four days' riding. All the riders in Ohio, including those of Cincinnati, Toledo, Cleveland, Dayton and Springfield, would like to see the convention brought to Columbus.

The roads of the Buckeye State are becoming known as some of the best in the Middle West. This is true especially in the central part of the State. The people of Columbus, and, in fact, Ohioans in general, are known for hospitality, and a special effort will be made to show the members and visitors an excellent time should the city be chosen by the F. A. M. for the next convention.

HEIL NEEDS ASSISTANT.

NORMAN E. HEIL, agent for Flying Merkel, Reading-Standard, Marvel and M.-M. motorcycles in Bergen and Passaic counties, New Jersey, has engaged Harvey Snyder to assist him in keeping up with the sales of these popular makes throughout his territory during the coming season. Snyder, who entered upon his new duties on January 22, has had wide experience in the motorcycle trade and is a valuable addition to Heil's staff. The latter opened his present headquarters about a year ago at Van Houten and Washington streets and was soon carrying on a large business. Of late he has made improvements in his salesroom and shop, and riders in his district will find him prepared to meet their every requirement for the 1912 season.

AKRON CLUB'S MOTTO

"Something Doing All the Time" is Slogan of Hustling Squad Which is Booming Motorcycle in Ohio City.

THE motto for the Akron (Ohio) M. C. this year is: "Something doing all the time." The competition and tours committees are already striving to find new stunts to keep the boys busy during the summer, while the social committee is not permitting interest to lag throughout the winter months. The clubrooms are now in shape. The pool table has been re-covered and given a general overhauling; additional furniture has been purchased and a new porter is on the job.

A bowling series is now in progress between the singles and the twins—or single and married members. No one has bowled many scores over 300, and at present each side has won and lost three games. On Saturday, January 20, about twenty members enjoyed a sleigh ride to Henry's Hotel, six miles from the city. After eating a chicken dinner the boys told stories, and shortly after midnight we were again gliding over the road to the music of the sleigh bells. About a score of the members, in a body, are going to attend the Cleveland Auto Show in February.

At the annual election officers were named as follows: Clyde B. Mitchella, president (reelected); Floyd A. Fleming, vice-president; Bert Waltz, secretary; Julius J. Blank, treasurer; Al. Bertele, trustee; Herbert Griffin, road captain; Charles Starner, road lieutenant.

Meeting nights have been changed to the first and third Tuesdays of every month. The dues have been lowered and the initiation fee raised.

READY FOR BANQUET

Maryland Club Will Have Its Attorney as Guest of Honor at Annual Feast, to be Held on January 31.

BALTIMORE, MD., Jan. 20.—The members of the Maryland M. C., unable to do any riding owing to the extremely bad weather of the past few weeks, have gotten together and formulated plans for the annual banquet of the club, which will be held on Wednesday, January 31, at the New Howard Hotel. The committee in charge, consisting of H. E. Snyder, John N. Carroll, Jr., Alvin Nusbaum, Samuel Congdon and Howard A. French, is working hard to make the affair a big success. There will be speaking, of course, and a vaudeville entertainment will be provided to enliven things just a little. The guest of honor will be Osborn I. Yellott, the club's attorney.

PATTERSON'S SHOW DISPLAY.

THAT motorcycles will not be overlooked in the Brooklyn Automobile Show, to be held in the Twenty-third Regiment Armory, on Bedford avenue, February 24 to March 2, is due to the enterprise of A. H. Patterson, the progressive Brooklynite, who holds the Indian, Pierce and New Era agencies for his territory. Mr. Patterson has contracted for a space 34 by 17 feet, in which he will display the new models of the machines mentioned, as well as tri-cars and samples from the full accessory line to be found in his busy headquarters. For years past Patterson has been preaching the advertising and general activity doctrine in connection with the motorcycle trade—and practising what he preaches. As a result it is difficult to find him when he is not on the jump trying to meet orders and keep up with repair work. He extends a cordial invitation to riders throughout the metropolitan district to drop in on him during the Brooklyn show.

P. J. CARLTON will continue to handle the Emblem machine in Cleveland, Ohio, for 1912.

THE RECORD OF A WEEK.

ANOTHER week's additions to the list of registered F. A. M. repairshops: F. P. Fentress, 947 Commerce street, Tacoma, Wash.; Greenough & Greenough, 24 King street, Charleston, South Carolina; A. J. Gladwell, 207 South Main street, Lima, Ohio; Motorcycle & Supply Co., 42 Walton street, Atlanta, Ga.; Charles S. Cobb, South street, Plainville, Mass.; Kenton Motorcycle Co., 122 South Detroit street, Kenton, Ohio; The Petmecky Co., 505 Congress street, Austin, Tex.; P. J. Arbuckle, 813 Ninth street, Greeley, Col.; American Motor Company, 2724 Michigan avenue, Chicago, Ill.; Consolidated Manufacturing Company, 145 Michigan street, Toledo, Ohio; D. & M. Hardware Company, Hortonville, Wis.; A. L. Johnson, 311 North Fourth street, Rockford, Ill.; R. L. Davis, 911 West Broadway, Louisville, Ky.; B. L. Howell, 27 North street, Danville, Ill.

ACTIVE CLUB IN ERIE.

DESPITE inclement weather twenty-five members of the Erie (Pa.) M. C. attended the last meeting of the organization when the new officers were elected. The staff is made up as follows: George Beheringer, president (re-elected); William Edwards, vice-president; A. D. Beckman, corresponding secretary; Charles Imhoff, financial secretary; E. J. Gallagher, treasurer; Clyde Weigel, road captain, and F. Heidt, lieutenant. F. Farrell and C. Brown were named on the executive committee, and George Frye was made press agent.

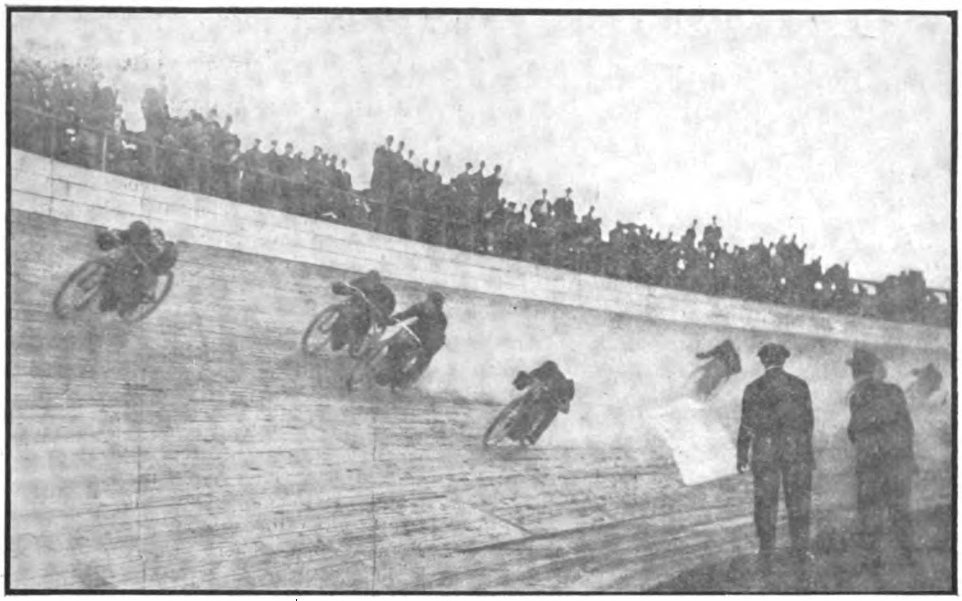
Following the meeting addresses were delivered by President Beheringer and several of the other officers. The past season proved a highly successful one for the club, and there are indications that it will be even more active during 1912.

MARIETTA OFFICERS.

THE annual election of officers of the Marietta M. C. took place on January 5, 1912, the staff being made up as follows: Edward Baumgartner, president; Earl Oesterle, vice-president; Blaine Johnson, secretary-treasurer; Arthur Bender, road captain; G. R. Yeomans, first lieutenant; Raymond Miller, second lieutenant; Henry Baker and Frank Noland, members at large.

The house committee was instructed to obtain new quarters for the club.

THIS is not Carl Morris, the white hope, but one Anderson, of Salt Lake City, and his Flying Merkel.



START of a professional event on the Oakland Motordrome. Albright crossing the line; E. G. Bernthal, starter; Frank Carroll, referee.

DAY AS A POET

Tacoma Agent Breaks into Verse to Express His Opinion of the Flying Merkel Machines.

RAY E. DAY, agent for Flying Merkel machines in Pierce County, Wash., with headquarters in Tacoma, forwards the following poem by way of expressing the satisfaction he has been afforded by the Merkel products:

Oh, You Flying Merkel.

I am never half as happy,
  As when I am astride
My Flying Merkel motor—
  When going out to ride.

Its strong ball-bearing motor
  Is sure to win the day;
You'd think it almost human,
  It's so ready to obey.

It's like a living creature,
  But a thousand times as fast—
And makes the sport a pleasure
  Such as never in the past.

The Automatic oiler
  Never causes me vexation;
Its feed is with the throttle,
  Giving perfect lubrication.

Let the roads be rough and stony,
  My back is never lame;
For there's surely solid comfort
  In the Merkel's cushion-frame.

And with the friction shock absorber
  It takes up the slightest jar,
So my Merkel rides as easy
  As a first-class touring car.

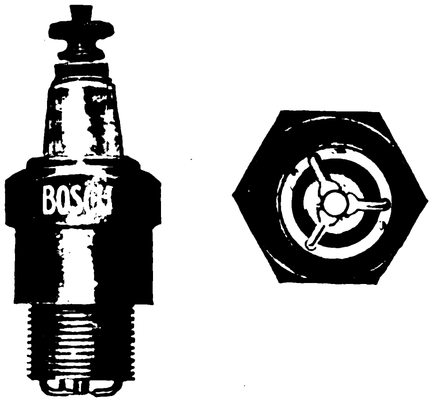
When I'm out with other riders
  And they show a thirst for speed,
'Tis then that I am happy,
  For the "Merkels" always lead.

THREE more motorcycle policemen have been added to the San Diego, Cal., police force, making five members who now ride the single-tracker in that city.

IMPROVED BOSCH PLUGS.

BOSCH high tension spark plugs for 1912 are of the same general construction as the highly satisfactory Bosch plugs of former years, but have been made even more efficient and reliable. The accompanying cuts show the complete plug and an end view.

As before, the Bosch plug consists of but three principal parts, the heavy central electrodes, a one-piece insulator and a steel shell.



As shown in the end view, however, the form of the three electrodes is now crescent shape, which gives them a lower electrical resistance and produces a spark in the form of a sheet rather than a ball.

The steatite insulator, which is retained in the 1912 construction, has long been a feature of the Bosch plug. Steatite (which is manufactured under a most costly process), has exceptional insulating properties and is absolutely free from the disadvantages of porcelain, glass or mica insulators, being neither brittle nor subject to deterioration by intense heat, extreme pressure or excessive oil. The unique character and strength of these insulators make it possible to eliminate from the Bosch plug all joints which are commonly found in others, insuring perfect insulation and gas-tight construction, the plugs being guaranteed to withstand a pressure of 750 pounds—far in excess of the ordinary pressure to which plugs are subjected. These plugs may be used either for magneto or battery ignition, and can be supplied in standard ½ in., ⅞ in. and metric threads.

ROAD COURTESY AND HOW TO FOSTER IT

Pointed Suggestions From a Veteran Rider Who Has Not Always Found His Brethern of the Single Tracker Considerate of the Rights of Others—The Secret of True Boosting.

By GEORGE M. JOHNSON.

WE might divide motorcycle courtesy into two general classes—courtesy to the public at large, and courtesy to other riders. There can be no reasonable doubt that the first is the more important, since it is an unfortunate fact that many misinformed people cherish decided prejudices against motorcycles and those of us who ride them. It is happily true that this prejudice seems to be on the wane, but there is still plenty of missionary work to be done.

Motorcycle riders have sinned in many respects in the past, and some of their sins have been made the objects of vigorous crusades on the part of legislators and the trade journals. Such offences as the abuse of the cut-out will cure themselves in time—legislation is already beginning to take very good care of that—but there are certain other details that apparently have not yet received proper consideration.

A fair proportion of motorcyclists must perforce do most of their riding on Sunday, since the week days are mainly occupied with collecting a sufficient supply of lucre to keep the domestic power plant running. There is no objection that I can see to riding on Sunday, provided the rider is willing to deport himself like a gentleman. On Sunday of all days the cut-out should be conspicuous by its absence, and there is no excuse for wild bursts of speed past churches, just as the congregations are entering or leaving. Such conduct will certainly not create a favorable impression on the beholders. Nor is it necessary that one should scoot up a quiet village street at almost a mile a minute, flattened down on the gas tank and making a noise like the combined efforts of all the speed kings of the past racing season.

Another vital question concerns the proper conduct of motorcyclists in public places, such as hotels and restaurants. If a tourist is making a stop for dinner, it will not add to the other diners' enjoyment of the meal to see him appear with a half-inch or so of road material adhering to his garments. Even though a clean collar may be an impossibility, one can at least show clean hands and a clean face, and the rider's finger nails need not be in deep mourning as a result of too intimate an acquaintance with his engine.

It does not seem reasonable to suppose that all, or nearly all, motorcyclists are careless or profane in their talk, but I have heard of cases where certain individuals have formed very unflattering opinions of the brotherhood as a whole through being compelled to listen to a loud-mouthed, vulgar conversation carried on by several motorcycle riders. We must not forget that others have privileges as well as ourselves, and that no one has a right to disturb more than his own share of the atmosphere when talking.

Never risk causing a runaway by riding past a horse that seems excited or "skittish." In these days of easy-starting engines it is a small matter to stop until the frightened animal has been led past, and it would even be better to re-start your machine in a patch of soft sand than to cause damage or perhaps loss of life by being to blame for a serious runaway. Most of us who burn gasoline have little or no use for horses, but the driver of one of these four-footed delusions has just as much right to the road as we have, whatever may be our opinion of his mode of conveyance. By treating him fairly we will probably gain a friend for the motorcycle; otherwise an enemy will most certainly be acquired.

"Dirty and noisy" is the commonest expression applied to the motorcycle by the unenlightened scoffer; therefore preach the gospel of cleanliness and quiet. There can be no excuse for keeping the beauties of a machine concealed beneath a thick paste of road dirt and grease. Dirt is a mighty poor thing for your engine, anyway, inside or out.

There seems to be a certain feeling of good-fellowship prevailing among most all riders of the two-wheeler. A rider who meets another on the road usually lifts his right hand in friendly greeting, and it is rare that a motorcyclist passes someone else in trouble without stopping to offer assistance. Contrast this spirit with that which automobilists exhibit. How often do you hear of an automobile driver stopping, without being signaled from the wayside, to help out the occupants of a stalled machine? Occasionally, but not often.

The custom of offering help to a fellow rider in difficulties is a fine one, but even this can be done in a discourteous way. I remember an instance in my own experience. It happened several years ago, shortly after I had purchased my first motorcycle, and the trouble came in the form of a bad cut in the casing that ripped a frightful hole in the tube. I had never fixed a puncture before, and doubtless went about the job with an awkwardness that would have been provocative of much mirth had an expert been there to enjoy the operation. Presently another rider hove in sight and, seeing me at work, stopped to inquire as to my trouble. I informed him.

"Oh, that's nothing!" he exclaimed with a grunt of disdain, and his whole attitude of superiority implied that after I had ridden as many miles as he had, I too would consider it as a mere trifle; whereupon he was off down the road without further loss of time.

Even though the rider you help is as green as the greenest, there is no need to let him see that you know it. He may begin an energetic attack on the helpless and unresisting magneto when his only trouble is a sooted spark-plug, but he won't thank you for laughing at his ignorance, no matter how grateful he may be for your putting him on the right track. Try to avoid the know-it-all attitude; it is not generous nor sportsmanlike.

Whatever else you do on the road, do not form the habit of telling strangers what poor makes of machines they are riding. Most riders swear by their own mounts and are quick to resent criticisms. One day in my early experience I was stalled by a magneto that in some mysterious manner had succeeded in getting out of time. A fore-car man came along and stopped, with the cheerful information that he could have me going again in a jiffy. I am ignorant as to just how long a jiffy is, but it must be a mighty long time, for he in his vast knowledge failed as ignominiously as I had in my ignorance.

At length he covered up his failure by consigning my poor machine to the lowest part of the bottomless pit as a worthless bunch of junk that never could be made to run decently. My make of machine, so he said, was positively the very worst that had even been "shoved off on a poor dub of a buyer." The best thing for me to do with it was to push the thing up the road to a nearby bridge, heave it over into the river below and then hie me to the nearest agency to procure one like his. He concluded his interesting remarks by exhorting me to help push his heavy fore-car outfit into a chug-chug.

On one occasion I came near being moderately stung through my desire to help out, and it happened in an interesting manner. I had started from home shortly after supper for an evening spin, and soon came upon a stalled machine. Since it was the same make as mine I was all the more willing to offer help if any were needed. The stranger's difficulty was a broken connecting-link on his V-belt, and as neither of us chanced to have a spare one, I volunteered to ride back to the agency where we had both purchased our machines and get him a new one. I did this and secured the belt-hook, paying for it out of my own pocket. On my return I helped the rider get his mount ready for use, naturally expecting that he would offer to pay me the money I had spent for his repair part. When we finally parted he not only said nothing about paying me, but never uttered one single solitary word of thanks for the trouble I had taken!

On I went, pretty well disgusted at the way the fellow had acted. At first it occurred to me that he might have expected me to have the belt-hook charged to him at the agency, but as I did not know his name at the time, such an excuse could hardly go. I was so thoroughly put out that I told the agent all about it, and he was just as sore as I was. He had easily recognized the fellow from the description I gave of his machine.

"I'll fix it up this way," he finally said; "the next time I send him a bill for repairs or parts I'll put that belt-hook in, and then give you the money."

In due season I received back the small sum I had expended, but never quite forgave that unique specimen of a rider for his discourteous action, to use a very mild word.

Another thing to remember when on the road is that not every rider you meet is looking for a race. If you pass a machine whose owner is satisfied to jog along at a prosaic pace, don't try to lure him into a speed bout by settling down to ride just far enough ahead of him so that he gets all your dust. This is a favorite trick with a certain class of automobilists, but a motorcycle rider should be above it. Remember also that a wild race along the average give-and-take road may be highly exciting, but it may also give your sorrowing family an opportunity to collect the amount of your life insurance policy. Don't take the risk.

After all, the keynote of the whole thing is: think of the other fellow. Whether he's on foot or on horseback, driving a motorcycle or a mule, he's just as human as you are, just as quick to appreciate fair treatment, and probably just as quick to resent what he considers as unfair. Don't let people get the idea that motorcycling is a "mucker's" sport. That word is hardly elegant, but it is at least expressive. There are doubtless some "muckers" traveling about in 60 horsepower touring cars, but that does not excuse you or me or any other motorcyclist. Keep your machine clean, keep your language clean, keep yourself clean, and then you will be doing a lot towards keeping the sport itself clean.

THREE EAGLE TYPES

New Product of Chicago Company Embraces Desirable Features, and Has Pleasing Appearance.

AN attractive addition to the family of motored two-wheelers for 1912 is the Eagle machine, produced in three powers by the Eagle Motor Company, of 2724 Michigan avenue, Chicago. The types are a 4 h. single, listed at $200; a 5 h. single, listed at $225, and a 9 h. twin, priced at $275.

The Eagle frame is of the double-truss style, so cut away at the rear as to allow a low saddle position. This feature, with the large Standard No. 4 shock-absorbing saddle, large tires, wide handlebars with flexible grips and a leaf spring fork combine to make the machine an easy rider. The motor is of the long stroke type, with roller bearings, drop-forged flywheels, nickel-steel valves, and cylinder made of gray iron and vanadium composition. The piston carries three rings. A Bosch magneto, gear driven, is the ignition device.

The inlet valve is automatic. For the compression release the valve is lifted not by a direct thrust from the cam, but by action of a pawl, which relieves the push valve or valve tappet from side hammering and undue friction. The crankcase, of aluminum alloy, is in two parts. A platform cast integral with the motor base carries the magneto, forward of the engine. A flat belt is the transmission agent on each model, and a spring idler is fitted. The belt is applied loosely enough, so that with the idler entirely released the engine may be allowed to run free, thus affording what the company refers to as a "simple and effective type of free engine."

The idler is supported at its lower end by a yoke connection having a long bearing. The segment, instead of being on the side of the tank, is attached to the lower horizontal bar directly under the tank. The two-gallon gasoline tank fitted on the Eagle machines has a shut-off in the form of a large needle valve, built into the tank and operated by a knurled head on the outside. The oil tank has a capacity of one and one-half quarts, and is contained in the lower half of the tool box. It is provided with a hand pump.

The machines have a wheelbase of 54 ins., 28-in. wheels and knockout front axle. The tires are 28 by 2½ ins., single clinch type, and either corrugated or studded. Grip control is provided by means of rods and bell cranks. The Schebler carbureter is fitted, the Mesinger Standard No. 4 saddle is standard equipment, and the Eclipse internal expanding brake is supplied. The finish is French gray with blue panels and nickel trimmings.

COMMISSIONERS APPOINTED.

ALVIN KNAACK, an enthusiastic follower of the motorcycling game in Berrien county, Michigan, has been appointed county commissioner by State F. A. M. Commissioner A. F. Gregor, of Detroit. He appointed Robert Allen to act in the same capacity in Wayne county. State Commissioner Gregor would like to hear from any other motorcycle riders throughout the State who would like to represent their district. Address A. F. Gregor, 294 West Forest avenue, Detroit, Mich.

THE PIERCE IN THE PHILIPPINES.

ELEVEN four-cylinder Pierce machines were sold during 1911 to the Government in the Philippine Islands. As a result of the satisfactory service given by these machines the Pierce Cycle Company placed a general agency for its bicycles and motorcycles with Wisner & Co., Manila. The company has just received an order for twenty-seven machines, which will be shipped at once for immediate use.

RACES DISCONTINUED.

SAN FRANCISCO, CAL.—Because of the inclement weather the races at the Oakland Motordrome, at Elmhurst, have been discontinued, much to the disappointment of the fans who have witnessed some unusually fine racing exhibitions on the bowl of late.

WEST SIDE CLUB ACTIVE

Detroit Organization Plans to Have Country Clubhouse Ready for Occupancy When the Riding Season Opens.

DETROIT, MICH.—Picture, if you can, an ardent follower of the motorcycle game mounting his steed and speeding away from his city home in the early hours of the morning, over a six-mile route to a pleasantly situated clubhouse along the shores of Lake St. Claire, and whiling away the rest of the day lounging about the clubhouse veranda, enjoying the lake breezes, taking a sail or a fishing expedition, and you have a fairly accurate idea of what the members of the West Side Motorcycle Club, of Detroit, are planning for the future.

Although this is the youngest of the trio of motorcycle organizations of Detroit, its membership includes many live ones who do not do things by halves and who are planning an innovation, as motorcycle clubhouses go. When the club's plans are realized, which will be some time early in the coming summer, a clubhouse will have been erected that will make other organizations sit up and take notice, and one which they well may pattern after.

Already a committee has been appointed to secure a suitable site, and plans soon will be drawn up for the home. The committee has an option on a suitable plot of land out in Grosse Pointe, a summer resort six miles out of the city, at a point near where Lake St. Claire joins the Detroit river, and not far away from the Detroit Motor Boat club and numerous summer hotels, which, however, do not too closely surround the property under consideration. To raise funds for the enterprise the club is giving a series of dances at a West Side hall which are proving most popular and which already have netted the club a handsome little bank account. It is figured that in a short time the sum derived from these affairs will be almost sufficient to cover the expense of erecting the proposed new clubhouse.

RS
RS
MOTORCYCLE
MOTORCYCLE

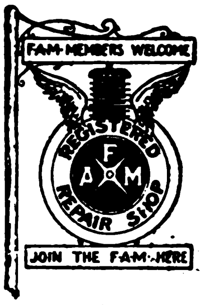
COVERING BIG TERRITORY.

IN order to handle its rapidly increasing sales of Reading-Standard machines in its large territory, the Omaha Motorcycle Company, of Omaha, Neb., is obliged to use the big motor truck shown in the accompanying photograph for deliveries. The necessity for such a delivery system will be better appreciated when it is known that the firm is distributor for the Reading-Standard in Nebraska, Kansas and North and South Dakota.

NEW PUBLICITY PLAN

Chairman Estabrook Is Furnishing Neat Electrotypes Showing F. A. M. Symbol for Use of Repairmen.

MR. REPAIRER, have you a neat little F. A. M. symbol on your letterhead? If not, you are a full lap behind Chairman Estabrook, of the membership committee, who is setting a hot pace these days for the registered repair shop squad. With a view to obtaining additional publicity and encouraging the shop owners, the chairman has designed an attractive illustration in the form of a sign, and F. A. M. shop proprietors who desire to use it on their stationery may obtain electrotypes on application. The accompanying illustration tells its own story and shows the size of the electrotype which will be furnished by Chairman Estabrook.



To announce his new proposition the chairman is sending out the following circular letter:

"Don't you think this little endorsement of your shop is worth spreading around among your regular and possible customers? You might get a few more if you go after them right. You might reclaim a few of the old ones who have a 'grouch,' if you live up to your New Year's resolutions, and you may hold all of these against your competitor if you apply tact to a good policy and well-known business principles.

"There is nothing in sight at present which can beat advertising as a business getter, while it is each man's problem to get and hold his business prospects. Make your policy an aggressive one so that at the end of the year you may retain all of your original customers and may have acquired much of the new business. Why not get up some business-getting cards or circulars, embellishing same with this ornamental cut, and make a business of placing these in a wide radius.

"Attract attention to your advertisements in the local papers by using this little sign: Do the same thing for your business through using it on your stationery, bill-heads and business cards, and see to it that the latter are delivered to every customer. Make your customers feel easy and at home, and plan for their comfort and entertainment while waiting; furnish them with copies of the latest motorcycle journals, etc. This is educational and good business. We want to make your place a popular recruiting station for the F. A. M., and are doing all we can to attain this end.

"The chairman solicits your co-operation and active participation in local advertising and actual hard work along the lines of popularizing the sport and pastime of motorcycling and in building up the membership of the F. A. M. He will be glad to receive requests for the 'Repairman's Special Electro' from all who will use it. Not furnished to other than F. A. M. shops."

PROGRESS IN CANADA.

ACCORDING to present prospects, the F. A. M. will soon have a strong chain of clubs stretching across the Dominion of Canada. Vancouver, on the Pacific coast, is already in the fold, and continuing eastward, Winnipeg, London, Hamilton and Toronto are all dickering with the States' governing body. At its annual meeting, held last week, the Winnipeg Motorcycle Club decided unanimously to take up membership with the F. A. M., thus following the general inclination. The report of J. M. Moorhouse, the Winnipeg secretary, showed that the membership had reached a total of eighty, and advanced the opinion that the club will be almost twice as strong, in point of numbers, by June 1.

MORE REGISTERED SHOPS.

ADDITIONS to the rapidly growing list of registered F. A. M. repair shops of late have been made as follows: Walter Goerke, 321 Washington street, Newark, N. J.; Fred Personett, 123 North Main street, Elkhart, Ind.; Billy Burman's Motorcycle Garage, 116 East Cortland street, Jackson, Mich.; The Motorcycle Inn, 112 Mill street, Marion, Ohio; Doc's Motorcycle Agency, 329 Broad street, Elyria, Ohio; Doc's Motorcycle Agency, 214 Fourth street, Lorain, Ohio; H. A. Dickason, 345 Broad street, Elyria, Ohio; Kittle Manufacturing Company, 109 East Seventh street, Los Angeles, Cal.; John Rawlings, 120 Penn avenue, Scranton, Pa.; J. W. Sanders, 1704 Broadway, Lorain, Ohio; C. A. Fenn, 114 Front street, Bloomington, Ill.; Lon Claflin, 75 West South street, Salt Lake City, Utah; Raymond E. Lee, New London, Ohio; Nuss Brothers, 1320 Louise street, Munhall, Pa.; J. C. Ellman & Son, 121 East First street, Rushville, Ind.; J. J. Metz, 398 Water street, Meadville, Pa.; E. E. Stillabower, 311 Fourth street, Columbus, Ind.; Mansfield Motorcycle Garage, 50 Park avenue, Mansfield, Ohio; H. H. Esbenshade, 131 North Grant street, Waynesboro, Pa.; Ashtabula Motorcycle Company, 163 Center street, Ashtabula, Ohio; W. C. Hering, 37 West Fourth street, Mansfield, Ohio; E. J. Zeman Cycle Works, 1626 Twenty-second street, Two Rivers, Wis.; Gordon Bent Company, 111 Main street, Green Bay, Wis.

FINE RECORD FOR 1912

Annual Statistics Show That F. A. M. Gained 141 Clubs During the Year Ending December 31.

CHAIRMAN ESTABROOK'S latest bulletin contains the following jottings of interest to club workers and riders in general:

During the calender year ending December 31 there were 141 clubs affiliated with the F. A. M., or an average of nearly twelve per month.

So many of the newly registered shops are interested in the organization of local clubs that the chairman will hereafter consider them all as good "club prospects," and accordingly supply them with affiliation papers, other club hints and by-laws. These, together with literature sent from the office of the national secretary, will assist them materially in the work of organization.

That the F. A. M. is but sparsely represented in the vicinity of Waseca, Minn., is vouched for by Otto F. Schacht, a local motorcyclist, who has been making a canvass of the riders in his vicinity. However, our friend feels confident that the right spirit prevails and all that is lacking is initiative. This is very true of thousands of places in which we are not so fortunate as to discover a good worker to supply this. Mr. Schacht believes that a live local club is needed and will do his best to put one through.

The work of the chairman's office just now is so heavy that although he puts in fully forty-two hours weekly, there is a stack of friendly F. A. M. correspondence accumulating which he is unable to reduce. However, this augurs well for the future membership of the F. A. M.

MOTORCYCLE CLUBS.

W. S. VON DERMUTH.—There is no organization in motorcycle circles that corresponds to the Automobile Club of America, each city and town having its own local club or clubs, and there being a few State clubs only. In Newark, N. J., for example, there are two clubs—the New Jersey M. C. and the Newark M. C. In New York City there are, among others, the Concourse M. C., the Motorcycle Touring Club of New York, the New York M. C., the Harlem M. C. and several others which are very small. Most of these have no club rooms, meeting at the various motorcycle garages. The addresses are: Concourse M. C., 162nd street and Jerome avenue; Motorcycle Touring Club of New York, 203 West 100th street; Harlem M. C., 1491 Fifth avenue; Metropolitan M. C., care of H. L. Struss, 401 East 36th street; Colonial Touring Club, 204 West 116th street.

CLUBS AND THEIR FOUNDERS

Despite Snow and Icy Winds Enthusiasts Throughout the Country Continue to Lay 1912 Organization Plans.

LITTLE JACK HORNER, of nursery fame, who sat in a corner eating that much-talked of piece of pie, would no doubt have occupied himself more profitably had he been related to an up-to-date Jack Horner, who is very busy just now organizing a motorcycle club in Plainfield, N. J. While his staff is taking turns at a pick and shovel, endeavoring to sink a hole below the frost line in which to plant a post for his new registered repair shop sign, Horner is scouting through Plainfield and vicinity to round up riders. He is meeting with encouragement on all sides and promises to have a 100 per cent. F. A. M. squad in the field when the riding season opens.

Attleboro, Mass., now has about fifty motorcyclists, not counting the spring crop of fifteen or twenty that is already sprouting. Ernest Broadbent and George W. Stevens are canvassing the present and prospective riders with a view to forming an F. A. M. club.

H. H. Esbenshade, who conducts an F. A. M. repair shop in Waynesboro, Pa., has sent in a request for club by-laws and organization papers with affiliation blanks. This looks mighty suspicious, says Chairman Estabrook.

One of the latest bulletins from Bangor is to the effect that the F. A. M. is going after a "farthest north" record. R. M. Charlton, of St. Eleuthere, Province of Quebec, Canada, has just taken out membership card 12,205, which entitles him to the distinction of being the "farthest north" Federation worker on the continent.

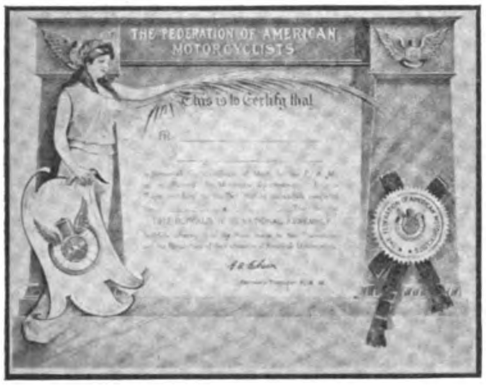
Pompton Plains, N. J., will soon affiliate a local club and get into the running with other New Jersey cities. D. W. Voorhis, of 140 West 91st street, New York, sowed the seed for this organization in April, 1911, and then took a long vacation. Now he announces that the club will enter the field under F. A. M. colors in February.

F. A. M. TOUR WINNERS

Riders Who Finished Eastern Run to Buffalo in Keeping With Regulations Will Receive Certificates.

NATIONAL SECRETARY G. B. GIBSON recently received from B. A. Swenson, tourmaster for the eastern division on the 1911 run to the Buffalo convention, a complete list of the participants who are entitled to F. A. M. certificates for having finished the tour in keeping with the regulations. A suitable certificate has been prepared under Secretary Gibson's direction, and copies will be forwarded to the following riders who make up Tourmaster Swenson's list:

Merle B. Mann, Hartford, Conn.; B. A. Swenson, Providence, R. I.; A. P. Howe, Boston, Mass.; Eugene Miller, New York City; J. P. Seery, Camden, N. J.; F. L. Kidder, Worcester, Mass.; John Kay, Providence, R. I.; H. N. Davis, Newark, N. J.; C. H. Hinman, New Haven, Conn.; William Woods, New York City; Robert Buttlar, Jr., New York City; Peter A. Cox, New Haven, Conn.; Philip Hennard, Tampa, Fla.; N. P. Leahy, Hartford, Conn.; P. W. Stevens, Newark, N. J.; F. H. Sheridan, Cleveland, Ohio; George Reichey, Newark, N. J.; Clifford Frazier, Pawtucket, R. I.; H. M. Howard, Westminster, Mass.; Adolf Tornquist, Pawtucket, R. I.; Albert Burrill, Utica, N. Y.; Charles Dahlenburg, Miami, Fla.; John W. Brewer, New York City; Herman Krackowizor, New York City; Russell Coes, Worcester, Mass.; N. A. Truffner, Newark, N. J.; Fred Voelker, New York City; John W. Howell, Camden, N. J.; H. F. McPayne, Pittsburgh, Pa.; M. E. Gale, Argola, N. Y.; J. D. Simmons, Wilmington, Del.; B. L. Buffington, Providence, R. I.; H. F. Smith, Medford, Mass.



THE FEDERATION OF AMERICAN MOTORCYCLISTS

This is to Certify that

TIRES BY SPECIAL DELIVERY.

SHOWN in the photograph to the left is one of the motorcycle "special delivery" carriers of the Seattle branch of the United States Tire Company. Manager A. H. Jones says that he is getting good results, an Excelsior machine being used.

PLANNING SUMMER TOURS.

NOW is the time to plan for summer trips and tours, according to E. M. Estabrook, chairman of the F. A. M. membership committee. Meet once a week, and the most pleasant outings for next summer can be arranged, he advises. Many clubs throughout the country are following this advice and finding it surprisingly easy to hold the interest of their members during the winter.

UNDER F. A. M. BANNER

Interest is Revived in Tacoma Club When State Commissioner Gorman Brings Score of Riders into Federation.

THE Tacoma (Wash.) M. C. held its first meeting of the new year on January 17, when State F. A. M. Commissioner J. F. Gorman attended and launched a movement to bring the organization under the Federation banner. Twenty-one members were on hand, and the State official succeeded in getting their applications for admission to the national body. Of late interest in the club has been lagging, but it is believed that the present action will pave the way for a prosperous future.

At the next meeting a staff of energetic officers will be named, the following candidates being before the club: Clinton Hall and Dr. Button, for president; L. Freeman, L. Huggins and A. A. Richardson, for vice-president; A. F. Hoska, Jr., for secretary-treasurer. As soon as Mr. Hoska was named nominations for the offices of secretary and treasurer were closed, the club members agreeing that no more competent or active worker could be found for the offices in question. Ray Packard, R. Hallaway and A. R. Wisner are in the field for captain, and Fred Folkes, B. Oxley, L. Freeman, A. A. Richardson and R. Sands are the nominees for lieutenant. M. Martin was named as a trustee.

HERE AND THERE.

CHARLESTON, S. C., motorcyclists recently organized a club, elected M. S. Sullivan president and launched a campaign to make every rider in the city a member.

Dancing forms a part of the winter's pleasure for the Giroy, Cal., Motorcycle Club.

When President Taft recently laid the corner stone for the first settlement house for the blind in the world, which is being erected in New York City, two motorcycle policemen were the most active of his guard.

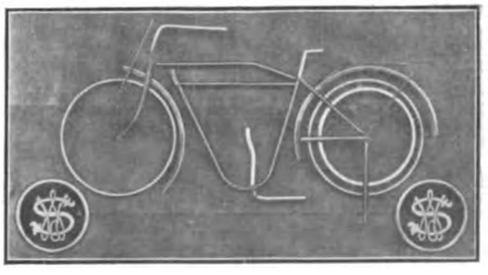
Chicago has 3,000 motorcycle riders, according to the license collector's report for 1911.

Despite the cold weather the Lorain, O., Motorcycle Club recently conducted its first reliability run to Cleveland, O., and return.

President Edward Friedman, of the Newark (N. J.) M. C., states that it is the intention of his squad to affiliate with the F. A. M. at an early date.

TO BUILD MOTORCYCLES.

THE Webb-Veitch Company, Jersey City, N. J., has been organized to manufacture automobiles, motorcycles, aeroplanes, etc., with a capital of $25,000. Incorporators: Charles N. King, Jr., Geo. H. Russell, Elmer H. Geran, all of 243 Washington street, Jersey City.



Part of Exhibit of Standard Welding Company at the New York Show.

With the Clubs

NEW CLUB IN AUGUSTA

Plenty of Enthusiasm at First Meeting of Georgia Riders—Plans for Banquet and Meets.

AN enthusiastic meeting of the motorcyclists of Augusta was held January 15 at the Chamber of Commerce, and a permanent organization with 51 charter members was effected. By-laws were adopted and officers for the year elected.

A report of the New Year's day race meet was received; the promoters of this event, which was a decided success, donated the proceeds to the club fund. This, with the dues collected at the meeting, starts the new club on a good financial footing. Arrangement has been made to occupy a centrally located club room and to furnish it in good style.

Arthur Mitchell, who is now traveling in this territory for a leading supply house, was present at the meeting and was listened to with attention while he gave a short talk to the club, explaining to the boys the many advantages of affiliating with the F. A. M. and relating a number of experiences in his varied racing career. He said that he is now out of the racing game, and then qualified the statement by saying, "for the present, at least."

The question of affiliation with the F. A. M. was discussed and it was decided to postpone action in the matter until the next monthly meeting. Plans are being laid for a banquet or smoker to be held on the opening of the new club rooms. An endurance contest is scheduled for the early spring and a big club meet is to be held on the Georgia-Carolina fair grounds track in April.

The officers of the club are: President, Chester Story; vice-president, E. W. Watson; secretary-treasurer, Hugh Saxon; captain, L. H. Fourcher; first lieutenant, M. B. Buford; second lieutenant, C. H. Story.

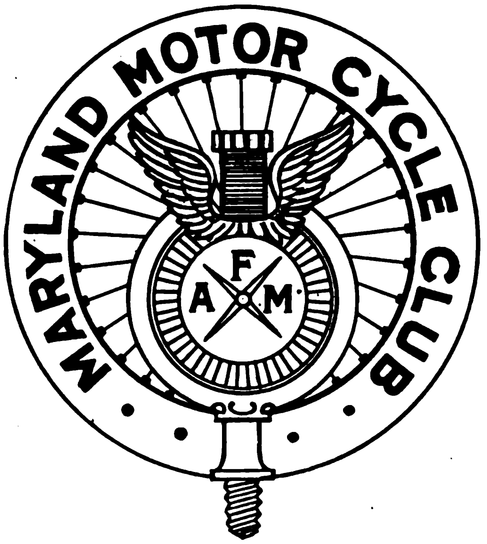
FIRST ANNUAL BALL.

FOLLOWING are the new officers of the Richmond (Ind.) M. C.: Charles A. Tangeman, president; Roy Harvey, vice-president; Alva Alexander, secretary; Elmer Smith, treasurer; Charles Meyers, road captain; Paul McBride, first lieutenant; Earl Wright, second lieutenant; Walter Shute and Frank Oelklaus, directors.

The Richmond Club will hold its first annual ball on Wednesday evening, February 7.

WANT ALL THE RIDERS.

MOTORCYCLISTS in Charleston, South Carolina, recently launched a club, elected M. S. Sullivan president and entered upon a campaign to make every rider of the city a member.



Maryland Club's Emblem.

WITH THE NEWARKERS.

SECRETARY NORMAN H. DAVIS, of the New Jersey M. C., Newark, N. J., and one of the most consistent riders of his city, has designed a new pennant for the club. It carries the letters N. J. M. C., and the word "Newark." The pennants will be ready for distribution in a week or two.

In keeping with his name, George Frost, one of the most enthusiastic members of the New Jersey club, is just as willing to take to the road when the mercury is on its way down in the tube as he is on a summer day. Despite the severe weather for some time past, Frost has been seen on his machine nearly every Sunday, making short runs into the country.

Peter W. Cunningham, chairman of the house committee of the New Jersey club, was as busy as the proverbial bee during the recent successful smoker held in the club's headquarters. Pete mapped out the program, superintended the decorating of the rooms and even helped to dispose of some of the refreshments. Cunningham is not the only social "live wire" on the club list by a long shot, but he usually sets a pace that makes the other boys plug to keep up with his plans.

OFFICERS OF NEWARK M. C.

OFFICERS of the Newark (N. J.) M. C. for 1912 were lined up as follows at the annual meeting: J. V. Haster, president; H. F. Schnell, vice-president; E. Friedman, secretary; H. L. Clark, treasurer; W. Sincox, captain; D. Suydam, first lieutenant; C. Peterson, second lieutenant. Two new members, Herbert A. Weakliem and Bert M. Scholes, were taken in at the last meeting of the club.

MARYLAND CLUB BOOMING

Will Co-operate with Automobilists of Baltimore to Further Good Roads Movement—New Emblem Adopted.

FOLLOWING the example of the Automobile Club of Maryland, whose members carry specially designed brass emblems on the radiators of their cars, the Maryland Motorcycle Club has adopted a design for a metal plate which embodies the F. A. M. symbol and which will be carried on the front mudguard. This design was perfected by John N. Carroll, Jr., manager of the Chase Motor Company, of Baltimore, and one of the busiest workers in the ranks of the Maryland club. The idea of carrying these plates has met with the approval of the boys and several are already to be seen in use. In addition to being decorative they augment the prestige of the organization and tend to make the riders take pride in their clan.

The Maryland club is growing rapidly and it is believed that one hundred members will be on the list before the first balmy days of spring bring the riders out on the roads. The club is preparing to join hands with the Automobile Club of Maryland in boosting the good roads movement and working for the general good of motorists throughout the State.

CLUB ELECTIONS.

MOTORCYCLISTS of York, Pa., recently met and organized a motorcycle club and elected F. H. Reiff, president; Geo. Rudy, Jr., vice-president; Curvin L. Rhinehart, secretary and treasurer.

A. G. Aldrich, president; J. Sumner, vice-president; F. W. Huels, secretary and Charles Gratoit, treasurer, are the new officers of the Four Lakes Motorcycle Club, of Madison, Wis.

The newly elected officers of the Bakersfield (Cal.), M. C. are Charles P. Clark, president; J. F. Dunlap, vice-president; P. C. Taylor, recording secretary, and Frank Lightner, secretary-treasurer.

FOSTORIA CLUB OFFICERS.

THE Fostoria (O.) club met in their room on East Center street recently and elected the following officers: President, F. A. Copley, vice-president, Charles Foster; secretary, George Kessler; treasurer, Val. Whitta; road captain, Arthur Duffield; first lieutenant, Dale Garner. Seven new members were accepted, making the total membership twenty-seven.

BOWL FOR TORONTO?

Rumor That Motorcyclists Would Be Barred from Speedway Revives Plans for a Board Track.

THERE was consternation among the motorcyclists of Toronto recently, when a report spread that the City Fathers had taken the use of the half-mile exhibition speedway, upon which they have held all their race meets, away from the single-trackers. Without warning or apparent cause, the exhibition management committee turned down the application for a permit to hold a mixed auto and motorcycle meet on the track on September 21 next, intimating that it was their intention "to keep all motors off the oval in future." As there was no other available course on which to race, an officer of the Toronto M. C. immediately took up the matter with the chairman of the committee, who soon gave out the information that motorcycle races would not be banned.

Although it was found that no objection was being taken to the riders, the scare has had the effect of reviving board saucer talk, and the club may now take up the building of a bowl, and at the same time apply for an exclusive franchise from the F. A. M. The matter will be fully discussed at the next meeting of the club, to be held on February 7.

BUSY IN COLUMBUS.

THE Columbus Club is arranging to amend its constitution and by-laws, and to that end a committee consisting of W. H. Snyder and W. H. Ferguson, the latter corresponding secretary, was named by President P. M. Sarver. It is proposed to give the membership committee, which will probably consist of the board of trustees, power to elect an applicant to membership in the club. Under the new rule the applicant's name is to be posted, and a locked box is to be provided for all members who desire to make objections.

BOWLING LEAGUE.

MUCH interest is being shown in the motorcycle bowling league of Columbus, Ohio, consisting of four teams, representing the Flying Merkel, Harley-Davidson, Excelsior and Indian agencies in the Buckeye capital. With twenty-one games bowled by each team, the standing of the clubs is: Flying Merkels, first; Indians, second; Excelsiors, third, and Harley-Davidsons, fourth.

SECOND ANNUAL DANCE.

ARRANGEMENTS have been completed for the second formal dance to be given under the auspices of the Columbus club at the A. C. R. Hall, on East Gay street, February 1. The committee on arrangements consists of G. H. Bangham, H. M. Seibold, Fred Hare and William Matthews.

A RATHER LONG RUN.

THE Indian motorcycle which had been running for several weeks in the window of the John Winchester store at London, Ohio, when stopped recently showed a distance of 6,471 miles. The person to guess the closest to the number of miles was Thomas Lee, Jr., who guessed 6,470.

Columbus Riders Who Took Part in New Year's Run.

GILLEY HAD CLEAN SCORE

Came Through With Record of Straignt Victories in Toronto Club's Euchre—New Constitution is Framed.

ALL the members of the Toronto Motorcycle Club have suddenly become proofreaders. At the regular monthly social meeting of the club, held on Wednesday evening, January 17, proof copies of the club's constitution were distributed for the perusal and approval of the members, before it is bound in booklet form. Any suggestions will be heard at the next business meeting.

A game of progressive euchre was played with fifty members participating, the winner turning up in Jack Gilley, who came through with a record of straight victories. The club's annual boxing entertainment will be put on at a special gathering to be held on Friday evening, January 26.

NEW SACRAMENTO STAFF.

AT its last regular meeting the Sacramento (Cal.) M. C. installed its new officers as follows: C. S. Emery, president; H. A. Ten Bosh, vice-president; Roy Emery, secretary; N. F. Barber, treasurer; D. Galloway, road captain. The president appointed the following committees: Competition, W. A. Langley, H. A. Ten Bosh and Frank Murray; publicity, E. Shoemaker, L. Abraham and H. Cameron. H. A. Ten Bosh, C. C. White and George McCormick were appointed to the board of trustees. After the business session refreshments were served by the feminine enthusiasts of the club.

THE PRESIDENT'S JEWELS.

NOT a motorcycle picture, and still the relation is interesting. The happy youngsters pictured above are Mary and G. H. Junior, the children of F. A. M. President G. H. Hamilton.

IPMROVED SPARTAN LINE

V-Belt With Distinctive White Strip is Added to Graton & Knight Products for the 1912 Season.

REALIZING that quality in the transmission agent of a motorcycle is as important as efficiency in the motor itself, experienced riders in the "belt-drive division" have of late kept a close watch upon the announcements of the Graton & Knight Manufacturing Company, of Worcester, Mass., producer of Spartan belts. That this display of interest has brought its reward is now known to every motorcyclist who attended the New York Show and inspected the improved offerings of the Worcester firm for 1912. In short, those who looked for still further improved Spartan belts were not disappointed.

In addition to its popular White Strip flat belt, the company is now marketing a high-grade V belt which also embodies the White Strip. It is the latter product to which the firm calls special attention, and in which visitors to the G. & K. booth in the Chicago Show will find much to interest them. This does not mean that the company's flat belt is to be overshadowed, even temporarily, but that the white strip in the V belt, being a distinctly new feature, is bound to receive extraordinary consideration.

It is claimed for these belts that they will be found on the 1912 models of at least 80 per cent. of the motorcycle manufacturers, and this in itself is a testimonial which can hardly be strengthened. The unusual success of Spartan belts has been properly attributed to careful selection of the leather, a special tanning system, and long experience on the part of the workmen to whom their production is entrusted. These conditions make possible the manufacture of a belt of uniform quality and efficiency at a reasonable price. The Spartan belts are not affected by heat, oil, dampness or other unfavorable conditions, and have been used with unfailing satisfaction in most severe tests.

Through the untiring and well-directed efforts of W. W. Shoemaker, the firm's expert on motorcycle belts, the great possibilities of the motorcycle field were brought to the attention of the Graton & Knight company, and almost from the start Mr. Shoemaker's predictions regarding the demand that would be found for the Spartan product among motorcyclists were verified. He has visited nearly every State in the Union in connection with his broad sales campaign, and his route to and fro across the country has been marked by results.

Although the Graton & Knight plant in Worcester is humming with business activity, the company never fails to find time for a courteous reply to all questions concerning its products, and motorcyclists are invited to communicate with the firm when desirous of obtaining the complete Spartan belt story.

F. A. M. PRESIDENT IN COLUMBUS.

GEORGE HAMILTON, president of the F. A. M., stopped off in Columbus, Ohio, last week on his way to his home in Milwaukee from the New York show. He visited a number of the dealers while in the Buckeye capital.

GREAT PLANS FOR NEW LOS ANGELES BOWL

Big Squad of Speedsters Ready for Opening Meet Under Management of Jack Prince on February 4—Referee Charles Fuller Gates Busy With Racing Reforms on Coast.

LOS ANGELES, CAL.—Rapid progress has been made on the new three-lap board track here by Jack Prince, the pioneer track builder. Work was begun on January 5, the track surface was going down on January 13, and the bowl was ready for the racing men to practice upon on January 20. February 4 is the date Prince and his local manager, Paul Derkum, have set for the first meet on the new track. The location, on Hooper avenue, at Thirty-fifth street, is easy to reach by three car lines, while riders will find that smooth, paved streets run directly to the entrance. As Los Angeles has more than 5,000 motorcycles and twice that number of automobiles, much of the patronage will be from users of motor-driven vehicles, so the wide, smooth pavement of Hooper avenue will be a great help. It will be used to stable the cars, while motorcycles will have a checking station large enough to hold thousands of machines; they will be checked free by the management.

Paul Derkum, probably better known in California as "Dare-Devil" Derkum, has had considerable experience in promoting motorcycle meets, as well as in racing, and is said to be one of the best motorcycle promoters on the coast. He is extremely popular in and about Los Angeles. In the early days of the 3½-lap Coliseum track in this city, every small boy was a booster for Derkum, while their attempts to get acquainted with Jake DeRosier and some of the others met with a chilly reception. DeRosier is here; in fact, has adopted Los Angeles as his home. At present he is suffering from water on his right knee, and may have a stiff leg as a result of a fall in the South.

Joe Wolters, "Fearless" Balke and Armstrong, the Excelsior team, came south from Oakland at the close of the racing there on December 31, while Graves, who lives here, was already at home. Ward and Seymour also are Los Angeles boys. The Samuelson boys, of Salt Lake, are here, with Johnnie Albright, of Chicago, and Hasha, of Texas.

Charles Fuller Gates, who was placed in charge of California racing matters by the Competition Committee of the F. A. M. last fall, as the only man who had been able to make a success of the job of referee on the coast, will personally referee the races on the new Los Angeles Stadium, and strictly and impartially enforce the racing rules.

About three years ago, when the first motorcycle track was built in Los Angeles by Jack Prince and George I. Kreamer, Mr. Gates was made official referee, and at once started to enforce the rules of the Competition Committee of the F. A. M. This was something unusual for some of the riders, but no exception was made in favor of any rider, and in a short time Referee Gates was just about as unpopular with certain riders as he could be. When motorcycle dealers attempted to take a hand, he ruled them off the track and out of the pits. This was indeed the limit, but the rulings stood, although Chairman Thornley was bombarded with petitions. Even the club of which Mr. Gates was an active member joined in the knocking. Then Mr. Gates resigned, and in time the club requested his reappointment. Finally an assistant referee was appointed, and for a time he officiated at the Coliseum. When the alternate referee began carrying out Mr. Gates' rulings Promoter Kreamer begged Gates to come back and take charge, but instead he backed up his representative and refused to officiate again until the track was repaired and washed regularly, and until other changes were made. As the promoter would not make these changes, both Mr. Gates and his alternate refused to officiate on the old track.

Since Charles Fuller Gates again took charge of racing, this time carte blanche, sanctions have been issued in California with great care, and only the most experienced men have been used as officials. In the San Francisco district, which is 500 miles north of Los Angeles, Mr. Gates appoined Frank E. Carroll, one of the pioneer motorcyclists of San Francisco, and at one time quite a racer. Mr. Carroll was the originator of the present Los Angeles Motorcycle Club, and as chief official of the recent motorcycle meets at the half-mile Oakland Motordrome, made a great success of the work. In California the plan of having as few official referees as possible will be carried out, and each will have as large territory as he can cover, so as to keep in touch with the situation and strictly enforce the rules.

Mr. Gates has already persuaded the "trade riders" in southern California to come out as Class B professionals, a new class he has evolved, the members of which will be able to ride for cash and yet not have to go up against the world beaters. Manager Derkum, of the new Los Angeles three-lap track, was the first trade rider in California to turn professional, doing so about five years ago. He brought out Graves, said to be the best dirt track rider on earth, "Fearless" Balke, Al. Ward, Hubert Kittle, Ben Bresee, of Fresno, and several other riders of note. As soon as Mr. Gates explained to Manager Derkum about the new class, the latter at once began arranging his programs for the Los Angeles Stadium to build up the Class B races. Derkum has a warm place in his heart for the beginners, and the new track will inaugurate the Class B, which will probably help to solve the disagreeable amateur puzzle. The Class B riders will, of course, be professionals, but, removed somewhat from the record makers.

When the new Los Angeles track opens many new ideas will be sprung by Referee Gates and Manager Derkum, who will both work to elevate the motorcycle game in the eyes of the public, and as far as is possible eliminate former abuses. This can now be done, as there will be plenty of machines and riders, with closer competition and a better spirit. It is expected that the new track will open to more than 10,000 spectators, as the old track had 7,000 people at the opening meet.

The official starter at the Los Angeles Stadium is John S. Wiese, an old-time bicycle track official. The announcer is another old bicycle track official, Howard Tuttle, familiar on the old National Circuit in bicycle days. Many of the other officials have been connected with bicycle tracks of a decade ago, and all are experts in their particular capacities.

It is expected that Oscar Hedstrom will bring on from the Indian factory a bunch of the new Indian racing machines, and both Seymour and Hasha are already supplied with the new eight-valve models. The Merkel and Thor factories are preparing some new racing machines for the Los Angeles Stadium races, and it is hinted that the Harley-Davidson factory has a surprise ready for the new track. A new lot of fast Excelsiors will also be seen.

A new board track is being planned for San Diego, a city of about 50,000 population, lying 150 miles south of Los Angeles, and within seventeen miles of the Mexican border. San Diego has a large motorcycle club, and is now getting ready a big exposition for 1915, and wants a motordrome as an attraction for Panama Exposition visitors. San Francisco is also talking about a quarter-mile saucer track as a feature for its still large exposition to commemorate the opening of the Panama Canal.

In the orange belt of southern California are three prosperous cities—Pomona, San Bernardino and Riverside, the two former being county seats, and the latter a great tourist town. Nearby are many villages, and it is probable that a motorcycle saucer track will be built in San Bernardino to cover this district, and be run in connection with the Los Angeles and proposed San Diego tracks. Jack Prince expects as soon as he can get the Los Angeles Stadium running under the care and management of Paul Derkum, to go to Baltimore, Md., and build a half-mile motordrome there for Howard French and his associates.

MOTORCYCLE COWPUNCHERS.

EVEN the Texas broncho, so long supreme in his bailiwick, is now being hard pressed by the relentless motorcycle. Recently a "long horn" was terrorizing a certain neighborhood near Houston when two motorcycle policemen appeared on the scene. Without dismounting from their machines they chased the bellowing animal through the streets and into a pen. The officers whooped like full-fledged cowpunchers as they chugged along behind their quarry, and the performance scored a distinct hit with the Texans.

AIMING AT CENTURY MARK.

THE Dayton (Ohio) M. C. is hitting the high spots with its enthusiasm throttle wide open in an effort to boost its membership to 100 before February 1. There is every indication that the century mark will be reached.

TO COMBINE AMPHITHEATRE AND "SAUCER"

Baltimore Promoters Plan to Accommodate Athletic Events of All Kinds, and Even Mass Meetings, Within Proposed Three-Lap Circuit—Count on Seating at Least 4,000 Spectators.

BALTIMORE, MD., Jan. 20.—It is now stated that the motordrome to be built in this city will be used for a number of purposes. Howard A. French has greatly elaborated his original plans, and as a result when the big saucer is not being utilized for motorcycle races it will become an amphitheatre. The announcement of the new plans has created quite a stir.

Mr. French has shown his usual brand of progressiveness in tackling this proposition single-handed. He realizes that there is sufficient interest in the sport here to maintain a good board track, and he has been spending his money freely trying to make his plans as perfect as possible. The financial end is now secure, and the only things to be decided upon are the site and the cost of the track. French has written to Jack Prince asking him to send at once an expense table covering the construction of a three-lap bowl, including the stands.

Prince, who is in Los Angeles, and, as previously reported, wants to build a half-mile track, will probably defer to the wishes of the local men, who cannot see the advantage of a half-mile track for this city. Besides, the new plans could not be carried out if a saucer larger than three laps to the mile was built.

As planned by Mr. French, the seating capacity of the motordrome will be not less than 4,000, and may go well above that figure. He intends to run a meet at least one night in the week during the season. This will leave five other nights and Saturday afternoons open to the local bicycle contingent, who will be allowed to use the track for their own races and, if they desire, they can promote a twelve-hour, twenty-four-hour, or a six-day race on the saucer. There has been considerable discussion with reference to promoting such races, but the fact that there will be a covering only over the stands would interfere with such an event in case of inclement weather.

Inside of the board track French will have laid out a four-lap cinder path for athletic events. There is practically only one athletic field in this city, and it is not of the best. French will provide every facility for the promotion of all kinds of athletic events on the track, and the Marathoners will find there a permanent home in which to display their prowess. In addition to all this, the inclosure will be converted into an aerodrome at short notice, and above the large field inside the board track the bird-men will be able to perform their stunts, while the spectators, in comfortable seats, will view them with ease. A number of gentlemen interested in flying machines here have approved of the plans.

Going still further, French says the place can be utilized for conventions, conferences or big open-air meetings. A rostrum could easily be placed in the center, and from this speakers could be heard in all parts of the inclosure. The announcement of this feature has also made a big hit. When French returned from New York, where he attended the motorcycle show, he said that he had taken up with the F. A. M. the question of sanctions for board tracks other than those absolutely circular in shape. He stated that the matter had been settled and that sanctions will be granted to any kind of track, so it is made perfectly safe. This problem was perplexing Jack Prince, and it was at the latter's request that French took it up with the F. A. M.

ROGERS JOINS FLYERS.

BALTIMORE, MD.—George W. Rogers, who made a reputation as a daring rider, has abandoned motorcycling and will take up flying. He was in town a few days ago to bid farewell to his many friends. He sails soon for South America, where, with other birdmen, he intends to court fame and riches.

SLEIGHING BY MOTORCYCLE.

C. L. NEWLEY, Kansas City, Mo., forwards the accompanying unique photograph and writes as follows: "After returning from one of our recent trips with three aboard we loaded five passengers on the sleigh and made another run at about 25 miles per hour. This sport has created quite a hit here.

A COMBINATION MEET.

PLANS have been perfected for a race meet to be held in Montgomery, Ala., on March 4, in connection with an aeronautic program which is being promoted by the Berger Aviation Co.

HASHA IS POPULAR.

SAN FRANCISCO, Cal.—Mr. and Mrs. Ed. Hasha have been delightfully entertained since their arrival in this city. Frank Carroll and G. J. Lehman, of the Goodyear forces, tendered the young couple a lunch at the Cliff House and took them for an automobile ride recently, and the little speedster and his wife could accept an invitation for almost every evening were they so inclined.

ANOTHER INDIAN PREACHER.

J. OTTO TRESEMER, who is well-known as a rider in Ohio, has joined the forces of the Barr Motorcycle Company, Indian agents at Columbus and is already preaching the Indian gospel. He says, "The 1912 Indian certainly looks good to me, and I believe it will sell 'like a flash,' as the prospects I have talked with so far are very enthusiastic about it."

THE D. C. Walker Auto Company, 1919-1931 North Charles street, Baltimore, Md., has become local distributor for the Flanders "4."

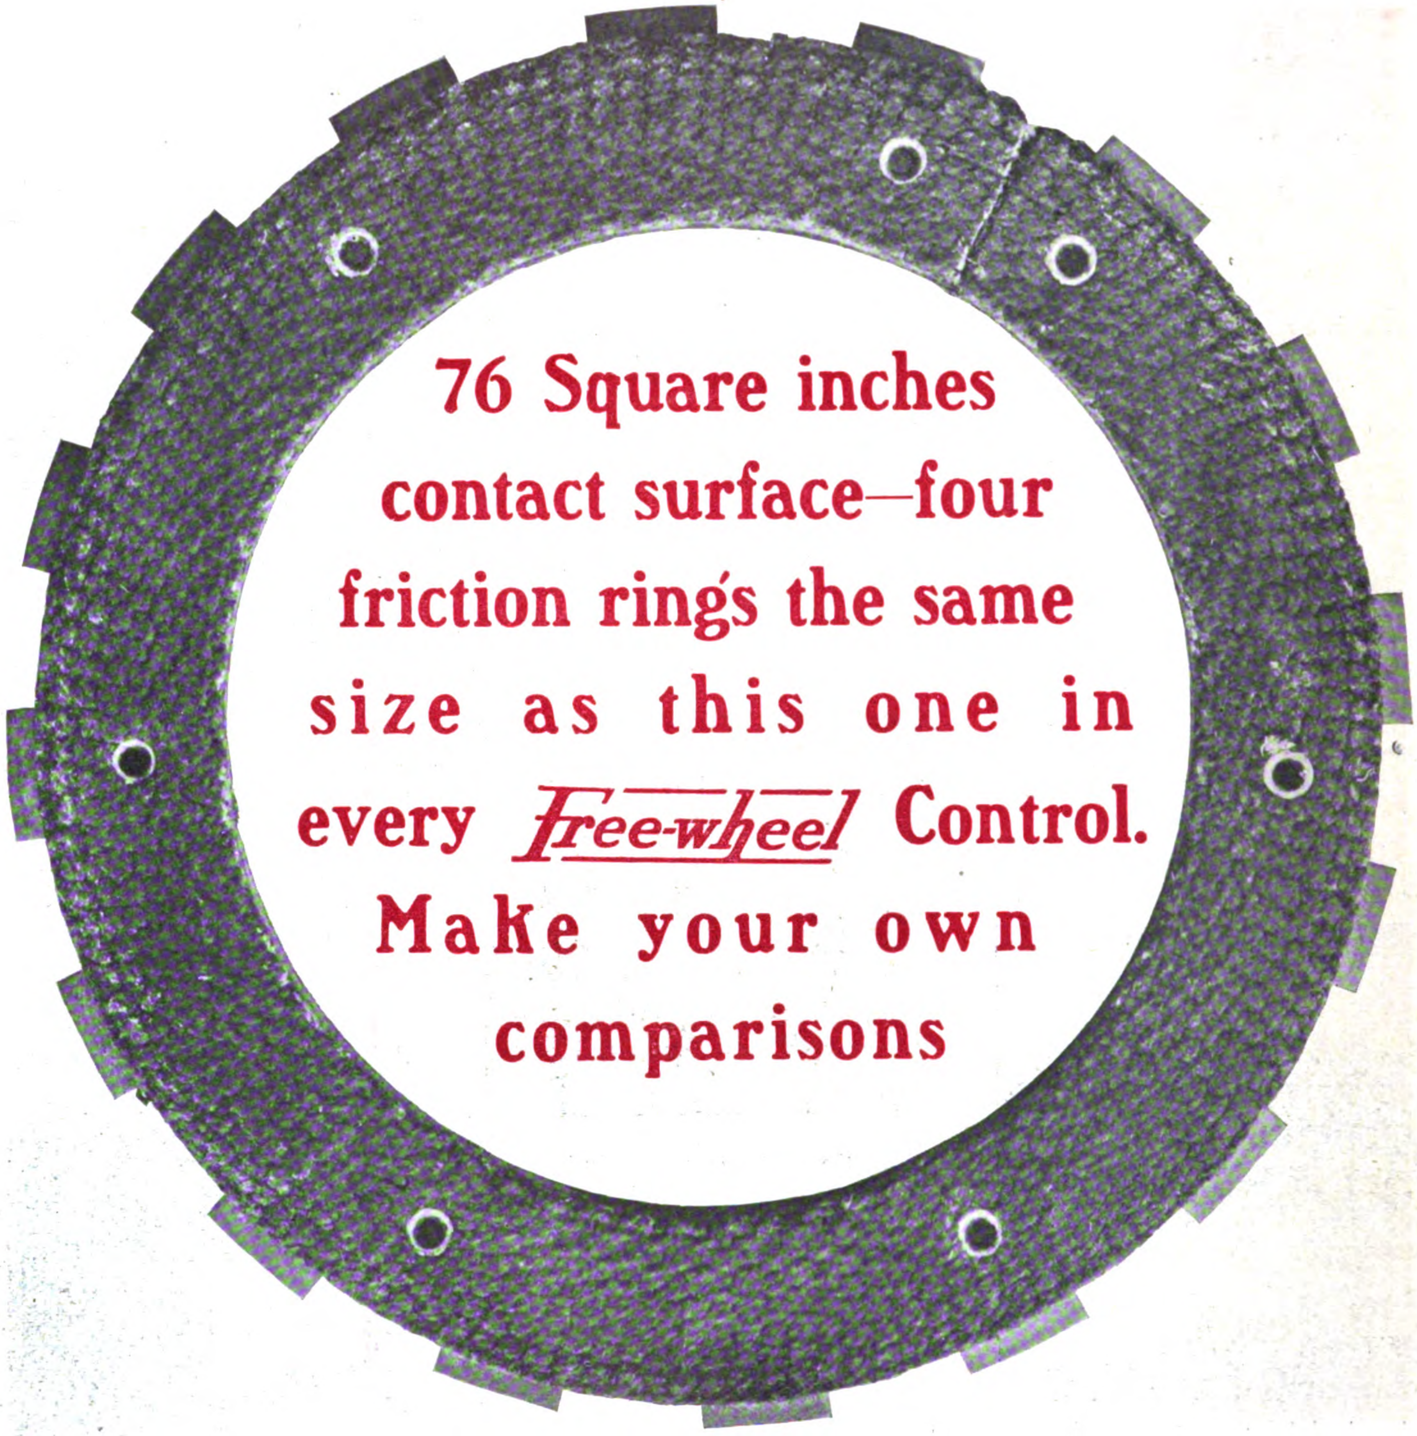
HARLEY AGENTS.

THOS. BUSHART and John Flosom have entered into partnership for the purpose of handling the Harley Davidson machines in Portsmouth, Ohio.

CARROLL BAGGED THE GAME.

MANAGER JOHN N. CARROLL, JR., of the Chase Motor Company, Charles and Reade streets, Baltimore, Md., made a "gunning trip" for up-State prospects some time ago on which he found time to let the camera man obtain the accompanying photograph. The picture shows Manager Carroll on his Harley-Davidson, for which the Chase company has the agency. He explains that the only gun used to bring down the game was his Harley, which allowed him to return with more orders than he had counted upon. The Chase company has been taking orders and making prompt deliveries on 1912 model Harleys since the first week in November.

The Free-Wheel Control—the Smoot



76 Square inches contact surface—four friction rings the same size as this one in every *Free-wheel* Control. Make your own comparisons

HARLEY-DAVIDSON MOTOR COM

est Operating Clutch in the World

COMMON SENSE is enough to convince anyone open to conviction that the rear wheel is the only logical place for a clutch on a motorcycle. It's *the only place where there is room* to make the various parts *large* enough to do the work required.

It requires no mechanic to see that the dry plate clutch of the Harley-Davidson cannot throw oil or grease onto the machine or rider *because no oil or grease is used.*

The Free-Wheel Control on the new Harley-Davidson is in such great demand by riders who want "something better" than the ordinary "free engine clutch" that we have been obliged to secure a separate building for the use of the clutch department exclusively. We are now operating the largest stamping presses in the motorcycle business—two of them—with 400,000 pounds capacity, and we have to work them *to the limit* to make enough Free-Wheel Controls to take care of our orders.

You know yourself that nothing is so convincing as a *trial.* All our dealers have their demonstrators now. Take a ride on a 1912 Harley-Davidson *yourself.*

THE Harley-Davidson Free Wheel Control is not a makeshift attachment or an after-thought added on "to meet competition." It is built *for service* and should last as long as the machine itself, with the possible exception of the replacement of the friction disk facing once in two or three years. This facing is an asbestos composition that cannot possibly burn, char or go to pieces from heavy overloading or abuse, and is subject only to natural wear.

The two ball-bearings have 3-inch races. The ball thrust bearing has 2¾-inch races. The very size of these parts guarantees a lifetime of wear if given as much care as any ordinary hub receives.

The friction faces and the ball-bearings are the only parts in the Free-Wheel Control *which could possibly wear out* or cause trouble, and they have been made so unusually large that their life will be nothing short of phenomenal when compared with other prevailing types of under-sized attachments which have been offered to the public for the past year or so.

Even such little details as the rivets used to fasten the facing material to the clutch plates have received proper attention. Even these rivets are made in our own plant. They are not common clinch rivets. They are *swaged bronze,* large, hollow and indestructable, and *will not tear out* or cause trouble like the kind used in the ordinary clutches.

ANY, MILWAUKEE, WISCONSIN

Questions & Answers

HORSEPOWER RATING.

A CONSTANT READER.—The Federation of American Motorcyclists does not officially recognize horsepower ratings. Its competition committee chairman is guided entirely by measurements, showing piston displacement of each machine. Entry blanks are made out on this basis, although under the present rules promoters may program events for machines of different horsepower ratings. However, no official recognition is taken of records based upon horsepower.

As a matter of fact, there is no absolute relation between horsepower and piston displacement. This very problem has been before the Motorcycle Manufacturers' Association for some time, and is still unsettled. It was suggested that the association adopt a standard on the basis of 7½ cubic inches for 1 h. This is a fairly good average and would give a rating of 4 h. to a motor of 30 cubic inches piston displacement. Such a standard, however, would be an arbitrary one and not entirely scientific, as different lengths of stroke would result in the production of different horse powers in motors of exactly the same piston displacement.

LOUISVILLE TO MAMMOTH CAVE.

A READER.—We can give you only the outline of a good route to Mammoth Cave from Louisville, according to latest information received. The route for the most part is only fair, and in the season you propose to ride it is possible that you may find some poor spots. Leave Louisville at Hotel Seelbach, going east on Fourth street, then turn into Broadway; cross railroad and at cemetery entrance turn right with trolley. At next fork go left with trolley (2.3 miles from hotel, and at 4.8 miles cross trolley track and keep right at next fork. Cross railroad (7.7 miles), stone bridge (10 miles), then covered bridge (17.6 miles), and on "S" turn (18.2 miles), pass small road and go on to Mount Washington. Go next to Bardstown, then to New Haven, and Buffalo. Go on to Bear Wallow and Cave City. Mammoth Cave is 10.5 miles from Cave City and 116.2 miles from Louisville.

PISTON DISPLACEMENT.

THEODORE JOENS.—In a motor cylinder the piston displacement is the volume of that portion of the cylinder swept by the piston in any one stroke. The displacement is calculated in cubic inches in this country and in cubic centimetres abroad, and measurements for determining it are as follows: Stroke, from point where head of piston is at its uppermost position to that point where the piston head is at its lowest position; bore, the internal diameter of the cylinder just below the uppermost position of the piston head. The displacement is calculated from the formula for the volume of a cylinder: Bore × bore × stroke × 0.7854 = volume or piston displacement. When the bore and stroke are taken in inches the result will be in cubic inches, thus: 3¼ × 3¼ × 3⅝ × 0.7854 = 28.04 cubic inches. For the relation between cubic inches and cubic centimetres, see the article on "Measuring Cylinder Capacity," page 47, issue of December 14 last. The combustion chamber is not measured in reckoning piston displacement.

GRINDING IN VALVES.

E. H. BROZKA.—Grinding in a valve implies, for perfect tightness against leakage of gas, that the surfaces of the valve face and valve seat are such a fine fit that they touch at all points. If you can be assured that the valve fastened in the chuck runs absolutely true when you grind it in on the lathe, and that the cylinder can be placed so as to insure this valve being true, then the method you mention, if not continued too long for each valve, should be satisfactory. But even tool makers find difficulty in setting up jobs such as you suggest, with accuracy, and they have at hand very superior machine tools to work with. We suggest, therefore, that you grind them in by hand, or with brace or grinding tool, and test for tightness during the operation. The use of Prussian blue on the surfaces will show the "high spots" by the removal of the blue. When there are no such spots, a good, accurate fit is indicated. Grind slowly and without too great a pressure.

F. A. M. REPAIR SHOPS.

WALTER D. LANDON.—Full information concerning F. A. M. repair shops and the benefits to be derived from them may be obtained by addressing Secretary G. B. Gibson, Westboro, Mass., or E. M. Estabrook, Bangor, Me., chairman of the F. A. M. membership committee. They will welcome an opportunity to inform you fully.

FOREIGN PACING MACHINE.

C. W. COLEHOM.—The machines are used in the Buffalo velodrome, Paris, France, for pacing cyclists in match events, etc. They are built especially for such purposes and very probably could not be used on the road for any length of time. For further information write to Geo. C. Greener, Columbus, Ohio, who contributed the photograph during his trip through Europe last summer.

MACHINE TYPES.

J. J. SOUCIE.—The "Motosacoche," made in Zurich, Switzerland, in 2¾ h. twin, with a cylinder capacity of about 27.5 cubic inches, is probably the most powerful machine made in Switzerland. The S. I. A. M. T. is another machine of the same power, made only with single motors. The Peerless is either an American or British make, as there are machines bearing that name in both the United States and Great Britain. Special machines of higher power than 2¾ h. have been built in Switzerland, but as far as we know only on order and never regularly listed.

BELT TREATMENT.

W. H. MARTIN.—Belts should be treated at intervals to prevent them becoming hard, with neatsfoot oil or a good belt dressing. When neatsfoot oil is used, it should be of the best quality procurable. Clean the belt thoroughly before dressing it with oil or the preparation. Castor oil should, in general, not be used on belts, as it has deleterious effects in many cases, but seems to be fairly satisfactory on some makes.

HUNTER, N. D., TO LOS ANGELES.

HARRY F. GALE.—Your starting point will be at Fargo, Cass county, which you should be able to reach by following the line of the Great Northern to Casselton and then going east to Fargo. From Fargo go to Wahpeton and Sisseton, S. D., then to Watertown, Arlington, Madison, Salem and Yankton. The next town of importance to be reached is Columbus, Neb. The states of North and South Dakota and Nebraska are not routed, except as here given, and we consequently can only give the above outline. From Columbus go on to Grand Island, Kearney, Lexington and Ogallala. The next city is Cheyenne, then Laramie, Rawlins (Wyoming), Thayer, Rock Springs, Green River, Evanston and Ogden, Utah. The better route will go north of the Great Salt Lake and to Palisade, Nevada, then to Winnemucca and Reno. From Reno go next to Truckee and Sacramento, California; thence to Stockton, San Jose, Sante Cruz, Salinas, Paso Robles, San Luis Obispo, El Piz Mo, Santa Maria, Lampoo, Santa Barbara, Ventura, Oxnard and Los Angeles.

FULL INFORMATION COMING.

A. CHAPMAN.—Our forthcoming *Motorcycle Manual* will give a thorough and detailed description of the motorcycle motor, the troubles encountered and their remedies, horsepower calculations, State motorcycle laws, a directory of the industry and other valuable information for those interested in the motorcycle. The price will be 25 cents and the *Manual* will be issued about February 15.

ELECTRIC MOTORCYCLE.

RAY E. STEWART.—An electric motorcycle, using storage batteries for source of current is made by the Electra Motorcycle Company, Detroit, Mich.

SEEK TO MODIFY BAN ON THE TANDEM

Washington Motorcyclists Approve Edict Against Tank and Handlebar Riding, but Argue that Use of Standard Passenger Attachment Should Be Permitted.

FEW clubs in the East have given more encouraging evidence of activity and enthusiasm during the last few months than the National Capital M. C., of Washington, D. C., which recently elected new officers and mapped out plans for the 1912 season. One of the issues of vital import to motorcyclists in the capital city involves the problem of passenger carrying, a recent ordinance having prohibited the use of a motorcycle by two riders regardless of how they may be seated. This drastic action by the municipal authorities followed several accidents which resulted from motorcyclists carrying a passenger on the tank or handlebars of a machine.

The club takes the stand that such a sweeping restriction is not justified, and that motorcyclists should be allowed to carry passengers provided a standard tandem attachment is used. With a view to calling this phase of the situation to the attention of the City Fathers the club adopted the following set of resolutions:

"Whereas: The primary object of the National Capital Motorcycle Club is the advancement and protection of the rights and interests of motorcyclists; and, whereas, this organization realizes the danger to life and property following the practice of carrying an extra person on any motorcycle in front of the operator of such motorcycle,

"Be is resolved: That the National Capital Motorcycle Club, in regular session assembled, does hereby approve the ordinance recently put into operation by the commissioners of the District of Columbia, making it unlawful for more than one person to ride on any one motorcycle at one time; provided the said ordinance be enforced only in the cases of motorcycles carrying an extra person in front of the operators of such motorcycles, and

"Be it further resolved: That the National Capital Motorcycle Club does hereby condemn as being unjust and not in accordance with the spirit of law, the enforcement of this ordinance in the cases of motorcycles carrying an extra person in the rear of the operator of such motorcycles. Therefore, be it

"Resolved: That a copy of these resolutions be spread on the minutes and that a copy of same be forwarded to the commissioners and the Chief of Police, of the District of Columbia, and that a committee be appointed to wait upon the commissioners and the Chief of Police with a view to having the aforesaid ordinance modified in accordance with these resolutions."

The club's new official staff is made up as follows: F. Yowell, president; E. Dodson, vice-president; S. Eaton, recording secretary; T. Wansleben, corresponding secretary; C. Cross, treasurer; G. Beall, captain; S. McPherson, first lieutenant; W. H. Throop, guard. The first six officers named with J. S. Berryman and H. B. Cohen, make up the board of directors. The club is assured of rapid growth during 1912.

PLAN THREE RACE MEETS

Elmira Club Has Obtained Options on Track for Decoration Day, Fourth of July and Labor Day Programs.

ELMIRA, N. Y.—Three race meets will be held by the Elmira Motorcycle Club during the coming year if present plans of the members do not miscarry. Options have been secured on the local race track for the afternoons of Decoration Day, Fourth of July and Labor Day. It is hoped that the interest manifested at the meet last year will again become evident for the events this year, so that some of the best-known riders may be brought to this city to give Elmirans top-notch racing.

The annual meeting of the local club was held recently, and the following hustling staff of officers was elected for the coming year: President, B. A. Forsythe; vice-president, Robert Weaver; corresponding secretary, T. C. Sayles; financial secretary, Henry Rohver; treasurer, Arthur Holly; captain, Waldo Allen; first lieutenant, Robert Butts; second lieutenant, Victor Campbell; members of the board of directors, Dr. Walter C. Byrne and Phay B. Rutan.

TO BUILD ROADS.

THE Quebec Provincial Legislature decided, during its present session, to set apart the sum of $10,000,000 for the establishment of a network of good roads throughout the province, totaling in length 3,300 miles. The new highways will be macadamized, and the feature of the project is the laying of "double-tracks" down each bank of the picturesque St. Lawrence river, between the cities of Montreal and Quebec. Another main highway contemplated will run from Quebec city to the United States boundary line through Sherbrooke. The nature of the roads of Quebec has never been a matter for pride, and the government's proposal will prove a great boon for auto and motorcycle touring.

Chas. H. Sayles, of Waterloo, Ontario, and Two Promising Prospects.

PHOENIX ROAD RACE

Seven Out of Ten Starters Finish Severe Test Over Sandy Course, and Fair Time Is Made.

TEN riders started in the road race from Phoenix, Ariz., to Mesa and return on December 28, and seven of them finished. The course was a trying one, much sand and some rocky stretches being encountered, but on the whole the machines stood up well.

The contestants finished in the following order: Stanton Dorris, Harley-Davidson, time, 1:00:37; Joe O'Connell, Thor, time, 1:05:08; Jim Davis, Harley-Davidson, time, 1:06:20; Walter George, Harley-Davidson, time, 1:06:47; J. Barker, Harley-Davidson, time, 1:07:05; M. Valentine, Thor, time, 1:09:59; H. Steele, Yale, time, 1:10:45; Elmer Brunner, Thor, out; Ed. Hurley, Twin Indian, broken chain, out; Robert Anderson, Wagner, broken belt, out.

RODE THROUGH FLAMES

English Motorcyclists Have Thrilling Experience When Enveloped by Blaze from Wayside Brush.

AN unusual story is told of the experience of two English motorcyclists who recently made a side-car trip from London to Harrogate. While they were passing a field where some brush was burning a high wind suddenly swept the flames out upon them and they were obliged to drive through the fire at top speed. The machine operator placed his hand over the vent hole in the gasoline tank and opened the throttle, trusting to his speed to carry him through before the fuel could be ignited. The tank had been freshly filled and some of the gasoline had spurted out around the filler cap but this was not ignited; the riders made the perilous trip in safety.

As they dashed out of the fire zone the riders encountered a railroad crossing with the gates down, but they again escaped, succeeding in bringing the machine to a stop in time to avert a catastrophe. The front tire on the machine burst, probably owing to the intense heat to which it was subjected while passing through the flames.

MERKEL IN TACOMA.

TACOMA, Wash.—There are now a round dozen Flying Merkel motorcycles chugging about the streets and boulevards of Tacoma, in spite of the rainy weather. Only one rider has been forced to discard his machine; he has been sick in bed, but will soon be again astride his single-tracker.

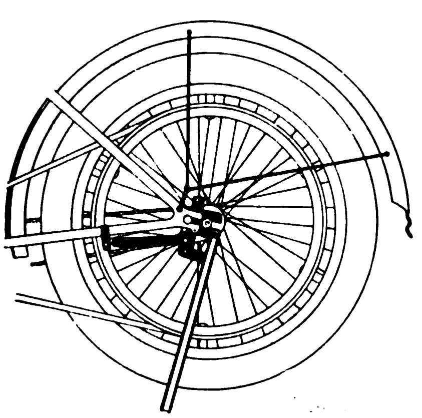
OLD DOMINION BANQUET.

MEMBERS of the Old Dominion M. C., of Richmond, Va., recently held their first annual banquet in the club rooms. The evening was spent in merrymaking, with G. H. Tompson as toastmaster.

Manufacturers

KOEHN SHOCK-ABSORBER.

NEW in design and sturdy in construction, the Koehn shock-absorber for motorcycles has proved its value in severe tests and is likely to be widely used as riders become acquainted with its advantages. The shock-absorbing device is shown in black in the accompanying illustration. It will be noted that the axle proper fits into the slots in the shock-absorber, and that in turn the special fitting rests in the regular fork-end slots. When the wheel strikes a road inequality the shock transmitted to the axle moves it upward proportionately without passing the jar on to the frame, the fork-ends proper acting as a pivoting base. The spring which extends from the shock-absorber to the lower fork member supplies the necessary tension as the wheel moves upward under pressure. The device, which is sold complete for $6, is now being turned out in quantities by Koehn Bros. at their factory in Tampa, Kan.



The Koehn shock absorber is very simple and can be attached to any make of motorcycle, either chain or belt drive, the Koehn Brothers furnishing all the fittings with the attachment.

RIM FOR LARGER TIRES.

EARLE S. ECKEL, of Washington, N. J., a live-wire motorcycle dealer, has offered a solution for the problem of larger tires for motorcycles. He has made for himself a rear wheel to take a 28 in. x 3 in. automobile tire. The diameter of the rim is a trifle smaller than the usual rim, so that the large tire will clear the forks and the rim will properly fit an ordinary 28 in. x 3 in. automobile tire. The reading of the speedometer, if it be attached to the rear wheel, is not affected. The rim measures 2¼ inches across the clinchers, as against 1½ inches of the ordinary rim. Extra heavy spokes and nipples are used in the wheel. The liberal width of the rim will insure against rim-cutting of the tire, even when the tire is only partially inflated. With a softer rear tire go easier riding qualities and increased life of the motorcycle. A 3-inch automobile tire is designed to carry a load several times as heavy as that which it will receive on a motorcycle, even with the weight of a tandem rider on it. On a motorcycle a 3-inch automobile tire will outwear two ordinary 2½-inch motorcycle tires.

Mr. Eckel has tested his wheel in a most severe manner. He has it equipped with a non-skid tire and has ridden it several thousand miles through mud, slush and snow, and the tire shows no signs of wear. He pronounces it a complete success and with it, he says, skidding is impossible. He is manufacturing these rear wheels in quantities for the trade, and in so doing is offering to motorcycle riders a long-felt need.

TIRE MACHINE PREVENTS DISSATISFACTION.

"OUR claims for Goodyear motorcycle tires," says S. A. Falor, are proven by a replacement report recently received at our office from a large Eastern territory." The report showed that only two replacements had been asked for by riders during the past year. The reason for this, Mr. Falor stated, was the fact that "Goodyear motorcycle tires, as well as Goodyear No-Rim-Cut tires are built on a special machine. This avoids the uncertainty in carcass building that accompanies hand-made tires. This is one instance where a machine-made article is superior to a hand-made article. Were motorcycle tires made from one piece of fabric, hand-making would be superior, but inasmuch as the carcass of the tire is made up of many plies of fabric, each being stretched at high tension over an iron core, one layer at a time, the fine mechanism of the Goodyear machine eliminates all possibility of one layer being pulled tighter than another, and proves superior.

"Each layer must be laid on at exactly the same tension in order that the carcass when vulcanized becomes a perfect whole of uniform strength."

ALLEN IS BRANCH MANAGER.

ANNOUNCEMENT is made by the Federal Rubber Manufacturing Company, of Milwaukee, of the appointment of Marcus Allen as manager of its New York branch, with headquarters in New York City. Mr. Allen, who was formerly connected with the Empire Tire Company, left that company to take the management of the New York branch of the G. & J. Tire Company, of Indianapolis. Inasmuch as the former officials of the G. & J. Tire Company are now at the head of the Federal Company, Mr. Allen's connection with the latter company is in the nature of a "welcome home" by his former business associates.

Having a wide acquaintance in the pneumatic tire trade, and an enviable record for results achieved in sales promotion work. Mr. Allen will no doubt prove a strong link in the chain of representative selling connections which the Federal Company has established in all parts of the country.

LOYAL TO THE TWO-WHEELER

A VISITOR at the Indian stand at the Madison Square Garden Show told of another use for the motorcycle. He said that although he owns six automobiles he always keeps two Indian motorcycles at his country place, near New York City. One of these machines he reserves for his own use, to run about to his neighbors on informal calls, to go to the golf grounds and frequently for a little pleasure spin. The other machine is kept in constant use in messenger service on his large country place.

ANOTHER COMMERCIAL LINE.

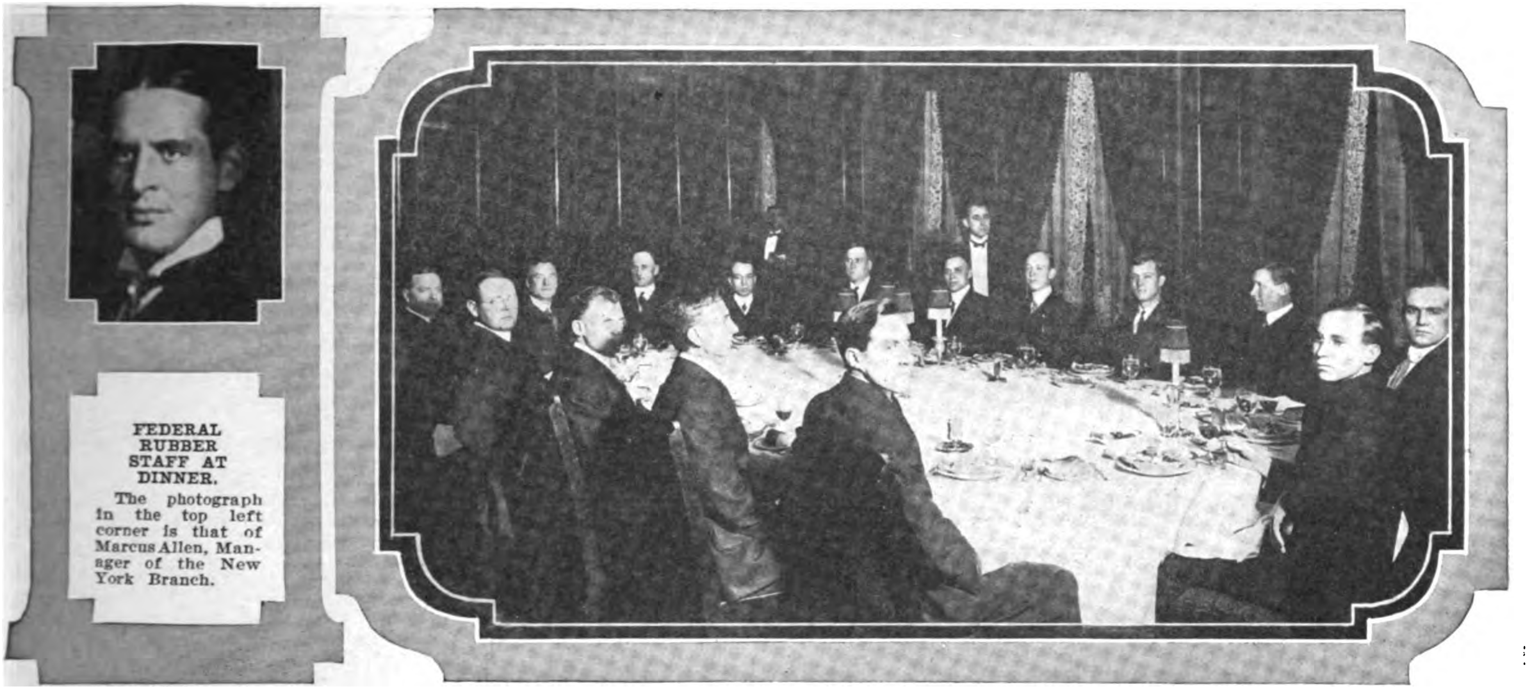
ONE of the motorcycles used for commercial purposes in Milwaukee, Wis., is in the service of the Wisconsin Dye Works, and is doing thoroughly satisfactory work over all kinds of roads. It is a Harley-Davidson, equipped with a rear carrier, as shown in the accompanying photograph, and has enabled the company to cover a much larger district than was available with a horse and wagon. It has also proved far more economical.

WISCONSIN
DYE WORKS

CLUB IN NEW QUARTERS.

THE members of the Bakersfield (Cal.) M. C. took possession of and held their first regular weekly meeting in the four-room cottage at 2717 I street, which they recently rented as a clubhouse. The club plans to hold a housewarming about February 1, by which time the cottage will be completely fitted up.

THE Troy Rubber Tire Company, of Troy, Ohio, has been incorporated, with a capital stock of $10,000, to manufacture automobile and motorcycle tires and wheel attachments. The incorporators are Jacob Sweigert, Cyrus S. Perry, Sherman LeBlond, Charles M. Drake and Alvie V. Kiser.



FEDERAL RUBBER STAFF AT DINNER.
The photograph in the top left corner is that of Marcus Allen, Manager of the New York Branch.

FEDERAL STAFF BANQUETS

Department Heads of Milwaukee Firm Dine Once a Month at Company's Expense and Then Talk Business.

WITH a view to fostering a spirit of good fellowship and co-operation, and incidentally to bring about a thorough understanding of its general business requirements, the Federal Rubber Manufacturing Company, of Milwaukee, Wis., tenders a banquet once a month to the managers of its different departments. The programs are so arranged that semi-social features blend with business, and by this pleasant method highly desirable results are being obtained. After the repast there is always a general discussion of the operations in each of the company's departments.

For the last banquet the Federal "family" gathered in the Red Room of the Pfister Hotel, in Milwaukee, and it was on that occasion that the accompanying photograph was obtained. Those at the table are Byron C. Dowse, president; Herbert A. Githens, vice-president; Richard Ward, secretary-treasurer; F. Haskell Smith, superintendent of works; J. E. Kepperly, general counsel; Arthur A. Frank, assistant superintendent; Edward Hutchins, superintendent of construction; Arthur J. Zealley, publicity manager; P. H. Ober, superintendent of tire department; G. H. Money, purchasing agent, and A. H. Wilson, assistant to the secretary.

"I believe these monthly gatherings to be most beneficial to the company's interests and progress, as well as to our department managers individually," said President Dowse, "for they bring us together under conditions of mutual good-fellowship, free from the ordinary restraints of business hours, and have a tendency to promote freedom of discussion, suggestion of new plans, improvements, etc., and a general co-operation that we might not otherwise obtain."

STATE ADOPTS F. A. M. COLORS.

THE official colors of the F. A. M., blue and yellow, have been adopted for the motorcycle license plates in Maine.

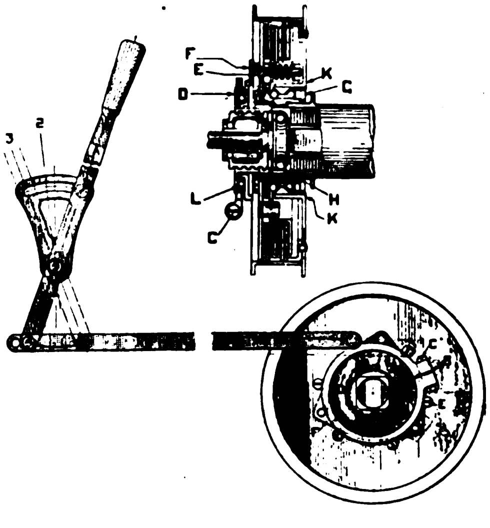
HARLEY REAR WHEEL DISC CLUTCH

Large Surface and Simplicity of Adjustment Are Prominent Characteristics—Extra Flywheel Effect When Motor Runs Free.

UNUSUAL attention has been attracted of late to the Harley-Davidson free wheel, or rear wheel type of clutch, which is a distinctive feature in the Milwaukee company's popular line for 1912, and many riders of wide and varied experience are thoroughly in accord with the firm's claim that its device will eliminate clutch troubles. The Harley-Davidson designers maintain that the rear wheel is the only logical location for the clutch, inasmuch as by having it located in that position the motor pulley, belt and rear wheel pulley act as an additional flywheel, causing very steady running when the motor is not driving the machine. Furthermore, the clutch is out of the way in case of falls or other accidents, and it is also possible to construct a clutch of more than sufficient surface, if necessary.

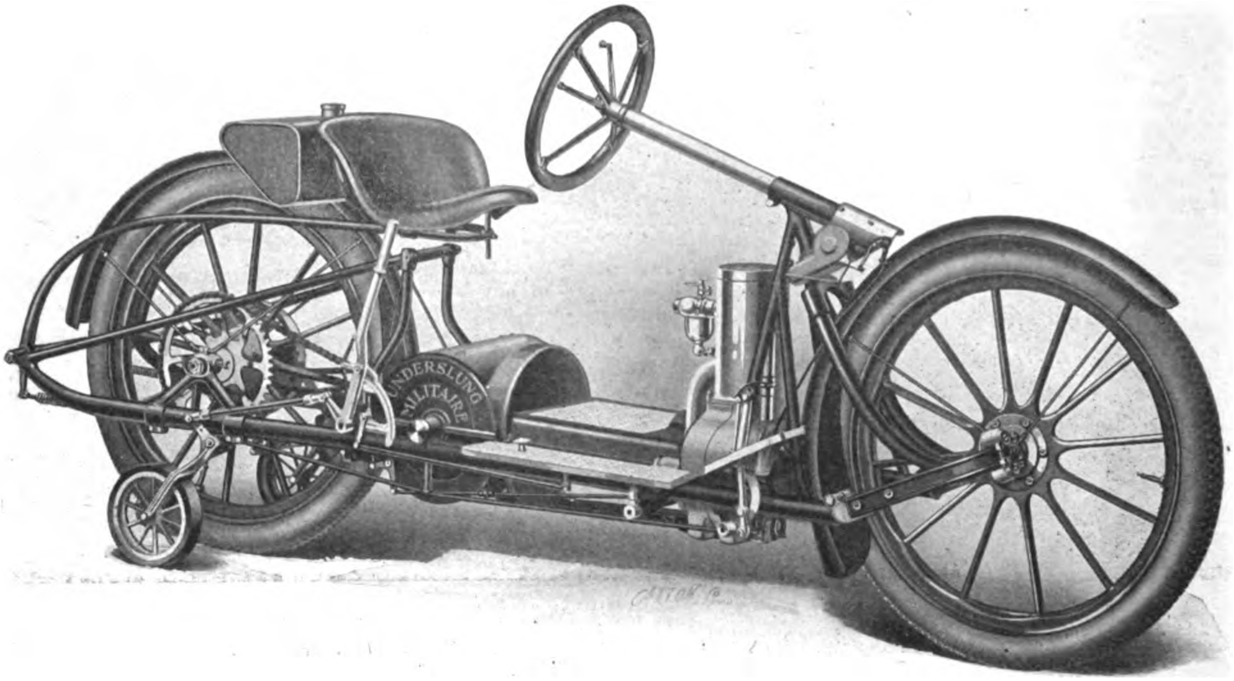
There are 76 square inches of contact surface in the Harley-Davidson Free Wheel Control. The ball races are used only when the clutch is in the free position, and are 3 inches in diameter, assuring long service. The race itself is of a special grade of high duty, high carbon steel, very carefully hardened. Special hollow bronze rivets are used to hold the asbestos composition facing to the clutch discs. These rivets are made in the company's factory and assure against any possibility of the facing coming loose. The six springs which hold the discs in engagement are large and of long life, and are designed to eliminate breakage under normal or abnormal use. The clutch may be adjusted when necessary by a half-turn of the six screws marked E in the sectional illustration of the clutch.

The clutch consists of a number of steel and asbestos composition disc facings, two being fitted to the shell K, while the third steel disc is fastened to the cup, which is riveted to the part carrying the male or operating member of the clutch. The asbestos composition discs are arranged, each between a pair of steel discs, and the pack thus formed is held in engagement by the springs on the screws E. A twin ball race is fitted so that the shell K and the steel discs can ride on the axle and operating member when the discs are forced out of engagement. This is effected by pushing the cup inwards, the web of the latter sliding along hollow rivets and separating the discs. A nut working on a square threaded collar on the extension of the rear axle effects this; the collar is split at B in the operating gear illustration and is operated by the lever A and the flat link. C is the screw for adjusting the nut and ball-bearings of the thrust type H (clutch illustration) are fitted. The lever A has a button which limits its movement by working in a slot cut in the quadrant mounted on the seat pillar, and is capable of being placed so as to give free-engine, full engagement and an intermediate position where a slip of the clutch is allowed.



There are no lock washers nor lock nuts fitted to the screws E, so that the adjustment is as simple as stated above.

The Underslung Militaire—Radically New



TO anyone making an analysis of the rapid growth and remarkable development in the two-wheeled auto vehicle industry, several important tendencies are plainly evident. Aside from the great improvement and execution of the merely mechanical details, another tendency is very pronounced, namely: the incorporation of the many conveniences of the four-wheelers. The machine illustrated above discloses sufficient of these conveniences and improvements to place it in a class by itself. The "Underslung Militaire" incorporates many radical innovations. One of the many features is the artillery wood wheels, which are always true and straight, without kinks or wobble. This detail gives the machine its sturdy appearance. The rims and clearances are wide and liberal, and will accommodate up to 3-in. tires and non-skid chains.

The underslung frame affords the lowest possible center of gravity and seat position, practically eliminating side-skidding.

The idler wheels attached to each side of frame are lowered by a convenient shifting lever at the right of seat, and are raised by pressing the button shown on footboard. These small rubber-tired idler wheels and the very low center of gravity are said to materially increase the factor of safety.

The combination of the large tires, non-skid chains and the idler wheels provides a most efficient drive for sandy roads and steep hills, keeping the machine erect while the engine is employing its greatest power with low speed.

The engine is a vertical cylinder, air-cooled, with vertical fins, enclosed by a polished casing, open at the top. The air is drawn down by a highly developed sirocco blower in the flywheel, and discharged downward and away from the rider. This cooling system is equally efficient with the machine traveling or standing.

The 3½ ins. x 3 43/64 ins. engine is a striking example of the best engine practice, embracing perfect combustion, highest type of magneto ignition, ball bearings and remarkably efficient eccentric counter-balanced flywheel, with a perfectly developed oiling scheme.

A very unique feature of the machine is the friction drive, which gives any variation of speed desired, from 30 to 1 on low and 3 to 1 on high, with 10 to 1 on reverse. The lever on the right operates forward to throw out the clutch, when the speed may be changed by the lever on the left footboard. Or, the right lever may be moved still further forward and operate the band brake. This band brake and the reverse drive as an emergency brake give absolute safety and control.

The reverse appeals strongly to the city riders, and will prove invaluable where the rider finds himself in an awkward position in congested traffic. The steering wheel is identical with standard automobile practice, with spark and gas controls on the inside of the post. A radical evolution is seen in the front hub and axle. This construction provides for the entire load of the forward half of the machine coming directly on the axle, removing this burden entirely from the forks. The forks operate to guide the front wheel only, and *have no other load whatever.*

The long wheel base, the cantilever spring device, together with the bucket seat, provide comfort for the rider and do away with vibration. The low frame, bucket seat and controls make it remarkably easy of access, and the simple control and idler wheels make it possible for the merest novice to learn the management before lifting the idlers.

The builders of this machine are the Militaire Auto Company, of Cleveland, Ohio, who have been working on the above illustrated model for two years, and are now satisfied that as designed and constructed in will meet every reasonable requirement.

ON KELLY-RACINE STAFF.

IT will be of interest to the trade to know that James I. Bush, former manager of the motorcycle department of the B. F. Goodrich Company, Akron, Ohio, is now located in Racine, Wis. Mr. Bush has entire charge of the motorcycle tire department of the Kelly-Racine Rubber Company, of Racine, and will devote all his time to that business. The Kelly-Racine Company has one of the most modern, up-to-date rubber factories in the country and will be an important factor in the motorcycle tire industry.

COUNTY AGENCY FOR EXCELSIOR.

THE Ford Motorcycle and Auto Supply Company, of White Plains, N. Y., has just closed a contract with the Excelsior Motor Manufacturing and Supply Company to handle the Excelsior line for Westchester county. The firm is affiliated with the Motorcycle Dealers' Association of Greater New York, and is also county distributor for the Flanders, Curtiss and Marvel machines. The company has a most up-to-date machine shop and is equipped to do all sorts of repairs and special work.

WOLTERS' OAKLAND RECORDS.

SAN FRANCISCO, CAL.—Now that most of the racers have left Oakland it is interesting to look back over the exhibitions and note the records established by "Farmer" Joe Wolters in his sensational whirls. Following is the official dope on Wolters' Oakland performances: One mile, 41⅖; two miles, 1:22; three miles, 2:02⅘; four miles, 2:24⅕; five miles, 3:25⅗; six miles, 4:07; seven miles, 4:48⅖; eight miles, 5:30⅗; nine miles, 6:12⅗; ten miles, 6:54. By setting the ten-mile time at 6:54 Wolters pulled down another record.

SOLVING LUBRICATING PROBLEMS

Use of a Suitable Grade of Oil Quite as Important as Its Proper Distribution—Tests of High Grade Vacuum Products for Motorcycles.

EXPERIENCED motorcyclists realize and beginners too often have the fact forced upon their notice that most of the troubles that send the machine to the repair shop have their beginnings in defective lubrication. This not only implies that the means of feeding the lubricant to the various bearings and other surfaces are inadequate but, what is more important, that the quality of the lubricant itself is very often inferior. Few machines are more sensitive to inadequate lubrication than gasoline motors, especially when air-cooled, and few are more carelessly treated. Any old oil is frequently considered good enough and the slightest recommendation on the part of a dealer or repair man is usually sufficient to effect a sale. Again false motives of economy promote the use of inferior lubricants, but the lesson of "a penny saved" in oil means "a dollar spent" in repairs should show the futility of this. To perform its functions properly, an oil must form a film between the moving surfaces to prevent their coming into contact with each other and causing wear. The ability of an oil to adhere to the surfaces and to maintain the vital oil-film is known as its "body." There are many good oils on the market, but those of inferior grade are unfortunately in the majority.

When an oil is heated, it loses its body, the very quality that is most desirable, and it must have, therefore, more than sufficient body to make up for the loss by heat, and keep up the film as long as possible. The oil must in addition maintain a "seal" around the piston rings in the cylinder during compression and power strokes, in order that there may be no escape of pressure, and further as the pressure of the rings tends to squeeze out the oil from between them and the cylinder walls the oil must also be able to resist this pressure. Where the rings are a tight fit, an oil of lighter body may be used than when the rings are worn and loose. These being the circumstances, it is evident that unless an oil is capable of doing the work called for, it is too expensive for use on any gasoline motor whatsoever. To secure an oil which fulfills the necessary conditions required, it is necessary to experiment in a good chemical laboratory where proper researches for the best ingredients may be tested and where the motors themselves may be tried out to find the oil which will give the greatest satisfaction and economy for each type of motor. The production of first class oils thus costs more than of those of inferior qualities, but the insurance of a good name and proper manufacture is worth infinitely more than the difference in price.

The various makes of motorcycles used in this country, have been investigated by the chemists and mechanical experts of the Vacuum Oil Company, 29 Broadway, New York, the oils recommended being either "Mobiloils," "B," "A," or "Arctic," the latter two being chiefly used for winter service. It is almost unnecessary to give a description of these products, but a recapitulation will serve to remind users of the same of their characteristics, and some may discover that they could better employ a lighter or heavier bodied oil as the case may be, and it will guide the non-user to the proper choice for his machine. Mobiloil B is of heavy body and is the "stock" oil for air-cooled motors, having the ability to hold compression under a great amount of heat. Mobiloil A, while primarily designed for water-cooled motors, will hold its body under extreme heat and will feed through all forms of mechanical and gravity oilers. It is of medium body, while Mobiloil Arctic, having a light medium body, is invaluable in extreme cold weather, flowing freely and is noticeable for its light color. The following table has been compiled by the laboratory after sufficiently exhaustive tests and when followed will give the highest satisfaction:

MOBILOILS RECOMMENDED FOR MOTORCYCLES.

	Use.	
Machine.	Summer.	Winter.

[Note.—The figures in brackets refer to the number of cylinders where different oils are recommended on singles (1) or twins (2)].

The user of a variable gear device is equally well provided for in the Vacuum line of lubricants; Mobiloil C, for example, for gear-boxes being a dark, heavy oil, and this is especially adapted to types having ball or roller bearings. A variety of transmission greases, all of which can be handled by a grease-gun, for gear-boxes are included in the Vacuum line, and like the Mobiloils are the result of years of experiment and gruellingly practical service. The nature and characteristics of these lubricants can be seen at the various branches of this company, the oils being shown in glass tubes so that their color and viscosity will become familiar and the greases equally effectively displayed and ready to be demonstrated. The exhibits at the New York and Boston shows give an idea of the full line of lubricants manufactured by this company, and a photograph of the Madison Square Garden Show exhibit given herewith, illustrates this, but the value and accessibility of the various products to those interested must be seen to be appreciated.

VACUUM OIL CO.

EXHIBIT OF VACUUM OIL CO. AT THE NEW YORK SHOW.

CYCLE PARTS CONVENTION FOR DETROIT

Plans for Big 1912 Meeting Were Launched at Enthusiastic Session in New York—L. M. Wainwright, the New President, Welcomed Guests at Highly Enjoyable Luncheon.

ANNUAL LUNCHEON OF
CYCLE PARTS & ACCESSORIES MFG. ASS'N.
TENDERED TO
MOTOR CYCLE MANUFACTURERS ASS'N.
AND
NATIONAL CYCLE JOBBERS
AND
ACCESSORIES ASSOCIATION
HOTEL ASTOR
JAN. 11, 1912

BUSINESS and social features were merged to such good effect at the annual meeting of the Cycle Parts and Accessories Association, at the Hotel Astor, New York City, on the morning of January 11, that the program was declared to be the most successful ever arranged by the body. In the absence of President Ralph D. Webster, of the Eclipse Machine Company, the chair was occupied by William H. Crosby, of the Crosby Company, pending the election of the new president, who proved to be L. M. Wainwright, of the Diamond Chain Company, of Indianapolis. The remainder of the staff was made up as follows: David S. Smith, of the Standard Company, Torrington, Conn., vice-president, to succeed D. S. Troxel; Louis Schwab, of Stevens & Co., New York, secretary, re-elected; W. J. Surre, of the Continental Rubber Works, Erie, Pa., treasurer, re-elected.

Detroit was decided upon as the scene of the annual summer meeting of the association which will be held August 6-9. An appropriation was made for the entertainment of guests, and a committee of arrangements, consisting of W. J. Surre, chairman, David S. Smith and L. M. Wainwright, was named to take up plans for the convention. For the coming meeting all the members of the trade will be invited individually instead of by invitations sent collectively to organizations as in the past.

After the business session the Cycle Parts and Accessories Association tendered a luncheon to the Motorcycle Manufacturers' Association and the National Association of Cycle Jobbers, the guests and their hosts filling the large dining room on the eighth floor of the hotel. W. H. Crosby, first president of the Cycle Parts body, occupied the toastmaster's chair and admirably handled a difficult task. He introduced the new president, L. M. Wainwright, who extended a hearty welcome to the association's guests. A half-dozen short addresses were made.

KNIGHT WITH THOR COMPANY.

E. J. KNIGHT, formerly sales manager of the Fowler-Carnes Company, of Aurora, Ill., is now in charge of the sales department of the Aurora Automatic Machinery Company, of Chicago, in place of J. A. Handin. Mr. Knight is well and favorably known in the trade, combining to a nicety the desirable qualities of affability, intelligence and an inexhaustible energy. With Knight promoting the "Thor" sales, his friends predict an out-of-the-ordinary future for him and the company with which he is now identified.

LARGE SHIPMENTS COMMON.

UNTIL a few years ago a single order for a dozen machines was a notable event in the motorcycle trade, and an order for a full carload lot was the occasion for a general celebration. The entire establishment watched the loading of the car, and photographs were taken which were spread around generally among the papers and the trade. To some extent these conditions still prevail, but at the Indian factory of The Hendee Manufacturing Company a carload lot has become such a common occurrence as to excite no comment. Besides the great numbers of Indians that have been sent out in smaller lots to every part of the United States, Canada and England, there have already been shipped from Springfield nine full carload lots of genuine 1912 machines, and other shipments equally as large are on the books for delivery at a later date.

The above is an encouraging indication of 1912 business, and it is especially satisfactory from the fact that all deliveries are of 1912 models, as the 1911 product was long ago exhausted.

HELD BALL IN FACTORY.

THE employees of the Dunlop Tire and Rubber Goods Company, Toronto, and their friends, held a musicale and ball in one of the factories of the company's plant on Booth avenue, there, on Friday evening, January 19. The best talent in the city was engaged for the occasion, and a splendid program was provided. It is the intention to make the affair an annual event, in view of the fact that the first program proved so successful.

S. K. F. BALL BEARINGS.

THE S. K. F. Ball Bearing Company, 50 Church street, New York City, has opened an office in Chicago to facilitate the handling of Western business. The new office will be in 1505 Heisen building, in charge of C. A. Winn.

NIGHT FORCE NEEDED

Eclipse Machine Company Finds it Necessary to Put On Extra Staff of Forty Men to Keep Up with Orders.

ELMIRA, N. Y.—General Manager Ralph D. Webster, of the Eclipse Machine Company, of this city, is making plans for the employment of a night force of about forty men to take care of the heavy increase in orders during the last few months. Manager Webster expects that the coming year will be the greatest in the history of motorcycling, and the local concern is making preparations accordingly. The firm is now rushed with orders for its free engine, invented by Frederick D. Ellet, former secretary of the Elmira Motorcycle Club.

More orders for this device have been received up to the present time than were expected for the entire year. The recent indictment returned against David L. Whittier, Leonard Whittier, Edward J. Dunn and Mr. Webster in the Federal Court at Buffalo are expected to have no detrimental effect upon the business of the local concern. Attorney Alexander Falck, who represents the local officials, states that there is merely a point of law to be determined.

GRIFFITH KEEPING BUSY.

A. E. GRIFFITH, of the New Departure Manufacturing Company, recently returned from a four months' Western trip, on which he was successful in lining up many sales for the firm. He is now traveling in the East, where he will undoubtedly set his usual fast clip in locating orders. At the New Departure booth in the Garden Show Mr. Griffith was pretty hard to find, being usually surrounded and hidden from view by his hosts of friends.

NO NOBBY TREAD SUSPENSION.

THE United States Tire Company is announcing to the trade and to consumers throughout the country that the manufacture and sale of Nobby Tread tires is continuing as heretofore. This statement is supplemented with an announcement to the effect that the company is under no prohibition from the courts.

Application had been made for an injunction to restrain the company from marketing Nobby Tread tires pending the result of an appeal, but the court ruled that the injunction be suspended pending the appeal.

PLANNING BIG CATALOG.

THE Davis Sewing Machine Company, of 628 Third street, San Francisco, Cal., manufacturer of bicycles, screw machinery and motor sundries, in addition to sewing machines, is preparing to put out a big catalog in which will be included accessories for the motorcycle. Manufacturers of such articles are invited to forward electros of their products.

Over twenty years ago the Davis company was founded by W. E. Jackson, sr., and about three years ago W. H. Jackson and his brother, W. E. Jackson, took over the business and added the Dayton line of bicycles, for northern California. During the last year sundries were added and the company was forced into larger quarters. It now conducts business on a strictly jobbing basis, and is usually rushed with orders.

VISITED THE WIGWAM

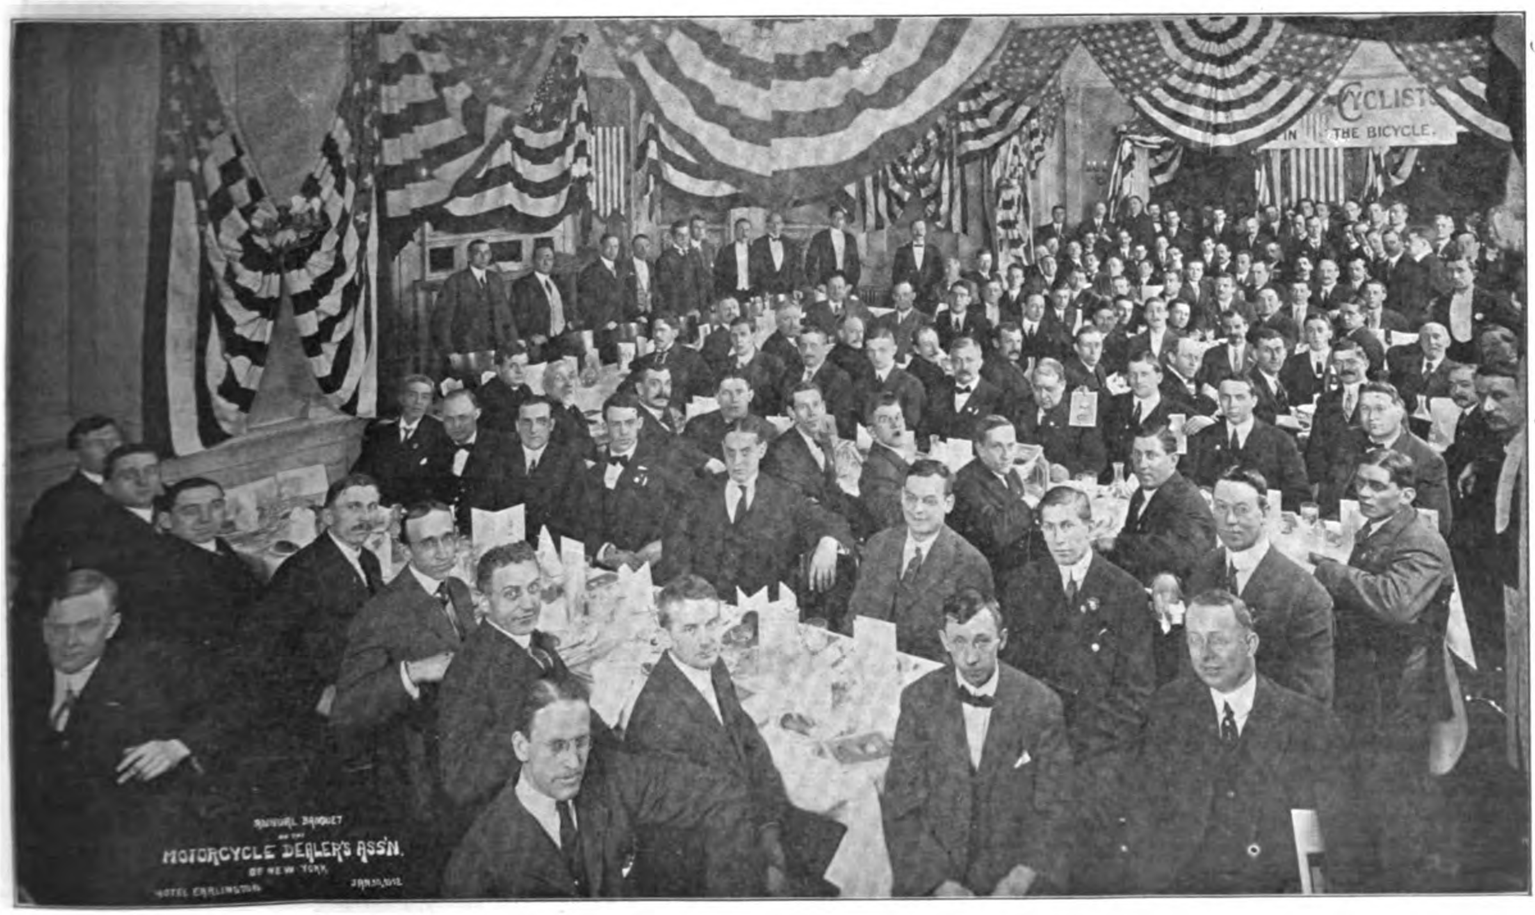
Indian Agents, After Attending New York Show, Are Entertained in Springfield by Hendee Company.

THE New York Show brought together a large number of Indian agents from all parts of the country, and at its close an adjournment was taken to the factory at Springfield to inspect the process of manufacturing the splendid machine they had seen at the show. On the arrival of the party in Springfield on Sunday evening, January 14, they were met by F. J. Weschler, treasurer and sales manager of The Hendee Manufacturing Company, and entertained at supper, and on the following day the big Indian plant was thoroughly inspected.

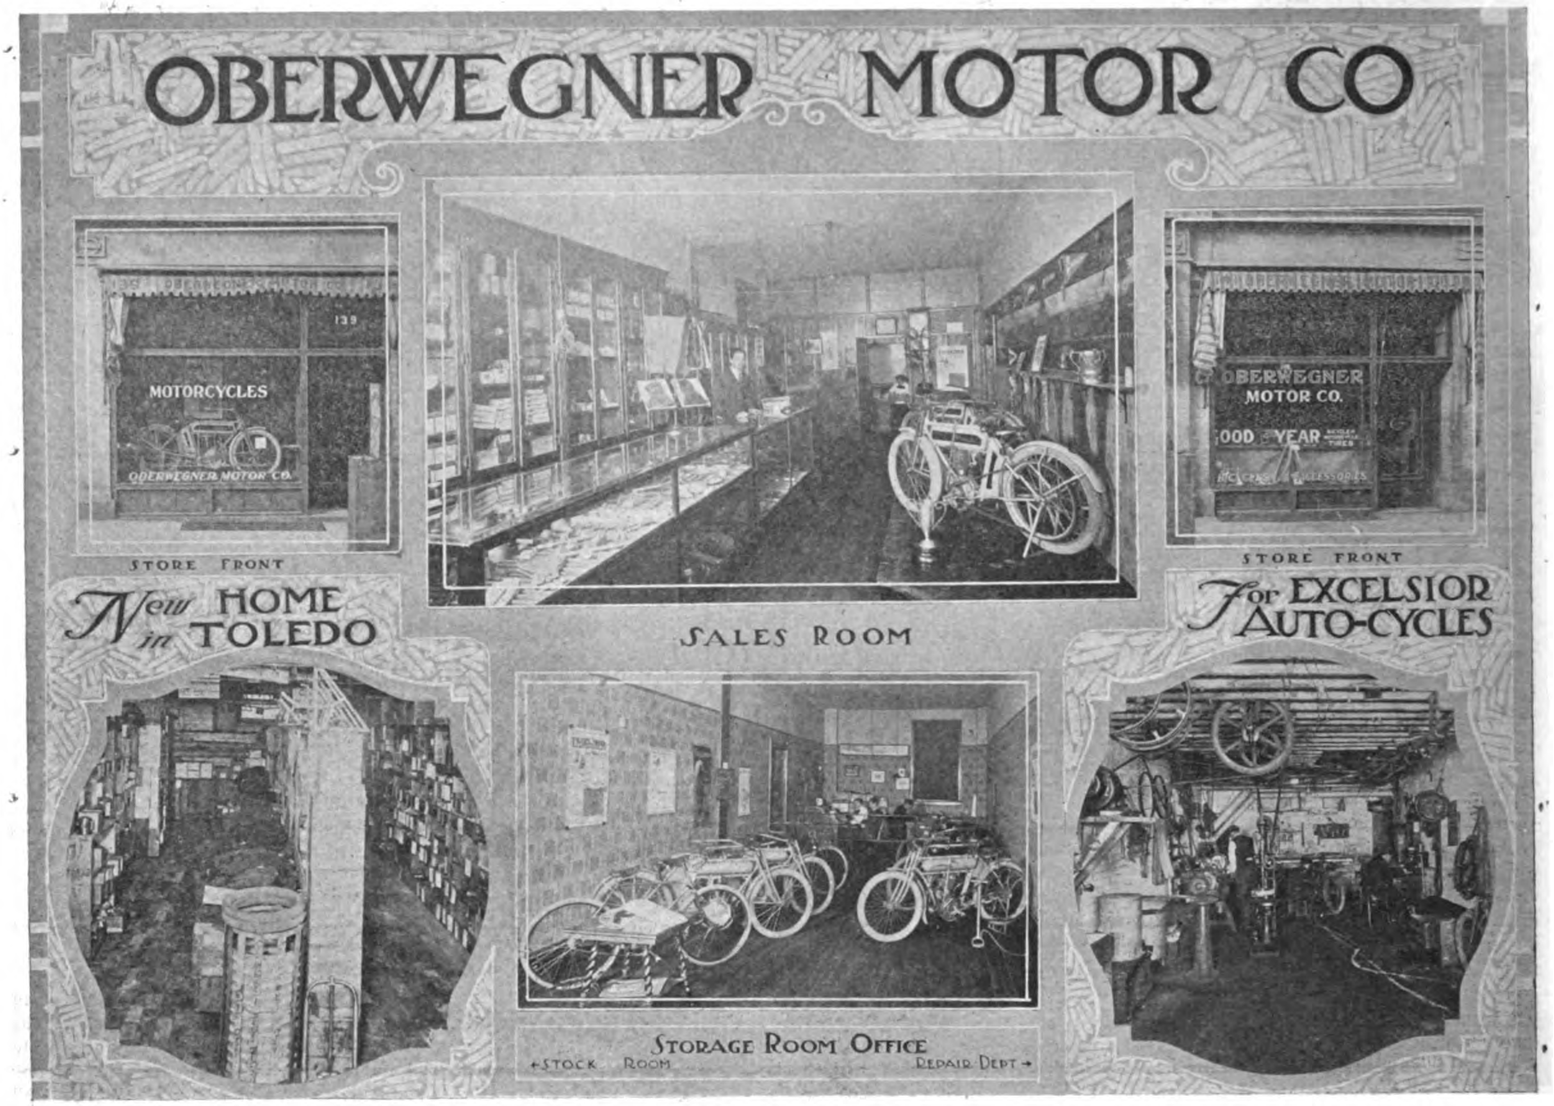
On Monday evening the party was taken to a theater, after a dinner at the hotel, winding up as busy a day as any they had experienced in New York. An impromptu meeting of the visitors was held and a vote of thanks passed to The Hendee Manufacturing Company for the entertainment afforded them.

Among those present were: H. B. Clark, Buffalo, N. Y.; George H. P. Stone, Ilion, N. Y.; Joseph V. Voll, Walter Rothmiller and H. R. Williams, of Lancaster, Pa.; A. E. Gettys and George F. Hewitt, of Harrisburg; A. G. Schmidt, of Pittsburgh; John Rawlings, of Scranton; S. F. Weary, Mt. Carmel; John Sykes, Jr., of Trenton, N. J.; Ed. Stauder and Chas. Daycock, of Rochester.

LISTER BROS., Cleveland, Ohio, have made extensive improvements in their headquarters, and have leased a fireproof building which is to be used as a repair shop.



Dinner Tendered at the Earlington by N. Y. Motorcycle Dealers and the United Cyclists.



HENDERSON DISTRIBUTORS.

IN Eastern territory the new Henderson four-cylinder motorcycle will be represented by the New York and Brooklyn Automobile Supply Company, 1717 Broadway, New York City. The firm's motorcycle branch will be managed by Felix Lewin, who will be remembered for his connection with the Moto-Accessories Company, and as secretary of the Harlem M. C. A demonstrating Henderson will be on view in the company's salesroom about February 20, and riders and prospective buyers are invited to drop in and inspect the machine. In the general line handled by the firm one of the most popular sellers is the "Standard Tire Protector."

INDIAN SUB-AGENCY.

ALTHOUGH their product is already very popular in the Canadian metropolis, the Hendee Manufacturing Company apparently intends to make a big bid for future business in Toronto. Following closely upon the announcement that the main distributing agency for the Indian would, in future, be found in centrally located quarters on Spadina avenue, one of Toronto's big thoroughfares, comes the news that Walter Andrews, the Canadian bicycle champion and agent for the Pierce, situated at 369 Yonge street, has secured a sub-agency for the Springfield flyers.

Toronto, with its more than 500 riders, is generally regarded as one of the liveliest motorcycle towns in the world.

GREW UP WITH BUSINESS

Oberwegner Firm Entered Field When Motorcycle Was New, and Has Kept Abreast of Developments.

IT is one of the proudest boasts of the Oberwegner Motor Company, of Toledo, Ohio, that it entered the motorcycle field when the single-tracker was in its infancy, so to speak, and grew up with the business. The firm has kept pace with the rapid developments of the last few years and is today prepared to meet all the demands of the motorcyclists in its territory. An efficient corps of employees under the direction of A. R. Oberwegner, general manager, and O. J. Oberwegner, manager of sales, handles a great volume of business throughout the riding season. A well-arranged 36-page catalog, full of up-to-the-minute motorcycle assessories, affords an idea of the scope of the company's operations.

Last spring it became necessary to enlarge the headquarters and the facilities throughout were materially improved. That the firm enjoys a wide reputation for fair dealing is evidenced by the large number of mail orders received. This department receives special attention. In addition to being distributor for Yale machines in northwestern Ohio, Southern Michigan and northeastern Indiana the company carries a line of motorcycle accessories, ranging from tire patches to tandem attachments.

DISTRIBUTING EXCELSIORS.

JOHN W. HENRY, president and treasurer of the Vim Cycle & Hardware Company, 137-139 Broadway, Buffalo, N. Y., has closed with the Excelsior Motor Manufacturing & Supply Company, for the distributing agency for Excelsior machines in Western New York and Northern Pennsylvania. The headquarters will be in Buffalo where, in addition to the distributing agency, Mr. Henry will establish a local agency for retailing to the Buffalo trade. The deal is regarded as a highly satisfactory one by both parties. Mr. Henry, besides being enthusiastically interested in the development of the motorcycle trade and advancement of the sport, is one of the best known and most popular citizens of Erie County. He has the reputation of being a great hustler, and it may be predicted with every degree of assurance that the new connection will prove highly advantageous to the Excelsior folks as well as to the Vim Cycle & Hardware Company. The contract was closed by Mr. Henry with Sales Manager Kirk, of the Excelsior Company.

RAPID SHOW SALES.

AT the Indian booth in the New York show one Indian representative booked orders for over 100 Indians in a single day, on signed contracts. Most of these were for immediate delivery, which is unusual for so early a season.

OAKLAND PROMOTERS CRITICIZED

Fans Give Credit for Good Racing But Deplore Management's Attitude Toward Riders--Praise for Referee Carroll.

SAN FRANCISCO, CAL.—Now that motorcycle race series at the Oakland Motordrome is closed fans in this vicinity are expressing their opinion quite frankly concerning some of the "two-penny" methods resorted to by the promoters. To begin with, the series was planned by Jack Prince, but prior to the opening of the meet he turned over the Motordrome to Friedman Bros. Riding contracts were included in the deal, of course, so that the Friedmans held the original agreements between Prince and the racers. No others were drawn up, as far as could be learned.

Three times during the series, while the crowd was on the field and waiting anxiously for action, the riders were forced to "go on strike" owing to the tactics of the management. At first this stand was quite novel but it soon became tiresome. When the turn-out was small the speedsters were asked to ride for less money, and it is stated that on several occasions they did accept less than their contracts called for in order to avoid a rupture which would disgust the race followers. It was when the management finally demanded that the racers ride for the glory of the thing, before a small crowd, that the squad rebelled and started off the grounds.

A baseball game had been slated but the fans refused to put up with it and yelled for the racers. When it became known that there was to be no racing the patrons demanded their money back and the police were called in. No one denies that some mighty classy racing has been seen on the big bowl of late, and that fact only serves to incline the fans more to the belief that it was poor policy to attempt to juggle contracts or give a disappointing program when the crowd happened to be small.

On all sides there is praise for Referee Carroll who was always on the firing line to pacify the riders and keep the promoters as closely within the contracts as possible. Carroll took into consideration the claims of the management, the riders and the crowd and then adopted an impartial course. That he is exceedingly popular goes without saying.

RACERS AT LOS ANGELES.

SAN FRANCISCO, Cal.—Since the closing of the Oakland motordrome many of the riders have gone to Los Angeles where they will await the opening of the new motordrome at that city. Among those who have left San Francisco for Los Angeles are Joe Wolters, Earl Armstrong, Chas. Balke and the two Samuelsons. Raymond Seymour, John Albright and Ed. Hasha are to remain in San Francisco until the racing opens up in Los Angeles.

TO REGISTER SHOP.

SAN FRANCISCO, Cal.—An application for a registered repair shop certificate has been made to the F. A. M. by W. T. Hause, of Napa. Mr. Hause would also like to hear from Secretary Gibson in regard to organizing an F. A. M. club.

INSTALLED OFFICERS.

SAN FRANCISCO, Cal.—The San Francisco M. C. installed its new officers at the last meeting when there was an excellent attendance. After the regular meeting a course of light refreshments was served and the members enjoyed an informal dance.

CALIFORNIA TRADE NOTES.

H. C. PIPER, of Petaluma, who has the Excelsior agency, states that he found business excellent during the past year and has a splendid lot of prospects for 1912. He has placed an order for ten new machines. Piper holds the motorcycle record from Petaluma to Santa Rosa and is very proud of it. He offers a prize of twenty-five dollars for anyone who can lower his time.

STEIGER BROTHERS, of Petaluma, who have the agency for the Indian, are highly encouraged over their business. They have a splendid stock of auto and motorcycle accessories and hold several automobile agencies.

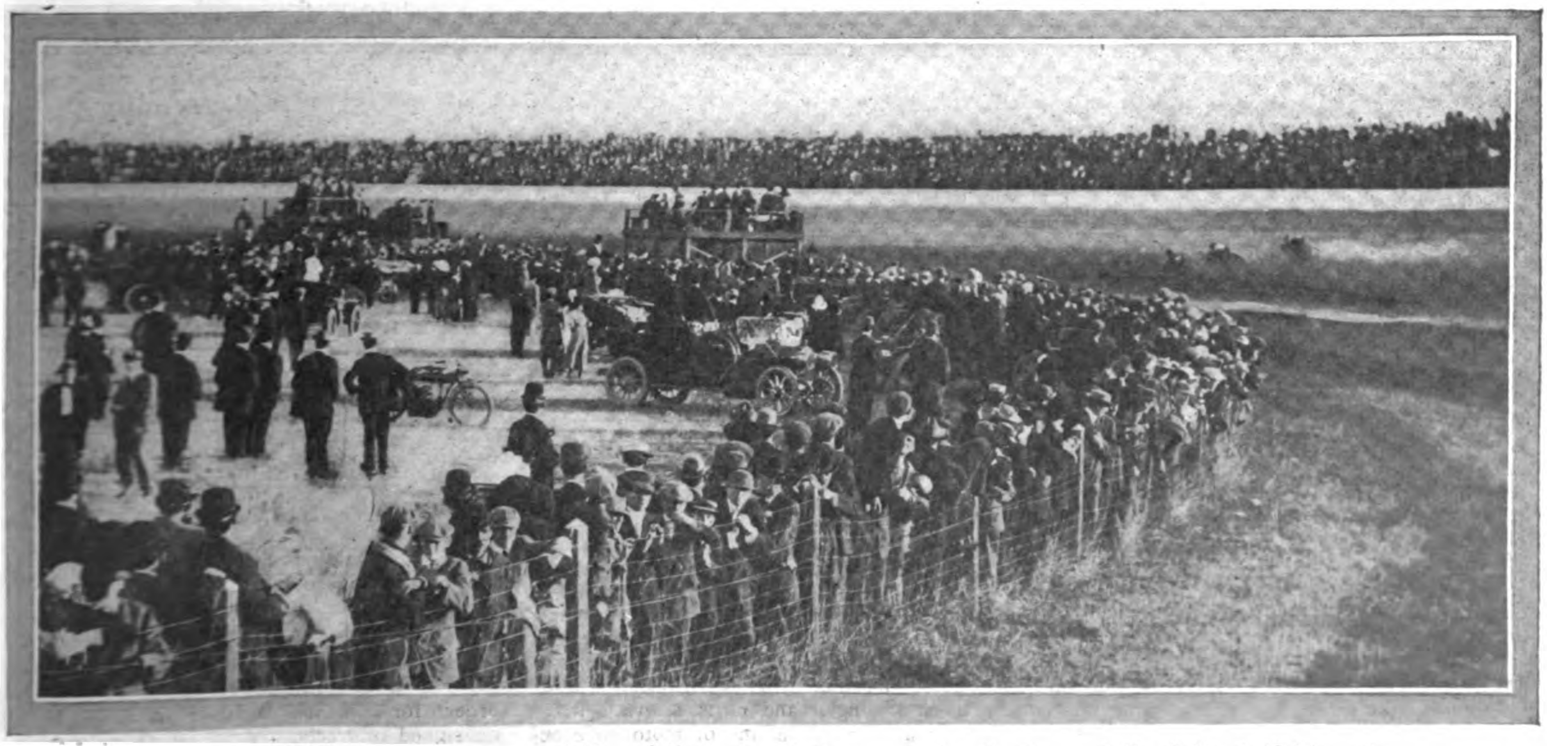
P. F. MARLOTT, of Santa Rosa, has secured the agency for the Excelsior machines in that city. Mr. Marlott has already sold five machines and as soon as his main shipment arrives he intends to wake Santa Rosa up a bit.

THE Indian and Flanders machines are sold in Santa Rosa by the Jenkins Cyclery.

W. T. HAUSE, of Napa, has secured the Excelsior agency and has already disposed of his demonstrating machine and is patiently awaiting the arrival of his order. Napa is famous for the great Napa Soda, and it has some of the largest tanneries in the country. The community is a growing one and financially it stands very high. Trade in motorcycles in this section of California is growing exceptionally fast.

LECTURE SERIES.

SAN FRANCISCO, Cal.—The first lecture of the Wednesday night series at the San Francisco M. C. home proved a complete success. W. J. Collins gave a highly interesting talk, taking for his subpect "Magnetos." This series of lectures will continue for some time and will be both entertaining and instructive. The second lecture will be on "Carbureters" and will be delivered by A. H. Crocker, of the Hendee Manufacturing Company.

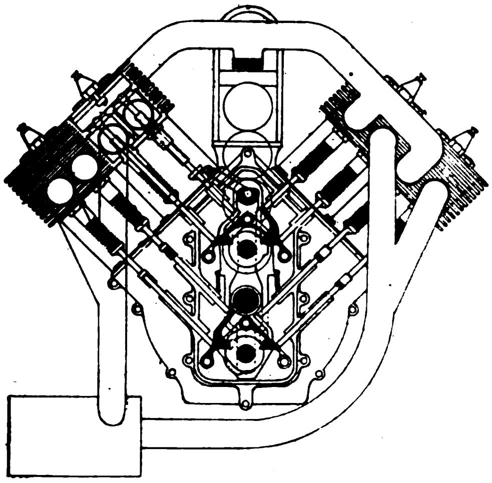


This photograph gives one a good idea of the size of the crowds in attendance at the Oakland (Cal.) meets.

AN INGENIOUS MOTOR

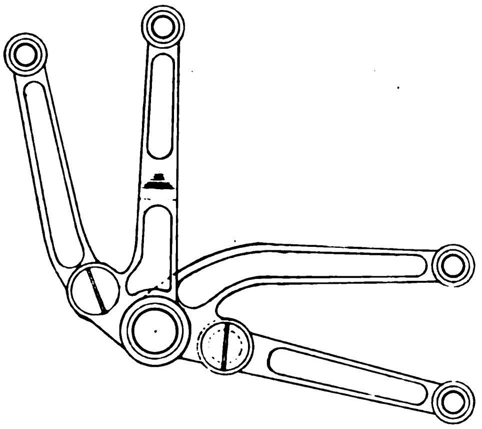
Minneapolis Inventor Outlines Four-Cylinder Engine of Novel Design to Give 10 Horsepower.

A FOUR-CYLINDER, V-type motor with cylinders arranged in pairs vertically, but at 90 degs. between the axes, has been designed by Edward Pommer, of Minneapolis, Minn. It embodies a number of distinctive features, the first of which is the cylinder position; it has the first and second cylinder placed one above the other, and the fourth and third similarly fitted. The connecting rods work on one crankpin, but two big-end bearings only are used, one for each pair of rods. The lower rod of each pair is journaled to the upper on a projection formed on the latter, after the construction used on the four-cylinder 15 deg. Aries bloc motor. Two compound cams are used for valve actuation, the front for inlet and the rear for exhaust. The upper compound cam operates the inlet and exhaust valves of cylinders Nos. 2 and 3, and the lower actuates the valves of cylinders 1 and 4, counting No. 1 cylinder that at the left and lowermost. The inlet rockers are indicated on the drawing of the motor by cross-hatching.



Pommer Four-Cylinder Motor.

The exhaust valves are lifted by a U-shaped piece extending downward in the distribution casing, which has projections catching under the exhaust rockers; two spiral springs serve to keep it down when not in use. This lifter is operated by a cam fitting into the base of the U and actuated by a lever in the usual manner. Of each cylinder, the lower valve and chamber is for the exhaust, and the upper for the inlet valves. Adjustments are provided for only on the valve gearing of the first and fourth cylinders. The ignition is by magneto, driven at cam-shaft speed. The spark-plugs are fitted in the center of the cylinder heads. The inlet and exhaust manifolds can be seen in the illustration, the carbureter being coupled to the short branch just in front of the magneto.



Arrangement of Connecting Rods.

Piston displacement is 84.8 cubic inches, or 21.2 per cylinder. This gives a bore and stroke in the neighborhood of 3 inches each, and the firing sequence is 1-4-2-3. The motor should be well balanced, equal to that of a four-cylinder vertical type. While rated at 10 horsepower it would probably develop considerably more in service. The spread of the motor from rib to rib, No. 1 to No. 4 cylinder, is 21 inches, and the height is 17 inches. The spread would probably necessitate the use of a frame giving a wheel base slightly longer than that on the average machine.

LETTER FROM YOUNG PARISIAN.

JOE ESLER, whose interesting story of his summer tour in Europe with William Streiff is now appearing in MOTORCYCLE ILLUSTRATED, recently received a letter from Charles Friedlander, a twelve-year-old lad, who helped to escort the tourists about Paris on a sightseeing trip. The boy was deeply interested in the tour of the American motorcyclists and in the performances of their machines. Esler forwarded the youngster a Christmas gift.

ELMIRA, N. Y.—A number of interesting motorcycle exhibits will be made at the local automobile show, which will be held in the armory from February 26 to March 5.

REYNOLDS A TRUE BOOSTER.

H. REYNOLDS, Indian agent in Doon, Iowa, is one of the hardest workers in his district for the advancement of the motorcycle. He is deeply interested in road improvements and has spent considerable time of late in paving the way for an F. A. M. club. There are about thirty-five riders in his own county, and with a number of enthusiasts from adjacent territory ready to affiliate, Reynolds feels that an active club will soon be a realty.

MARIETTA CLUB ELECTS.

OFFICERS for the year were elected at an enthusiastic meeting of the Marietta (O.) club January 5. A committee was appointed to establish suitable quarters. The new officers are. President, Edward Baumgartner; vice-president, Earl Oesterle; secretary-treasurer, Blaine Johnson; road captain, Arthur Bender; first lieutenant, G. R. Yoomans; second lieutenant, Raymond Miller.

FOREMAN ESTABROOK ISSUES REPORT

Proves in a Cleverly Arranged Statement That His F. A. M. Shop Gives Big Returns to Customers at Bargain Prices.

WITH a view to calling the attention of dealers to the value of an F. A. M. registered repair shop certificate, Chairman Estabrook, of the membership committee, has embodied a clever idea in the table which is printed below. For tabulating purposes he has taken a list of arbitrary values, which he suggests may be rendered to the repairmen through having their shops registered, the idea being to indicate that the returns to the dealers are great and the outlay inconsequential. The chairman's statement follows:

NATIONAL F. A. M. REPAIR SHOP.

(Open evenings.)

E. M. ESTABROOK, Foreman.

The following jobs have been turned out of late. The first column shows what we consider the value of the work to our customers and the second gives our rates for this class of work. Can you beat them at any outside shop?

	Value to Customer.	Our Prices.
Job 401—W. T. Carter, 3662 South Main St., Los Angeles, Cal	$350.00	No Chg.
Job 402—H. A. Coyne, Main St., Anaconda, Montana	97.52	No Chg.
Job 403—J. G. Nuebling, 849 Penn St., Reading, Pa.	276.81	No Chg.
Job 404—W. F. Bracher, 82 South Second St., San Jose, Cal	207.60	No Chg.
Job 405—J. A. Webster, 112 Monroe Ave., Memphis, Tenn.	196.18	No Chg.
Job 406—Frank Low & Son, 19 East Cota St., Santa Barbara, Cal	204.47	No Chg.
Job 407—J. W. Harper, 1012 Avenue D, Miami, Fla.	280.63	No Chg.

NOTE.—The last job is one we did for J. N. Boyce about three years ago, and it has been satisfactory, but we thought it best to do this job over again, as a thoroughly satisfied customer is our best advertisement. E. M. E., Foreman.

TROUBLES OF A NEWARKER ON THE TRAIL

Rain, Snow and Heavy Roads, Combined with Several Mishaps, Fail to Discourage New Jersey Enthusiast Who Made Impromptu Journey to Massachusetts City.

A. J. DUPONT, a rider of Newark, N. J., writes the following account of a recent trip to Lynn, Mass., on which he encountered widely varying road conditions and some bad weather.

"Having occasion to go to New York by motorcycle on a Monday morning I set forth without the slightest intention of extending my trip beyond the metropolis. However, when I reached the 42nd street ferry something suggested that I might just as well keep to the trail and visit my brother in Lynn, Mass., and without more ado I started. I had no spare parts and was wholly unprepared for a long grind, but I had confidence in my machine and so started the journey in good spirits.

"When I started the weather was all that could be desired, but as I reached Larchmont it began to rain and in a short time the roads were very slippery. Any rider who has traveled the Boston Post road knows that it is not in the best of condition at any time, and that during a storm it offers very heavy going. I dodged and bumped all over the roadbed in an effort to keep traction and when I finally reached Norwalk I was wet to the skin and very stiff. Over the last fifteen miles of rough road I had been practically sitting on the mudguard, owing to the fact that one of the coil springs in my saddle broke when I struck an unusually bad rut. I located a blacksmith shop and would have turned out a new spring had the proper material been available. Thus handicapped I realized that there would be little pleasure in the remainder of the trip, so I decided to go back to Newark, change my clothing, obtain a waterproof suit, spare parts and another saddle and then take up the journey again from Norwalk.

"This plan I carried out and on the following day, Tuesday, I was back in Norwalk, where I had left my machine. Having put on the new saddle and taken on oil and gasoline I was under way about 2.30 p. m. for Hartford, where I arrived at 5.55. I put up at the Palace garage, had supper and then went to see a show. At 8 o'clock the following morning I was on the road again, headed for Boston. Just outside of New Haven I struck a bad stretch of road. It runs through a swamp and for some distance I rode with water up to the crankcase. Later the road improved and the going was quite satisfactory as I pulled into Worcester. I arrived there at noon and ate lunch. Two hours later I was in Boston. I had taken my time on this part of the trip, for I realized that I would not be able to meet my brother in Lynn until 6 p. m., and as Boston was my home town some years ago I decided to put in some of the spare time there. I made a sightseeing trip about the city, and then proceeded to Lynn. My running expenses for the out trip were 55 cents, for oil and gasoline.

"After spending a week in Lynn, during which brother Ed and myself made trips to Gloucester, Marblehead, Nahant and other points of interest, I decided to head my machine for home. Ed accompanied me as far as Boston on the outward run and after a farewell handshake I was alone on the road again. Everything went well until I reached Palmer, where the tube in my rear tire gave way and I was obliged to lay up twenty minutes for repairs. A short time later I struck a rooster who tried to cut across ahead of me, but I came through the mix-up without a fall. I made Springfield on the last drop of gas in my tank and took on a new supply at a garage.

"I had lost the nut off my free engine and made a round of the Springfield shops without being able to find another one suitable. Finally I was obliged to rig up a device with wire and with this arrangement I started off. As I was pulling away from the garage I picked up a nail in one of my tires and had to go back to make repairs. It was 5.15 when I finally left Springfield behind me. Riding out of town in the gathering dusk I took the wrong road and had to go back over my course for some distance to pick up the right trail. I reached Hartford about 7 p. m., just as snow began to fall, and put up there for the night.

"The weather was clear on the following morning, but the roads were in poor condition so I waited until 1 p. m. before resuming my journey. I did some tall skidding between Hartford and New Haven, but managed to escape without a fall. I practically walked through Meriden and then rode on sidewalks, grass banks and ties of the electric railway line into Norwalk, where I arrived at 6.30, covered with mud and very tired.

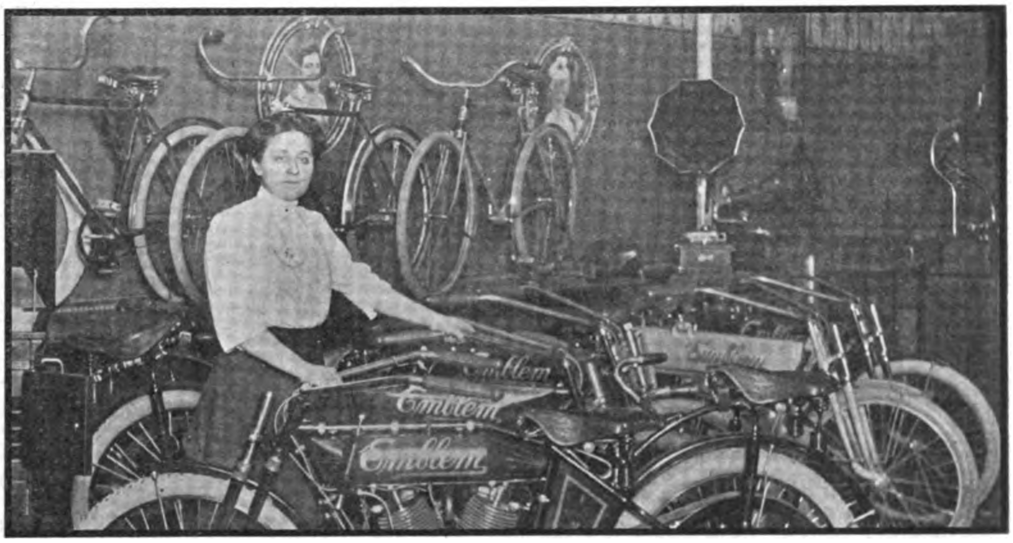
"I pulled out at 9 o'clock on the following morning and while climbing a steep grade in Stamford I met an automobile that skidded as I approached it. In turn my machine slid into a deep rut and broke the frame at the head. I bound up the break with wire and pushed the machine to the headquarters of the Stamford Motorcycle Co. In just an hour we had everything out of the frame and I was on my way to have it repaired. At 6.30 p. m. that evening the repairs had been completed and the machine was reassembled. I started at 8.30 a. m. the following day and was back in Newark at 2 p. m. As will be inferred from my story the trip did not lack spice, and despite the fast that the outing was quite informal it amply repaid me for the road trouble I have referred to."

AN ECONOMY RECORD.

FINDING that a motorcycle can be operated satisfactorily at an outlay of $3 a month, the Monroe (Wis.) police department has added two more machines to its equipment.

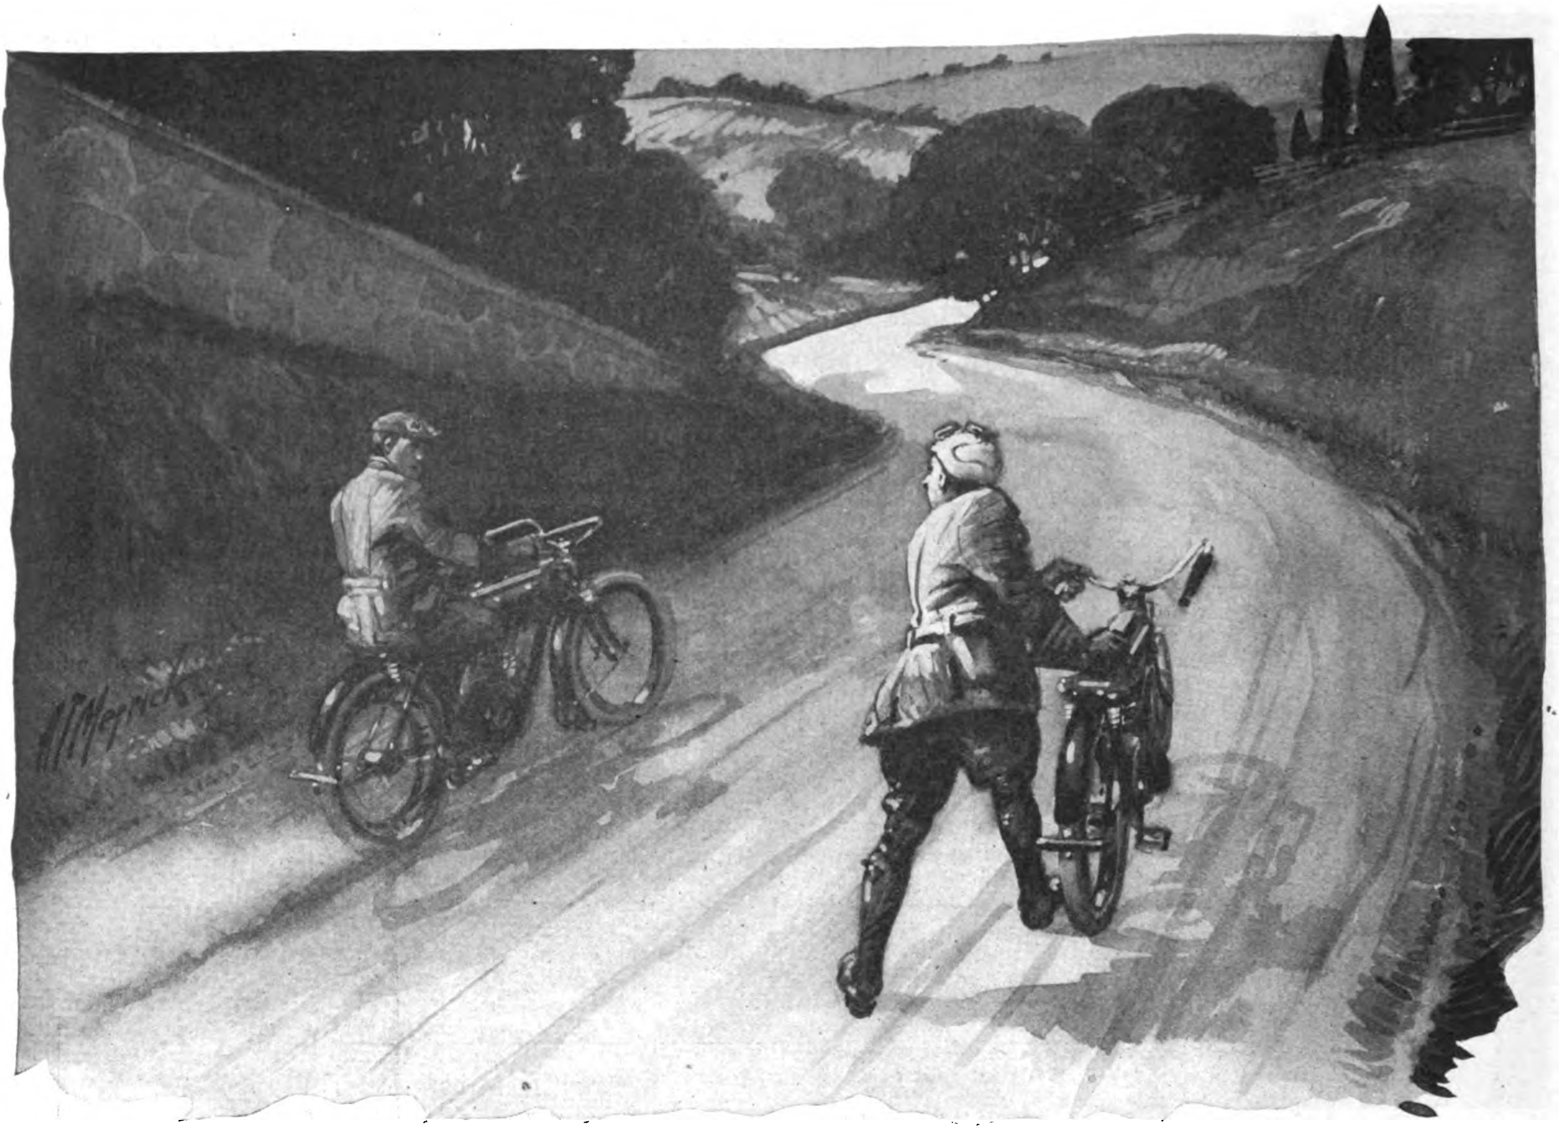
RACES DISCONTINUED.

SAN FRANCISCO, CAL.—Because of the inclement weather the races at the Oakland Motordrome, at Elmhurst, have been discontinued, much to the disappointment of the fans who have witnessed some unusually fine racing exhibitions on the bowl of late. However, racing will soon be resumed.



A COLUMBUS SALESWOMAN.

MRS. W. H. SNYDER, wife of Manager Snyder, of the American Machine Co., 338 North High street, Columbus, Ohio, is probably the most successful motorcycle saleswoman in this country. This does not mean that she has merely stood by while the power two-wheelers were being sold in the American company's headquarters, but that she has actually handled sales throughout the season and obtained results. During the 1911 season she sold half a dozen Emblems without a word of help from the male members of the staff, and has demonstrated her ability to explain the make-up and operation of the machines from A to Z. Mrs. Snyder attends to all the details connected with her sales except teaching the beginners to ride, and she asserts that she would do this also if permitted. She is an enthusiastic rider and often accompanies her husband and the Columbus M. C. on long runs over all kinds of Ohio roads.



"What's the matter; shy of horsepower?"—Don't know, but she's got plenty of mule-power, all right."

TO BUILD HEAVYWEIGHT.

ALTHOUGH J. W. Gibson, manager of the bicycle department of the Canada Cycle and Motor Company, of Toronto, took a trip to New York City during the big show to look over the 1912 offerings, it is denied at the head office of the firm that the company has entered into negotiations with certain American manufacturers for the turning out of machines on the Canadian side of the border. It was intimated, however, that an announcement would soon be made concerning the future motorcycle policy of the company, the expectations being that a heavyweight machine will be produced. All of this, however, is simply surmised.

BUILDING WASHINGTON ROADS.

IT is now possible to travel from Lake Cushman, in the heart of the Olympic Mountains, in Washington, to the Pacific ocean by motorcycle. The government has been quietly working and has completed a wide, level trail along the line of the old McNeil survey, made in 1882. It is the intention of the government to build such a trail from Longmire Springs, near Mt. Tacoma, to Mt. Adams, on the west side of the Cascades, and thence to Mt. St. Helens. A trail from Hood's Canal to Lake Cushman, west through the Olympic reserve to the Quinalt reservation, has also been mapped.

A MIDNIGHT JAUNT

St. Joseph Squad Started in Snow on New Year's Eve and Rode into First Day of 1912.

ONE of the clubs that helped to ride the new year in was the St. Joseph (Mo.) M. C., its members participating in a city run which started shortly before midnight on New Year's eve and extended into the first day of 1912. Those who took part in the jaunt were: G. Smith, 7 h. Indian; B. Reese, 7 h. Indian; E. McCarthy, 7 h. Indian; C. Martin, 7 h. Indian; E. Young, 5 h. Indian; J. Maier, 5 h. Indian; G. Reese, 5 h. Indian; J. Hanke, 4 h. Racycle; E. Clark, 6 h. Harley-Davidson; G. Wenda, 4 h. Minneapolis; W. Young, 4 h. Thor; T. Dixon, 4 h. Thor; H. Wenda, 6 h. Thor; R. Herndon, 6 h. Thor; J. Schneider, 2¾ h. Indian.

Although there was ten inches of snow on the ground and the temperature about two below zero, the riders managed to keep their equilibrium by riding between the street car tracks. The club is rapidly coming to the front and has over seventy-five members.

A CHILLY RIDE.

H. A. CONVERSE, of Minneapolis, Minn., claims a unique record. He recently rode his motorcycle with the mercury 20 below zero.

FOR GOVERNMENT SERVICE.

A 1912 HARLEY-DAVIDSON, with Ful-Floteing seat and free wheel control, has been purchased by the Government for use in connection with the United States Reclamation Service at Boise, Idaho. Several other Harleys are already in Government service; the officials of the Philadelphia Navy Yard and the Geological Survey have several of them and the United States foresters in Oregon are also using them.

COLE TO RIDE MERKEL.

HAROLD COLE, Toronto's leading track artist and holder of the 25-mile Canadian championship trophy, has been secured to ride the Flying Merkel in next season's events, according to a semi-official announcement. Cole, who is undeniably a top-notcher in spite of youthfulness, was originally an Indian enthusiast and later switched to the Reading Standard. The change introduces an entirely new phase to the Canadian racing situation, as the youngster is one of the nerviest riders in the Dominion.

ALL-YEAR SERVICE.

FOR quick delivery of milk in the winter and ice cream in the summer, the Pacific Dairy Company, of Tacoma, Wash., recently bought a Flying Merkel motorcycle. The machine has already demonstrated its utility.

SHARE PROFITS WITH STAFF.

THE New York Sporting Goods Company, with headquarters at 15-17 Warren street, New York City, has put into effect an employees' profit sharing plan which promises to increase the efficiency of its already competent staff and work for more rapid business increases in the future. The board of directors has declared out of the company's earnings for 1911 a bonus to be distributed on a basis of length of service, ranging from 1 per cent. of the salary of an employee who has been with the firm one year, to 7 per cent. for the employee of six years' service.

FENTRESS IS DISTRIBUTOR.

FRANK P. FENTRESS, for years in the bicycle and motorcycle business in Tacoma. Wash., has been made direct factory agent in Tacoma and Pierce county for the Excelsior motorcycle. He is expecting his first shipments of 1912 models early in February. The outlook is better than ever.

WANTED "HOODOO 13."

New Era Official Refused to Accept Any Other License Tag, and Finally Made an Exchange.

WHILE most persons throughout the country are trying to dodge the number 13 in all its phases, J. A. Campbell, sales manager for the New Era Auto-Cycle Company, of Dayton, Ohio, has been going to considerable trouble to get into close contact with the alleged hoodoo. When Mr. Campbell visited the Mayor's office recently to obtain a license tag for his motorcycle he spoke for No. 13 and was informed that it had been taken by another Dayton motorcyclist, D. W. Dodson. Campbell refused to take any other number, even frowning on the popular 23, and intimated that he would have No. 13 or move into another city where he could have his wants properly filled.

Finally he visited Mr. Dodson with a view to having him relinquish the number, but Dodson was just as determined to ride a motorcycle with a No. 13 license tag as Campbell was. The situation began to assume a serious aspect, for both Campbell and Dodson rank with the most active and popular riders of the city, and there were indications that one of them would either have to forego riding during the coming season or put up with a common, unpedigreed number with no family history and not a hoodoo to its name. However, Campbell continued his dickering until Dodson recalled having heard several queer stories about number 7. He agreed to take this number and turn over the fateful 13 to his rival, whereupon there was much rejoicing in the Campbell clan. The latter hurried to the Mayor's office, had No. 13 transferred to his name and went forth convinced that nothing now stands between him and a season of pleasant riding.

Riders of the Marietta (Ohio) M. C. recently elected Edward Baumgartner as their president.

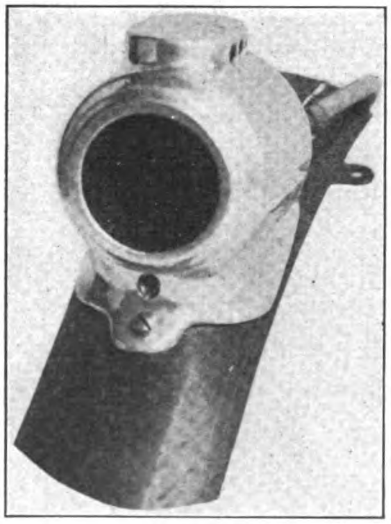
PICTURES TELL THE STORY.

EIGHT years ago B. F. Conner, of Wilkes-barre, Pa., first made a bid for motorcycle business in his city, and the accompanying photographs show how successful his efforts have been. Recently he moved from the small establishment to a modern building of his own which, as the picture indicates, will allow him to meet all the demands of his patrons for many years to come. The new headquarters is located at 21-23 Hazel avenue, and Conner announces that the latch-string is always out for visiting motorcyclists as well as those of his own district.

STAR SPECIALTIES.

NEAT in appearance, light, but sturdily built, and guaranteed as to its dependability, the improved tail lamp now being marketed by the Star Electric Company, No. 18 May street, Chicago, Ill., is rapidly coming into favor with riders. While intended primarily for fitting to the rear mudguard, the lamp furnishes sufficient light for use on the head of a machine, and is being used in that position by some machine owners. It is furnished with a reflector to throw light upon the number plate of the machine when used as a tail lamp, and may be had with either white or red lens.



Star Tail Lamp.

Another specialty for which the company is finding a demand is its pedal step, designed for use when a luggage carrier is to be used for the carrying of a passenger. The step can be supplied for any make of coaster, and will add greatly to the comfort and safety of an extra rider on any machine not fitted with a regular tandem attachment.

Star Pedal Step.

NO VALVE CHANGES

Tire Expert Points Out that Construction of Inner Tube Valves Has Not Been Improved in Twenty Years.

AN old tire man who has followed the development of motorcycles and automobiles for years, has the following to say regarding valves:

"It is a remarkable fact that the valve insides today are the same as were used twenty years ago on bicycle tires. In fact, the valve is about the only individual part of tube construction that has not been greatly improved.

"My observation is that a great deal of tire trouble is due to leaky valves, and this is particularly annoying, because frequently the real cause is not discovered until after the casing has been taken off. In any event, the only remedy is replacing the valve-inside, and this necessitates pumping an empty tube. Furthermore, if the inside sticks, it is more than likely that the little prongs at the top will be twisted off so that the inside cannot be removed at all.

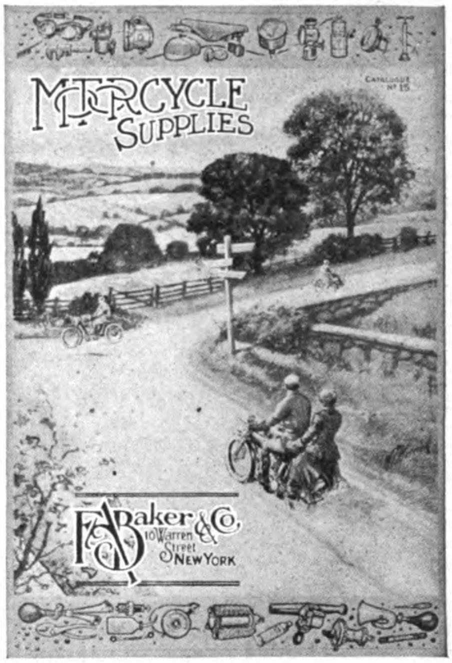
"Often, assuming that no difficulty has been experienced in taking out the inside, a new inside will not remedy the trouble, because the small external rubber washers rot and stretch so fast that they are quite likely to be defective, although apparently in good condition. Furthermore, the inner metal shoulder in the outer tube, against which this washer seats, may be burred or worn, and the least defect will cause the washer to tear.

"Great care is needed in inserting the inside, because it must be screwed tight to seat the washer, but if screwed too tight it may tear the washer. I have put into the same tube two or three new insides in succession without stopping the leak, and the pumping involved produced as much perspiration as would result from an equal number of punctures.

"I have also seen persistent leaks through the check valves themselves. These valves are so small that it is impossible to tell by inspection whether they are defective or not, so that it is a matter of luck whether or not a new inside will remedy the difficulty. The small size of the inflating passage and the proportionately large back pressure area result in the use of a great deal more muscle in pumping than ought to be necessary."

TRENTON MOTORCYCLE SHOW.

PLANS are now being perfected for a motorcycle show, to be held in Trenton, N. J., and unusual interest is being aroused in connection with it. The committee is meeting with entirely satisfactory returns, and there are indications that the exhibition will be by far the most successful of its kind held in the New Jersey capital.

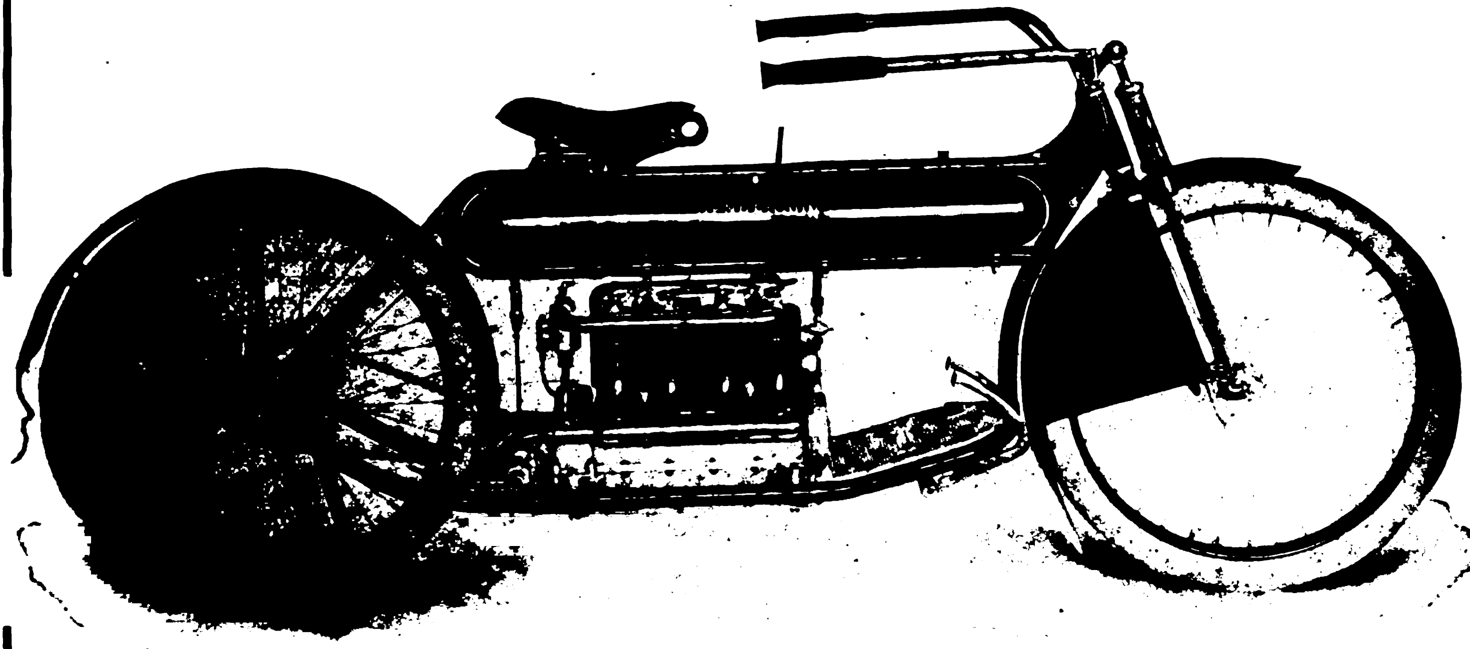


Attractive Cover of Baker Catalog.

WITH the aid of a motorcycle Casper Jaeger, of St. Louis, Mo., recently set a new elopement record. With Miss Clara Bafunno occupying the tandem seat on his machine Jaeger cut out a 30-mile clip from St. Louis to Clayton, obtained a license and was married, the entire performance being planned and executed in an hour.

THE Jacksonville (Fla.) M. C. has grown during the last year from a membership of twenty to a hustling squad of eighty riders, and its 1912 plans promise continued increases.

THE SENSATION OF THE NEW YORK SHOW



THE HENDERSON

4 Cylinder ═══ 7 H. P. ═══ $325.00

The most wonderfully flexible motor on any motorcycle. It throttles down lower than any machine on the market and responds to the throttle quicker. It has a wide spark range, giving a fat, hot spark in retard as well as in advance position. This means **maximum efficiency all the time.**

Be Sure to See It at the Chicago Show Before Ordering for 1912

Tandems $11.50

Spankers $8

Tandems With Saddles $16.50

MR. DEALER Write for Discount

The tandem is so constructed that the rider's feet move up and down with the body, thus preventing any bending of the knees.

The tandem is made to fit any motorcycle. Will not interfere with the stand. It has no side play, but has an up and down motion of three inches.

The Spankers are the "best ever."

We are the Pioneers in the Spring Attachments and have had them in the market for five years. All others are imitations.

Try on These Gloves at the Auto Shows

You'll find the

GRINNELL GLOVES

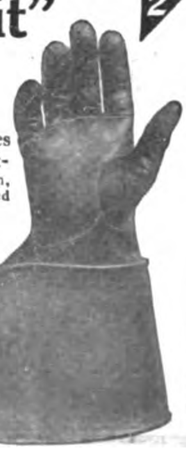
at the following Show Locations

CHICAGO — Jan. 27 to Feb. 3
Armory Gallery. Space 33

BOSTON — March 2 to 9
Paul Revere Hall. Mechanics' Building

We want you to see our new styles of

Grinnell "Rist-Fit" Auto Gloves



See what a classy, up-to-date line of Auto Gloves we are putting out. See the soft, flexible Coltskin and "Reindeere" leather, guaranteed never to harden, shrink, peel or crack. See our patented **"Rist-Fit"** (pointed out by arrow 1). See the **Ventilated Back** in our summer gloves — see our new style with reinforced palm (arrow 2); see the big, roomy cuffs and warm linings of our winter gloves.

If you do not attend the Auto Shows write for New Style Book and Samples of leather.

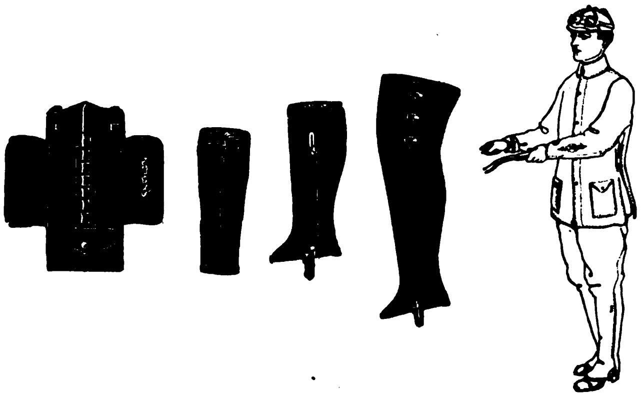
THE ART
OF SUCCEEDING

Hundreds of dealers are on the road that leads to Success. Are you? They have learned the secret: True Success lies not in selling cheap and inferior goods, but in holding the trade and customers made by giving them honest and reliable merchandise. That is the only kind we manufacture and our business reputation stands behind it. Out of the thousands of leggins sold by us last year only one pair was returned.

NATHAN'S

"This is OUR trade-mark
and is YOUR guarantee."

1912 will be a Banner year for dealers. Get your share of the big business by ordering a line that builds business and is known from coast to coast. Send for new 1912 catalogue containing descriptions and price of all styles of leggins, the well-known Koveraul motorcycle garment and many other specialties. It's free. Ask us for prices, but you will learn more about quality by sending us a sample order.



NATHAN NOVELTY MFG. CO.
84A Reade Street, New York City

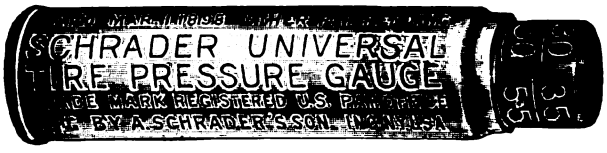
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

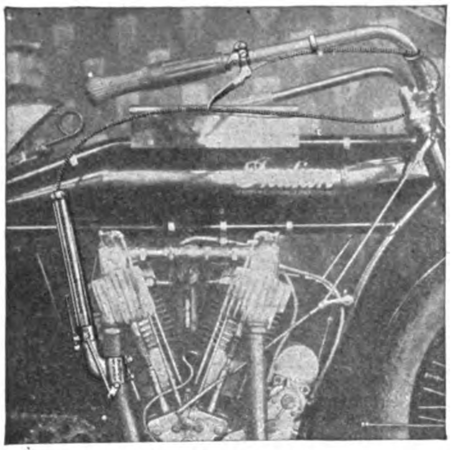
Purdy Motorcycle Whistle

"PROTECT YOURSELF AS WELL AS THE PUBLIC"



MODEL "B"
Handle Bar Control
A brand new addition that will create a sensation among the riders. It's a "hummer."

The warning that **actually** "warns"—far enough in advance to insure a clear road without the necessity of a "slow down" or an accident.

The patent butterfly valve does the work—forces the **FULL** exhaust through the sound chambers—producing a loud and penetrating warning that commands instant attention—startles the "drowsy driver" a half mile in advance.

You can't afford to be without a "Purdy."—Ask any rider using one. His testimony will convince you.

Descriptive booklet free on request.

Attachments for all motorcycles—finished in a combination of dull and polished nickel plate. Price complete **$6.00,** either model, including "money back" guarantee.

MODEL "A"
Lever Control
The whistle that was tried out last season and found 100% efficient—now used everywhere.

DEALERS—This is a live one. Our proposition will interest you. Write *today*

THE NEW

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

This and other new types of New Departure motorcycle coaster brakes can be seen at Space No. 223, Balcony, Madison Square Garden.

if you're a dealer with initiative and action. Here's a chance to make a nice snug profit by a little promptness and push.

TIRE SHOES

guaranteed to be in A1 condition 28 x 2¼ but which will fit 28 x 2½ rims, Goodrich, G. & J., M. & W., and Hartford, Single and Double Clinch; Bailey Tread, Basket Weave, Studded and Corrugated

AT THESE VERY LOW PRICES

26 and 28 x 2¼, $3.50.

Bailey treads, 25c extra.

Write for complete list of Bargain Prices

A rider can get splendid use from these shoes and pay very little money. They will certainly tide him over a good many months and more. We bought a large consignment, at a low figure, so can offer them at much reduced prices. It's a snap that ought to be snapped right away.

HERE'S ANOTHER

$125.00 buys the Model A, **MERKEL LIGHT,** a motorcycle of sterling quality and fine running ability—brand new, of course. This machine hasn't some of the minor refinements of the regular Model Merkel, but is a high grade motorcycle in every way.

SPECIFICATIONS

Frame—22-inch truss loop, latest style; 14 and 16 gauge tubes; double top bar. Forks—Light special cushion. Motor—Thor, 2¼-2¾ H. P. Transmission—Chain (⅝-inch pitch roller). Handle Bars—With double grip control. Ignition—Special coil, standard batteries (3). Tank—(3 in 1). Contents, 5 quarts gasoline, 1 quart oil, 3 standard batteries. [*Notice.*—The arrangement of batteries is so simple and positive that there is no chance for short circuit or loose batteries.] Coaster Brake—Thor. Wheels—28-inch, steel rims; 26-inch wheels optional. Tires—2¼-inch Morgan & Wright or Kokomo. Finish—Rubens red; option black. Grips—Light, flexible. Saddle—Empire No. 3. Pedals—Standard rubber motorcycle No. 3. Wheel base—54 inches. Speed—5 to 40 miles per hour.

Transmission Efficiency

The service of a motorcycle depends primarily upon the power delivered to the rear wheel. No matter how powerful the motor, its work is wasted unless it is used right. For consistent, effective service the transmission must be absolutely dependable and of maximum efficiency. The racing men recognize this and practically all use

DUCKWORTH CHAINS

on their machines. Efficiency is as important on the machine for road service as on the racer. Insist on the best. Be particular. Say "Duckworth" to insure transmission quality when buying your new machine. Duckworth chains have the WEARING QUALITIES. Duckworth Repair Links are in demand by riders. Why? Simplicity and Sureness.

It will mean money saved in a season's riding to find out more about this. Information free. Write us.

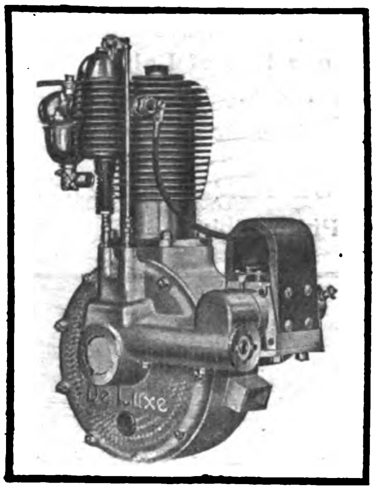
A REVOLUTION
IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

FEDERAL TIRES

Comfort—Safety—Speed Mileage

Motorcyclists who demand these qualities recognize Federal Motorcycle Tires as the tires that best meet their expectations.

The undeniable quality of Federal Motorcycle Tires tells in the long and satisfactory service they render in actual service under every conceivable road condition—their extreme durability emphasizes the quality built into them.

Federal Motorcycle Tires are made from the highest grade materials and with the same skill, brains and experience that enter into the making of Federal Automobile Tires.

Investigate Federal Tires and you will quickly distinguish the difference between them and ordinary motorcycle tires

ENGINEERING DEPARTMENT

January 26, 1912.

Graton & Knight Mfg. Co.,
Worcester, Mass.

Gentlemen:

As you no doubt are aware we for the past three or four years have been using a number of your Spartan motorcycle belts and it gives me great pleasure to say that these belts have given us and our customers the very best of satisfaction.

When one realizes the difficulty met with in running a belt which must be thick enough to stand the strain over a small engine pulley it is somewhat surprising to find the length of time one of these belts will give good service.

The complaint that we have received from our riders are very few and on account of the fact that we are manufacturing motorcycles and not belts this is very interesting to us.

Yours very truly,
The Miami Cycle & Mfg. Co.
J. F. Merkel

Gentlemen:

Just a word in regard to Spartan belts which we are using on the Pope Motor cycle. We are receiving excellent reports from our motor cycle riders, and experience has shown there is very little stretch or wear on a Spartan V belt.

We have tried several other makes but consider the Spartan belt best of all. We are so well satisfied with it that we shall use it on all V belt drive machines for the season 1912.

Yours very truly,
The Pope Manufacturing Co.,
Westfield Factory.

SPARTAN

WE ARE TALKING TO YOU

fairly and honestly, jobbers, dealers and riders, when we say that the letters reproduced on the opposite page were written willingly and the opinions expressed are but similar to those of **many thousands** of Spartan Belt users.

JOBBERS, DEALERS and RIDERS

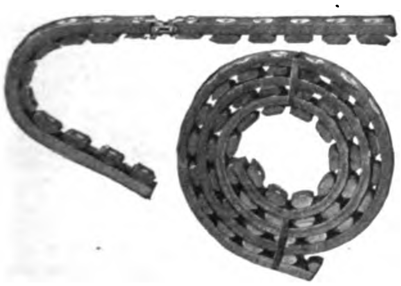
you little realize the cost to us of producing the **best belts made.** By substituting inferior stock, displaying less care in the selection of the choice parts of quality hides, by giving less time to the special tanning and to the many phases of manufacturing and by employing unskilled labor we could

SAVE THOUSANDS OF DOLLARS

But to do this would be to renounce a business policy of 61 year's standing: "Produce only the Best."

SPARTAN BELTS

will always be made for producing a high standard of transmission efficiency. Spartan Motorcycle Belts are designed and manufactured especially for the severe service of motorcycle drives.



SPARTAN "V" BELT.

FOREMOST IN MILEAGE and LONG WEAR

Practically stretchless on account of undergoing many stretching processes before completion.

Exceptionally efficient because of careful selection of choicest parts ***only*** of quality hides and the special design and construction used.

Long Wear and ***Great Mileage,*** on account of quality material, design and special secret tannage, making them unsusceptible to atmospheric conditions, heat, cold, oil or water. You will now readily see the reason for

80 PER CENT.

of the total number of motorcycle manufacturers equipping their 1912 belt-driven motorcycles with these belts.

SPARTAN FLAT BELT.

It costs nothing to investigate. Will you call on your dealer, at one of our branch stores or ask us direct?

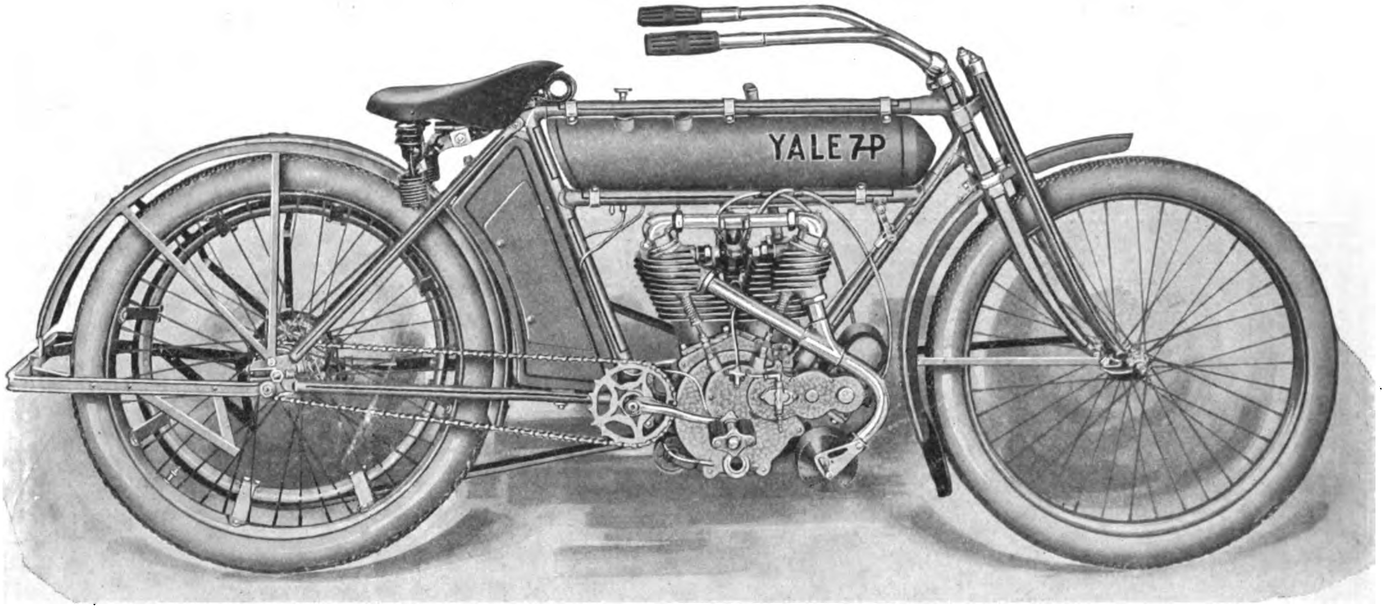
The Flaming Banner of Yale Quality fection, Unattainable when Producti

Ten Good Things That Make The

1. Long stroke motors with horizontal flanges. 2. Improved fork with anchored handlebar. 3. Yale-Eclipse free-engine clutch. 4. Perfected mechanical oiler on twins. 5. Eccentric chain adjustment.



Model 27, 7 H. P., $285

WHERE THE QUALITY LIES

THERE is no mystery, nothing intangible in Yale quality; it is dominant, visible and readily proven. It is derived from four essential features: Correct design, the highest possible grade of material and skilled workmanship aided by modern automatic machinery.

Eccentric Chain Adjustment

Affords an accurate chain adjustment without the use of any special tool. One turn of the yoke takes up one link of chain. The slotted rear fork, a backward movement of the rear wheel sufficient to take up a 3 in. stretch in the belt. Extra chain links are furnished free with each machine.

Eclipse Free Engine Clutch

The only tried and thoroughly developed free motor device on the market. It is extremely flexible and grips easily and gently, but holds positively when fully engaged. The method of operation is an exclusive Yale feature that affords extreme accuracy of adjustment.

Yale Tanks

The fuel tanks of the Yale need no introduction to experienced motorcyclists. They are cylindrical in form and heavily reinforced, with a gasoline capacity of 2 gallons and oil 2 quarts.

Motors

Yale motors are primarily built for power and reliability and have proved their supremacy in every hard practical test. The leading mechanical features are long stroke, perfect balance and horizontal flanges, backed by correct design and finest material and workmanship throughout. A serious trouble found in all motors so designed or placed that the flanges set obliquely is overheating, due to the air passing by the edges of the flanges instead of between them and thus failing to take away the heat of the cylinder. To overcome this we have so arranged the flanges on our twin cylinders that they lay horizontally, allowing a free passage of air with maximum cooling effect.

Frame

It is a mechanical axiom that there is no strength in a curve. We therefore adhere to the stricly straight line frame, yet attain as low a saddle position as in any road machine with 28-inch wheels.

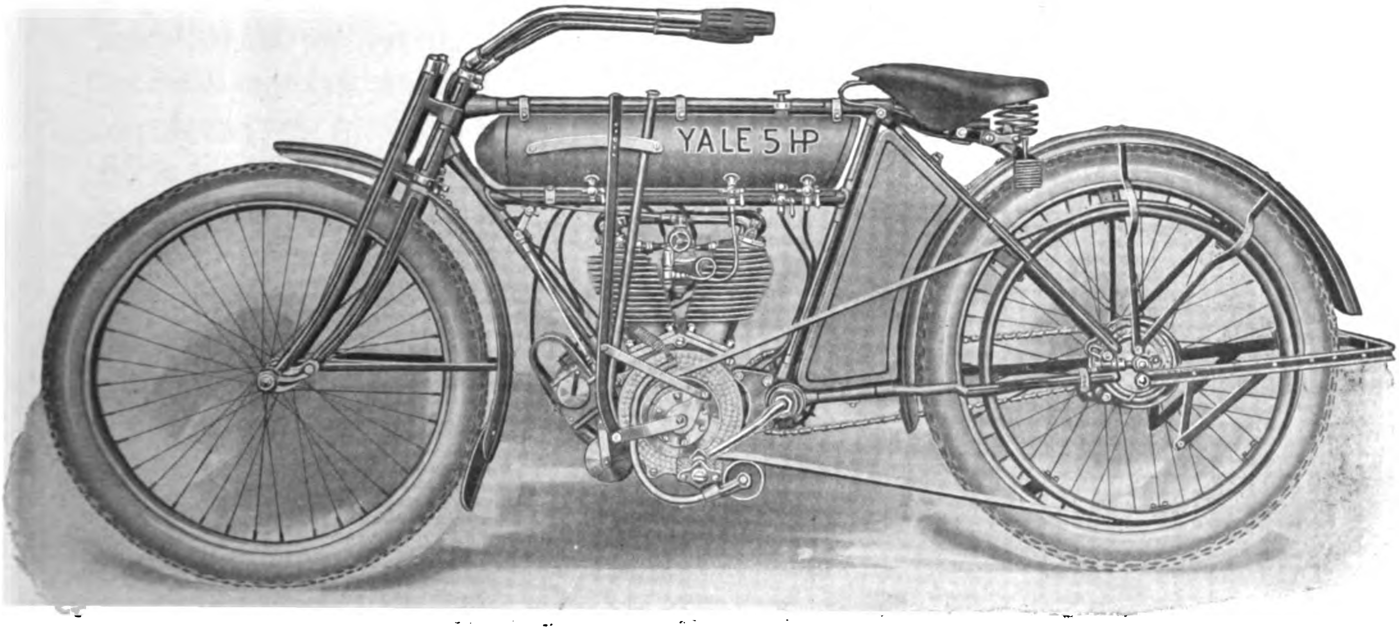
THE Y-A SHOCK ABSORBER—

THE CONSOLIDATED MANUFACTURING CO

Stands for Absolute Mechanical Per-
on is Limited by a Fixed Selling Price

1912 YALE *Better Than Ever*

6. Extra wide automobile style fenders. 7. 2¼-inch Studded tires on all models. 8. 10-12 gauge extra heavy spokes, nickeled on copper.
9. Improved patented enclosed grip control. 10. Priming cocks on twin motors.



Model 25, 5 H. P., $260

A MECHANICALLY PERFECT MOTORCYCLE

All fittings are drop forgings made in our own plant from steel especially selected for the purpose and scientifically heat treated. There are no malleable iron castings or pressed steel fittings used in the construction of the Yale.

Yale Spring Fork

The Yale fork has always been good and in 1912 is still better. Fork sides are carried up to the handlebar, engaging lugs extending downwardly from the handlebar forging. The three point anchorage thus attained is positive assurance against the bar turning under any conditions. Fork sides are thoroughly reinforced and the main and cushion fork are joined by a powerful straight-line forged connection.

Head Fittings

Extremely large, with ¼-inch balls—cups and cones are turned from fine stock and case hardened.

Improved Grip Control

We use a new locking device which holds the valves open absolutely at the will of the rider.

Automobile Type Mud Guards

A very desirable addition and rendered necessary by the Yale's big tires. They are full 4 in. wide, and afford perfect protection under all circumstances.

Large Tires

A necessary provision in view of the increasing vogue of tandem riding. Yale tires are really small automobile tires, and are 2¼ in. instead of the customary 2½ in. This gives 10 per cent. more air for cushioning purposes and 300 lbs. carrying capacity per tire, which is one-third more than the 2½ in. tires. They may be ridden softer than a smaller tire, have more resistance to skidding, are less likely to rim cut, are more comfortable for the single rider, have increased fabric as well as more rubber, and weigh only 18 ozs. more than common tires.

Power Transmission

Flat or V leather belts as desired. Yale flat leather belts are 1¾ inches wide and *extra heavy* double ply. Our V belt is the celebrated 1⅛ in. Spartan. On all flat belt models the rear belt rim is lagged with an endless piece of leather securely fastened by our process.

Large Spokes

The increasing use of tandem attachments demands a stronger wheel than is in common use, and to meet this requirement we have increased the gauge and number of our spokes. The front wheels now have 36 spokes and the rear wheels 40. The spokes are made to our order and specifications of the finest quality of steel ever used for this purpose.

Brakes

Regular equipment, Eclipse motorcycle coaster with option of Corbin band or Musselman.

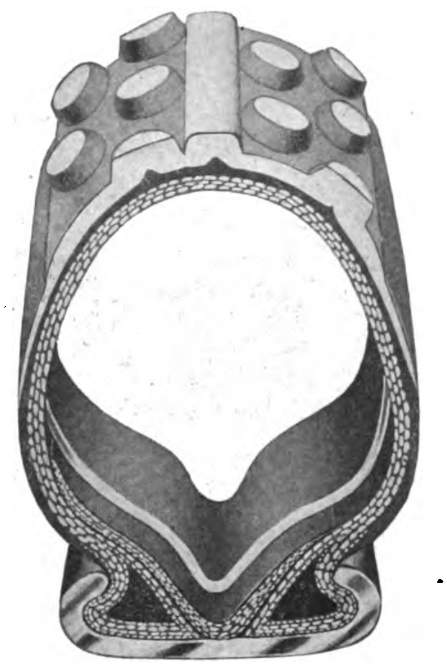
THE SHOCK ABSORBER THAT ABSORBES THE SHOCK; regular equipment on all 1912 Yales. The only mechanically correct shock absorber built. One spring is good, two vanadium steel springs are better. No side motion. No jar. Low saddle position. See it at the Chicago Show.

MPANY, 1730 Fernwood Ave., TOLEDO, OHIO

Get A Big Tire

WE have already said something about the importance of using big tires. Now we wish to emphasize that point. Next to using ***good tires*** and taking proper care of them, the surest way to tire economy is to use big tires.

Time was when small tires could carry the load. But heavy machines, extra luggage, tandem-riding and high powered engines have doubled and trebled the strain on the tires. Big tires are now an absolute necessity.



Larger tires mean more air to absorb shocks, and greater tread surface to withstand wear. Larger air capacity will always mean more comfortable riding.

We make two tires larger than the standard 28 x 2 1-2 inch tire. The 28 x 2 3-4 inch road weight, three-ply, is recommended as a big improvement over a 28 x 2 1-2 inch tire under any conditions. The 29 x 3 tandem weight, four-ply tires are for tandem riders, tourists, and those who carry heavy loads or ride on bad roads. They are made with four plies of fabric—with the famous White Tread of course. They resist punctures.

These tires will fit a 28 x 2 1-2 rim. But be sure that there is sufficient clearance between the tire and mud guard, without danger of clogging in muddy weather.

A Goodrich White Tread Motorcycle Tire, with four plies of fabric, and 29 x 3 inches. Can you beat that combination? It makes the biggest, heaviest, strongest motorcycle tire in the world.

It's the most comfortable and the cheapest, too. Try it on that new machine. You'll never regret the little extra cost. If you intend to ride a motorcycle, do it right. Get some pleasure out of it. Leave tire worries alone. Get the

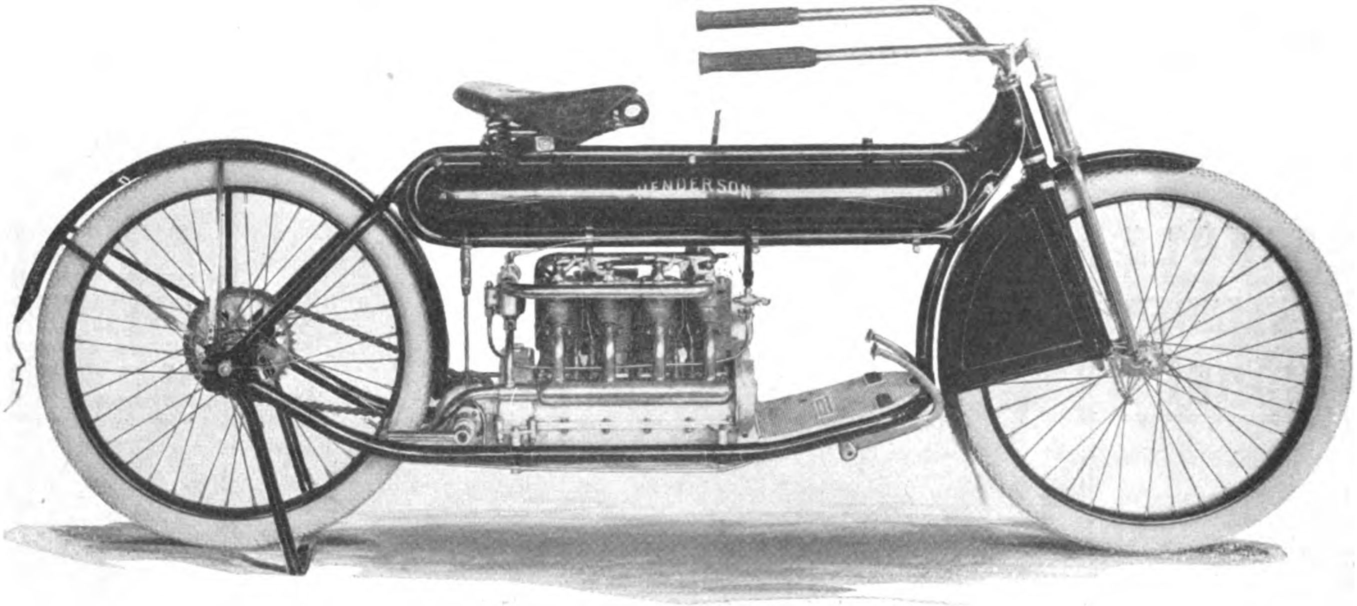
SEVEN HORSEPOWER **$325** **FOUR CYLINDERS**

Designed as a motorcycle **should be** made, not as they have been made, the **HENDERSON FOUR** represents the **very** latest development in motorcycle construction. That's why the one 1912 machine which occupies a class all its own is

THE HENDERSON



LIVE WIRE DEALERS

Will find the Henderson agency the most attractive proposition they have ever had. This agency will give any dealer undisputed pre-eminence over all other machines in his territory. The discriminating buyer will invariably be the purchaser of a Henderson, for this is a machine in a class by itself. No effort is made to compete with any other on a price basis. It is not necessary. The machine which leads the way in scientific design and holds its superiority by its greater ability and more pronounced adaptability to adverse road conditions, will never be bothered by competition.

The secret of success lies in grasping the opportunity at hand. The chance for a Henderson agency is the one big opportunity for the motorcycle dealer. Write us now!

HENDERSON MOTORCYCLE COMPANY
270 Jefferson Avenue **Detroit, Michigan**

Three of the Many Points in Which the

HENDERSON

1912 Four Cylinder Excels

Dependability

It will be generally admitted that, without this qualification, no motor driven two-wheeler can gain the popularity which ultimately leads to an established reputation.

The HENDERSON, while designed along entirely new lines, has been built scientifically. The workmanship and materials are in every case the very best obtainable regardless of expense, and the completed machine is a symposium of trustworthiness under any and all conditions.

The HENDERSON has been given the severest imaginable trials by experts and has demonstrated its capacity to climb hills and to conquer all conditions of roads. It is simple, with the possibility of trouble of any kind reduced to the absolute minimum.

Service

Length of service depends upon a proper harmonization of design with the methods of construction and the quality of the materials used. Weakness in any one of these three factors is sure to cause annoyance, if not more serious trouble to the rider. But, given a scientifically designed motor, staunchly constructed, with a simple transmission, like the chain drive of

The HENDERSON, and you have an ideal machine, which will give you good service day in and day out, year after year, and all along perfect satisfaction. For you want, not only durability, but pleasure and also economy in the pursuit of the sport, and this is the machine which affords you all, at a price which is remarkably low, considering what you get in return.

Comfort

The single cylinder motor by the very nature of its construction cannot be balanced, nor is a perfect balance and absolute absence of vibration found in a twin, but

The HENDERSON, with its four-cylinder engine and low center of gravity, insures to the rider the kind of comfort and ease of handling unobtainable in any other motorcycle. The power impulses of the cylinders are perfectly balanced in

The HENDERSON, which, starting like a car and having big foot boards and a large saddle, is easily the most comfortable motorcycle made.

SMOOTHEST, QUIETEST AND MOST FLEXIBLE MOTORCYCLE MOTOR EVER BUILT

More than enough power to climb and more than enough speed to satisfy your wants.
Positive lubrication system does away with the remotest chance of oiling trouble.

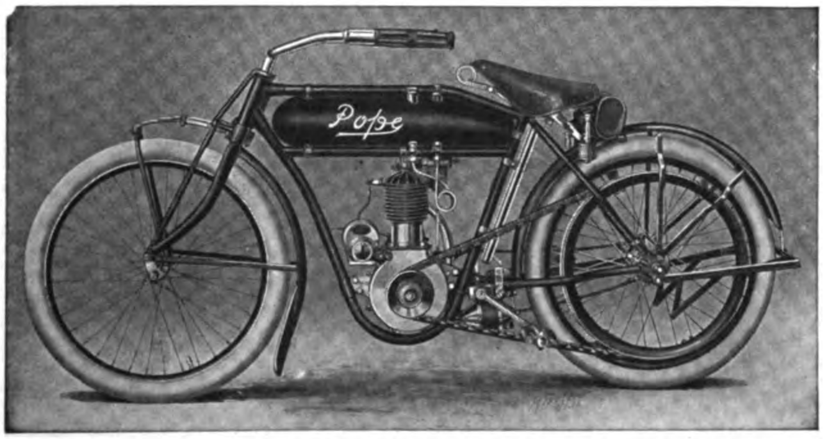
POPE MOTORCYCLE

With Imported Magneto, $165.

Quality is the first consideration in a motorcycle. An examination of the POPE will show that no machine, regardless of price, embodies better materials or workmanship. This means reliability. Conceding these facts, why pay more for a motorcycle? The Pope's price is an added inducement and gives the machine a selling advantage over all others. A large demand has been the logical result of the Pope's quality and price.

Carrying Out Original Plan

By manufacturing in large quantities we have reduced the cost of production to a minimum. Thus we are able to carry out our original plan of putting the price low enough to popularize motorcycling in a large way and create a demand among new classes of riders.



See the Machine in Spaces 145 and 146 at the Chicago Show. Then consider the price. Let us give you details of 1912 Eclipse Free Engine Pulley.

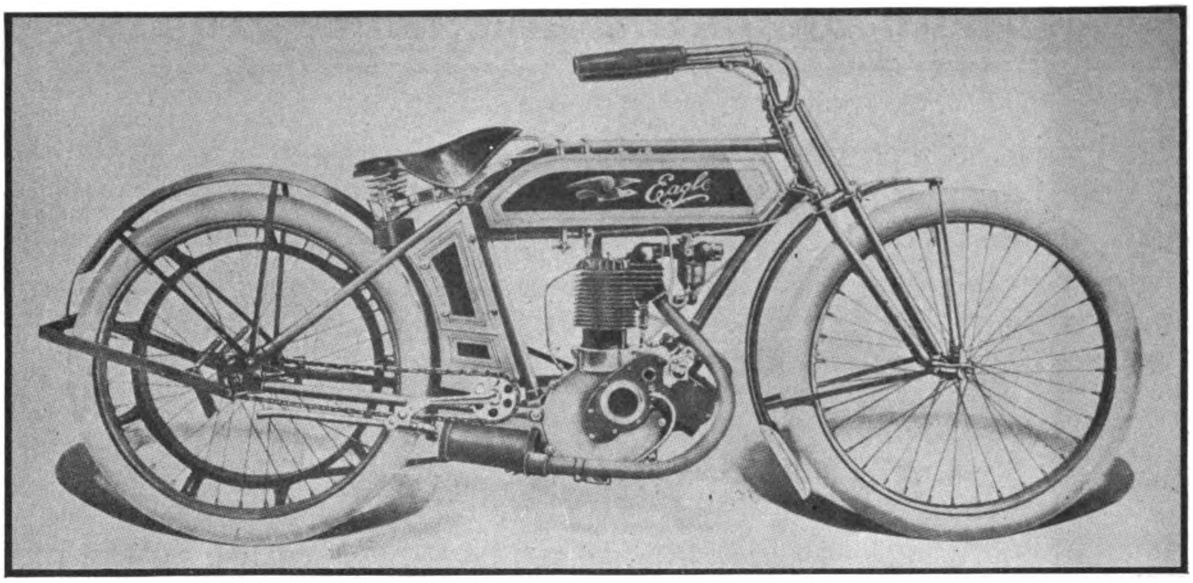
EAGLE BIG "5"

The Simple Single Cylinder With Twin Power



THE REAL LIVE ONE FOR 1912

It has already proven its superiority and accuracy, and perfection of construction, plus added quality in material will maintain it.

One of the latest achievements of the Eagle was a 130-mile ride made by Glenn Engel from Sterling, Ill., to Chicago, Ill., in 5 inches of snow and the thermometer registering around zero.

This most remarkable test just made, proves that the Eagle will soar to the heights of popularity.

This elite machine stands paramount in the minds of all who see, try and use.

MR. DEALER

No matter what machine you now represent, the Eagle Motorcycle now offers you an opportunity to increase your business. It's the machine with a big future, and if you are in the business for the sales you can make, the Eagle is the one machine that you will want to represent.

Our proposition coincides with the machine. It's the best.

AGENTS! Here's Some Good News

The popular M·M Four-fifty model will hereafter be fitted with the Eclipse Free Engine Clutch and an option of 28" wheels for $200, list. This is the very best proposition for a single cylinder motorcycle offered this year. A powerful hill climber, speedy, and very smooth running. With its three roller bearings in the motor, it will withstand more hard punishment than any other motor built. One new rider rode constantly for three hundred miles without putting any oil in the crank case, and did not harm the bearings. This model will be a big seller. Other models at $140, $160 and $225.

Write for Catalog and Agents' Proposition today

The American Motor Co.
Gentlemen:

I recently purchased an M-M motorcycle that had been run several thousand miles. Not being a mechanic, I ran the machine over 300 miles through New Hampshire on my first trip without lubrication.

I expected to have to replace the bearings of the motor, but when it was taken down and inspected, the only apparent damage was the slight wearing down of the piston rings.

I mention this to you to show you my gratification at being the possessor of a motorcycle that will run under such adverse conditions without causing serious damage that would usually follow such neglect in the operation of any ordinary machine.

Having familiarized myself with the machine in a recent 1,000 mile business trip I have just completed, I find after applying proper lubrication that the engine shows no signs of wear whatever and is equal to any test in climbing the steepest hills I encounter.

Yours very truly,
W. M. KENDALL,
Boston, Oct. 17, 1911. Insurance Adjuster.

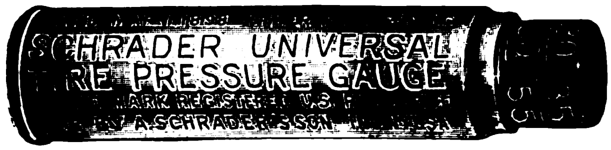
delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



SCHRADER UNIVERSAL
TIRE PRESSURE GAUGE
TRADE MARK REGISTERED U.S.
A. SCHRADER'S SON

(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

This and other new types of New Departure motorcycle coaster brakes can be seen at the Chicago Show.

A SHOW VISION

There is every reason in the world why your new 1912 machine or the one you now ride should be fitted with

UNITED STATES TIRES

They are unquestionably the strongest motorcycle tires ever built.

Where else will you find a tire that actually combines all the strong points which served to make two brands (Morgan & Wright and G & J) famous from one end of the country to the other.

Where else will you find a tire made by processes and machinery selected from the two finest motorcycle tire-making plants in the world.

UNITED STATES TIRES

stand alone in this respect.

You riders who select United States Tires as your coming season's equipment will be sure of this—that you are getting the greatest possible value for your tire money—that you are getting a tire that will add to your riding pleasure, subtract from your trouble and delays, multiply your tire mileage and divide your tire expense.

Despite their extra strength and extra service, UNITED STATES TIRES cost you nothing extra to buy.

80 per cent. of all riders use them—100 per cent. of all motorcycle makers furnish them gladly as 1912 equipment because they recognize them as

Motorcycle Illustrated

THURSDAY, FEBRUARY 8, 1912

THRONGS FILL THE COLISEUM

Striking Display of Motorcycles and Accessories Moves Chicago Show Visitors to Unprecedented Enthusiasm, and Returns Exceed All Expectations of the Trade—Late News from the Busy Stands.

CHICAGO—at the Show—Tuesday, February 6.—Ed. Worthington, of The Wagner Motorcycle Company, claims the distinction of having made the first sale of what promises to be by far the most successful show ever held in Chicago. Worthington, who is assisted by F. B. Campbell, made the sale in connection with the closing of a contract with A. P. Beck and Son, of Woodstock, Ill., for several counties in the northern part of the State.

The opening of the Show yesterday was featured by the biggest first day attendance of dealers in the history of motorcycle exhibitions in the United States. Exhibitors were unanimously of the opinion that the number of dealers on the job at the very start was phenomenally large, indicating an unprecedented volume of business for the week. J. C. Ferguson, of the Eclipse Machine Company, stated to a representative of MOTORCYCLE ILLUSTRATED that he closed for more business with dealers yesterday than during the first three days of the New York Show. Although there is not the slightest disposition to disparage the exhibition in the eastern metropolis, it already seems practically certain that this week's Motorcycle Show in the Coliseum Annex will be a record-breaker in every sense of the word.

The arrangements for the motorcycle end of the Chicago Show are not quite as satisfactory as they were in New York. The aisles are narrower, and the big crowds of the opening night had no little difficulty in getting from booth to booth. The motorcycle exhibits are located in a rather obscure part of the Annex Gallery and, although they are not as advantageously displayed as they were in the Eastern Show, it would be impossible to accommodate any more people than there were present in this section last night.

Eighteen makes of machines are being shown, a late-comer and an addition to the original list being the Iver-Johnson, manufactured by the Iver-Johnson Arms and Cycle Works, of Fitchburgh, Mass.

The other seventeen machines on exhibition are: The Minneapolis, Flanders, Thor, Henderson, Harley-Davidson, Excelsior, Indian, Wagner, Yale, Reading-Standard, New Era, Racycle, Emblem, Pope, Pierce, Merkel and the Schickel. The latter was staged in space 1 in the gallery of the main building. The makers of the Iver-Johnson showed their new single cylinder model. The other makes of machines exhibited are briefly described elsewhere in this issue. Motorcycle accessories, of which there are about seventy-five different makes, are mostly displayed in the gallery of the main structure.

CLOSED STATE AGENCY.

ONE of the early agency contracts placed during the show was made by C. W. Mason, sales manager of the New Era Auto-Cycle Company, who closed with the Palmer Motor Sales Company, of Jacksonville, for all of Florida. Mr. Mason is particularly enthusiastic over the outlook for the New Era delivery van, which is making a big impression. He argued that there was not the slightest reason for fearing any competition on the part of cheaply made four-wheelers, he being satisfied that the time was not far distant when the motorcycle will have demonstrated its commercial utility to thousands of hard-headed business men.

EXCELSIOR DELIVERIES.

SALES MANAGER H. N. KIRK was assisted by Art Lyon, Frank Schwinn, G. Haines and A. H. Davis, at the booth of the Excelsior Motor Manufacturing and Supply Company. President Ignatz Schwinn gave assurance that there will be no delays in the making of deliveries, very satisfactory progress having been made during the past two weeks. At the Show the new Excelsiors, with their attractive lines and sturdy construction, are making a decided hit.

DE LUXE MINNEAPOLIS.

SALES MANAGER C. B. KNUDSEN announced on Monday that the Minneapolis line had recently been increased by the addition of a de luxe big twin, fitted with a 10 h. Spacke motor. This engine has a bore of 3½, and a stroke of 3¾, its other specifications being the same as characterize the regular Minneapolis models. Fitted with a single speed the big twin retails at $250, and with spring frame at $290. Others in attendance at the Minneapolis booth are: W. E. and J. M. Michaelson, James R. Ralph and H. A. Atkinson.

REDUCE PRICE OF THOR 7.

IN the nature of a surprise came the announcement shortly after the opening of the Show that the Aurora Automatic Machinery Company had reduced the price of its 7 h. twin Thor, without two-speed, from $300 to $275. The Thor booth is presided over by Sales Manager E. J. Knight, assisted by Retail Sales Manager F. D. Freeman, "Shorty" Mathews, J. D. Hurley, E. N. Hurley and W. N. Graves. It goes without saying that the staff is kept busy.

AT THE WIGWAM.

THE Indian party, including George M. Hendee, F. J. Weschler, Oscar Hedstrom and Chas. Gustafson, which left Springfield Sunday afternoon, was five hours late in reaching Chicago. Accompanying the party were A. W. Campbell, of Waterloo, Indian distributer for Iowa, and his salesman, Mr. Pratt, who had spent two weeks at the Springfield factory. Sales Manager Weschler is satisfied that if the attendance continues as large as it was the opening night, this show will establish a new record. P. B. Whitney, manager of the Chicago branch, is in charge of the Indian exhibit, being assisted by D. E. Dunn, P. S. Newell, Roy Bowser, Don Klark, Wm. Reichert and others. Included in the Hendee exhibit is the beautiful Tourist Trophy, won last year by O. C. Godfrey. Much interest is being displayed in the side-car on exhibition in the Hendee booth, indicating that this pleasant feature of the sport is not likely to be neglected during 1912. The Hendee Company had one of its largest shipping days last Saturday, when no less than 141 machines left the factory. Other big shipments will be made soon.

SURPRISE FOR COFFMAN.

A. B. COFFMAN, of the Consolidated Manufacturing Company, makers of the Yale, came well primed to do his little publicity stunt as President of the Motorcycle Manufacturers' Association. It was not long before the size of the crowds and the interest they displayed caused him to revise his interviews for the daily press. That is, he was soon convinced that he had not made them strong enough, even though he had anticipated much in connection with this week's doings in the motorcycle section of the Coliseum Show. Sales Manager Coffman was assisted at the Yale booth by H. M. Baird and the Claussen Bros.

TO DOUBLE H-D OUTPUT.

WALTER DAVIDSON, who confesses to lonesomeness whenever he is away from the factory for more than a day, returned to Milwaukee late Monday night with the intention, however, of returning Wednesday or Thursday. He informed the writer that the Harley-Davidson Company will start excavating for its new factory about February 15. The completion of this building, about August 1, will double the company's present capacity, which was greatly increased recently.

JOHNSON DELAYED ON TRAIN.

W. A. JOHNSON, of the Pierce Cycle Company, was among those who arrived late owing to disorganized train service in the Middle Western States. A number of refinements are to be found in the 1912 Pierce models, particularly the four-cylinder machine, in which there is plainly manifest a determination on the part of the manufacturers to perfect the smallest details. Mr. Johnson was assisted by Elbert Jenkins and E. R. Durkee.

UNIQUE MERKEL DISPLAY.

INTERESTING features of the display of the Miami Cycle and Manufacturing Company, builders of the Flying Merkel, are the separate exhibits of the Merkel fork, ball-bearing motor, handlebar, tank and connecting rod design and construction, together with an attractive assortment of smaller parts. Each one evidences the excellence of the material used and the care, ingenuity and thoroughness with which they are designed and manufactured. Messrs. Buffum and Jackson are in charge, Mr. Jacoby also being among the early arrivals.

MEISER A FIRST DAY VISITOR.

AMONG the keenly interested spectators of the first day of the Show was George Meiser, designer, who was so largely instrumental in building up a reputation for the Excelsior. Mr. Meiser is now identified with the Black Hawk Motorcycle Company, of Rock Island, Ill. Meiser was not prepared to reveal anything definite about his company's plans, other than to say that their machines are now being subjected to the most expensive and thoroughgoing tests, nothing being left undone to the end of placing on the market a motorcycle which he and his associates will be justified in backing to the limit.

RAPID FIRE SALES.

SALES MANAGER KNUDSEN, of the Minneapolis Motorcycle Company, reported the sale of two machines before eleven o'clock and the placing of an order for fifteen with a Middle Ohio agent.

READING-STANDARD STAFF.

WM. F. REMPPIS is due to arrive in Chicago Wednesday. Pending his coming the demonstration of Reading-Standard models is in charge of Sales Manager W. B. Glasser, Philadelphia Agent W. G. Rhodes and M. Dewey.

THE HENDERSON FOUR.

T. W. HENDERSON, aided by H. B. David, Jr., is on duty at the Henderson display and is busy all the time. The Henderson four-cylinder reveals so many attractive novelties as to make it one of the most interesting exhibits of the Show.

SOME EARLY ARRIVALS.

AMONG the early arrivals from the East were: Dave Smith, of the Standard Company, and H. Mesinger, of the H. and F. Mesinger Company. Mr. Mesinger came over on the Twentieth Century Limited, second section, which was five hours late owing to a freight wreck and the fact that the intense cold caused many delays on account of freezing of the steam pipes and the disarrangement of the pneumatic brakes. H. T. Roberts, of the Troxel Manufacturing Company, was busily occupied on Sunday—a full day in advance of the opening of the Show. J. W. Brandt came in from Elyria this morning.

THE POPE BOOMERS.

S. W. STARR, George Cary, H. M. Musselman and M. G. Littlefield are entertaining groups of closely interested spectators at the booth where the Pope is on display.

BUSY EMBLEM CLAN.

THE handsome Emblem models are being shown under the supervision of General Manager W. G. Schack, assisted by R. P. Caldwell and L. S. Taylor.

PULS IS OPTIMISTIC.

GEORGE PULS, who travels for the Harley-Davidson Motor Company, has just returned from a trip through the South and Southwest. He reports that with improved road conditions the motorcycle outlook is being bettered every year.

MORE YALE VALUE.

IN addition to big tires and the Eclipse free-engine clutch the Consolidated Manufacturing Company has still further enhanced Yale value by including in its regular equipment on all models the Yale shock absorber.

VAN DUSEN A BENEDICT.

GEO. S. SQUIRE assisted H. D. Van Dusen at the booth of the Flanders Manufacturing Company. Squire is traveling through the Middle West, and reports that he has succeeded in interesting in the motorcycle many new automobile and supply dealers. Also demonstrating Flanders machines were B. C. Bradford and P. C. Bowne. Mr. Van Dusen, who is the company's assistant sales manager, became a benedict last Wednesday, his bride being Miss Kathleen C. Buckley, of Pontiac, Mich.

SURRE IS ENTHUSIASTIC.

SALES MANAGER W. J. SURRE, of the Continental Rubber Works, manufacturers of Continental-Erie tires, is being assisted by special factory representatives, W. S. Tullis, Chicago Manager F. W. Fee and Salesman Roland Sisson. This company is exhibiting the Continental-Erie studded tread for motorcycles, a new line of blow-out patches, outer sleeves, etc. Mr. Surre is one of those who feel that the time is not far distant when motorcycle and motorcycle accessories will be displayed in separate shows in both New York and Chicago each year, and the interest being displayed here in the motorcycle section confirms him in this belief.

LUCKY GOODYEAR STAFF.

SIX members of the Goodyear staff, including Superintendent P. W. Litchfield, Assistant Superintendent Edward Koken, H. B. Hamlen, S. A. Falor and Messrs. Darrow and Alexander, left Akron late Sunday night. Although they arrived safely, it was by a streak of good fortune that they reached Chicago. At Fort Wayne two of the cars making up their train, in one of which rode a vice-president of the Pennsylvania system, were derailed and thrown into a ditch. The Goodyear folks knew nothing of the accident until long after it had occured. Featuring their exhibit is the new Goodyear 3-inch motorcycle tire and, of course, the well-known Goodyear Quintette which has attracted its full share of attention from the opening.

GOODRICH RIB TREAD.

AN improved tread, designed as the studded, center-rib white tread for motorcycles, is being shown at the exhibit of the B. F. Goodrich Company, where the following representatives are in attendance: H. E. Raymond, W. O. Rutherford, E. P. Rowen, H. J. Morehead, B. M. Lovell, J. A. Petersen, J. S. Fishburn, H. A. Little, F. A. Oberheu, E. W. McCreery and J. F. Frank.

FEATURING SINGLE CLINCHER.

A SINGLE-CLINCH, nobby tread is the newest thing in the United States tire line. This company's motorcycle interests are being represented by J. J. Alexander and J. C. Welch, assisted by L. Baechle, of the solid tire department. Owing to the standardization of the single-clinch rim, and a recent court decision that the nobby tread is not an infringement of another make, this type of tread will be featured by the United States Tire Company. It seems fully qualified to meet every possible requirement of the most exacting manufacturers and riders.

EMPIRE FEATURES.

THE Empire Tire Company is represented by Chicago Manager E. B. McKay, assisted by M. O. Cooley, who covers Iowa, and Charles A. Wieland, who travels Indiana, together with a number of others of the Empire traveling staff. The Empire checkered tread and Peerless red inner tubes are the headliners at the Empire booth. It is the proud claim of Mr. McKay that during the past twelve months it has not been necessary to replace a single Empire motorcycle tire.

NEW MICHELIN TUBE.

A NEW motorcycle inner tube of the same quality as its automobile tube, manufactured in four different sizes, has been placed on the market by the Michelin Tire Company, of Milltown, N. J. The Company's exhibit is in charge of R. B. Tracy. The Michelin motorcycle tube is constructed exactly like the company's inner tube which has made so enviable a reputation for itself in France.

VACUUM TREADS POPULAR.

THE vacuum cup tread tire is rapidly making gains in popularity among motorcyclists, according to G. E. Hemmingway, who is in charge of the exhibit of the Pennsylvania Rubber Company.

FISK TYPES FOR 1912.

STUDDED and corrugated tread tires are shown at the booth of the Fisk Rubber Company, where there is always a group of spectators.

MOSLER BRANCH IN CHICAGO.

IT was announced at the booth of A. R. Mosler & Co., of 163 West 29th street, New York City, that its special motorcycle plugs, of which three types are now being made, are being fitted to Merkel, Wagner, Indian, Spacke and Pierce motors. Mosler plugs are made with both mica and porcelain insulators, in half-inch metric and A. L. A. M. sizes, and retail at 75 cents. A. M. Lummis is in charge of the Chicago show exhibit. The company has just opened a Chicago branch at 180 North Market street, in charge of Hastings & Anderson.

MAKING NEW FRIENDS.

SALES MANAGER J. C. MANTERNACH and Detroit Manager Chas. E. Miller, of the Standard Welding Company, received scores of friends at their company's booth. Burt Quayle and A. C. Clark, who are in charge of the Chicago branch of the Standard Welding Company, have been remarkably successful in building up a fine business in this territory. Both Quayle and Clark are adding to their already long list of friends at the show. Advertising Manager Benton G. L. Dodge attended the show the early part of last week. General Manager Gutherie and Superintendent Sessions have returned to Cleveland after viewing the Show.

BIG ECLIPSE ORDER.

J. C. FERGUSON, of the Eclipse Company, was not a little elated over the fact that in one day last week more than 1,000 orders for free-engine clutches had been received. The factory is now working day and night to meet the phenomenal demand for Eclipse clutches and coaster brakes.

THE EDWARDS-CRIST STAND.

SHOWING a complete line of machines and accessories the Edwards-Crist Manufacturing Company is exhibiting in the Armory, nearly a block away from the motorcycle section in the Coliseum Annex.

OWING to a rush of orders, the big plant of the Miami Cycle and Manufacturing Company, in Middletown, Ohio, was placed on a day and night working schedule on February 5.

LOTS OF NATHAN ORDERS.

BY Monday night E. B. Nathan, of the Nathan Novelty Company, had written just twenty-one orders. The newest feature in the Nathan line, in addition to the Koveraul garment, is an entirely new line of Norfolk coats and riding breeches of "Never-Leak" and Khaki. Another Nathan novelty is the improved legging, so designed and constructed as to absolutely protect the knees. The Napoleon legging has the usual front extension characterized, however, by being curved inward, a feature which will appeal to experienced riders. In order to protect dealers handling the Nathan line, the company's goods all bear the Nathan trade mark.

ALL RECORDS BROKEN.

MORE enthusiastic than ever, and that means something, Thomas M. Dunham talked "Old Sol" at the booth of the Hawthorne Manufacturing Company. This morning he told a representative of this paper that last month his company had done three times as much business as in January last year, and that in a week or two the orders for 1912 will have reached the total of the entire 1911 season.

OLD MEMORIES REVIVED.

VETERANS in bicycledom had an opportunity to revive old memories at the booth of the Diamond Chain & Manufacturing Company, where they are meeting Messrs. Wainwright and Barmeiss. It was Barmeiss who won the first bicycle race between Pullman and Chicago some 20 years ago. Messrs. Spray and W. C. Roby are also demonstrating the merits of Diamond chains.

BOSCH ARMORED MAGNETOS.

E. V. SWANSTROM is in charge of the booth of the Bosch Magneto Company, demonstrating the ZEV type for the twin, and the ZEI for single-cylinder machines, both armored. The Bosch plug, also shown, is distinguished by the fact that the insulator, made of steatite is pressed into the body of the plug in such a manner as to be separable from it, thus providing a particularly staunch construction.

BUSY AT WHITNEY STAND.

THE new silent motorcycle chain was responsible for much of the enthusiasm displayed at the booth of the Whitney Manufacturing Company, in charge of W. W. Totman. Clarence Whitney and Advertising Manager Sevin attended the Show the opening day.

PLANS for a racing program to be given on Washington's Birthday are being completed by the Charleston (S. C.) M. C.

EISEMAN magnetos are being shown by A. T. Le Blanc and James Rohde.

PRESIDENT WILSON ON HAND.

PRESIDENT WILSON, of the Fowler-Carnes Company, of Aurora, Ill., arrived in Chicago this morning. He will spend most of the balance of the week at the show in the interest of his company's strong line of Aurora Brand Motorcycle Clothing.

HOOKS MAKING FRIENDS.

HARRY J. HOOKS, representing the United Wire Supply Company, of Providence, R. I., manufacturers of seamless soft brass and copper tubing, is urging on the manufacturers of machines the merits of his company's products. He is an interesting and persuasive talker, and is making many friends.

SPACKE MOTORS.

F. S. LAWRIE and an assistant are being kept well occupied at the booths of the F. W. Spacke Machine company, where there is displayed a complete line of the latest Spacke motorcycle motors, from the single to the powerful 10 horsepower twins. The exhibit includes sectional motors which visitors can operate.

STAR LUGGAGE CARRIER.

A NEW luggage-carrier and tail lamp, manufactured by the Star Electric Company, of Chicago, is being shown attached to one of the machines of the Thor exhibit.

THE show staff of the Diamond Rubber Company includes C. H. Smith, F. H. Harris, Harry E. Knipp and A. H. Sangher.

THE Turner Brass Works, with Mr. Kauffman in charge, is exhibiting a full line of fittings and connections, also gasoline torches and braziers. This company's address is Sycamore, Ill.

WARNER speedometers, manufactured by the Warner Instrument Company, of Beloit, Wis., are being shown by E. J. Travers.

CHICAGO Branch Manager S. H. Pierce, is in charge of the Ajax-Grieb Rubber Company's exhibit. A Diamond tread non-skid features the Ajax tire line.

THE machines shown in the Coliseum, and a number of the accessories, are more fully described, and in some cases illustrated, in the succeeding pages, where there also will be found line drawings of several score of the leading 1912 accessories which were not shown at either New York or Chicago.

BOOM IN REDLANDS.

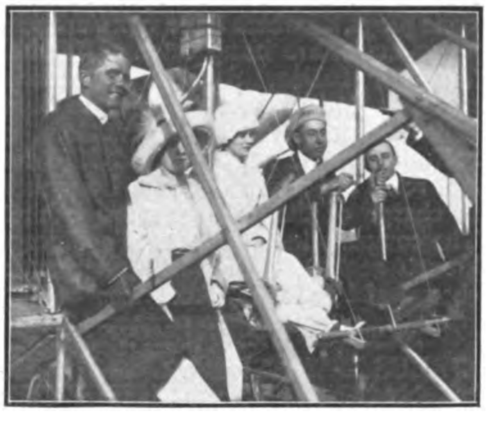
REDLANDS, CAL.—Gowland Brothers, who have the Excelsior and Indian agencies in this city, report splendid business. This enterprising firm has just added to its line the Pope motorcycle.

MARRIED IN AEROPLANE

Neal Cochran and Bride Then Enjoy a Short Aero-Honeymoon While Los Angeles Friends Cheer Them.

LOS ANGELES, CAL.—A new chapter was added to the unique history of aviation recently when Neal Cochran, a salesman for W. H. Whitsell, Excelsior agent in this city, and Miss Leona Cowan were married in a Wright bi-plane at the aviation field. The aeroplane was in charge of flyer Turpin, of the Wright company, who immediately after the ceremony took the bride and bridegroom for a short "aero-honeymoon."

Mrs. Walter de Leon acted as matron of honor, and H. L. Flurry as best man. In the crowd which surrounded the aeroplane while the novel ceremony was being performed were scores of Cochran's motorcycle friends, who cheered him lustily when he sailed off with his bride, with Turpin at the wheel. Incidentally, Turpin, who is now one of the most consistent Wright fliers, was formerly a traveling salesman for the New Era Auto-Cycle Co., of Dayton, Ohio. On the evening following the wedding Mr. and Mrs. Cochran entertained their friends at a reception in the Palms Pavilion.



WILLING TO LOSE $100.

LOS ANGELES, CAL.—Some time ago Jake DeRosier, while conversing with Superintendent Hoffer at the Excelsior factory, stated that he would be willing to pay $100 to know that his machine would do a mile in 38 seconds. Hoffer smiled sagely and stated that he could use the century note and would apply for it at the proper time. Jake told him to fire away and produce the machine. Without more ado the Excelsior superintendent got busy and as a result Balke took De Rosier's new machine to the motordrome for a try-out a few days ago and reeled off an unofficial mile in 37:02. This showing has convinced DeRosier that he can do big things with the new Excelsior racer, and it understood that he is prepared to turn over the aforementioned $100 note without argument.

1912 RACE SCHEDULE.

FOLLOWING is a list of the events the Savannah (Ga.) Motorcycle Club will run off during 1912: February 22, track meet; May 30, endurance run; July 4, track meet; September 5, track meet; October 10, road race; November 24, track meet; December 25, track meet. The plans for the opening meet are practically complete and much interest is being shown by the riders.

BALTIMORE SHOW.

THE motorcycle dealers in Baltimore, Md., are planning to have a fine exhibit at the automobile show, which will be held from February 20 to 28, inclusive. Allotment of space has just been made, and the agents who will be represented, with the machines they handle, are as follows: Howard A. French & Co. (Indian), Little Joe Wiesenfeld Company (Yale and Thor), Chase Motor Company (Harley-Davidson), F. W. Sandruck (Excelsior and Merkel), Randall Manufacturing Company (Reading-Standard and Pope). The local agency for the Reading-Standard has just been awarded to the Randall Company. The distributors are full of enthusiasm for the coming show and they firmly believe that a big boom in business will follow.

TORONTO SMOKER.

MEMBERS of the Toronto Motorcycle Club and their friends to the number of three hundred, lit their cobs on Wednesday evening, January 31, to enjoy the club's annual smoker. A lengthy programme of boxing, wrestling and music was put on, the best artists in the city being engaged for the occasion. Wednesday evening, February 21, will be "side-car" night, when special ladies' talent will be provided for the friends of the riders.

TO SHOW MOTORCYCLES.

COLUMBUS, OHIO.—Motorcycle dealers of Columbus have been invited by the Columbus Automobile Club to join with that organization in a combined automobile show to be held in the abandoned Federal building at Third and Chestnut streets during the week beginning March 2. The dealers of the Buckeye Capital are enthusiasts over the project, and will lend their aid in making the show a success. It is proposed to have motorcycles and auto accessories exhibited in the same department, which will probably be on the second floor of the building.

HELD SUCCESSFUL DANCE.

COLUMBUS, OHIO.—The second formal dance given by the Columbus Motorcycle club at A. C. R. Hall on East Gay street, February 1, was a success in every particular. More than 100 couples enjoyed the entertainment of the evening. The dance was for the club members, their families and guests. The committee on arrangements consisted of H. H. Seibold, Harley Funk and George H. Bangham.

CLUB CARD AS BOND.

COLUMBUS, OHIO.—The Columbus Motorcycle Club of Columbus, Ohio, has made arrangements with the police department of Columbus, that in case any of its members are arrested for any offense connected with motorcycling, a membership card, showing the dues paid up will be taken as a bond for appearance in police court the following day. This system is now being used by a number of clubs throughout the country, and is deserving of even wider employment.

PLAN RECORD TOUR.

HAROLD A. SHAW and John E. Hoggie, of Urbana, Ill., are planning a motorcycle trip over four continents in the Old World next summer. They intend to tour Europe, Asia Minor, Egypt and Northern Africa on their machines.

MACHINES on SHOW

READING STANDARD TYPES.

IN the characteristic golden-brown shade with ivory and black striping, and with one model in grass green with silver striping, the Reading-Standard machines attract unusual attention at Stands 133, 134 and 135. All four models are shown, the chain and flat-belt Tourist 4 h. machines, the chain twin of 7 h. and the Service, flat-belt driven single. The latter is finished in the green color.

On the flat-belt models an Eclipse clutch is fitted and control of this and the idler is by the distinctive combination hand and foot lever, the clutch being engaged after the idler has been set up or vice versa. On the chain-driven mounts, a cone clutch of Reading-Standard design is fitted. The Service model has a differently-shaped lever from that fitted on the other models, and all are noticeable for the shoe brake acting on the belt-rim or on the rear sprocket of the chain models, actuation of either form being by foot-pedal. Footrests are also seen on all but the Service model.

Those in charge of the company's stand are W. F. Remppis, secretary and manager of sales; W. B. Glasser, assistant manager of sales; W. G. Rhodes, W. G. Schaeffer and J. B. Trossel, special representatives, and W. E. Dewey, salesman.

TELLING THE POPE STORY.

DESPITE the fact that the Pope has had a comparatively limited period in which to pile up records, the company's Show staff does not lack practical arguments to back up their claims as to the reliability and efficiency of the machine. They refer to the fact that in the recent San Francisco endurance run, over 336 miles of rough roads, E. N. Moore, an amateur rider, brought a little Pope through with a perfect score. The Pope covered this route in 18 hours. They also point out that Frank Murray, riding the same Pope, entered the endurance run held from Sacramento to Colfax and return, and came through with a clean score. On the same mount Murray scored perfectly in the second endurance run of the Sacramento club on December 10, over roads which were in the worst possible state following heavy rains of the day before, and in the endurance test held by the Sacramento M. C. on January 14 the same Pope romped home with its score intact. The Pope demonstrators point out that the machine which figured in these four contests was a regular stock type.

AT THE EMBLEM STAND.

FOUR spaces, 147 to 150, display the Emblem in 7 h. twin model, 5 h. single magneto and battery and 4 h. single battery and magneto models, and W. G. Schack with a corps of able assistants is there to show that the Emblem is worthy of its name. Greater front and rear wheel mudguard clearance, longer front forks, and three-stem handlebar lock are noticeable, and a lower saddle position is afforded by the increased drop in the frame top tube. The celluloid barreled oil-pump and distinctive plunger handle serve to characterize this product while the oil retention packing for the crankshaft makes for extreme cleanliness of the motor and rider. Automatic inlet valves are used, as the Emblem designers adhere to this form of actuation and are among its chief champions.

THE TWO-STROKE SCHICKEL.

BEING unable to obtain space in the motorcycle section at the Show, the Schickel Motor Company, of Stamford, Conn., is displaying its product in space No. 1 in the Coliseum gallery, where it is an object of unfailing interest. Norbert H. Schickel, president of the company and designer of the machine, is on hand to greet visitors and he is being assisted by Robert M. Hillas and Leo. J. Carling. Heronamus J. Krackowizer is taking care of the prospects who wish to see the Schickel in action on the road. This company is concentrating its efforts upon the production of one model, a 5 h. single with completely enclosed Eiseman magneto and grip-controlled free-engine.

A motor in section, that can be put into operation by the demonstrators, is a feature of the exhibit and is proving of great value in making clear the two-cycle principle which is distinctive of the Schickel product. The decided simplicity of the valveless, two-stroke motor attracts the eye at once and a closer inspection reveals the fact that simplicity is the keynote of the whole. Not a single gear is used in the motor construction and the entire absence of lubricating mechanism and other complications appeals to the prospect.

The company's well-equipped factory in Stamford is running on a schedule which calls for the production of 500 machines. Practically all of the eastern and much of the western territory has been applied for by agents, and dealers have been promised their demonstrators on or before February 20. The firm has received its first order for a demonstrating machine from Australia and intends to give special attention to the export trade.

FOUR PIERCE MODELS SHOWN.

THE attractive exhibit of the Pierce Cycle Company in the Chicago Show embraces four models and a full line of the parts which enter into the construction of the Pierce four-cylinder and single cylinder engines and transmissions. Unusual interest is being manifested in the four-cylinder machine with two-speed, shaft drive and free-engine and in connection with this feature of the exhibit a cut out section is displayed, showing the operation of the sliding gears and the clutch. The company also shows its 12A, 5 h. model, with flat-belt drive, magneto ignition and mechanical valves, its 12B type with the same horsepower and magneto ignition, flat-belt and free-engine, by use of an idler, and its model 12C, which follows the lines of the 12B type except that it is fitted with a V-belt and Eclipse free engine clutch. A feature of the 12B model is the new style rebound cushion outside the oil gauge.

HENDERSON EXHIBIT.

THE Henderson four-cylinder motorcycle with its characteristic trapezoidal cradle frame, footboards, grip-and-pedal control and hand-operated clutch is seen at Stand 114 in the Coliseum. With T. W. Henderson in charge, assisted by H. K. Davis and W. G. Henderson, the fine points of construction are pointed out, and the machine fully demonstrated as at the New York Show. The interest shown in the East has been more than equaled by that exhibited at the present Show.

AT THE INDIAN STAND.

THE Tourist Trophy, flanked by sectional models of the Indian motor, two speed gear and other parts, is one of the drawing cards of the Hendee Manufacturing Company's exhibit. However, the chief attractions are the Indian motorcycles, which are shown in the regular 4 and 7 h. models, a single 4 h. belt-drive model, a 4 h. Tourist Trophy model and one of 7 h., and another 7 h. Tourist Trophy model with two-speed gear and with side-car attached. The stand is naturally one of the most crowded in the Show, as Indian doings and construction are of nation-wide interest in the field of the two-wheeler. The side-car outfit was voted one of the best attractions at New York, and is the subject of even more praise here. Those who chant the praises of the Indian include Geo. M. Hendee, Sales Manager F. J. Wechsler, Engineer Oscar Hedstrom, Perry S. Newell, D. E. Dunn, Roy Bowser and Don Klark. P. B. Whitney, Chicago branch manager with his assistants is there, as well as representatives of Edwards & Crist, who also have an exhibit here.

NEW ERA MODELS.

THE drop-and-loop frame, inclined motor and pedal-controlled two-speed gear are details which draw attention to the New Era product at Stands 142, 143 and 144 in the Coliseum. Those who have tried the form seat, and they number many, appreciate its comfort, while the location of the gasoline and oil tanks behind and above the motor tends to ensure positive feed of gasoline and oil. Those who have pushed a machine through the mud and sand or pedaled with vigor under the same conditions can well appreciate the handle starting and the hand and foot control for all functions of the machine. The valves are now mechanically operated and a tandem attachment which is practically part of the rear of the frame is a feature that has had success in the past and is continued for this year.

Besides the single and two-passenger models, the New Era van is also shown. The New Era booth is in charge of C. B. Hull, western representative, and Secretary C. B. Mason, assisted by Chicago agent, R. R. Hill.

IMPROVED WAGNER MODELS.

AT Space 132 in the Coliseum is to be seen the exhibit of the Wagner Motorcycle Company, embracing a "4-'12" model Wagner and an "M" model. The "4-'12" machine, the leader for this season, is noticeable for its characteristic Wagner diamond-loop frame with inclined brace bar, one-piece crowned rear belt pulley of steel with endless, stitched lagging and cemented in place, and outside exhaust tube and butterfly muffler cut-out operated by extension rods. The latter arrangement is a change from former Wagner construction, where the loop tube carried the exhaust to the muffler and the cut-out was located close to the head of the motor and operated by hand. Other features are the exhaust valve with carbon steel stem and cast iron head, three-ring piston with two rings at the head and one at the tail, vacuum force pump lubrication and automatic intake valve. This model has flat-belt and idler, with direct clutch lever control.

Model "M" has battery ignition, V-belt transmission, Eclipse clutch, with direct hand lever control, Watawata belt, two-ring piston, cut-out fitted in exhaust elbow and exhaust through loop. Both models are being demonstrated by Ed. Worthington, sales manager, aided by Frank Campbell, his assistant manager of sales.

THE NEW "X" MODELS.

CHARACTERIZED by the distinctive tanks and "X" trademark, and with the new cradle spring fork, the Excelsior is seen at Stands 131 and 132. The compact, and practically hidden, spring seat post is another feature, and it is noticeable for simplicity and accessibility for adjusting when this is necessary. A one-lever control for the belt and Eclipse free-engine clutch is shown on the 4 and 6 h. belt models at the Stand, while the same clutch, operated by a similar lever, is seen on the 4 and 7 h. chain-driven machines. These four models, one of each of which is shown, are fitted with mechanical inlet valves. The "B" models with either battery or magneto ignition are represented, but the valves are operated similarly to those of the corresponding models in 1911. Other details which appeal to the rider are the increased capacity of the tanks, to 2¾ gallons of gasoline and 1½ quarts of oil. Sales Manager Kirk is in charge of the exhibit.

MINNEAPOLIS FEATURES.

THE distinctive features of a unit-power plant with two-speed gear and clutch running in oil are to be seen at Stand 79 where the Minneapolis is located, but this by no means covers all the features of this make of motorcycle. Side-by-side mechanically-operated valves, magneto at rear of cylinder, force feed lubrication, and special one-inch Schebler carbureter are other characteristic points. The models shown include a chain-drive with two-speed gear, a flat-belt drive similarly fitted, a belt-drive machine minus the two-speed gear and a Model N with the new spring frame. The commercial side of the motorcycle is well catered to by the company's fore-car with van body. The spring frame model has the upper rear stays connected to the ends of a long rocker pivoted to the seat mast, and the shorter arm of the rocker attached to a plunger working within a tube in rear of the seat mast. A coil spring is secured within the cylinder and the plunger has a head which is fastened midway of the spiral spring. The good points of the Minneapolis are being well explained by J. M. Michaelson, W. E. Michaelson, J. R. Ralph, Sales Manager C. B. Knudsen and H. A. Atkinson.

YALES FOR 1912.

THE Consolidated Manufacturing Company shows its full line of Yale motorcycles at Stands 127, 128, 129. In the characteristic battleship gray with blue striping, are shown the two single 4 h. models, one with battery and the other with magneto ignition, the 5 h. twin and the twin 7. Both forms of transmission, V-belt and flat-belt, are there, and the distinctive two-lever clutch and idler control on the flat-belt models attracts attention at all times. The same may be said of the large, 2¾-inch tires which are stock equipment on Yale machines for 1912. A tandem attachment, for use with which these tires are especially adapted, is seen on one machine. The clutch used is the Eclipse on both flat and V-belt mounts. The exhibit is in charge of A. B. Coffman.

THE FLANDERS LINE.

AT Stands 81 and 82 are shown the Flanders machines with their characteristic interconnection between the sight feed oiler and the throttle. Other features which attract attention are the spring fork, stream-line tanks with wide filler openings, and bronze bearings throughout. The clean crankcase and the well-designed magneto position, and drive with Splitdorf magneto mounted on all machines are features which attract the veteran as well as the novice, and the price of $175 also appeals to many. The Kingston ball-cage carbureter and scientifically designed inlet piping to the dome of the automatic inlet valve indicate the care used in the design and construction of the Flanders product. The Eclipse free engine clutch is shown fitted on the machines.

FULL WHITNEY LINE.

OF its comprehensive line of chains for transmitting power to the motorcyclist, Number 145, specially built for motorcycle service, is the feature of the Whitney exhibit at Stand 54. No less important, but not so well known, are the Woodruff keys for fastening pulleys to the motorshaft and for like uses, made by the Whitney Company. The keys and the chain have remained unchanged in construction for a number of seasons past.

READING STANDARD

HARLEY-DAVIDSON TYPES.

FOUR models, showing many desirable improvements and featuring the new 7 h. chain-driven twin, make up the striking exhibit of the Harley-Davidson Motor Company at Stands 124, 125 and 126. In addition to the new chain machine the display embraces the 6½ h. twin, the 4 h. single with magneto ignition, and the same type with battery. All the models have the Bosch magneto fitted in the rear, and the exclusive Ful-Floteing seat with double springs for shock and recoil is a regular fitment. Much interest has been aroused in the Harley-Davidson free wheel with multiple disc clutch in rear hub, operated by a lever on the seat mast, in addition to a hand-operated idler lever, except on the chain-driven seven.

The transmission for the chain model is a high-grade roller chain in connection with the free wheel device. An eccentric in the countershaft allows for adjustment of the first drive chain, and the final drive chain is adjusted by means of rear axle slide screws. A second eccentric in the countershaft permits of adjustment of the pedal chain. Embracing all the standard Harley-Davidson features in conjunction with the powerful, positive chain drive, this model is proving unusually attractive and it is always under inspection by visitors to the H.-D. stands.

MERKEL MACHINES AND PARTS

FLYING MERKELS in 4 h. single and 6 and 7 h. twin spring frame models, 4 h. single of rigid frame type and a 7 h. twin machine with tandem attachment are the chief features of the exhibit of the Miami Cycle and Manufacturing Company, of Middletown, Ohio. Not less interesting to both dealer and rider is the exhibit of Merkel parts, in which the character of the various motor, transmission and frame members may be noted and the excellence in construction verified. The controlled oiling device, for example, is mounted on a board with a number of other motor parts and its regulation and operation can be seen very clearly. The parts exhibit is naturally characterized by the typical orange color of the Merkel product, and this scheme is carried out in the other features of the exhibit. The exhibit is demonstrated by the following representatives: Sales Manager Edward Buffum and J. Lee, of the sales department, and K. R. Jacoby and J. F. Merkel, also count upon renewing acquaintances at the stand toward the end of the week.

SPECIAL M. M. EXHIBIT.

BEING unable to secure space at the Coliseum, the builders of the M. M. machines are exhibiting at their Chicago salesrooms, 2724 Michigan avenue, where nearly everybody attending the Show is viewing the display. The rooms are decorated in an attractive manner, and are in charge of Guy Greene, who, with an able staff of assistants, demonstrates the qualities of the four models shown. These include the 90 deg. 8 h. twin with flat belt and variable pulley, and hand tension idler lever; the Four-fifty model, also flat belt fitted, with Eclipse clutch and 26-inch wheels; the battery special, with flat belt and hand-operated idler and the magneto special, similarly fitted. The two latter are the $140 and $160 machines, which were the most moderate in price at the New York Show and attracted a tremendous amount of interest.

NO INDIAN AT $225.

OWING to one of the errors unexplainable, but common to all publications, the price of the 7 h. Indian twin was recently given as $225 when it should have been $250. The result of this is that the Springfield firm has been in receipt of numerous additional inquiries on the subject, which indicates that the interest in the Wigwam product is at top pitch and also that prospective riders keep a close watch on MOTORCYCLE ILLUSTRATED.

CROWDS AT BOSCH STAND.

DEVOTEES of the single tracker who visited the Coliseum naturally stopped at Stand 99, and that there is a strong Bosch following among users of ignition in all lines is indicated by the crowds handled at this exhibit. The chief objects of interest are the ZEI and ZEV magnetos for single and twin motorcycles, these models being brought out to supplant in time the DA2 and DAV machines now used in every motorcycling country in large numbers. The principal dimensions are the same for the corresponding types, but the chief distinctive feature of the ZE models is in the full protection given by the end plates from wet and dirt. The plates are of aluminum and fit on the ends, packing assuring a tight joint. On the single model, the terminal is protected by vulcanite where it emerges from the plate. In addition to the full line of magnetos, the Bosch plugs are also shown.

"WHITE STRIP" BELTS.

"WHITE STRIP" is the trade name of the high-grade motorcycle belts manufactured by the Chicago Belting Company, of 124 North Green street, Chicago, Ill., and for which the firm's representatives at the Show are making many new friends. The "White Strip" feature, exclusive with the Chicago company, is now embodied in the V as well as the flat belts, and is characteristic of the company's output for the motorcycle. In the last issue of MOTORCYCLE ILLUSTRATED, "White Strip" belts were, through an error, referred to in an article describing the products of another company. By way of correction it is only necessary to state that the "White Strip" feature is patented by the Chicago Belting Company, and that as a result it is an exclusive detail in the make-up of this firm's motorcycle belting.

PLUGS AND MAGNETOS.

AT each Show it is a question which attracts more attention in the Splitdorf exhibit, the "Common Sense" sparkplugs or the motorcycle magneto, and only a personal canvass could determine this at the Coliseum. The throng at Space 49 gives proof of the interest that the plug-using public has for the products which bear the Splitdorf name. In the plugs, the center electrode is formed on the end of a taper piece around which the mica insulation is fitted. The upper part of this center piece has the retaining washer and terminal nut fitted on it. The shell has a small opening through which the center electrode protrudes and any leakage is prevented by gaskets at the shell shoulder and elsewhere. The magneto has the now-familar centrifugal circuit-breaker and large insulating surfaces on all terminals, which render it waterproof. On the Flanders motorcycles this magneto is seen regularly fitted.

VEEDER CYCLOMETERS.

THE familiar Veeder line of cyclometers for motorcycles and other vehicles are as popular as ever at Stand 42, but of particular interest is the new adjustable bracket which permits of its attachment to all makes of motorcycle. The bracket projects forward when in position and clears the truss fork members used on many machines.

SOLAR LAMPS.

IN combined lamp and generator, and in a number of models with separate generator, the Solar lamp products are seen at Stand 41, the space given over to the Badger Brass Company. The most familiar model to riders of the two-wheeler is that with the two red jewels mounted at angles at the sides to give rear signals. The great variety of lamp brackets, for adapting the Solar products to any make of machine attracts notice almost equal to that given the lamps and generators. For the rider who wishes a greater amount of light, the smaller models of automobile lamps give a considerable range of choice without prohibitive weight.

W. F. PICKETT AND SONS, of Greensboro, N. C., have just closed with the Reading Standard Company to handle the R-S machines in their territory for 1912.

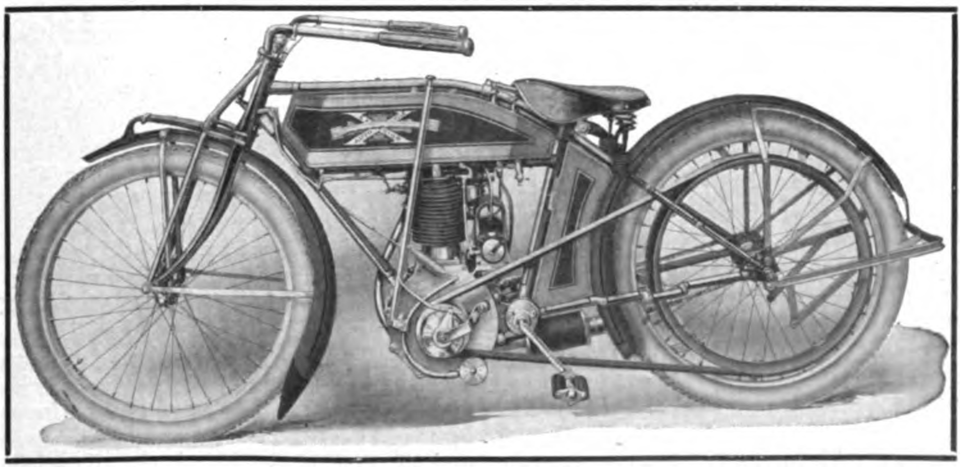
Pope Motor.



Excelsior 4 h. Belt Drive Magneto Single.

1911-1912 TENDENCIES COMPARED

Data Showing in What Respect and to What Extent This and Last Year's Models Differ in Design and Equipment.

HORSEPOWER.

Eight	1
Seven	10
Six and one-half	1
Six	2
Five	6
Four	11
Three and one-half	1

An increase in 5 h. motors is noticeable, two new singles and a twin having been added since last season. One of the singles is a two-stroke motor. In sevens there has been an increase in the Reading Standard and Harley twins and a new four-cylinder model in the Henderson. The 4 h. single has gained a number of recruits and is the most popular power at present. The 3½ h. Pope motor has the lowest power of any exhibited.

NUMBER OF CYLINDERS.

Four	2
Two	8
One	14

The four-cylinder advocates have another recruit to their ranks, the Henderson. There are a number of additions to the ranks of the two cylinders: Reading-Standard, Yale 5, and Harley-Davidson 7. The singles, practically, all are of 4 h., except the Schickel 5 two-stroke, Thor 5, and Pierce 5.

CYLINDER AXES ON TWINS.

Fifty Degrees	1
Forty-five Degrees	6
Forty-two Degrees	1

Motors with axes greater than forty-five degs. have one representative; the Thor, of fifty degs. To the forty-five-deg. ranks are added the Reading-Standard, Yale 5 and Harley-Davidson 7. The Indian is the sole adherent to forty-two degs.

CYLINDER POSITION.

Vertical	13
Inclined	3

The tendency is toward a vertical position for the single motor, the Wagner, New Era and Harley-Davidson only adhering to the inclined position. The Henderson and Pierce fours are both vertical, with the additions of the Yale and Emblem 5's, the Schickel and Flanders since last show.

INLET VALVES.

Mechanical	10
Automatic	7
None	1

Mechanical inlet valves predominate, additions to the ranks being seen in the New Era, Yale 5, Reading-Standard and Harley-Davidson 7's. The Flanders is the chief recruit to the automatic ranks, which number single models of certain makes which offer valves mechanically-operated in their twins or singles also or both. The Schickel two stroke is valveless.

VALVE ARRANGEMENT.

Inlet over Exhaust	12
Side by Side	3
Opposite Sides	1

The arrangement of inlet over exhaust valves and but one chamber is the predominating one; the recruits have been the Flanders, Harley-Davidson 7, Henderson, Yale 5, and Thor 5. The side by side ranks have been augmented in less proportion by the addition of the Reading-Standard twin (33⅓ per cent. as compared with 41⅔ per cent.). The opposite sides or "T"-head arrangement are seen to be represented only by the Pierce four-cylinder motor.

BORES AND STROKES.

Long Stroke	14
Square	3
Short Stroke	2

Long strokes predominate, all recruits for the present season being added to these ranks. The greatest difference between bore and stroke will be found in the Yale 5, 2¾-inch bore and 3 43/64-inch stroke and the least in the Reading-Standard, 3 13/32 bore and 3 15/32-inch stroke. The "square" ranks number the Merkel 6 twin, Schickel and Wagner 4, while the short strokes are represented in the Merkel 7 and 4 and the Pierce four-cylinder.

CYLINDER AND HEAD CASTINGS.

One Piece	14
Two Piece	2

The tendency to cast the cylinder in one piece with the head has been noticeable for several season's past and the practice continues to grow. The representatives of separate head and cylinder castings, Indian and Minneapolis, have employed this arrangement since their entry into the field and continue to be the chief advocates of the practice.

MOTOR BEARINGS.

Ball	8
Roller	3
Plain	9

While plain bearings slightly outnumber those incorporating balls or rollers, the tendency is toward the use of the ball type in greater numbers and for all bearings in the motor. Examples of this are seen in the Reading-Standard, Schickel and Merkel. Roller bearings are found in the Thors, Harley-Davidson 7 twin, and in the big-ends of the Excelsior twins.

LUBRICATION SYSTEMS.

Gravity Feed	8
Hand Pump	4
Force Feed	4
Injection	1

Gravity feed from the tank to the motor base is used on the majority of machines, usually with splash for the various bearings. Hand pump lubrication at intervals has its advocates, Emblem, Minneapolis, Yale, Pierce single, with splash for actual lubrication, while on the Indian twins, Pierce four-cylinder, Thor and Yale twins, pumps are used to force the oil to the proper points from the sump in the crankcase. The Schickel injects the oil with the gasoline and lubricates by splash.

CARBURETER.

Schebler	6
Heitger	2
Breeze	3
Kingston	1
Hedstrom	1
New Era	1
Merkel	1
Thor	1

The general tendency is toward the use of carbureters of standard makes rather than one made by the motorcycle manufacturer himself. Exceptions to this are noted in the list above; the Indian using the Hedstrom, the Thor, New Era and Merkel, carbureters of their own make or made to their special design. The Flanders employs the Kingston model, with ball-valve for the auxiliary air.

IGNITION.

Bosch Magneto	9
Battery	4
Herz Magneto	5
Splitdorf Magneto	1
Eisemann Magneto	1

The magneto is rapidly ousting the battery and coil for two-wheeler ignition, and in most cases the latter form of ignition is employed on single cylinder models on which an alternative of the magneto is to be had at a slight increase in price. The two chief types shown are the Bosch and Herz, the former being fitted on the larger number of models. The Splitdorf magneto is fitted to the Flanders, and the Eisemann to the Schickel.

MAGNETO POSITION.

Front	11
Rear	3
At Side	2

While the majority of magnetos are mounted in front of the crankcase, the rear position is by no means poorly represented, and would probably be better so did not structural difficulties necessitate the magneto being located in the forward position. The Schickel has the magneto in a casing forming part of the

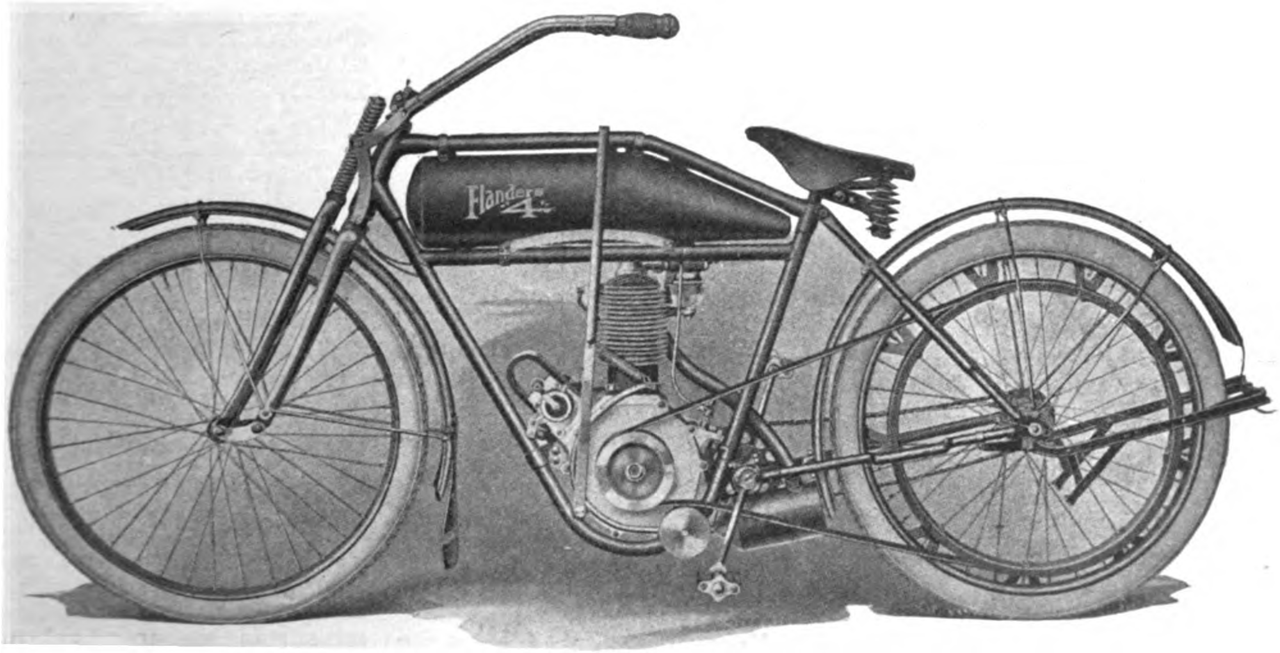
Harley-Davidson Chain Transmission on 7 h. Twin Model.



The Flanders Four, with Belt Drive and Idler.

right side of the crankcase, and the Henderson has it placed car-fashion longitudinally at the left side of the motor.

WEIGHTS.

150 to 175 pounds	5
175 to 200 pounds	6
200 to 225 pounds	3
225 to 250 pounds	2

There is but slight tendency toward the lightweight machine, as is evinced by the greater number being between 175 and 200 pounds. The lightest machines are the Pope and Flanders at 160 pounds, while the heaviest are the Henderson 250 and Minneapolis 225 pounds.

TRANSMISSION.

Chain	9
Flat-Belt	11
V-Belt	6

Flat belts are in the majority, and are not only fitted as the sole form of transmission on several models, but as an alternative on a number of V-belt machines. The chain has shown the greatest increase in advocates, firms such as the Harley-Davidson and Excelsior having added chain models in 7 h., the latter also having a 4 h. single model with this form of transmission. It is probable that the chain will be in the majority before the 1913 season opens.

FREE-ENGINE.

Idler	10
Multiple-disc Clutch (Eclipse)	8
Multiple-disc Clutch (Hub)	1
Multiple-disc Clutch (Countershaft)	3
Multiple-disc Clutch (other types)	1
Cone Clutch	1

The multiple-disc clutch is the chief type of free-engine device to be seen on machines with all forms of transmission, the idler, operated by hand, being found on flat-belt mounts only. But a majority of flat-belt machines are fitted with Eclipse multiple-disc clutches in addition to the idler, while the Indian, Pierce, Reading-Standard and Minneapolis have clutches of their own manufacture. The Harley-Davidson clutch is fitted in the rear wheel hub.

TWO-SPEED GEAR.

Planetary	2
Dog-Clutch	1
Sliding Gear	1

Compared with the previous season, two-speed gears are notable by their infrequency, three types only being regularly fitted, and these special to each particular make of machine. The planetary advocates are the Minneapolis and New Era; the dog-clutch user is the Indian, and the sliding gear adherent the Pierce. Although there has been a retrogression in this department of motorcycle equipment, the increasing use of passenger attachments will bring about an increase in the number of these devices used.

BRAKES.

True Coaster	13
Coaster Band	8
Coaster Internal Expander	3
Band	3
Shoe	1
Internal Expansion	2

The true coaster type of brake, with operating and braking members within the hub is in the majority, but the efficacy of the coaster band type has resulted in a number of makers offering either this latter type or a true coaster brake, with the coaster band device as the secondary of the two. The coaster internal expander has smaller representation than its construction and advantages deserve, being fitted to the Yale, Reading-Standard and Emblem. Band and internal expansion brakes are used on the T. T. Indians, bands being fitted on the Pierce and New Era. The Reading-Standard is the only representative of the shoe brake, on its belt models.

TIRES.

United States	8
Goodyear	8
Goodrich	1
Diamond	4
Empire	1
Continental-Erie	5
Optional	2

The diversity in numbers given above is due to the majority of makers giving alternatives on several makes of tires. There are practically no machines fitted with only one make: the Empire is fitted to the Emblem, but the Goodrich is also offered, for example. The Reading-Standard and Harley-Davidson give option on any make of tires.

WHEELBASES.

65	1
62½	1
60	1
57½	1
57	3
56½	1
56	1
55½	1
55	5
54	1
53½	2
53	2

Fifty-five to 57 inches seem to be the chief lengths of wheelbase, while the 53 and 53½-inch wheelbase is found on both twins and singles. The longest is the Henderson with 65 inches and the shortest the Indian and Merkel.

NUMBER OF MODELS.

Six	1
Four	4
Three	5
Two	1
One	5

The tendency in this direction is toward the reduction of the number of models in most cases, three or one being the rule. The three-model machines number amongst them the Emblem, Pierce, Reading-Standard and Yale, while the Indian has six models. Wagner has the two models, 4 and 4-'12.

SPRING FRAMES AND SEAT-POSTS.

Spring Frame	1
Spring Seat Post	4

Tendencies in these lines are toward the use of spring seat-posts rather than of spring-frames. The later has only one representative, the Merkel, which incorporates a spring seat device also.

FORKS.

Single Plunger	7
Double Plunger	7
Coach Spring	3

The plunger type of spring fork is by far the most employed, but opinions differ as to which sub-type is to be the final: the single plunger or the double plunger. The coach-spring type has gained an advocate in the Excelsior, in addition to the Indian and Pope, who have had this type for several seasons.

FRAMES.

Loop	6
Keystone	5
Trapezoidal	1
Tank Keystone	1
Diamond	1
Drop-and-Loop	1

The loop frame has been steadily growing in favor and probably will supersede the keystone type in the future, if the past is any criterion. The Wagner is the only representative of the diamond type, but has an inclined brace bar from the steering head with the motor syspended in the frame loop. The tank-frame is represented by the Pierce.

PRICES.

$400	1
$325	2
$300	2
$290	1
$285	4
$275	3
$265	1
$260	1
$250	7
$240	1
$235	2
$225	7
$210	1
$200	5
$175	5

In spite of the reduction in prices, the majority of machines will be seen to be priced around $225 and $250, although the more moderate priced machines are in a good number. The range of prices is considerable: the Pierce four-cylinder at $400 being the most expensive, while the $175 machines (Flanders, Pope 3½, and battery Thor, Emblem and Excelsior) are the most moderate in price. The Reading-Standard twin is listed at $290, and the Henderson and Indian 7 h. T. T. with two-speed gear at $325.

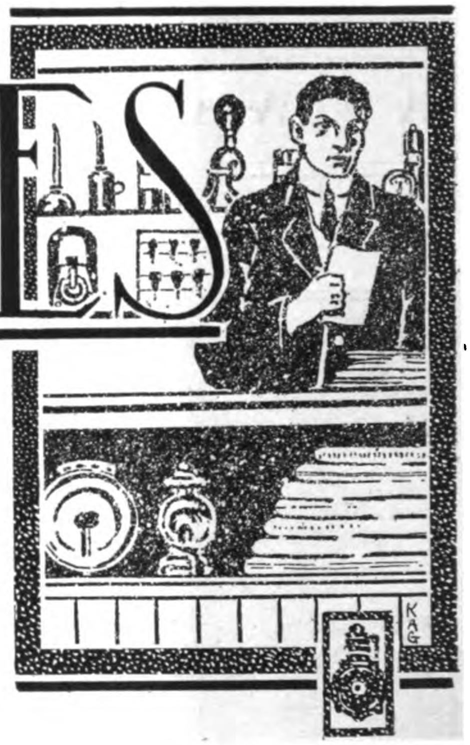
ACCESSORIES



FULL ECLIPSE LINE.

THE full line of the Eclipse Machine Company, of Elmira, N. Y., featuring Morrow and Eclipse coaster brakes and free engine pulleys or clutches, is on display at the Show and is attracting its full share of interest. The Eclipse staff is calling attention to the fact that the firm's clutch is now being fitted as regular equipment on Yale, Merkel, Emblem, Excelsior, Henderson, Reading-Standard and Flanders machines. Negotiations are now pending for the regular fitting of the clutch on three other makes of machines. This means that with the exception of the Harley-Davidson, Thor and Indian, whose makers turn out their own clutches, the products of all the leading manufacturers will be fitting the Eclipse device.

"BOUGIE MERCEDES" PLUG.

STUDENTS of motorcycle ignition fitments at the Show are not overlooking the "Bougie Mercedes" spark plug in the comprehensive display of Herz & Co. This product with its special stone insulation, four sparking points of platinum-alloy and its freedom from carbon troubles has proved itself dependable in long road service under adverse conditions, and the interest manifested in it at the Show indicates that it will be in wide demand as usual for the coming season.

SPARTAN BELT EXHIBIT.

AT the Chicago Show the Graton & Knight Manufacturing Company, of Worcester, Mass., producers of the well-known Spartan belts, is being represented by W. W. Shoemaker, than whom no expert in the field is better qualified to dispense information concerning motorcycle belting. Having plenty of arguments to advance and being backed up by a standard product which has proved its claims to recognition in long service and under the most severe tests, Mr. Shoemaker is experiencing no difficulty in interesting visitors to the motorcycle section, and no period in his busy career as a representative of the Spartan line has been more fruitful of results than the present week.

In the last issue of MOTORCYCLE ILLUSTRATED an erroneous reference was made to the motorcycle belting line of the Graton & Knight Company for 1912, and by way of correction it should be stated that the firm's belt products, as in the past, are all sold under the name "Spartan." They are known by no other designation, and will at no time be listed otherwise. The company rightly points out that the term Spartan, implying sturdiness, capability and adherence to a high ideal, tells the full trade story of its belting, and the correction herein contained is intended to make clear the fact that the name will not be changed in any way.

The announcement, made recently, that Spartan belts will be found on the machines of 80 per cent. of the leading motorcycle manufacturers for 1912 is of prime importance and interest to riders and prospective riders of the single-tracker. This fact, combined with the lively and consistent campaign which is being waged by Mr. Shoemaker at the Show, has served to bring the Graton & Knight line into even greater prominence than in the past, and although the big Worcester factory is now being operated on a rush schedule, there are indications that still further arrangements for extra production will have to be made to keep abreast of 1912 business.

Despite the great demand for the firm's products and the rapidity with which its output is being prepared for the market, every detail of quality and construction which has gone to make the name "Spartan" a by-word is receiving the expert attention which has been characteristic of the company in the past. The exhaustive tests incident to the selection of material, the firm's special and exclusive system of tanning and the general efficiency derived from years of expert belt-making and attention to the requirements of motorcyclists place the Graton & Knight belts on a footing hard to equal. The large business demand which would swamp the factory of ordinary capacity is handled with facility and dispatch by their large plant.

EDWARDS-CRIST DISPLAY.

JUST over the Michigan avenue entrance to the Armory is the well-arranged exhibit of the Edwards-Crist Manufacturing Company, which embraces all 1912 models of Indian machines and a full line of motor accessories. Special attention is being called to the firm's tandem attachments, luggage carriers, leggings and lamps; one of the lamps is a special type enamelled red to match the red Indian machines. Another interesting feature is an improved spring seat post designed to meet the particular requirements of the Indian.

The Edwards-Crist Company has the Chicago agency for the Eclipse free-engine clutch which will be attached without cost at any of the firm's shops which are located as follows: 1404-1406 Michigan avenue, 1150 Jackson boulevard, 5457-5459 So. State street, 5146 Chicago avenue, 4350 Evanston avenue and 11021 Michigan avenue, in Roseland. The Edward-Crist headquarters at 1404 Michigan avenue will be kept open for an hour after the Show closes each night in order that prospective purchasers may drop in and have the machine demonstrated. Expert riders are on hand for the purpose.

NEW DEPARTURE CHANGES.

IN the Show exhibit of the New Departure Manufacturing Company, special attention is being called to the new transfer spring which fits snugly on the shank of the actuator and prevents the annoying and often dangerous tendency of the pedals to "pick up" or "feed up." To avoid this trouble in the past it has been necessary to change the position of the pedals frequently. A new arm shown on the New Departure product is heavier and stronger than in the past, providing for increased power of the brake. Its shape has been improved upon so that it may be mounted on any make of motorcycle without interference with the frame. The new arm clip is so constructed that it is permanently fastened to the frame, forming a re-inforced

pocket into which the brake arm is easily seated in a manner that does away with leverage strains. In removing the brake for cleaning or repairs the clip is not disturbed; the brake arm is simply slipped out of the pocket.

STROMBERG CARBURETER.

THE latest product and a departure from their previous sizes of carbureters is the Stromberg motorcycle instrument, the center of attraction at Stand 76. Three jets are used and these are brought successively into communication with the mixing chamber by moving the throttle barrel. A curved pipe in this barrel effects the communication. The auxiliary air is at the end of the horizontal mixing chamber and the float is a hollow ball. The bottom of the float-chamber unscrews to adjust or examine this float.

BALL AND ROLLER BEARINGS.

FOR motors, variable gears and other motorcycle organs and for either thrust or radial loads, Standard roller bearings are shown at Stand 5b. The radial bearings are of the separator type, and there are shoulders formed on opposite faces of the inner and outer races to take up the end strain of the bearing. Thrust and load are cared for by the Grant type bearings of this make. A full line of ball-bearings suitable for motorcycle use is also shown.

PURDY EXHAUST WHISTLE.

REPRESENTATIVES of Purdy Bros., of Chicago, manufacturers of the Purdy exhaust whistle for motorcycles, are as busy at the Show as the proverbial bees, and their offering is attracting no little attention. The Purdy whistle is a powerful signal with a butterfly valve which automatically directs the full exhaust through the sound chambers when it is operated, thereby producing a clear and far-reaching note of warning.

STEWART SPEEDOMETERS.

FOR either front or rear wheel drive, Stewart and Clark speedometers, in two models, are shown at Stand 108. The rear wheel drive is by sprocket and pinion, while that for the front wheel is by pulley and belt, to take up the jar and motion of the spring fork. Of the two types, Model 44 has a 90-mile scale, with 100,000-mile season, and 100-mile trip, odometer sections, and the latter can be reset to any tenth of a mile. Model 43 has a 60-mile scale and a season odometer of the same mileage as model 44, but there is no trip register or reset.

IMPERIAL BRASS DISPLAY.

THE exhibit of the Imperial Brass Manufacturing Company in the Chicago Show is particularly attractive, being on the order of a huge picture covering the entire back wall of the firm's space. It has a beveled frame of polished brass, 24 inches deep, with a ground of rich black velvet. On this background, artistically grouped, are shown brass fittings, air, oil, and water pumps, gas and water manifolds and spinning work, which the company manufactures.

Two new specialties of interest to the motorist are being exhibited, one being a valve for regulating and reducing the pressure on acetelyne gas systems, for lighting and starting. The valve is capable of reducing the pressure as low as two ounces, and affords a steady, even flow of gas with a full or a nearly depleted tank.

The accelerator pedal which shows the segment of a circle rising just above the car floor and which operates with a forward, horizontal motion, is another novelty for automobilists. Frank Gruschow and W. S. Burgess are in charge of the Imperial exhibit.

"STA-RITE" PLUGS.

PLUGS in which breakage and leakage are eliminated, and in both mica and double porcelain cores, are shown at the exhibit of the R. E. Hardy Company, under the well-known trade mark of "Sta-Rite." The latest model is the 48A, with separable mica core and Tobin bronze shell, so that it will not stick to the hottest motor. This use of Tobin bronze is unique in spark-plug construction and furnishes, therefore, a distinctive feature for the plugs of this mark. The spindle is of Bessemer steel rod and the inner end of the shell is partly closed to protect the insulation. The head is made so as to fit Indian, Thor, and standard motorcycle terminals. The washers making up the mica core are compressed and locked in place, no shellac or other adhesive being used. Sootproof and waterproof qualities are almost a synonym for the "Sta-Rite" product. Stand 25 houses the exhibit.

STA-RITE
48A

KINGSTON CARBURETER.

THE Kingston floating ball-cage carbureter with the balls used to admit the auxiliary air for the mixture is located at Stand 75. The motorcycle carbureter of this make is nickel finished, and the primary air is taken in around the jet, both air and vapor passing through the Venturi tube construction in the center of the carbureter. The balls are of equal size and weight and the variation in suction causes the various balls to successively lift, the seats being of different taper to effect this. The Kingston carbureter is shown also on the Flanders motorcycles and is demonstrated by J. W. Johnson, secretary and treasurer of Byrne, Kingston & Co., E. E. Dean, of the engineering department, F. J. Alvin, of the Detroit branch, H. R. Brate and William Carleton, of the sales staff, and Advertising Manager Paul Burke.

DIAMOND CHAINS.

IN the large and varied assortment of chains for power requirements, the Diamond motorcycle chain attracts the attention of devotees of the two-wheeler. There have been no changes in construction since the inception of this special model, which is of ⅝-inch pitch, ¼ inch width and an ultimate strength of 3,000 pounds. The blue sides and straw-colored rollers indicate the care with which these chains are manufactured, and the uniformity of tempering, etc.

PITTSFIELD SPECIALS.

TWO-POINT sparkplugs of "Jewel" trademark for magneto ignition, and single-point plugs of similar make for battery ignition, probably interest the majority of riders more than the excellent display of coils for both single and twin cylinders at the stand of the Pittsfield Spark Coil Company. The plugs are noticeable for the large surface of the center electrode, which tends to reduce sooting, and for the staunchness of the side electrodes. They are designed for use in high speed motorcycle motors especially, but are in good service on practically all makes. James E. Frawley, Thomas J. Wetzel, D. M. Coffman, O. W. Brown and Charles H. Caine demonstrate the good qualities of the Pittsfield products.

TIMKEN ROLLER BEARINGS.

IN sizes suitable for the bearings on any part of a motorcycle and up to the carrying of the loads for heavy truck members, the Timken Roller Bearing Company shows its characteristic coned roller type of bearing, with guiding flanges and coned races, at Stand 33. One exhibit of these bearings is examined with special interest, it being in the rear hub of the T. T. model Indian machine.

RAYBESTOS BRAKE LINING.

THOSE who are interested in security in riding, especially when there is a passenger involved in the security, should visit the exhibit of the Royal Equipment Company, at Stand 69a. Here the Raybestos lining for brakes and free-engine clutches is shown and its fine points are demonstrated. On machines at the Show, this lining is fitted to the clutch members of the Indians.

JOHNSON STEEL PARTS.

HIGH grade steel parts and a new metal for piston rings are the chief attractions at the exhibit of Issac G. Johnson & Co. The steel castings are exhibited as to strength, etc., by twisting and bending and their ability to resist vibration is demonstrated. M. F. Doty is in charge.

S. K. F. BEARINGS.

IN a variety of sizes and suitable for use on wrist-pin, big end and main and camshaft bearings the S. K. F. ball-bearings are adapted for use for motorcycle construction. These bearings, which are made in Sweden, are handled in the United States by the S. K. F. Ball Bearing Company, of 50 Church street, New York. A distinctive feature of construction is that which makes these bearings self-aligning, and this is accomplished as follows: The inner face of the outer race is formed as the arc of a circle whose center is at the center of the shaft and bearing. Within this arc is fitted the twin race of balls, the latter being arranged with the balls of one race opposite the separator space of the other, and the two rows are thus staggered. The inner race has its outer face formed to accommodate the balls, and is a true cylinder on its inner face. When in position, should the shaft get out of alignment, the inner race, balls and separators move radially in the outer race, and still bear the shaft but subject no part of the bearing, housing or shaft to strain by "giving" in this manner. The width of the S. K. F. bearing with twin rows of balls is no greater than that of an ordinary bearing with a single row, but it can carry practically twice the load of the latter on the same dimensions.

THE MARBURG LINE.

LODGE spark plugs and the Mea magneto are shown at the stand of Marburg Brothers, No. 3 in the Armory. The Lodge plugs are made in single and double pole types and with the latter in series with standard plugs of any make a two-point ignition is obtainable. The use of the two-point plug is recommended only where the two plugs are situated on opposite sides of the motor head or where one is in the head and the other in the regular plug aperture. The single point plug is giving good service on a large number of foreign motors. The Mea magneto by reason of its compact size is suitable for use on the two-wheeler. The S. R. O. ball-bearings in sizes suitable for motor and variable gear service are also shown.

JONES SPEEDOMETERS.

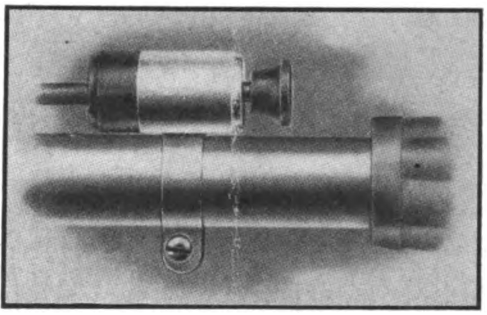
THOSE familiar with the speedometer are almost as familiar with the name Jones, and the instruments of that trademark are drawing as big crowds as any other accessory in the Show. At Stand 27 are exhibited the Jones products, which act by centrifugal force for indicating the speed, and in models suitable for all speeds and pocket books.

STANDARD TUBING.

FRAME parts of seamless steel tubing are the products of the Standard Welding Company, and the chief attraction of their exhibit at Stand 28 is a motorcycle frame made up of their parts and shown on a board. To facilitate appreciation of the strength, light weight and structure of the various parts, these are also shown on the tables at the stand ready for demonstration.

NEW MOTORCYCLE SWITCH.

IN addition to its regular line of motorcycle coils, switches, etc., the Connecticut Telephone and Electric Company, of Meriden, Conn., will exhibit its new switch for motorcycle service, which is used as standard equipment on 1912 Indian machines. The switch is cylindrical and has one lead direct to the magneto. The button has a metal shank fitted with wings which can only enter in one position into a special slot in the end opposite to that from which the lead to the magneto is taken off. When entered and given a quarter turn the rubber head projects a short distance and a slight pressure of the thumb on the button will effect a short circuit. Breaking of the circuit, the normal position for running on the magneto, is accomplished by pulling back on the button. By a quarter turn in the reverse direction, the button can be removed from the switch proper, the ignition is cut out, and the switch acts as a lock, it being impossible to start the motor without the button being in its proper position. The switch is mounted on the handlebar convenient for operation by the thumb and forefinger and is invaluable in crowded traffic riding. It is listed at $1. Extra buttons can be obtained at any time from the makers.



At the Show the company is represented by E. C. Wilcox, C. E. Stahl, Charles Rubel, W. H. Lolley, and F. C. Picker.

WARNER CYCLEMETER.

WORKING on the principle of magnetic drag instead of centrifugal force to indicate the speed, the Warner Cyclemeter is the center of attraction at Stand 102. The characteristic spiral driving-plate with the gear on the flexible shaft and the lamp attachment for lighting the indicating window are other well-known Warner features. The Cutmeter and computing instrument of this make are of importance also in motorcycle manufacture and attract the attention chiefly of the technical crowd.

MOSLER SPARK PLUGS.

"SPIT-FIRE" and "Breech-Block" plugs for the motor of the two-wheeler, as well as for motors of all kinds, attract the crowd at Stand 38, the Mosler headquarters. The former derives its name from the hollow porcelain cup with circular electrode, giving a jet of ignited mixture from the cup when the spark is passed. The body of the "Breech-Block" plug is fitted with an interrupted screw and the shell with a corresponding interrupted screw, so that the core and inner portion of the plug can be removed by a third of a turn. The shell remains in the cylinder and can be used as a priming or relief cup.

MODEL "H" SCHEBLER.

MOTORCYCLISTS center their interest upon the model H carbureter of Wheeler & Schebler make, this model being the standard Schebler motorcycle carbureter. While being called "the standard" it is not made as a stock instrument, each being adapted individually to the motor on which it is to be fitted, with special cam attachment, etc. Details and advantages of the Schebler product are explained by Sales Manager Geo. T. Briggs, assisted by Messrs. Okey, of the experimental department; Thorburgh, D. F. Wheeler, Stone, Avery, Reade, and Motsinger, manager of the Chicago branch.

USING SPACKE MOTORS.

IT is reported that the English champion, C. R. Collier, has obtained Spacke motors for experimental purposes in connection with the Matchless motorcycles at the factory at Plumstead, England. Brooklands track tests will undoubtedly be made, in addition to the regular factory trials, and the results are awaited with interest. The Spacke motors, manufactured by The Spacke Motor Company, of Indianapolis, Ind., are to be seen in the Coliseum during this week.

NATIONAL CARBON PRODUCT.

USERS of battery machines, as well as others who employ dry cells as a source of ignition, find interest in the exhibit of the National Carbon Company, at Stand 40. The product has been noted since its appearance on the market for its long life under both open and closed circuit conditions, and for its regular retention of voltage and recuperative qualities.

CORBIN SHOW STAFF.

THE CORBIN SCREW CORPORATION, of New Britain, Conn., manufacturers of the famous Corbin Brakes for bicycles and motorcycles, has a strong force of representatives in Chicago for the Show. William E. Diehl will head the selling force, and his headquarters, 65-67 West Lake street, the western office of the Corbin people, will be at the disposal of the trade during the Show.

EDW. BUFFUM,
Sales Manager of the Flying Merkel.

J. A. HANDIN,
Sales Manager of the Aurora Automatic Machinery Co.

WM. OTTAWAY,
Supt. of the Aurora Automatic Machinery Company, and Veteran Motorcyclist.

IT'S UP TO THE RIDER TO SPECIFY TROXEL SADDLES

If You Have Ever Ridden With Any Saddle Other Troxel You Know What

WE SAY THIS BECAUSE the New Troxel Motorcycle Saddle is the first real saddle that has ever been designed for the Motorcycle rider. We do not call your attention to any feature and say some fool thing about why you should ride one, but we ask you to either examine the Saddle or take the word of an expert, probably the man who builds your own motorcycle.

AT THE NEW YORK SHOW every Big man in the Motorcycle Industry put his O. K. on our New Saddle, as being the finest Motor Seat ever designed. Mind you, these Motorcycle Manufacturers are harder to please than you are, because their particular machine and reputation are at stake, and nothing but the best will wring an O. K. from them.

NEVER BEFORE IN MOTORCYCLE HISTORY has anything created so much talk as the New Patented Troxel Saddle. If you are new to the fold you probably wonder why a saddle should create such a stir in all quarters. Just remember this, every mile you ride, you ride on your saddle; of course you realize that, and if you have a New Troxel on your mount you will enjoy every mile, as far as your seat is concerned, because it is built with that object in mind.

WE WILL NOT WASTE SPACE to tell you we use only the best materials; the men at the factory demand that for you, and the reason we have 75 per cent. of all the Saddle Business is because for over a quarter of a Century we have had the confidence of all the Manufacturers and also their saddle business.

IT IS REALLY A JOKE to see the other fellow still trying to deceive the motorcycle rider with a makeshift saddle that is as complicated and funny looking as an Old Maid's Curls. There is a mechanical principle

Look Over the Saddles Shown Herewith and ufacturer More Money But Do Not Cost the Rider

"THERE IS A

TROXEL MANUFACT

a Motorcycle Equipped han the New Patented It Means to Hit Bottom

underlying the construction of a successful Saddle that every saddle maker, other than ourselves, does not seem to understand.

HERE IS A SIMPLE EXPERIMENT for you to try. Take a lead pencil or any measure about a foot long. Hold one end stationary and the other end about four inches from the table, getting a line even with the edge of the table. Now just drop the measure flat on the table and notice that it overhangs about half an inch. This is just exactly what the Saddle top does when it goes down under your weight, the two centers change, and the New Troxel is the only Saddle made that takes care of this movement. That is why everybody who has seen it marvels at the simplicity of the spring action, and proclaims it the only Real Spring Action on a Motorcycle Saddle.

THE ONLY THING THAT A NOSE COIL DOES ON A MOTORCYCLE SADDLE IS BREAK and hold your saddle up away from the frame. Our New Saddles are all made with our patented "NO NOSE COIL" and "NO BUMP" Spring Action. There are two Suspension types and one formed or Cavalry Saddle; all have the new "NO BUMP" Spring Action, and are supplied as regular equipment on all Motorcycles when specified.

IT IS UP TO YOU TO SPECIFY A TROXEL SADDLE on your Motorcycle, because you will not be satisfied with anything else. The maker of your motorcycle is more than willing because he knows you will be satisfied only with the New Troxel, and he is anxious to please you; ALTHOUGH THE TROXEL SADDLE COSTS HIM MORE MONEY YOU CAN HAVE IT BY JUST SAYING, "I WANT A NEW TROXEL SADDLE."

"NO BUMP SPRING ACTION."

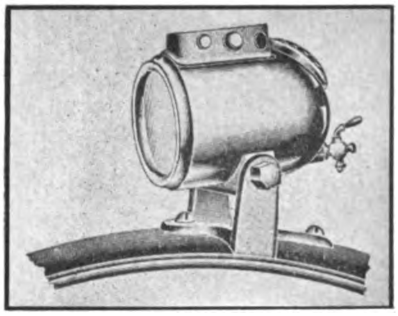
STAR ELECTRIC SPECIALS.

IN the accessory line which is being displayed at the Show by the Star Electric Company an improved luggage carrier and a combination head and tail lamp are the features of greatest interest to motorcyclists. The lamp body is a nickel aluminum casting, fastened to a bracket of the same material. This bracket is attachable to the rear mudguard by two bolts, and by loosening one nut the lamp may be adjusted to throw the light at any angle. The shut-off and hose connection are of brass and the gas duct and burner holder are of the same material and soldered into the shut-off, thus preventing leakage. One end of the gas duct is fastened into the burner holder which rests on the bolt connecting the body and bracket, thus avoiding vibration and breakage. There is a jewel in the rear of the lamp body so that when the lamp is used for rear lighting a gleam from the jewel illuminates the license tag, if the latter is placed upon a bracket. While the lamp is finding unusual favor for rear lighting because of its handy design it is credited with supplying plenty of light for use on the head of a machine. The firm's luggage carrier, which is of simple, sturdy and attractive makeup has been previously described in these columns.



Star Tail Light.

INSPECTED THOR PLANT.

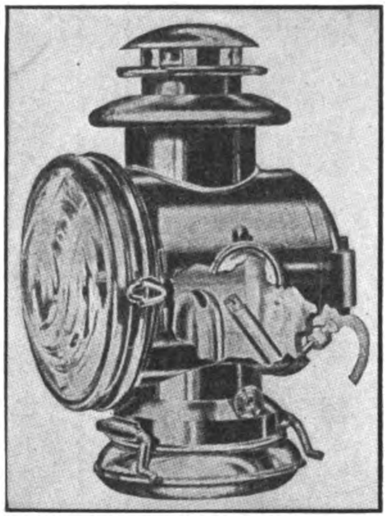
ONE of the most interesting trade events incident to Show week was an excursion to the Thor plant in Aurora, Ill., on Tuesday, February 6, when a special train of six cars carried the guests of the company to Aurora for the inspection. The party was admirably conducted by Sales Manager E. J. Knight, who saw to it that the visitors missed nothing and that all their wants were catered to. Luncheon was served at the English Kitchen in Aurora, at 12.30 and the party was then escorted to the big plant. The trip back to Chicago was made on another special train which left Aurora at 4 p. m. and arrived in Chicago at 5.30, in time for the evening show.

HAGSTROM SUCTION PRIMING CUP.

A PRIMING cup that will appeal to the rider, as do all labor-saving devices, especially where simplicity and accessibility mark the construction, is the Hagstrom suction priming cup, made by the Hagstrom Bros. Manufacturing Company, of Lindsborg, Kan. This cup has a body holding a sufficient quantity of gasoline to prime the cylinder, and the only connection between the interior of the cylinder is through a bent tube flattened at the inner end. This tube reaches nearly to the bottom of the cup, and when the lid is closed the suction of the motor effects a drainage of the gasoline through the siphon tube and the motor is primed. The cover is held closed by a coil spring. The list price is given as $1.

UNIQUE DUPLEX LAMP.

INTENDED for use either with oil or an acetylene burner attachment, and made in a neat and sturdy design, the new motorcycle lamp offered by the C. T. Ham Manufacturing Company, of Rochester, N. Y., is an offering calculated to attain wide popularity. It is on display with the company's full line at Stand 4 in the Show. For ordinary use the lamp burns oil, and is built on the coldblast principle which insures its staying lighted under all conditions of use. Where a stronger light is desired the acetylene burner is used, and the lamp is fed either from a generator or a gas tank. The burner is brought into action simply by turning on the gas, which ignites from the wick flame; the wick may be lighted in the same manner by turning it up until it comes in contact with the flame of the gas. It is stated that the rider may make this change from one burner to the other without dismounting from his machine. The accompanying illustration shows the application of the gas burner.



MAKING EXTENSIONS.

LISTER BROS., Cleveland, Ohio, have made extensive improvements in their headquarters, and have leased a fireproof building which is to be used as a repair shop. They are preparing for an early riding season and a busy one.

ADAMS SHOCK ABSORBER.

IN the Adams shock absorber for fitting to motorcycle saddles, manufactured by O. L. Adams, Denver, Col., steel bolts inside the springs extend through the hanger and keep the saddle from swaying. When the device is in action the hanger attached to the rear stays works up and down on the bolts, according to the irregularities of the road, while the rider maintains a comparatively even position. Self-aligning bronze bushings are used where the rods work through the hanger. The device is made throughout of high grade material and is nickel-plated. The rider's weight is sustained upon a pair of springs of large diameter, which give a cushioning effect and practically eliminate the transmission of vibration to the saddle proper. The saddle clamps upon a ferruled block, ferruled washers being used, but the seat post clamp is eliminated. The device may be arranged to fit any standard machine.

EXTENDING POLLOCK PLANT.

A. B. POLLOCK, president of the Pollock Manufacturing Company, Limited, of Berlin, Ontario, Can., has been in New York and Bridgeport of late for the purpose of purchasing special machinery to be used in the manufacture of Old Sol lamps, for which the firm now has the Canadian marketing rights. Recently the Pollock company entered into an agreement with the Hawthorne Manufacturing Company, of Bridgeport, for the manufacture of its well-known line of lamps in the Dominion and its success is almost as pronounced as that of the Hawthorne firm, which has been making remarkable progress in the development of its field under the department management of Thomas M. Dunham.

NEW DEPARTURE CATALOG.

AN interesting and valuable contribution to the ball-bearing literature of the present year is the Engineering Edition or catalog treatise, issued by The New Departure Manufacturing Company, of Bristol, Conn. This is fresh from the press, contains seventy-six (76) pages, and has been prepared by the company's staff of ball-bearing specialists and engineers. It gives valuable information of a technical character, and is fully illustrated by fine engravings.

The New Departure Manufacturing Company offers to send this catalog on request to manufacturers, purchasing agents, designing and mechanical engineers, and other responsible persons who are interested. Such requests should be made on the letterhead of the firm with which they are connected. Address The New Departure Manufacturing Company, Bristol, Conn.

SIGNS OF THE TIMES.

WITH the last of the big Shows in progress the opening of the second month of 1912 finds the trade fully one hundred per cent. ahead of last year. Machines to the number of several thousand have already been delivered, and firms which never before made deliveries in quantities until March or April are prepared to do so now. This promising state of affairs demonstrates more effectively than anything else that the trade is on a sound footing, for it takes capital in generous quantities for a manufacturer to be in position to make big shipments while the snow is still deep. On the other hand, capital so employed is certain to be turned over quickly, thus enabling the builders of machines to cope to better advantage with next year's demands.

Second in importance among the good signs of the New Year is the fact that the motorcycle is better and more favorably known than ever heretofore. On the one hand the motorcycle has been more vigorously and more intelligently advertised; on the other, the rider is giving the sport a heartier and more sensible co-operation. That he is so doing is largely because of the development by the F. A. M. and affiliated clubs of a motorcycle spirit that is altogether on a higher plane than in previous years. As a result, much of the old public antagonism has disappeared, and in its place, in many localities, there is manifest at least a disposition not only to tolerate, but also to look into the sporting and commercial possibilities of the motorcycle. A still more favorable public sentiment is wanted and, after that, real public enthusiasm from coast to coast.

ON YOUR GUARD.

UPON the State Commissioners of the F. A. M. rests the responsibility of at least keeping the chairman of the National Committee on Legal Action informed as to the prospect of the introduction of bills aiming to regulate the operation of motorcycles. Many legislatures are now in session and, unless the State Commissioners keep their eyes open, their law-makers are not at all unlikely to "slip something over" in the way of an unreasonable law. On the other hand, it may be wise, in some States, to propose a bill that will safeguard the interests of the public as well as of riders of motorcycles. The co-operation of the legal committee is assured to all State Commissioners who show the slightest disposition to work hand in hand with the Federation's national officials.

PROVIDENCE BANQUET

Club Members and Guests Dispose of Feast and Then Enjoy an Excellent Entertainment Program.

FORTY members and guests of the Providence (R. I.) M. C. attended the seventh annual banquet of the club on Sunday, January 28, and pronounced it the most successful affair of the kind in the history of the organization. E. L. Buffington, president and toastmaster, saw to it that the excellent dinner was spiced with just the proper number of speeches and witty stories of the road, and it goes without saying that there was not a dull moment.

B. A. Swenson, dean of motorcyclists in his district and an ardent worker for the advancement of the Providence Club, spoke of the progress made by the motor two-wheeler throughout Rhode Island, and outlined plans for future activity. Following the dinner a high-class entertainment program was provided by the committee, which was made up of A. R. Magee, chairman; L. P. Whitcher and John Kay.

CLUB GROWS RAPIDLY.

THE Jacksonville (Fla.) M. C. has grown during the last year from a membership of twenty to a hustling squad of eighty riders, and its 1912 plans promise continued increases.

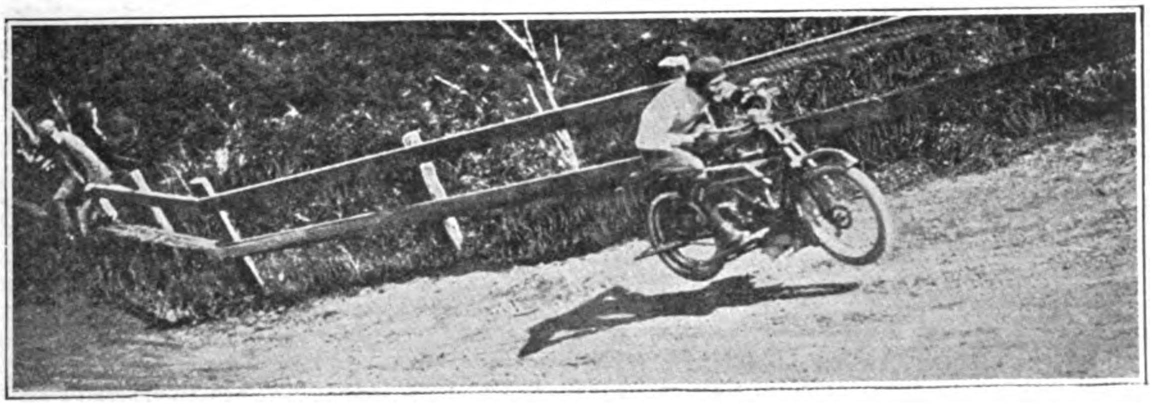
JOIN MOTORCYCLE RANKS.

THE Capital City Wheelmen, of Sacramento, Cal., formerly devoted exclusively to the bicycle, will reorganize shortly as a full-fledged motorcycle club.

P. J. CARLTON will continue to handle the Emblem machines in Cleveland, Ohio, for 1912.

ACCORDING to the census collectors for 1911, Chicago has 3,000 active motorcyclists.

A REMARKABLE PICTURE.



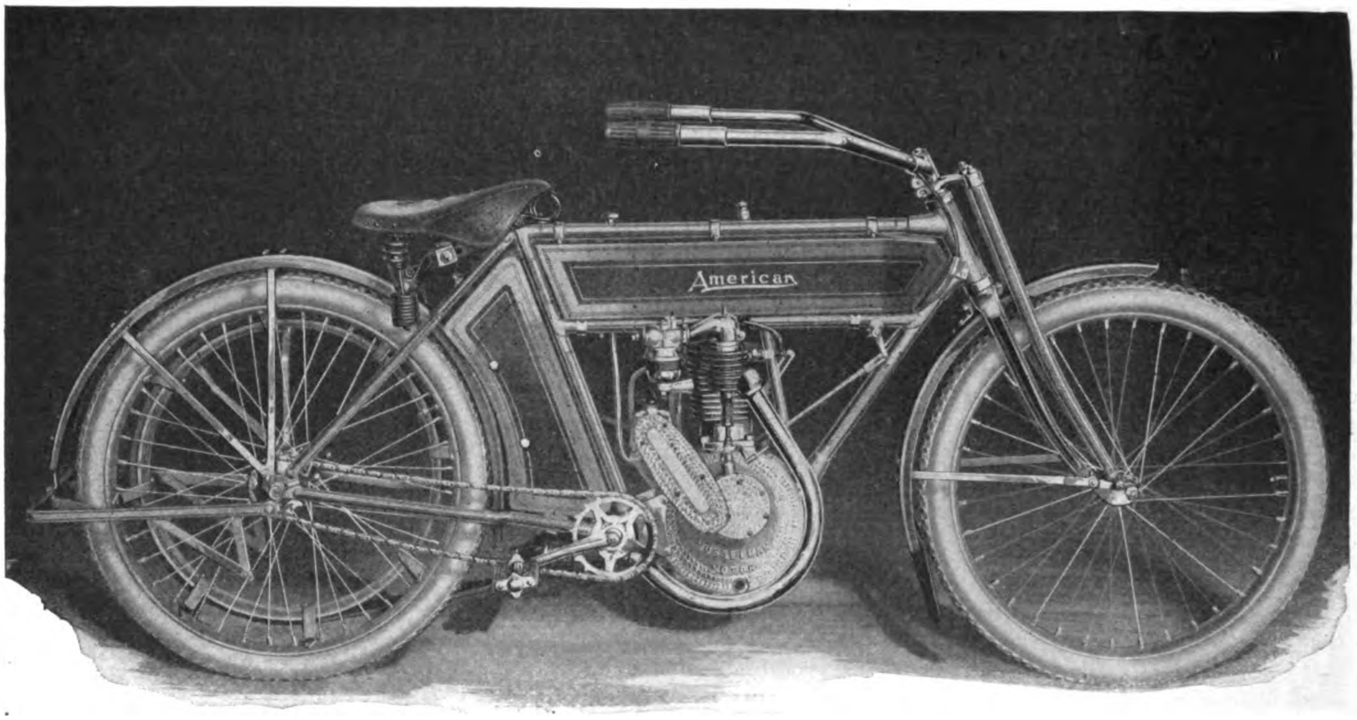
THE remarkable photograph shown herewith depicts a rider named Jenkins recovering after taking the sharp turn at the left of the picture during a contest on the celebrated Rayorback Hill at Pokeno, New Zealand. The surface was so bad that both wheels left the ground and at that instant the camera exposure was made. The machine used was an L. M. C. roadster of 3½ h. without pedals and equipped with the Auto-Varia change-gear. Jenkins won first place on hill-climbing formula and made the fastest time for the single cylinder class. We are indebted to the Lloyd Motor Engineering Co., Ltd., of 132 Monument Road, Birmingham, England, the makers of the L. M. C. machines, for the information and photograph.

BIG COUNTRY SALES.

"CITY sales are up to expectations," says Sales Manager John Yoke, of the Flanders Manufacturing Company, "but for rapid-fire orders give me the country. We count upon selling 80 per cent. of our entire output for 1912 to farmers and riders in towns having less than 5,000 inhabitants."

B. A. SWENSON opened his 1912 sales campaign in Providence, R. I., recently by selling several Indians before they were out of the crates.

BRUSHART & FLOSOM is the name of a new firm in Portsmouth, Ohio, formed to handle the Harley-Davidson line of motorcycles.



AMERICAN HILL-CLIMBER.

KNOWN as the Model 33 "Hill Climber," the product of the American Motorcycle Company, of 1354-8 Wells street, Chicago, presents a number of attractive features for the 1912 season. The frame is built on square lines, with a big drop, allowing for a low saddle position without cutting off the top or seat members. The motor has a stroke of 3⅞ inches, and the crankcase is large. While rated at 4 h. the motor has developed considerably more. The control is enclosed in the handlebars and is operated by twisting grips for the spark and throttle. Magneto ignition only is fitted and the Eclipse free engine pulley is standard.

Every frame connection is a forging and all machined parts are given a crocus finish. The equipment speaks for the high quality of the machine, the Musselman coaster brake, Troxel saddle, Continental-Erie tires and Standard pedals being fitted. The mudguards are formed with wide raised centers, the braces are flat, and the magneto used is the Bosch enclosed type. The motor is after the design of A. J. Musselman, who is president of the company, and whose inventions are well known in the motorcycle field.

NATIONAL TOUR PLANS TAKING FORM

Project Launched At New York Show Arouses Interest of Manufacturers, Dealers, Riders and F. A. M. Officials—Early Action Is Needed.

THE Coffman-Musselman annual motorcycle tour, for which plans were launched at the New York Show, is beginning to take form, and with every F. A. M. official and leading riders throughout the country giving the project their hearty support the success of the undertaking seems already to be assured. The value of the publicity which will be obtained for the motorcycle through this tour can hardly be estimated, and wide-awake dealers from coast to coast are appreciating this fact and falling into line with the boosters.

In order to have the route touch their cities and towns dealers are advised to act at once, and if possible offer some inducement in the way of entertainment or a welcome. In addition to assisting the individual dealer such an arrangement will contribute to the general success of the enterprise, and the promoters are anxious to have dealers throughout the country take up the matter in this spirit.

Inasmuch as the two trophies will be of greater value than any heretofore offered for a motorcycle tour in this country it is likely that competition will be very keen. The contest for the handsome trade riders' cup promises to be a desperate one from start to finish, while the private owners will not be less enthusiastic in their efforts to carry off the trophy for their division. Bought at wholesale rates the cups will cost $150 and $100, respectively, and if purchased ordinarily they would run considerably higher.

It has been suggested that each club on or near the route of the tour delegate at least one rider to compete for the private owners' cup, under his club colors. The winner of this trophy holds it permanently, and it is argued that it will be no small honor for a club to capture it. The trade riders' trophy must be won three times consecutively in order to become the permanent property of a rider. Messrs Coffman and Musselman will welcome suggestions and expressions of opinion from clubs throughout the country with reference to the tour. A. J. Musselman may be addressed at 1356 Wells street, Chicago, and A. B. Coffman at 120 10th street, Toledo, Ohio.

TOURING IN THE OLD WORLD

Five-Thousand-Mile Trip of Esler and Streiff Over Continental Roads Ends in Milan, From Which Point They Return by Train to France and Embark for Home Shores—Streiff on Side Trip to Venice.

FOLLOWING is the last instalment of Joseph Esler's article recounting his experiences on the European tour which he made in company with William Streiff during the past summer. It carries the American tourists through picturesque Italy, deals with their journey by train back to Boulogne, France, where they embarked for the ocean trip homeward, and closes with their arrival in New York.

On a sightseeing tour of Milan we saw many women washing clothes along the banks of the canal, and here and there we found groups of men flipping pennies, a small form of gambling which is quite popular among the poorer classes in this part of Italy. We paid ten centimes each to ride through the city in a trolley car, and when we started back the conductor demanded twenty centimes each for the return trip. Streiff and the traction employee had a wordy argument, neither understanding the other, but we finally paid the rate asked.

We rode into the country for about ten miles and had dinner before returning. At night we found great throngs of people parading the streets and learned that in Milan and other large Italian cities it is customary for the inhabitants to enjoy Sunday evening promenades. We visited the Victor Emmanuel Arcade, a huge structure three stories in height and covered by a glass roof, and later inspected the cathedral, the latter being the city's greatest attraction for tourists.

Preparing for Homeward Trip.

We were up bright and early on Monday morning to accompany the N. S. U. agent, P. Ghirlanda, on a carriage ride through the city. We went to the customs office to inquire about the suit case and tires I had shipped from Neckarsulm, Germany, weeks before, and found that they had just arrived. Several officials unwound much red tape before the car was opened so that we might get the goods. Later we hunted up the American Consul to obtain information concerning the shipping of our machines back to the States. He informed us that he had experienced difficulty in getting several parties of American motorcyclists out of tangles during the summer, and was glad to learn that we were not in trouble.

In the meantime the N. S. U. agent had fallen in love with my Indian and finally bought it, thus relieving me of the bother of getting it back to our home shores. When we tried to obtain return tickets we ran into difficulties. All the agents assured us that the second-class berths were sold out for weeks ahead and we finally telegraphed to Paris to obtain accommodations by way of Boulogne.

Shabby Hotel Treatment.

When I turned out on the following morning I found Streiff "all het up," as we say in the States, because of treatment he had received at the hands of the hotel attendants. He was writing a letter on a table in the dining room when a waiter took his ink without warning and gave it to another patron. Streiff explained that his letter was not finished, but could obtain no more ink. We counted upon paying eight francs to settle our bill, four francs each for two nights' lodging, but instead received a bill for ten francs. Then came another argument, and we finally compromised on nine francs and left without tipping the waiters, an unspeakable offense.

While going downtown on a trolley car we found that only five centimes each was charged when we had previously paid ten. Inquiries brought the information that during the early morning hours when the workers of the city are using the traction lines the lower rate is in effect. Can we ever hope for such an arrangement in the States?

Sidelights on Milan.

Telephone service in Milan and in most Italian cities is beyond words. Talk about slow operators in American exchanges! Why, a tourist will wear out an ordinary voice yelling "pronto" before he can get attention from an Italian telephone girl. The co-operative store idea has taken root in Italy, and big establishments, run on modern lines, are to be seen on all sides. Six stories seems to be the maximum height for buildings, and where they are used as dwellings every window is full of clothes, hung out to dry. Apparently there are no yards in the city districts. I spent considerable time watching hundreds of pet doves feeding near the cathedral and found many little touches of human nature to impress me as I passed through the streets.

While Streiff made a side trip to Venice I remained behind to arrange for the steamer tickets, obtaining them for $65. However, we had to travel by rail all the way to Boulogne and pay extra for this transportation. I noticed that motorcycles are quite popular in Milan, the lightweight types being preferred.

Streiff in Venice.

After four hours of travel Streiff arrived in Venice and visited several of the most famous points of interest. He spent an hour in a gondola on the Grand Canal, viewed the Doges' palace and stopped for a time in St. Mark's Place where thousands of pigeons come daily to be fed. Although his time was short he managed to see a great deal and was deeply impressed by his visit. On his return to Milan he found all the hotel attendants in bed and was half frozen before he succeeded in getting a response to the bell.

We left Milan on Thursday at 4 p. m., or 16 o'clock, as the natives call it. They use the Canadian system of keeping time, numbering the hours from 1 to 24, instead of dividing the day into a. m. and p. m. We were loaded down with a big box containing Streiff's baggage, a suitcase filled with our mutual belongings, another large package and a pair of old Goodrich tires, but the cab driver charged only one franc, 30 cents, to carry us to the station, a distance of three miles.

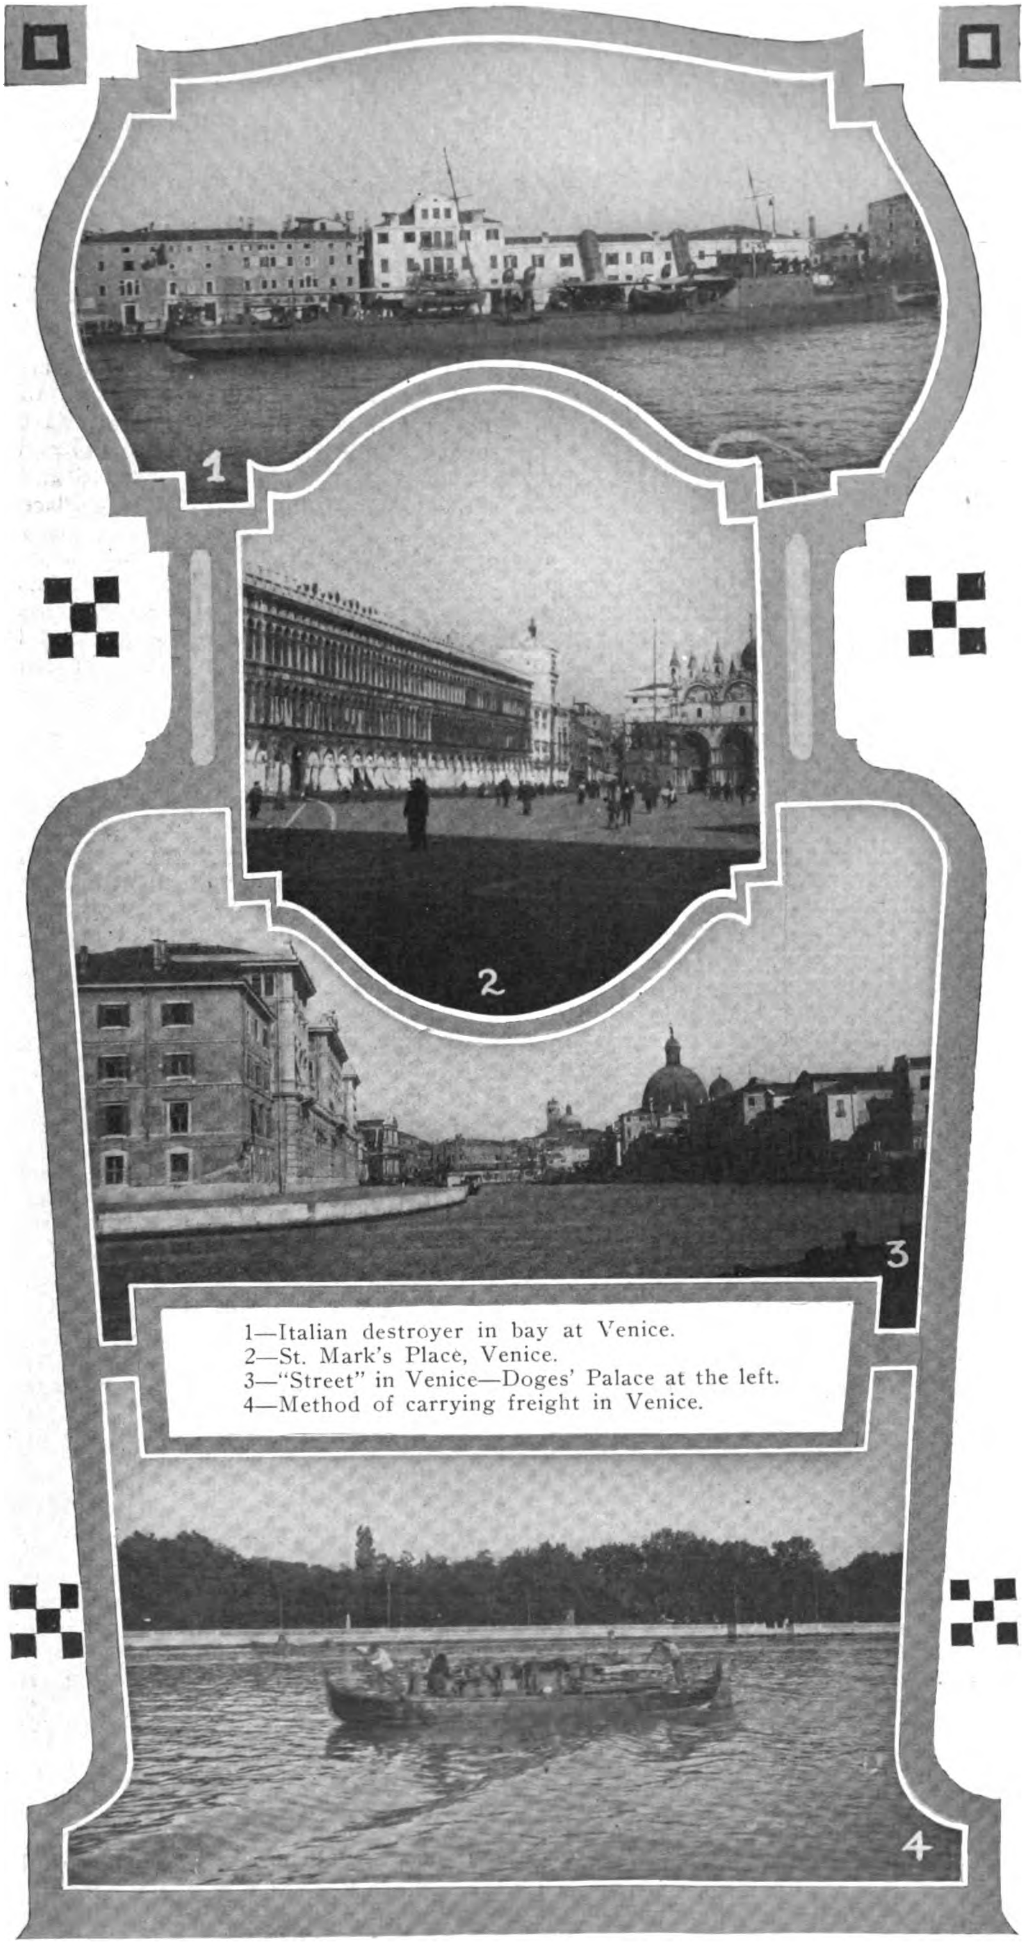
The Trip to Boulogne.

On the train I had the honor to be mistaken for a priest by a passenger who seemed troubled and wanted the aid of a churchman, but I gently informed him that he had made a serious mistake. We settled down for the run to Boulogne and managed to while away the time by watching the scenery, which was unusually attractive. We noticed that all orders posted in the train were printed in four languages, English, French, German and Italian. A lady who sat opposite us throughout the trip puffed contentedly at a cigarette and attracted no attention.

We were under the impression that we would have to change only once, perhaps not at all, on the way to Boulogne, but we found that no such comfort is to be had on Italian railways. The first train was slower and more noisy than some of the famous slow trains of Arkansas, and to cap the climax we learned that we would have to lay over at Zurich, Switzerland.

Italian Rapid Transit.

It was explained that we could spend the night in Zurich and leave at 7:16 the next morning. We turned out at that unholy hour and reached Basel in due



1—Italian destroyer in bay at Venice.
2—St. Mark's Place, Venice.
3—"Street" in Venice—Doges' Palace at the left.
4—Method of carrying freight in Venice.

time. There we had to change again and go through the Swiss and German customs before taking another train for Mulhausen, Germany. At the latter point we changed once more, and this time we got as far as the French border at Petit Croix, where we had to pass the French customs and change trains again. We were told that we would reach Paris at 10 o'clock at night, and it was also explained that if we had left Milàn an hour earlier the day before we would reach Paris ten hours earlier, all this time being lost along the line by the trains we had used.

In Italy it seems that a conductor punches your ticket at every station, while in Germany and France the ticket is punched when you board the train and when you leave. No one bothers you during the trip. We were surprised at Petit Croix to have the customs officials demand our American passports; we showed them and passed through without further difficulty. This was the first time during our tour that the passports had been asked for.

On the Steamer at Last.

We hunted up the hotel at which we had stopped before when we arrived in Paris late that night, but found it crowded, so put up at another hotel in the neighborhood. On the next morning we went to the Hamburg-American office and obtained our tickets and made arrangements to have our baggage forwarded to Boulogne. We met some of the friends we had made while in the French capital before and enjoyed a short sight-seeing trip. Here's a little joke on Streiff. In an underground station he invested 10 centimes in a slot machine for a piece of chocolate, and instead received a small box of face powder and a tiny puff. What he said is better left unrecorded.

We left by special boat on the next day, Sunday, for Boulogne where we were to embark at 3 o'clock on the steamer *President Lincoln.* As we arrived in Boulogne it was raining heavily and we found that we were several blocks from the quay at which the tender *Holland* was supposed to be waiting to take us out to the steamer. Every cab had been gobbled up, so we had to walk to the waterfront in the rain, thereby getting soaked to the skin. When we arrived at the wharf we learned that the tender could not go out that night, owing to a very low tide, and we were advised to go back to a hotel to wait. It was almost noon the next day when we finally got out to the ship; in the meantime we had been guests of the Hamburg-American Line.

We left Boulogne at noon on Monday and had a rough passage down the English Channel to Southampton, where another tender brought a few passengers out to us. For several days the rough weather continued, but neither of us suffered from sea-sickness. Many novel amusements were devised by the passengers and the trip over was very pleasant.

Back in Old New York.

We reached New York about 8 o'clock on Thursday night and were told that we would have to land at once, although we had been informed previously that we were to remain on the ship overnight and land in the morning. There was considerable grumbling, but the customs officials were aboard, so there was nothing to do but go ashore. We put up at a hotel in Hoboken and on the following morning went over to New York.

We felt very well satisfied with our tour, despite the fact that we were glad to be back on American soil. We had ridden 5,128 miles in Europe on our machines and had collected a vast store of information concerning the countries we visited and their inhabitants. Our trip had not cost us as much as such a tour would ordinarily, owing to the fact that we were entertained by the motorcycle agents in nearly every city. Still, had the outlay been twice as large, we should have felt justified in making it in order to go through the experiences which have been briefly recorded in this series of articles.

AMERICAN MACHINES LEAD.

TORONTO, CAN., has over 500 motorcycles. Twenty-six makes are represented, of which nine are English machines. The growing preference for American built machines is illustrated by the fact that out of a total of 518 motorcycles in the city, only 239 are of foreign makes.

RELIANCE DIVIDEND.

REFEREE BENJAMIN BAKER has made announcement that a first dividend of five per cent. on the business of the Reliance Motorcycle Company, of Owego, N. Y., will be forthcoming to the company's creditors at the office of Fred J. Davis, Owego, on February 10. The meeting is called for 9 a. m.

McBRIDE A BUSY AGENT.

PERCY A. McBRIDE, one of Toronto's up-to-the-minute retailers, has secured the Ontario agency for the new Excelsior product. His territory will include the whole of the Province of Ontario and he is placing agencies in Ottawa, Hamilton, London, Brantford and other centers. He will continue to retail the Excelsior in the city of Toronto, where he is also dispensing Majestic side-cars.

PLANS FOR A RUN.

A MEETING of the Visalia (Cal.) M. C. was held on January 22 for the purpose of taking up plans for a run to be held in the near future. There was also some talk of a banquet to be held in a few weeks.

LOUISVILLE RIDERS BUSY DESPITE SNOW

Motorcycles In Commercial Service Chug Merrily Through Drifts, Dealers Find Prospects Bright for Spring Sales and Louisville M. C. Is Laying Plans for Early Endurance Run—Agents At Chicago Show.

LOUISVILLE, KY.—Owing to the fact that the regular meeting date of the Louisville (Ky.) M. C. fell on New Year's Day the session was held a week later, and practically all the members were in attendance. Vice-President J. B. Coblens occupied the chair in the absence of President E. M. Hughes, who was attending the Automobile Show in New York. There are indications that the club will open the riding season auspiciously and that the summer will be an unusually busy one. Much interest is being taken in the annual election of officers which will be held in March.

Chicagoan in Louisville.

Frank Harris, an officer of the Washington Park M. C., of Chicago, is now in Louisville and expects to be held here by business for the coming year. He has brought his Merkel 6 with him, which is an indication that he means to stay a while. Of late he has had several interesting experiences in riding through Louisville snow. On one trip he traveled through twelve inches of "the beautiful" for some distance and then discovered that his machine was imbued with quite a few of the characteristics of a Texas broncho. It not only refused to stay upright, but lay down and rolled over with him, according to reputable witnesses. Harris insists that Louisville snow is totally different from the brand he is accustomed to riding through in the Windy City, but, nothing daunted, he may be seen on the road almost any day.

Commercial Machines in Use.

Despite the heavy fall of snow and subsequent bad roads, motorcycles in business service have been seen making their rounds of the city daily, but pleasure riders, as might be expected, are conspicuous by their absence. The men of the Louisville Lighting Co., which recently supplied its inspection staff with motorcycles, have ploughed through the snow on their two-wheelers, even to outlying points, and accomplished many emergency tasks that would otherwise have been greatly delayed. Although forced to do considerable "rough riding," they state that few drifts can balk them since they have fitted their mounts with free engines.

Attending Chicago Show.

News of the New York exhibit so stimulated interest in the Chicago Show that a number of Louisville dealers and agents have left for the Windy City, among them R. L. Davis, Louisville agent for Reading Standard, Pierce and Pope machines; Albert Wolke, agent for the Excelsior and Emblem; P. J. Kline, of Kline Bros., Harley-Davidson agents, and Frank Marshall, of the Sutcliffe Co., Indian agents.

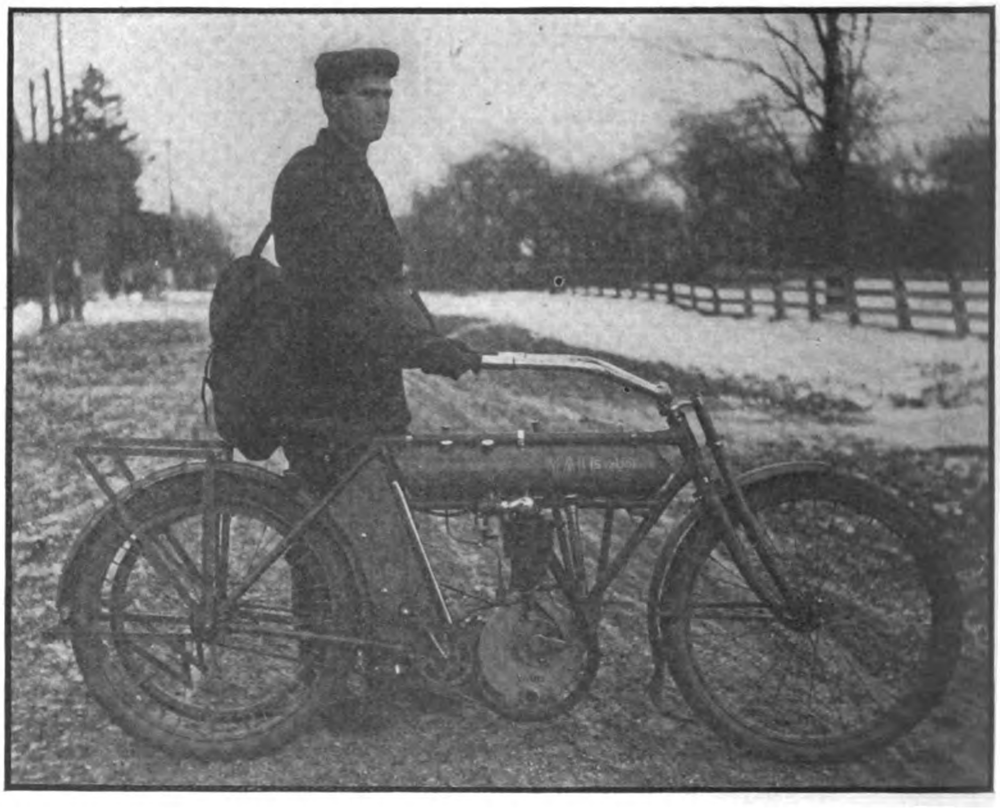
E. M. Hughes, president of the Louisville M. C., combined business with pleasure while at the New York Show and contracted for his 1912 supply of Indians, for which he is agent in Ashland, Ky. Mr. Hughes' home is in Louisville, but, being a railroad man, he spends about half his time in Ashland.

That Dark and Stormy Night.

A well-meaning but thoughtless correspondent caused one of the motorcycle journals to announce recently that the regular meeting of the Louisville club would be held on New Year's night, and that the session would be featured by that generosity for which Kentucky is famous. Thereon hangs a tale. The fateful night arrived; with it came snow and biting winds. A tottering form, shrouded in snow, approached the clubrooms and tried the door. It was locked and the visitor had no key. He crouched as far as possible out of the wind and snow and waited. In time another form appeared, but still there was no key. Others came, waited and shivered, but there was no officer in the party and consequently no key. Finally the forms stumbled off into the night thinking of that meeting notice—thinking hard. All of which is accounted for by the fact that the meeting had been set ahead a week because of the New Year's holiday.

A True Motorist.

P. J. Kuhn, one of the best known motorcyclists in Louisville, is up a tree, so to speak. For several years he has been a Reading Standard rider, and recently he decided to divide his attention between the R.-S. and a Harley-Davidson. So far, so good, but now he wants either a motorboat or an automobile runabout, and can't make a choice. His friends have advised him to solve the problem by sticking to the motorcycles, and P. J. just about agrees with them.



A CARRIER'S STORY.

WILL KERR, an R. F. D. carrier out of Monclova, Ohio, writes a highly interesting letter concerning the record he has established with a motorcycle on his route, and adds another argument to the hundreds already advanced for the power two-wheeler as a vehicle for other than pleasure service. He purchased one of the first Yales sold in 1909 and has since used the machine on his route every day when it was possible to ride. It is still in running order. He covers a route of 25 miles in two and a half hours and makes 125 stops on an average. To make the trip with a horse and buggy would require six hours. Some time ago Kerr purchased a 1911 Yale, and he now feels prepared to meet all the demands of his route for some time to come. He reports that in addition to saving much time he has about cut his expenses in half, the motorcycle giving him practically no trouble. The amount of mail ordinarily carried is seen in the photograph.

COMING OUT.

Result of a Staff Artist's Exercising His Imagination in Advance of the Show's Opening Date.

WITH THE COLUMBUS TRADE.

COLUMBUS, Ohio.—The Franklin Cycle & Supply Company, 142 East Gay street, Ohio agents for the Excelsior, Thor and Harley-Davidson machines, booked six orders during the past week for motorcycles to be delivered in the spring. The concern will receive several models of the chain-driven Excelsior in a few days.

The Pharis Bros. Rubber Company has been organized in Columbus, to take over the tire business formerly operated under the name of the Columbus-Mansfield Rubber Company. The new storeroom will be located at 121 East Gay street. Motorcycle tires will be included in the stock.

P. I. Haynes & Co., central Ohio agents for the Harley-Davidson, have removed from their old location at 51 East Gay street, Columbus, Ohio, to a new building at 45 North Third street. The new building, which was built especially for the company, is 20 by 50 feet and two stories in height. The salesroom and offices are on the first floor, and the repair shop on the second, and one of the conveniences is an elevator.

Motorcycle dealers of Columbus have been asked to join with the automobile dealers to give a combined automobile and motorcycle show at the old postoffice building at Third and Chestnut streets some time in February. Although the plans have not been worked out in detail as yet, the motorcycle dealers have assured the automobile men of their support. At least a half dozen of the Columbus motorcycle dealers will participate in the Show.

BIG CANADIAN ORDER.

THE T. EATON CO., LTD., with main stores in Toronto and Winnipeg, Canada, and branch stores throughout the larger European cities, are Reading-Standard distributors for most of the Dominion of Canada. They have placed a large order and to partially satisfy the growing demand for R-S machines in that locality it was necessary to express to the firm a number of machines in advance of their first carload.

MARYLAND DISTRIBUTORS.

THE RANDALL MFG. CO., of Baltimore, Md., has just taken the exclusive agency as distributor for Reading-Standard machines in Maryland. They have placed a large order and promise to boom things in their territory.

ON THE HOP IN TORONTO

President Johnson Has His Squad Hard at Work on Summer Plans, and Great Doings Are Promised.

IN the first month of his reign, President Fred Johnston, of the Toronto M. C., proved himself to be a real live-wire and already his whole board of officers are hustling preparations for the coming season. So anxious did Johnston become regarding the plans for the approaching season, that he has issued a decree to the effect that the last two social events of the club's winter program, scheduled for April, be substituted by business meetings when final arrangements for the summer should be announced. Special sessions of the executive board are being held at regular intervals and everybody is on the hop.

President Johnston.

For the purpose of carrying on an advertising campaign, President Johnston has appointed W. M. Gladish as publicity agent, while Captain McCarthy has been made club archivist to keep records of all happenings.

Last summer the Toronto club held only two meets, but it is the intention to put on a race carnival at least once a month this year. The time between the track meets will be occupied in Sunday jaunts and endurance runs. To encourage the riders to take part special restrictive rules are being set, so that the excursions will not become too strenuous. With their energetic president at the tiller, the members of the Toronto organization have been whipped into a bustling crew of obedient and enthusiastic workers and great ends are being hoped for.

BOWLING LEAGUE SCORES.

THE Motorcycle Bowling League, of Columbus, Ohio, has now bowled twenty-four games and the official averages of the players taking part in the four teams are: Amos, Harley-Davidsons, 185; Werner, Harley-Davidsons, 179; Birkenback, Indians, 162; Achatz, Excelsiors, 162; Bounce, Flying Merkels, 158; Knecht, Indians, 157; Monroe, Harley-Davidsons, 157; Keifer, Excelsiors, 155; Sarver, Indians, 155; Dell, Harley-Davidsons, 155; Redden, Indians, 154; Edwards, Flying Merkels, 153; Haynes, Harley-Davidsons, 151; Fletcher, Indians, 150; Barr, Indians, 150; Enke, Flying Merkels, 149; Knight, Flying Merkels, 149; Frank, Excelsiors. 149; Sugar, Harley-Davidsons, 149; Kinselman, Flying Merkels, 141; Hare, Flying Merkels, 138; Siebold, Excelsiors, 138; Leighton, Excelsiors, 137; Inskeep, Harley-Davidsons, 137; Woodrow, Harley-Davidsons, 134; Osgood, Harley-Davidsons, 126; Stierhoff, Excelsiors, 123; Sunderman, Excelsiors, 123; Fadley, Harley-Davidsons, 122; C. Tressmer, Flying Merkels, 121; Morrow, Flying Merkels, 112; Blose, Harley-Davidsons, 111; Munkle, Harley-Davidsons, 108; A. Tressmer, Indians, 108.

LING BUYS MOTOR-VAN.

HARRY LING, Toronto's progressive Celestial merchant and a stanch supporter of the new Chinese republic, has decided to give the motorcycle a trial as a business proposition. Ling rode an Excelsior all last summer for pleasure, but the sight of a side-car gave him an idea of the possibilities of a delivery car attachment, and forthwith he placed an order for a "wagon" equipment. This has been attached and Ling hopes to put his motor-cart into commission in the very near future.

PLUGGING DOVER MUD

Novel Photograph Shows Machines of New Hampshire Enthusiasts On a Strenuous Trail.

FROM Dover, New Hampshire, comes the unique photograph reproduced herewith. It shows the machines of two Dover riders plugging mud which almost stalled them during a run into the country on December 10. As the mud was the chief object of attention at the time the Doverites didn't bother to get into the picture themselves, only the presence of their nether limbs indicating that they are sticking to their mounts through thick and thin—mostly thick, judging from the photograph.

An unusually successful banquet was held by the club on December 21, when plans were discussed for the coming season. During 1911 the squad enjoyed 29 runs, covering a total of 1,994 miles, and it is stated that there was not a single mishap of moment to a rider or machine.

TROUBLES OF A MOTOR COP

"Sunny Jim" Margeson, of San Jose, Has His Share, But No More Than Police Riders Throughout Country.

SAN JOSE, CAL.—That the life of a motorcycle officer is not one long series of joy rides, shorn of cares and sponbilities, is proved by the daily record of "Sunny Jim" Margeson, pilot of the single-tracker in the service of the local police department. Margeson's assignments for one day recently embraced the following:

"Mrs. Blank, in the Gardner District, complains that Mrs. Dash's chickens are trespassing in her garden. See these women and settle the trouble; people in North Twelfth street report that a young man rides a bicycle on the sidewalks in this section daily. Catch him and bring him in; restaurant proprietor on Second street shuts dog in storehouse in rear of his premises, and dog howls all night—no one in Third Ward can sleep. See that this nuisance is abated; proprietor of saloon on San Fernando breaks city ordinance by leaving electric sign out in the daytime. Watch him and when he offends again bring him in; boys on Jackson street are shooting chickens and breaking windows with a rifle. Get the gun, and scare the life out of the kids. If they are 'sassy' take their names to the Probation Officer or bring the boys in."

These with a few other odd assignments kept "Sunny Jim" and his motorcycle on the jump on the day in question, and other days show about the same line-up of troubles for the San Jose motor cop.

MACHINES GOING RAPIDLY.

SAN FRANCISCO, CAL.—Zimmerlin Brothers have received a carload of the new Flanders machines, and they have sold twelve machines in San Francisco alone. This company also handles the Yale, and during the past year sold 25 of these machines.

F. A. M. BREVITIES.

WAUCHOPE BROS., enthusiastic motorcyclists of Lodi, Cal., and members of the Stockton M. C. and the F. A. M., are planning to celebrate their sixth anniversary in business. They purpose organizing a local club, and have set the date for its accomplishment April 7, which also marks their sixth year in business in Lodi. They are making an early start so as to have everything in readiness on the above date, and plan to give prospective club members and friends a fine banquet with entertainment.

Leon F. Riche, of Great Barrington, Mass., reports local conditions as favorable for an F. A. M. club early in the riding season. There are about forty riders in the immediate vicinity of Great Barrington, many of whom have expressed a desire to join a local club.

C. A. Jenner, physical director at the Brush Union High School, Brush, Colo., is an enthusiastic motorcyclist, and reports the local road and other conditions as exceptionally fine for the sport. He has it in mind to organize the local riders into a club in order that sight-seeing runs and short tours may be made more enjoyable.

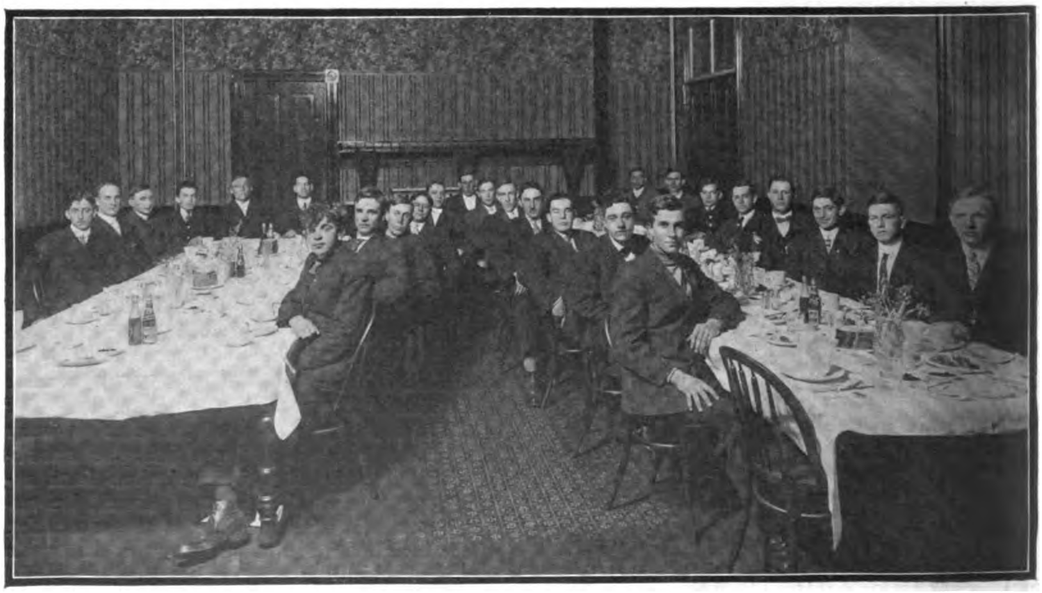
Henry Fisher, of Southold, N. Y., believes in sociability, clean sport and companionship in motorcycle trips and tours, and is working to organize a local club in his town.

OVER SAN JACINTO PASS.

ONE of the latest unusual accomplishments of the motorcycle is a trip over the San Jacinto mountains of northern California. The pass was covered with snow and at times the machine was hub-deep, but the rider succeeded in getting through in ten hours, thereby setting a remarkable record for endurance and consistent running under conditions which could hardly be more discouraging.

CAMDEN CLUB ELECTS.

AFTER electing its 1912 staff of officers recently the Camden (N. J.) M. C. held an enjoyable banquet and talked over plans for runs and contests to be held throughout the summer. The officers follow: Charles Kenfer, president; William Smith, vice-president, William T. Reed, treasurer; Robert Smith, financial and recording secretary; George Hardy, road captain; W. Harris, first lieutenant; R. Ward, second lieutenant; B. F. Bryant, A. L. Hilaman, William Heckenhorn and W. Dunn, executive committee.



LA PORTE BANQUET.

THERE was a full turn-out of the members of the LaPorte (Ind.) M. C. at the club's annual banquet which was held recently and the affair was a success from turkey to cranberry sauce, so to speak. The photograph shows the diners in repose after assisting several juicy "turks" and their trimmings in the performance of a disappearing act.

FINE DISPLAY OF THORS

New Models at Headquarters in Chicago Make Splendid Showing and Keep Salesroom Crowded.

AN unusually effective display of the Thor models for 1912 is now attracting attention at the headquarters of the Aurora Automatic Machinery Co., 1307 Michigan avenue, Chicago. Two of the new "White Hopes," a 5 h. single and a big twin 7, occupy the center of the show window and to one side are a few of the handsome trophies captured by Thor speedsters during the last season. With their dazzling white frames and racy lines the new machines are calculated to catch the eye of every passerby, and many Chicagoans who have hitherto given the power two-wheeler little or no attention may now be seen studying the window display carefully.

Mr. Freeman, Cook County sales manager for the company, is shown at the entrance to the establishment. He states that so many inquiries have been received of late with reference to the 1912 models that he has been conducting a motorcycle show of his own. He is selling Thors for cash or on easy payments, and is experiencing difficulty in keeping up with the rush of business.

NEW CLUB BOOMING

Philadelphia Squad of Harley-Davidson Riders Holds Lively Meeting and Plans for Permanent Quarters.

THIRTY-FIVE members within six weeks is the record of the newly organized Harley-Davidson M. C., in Philadelphia, Pa. The club held its opening reception on January 4 and entertained a large number of guests. It is the intention to occupy permanent quarters in the near future and to this end a benefit performance will be given in the Grand Opera House. There is every indication that before the riding season opens the club will be very close to the century mark in membership.

Officers have been elected as follows: H. B. Sellers, president; Elwood C. Rorer, vice-president; F. Ralph Shenk, secretary; Howard Kolp, treasurer; Alexander Klein, captain; William Jaggards, first lieutenant; Vincent Buhl, second lieutenant.

THE Columbus (Ohio) M. C. held its second annual dance in A. C. R. Hall, over Keith's theatre, on the evening of February 1.

THE Howard Cycle Company, of Trenton, N. J., has added the Merkel Flyer to its list of machines.

FAVOR ROAD TRIPS.

W. B. KINNEY heads the new official staff of the Newark (Ohio) M. C. and his associate workers, elected on January 25, are as follows: E. R. Francis, vice-president; L. G. McCormick, secretary-treasurer, and Wilbur Perks, road captain. The club now has about fifty members and it is not unlikely that this number will be doubled during the 1912 season. The organization has decided that club runs shall have more attention than track work for the coming season. While racing will not be entirely overlooked it is the intention of the riders to specialize on road trips in the belief that this is the best method of popularizing the motorcycle with the general public.

RACERS GO TO LOS ANGELES.

SAN FRANCISCO, CAL.—Ed. Hasha, accompanied by his wife, has gone to Los Angeles in order to be on hand with his Indian at the opening of the new motordrome. San Francisco race fans are disappointed because they did not get an opportunity to witness this speedy racer here but owing to the close of the Oakland meet Hasha did not get a chance to show just how meteoric he is.

Johnnie Albright has also left San Francisco with his racing machines, and will appear on the new track at Los Angeles at the opening.

ROCHESTER HAS NEW CLUB

Flower City M. C. Enters the Field Under Auspicious Conditions and Will Hold Series of Runs and Trials.

ORGANIZED under the name of the Flower City M. C., a new motorcycle squad has been rounded up in Rochester, N. Y., and officers are in charge as follows: H. George Hammon, president; J. J. Malone, vice-president; William Krieg, secretary; A. D. Cook, financial secretary, and C. Akin, treasurer. It is the intention to avoid all side issues, such as dances, card and pool tournaments and the like, and to concentrate upon the development of real motorcycle interest. The club officials do not contend that all social features are detrimental, but believe that a live motorcycle club should find plenty to interest its members at all times in the single-tracker itself.

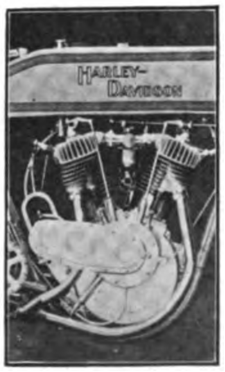
Meetings will be held on the first and third Mondays of each month at the headquarters on Monroe avenue. Plans are being laid for promoting runs, economy tests and hill climbs throughout the summer, particularly on Saturday afternoons.

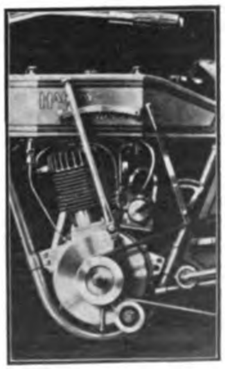
"SHORTY" STARTS HOUSEKEEPING.

E. W. MATTHEWS, known to race followers as "Shorty," announces that he has settled down to married life and that his friends will find him at home at 4300 Ellis avenue, Chicago. Although Mrs. Matthews is a motorcycle enthusiast she has suggested that "Shorty" give up racing and confine himself to road work. To this the little speedster replies that he wouldn't feel quite right without a white Thor racer in his hands now and then, and when the eastern racing season opens "Shorty" will wheel out his new mount and continue to worry old Father Time as in the past.

A CORRECTION.

IN our analysis of 1912 machines in the last issue we inadvertently classed the Harley-Davidson machine as having the magneto at the front, instead of at the rear. The latter position is the correct one for this machine, and the makers state that the Harley-Davidson was the first American motorcycle to so locate the magneto. Considerable time and money was spent in perfecting this system of magneto drive, as will be evident to those familiar with Harley-Davidson construction. Since first fitting the magneto at the rear, the makers have advocated and retained this location, which will be seen in the accompanying photographs of the twin and single cylinder machines.





HAD ROUSING SESSION

Toledo M. C. Elected Staff of Energetic Officers at Annual Meeting and Enjoyed Supper.

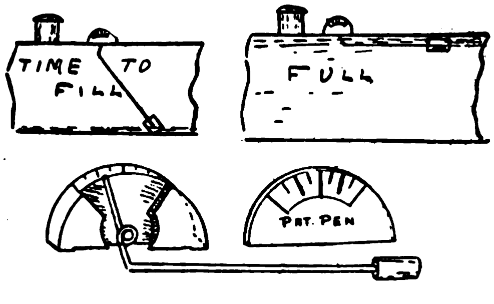
AT the annual meeting of the Toledo (Ohio) M. C., held on January 26, much routine busines was conducted and six new members were admitted. The election of officers for 1912 resulted as follows: E. Ehingen, president; A. B. Coffman, vice-president; J. W. Siler, treasurer; H. H. Giese, recording secretary; E. F. Miller, financial secretary; S. J. Chubbuck, road captain.

The financial secretary's report showed a healthy condition of the exchequer, and the recording secretary's list of new members taken in during 1911 was very gratifying. The new club rooms in the Colonade Building are more easy of access than the old club house at the corner of Ashland avenue and Prescott street.

After the meeting all hands repaired to the Spitzer Cafe, where a buffet lunch was enjoyed in the "motorcycle cave." Speeches were made by several of the members, and a general discussion was held toward boosting the Toledo M. C. Mr. Chubbuck, one of the oldest endurance riders in the country, F. A. M. member No. 187, entertained the boys by relating a few of his experiences of the old days, when large saddles, spring forks and a long wheel base (easy riding features) were unheard of. At this time, Vice-President Coffman discussed the Coffman-Musselman annual motorcycle tour, explaining in detail the great benefit it would be to the trade at large and asking the club's support.

NOVEL FUEL GAUGE.

CHASTINE JOHNSTON, of St. Joe, Ind., is the inventor of a new gasoline gauge for use in motorcycle tanks. It is made up of two main parts, a float and a combined float lever, indicator rod and bearing for the same. The bearing is formed by a loop in the wire float lever and swings on an axle or rivet through the lower part of the gauge. As the float sinks with the gasoline in the tank the indicator moves across the small dial, which is placed upright on top of the tank, and shows the point to which the fuel supply has been lowered. Examination of the accompanying drawings will show the manner in which the indicator is operated. A patent for the device is pending. It is sold for $1.50 by System, of St. Joe.



F. H. Bente has gone to Los Angeles to spend a three weeks' vacation. He will attend the aviation meet and motorcycle races while there.

CLUB TAKES ACTION

San Jose Riders Assist In Preparation of Anti-Noise Ordinance—Working On New Saucer.

SAN JOSE, CAL.—L. Sorrenson and W. Hermann, two local motorcyclists, and members of the San Jose M. C., recently attended a conference with the Mayor and City Council of the city and presented a petition requesting that an ordinance be adopted to prohibit the use of the muffler cut-out within the city limits. As a result the City Fathers have framed a measure under the direction of the city attorney and it is believed that a quietus will soon be placed upon the open muffler fiend. Charles D. Reade, president of the San Jose club, and one of the best known coast riders, assisted in the preparation of the ordinance, which has the support of all the local dealers as well as that of the club.

Working on New Motordrome.

The famous old driving park at the southern end of the city is the site of the new motordrome on which work has already been started. A local firm, headed by Emil Agraz, county traffic officer, is promoting the enterprise, which promises to be highly successful. Some excellent riding has been seen on the old dirt track, and it is believed that the fans of the district are primed for saucer exhibitions.

DINED HIS PATRONS.

J. E. SWANK, of Bucyrus, Ohio, one of the best known agents and supply men in his district, recently gave a fine chicken dinner at the Hotel Elberson and had as his guests all the riders who purchased new machines from him during the 1911 season. Needless to state, the feast was thoroughly appreciated, and the occasion proved a complete success. Following the dinner there was a discussion with reference to organizing an F. A. M. club, and it is likely that the riders of the district will soon bring a squad under the Federation banner. Mr. Swank intends to make his supper an annual affair and believes he will have twice as many guests to entertain a year hence.

EXCELSIOR IN CALGARY.

STEWART & MUNROE, of 135A 8th avenue E., Calgary, have taken the agency for the Excelsior for the province of Alberta in Canada. Wesley Munroe, a member of this firm, reports that many of the roads in that part of the country are good in season and that on not a few occasions a motorcyclist has actually doubled train-time between towns.

WANTS TO GREET FRIENDS.

J. S. WOODWARD, well known in Chicago and vicinity through his former connection with the Excelsior Supply Co., is now handling Ford automobiles in Jasper and Crawford counties, Illinois. His address is Palestine, Crawford County. "Woody" reports lively business, and invites his many motorcycling friends to drop in on him when in his neighborhood.

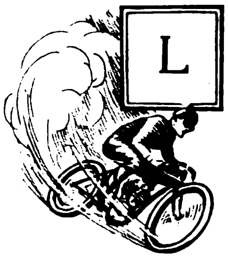
A PERCENTAGE of the receipts from races held at the Tampa (Fla.) Motordrome recently went to a fund which is being raised for the purchase of a town clock.

NOVEL USE FOR INDIAN.

"I COULD not get along without the motorcycle," says A. J. Kennedy, of Providence, R. I., who uses an Indian in selling vacuum cleaners, washing machines, washing wringers, etc.

FORMING STOCK COMPANY

Newark Motorcyclists Will Assist in Raising Funds for Erection of New Board Track.



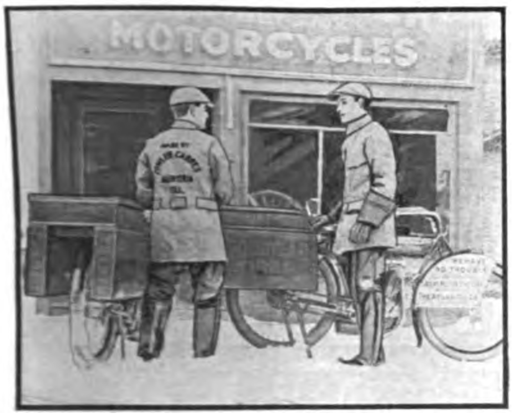
LATEST reports from the promoters of the board track to be erected in Newark, N. J., are to the effect that satisfactory progress is being made with the preliminary arrangements and that there appears to be no serious obstacle in the way of the plans. George I. Kreamer, whose proposition for the construction of the saucer has been accepted, announces that he will organize a stock company to finance the undertaking, issuing 15,000 shares of stock at $1 each. The New Jersey M. C., of Newark, will receive 1,000 shares of stock gratis as a bonus for its moral support, and club members also will be given an opportunity to purchase stock. At the last meeting of the club fifteen members pledged themselves to subscribe for fifty shares or more.

Kreamer places the cost of the track roughly at $15,000, and states that $6,500 of this will go for lumber. His plans call for a four-lap bowl, built on an angle of 56 degrees, and making a perfectly circular course. It will be banked to a height of sixteen feet, and will be capable of holding motorcycles at the highest speeds they are now giving.

WITH THE INDIAN RACERS.

SAN FRANCISCO, CAL.—Ivan Linn, who is connected with the Hendee Manufacturing Company, has gone to Los Angeles to take care of the Indian machines that will be entered in the races there.

MOTORCYCLISTS of Phoenix, Ariz., have formed a club and named temporary officers. Twenty-five riders have been lined up and the squad enters the field with bright prospects.



OFF ON SOUTHERN TRIP.

CARL H. INGWES and Berton Hunter, shown in the photograph, left Elyria, Ohio, recently for a trip through the Southern and Pacific States. They are riding Indian sevens fitted with Goodyear tires and Troxel saddles, and their natty uniforms are from the factory of the Fowler Carnes Company.

BANTA GETS HIS CHECK.

A. C. BANTA, of San Jose, Cal., has just received from Secretary Gibson the fourth $25 check which has been paid by the F. A. M. for the recovery of motorcycles stolen from Federation members. On November 6, 1911, a machine owned by O. E. Chase, of San Francisco, was stolen and three days later Banta caused the arrest of the thief, who confessed that he had taken the motorcycle. He proved to be a fugitive from justice, having escaped from a New Jersey prison, and in due time he was taken back to serve out his term.

The F. A. M. regulations provide that the reward shall be paid only after the thief has been convicted, but in the case in question it was decided that as the prisoner was serving time the technical argument that he had not been convicted for the motorcycle theft should not be entertained, and the F. A. M. Board of Directors authorized the payment of the reward to Banta.

JANUARY GAINS OF F. A. M.

SECRETARY GIBSON'S report on the growth of the F. A. M. in January is as follows: New members by districts, New England, affiliated, 4; unaffiliated, 12; Atlantic, affiliated, 45; unaffiliated, 22; Peninsular, affiliated, 2; unaffiliated, 13; Gulf, affiliated, 29; unaffiliated, 2; Lake, affiliated, 75; unaffiliated, 32; Central, affiliated, 11; unaffiliated, 14; Southwestern, affiliated, 95; unaffiliated, 13; Pacific, affiliated, 23; unaffiliated, 4; Insular, unaffiliated, 3; Canadian, affiliated, 2; unaffiliated, 1; total, 402.

The renewals by districts were as follows: New England, 17; Atlantic, 55; Peninsular, 4; Gulf, 2; Lake, 42; Central, 2; Southwestern, 20; Pacific, 11; total, 153. The last card issued in January was No. 12,466.

READING STANDARD OFFICERS.

AT a meeting held on January 19 the directors of the Reading Standard Company, Reading, Pa., elected the following officers to serve for the coming year: Abner S. Deysher, president; Jacob B. Fricker, vice-president; William F. Remppis, secretary, and John H. Mull, treasurer. All the officials reside in Reading.

BURRELL A LIVE ONE.

GUY BURRELL, of Jackson, Miss., an active F. A. M. worker in his district, is striving to have a bill introduced in the Mississippi legislature which will prohibit the use of the motorcycle cut-out in cities and towns, and at any time when its operation might excite a fractious horse. Officials in adjoining states have similar measures under consideration, and Burrell is assisting them in every way possible, in the belief that indiscriminate use of the muffler cut-out is working great harm to the interests of the motor two-wheeler.

WHY CONSTANT SMILED.

JOHN U. CONSTANT, the well-known Brooklyn speedster, might have been seen going about his duties a few days ago wearing a $4,500 smile, or in other words a smile which followed the closing of a contract to that amount for Goodyear rubber horse pads to be used by the New York street cleaning department. It is not unusual for Johnnie to close good-sized contracts, but the $4,500 sale was a bit above the average, thereby demonstrating that he is capable of cutting out as fast a clip on the trail of business as on a speed bowl, which, by the way, is saying something.

PLANNING BIG RUN.

THERE are indications that the first big road event in the metropolitan district for the 1912 season will be a single and double century run on Long Island under the auspices of the Invincible M. C., of Brooklyn. Plans have been under discussion for some time past and it has practically been decided that the run will be held on May 5. A meeting of the competition committee of the club was held on February 6 at which the proposition was taken up in detail. It has also been suggested that the squad may manage a road race on the Long Island Motor Parkway some time in May.

BUTTE HAS NEW CLUB.

BUTTE, MONT., has a motorcycle club, recently organized, with the following officers at its head: Leo Bens, president; Curnow, the Indian, vice-president; Joe Seaker, secretary, and Edward O'Brien, captain. After the first meeting a smoker was held with an interesting entertainment program. Meetings will be held every two weeks, and the club plans to keep things moving in its bailiwick throughout the coming summer.

LOCAL WORKERS NAMED.

R. Y. LESLIE, of Pasadena, State F. A. M. commissioner for California, has just appointed A. W. Taylor as local representative in Watsonville, and P. E. Marlott in Santa Rosa. Taylor is captain of the Watsonville M. C., and both he and Marlott are F. A. M. boosters of the first order.

IT is the intention of Safety Director Benner, of Akron, Ohio, to add several new motorcycles to the equipment of his department.

FOUR motorcycle officers will be added to the force in Chester County, Pa., for service in the outlying districts.

NEWSPAPER PUBLICITY.

THE Louisville club expects to derive a great deal of benefit and encouragement from a weekly motorcycle column recently started in the *Evening Post*, a local newspaper. Several of the Louisville papers have heretofore published motorcycle news in the regular automobile columns, but a separate department for the single-trackers is an innovation here. The club is strongly in favor of the idea and is aiding the *Post* in every way possible.

Now that real winter weather has driven the club members to the shelter of their headquarters many informal meetings are held around the stove, and plans have been pretty thoroughly threshed out for an endurance run to be held in about a month. One local tire firm has offered to donate a set of standard casings and other firms have signified their willingness to contribute prizes when the project takes definite form.

OSHKOSH TO HAVE SHOW.

THE OSHKOSH (WIS.) M. C. held a special meeting and smoker at its rooms recently and named the new officers. Plans were taken up for a series of card parties and a banquet to be held before the riding season opens. The club is in good financial standing and is one of the busiest in the State. The automobile men of Oshkosh are to hold a show late in February, and it is likely that the motorcycle dealers of the city will also be represented by displays.

SYRACUSE OFFICERS.

THE Syracuse (N. Y.) M. C. has elected the following officers: H. W. Cook, president; Percy Adams, vice-president; J. M. C. Gillespie, secretary; George W. Fenner, treasurer; and Frank E. Scoville, captain.

Defying the Elements.

RACES FOR SANTA CRUZ.

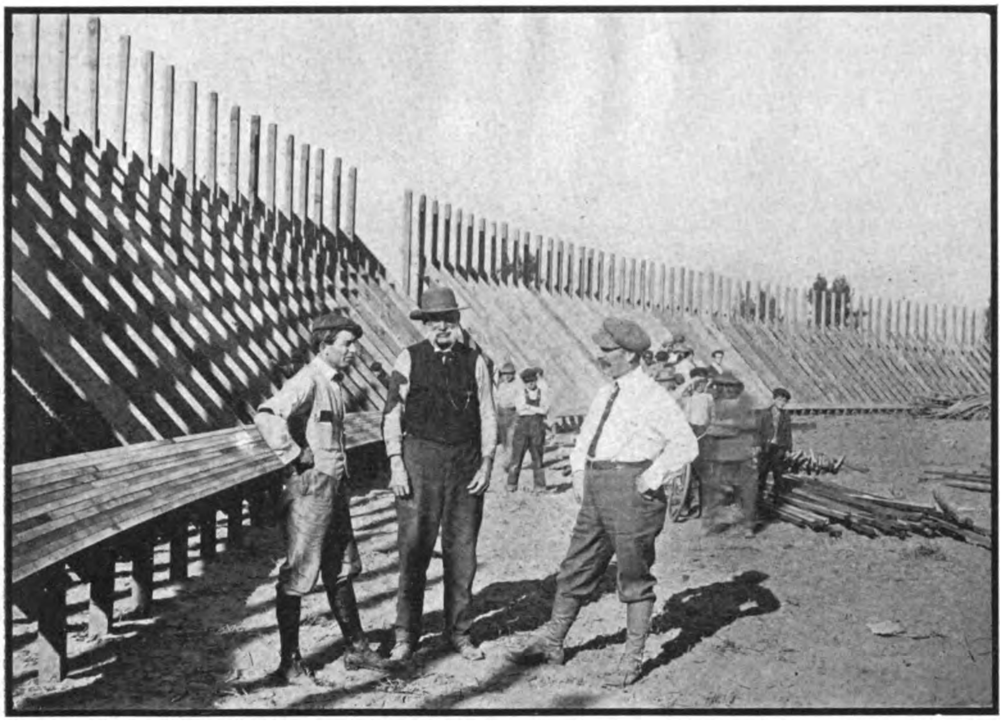
SANTA CRUZ, CAL., recently stepped into line with a motorcycle club of twenty members. Interest in the single-tracker runs high and a series of races is being planned for the near future. The Santa Cruz Driving Club is building a track near the city, and the motorcyclists will use it for their meets. Officers have been elected by the club as follows: Ray Moliter, president; Ralph Naiken, vice-president; Victor Buckman, secretary; E. W. Fields, treasurer; George Griffin, captain; Ray C. Lanfear and Edward Millard, lieutenants.

THIRD RUN IN SERIES

Six Sacramento Riders Score Perfectly On Trip to Stockton in Contest for Season Gold Medal.

SIX riders finished with perfect scores in the endurance run held by the Sacramento (Cal.) M. C. on January 15, the third contest in a series of twelve. The route was from Sacramento to Stockton and return, an hour being allowed for lunch at the turning point. There were three secret controls on the run, which was not nearly as severe as the two previous ones. The rider having the best general score at the close of the series will be awarded a gold medal. Those who finished perfectly in the January 15 test were as follows: E. Shoemaker, Excelsior 6; Roy Emery, Excelsior 6; W. A. Langley, Excelsior 6; Frank Murray, Pope; D. Galloway, Excelsior 6; R. S. Mackey, Excelsior 6.

Following are the contestants who made perfect scores in the two previous runs: E. Shoemaker, Roy Emery, W. A. Langley, Frank Murray and D. Galloway.



AT THE NEW SAUCER.

THAT Jack Prince is losing no time in the construction of his new Los Angeles motordrome is evident from the accompanying photographs which were taken recently. The larger picture shows Paul Derkum, Prince's manager at Los Angeles, on the left and Prince at the right. In the center is one of the stockholders in the new track. The fact that the men are not wearing coats speaks volumes for January weather in southern California.

The other picture shows John Farrell, well known as a racing official on the coast, and Manager Derkum of the motordrome. It is explained that Farrell had covered his face with his hand not because of extreme modesty, but because he could not withstand the glare of the California sun in his eyes. They are seated outside of the new track.

OAKLAND OFFICERS.

THE Oakland (Cal.) M. C. has chosen its new staff of officers as follows: W. G. Clough, president; V. B. Stone, vice-president; E. S. LaPierre, secretary-treasurer; I. W. Story, recording secretary; Al. Makas, sergeant-at-arms; E. L. Cramer, George Hill, T. W. Schulhoff, H. Conboy and H. E. Parker, trustees; H. Conboy, publicity agent.

DETROIT RIDERS DANCED.

MOTORCYCLISTS of Detroit, Mich., gathered under the club name of "The Motorcycle Boys," held their first annual dance in the Coliseum on January 31 and entertained a large crowd. J. B. Gault and W. E. Sanburn made up the arrangements committee.

REORGANIZE EL PASO CLUB.

THE El Paso (Tex.) M. C. elected F. H. Bailey, president; S. S. Schafer, secretary; and Sam Vaughn, treasurer. The club is to be reorganized and the constitution and by-laws will be revised.

FIRST AUGUSTA RUN

New Georgia Squad Made Sunday Trip Over Series of Fine Roads.—Fitting Well-Located Quarters.

THE first club run of the recently organized Augusta (Ga.) M. C. was held on Sunday, January 28. Although the day was cloudy and threatening rain, fifteen of the fifty members of the club reported. The run was held to no special point, but a very pleasant ride lasting for half the day was had over the perfect net-work of good roads of which Augusta is the center. A ride was taken along the historic Sand Bar Ferry road, the motorcyclists making a short stop at the United States Army Aviation Camp which the War Department is maintaining here. All the boys took a close view of the four government flying machines, which on week days can be seen flying over the city doing the spiral glide and other "stunts" practiced by the airmen.

The club will have roomy and nicely equipped quarters in the Irish-American Bank Building, which will be ready for occupation within the next few days. The club rooms will be newly painted throughout and furnished in mission style. The quarters selected are located in the center of the business district. In the rear of the building the club members will have the use of a garage for the storage of their machines.

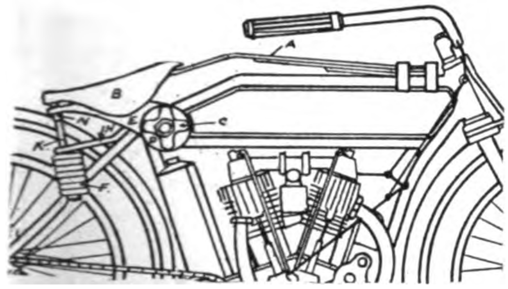
BARRETT WANTS RACERS.

JOE PIERCE BARRETT, known as a promoter of motor races, is desirous of getting into communication with a number of motorcycle speedsters who are prepared to travel through the New England States and Canada to ride in novelty and short speed races and long distance events. He figures on giving exhibitions on every Saturday and Sunday and on holidays throughout the summer, and intends to start on the circuit early in the riding season if he can obtain a suitable squad of racers. He announces that expenses will be paid to professional riders and that only top-notchers need apply. Pierce may be addressed at 107 West 45th street, New York City.

NOVEL SPRING SEAT

Chicago Designer Would Avoid Road Shocks by New Application of a Long Leaf Spring.

R. A. BECKWITH, of 506 East 33rd place, Chicago, forwards the accompanying illustration of an original spring saddle device which, if it did not prove too cumbersome, would no doubt afford easy riding. The leaf springs A are attached to the top bar of the frame close to the head by two clamps. They extend back under the saddle and connect with a frame to which the rod K also is fastened. The rod K passes into the coil spring F on either side. As the coil spring F is also connected to the brace H it takes part of the load on the saddle direct which reduces the strain upon the long leaf spring A. The designer argues that this construction, while thoroughly dependable, would permit of unusually free action of the saddle.



C, D and E make up the saddle guide and also a shock-absorber, C and D acting as the absorber when C is tightened to the round plate D which is a finished face of arm E. The other end of the arm E is a fork running between two small rollers N1 and N2, and at the same time it acts as a guide to prevent any sidewise motion of the saddle. As there is no saddle post it would be practically out of the question for any shock to be transmitted to the rider, who is supported, as it were, upon the end of the long leaf spring.

HILAMAN'S BUSY SHOP.

ONE of the most thoroughly equipped repair shops in Camden, N. J., and vicinity is presided over by A. L. Hilaman, who forwards the accompanying photograph of the establishment. Hilaman is agent for Thor motorcycles and Pierce bicycles, and in addition to operating a busy shop he conducts a lively sales campaign throughout his territory. He states that he is prepared to supply small parts for all standard makes of machines, and that his *supply line* is always up to date. Hilaman is *located* at 320 Market street, Camden, where *he may* be found easily by visiting riders. *His* shop is on the F. A. M. registered list

A.L. HILAMAN
Thor
STANLEY MARINE MOTORS.
LE REPAIRING.

IN NEW HEADQUARTERS.

THE Chicago Cycle Supply Company has just moved into its new building at 22 West Lake street, Chicago. The firm occupies three floors, each 26 feet wide by 140 feet deep, so that about 10,000 square feet of floor space is afforded. Many of those identified with the Chicago company were at one time in the employ of the old Excelsior Supply Company, and they have had plenty of experience. Plans are being laid to issue a complete catalog in the near future, and the company will be pleased to forward it to manufacturers, jobbers, dealers and repairmen, to whom their business will be confined. No goods will be sold at retail. The company is prepared to entertain propositions from Eastern manufacturers who are in the field for a live Western representative.

PITTSBURGH TRADE NOTES.

A. G. SCHMIDT, manager of the Motorcycle Exchange, Pittsburgh, Pa., reports that he has booked fifty orders for 1912 machines, and that to date the present season has gone far beyond all previous records. This is borne out by the statements of other dealers and agents throughout the city, all of whom announce that they are prepared to meet the greatest demand so far known for motorcycles.

Harry L. Neff has opened his new motorcycle headquarters on Federal street, N. W., Pittsburgh, Pa., and is entering upon a busy sales campaign. With a thoroughly up-to-date repair shop and an attractive store he counts upon getting a good share of the rapidly developing motorcycle business in his district. Neff has about 600 square feet of floor space on the first floor of his new quarters, which are located in a fine brick building of fireproof construction. His big show window is now occupied by a 1912 white Thor and an attractive display of accessories.

ANOTHER OLD SOL LAMP.

ALL models of the Old Sol lamps, produced by the Hawthorne Manufacturing Company, of Bridgeport, Conn., are being shown at Stand 113 in the Show, and unusual interest has been aroused in a new feature, the Old Sol tail lamp No. 15 which is made like the firm's No. 9, but with a funnel-shaped shell projecting from the rear to throw the light upon the license plate. This is a detail of special value in communities where the statutes provide for illumination of the license number. The new lamp is as compact and sturdy as the other well-known members of the Old Sol family, which means that in general construction it cannot be improved upon.

An interesting feature of the Hawthorne company's exhibit is a motorcycle fitted with Old Sol searchlight, generator and tail lamp, all in place and in working order. This has been arranged with a view to showing how the usually troublesome bracket problems have been solved by the Hawthorne company. Sales Manager Thomas M. Dunham is in charge of the exhibit.

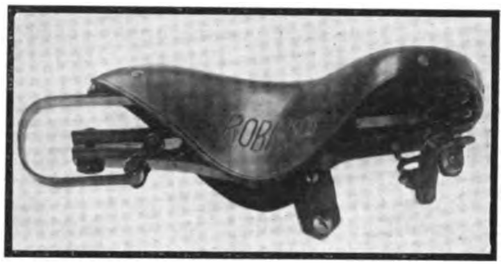
DISTRIBUTORS FOR EXCELSIOR.

THE Oberwegner Motor Company, of Toledo, Ohio, distributes the Excelsior Autocycle in Northwestern Ohio and Southern Michigan, and does not handle the Yale machines as was inadvertently stated in these columns recently.

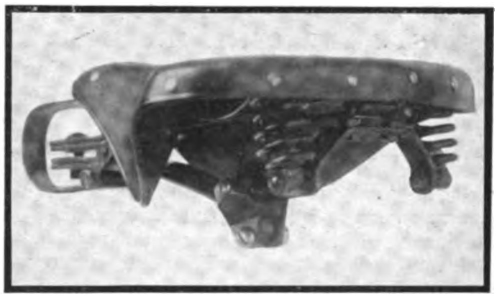
NEW ROBINSON SADDLE

Unique Chicago Product Permits of Horizontal as Well as Vertical Movement To Dispose of Vibration.

A RADICAL departure from most commonly used types of saddle frames and springing devices is shown in the new Robinson product, manufactured by Fred Robinson, 9822 Avenue H, Chicago, which will be ready for the market early in the spring. As will be seen from the accompanying illustrations, the Robinson saddle is suspended from a set of double-leaf springs in such a manner as to give it a forward and backward movement, thus overcoming the horizontal vibrations that have been almost entirely overlooked in previous saddle designs.



The combination of a double-leaf spring with the coil springs permits of an up and down action of four inches, which the inventor believes is sufficient to absorb all ordinary road shocks and afford "automobile comfort." The leaf springs are adjustable as to tension by means of a bolt and can be made to suit the rider's weight. The saddle is patented and has been perfected after tests extending over two years. With four inches of vertical and half an inch of horizontal movement it is argued that little or no vibration can be transmitted to the rider.



TWO NEW BRANCHES.

THE Edwards-Crist Manufacturing Company, which some time ago took over the agency for the Indian motorcycle, has established two new agencies in Chicago, making six in all. On February 1 the concern opened a new sales headquarters at 4350 Evanston avenue and another at 11021 Michigan avenue, Roseland.

FRISCO AGENTS BUSY.

SAN FRANCISCO, CAL.—Bente & Baumgardner, the local agents, have received their 1912 Merkels. The first shipment arrived in San Francisco on January 20, and the firm sold several machines before they were unpacked. Bente & Baumgardner are also agents for the Excelsior machines in this territory, and have a shipment of twenty-five of the 1912 models on the way.

FRISCO MOTORCYCLE SHOW

Club in Golden Gate City Fathers Movement to Have Big Exhibition During First Week of March.

SAN FRANCISCO, CAL.—San Francisco is to have a motorcycle show the first week of March. It will be held on Market street, in the downtown district, and will be under the auspices of the San Francisco Motorcycle Club. W. G. Collins is at the head of the project, and is working with all his energy to insure success. This is the first motorcycle show that has been planned on the coast. It will be a big thing, and is to be held upon the lines of the shows in the East.

Motorcycles, tires and accessories will be the features, and the following will have exhibits: Aurora Automatic Machinery Company (Thor); Hendee Manufacturing Company (Indian); Bill & Co., E. F. Merry, Bill & Bill, Zimmerlin Brothers, J. Halley, United States Tire Company, Goodyear Tire and Rubber Company, Diamond Tire Company, Fisk Rubber Company, Republic Rubber Company, Pennsylvania Rubber Company, Bosch Magneto Company, Monarch Oil, Monogram Oil, Bean Sons & Co., Mohrig Brothers, L. H. & B. I. Bill, and Baker & Hamilton. The club is now hard at work upon the preliminary details.

The show promises to be a great thing for the motorcycle trade in the West, and the San Francisco club cannot be lauded too highly for the work that has already been done. The first of March has been decided upon for the opening, to enable all motorcycle dealers to have the new models ready for the show.

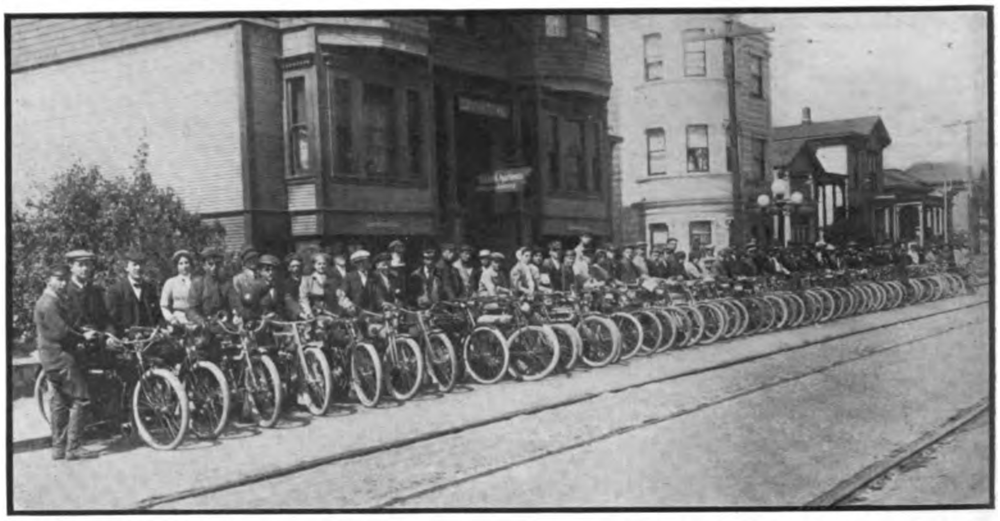
EIGHTY PER CENT. INCREASE.

SAN FRANCISCO, CAL.—The San Francisco branch of John T. Bill & Co. reports excellent business during 1911. This is the second year for the firm in San Francisco, and an increase of 80 per cent. over the first year's business is announced in the statement made by Branch Manager M. B. Moriarty. Bill & Co. have just received their "Reading Standard" demonstrator, 1912 model, and the machine has caused much comment. A carload of the new machines is on the way to the San Francisco branch. The firm also has the agency for Pierce and Emblem motorcycles.

In 1911 this company sold 150 Emblems, 60 Pierce machines and 80 Reading Standards. The San Francisco branch has made extensive improvements in the store, and it now has an excellently equipped office and a neat and attractive shop.

DANCED IN SAN JOSE.

SAN JOSE, CAL.—Two hundred and fifty Knights of the Spark and nearly as many ladies, representing the beauty of the famous Santa Clara Valley, gathered in Germania Hall on January 27 and participated in the "event of the season," as it has been rightly called by local enthusiasts. Hundreds of riders came over from the surrounding Bay cities on their motorcycles, the roads being in good condition and the mercury standing above 60 in the evening. Visitors from the San Francisco Club, the Oakland Club and riders from Berkeley and Alameda made the trip and returned in the early hours of the morning.



READY FOR THE ROAD.

JUST before the Oakland (Cal.) M. C. started on a social run to Mission San Jose recently the camera man got in some good work and as a result the club members are displaying copies of the accompanying photograph. It will be noticed that quite a few tandems are shown and that the ladies of the party seem to be enjoying the situation every bit as much as their escorts.

UNION FOR RACERS?

"Walking Delegate" Who Represents Some of the Coast Speedsters Gets Cold Reception From Track Owners.

LOS ANGELES, CAL.—A new condition now looms up in motorcycle racing, that of unionism with walking delegates. Jim Gunn, who was one of the Salt Lake City bicycle racing men, and who last summer tried his hand at managing one of the tracks there, has come to Los Angeles to organize a union of racing men and has persuaded a half dozen of the professional riders to engage him as manager for a year, to protect them, as he says, from the promoters and referees.

When he called on Manager Paul Derkum, of the new Los Angeles Stadium, that promoter informed him that he had already told the professionals personally that if they sent Gunn to him to transact business for them that they would have to buy tickets to get into the new track, and those who did not care to deal direct with the management would not be needed.

The walking delegate consulted Referee Charles Fuller Gates, who is now in charge of racing on the Pacific Coast, and that official informed Mr. Gunn that under the new system of the F. A. M. racing men were practically guaranteed their prizes. The official referee collects all prize money and pays the riders individually before they leave the track, so that third parties are not needed to protect racers. Referee Gates also stated that the F. A. M., as far as it is represented in California, will deal only with riders and promoters direct.

Some of the professionals who are not riding fast enough to win may try, as at the Oakland Motordrome, to obtain a guarantee from the promoters, but Manager Derkum, who is backed up by Jack Prince and the owners of the new track, says that the fellows who cannot win anything ought to go into some other line of business.

E. L. DURHAM & CO., Charlotte, N. C., have taken the exclusive agency for Reading-Standard machines for that section.

RECORDS ARE UNOFFICIAL

Wolters' Failure to Have His Machine Measured Before Oakland Trials Disappoints His Friends on Coast.

SAN FRANCISCO, CAL.—The fact that the chairman of the F. A. M. Competition Committee does not officially recognize the records made by Joe Wolters at the Oakland Motordrome, in which he lowered all official marks up to ten miles, comes as a surprise to many, but the truth was known in San Francisco for some time by those closely in touch with the situation. The fault, if there is any, rests with Wolters himself, according to a statement made by Referee Carroll. Wolters was notified that if he wished official count on his records arrangements could be made to have his machine measured in the presence of the proper authorities, but this was not done. The timers certified to the time, each record was signed, and all other requirements were looked after, but according to Referee Carroll, Wolters said that he would wait until he appeared in Los Angeles against De Rosier, before going after official records.

It seems a shame that the records made here were not officially recognized, as there seems to be no doubt as to their authenticity. Wolters is sanguine of success in Los Angeles, however, and his friends here believe he will duplicate his Oakland performances.

CLUB TRANSFER CARDS.

OFFICIALS of the Oakland M. C., Oakland, Cal., are corresponding with other clubs throughout the state with a view to outlining a transfer card system so that a member who moves from one town to another may still be a member of a club. The idea is to arrange the cards so that a rider in good standing when the transfer is issued may become affiliated with the club in the town to which he moves without being obliged to pay another initiation fee. The plan has been approved by the San Francisco M. C. and other clubs in the vicinity.

WANT RACES IN SAVANNAH

Movement Is Under Way to Improve Present Horse Racing Course for Use By Motorcycle Speedsters.

SAVANNAH, GA.—If present plans do not miscarry this city will be in a position to hold out inducements for the motorcycle speed kings during the coming racing season. Efforts are being made to have a half-mile track, now used exclusively for horse racing, improved so that it will be suitable for the single-trackers, and there are indications that the movement will be successful. The motorcycle has always stood high in this city and vicinity, and it is believed that races would be well patronized. Both the Savannah and Augusta clubs are now under the F. A. M. banner and there appears to be nothing in the way of a thoroughly satisfactory arrangement for all concerned.

The present track has a good grandstand and the course itself is in fair condition, so it is argued that only a small outlay would be necessary to start the ball rolling. There has been some talk of carrying the plans through so that the opening meet may be held on Memorial Day, but it is likely that a later date will be decided upon for the first races if the scheme goes through.

The annual election of officers of the Savannah club will be held in June and a number of candidates are already in the field.

Savannah Agencies for 1912.

Agents in this city have closed contracts as follows for 1912: Oakman & O'Neil, Yale, Pope and Merkel; George W. Thomas, Pierce; Balfour Hardware Company, Harley-Davidson and Excelsior; O'Neil & Burch, Flanders; Wiliams Motorcycle Company, M. M. and Thor; Harris Tire Company, Indian.

New Police Machine.

The Savannah police department has added a new Excelsior machine to its equipment, making three motorcycles of this type now in use by the bluecoats. The motorcycle officers have rendered excellent service in the past and so deeply impressed are the city officials that still another machine may be purchased before the summer is over.

CAUGHT "BURGLAR" RED-HANDED.

RECENTLY the Dayton (Ohio) police headquarters was notified that a burglar was trying to enter a house in a section of the city two miles distant. A motorcycle officer leaped into his saddle and covered the ground so quickly that he caught the intruder "red-handed." It developed that the "burglar" was a reputable citizen who had gone to a neighbor's home to obtain water, but that did not detract from the fact that the motorcycle cop arrived on time.

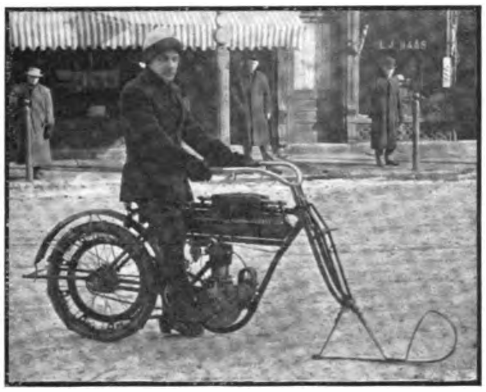
SANTA ROSA OFFICERS.

SANTA ROSA (CAL.) motorcyclists have organized a club and elected the following officers: A. Dont, president; H. Coppedge, vice-president; H. Bruner, secretary; A. Bowden, treasurer. The club will be affiliated with the F. A. M. at an early date.

A HYBRID OUTFIT

Merkel With Front Wheel Replaced By Sleigh Runner Makes Good Time and Attracts Much Attention.

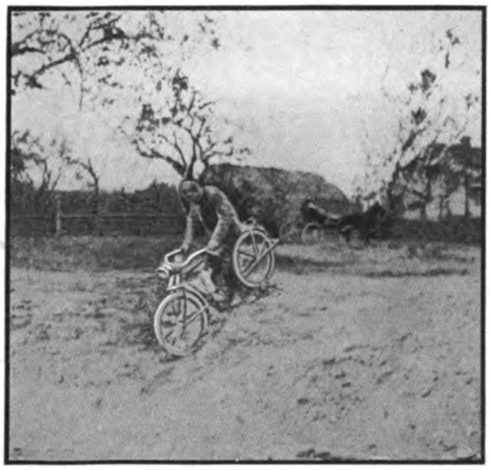
OF late the attention of motorcyclists in Middletown, Ohio, has been attracted to the unique outfit which is shown in the accompanying photograph. As will be noted a standard Merkel single has had its front wheel replaced by a sleigh runner of unusual design, and except in this regard the machine has not been altered.



Ford Sanford, of the Miami Cycle & Mfg. Company's staff, who made and adapted the attachment, states that he is able to make good time over ordinary snow surfaces and that steering is not as difficult as might be imagined. The rear wheel is fitted with an anti-skid chain to provide additional traction when driving up grades and on particularly slippery stretches.

MOTORCYCLE MILK DELIVERY.

ONE of the leading dairy companies in Tacoma, Wash., has been using a motorcycle of late to deliver rush orders of milk to its patrons, and the scheme has proved so successful that a machine with a specially built container will probably be used on a suburban milk route during the coming summer.



KIPP IN NEW STUNT.

HERB KIPP, the Toronto speedster and Indian representative, is shown in the performance of a new stunt in the accompanying photograph. He is plunging down the side of a sand dune at Burlington Beach, Ontario, on an Indian machine, a hazardous undertaking even for a rider of Kipp's skill and daring.

MECCA FOR MOTORISTS

San Jose District Now Offers Some of the Best Roads in California.—Pushing Improvement Work.

SAN JOSE, CAL.—That San Jose is soon to be a Mecca for motorcyclists and automobilists is an assured fact. It is certain that the new Valley Circuit Road will be built in the near future, and together with the new State Highway of the "Wishbone Route," as it has been called, will make the roads and highways of this district the best in the State of California, if not on the continent. There is a constant stream of vehicles pouring into San Jose from the bay cities and as a pleasant halting place this city and its environment is unsurpassed. Every touring party which travels over the El Camino Real passes through Santa Clara County, and the assurance of even better roads has done much to stir up enthusiasm in local circles.

A Chamber of Commerce boosting party is arousing enthusiasm in the districts over which it is proposed to run the route and all the property owners are promising to give free right-of-way for the roadway, while hearty co-operation of every improvement club and county organization is being given to aid the work.

MORE REGISTERED SHOPS.

FOLLOWING is the list of registered F. A. M. repair shops for week ending Jan. 27: E. R. Kahrs, 850 Ellis St., Augusta, Ga.; West End Electric & Cycle Co., Green and Maclay Sts., Harrisburg, Pa.; Miner & Houseknecht, 46 Main St., Batavia, N. Y.; F. Schwarz, 447 West North Ave., Chicago, Ill.; South Side Cycle Co., 1623 So. Broadway, St. Louis, Mo.; Holdridge & Gordon, 903 H St., Modesto, Cal.; Thomas Tauber, 628 Walnut St., McKeesport, Pa.; H. Von Der Linden, 52 Market St., Poughkeepsie, N. Y.; Walker Bros., 105 Court St., Bowling Green, Ohio; R. H. Hofheinz, 220 East Commerce St., San Antonio, Tex.; Chase Motor Co., Charles and Read Sts., Baltimore, Md.; R. E. Rodgers, 409 Chess St., Monongahela, Pa.; Chicago Motorcycle Works, 738 Sheridan Road, Chicago, Ill.; Excelsior Autocycle Co., 473 Woodward Ave., Detroit, Mich.; T. W. Long, 43 East Wheeling St., Washington, Pa.; Thomas Bouchie, 903 N. 7th St., Vincennes, Ind.; J. M. Williams, 18 Seventh St., Franklin, Pa.; Wm. H. Danner, Washington Ave., Siegfried, Pa.; R. G. Brazenor, 1507 Bushwick Ave., Brooklyn, N. Y.

SERIES OF NOVEL TESTS.

RECENTLY the Wichita (Kans.) M. C. held a series of unique tests in various parts of the city. The first contest was a slow race for a distance of one block, and then followed a "quick stop" test, a pedaling race, a speed trial around a city block, a race around a circle formed by four men standing in the middle of the street, a slow hill climb and a foot race, each man being obliged to push his machine for a block. Later the club members rode through the city in single file, with mufflers closed and almost at a walking pace to prove that their motorcycles "could behave themselves." The program proved so successful that another one along similar lines will probably be arranged before the coming riding season is far under way.

Pictures may look nice, but they

JUST at present about all that some manufacturers are showing in the way of 1912 models are pictures.

No one who has investigated as he should is going to hand over money to any manufacturer now-a-days on the strength of hand-made dummies stuck together for show purposes. Dealers are no longer interested in models that have never been built, because there is no profit in the sale of something they can't get.

Thanks to bitter past experiences most dealers know that "financial difficulties," "re-organizations," "disputes" and constant internal friction will raise the dickens with the *production* end of any factory.

Today it is not only the machines that count but the people back of them as well. The dealers won't be fooled again by any manufacturer, whether it is the same one or not.

HARLEY-DAVIDSON MOTOR CO

make mighty slim bank accounts

THE motorcycle business will be good next summer. There is no question about that, but what the dealer wants is machines *when he needs them,* not simply pictures to look at or promises which may or may not materialize.

As for ourselves, we're *alive.* We need no flowers or sympathy. Neither do our dealers. So far this season we have built and shipped twice as many machines as we ever did in like time before.

Still more property acquired—old buildings cleared—temporary buildings utilized for immediate needs—complete plans for another $100,000.00 addition—such happenings tell *our* story. *We* are making *motorcycles*—not promises—and we are looking for more *business,* not trouble.

If you ask yourself "What's this advertisement for?" just investigate *your own* proposition. You'll find out. Four or five months hence don't blame us if we come back and say "we told you so." It won't do you any good then.

MPANY, MILWAUKEE, WISCONSIN

QUESTIONS & ANSWERS

COMPRESSION PRESSURE.

R. A. WHITSIDE.—A motor of 4-inch bore and stroke, at 800 revolutions per minute, should give off about 4 horsepower. Pressures in the cylinder are various. There is the compression pressure, that of the charge at the beginning of the explosion stroke, that of the charge at the finish of the explosion stroke, and finally a pressure on the piston due to the action of the flywheel in turning over through the connecting rod, wrist-pin, etc. We presume you mean the compression pressure. This can be calculated by the relation of the volume of the entire cylinder to that of the compression space, figuring the pressure on the interior of the cylinder with the piston at the beginning of the compression stroke at 14.72 pounds per square inch and using the formula $v:V::P:p$. In this, v is the volume of the compression space and V that of the cylinder including the compression space; p is the compression pressure and P the pressure at the beginning of the compression stroke (14.72 pounds per square inch). A gauge can be used to get the compression pressure direct. We cannot give you the explosion pressures as you do not give us the volume of the compression space, the compression pressure, etc. The pressure due to flywheel inertia will be found in any good work on the internal combustion engine, and is too long to be given here.

ELYRIA, O., TO GREENSBORO, N. C.

L. A. OSBORNE.—We suggest that you go from Elyria to Wheeling, W. Va., via Akron, Canton and Steubenville, and then from Wheeling go to Cumberland, Ind., via West Alexander, Washington Pa., Beallsville, Brownsville, Uniontown, Addison, Grantsville and Frostburg. To Cumberland the route is over the National Pike and there are a number of steep ascents and descents on the way. From Cumberland go to South Cumberland, then to Frankfort, Springfield, Romney, Frenchburg, Capon Bridge, Parishville, Gore, Hayfield, Chambersville into Winchester, Va. Go next to Stephen City, Middletown, Strassburg, Maurertown, Woodstock, Edinburg, Mount Jackson, New Market, Lacey Springs, Harrisonburg, Mount Crawford, Burkstown, Mount Sidney, Verona, and Staunton. There are 19 toll gates between Winchester and Staunton. From Staunton go to Minte Springs, Greenville, Midway, Fairfield, Lexington, Fancy Hill, Natural Bridge, Buchanan, Troutville, Cloverdale, Boonsac, and finally Roanoke.

From Roanoke go to Rocky Mount, then to Syndorville, Martinsvale, Ridgeway, Stoneville, Madison, Ellisboro, Stokesboro, and Kernersville, N. C. From the latter place go to Greensboro. This route is varied, dirt and macadam roads, with fords and dangerous railroad crossings.

If the numerous toll-gates between Winchester and Staunton are not to be passed, go on to Washington, D. C., via Berryville, Leesburg and Falls Church. The extra distance is 70 miles. From Washington go to Fairfax, Centerville, Middleburg, Plains Station, Academy, Warrenton, Jeffersonton, Culpepper, Locustdale, Orange, Gordonsville; then to Charlottesville, Rock Fish Gap, Waynesboro and into Staunton. The route from Staunton to Greensboro, N. C., is thereafter the same as before. We cannot recommend your going via Parkersburg and Charleston, W. Va., as some of the roads you would encounter might be too much for any wheeled vehicle. In parts of that State horses only are used, with some roads only capable of being driven over in a light buggy. The routes given are fair-to-good, and include some fine country.

Riders in West Virginia, if from Ohio, and carrying Ohio license and plates, are exempt from taxation, as non-residents. An Ohio license can be obtained from the Secretary of State at Columbus. For 1912 regulations, write the secretary. Virginia and North Carolina, at the present writing, give exemption to non-resident riders from Ohio, under the same conditions as in the case of West Virginia. See our forthcoming Motorcycle Manual for State laws on motorcycles, etc.

LICENSE AGE LIMIT.

W. G. D.—(1) The age limit for licenses in your State is 18 years and we doubt very much if you could get the necessary papers without misrepresenting your age. If you are qualified as a rider, an exception might be made in your favor, but this is seldom done. Write the Secretary of State, at Hartford.

(2) The International News Company, 31 Chambers street, New York, can procure subscriptions to the *Motorcycle* and *Motorcycling* (London), for you. The price of each is, we understand, $2.50 per year.

FOR SIDE-CAR WORK.

HARRY H. RAYMOND.—A four horsepower motor will be capable of caring for the load of 130-pound passenger and 160-pound rider, plus the weight of the side-car, but more than a moderate speed need not be expected unless the roads are good. Ordinary hills can be surmounted without pedaling assistance or dropping the passenger, but on rough roads and steep hills a clutch will be found to be necessary in most cases. In fact, a clutch should be fitted on any passenger machine, whether of medium or high power. With a two-speed gear on this mount, you should be able to go anywhere that the wheels will get traction. A change in the mixture, point of ignition and amount of lubrication over that used when riding solo will be necessary when a passenger attachment is used. A number of side-car owners prefer chain transmission to that of flat belt, but the preference is dependent mostly on the ability and familiarity of the rider with that particular form of transmission in either case.

FUEL GAUGE DEVICE.

WM. E. WALDRON.—The device you mention has been fitted to a number of automobiles in this country and to several English motorcycles in the factory, as a rule, and not made outside and fitted to order. We know of no patents on such a device, and you might have an application for a patent refused, but we see no reason that would prevent you from getting up such a device for motorcycle service only. We suggest that you search the files of the Patent Office Gazette to make sure that such a patent has not been issued, looking up the files as far back as 1906 for example. Such a device should, in our opinion, be fitted to the tank to prevent the latter from being drained dry, and the rider stranded at a distance from any source of supply. The device could undoubtedly be made very cheaply and sold at a low figure, and the demand would probably be considerable. Many a first-class device has gone to the wall, however, by reason of its not "taking" with the public, so that a prediction on our part as to the success of the device you mention cannot be given.

DETROIT TO LOS ANGELES.

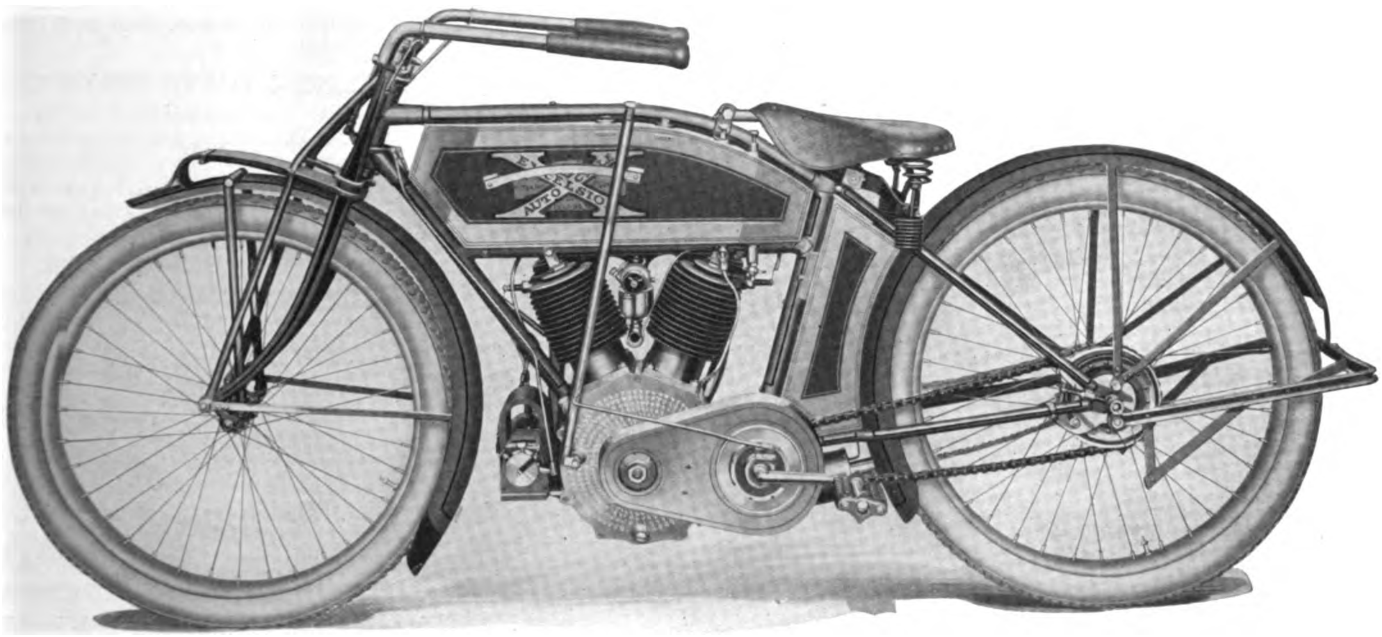
R. A. DELISLE.—From Detroit go to Wyandotte, then to Monroe and on to Toledo. From Toledo go to Caraghar, Swanton, Delta, Wauseon, Archbold, Stryker, Bryan, Edgerton, Butler, Waterloo, Kendallville, Brimfield, Ligonier, Benton, Goshen, Osceola, Mishawaka, and South Bend. From South Bend go to New Carlisle, La Porte, Westville, Valparaiso, Wheeler, Hobart, Highlands, Hessville, Hammond, Wolf Lake, South Chicago and Chicago.

From Chicago go to Maywood, then to West Chicago, Geneva, De Kalb, Malta, Creston, Rochelle, Flagg, Ashton, Franklin Grove, Nachusa, Dixon, Sterling, Round Grove, Morrison, Union Grove, Clinton, Camanche, La Follett, Princeton, Le Clair, Pleasant Valley and Davenport (Ia.). From the latter place go on to Durant, Wilton, Moscow, West Liberty, Iowa City, Tiffin, Homstead, South Amana, Marengo, Ladora, Victor, Brooklyn, Grinnell, Newton, Colfax, Mitchellville, Altoona and Des Moines.

EXCELSIOR AUTOCYCLE
EXCELSIOR
MOTOR MFG. AND SUPPLY
COMPANY
CHICAGO, ILL.

Always
Makes Good.

The Height of Mechanical Excellence Backed by a Powerful Organization



The Excelsior Autocycle will not only be better than ever in 1912, but our increased facilities and reinforced organization enable us to stand behind our product with a more liberal guarantee and give our dealers even stronger support than heretofore.

The 1912 Excelsior includes every perfect feature of previous models with marked development and improvement wherever such has been possible.

Our new RACY TYPE frame with CUSHIONED SEAT POST appeals alike to the young man who wants to "beat it" and the calculating man of business who wants comfort, safety and absolute reliability.

Our FREE ENGINE CLUTCH is the best on the market, greatly improved by special and exclusive Excelsior features.

THE NEW SEVEN TWIN

has shown itself beyond question the fastest thing on two wheels, and its remarkable power makes it the ideal machine for side car service.

Our new catalog is now ready and yours on request.

There is mighty little open territory, but you may be fortunate enough to be in some that is not closed.

If you are a dealer and want a live one write for territory and terms.—But DO IT NOW.

If you are, or want to be a rider, you want a machine that is right and stays right—in short—an Excelsior that

ALWAYS MAKES GOOD

6 Models—4, 6 and 7 h. p., $175 to $250

EXCELSIOR MOTOR, MFG. & SUPPLY CO.

2202-2258 Union St., Chicago, Ill.

From Des Moines go next to Waukee, Ortonville, Adel, Redfield, Montieth, Guthrie Centre, Exira, Brayton, Lorah, Atlantic, Marne, Walnut, Avoca, Minden, Neola, Underwood, Council Bluffs and into Omaha (Neb.).

From Omaha go to Lincoln, then to Hastings, Minden, Holdrege, Oxford, McCook and Imperial; from the latter place go on to Julesburg, then to Fort Morgan and Denver. From Denver go to Colorado Springs and then to Pueblo. From Pueblo go to Alamosa (Col.), then on to Santa Fe (N. M.); then go to Albuquerque and Gallup. From Gallup go next to Flagstaff, (Ariz.), then to Phoenix, Salome, Vicksburg, and Blythe (Cal.). From Blythe go across the State to San Bernardino, from which city Los Angeles can be reached via Pomona, and Pasadena.

An alternative route is that given in the answer to Harry F. Gale in the January 25 issue, taking the route at Ogalalla from Julesburg in the present answer. Lack of proper routing information about the States of Arizona, New Mexico, Utah, Nevada and Idaho prevents a more detailed description of either route. The States of Colorado and California, have been well routed to date.

GEAR RATIOS.

GUS. A. ANDERSON.—Most plugs for magneto ignition will work with battery and coil ignition, provided the distance between the points is not too small. This should be between 1-32 and 1-50 of an inch for battery and 1-50 of an inch or even less for magneto ignition. If air resistance is neglected, the 3:1 ratio should give the superior speed for a 5 h. motor, but counting in this resistance, it is a question of total weight, surface of rider and machine exposed and proportion of weight on the driving or rear wheel, whether the 3:1 or the 3½:1 will give the superior speed on the level. Probably the latter will be the better ratio for give-and-take riding.

TRANSMISSION TYPES.

R. C. NEWMAN.—The highest efficiency would naturally be with the single chain from the motor shaft to the rear wheel; under ideal conditions this would be about 97 per cent. With a pair of chains and intermediate bearings (as on a countershaft) the efficiency would naturally not be so high, 90 to 95 per cent. The relative efficiency of either type of belt has been the subject of much discussion in technical circles, and no results satisfactory to the majority have been reached. Theoretically, the V-belt should have the higher efficiency. Unfortunately, however, none of the above forms of transmission work under ideal conditions, and in all probability the efficiency in motorcycle service is about the same for double chain, V-belt and flat belt. The efficiency of any form of transmission working under theoretically ideal conditions should not be taken as the true guide to choosing the best form for a motorcycle, as no two riders can get the same service out of any two machines of the same power and make, nor of the same power but with theoretically—equally—efficient forms of transmission. Thus, rider A with a single chain machine theoretically should have a more efficient transmission than rider B with a V-belter, both machines being of equal power and weight, yet B can get more out of his mount in bad places, etc., than A, and his tires and frame may be in better condition than those of A after a certain number of miles. Thus the chief factor to be looked to is the ability of the rider to get the best out of any form of transmission, and not the question of a difference of 1 to 1¼ per cent. It must be remembered that all machine design in any line whatsoever is a series of compromises; efficiency being to a measure sacrificed for simplicity or economy in manufacture; simplicity being reduced in favor of stanchness, etc.

Vaseline is not a lubricant, and should only be used as a protector for surfaces subjected to rust, etc., as when a machine is stored away for the winter. Grease should not be used unless specified by the manufacturers as suitable for use in the frame parts in question. Oil is employed in the hubs, pedal bracket, etc., as a rule, and the proper quality should be obtained, according to the advice of the motorcycle maker or his agent. Ball-bearings frequently employ a special oil, while those on a magneto need a drop or so only every four to six months. Be careful not to over-oil the magneto as you will have vexatious trouble if you do.

The slots in piston rings should be opposite each other, 180 degs. apart when two are used, or 120 degs. apart when three are fitted. See page 64 of our December 28 issue for directions for fitting piston rings.

A LEGAL PROBLEM.

S. R. BRENAMAN.—As a rule the deposit given is forfeited under common law by reason of your failure to fulfill the contract made, but you may be able to recover on the ground that no such understanding existed between you and the manufacturer when the verbal contract was made, and the burden of proof will be on him, as no written contract exists. On the other hand, if the defaulting contracting part is unable to fulfill the conditions of the contract, because of his being a minor, of unsound mind, or having made the contract while under the influence of some drug, or by force or threat of force, the contract would be void, and the deposit returnable without recourse to a civil suit. Otherwise, it is doubtful whether you can recover except on the grounds given in the first sentence of this answer. You can readily see, in a case where a dealer took an agency for the A machines, and finding that the B machine was a better business proposition, declared that he gave up the A agency and demanded his deposit be returned, that the manufacturer of the A machines would suffer without redress in having built or partially built the machine or machines which were to go to the agent and by such expenses necessary to secure and maintain the agency through the said agent. An allegation of bankruptcy in most States is not of sufficient weight to effect recovery of such a deposit, and we advise your consulting a lawyer.

THREE-INCH TIRES.

J. S. MINDENDAL—There are 28 by 3 inch motorcycle tires made, but we do not think that there are any as yet made for 26-inch wheels. Write the various tire companies, such as Diamond, Goodrich, etc., whose addresses will be found in our advertising columns. The rims for a 2½-inch tire will probably be too small for a 3-inch tire, and special rims may have to be fitted to the wheels. Again, the clearance between the rim and the mudguard on most machines will hardly admit the use of a 2¾-inch tire, while a 3-inch shoe would not turn over, but would bind against the mudguard. The use of a 3-inch tire necessitates, therefore, the changing of the position of the mudguards to accommodate the increased clearance necessary for the larger size of shoe. On many machines the lack of room precludes this being done. The distance across the clinches of a 3-inch rim, too, may be too great to fit the tire between the fork sides.

MOTORCYCLE ADDRESSES.

AARON EHRESMAN.—Following are the addresses desired: Schickel, the Schickel Motor Company, 59 Garden street, Stamford, Conn.; Iver Johnson, the Iver Johnson Arms & Cycle Company, Fitchburg, Mass.; Bradley, the Bradley Motor Co., 268 Diamond street, Philadelphia, Pa.; Douglas, Douglas Bros., Kingswood, Bristol, England; Bradbury, Bradbury & Co., Ltd., Oldham, England; Detroit, Detroit Motorcycle Mfg. Co., 619 Majestic Building, Detroit, Mich.; C. V. S., C. V. Stahl Motor Works, 29th and Diamond streets, Philadelphia, Pa.

ARMSTRONG THREE-SPEED GEAR.

SUMNER C. BURGESS.—The Armstrong Three-Speed gear is located in the rear wheel hub and is made by the Armstrong Three-Speed Works, Icknield Street, Birmingham, England. There is no agency in this country.

NOTE THE ADDRESS.

OF late orders have been delayed and considerable confusion has resulted because a misunderstanding on the part of some patrons of the Motorcycle Equipment Company, of Hammondsport, N. Y., has led them to address the company's mail to other Hammondsport firms in the motorcycle trade. This was done presumably in the belief that these companies were interested in the Motorcycle Equipment Company, which is not the case, the latter concern being incorporated and distinct.

BOSCH SERVICE BRANCHES.

ARRANGEMENTS for special installation service have been made in all Bosch branches so that motorists in the vicinity of any branch, desiring to have their present ignition systems changed to Bosch, may leave their machines at the Bosch garage and have the change made promptly and at a reasonable figure with work of the usual Bosch quality.

PORTO RICAN AGENCY.

THE Pierce single and four cylinder motorcycles are handled in Porto Rico by Bolles, Rever & Co., 6 San Jose street, San Juan. Unlike most export houses, the company has a complete line of accessories, both for the Pierce machines and for the various lines of bicycles which they also handle.

A POLICE MACHINE.

THE police department of Trenton, N. J., has received from John Sykes, a local motorcycle agent, the twin T. T. Indian which will be used in the service of the department.

TWO RIVERS BRANCH.

JOSEPH PETERIK, the well-known bicycle man of Manitowoc, Wis., and county agent for the Harley-Davidson motorcycle has opened an agency in Two Rivers, and has appointed Walter Watzl as manager.

ERO MOTORCYCLE ACCESSORIES

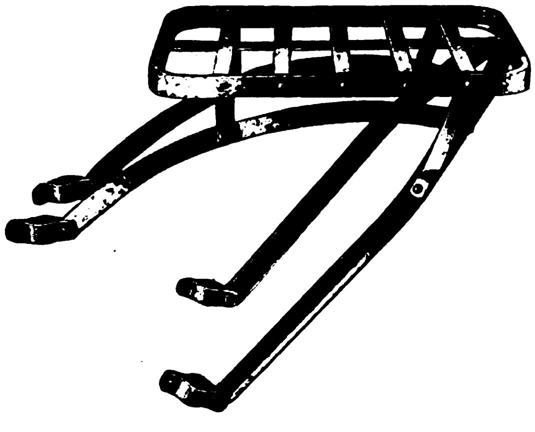
ERO, MODEL 3

A TANDEM ATTACHMENT THAT IS RIGHT

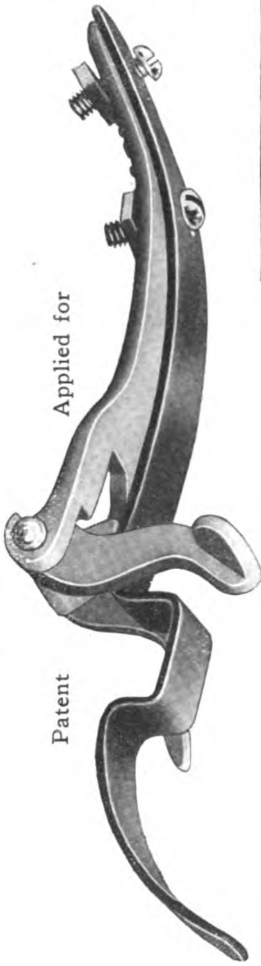
Simple, light and strong. Does not overload your machine and will carry any weight that your wheel will stand. No better attachment at any price. Why Pay More? Price, complete with saddle and dust-guard, full nickeled $11.50
Same, enameled any color $10.00

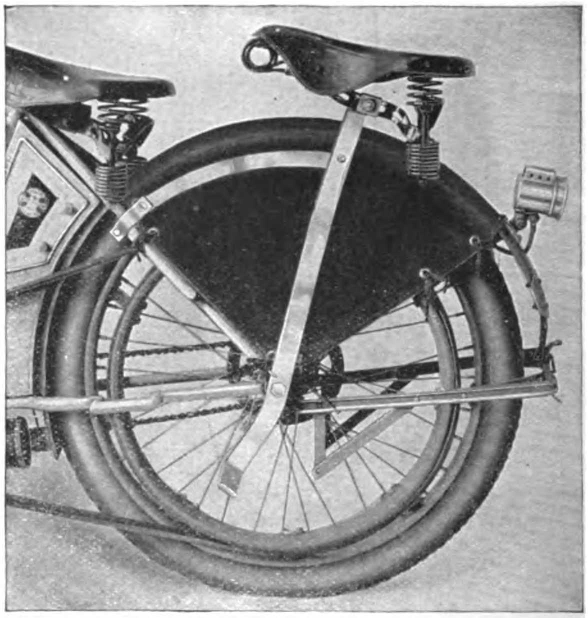
ERO LUGGAGE CARRIER

MODEL 4



A real luggage carrier, made of channel steel and bar stock throughout. Will carry more weight than any wheel will stand. Price, each complete with clips, enameled any color $3.50





ERO STAND LATCH

The handiest thing ever put on a motorcycle. Positively locks the stand and instantly releases it without using the hands. Fits any motorcycle and quickly attached. Price, complete without clip, postage prepaid . . . . 50c.

These are just a few good things of the Ero line

IF IT IS USED ON OR WITH A MOTORCYCLE WE SELL IT.

Write today for our new catalog that is worth real money to every motorcycle dealer and owner.

ERO MANUFACTURING COMPANY

OBJECT TO NEW BILL.

Louisville Motorcyclists Are Trying to Have Several Provisions in Motor Statute Modified.

LOUISVILLE, Ky.—Considerable excitement has been aroused among the motorcyclists in and around Louisville by a bill recently introduced before the State Legislature, providing uniform rules and regulations for the use and speed of all motor vehicles. In the bill all self-propelled vehicles are thrown into one class, no lines being drawn between motorcycles and automobiles. The greater part of the bill has not been found objectionable to motorcyclists, but on the contrary is rather acceptable, with the exception of a few minor provisions which are manifestly inconvenient, if not impossible, to be complied with. These provisions are three in number. Objection is taken to making the annual license fee five dollars, which is thought excessive by the motorcyclists when it is considered that the same fee applies to automobiles. Another point of contention is the provision to force all motor vehicles to carry a large license tag, prominently displayed, which would be large enough to be inconvenient to a motorcycle rider. The third point is the provision for lights, which provides that two white lights, visible at least two hundred feet away, shall be carried in front, and one red light in the rear.

President E. M. Hughes, of the Louisville Motorcycle Club, has written to the introducer of the bill protesting against the indifferent classificiation of automobiles and motorcycles, and pointing out that provisions for the one class would not be fair for the other, and received an answer thanking him for calling attention to the matter and promising to look more carefully into the matter of classification and to attempt to adjust it more satisfactorily.

"SOME" BELT.

The "Reinhold" belt, manufactured by the Reinhold Belt Co., 174 W. 65th street, New York, can well be considered as "some" belt, for it is a belt destined to please in every essential, in quality, efficiency and wearing ability. In the "V" type five plies of leather are used (three plies chrome tanned and two ply lugs of white oak tanned leather), making a belt of ⅞ in. in depth. The first two plies are not cemented together, as is usually the case, but left unjoined, thus permitting more freedom of action and assuring more pliability and a more complete conformance of the belt to the small engine pulley. As the belt passes over the pulley, the under or second ply of the belt proper, folds in, permitting the assembling of the friction lugs into a complete or solid mass of great friction surface. By this folding-in process all strain and cramping of the belt is relieved. The friction lugs are riveted with heavy iron rivets set by hand and fastened by large nickeled-steel plates. These rivets keep the lugs absolutely tight to the belt proper. The maker claims that by reason of the special features embodied in his belt, that it will produce more power and greater riding ease than the ordinary belt.

FLANDERS OFFICERS.

PONTIAC, MICH.—At the annual election of officers of the Flanders Mfg. Co., held January 24 last, the following officers and directors were voted in: Walter E. Flanders, president, being re-elected; Donald C. McCord, vice-president, succeeding A. O. Smith; Scott Brown, South Bend; J. M. Gunn, New York; W. M. Baker, J. B. Cook and W. Kahmeler, of Detroit, being other directors.

NEW ORLEANS CLUB DANCED.

THIRTY-EIGHT members make up the roster of the New Orleans (La.) M. C. to date, and all are active in the true sense of the word. The club is affiliated with the F. A. M. A successful dance was held on the evening of January 25, and the members and guests voted the affair one of the most delightful they had ever attended.

USING DELIVERY VAN.

LEAN GOTCHAUX, one of the largest clothing dealers of New Orleans, has put a Reading-Standard delivery van into service for local and suburban deliveries.

WAYNE COUNTY AGENTS.

FOR the Harley-Davidson machines Wayne county (Mich.) is covered by the Wolverine Motor Company, of Detroit, Harry Svensgard being the manager.

A SMOKER was enjoyed by the members of the Racine (Wis.) M. C. on the evening of January 23.

MAINE'S new motor law, recently put into effect, provides for an annual license fee of three dollars for motorcycles, and motorcycle dealers are to pay six dollars annually.

The Indian

The Indian holds all accepted official American records for 1911, amateur and professional, regardless of distance. This list is simply a repetition of what the Indian Motorcycle has been steadily accomplishing during the past ten years.

Speed Records Compiled from Official Documents in the Office of J. P. Thornley, Chairman F. A. M. Competition Committee. Other Data Tabulated from Reports of F. A. M. Sanctioned Contests by J. J. O'Connor, Official Compiler.

Always the leading holder of record honors, the Indian machine closed the year with the greatest contest triumphs of its career, holding not only all American official speed records, both professional and amateur, but also all the 1911 F. A. M. championships, the transcontinental record, and also all economy class records save one.—*Bicycling World and Motorcycle Review*, Jan. 6, 1912.

FROM RUBBER PLANTATION TO THE ROAD

Interesting Story of a Motorcycle Tire, Beginning With the Arrival of the Crude Material and Closing With the Shipping of Finished Product From the Factory.

WHILE the satisfaction derived from the motorcycle depends to a great extent upon the service rendered by its tires it is a fact beyond dispute that the average rider knows very little about the material and the ingenuity which go into the making of his casings and tubes. With this condition in mind a tire expert has prepared the followng terse and highly interesting story of the tire, from the rubber plantation to the speed bowl or the road:

That's the usual journey of the average motorcycle tire. Crude rubber comes in 57 different varieties: South American, better known as Para; Massana, Calata and Borneo Block being the better known varieties. Plantation, or cultivated, rubber is now preferred for two reasons, because the price is less on account of specialized methods of producing, and because by scientific cultivation the most desired grades of rubber can be grown.

The rubber is shipped in boxes and gunny sacks, and comes in bunches, resembling sponges or a fungus growth. The peculiarity of Borneo Block rubber is that it arrives in cubes, about a foot square. It has to be chopped up, soaked in vats and separated from the blocks. A machine called a "cracker" breaks up the rubber and prepares it for washing. All rubber has to be run between rollers, where water, forcing through, cleanses it of impurities. It is then steamed in vacuum cleaners and cleansed under 10 pounds pressure. After washing it requires from ten days to two months to dry.

The next step is the compounding of the dried rubber. This is a secret process, and each manufacturer has special formulae. Different proportions of antimony, sulphid and other ingredients are mixed to give different kinds of rubber desired properties, such as durability, tenacity and elasticity. The antimony is productive of elasticity and the sulphid of tenacity and durability.

From the compound room the rubber is run through mills and worked up in patches so that it can be passed through the calenders. The latter are huge cylinders, rotating in contact, which compress the rubber into sheets of desired thickness, and cut it into strips. Tread strips, beads and rubberized fabric are then arranged and rolled. These strips are rolled on the tire machine and are highly convenient. Most tire makers stretch the layers of rubberized fabric by hand, but some time ago the experimental department of The Goodyear Tire & Rubber Co. invented a machine for this work, and now control it by a patent. It was argued that hand-made tires were bound to be stretched at irregular tension, and that consequently some layers were looser than others. The parts stretched the hardest bore the major part of the strain and were inclined to give way in a short time.

The Goodyear tire machine consists of a revolving wheel over which the strips of rubber are placed and rolled into shape under pressure of foot leverage. The rollers are concave, fitting over the iron core and pressing out all air bubbles. Pinchers press down the sides and prevent the tire from "buckling"—containing air bubbles in the material which break with use, fill with sand and water and play havoc with the tire.

The rigid inspection of tires is the most startling thing that strikes a layman; it seems that at every move of the tiremaker an inspection takes place. An inspector sees that the splices do not cross, for that would wear them through in time, and he also looks carefully for air bubbles. Each splice must be at exact angle, and the splice must be between three-quarters and one-half inch. Splices must end at intervals, not all at one side, as that would tend to produce lopsidedness. Next a bead gauge is applied to see that the bead is not too high or low, and this inspection is very rigid, for a slight variation of the bead would rim-cut the tire.

This elaborate system of inspection is costly but necessary. It takes one inspector to every three men, but the results in exactness are shown by the fact that replacements for the Goodyear products have been reduced to an absurdly low percentage. The value of this tightening down effect is apparent: The inspector keeps the tiremaker up to snuff and doesn't allow him to continue to make a tire in his own individual way, and in this manner it is standardized and the workmanship is uniform. The inspector in turn can be held if he lets a bad tire go by, for tires are numbered and any defective one can be traced back to the maker. Naturally the tendency is to turn them out right.

After the fabric layers, the carcass and the tread have been wrapped on exactly, the tire is sprinkled with soapstone, to make the rubber flow freely when cured, and also to keep it from sticking to the next tire on the reel. From the machine the tire is taken to the curing room, a steamy, noisy place, where each tire is placed on an iron core and cured exactly so long. The curing and vulcanizing processes are factory secrets, and are carefully guarded. Part of the curing—the final touch—is done on air bags, practically regular inner tubes. This air-bag process is a feature peculiar to the Goodyear construction.

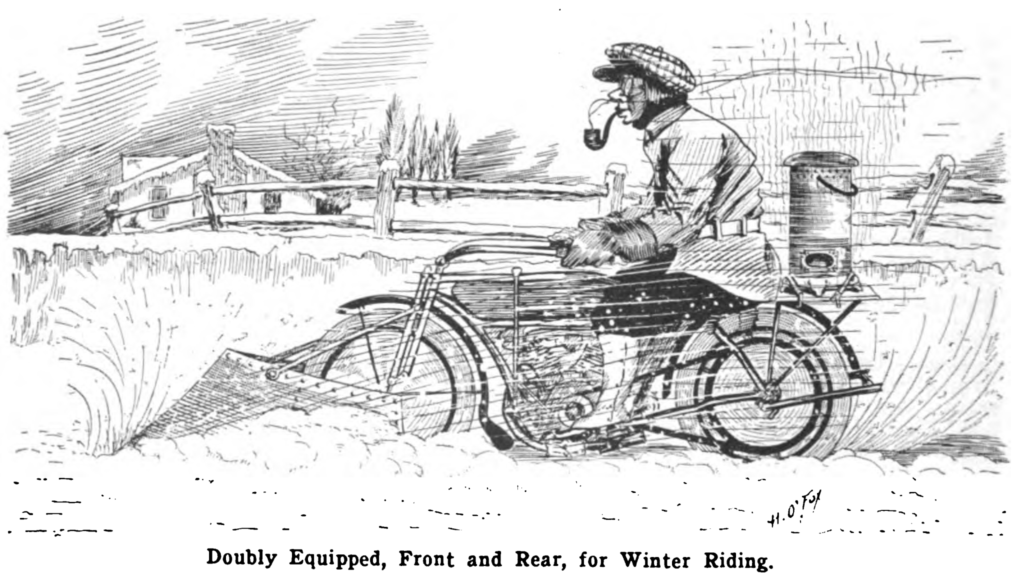
When the tire comes out of the curing room it is trimmed, and all irregularities and ridges are removed, and the flap is put on to keep the inner tube from pinching. Then the valve is placed and the tire goes to the shipping room. It is now ready for the buyer, and will ultimately find its way to the banked circuit of a speed bowl or to the long stretches of country road on which the rank and file of motorcyclists put their machines and equipment to such severe tests.

JOINS GOODYEAR STAFF.

LOUISVILLE, Ky.—C. E. Rodgers, one of the best-known riders of Louisville, has entered the employment of the local agency of the Goodyear Tire and Rubber Company, as salesman. Mr. Rodgers was formerly secretary of the Gulf District, F. A. M., and is now secretary and treasurer of the Louisville Motorcycle Club. Besides his wide acquaintance among the motorcyclists of Louisville, Mr. Rodgers has had considerable previous experience in the tire business, and should be well equipped for his new position, in which all his friends wish him success.

PREDICT BUSY SEASON.

LOUISVILLE, Ky.—The coming season promises to be the best yet for the motorcycle business around Louisville; all the dealers are foretelling a flourishing summer. C. W. Fischer, local agent for the Thor, reports more machines already sold this year than were disposed of up to April of last year. Kline Bros., agents for the Harley-Davidson, have placed several orders for the 1912 model chain-drive, which is exciting much interest around Louisville. Albert Wolke, handling the Excelsior, has orders for quite a few 7 h. chain-driven models, and business is looking up all over town.



Doubly Equipped, Front and Rear, for Winter Riding.

MOTORCYCLES
Motorcycle Mart

One time, three cents a word; twice, two cents a word each insertion. Agents' cards, five cents per word; two or more times, three cents per word each insertion. No advertisement for less than fifty cents.

FOR SALE OR EXCHANGE

FOR SALE.—Indian, twin with free engine clutch; bargain. W. J. Gaiffith, Warren, O.

FIRST $20 TAKES an 8 h. p. auto steam engine and boiler, complete with all fittings, in fine shape; ready to run. Dick Burdy, Decatur, Ind.

WILL exchange my deceased father's complete medical library, surgical and obstetrical instruments for motorcycle with clutch, twin preferred. A snap for medical student. Books and instruments in first-class shape. G. C. Mouton, Jr., Rayne, La.

M.M. Motorcycle single cylinder, magneto, variable speed pulley, 1911 Heitger glass bowl carbureter; the following articles are included; extra tire casing, inside tubing, horn, goggles, gloves, leggins, packing rings, two spark plugs, extra tool bag, exhaust valve spring. I have had the motorcycle about one year. It is in good running order. The entire outfit cost, new, $260; will sell for $100 cash. James Moran, Jellico, Tenn.

PIERCE FOUR-CYLINDER MOTORCYCLE, 1911 model, $225. Machine and tires in good condition. Buying 1912 model. First certified check. A. P. Matthews, 822 Quincy Ave., Scranton, Pa.

CUSSIN'! Why? Tank dry. You know. Next—Rider green; plenty gasoline. Why? Johnston gauge. Plain sight, easily attached. Returnable sample $1.50. Circulars free. Don't walk and cuss. Get one. System, St. Joe, Ind.

BARGAIN.—1911 Harley-Davidson magneto model, almost like new. $150 takes it. Will ship subject to examination if $25 is sent with order. H. G. Turner, Scarboro, Ga.

MOTORCYCLE BARGAINS.—Twenty in first-class condition. Will be sold at 1912 values regardless of cost. Send for descriptive list. W. D. Andrews, Buffalo, N. Y.

MARSH MOTORCYCLE.—Prest-o-Lite, head light, three carbureters—original one, Heitger glass bowl and model "H" Schebler. First check for $60 takes whole outfit, as am buying automobile. H. L. Sargent, Salem, Mass.

MOTORCYCLE WANTED.—I have a $100 Remington typewriter which I would like to exchange for a good motorcycle. "Upstairs," 18 Cherry street, Danvers, Mass.

MOTORCYCLE TIRE BARGAINS.—A. C. C. A. PRICES TALK! Diamond, Goodrich, G. & J. and other standard makes; guaranteed. Gridiron, Basket and Bailey Treads, 28 x 2, $4.95; 28 x 2¼, $5.70; 28 x 2½, $6.20; 26 x 2¼, $5.45; 26 x 2½, $6.20. Guaranteed tubes priced proportionately low; shipped on approval. Don't buy until you receive your price list. The Automobile and Cycle Company of America, Dept. X., 1769-1787 Broadway, New York City.

FOR SALE.—Shaw bicycle attachment. Convert your bicycle into a motorcycle. H. T. White, Salem, Ill.

EXCHANGE.—Enough jewelery and cutlery, your own selection at wholesale, for new or second-hand motorcycle. Robt. B. English, New Castle, Pa.

MOTORCYCLE DESIGNER and mechanical draftsman, with over three years' experience; good theoretical and shop knowledge open for position. Address "A. K." MOTORCYCLE ILLUSTRATED.

FOR SALE.—1912 8 h. p. magneto, M. M. motorcycle, with flat belt and idler, giving free engine effect, machine hasn't been ridden, list price, $275, will sell for $225; I need money; will ship C. O. D. with inspection privilege. R. MacDonald, 4 Allen St., Worcester, Mass.

FOR SALE.—4 h. p. Curtiss—$65 takes it. Correspondence solicited. L. Darby, Belvidere, Ill.

EMBLEM, 1911 model, magneto, 5 h. p. $135; Excelsior, 1912 model, twin 6 h. p., $160; Indian, 1909 model, 3½ h. p., $85. Other machines from $20 up. Get our catalog. Wolke Motorcycle Co., Louisville, Ky.

FOR SALE.—The largest stock of used machines ever offered. All makes and models. Every one guaranteed. $40 up. Write for list. American Motor Co., 2730 Michigan Ave., Chicago.

MISCELLANEOUS

MACHINIST by trade, with eighteen years of experience in cycling and motoring field, would like a position as tester or trial man on long trips, in any line that belongs to the motorcycle trade or equipment, as motors, carbureters, coaster brakes, two speeds, spring forks and tires. Address Box 262, Milltown, N. J.

MACHINIST, lathe, boring mill or bench hand, would like a position in motorcycle factory. Is willing to go anywhere in or out of United States. Address Mich. Csernus, 86 Church street, New Brunswick, N. J.

MOTORCYCLES.—Save dealers' profits; buy direct from the owners. I have all makes on my lists. Indians and Marshes from $20 up. Hundreds of other machines at comparatively low prices. Get my prices before purchasing. King, automobile broker, 217 West 125th street, New York City.

SECOND-HAND MOTORCYCLES.—75 of them, $25 up; three tri-cars, $125, $300 and $350, respectively; expert repairing, experimental work, aeroplane supplies. New York Motorcycle Co., Inc., 318-320 West 48th street, New York.

PARTS in stock for F.-N., Curtiss, Royal Pioneer, Indian, Thor, Marsh, Griffon and others, and sundries. Tiger Cycle and Aeroplane Co., 782 Eighth ave., New York.

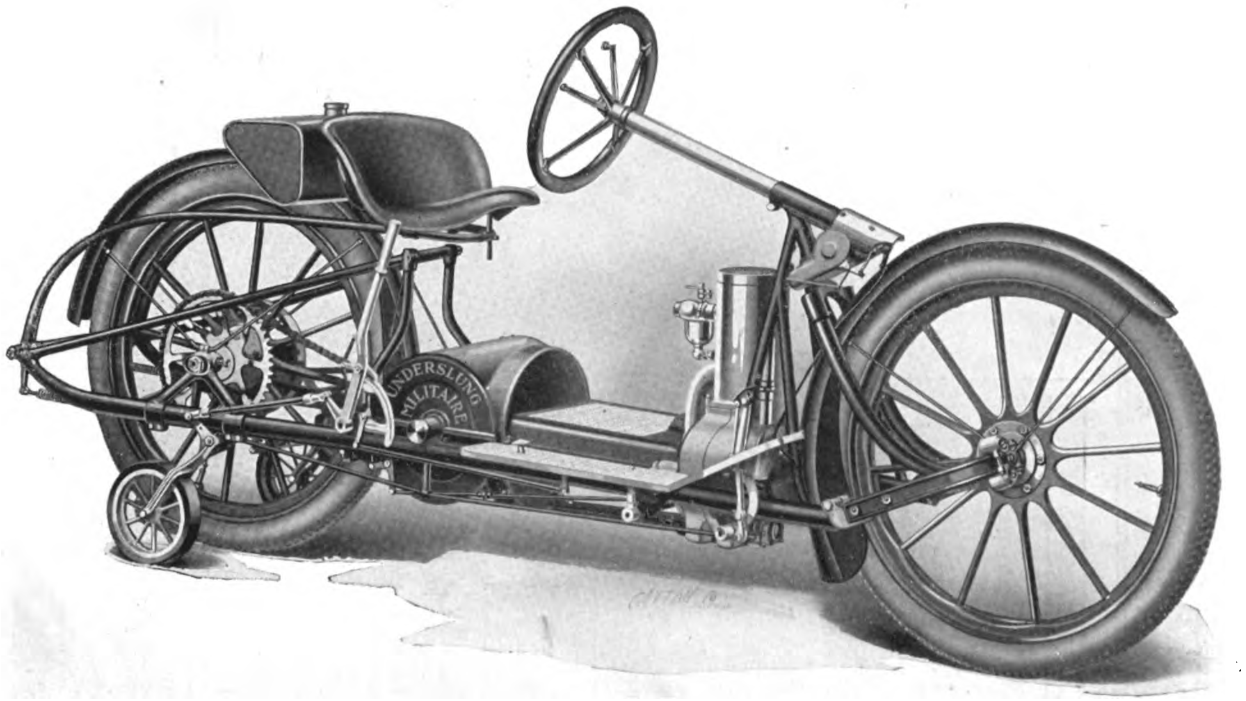
FULL LINE of N. S. U. and Flanders "4" motorcycles; N. S. U. repairs and parts, two speeds, motorcycle accessories. The Sun Motor & Supply Co., 206 West 76th street, New York.

PLATINUM replaced on circuit breaker springs, 45c. Don't pay more; write Thomas King, Kingman, Kans.

YOUR BROKEN MOTORCYCLE CYLINDERS and crankcases made good as new by autogenous welding at an average charge of about one-quarter cost of new parts. No charge made unless weld is satisfactory. References cheerfully given. Waterbury Welding Company, Waterbury, Conn.

THE UNDERSLUNG MILITAIRE

Five Years Ahead of the Motorcycle World



(Patents Pending in United States and Foreign Countries.)

THE LOGICAL EVOLUTION OF THE TWO-WHEELER

THE ONLY TWO-WHEELER IN THE WORLD

WITH ARTILLERY WOOD WHEELS, which are always true and straight, without kink or wobble.

WITH AUTOMOBILE TYPE OF STEERING WHEEL, with spark and gas control on inside of steering post.

WITH BUCKET SEAT WITH A BACK, and a rear seat to be attached of the same type.

WITH FRICTION DRIVE, completely housed from dust and water.

WITH NO GEARS OF ANY KIND, from front to rear, which means simplicity itself, the thing for those far from repair shops.

WITH ALL SPEED CHANGES, from 30 to 1 on low, to 3 to 1 on high, and 10 to 1 on reverse.

WITH FOOT CONTROLS, for brake and speed on running-boards, the lever on right operating clutch and brake independently, while on left the speed changes are operated.

WITH IDLER WHEELS on either side to preserve equilibrium while the machine is either standing, or running at low speed.

WITH SUCTION FAN, which absolutely prevents the engine from overheating while the machine is either standing or running.

WITH REVERSE MECHANISM, which permits the rider to withdraw from awkward positions in congested traffic without dismounting or turning around.

WITH UNDERSLUNG FRAME, which gives a much lower center of gravity and very much increases factor of safety.

WITH NON-SKID CHAINS if desired and ample clearance for same under mudguards.

WITH RIMS ON ARTILLERY WOOD WHEELS that will take 28 in. x 2¾ in. or 3 in. tires.

WITH ARC-SHAPED AXLE which carries direct the entire load of the front half of the machine, thereby leaving the forks free to be used for steering purposes only.

WITH IDLER WHEELS that may be raised or lowered at will, which absolutely prevent skidding on heavy sandy roads or in climbing sand hills.

WITH KNOCK-OUT TYPE AXLE in rear wheel which provides for it being taken off by removing two nuts on either end and not disturbing the general assembly.

WITH GENERAL NON-SKID CONSTRUCTION PRINCIPLES through use of idler wheels, lowest possible center of gravity, and tire chains.

WITH VERTICLE FINS ON ENGINE CYLINDER encased by steel sleeve through which the air is drawn by suction fan, thereby preventing overheating of engine either while the machine is running or standing.

WITH CANTILEVER SPRING SUSPENSION which eliminates shocks on rough roads by having long spring motion between the front and rear wheels and directly under the rider.

WITH NOISELESS EXHAUST.

WITH VARIABLE RIDING POSITION of from 22 ins. to 28 ins. from the ground, and forward and backward movement of 4½ ins.

WITH INTERCHANGEABLE ENGINE PROVISIONS. Our cylinder may be replaced by our twin cylinder in three hours without any alteration of the connections.

ENGINE: FREE—5 h. p.—VERTICAL—BORE 3½, STROKE 3$\frac{43}{64}$. MAGNETO, BOSCH—CARBURETER, SCHEBLER
SPEED: 2,400 r. p. m., 65 MILES PER HOUR—WHEEL-BASE, 64 INCHES

Price: $300 F. O. B. Cleveland

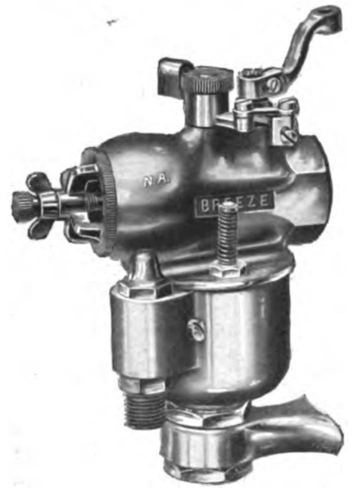
THE MILITAIRE AUTO CO., Inc., 302 and 304 Columbia Bldg., Cleveland, Ohio, U. S. A.

The New "N. A."

BREEZE

CARBURETER

Has No Competitor



FOR POWER AND SPEED

This model delivers a larger volume of properly mixed gas than any other motorcycle carbureter in the market.

FOR FLEXIBILITY AND THROTTLE

We have reduced the strangling aperture about the spray nozzle to a minimum for slow running. The auxiliary air valve and its passages have been enlarged over our previous models and the carbureter equipped with a perfect mechanical device to increase the gasoline with opening throttle.

FOR RANGE

On manufacturer's test apparatus, we have with spark advanced, throttled to 230 revolutions and speeded up as far as the test tachometer registered, 3,500. This same adjustment held good for hills and speed.

Polished all over, aluminum or nickeled Brass, whichever you wish. All hand adjusted, while riding. Get one now. Insist upon having the "N. A." on your new machine. Send for catalog.

SHAW MANUFACTURING COMPANY, Dept. 26, Galesburg, Kansas

What They Say About Heitger Carbureters

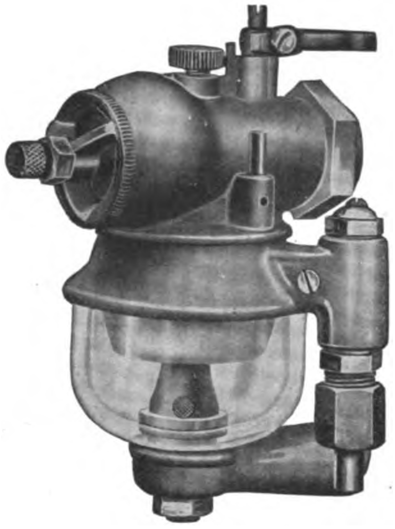
We Have Bushels of Such Letters, Given Voluntarily

DR. G. A. HAWKINS, Jerome, Ariz.—Am well pleased with carbureter for my Indian 7. In fact, it makes motorcycling a pleasure, whereas before (for me) it was hard work.

JOHNSON & VAN KEUREN, Danbury, Conn.—Our customers are delighted with Model G-D. Your carbureter is certainly perfection.

FRED M. GIDDINGS, Galesburg, Ill.—I received the carbureter for my single Excelsior and find it absolutely O. K. in every respect. It is certainly a pleasure for me to say this after the continued trouble with the old carb.

M. A. WESLING, Ludlow, Ky.—I want to say I am well pleased with carbureter bought for my Thor 4, and would have no other. Your guarantee to run motor smoother and with more power is well said. You couldn't give me my old carbureter I was using. Have increased the gear on my machine and it pulls better than with the smaller one used before.



Model H—Price, ¾ in., $9.50; 1 in., $10.00. Metal or Glass Bowl.

MARSHALL MOTOR CO., Kansas City, Mo.—We wish to state that the Heitger is giving excellent satisfaction on the New Era and Greyhound, handled by us. The high and low speed adjustment and glass bowl are the best on the market.

W. D. POPE, Athens, Ga.—Am well pleased with carbureter on my Marvel.

FRANK LIBBY VALIANT, Angola, N. Y., May 31, '11.—Since last February I have covered 2,000 miles on my sturdy Emblem. This has been during extremes of temperature from 4 degrees below zero to 102 above. So far have not had the slightest trouble with carbureter or machine, and cannot too highly commend its attention to all motorcyclists who are having carbureter troubles. I think the glass bowl splendid, and many motorcyclists who have seen it have commended it very highly.

WALTER SCOTT, JR., Philadelphia, Pa.—Feel delighted; can get 56 miles per hour geared 4 to 1. I weigh 175 pounds. This I consider good.

You see how these people are satisfied. You can get the same satisfaction by using a Heitger; gives 5 to 60 miles per hour, 75 to 125 miles per gallon; is easily adjusted, and remains so; is speedy, reliable and efficient. Glass bowl if you wish, showing gasoline level and float action, strainer, etc. Used by six manufacturers of motorcycles as exclusive equipment. Why? Catalog for the asking.

MR. DEALER
Write for Discount

The tandem is so constructed that the rider's feet move up and down with the body, thus preventing any bending of the knees.

The tandem is made to fit any motorcycle. Will not interfere with the stand. It has no side play, but has an up and down motion of three inches.

The Spankers are the "best ever."

We are the Pioneers in the Spring Attachments and have had them in the market for five years. All others are imitations.

KOKOMO
STUDDED TREAD

The materials entering into the construction of a tire are important factors, but something more than the best materials are necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

Kokomo Tires

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

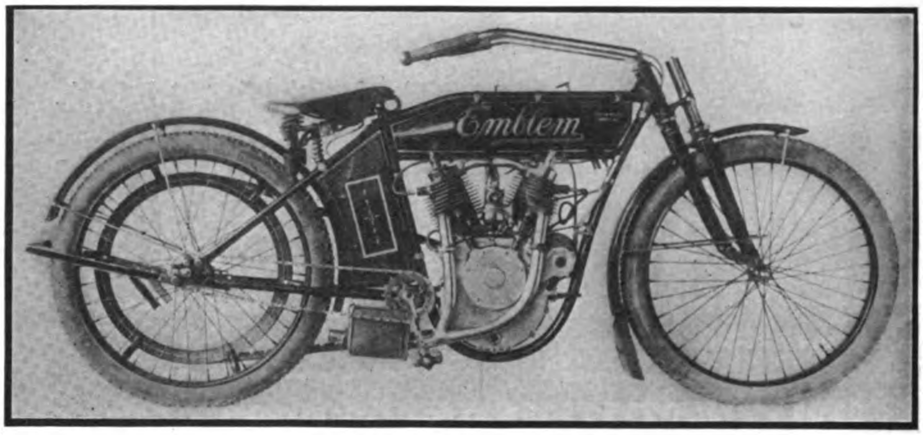
THE EVER ECONOMICAL EMBLEM



Here's the kind of day in and day out service you expect of a high grade machine and get with an EMBLEM:

WESTERN & SOUTHERN LIFE INSURANCE CO.

Kenton, O., Jan. 28, 1912.

Gentlemen: I purchased from your agent here a 4-H. P. Emblem motorcycle June 10, 1911, and have used it in my life insurance business to the extent of better than 5,000 miles. My total repair bill was 25 cents for one platinum point spring and packing for left fly wheel. I still have a new machine and wouldn't trade my machine for anything I have seen in the motorcycle line up to date.

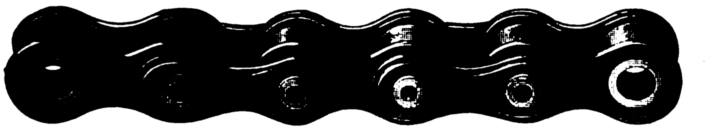
Transmission Efficiency

The service of a motorcycle depends primarily upon the power delivered to the rear wheel. No matter how powerful the motor, its work is wasted unless it is used right. For consistent, effective service the transmission must be absolutely dependable and of maximum efficiency. The racing men recognize this and practically all use

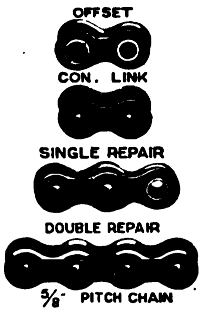


Duckworth Chains

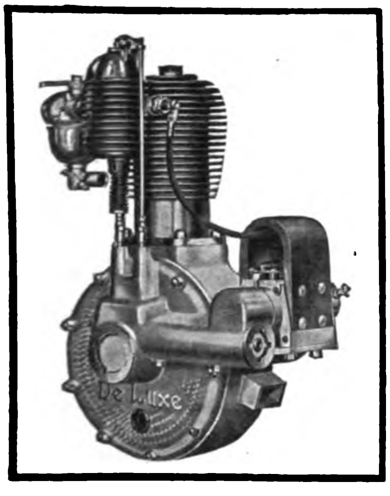
on their machines. Efficiency is as important on the machine for road service as on the racer. Insist on the best. Be particular. Say "Duckworth" to insure transmission quality when buying your new machine. Duckworth chains have the WEARING QUALITIES. Duckworth Repair Links are in demand by riders. Why? Simplicity and Sureness.

IT WILL MEAN MONEY SAVED IN A SEASON'S RIDING TO FIND OUT MORE ABOUT THIS. INFORMATION FREE. WRITE US.

Duckworth Chain & Manufacturing Co. **Springfield, Mass.**



A REVOLUTION
IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

IMPERIAL MUD GUARD BOOTS

We want jobbers to catalogue our belts, and will furnish electrotypes free upon request.
The endorsement of the rider is the best argument for our belts.

We have one of your **SEA LION** belts on our 1910 Harley-Davidson that we have run 10,500 miles and looks to be good for a good many more, although it is now getting a little too long; we intend to send it in soon and have it shortened. This belt has been run through all kinds of weather and for at least 500 miles has pulled two passengers. Yours truly,

(Signed)
I. S. KNOWLES & SON,
Kingsley, Iowa.

I have used your **WHITE STRIP** belt on my Excelsior 4 during the past season, which time I have ridden about 10,000 miles. It has proved to be very satisfactory in every respect, and I can truly say that it is far superior to any belt on the market. "It don't stretch." Very truly yours,

(Signed) **GERALD V. RALPH,**
Huron, S. Dak.

I have ridden one of your **WHITE STRIP** motorcycle belts for ten months (July, '10, to June, '11), and have gone 8,000 miles through rain, snow and mud, so I know what I am talking about when I say you can make good belts.

(Signed) **K. FUNSTEN,**
Dorris Motor Car Co.,
St. Louis, Mo.

Your **SEA LION** belt lasted me over 6,000 miles, the first 3,000 in and around San Francisco and the last 3,000 up here in this sandy country, which will soon tell what a belt is made of. The belt you turn out has them all wiped off the slate for wear, reliability and longevity, and any person giving your belts the proper care should last them between 6,000 and 10,000 miles. Yours sincerely,

(Signed) **ED. G. SLOAN,**
Doyle, Calif.

ENSURE SAFETY AND ABSOLUTE CONTROL BY EQUIPPING YOUR MACHINE WITH A

CORBIN BRAKE

¶ You then have the double satisfaction of knowing you have considered the safety and comfort of others as well as yourself. The Corbin Brake means Confidence, Reliability and Control. Accidents and collisions are prevented and the pleasures of the road are enormously increased.

¶ The Corbin Brake is located in the rear wheel hub and is operated by a slight back pedaling pressure. Your machine can be stopped instantly or slowed down gradually, according to desire or the need of the moment. Can be fitted to either belt or chain drive motorcycles.

¶ The Corbin Two-Speed Coaster Brake and Duplex Brake for bicycles are universally recognized as the standard. No cyclist can afford to ignore the Corbin.

¶ Corbin Brakes are sold by the leading hardware and sporting goods dealers everywhere. Specify CORBIN and insist on it.

Write for free catalogue showing all models.

FEDERAL MOTORCYCLE TIRE
FEDERAL MOTORCYCLE TIRE

FEDERAL TIRES

Conspicuous for Service

In actual use on all kinds of roads Federal Motorcycle Tires have earned the reputation of being the tires of *"Extra Service."* The superiority of Federal Tires from the standpoint of service, safety, comfort and economy has been thoroughly demonstrated.

Phenomenal strength, marvelous resiliency and extreme durability are the reasons why Federal Tires are given preference by motorcyclists who know. ***Quality*** is the first consideration in building them. Federal Tires are strictly high grade.

Made in two styles—*Corrugated Tread*

"If it's FEDERAL -it's right"

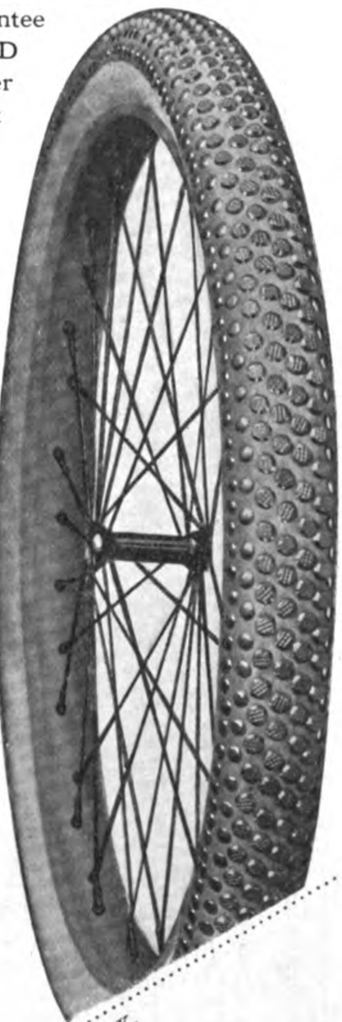
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME

Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.



O. O. Brictson,

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50
26 x 2½	6.00	28 x 2½	7.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

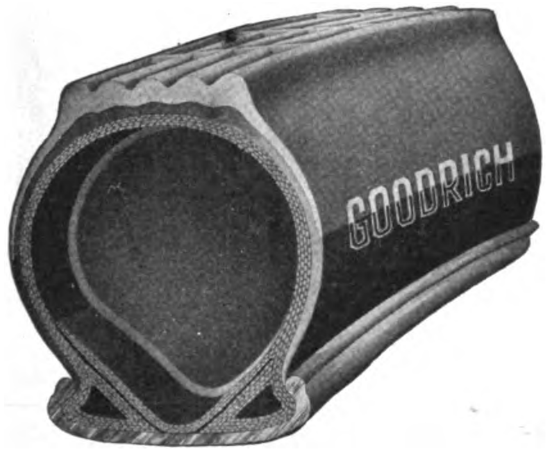
What Makes Quality?

You'd like to know what Goodrich Quality means. "It's all very well to talk, but have you got the goods?" you say. "What makes the Goodrich White Tread Motorcycle Tire a quality Tire?"

All right, let's get right down to talking points. Certainly we have the goods in this tire.



From the inside to the outside, Goodrich quality is a real feature of every Goodrich White Tread Motorcycle Tire. The inner tube is of the best Para rubber, compounded with all the skill known to modern science. The fabric of the highest grade of long fibre Sea Island Cotton, tested in our own factory to give the greatest possible strength, and frictioned with pure gum. The wonderful "White Tread", the toughest, "livest" tread ever known, is exactly the same as is used on our Automobile Tires. In fact, our Motorcycle tire is built just like our automobile tires.

Other tire makers can buy the same materials we do—if they can afford it—and can copy the shape, size and color of our tires. But they can't get the skill, precision and experience that come from forty years of steady work. AND THEY CAN'T MAKE THAT TOUGH WHITE TREAD. You'll never know that there is a difference in treads until you try to wear one of those out. Veteran motorists who have tried many makes of tires have a way of settling down to Goodrich when they get tired of punctures, blow-outs and wear-outs.

Another feature is the Service that goes along with Goodrich tires, as well as the quality. There are Depots and Branches in nearly every large town or city in this country. You are always within easy distance of headquarters, and you'll find the managers of the Branches or Depots always willing to do their best for you.

There's something in this quality tire after all, isn't there? And the best part of it is that a demonstration on the road is always more favorable than one on paper.

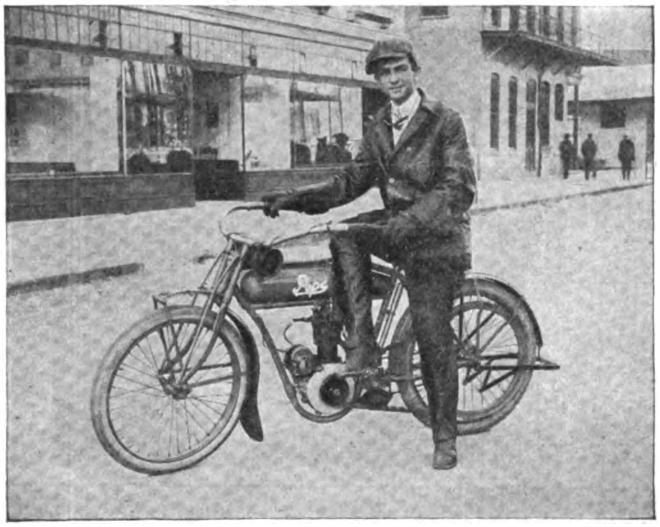
RELIABILITY

As Demonstrated by Four Consecutive Endurance Runs



Frank Murray and his Pope Motorcycle.

Four Consecutive Victories

In recent California Endurance Contests, run under the most varied and adverse road conditions and conducted under the strictest supervision, go to show the absolute reliability of the Pope Motorcycle.

FIRST RUN—Eighteen-Hour, 336-Mile Endurance Contest, held under auspices of the San Francisco Motorcycle Club at Oakland, October 29, 1911—greatest event of its kind on Pacific Coast—E. N. Moore, an amateur, riding Pope, made **perfect score** over the hardest kind of roads—equalling best performances of higher priced and higher powered machines.

SECOND RUN—Held under auspices of Sacramento Motorcycle Club, November 19, 1911. Frank Murray, riding the same Pope machine over heavy roads and up steep grades from Sacramento to Colfax and return, made a **perfect score** and beat out a 7 h. p. machine on an even start up five-mile grade into Auburn.

THIRD RUN—Conducted by Sacramento Motorcycle Club, December 10, 1910. Again Frank Murray rode the same Pope Motorcycle and again made a **perfect score** over bad roads and through deep mud.

This contest alone did more than anything else to establish the Pope's reputation on the Pacific Coast.

FOURTH RUN—Conducted by Sacramento Motorcycle Club, January 14, 1912, when another **perfect score,** the fourth in succession, was awarded to the same machine. The route covered a distance of 144 miles. Secret controls necessitated the most consistent operation on the part of the machine in order that a uniform speed might be maintained at all times.

What more could be said in proof of the Pope's Reliability?

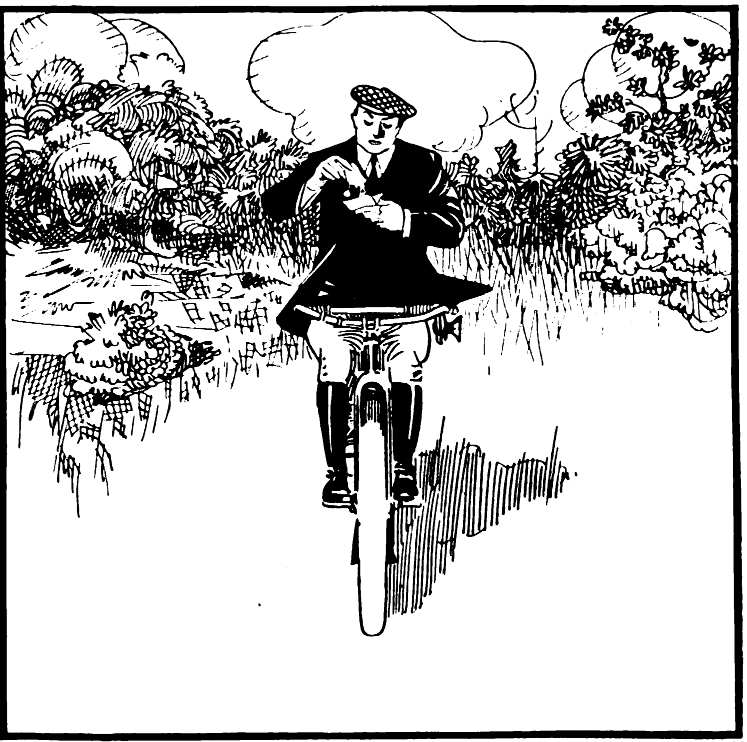
I TAKE MY HAT OFF TO YOU YOU'RE A ROUGHER RIDER THAN I AM

BOWLEGGED TO AVOID THE HEAT OF THE MOTOR—AND VIBRATION



A NATURAL, EASY POSITION, AND WITHOUT VIBRATION

A one cylinder motor produces power one-quarter of the time.

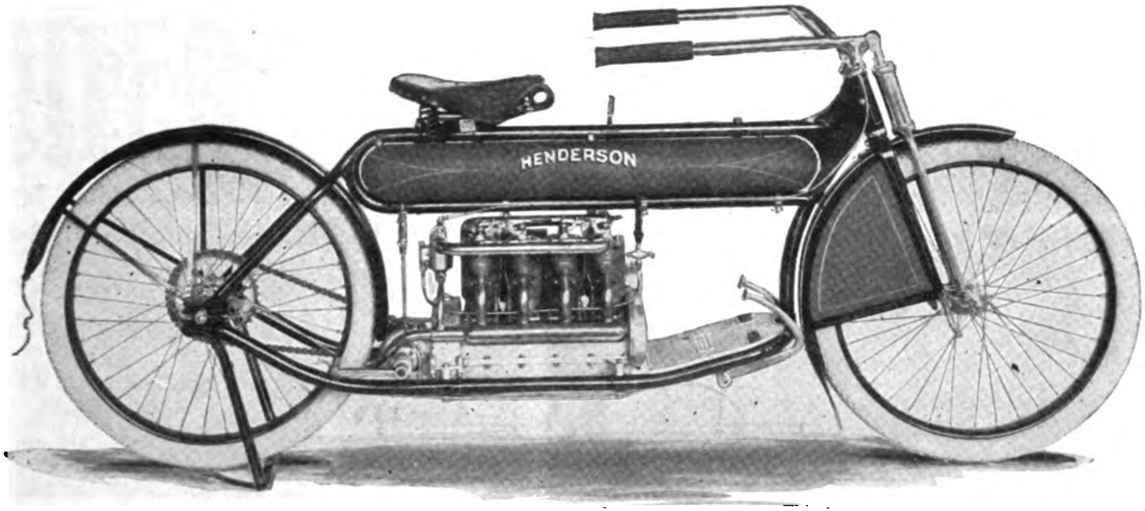
A two cylinder motor produces power one-half of the time.

The four cylinder HENDERSON produces power all the time.

It is because the HENDERSON has CONTINUOUS POWER that you can throttle down so slow, that if attempted on a single or twin the motor would stall.

Continuous power enables a machine to pick up and get away faster than is possible with jerky power.

Continuous power does not vibrate. Because the HENDERSON has continuous power, with the rider's seat between the wheels, vibration is entirely eliminated.



***DEALERS*—The Henderson does not conflict with the line you now handle. It's in a class by itself.**

CLUTCH CONTROLLED FROM THE HANDLEBAR

SPECIFICATIONS

1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm., bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1:5, 1:4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handlebar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

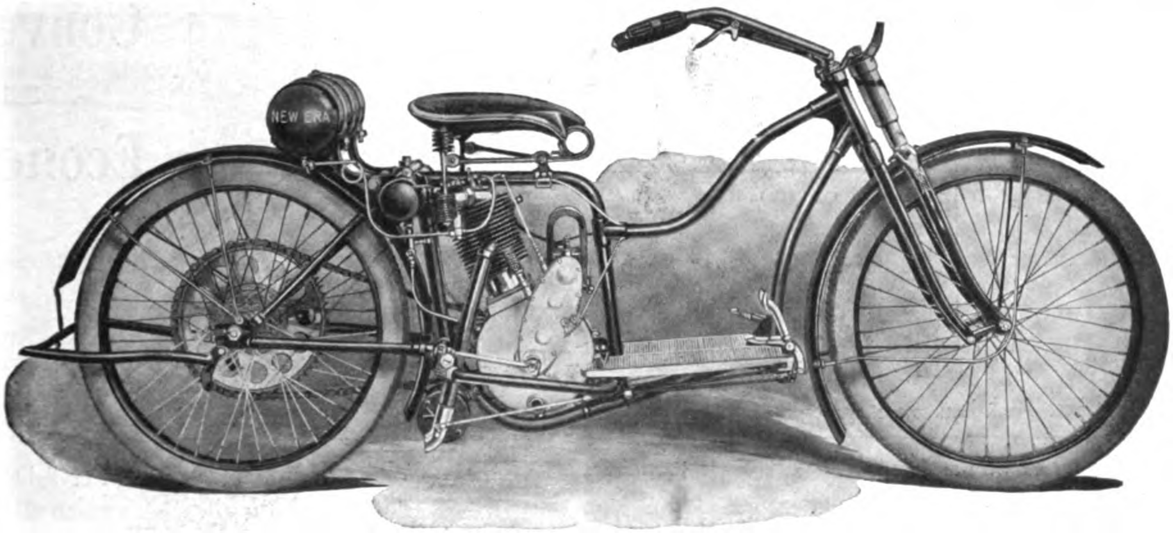
YOU'RE RIGHT! THIS IS THE NEW ERA

THAT GOES "ANYWHERE UNDER ANY CONDITION"



4 H. P. ROADSTER

As a common sense proposition, when you buy a Motorcycle you want to know six things:

I.	Will it take me where I want to go?	The two speed construction of the NEW ERA will take you anywhere, up any hill or through any sand or gravel.
II.	Will it take me the way I like to go?	The NEW ERA has a range on low from one to fifteen miles and on high from five to fifty-five miles. Guess your speed is in there somewhere, isn't it?
III.	Is it easy to operate?	The NEW ERA is hand cranked like an auto, the two speeds are controlled by foot pedals and its free motor means you can let your engine run while you are standing still. Cinch, isn't it?
IV.	Is it comfortable?	The NEW ERA has compound cushion spring fork, three point suspension form seat, aluminum foot boards, large tires and extra heavy rims. That all goes for comfort, doesn't it?
V.	Is it constructed right?	Each part of the NEW ERA is made of the material which practical experience has proved best for that particular purpose. For the workmanship, don't take our word. Look the machine over.
VI.	Is the price reasonable for what I get?	If you will only look the NEW ERA over carefully we are not afraid of the way you will answer this question.

WHY DO

Empire Tires
WEAR LONGEST

We will tell you in the next few issues of Motorcycle Illustrated

12,000 Miles—Think Of It

EMPIRE TIRE CO.,
1305 Michigan Avenue, Chicago.

Gentlemen:—I am sending you, by express, one motorcycle casing, 28 x 2¾ inches, in which you will find one small cut. Please repair this and return the tire as soon as possible. I want to say that this casing has been on the rear wheel of my twin Excelsior, and I have ridden it over 12,000 miles without getting a puncture. I used my machine for tandem riding a great deal and can say that I never saw a tire that stood the test and wear like this one. In my seven years of motorcycle riding, I have obtained four times more service out of this Empire tire than out of a tire of any other make, and the Empire tire still seems as good as when I had used it only a few hundred miles.

Yours very truly,

North Crystal Lake, Ill.

WILLIAM M. FREEMAN, M. D.

Simply Insist on Empire Equipment

YOU can get these same results if you will use Empire Tires. We ask you to try them once, knowing you will use no other make after once riding an Empire.

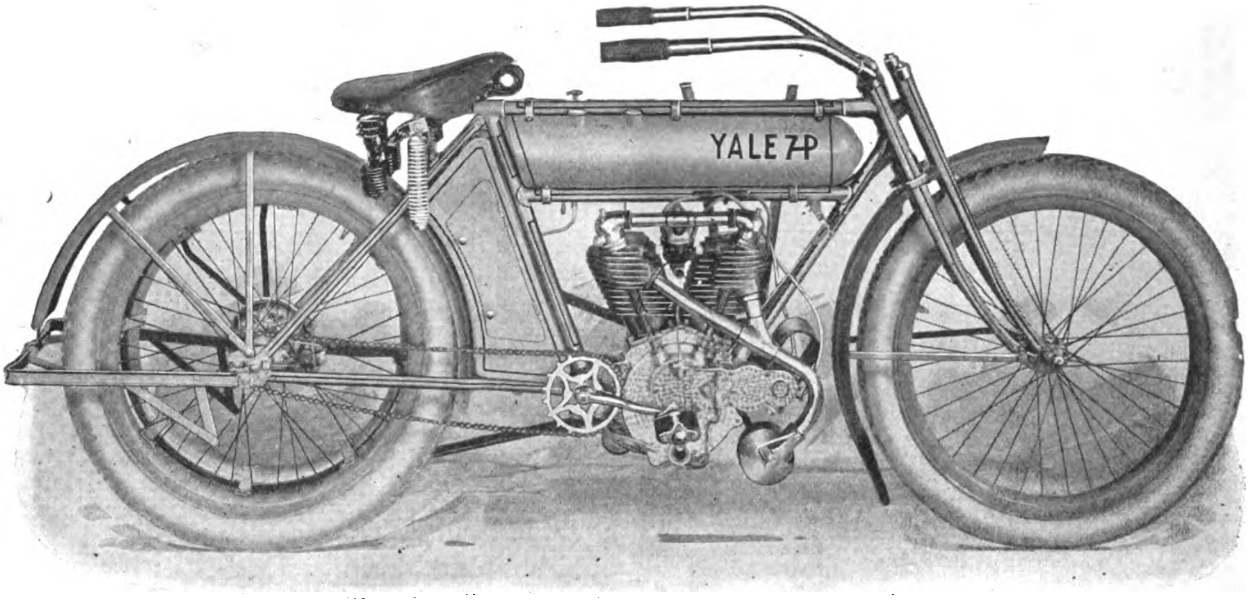
YALE PERFECTION

The Yale motorcycle is one of power, endurance and positive dependability. Mechanically it is absolutely perfect, and for quality its equal cannot be found.

There's a reason for the high standard of the Yale. Every part of the machine is made in our own factory, by the most skilful workmen, under the most modern conditions and under the supervision of men who know how to build motorcycles that are of the highest possible quality, and absolute mechanical perfection.

While some manufacturers are forced to have their parts built as cheaply as possible, often at a sacrifice of quality, the Yale is built in its own factory, regardless of cost—quality being the first consideration.



Model 27, 7 H. P., $285

Y-A Shock Absorber Free to 1912 Yale Buyers

Every person buying a 1912 Yale will have the machine equipped with one of these Shock Absorbers. Riders who have already purchased a 1912 Yale will, as soon as we have a sufficient number of Shock Absorbers on hand, receive one of these absolutely free of charge.

It's part of the Yale policy—every Yale rider will at all times get the highest quality machine and all the desirable features.

Just remember this—it's a big feature—write for the Yale booklet; or, if there is no dealer in your territory, write for our agency proposition.

2 3-4 inch studded tires, Eclipse free engine clutch, 57 1-2 inch wheel base, low saddle position, Y-A Shock Absorber, "That Absorbs the Shock," regular on all models.

You Can Ride an Excelsior Auto-Cycle in Your Business Clothes

THE *Excelsior Auto-Cycle* is practically an auto on two wheels. You can ride the *Excelsior* in your business clothes,—and be as clean and neat as after an auto ride. Save money; no need to buy a motorcycling outfit,—coat, trousers, leggings, cap, goggles, gloves, etc.,—just ride an *Excelsior.* We have constructed the *Excelsior Auto-Cycle* so that it is

THE ONE MACHINE THAT KEEPS YOU CLEAN

To the man on an *Excelsior Auto-Cycle* there is no such thing as dirt, or spattered grease and oil. This is because our *covered chain guard* keeps oil and grease on the chain,—off of you; our *aspirator* throws all superfluous oil far *behind* the machine; our *oil proof bearings* retain all the oil used for lubrication; our *auto-type mud guards* are wide and useful; our *oil-retaining joint* on the pulley side of the auto-cycle prevents splashing.

The Excelsior is Simple and Comfortable

Cleanliness is not the only feature of the *Excelsior.* The *Excelsior* is made of fewer parts than any other machine. Any child can learn to ride it in 15 minutes. It has the lowest saddle position ever attained,—you sit in a natural position, and can put your feet flat on the ground when you stop. Our *Komfort-Kushioned spring seat post* and *perfected spring fork* absorb all possible bumps. Read about the machine that *always makes good* in our

FREE ILLUSTRATED BOOKLET.

We'll send it gladly; *write us now.*

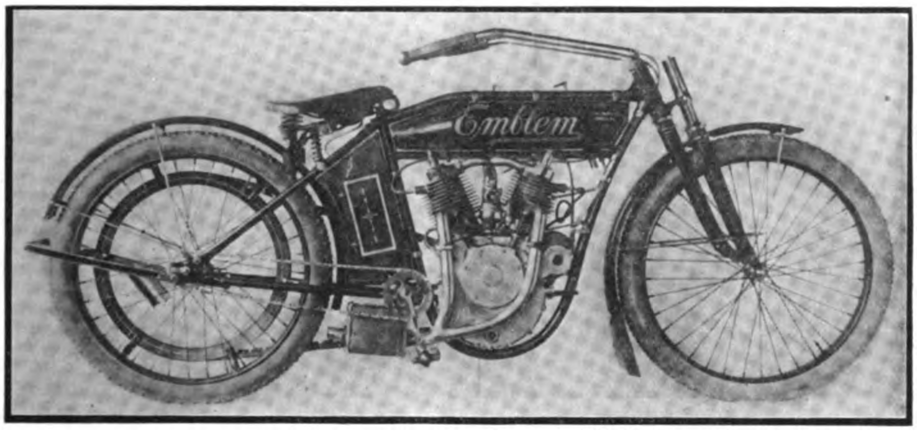
A MAN CAME UP TO OUR STAND

At the Chicago Show, and said:

"Yours was the first motorcycle I looked at when I came in this afternoon. I've seen them all since and now I have come back to give you an order for one of the big fellows to be delivered in March. You see," he added confidentially, "I have never owned a motorcycle before, so I thought I would see them all together at the show before buying. The Emblem seems so big and strong and easy to understand that I am sure I'll have no trouble in learning to run it."



Yes, that's the Emblem through and through—"Big and Strong and Easy to Understand." Mechanically perfect in construction, yet without the frills that drain the rider's purse and keep dealers in a constant state of apology. From the $175 single to the $250 twin, Emblem Motorcycles are built to withstand hard knocks and they have made good. "Motorcycle Satisfaction"—which means Speed-Power-Economy—is the lot of the Emblem Rider. Have we an agent in your town?

SOME MORE PROOF OF ITS DEPENDABILITY

Durability

Easy and Positive Control

Efficiency

Low Cost

It shows a lot of confidence in a motorcycle when a man trusts his dearest possessions to it, as does Mr. M. H. Donnetti, of 376 Hanover street, Bridgeport, Conn., who takes his entire family out for a spin occasionally. The motor of the Emblem Twin never abates in the slightest its strong quiet purr, no matter how steep the hill, or how restless its 400 pound burden. It's easy for the EMBLEM.

Motorcycling in the White Mountains of New Hampshire

Going up

steep hills and mountains is no trouble at all for the 8 H. P. M·M Twin — just like riding on level roads.

Read what the man in the picture says

American Motor Company, Brockton, Mass.
Gentlemen:

I have just completed a motorcycle trip through the mountains of New Hampshire. I am so bubbling over with joy, that I must write you how well satisfied I feel with my M·M Twin. The power it showed in tearing up those steep inclines was simply marvelous. Not once did I get stuck on a hill, and believe me there were some corkers, and as for smooth running qualities and speed, I never saw anything like it. With the muffler closed, she would slide through the towns as still as a bird, throttling down to a walk when required. You have never hollered half enough about this wonderful model. If people knew what they could do, you would be swamped with orders.

Yours truly,
Geo. B. Graves
Albion St., Somerville, Mass.

Announcement to Agents!

Here is the greatest seller ever offered to the trade in the Twin Line. The big powerful M·M Twin at $225 was the sensation at the New York Show. Of the many lines offered to Agents for 1912, there are only a few twins, although there is a big demand for this type. No agent can satisfy all his trade without a good powerful twin, especially in sections where the roads are hilly or rough.

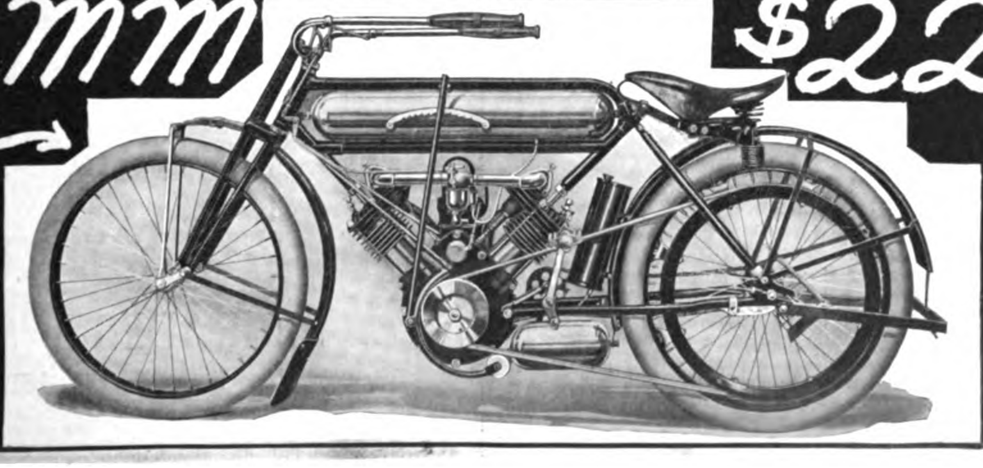
The M·M Twin is positively without an equal, regardless of price or claims. It is the only Twin having cylinders set at a 90 degree angle giving perfect balance, doing away with all vibration and many other tremendous advantages over the ordinary type.

With our large facilities and 13 years' experience, we are able now to put the twin price down where it is bound to multiply sales. The complete M·M line at $140, $160, $200, and $225, is the best agent's proposition to be had this year.

Get in touch at once—Territory is going fast.

AMERICAN MOTOR CO., 716 Centre St., Brockton, Mass.

8 H.P. MM Twin $225.



The Biggest Motorcycle Offer of the Season

With Free Engine Clutch $240.

B170 Seat part has carefully moulded steel base, is amply and comfortably cushioned and covered over all with substantial leather. Spring-framing includes the BROOKS PATENT COMPOUND SPRINGS, and is practically identical with the well-known B104.
Particularly low built, it is shaped on anatomical lines, and—you sit IN it rather than ON it.

Two new models of the

BROOKS—

the original and only genuine Compound-spring Saddle

J.B.BROOKS & CO., Ltd., 75 Criterion Wks., Birmingham, Eng.

Distributing Agents for U. S. A.
The D. P. HARRIS HARDWARE CO., 48 Warren St., N. Y.

B400 Note position of compound springs, which are placed immediately under the weight-carrying portion of the seat, which latter is not hinged to any fixed point at the peak, but constrained to move in a true vertical direction. This position, in conjunction with the compensating action of the spring, means unlimited elasticity without bounce. Seat part is comfortably cushioned and covered with substantial leather; has steel base carefully moulded on anatomical lines, and, again—you sit IN it rather than ON it.

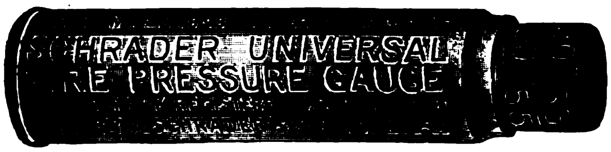
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

ENGLAND ENDORSES THE

PIERCE

Stoke, Holy Cross,
Norfolk, England,
January 22, 1912.

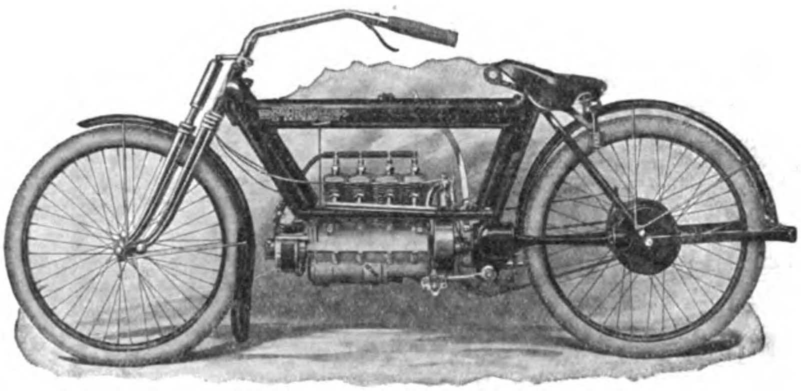
The Pierce Cycle Co.,
Buffalo, N. Y.

Gentlemen:

I feel that it is due you that I should express the perfect satisfaction I have received from one of your four cylinder machines which I have been riding for several months.

The even running, absence of vibration and noise and the cleanliness of your machine are especially noticeable as prominent features when compared with our English machines. The accessibility and ease of taking down and re-assembling are quite extraordinary. When riding out with my friends my Pierce is constantly proving its superiority when we come to a stiff hill with a bad approach. Other standard machines fail to pick up and make the ascent, but there is no trouble with the Pierce.

On many occasions the transmission has been in evidence as satisfactory, where belts on my friends' machines have slipped in the snow. No amount of tightening can then make them drive. I am now sure I shall stick by your machine instead of investing in a car, as I had intended doing, failing to find a satisfactory motorcycle in England, although I tried practically every make.



The Pierce Four Cylinder.

I am recommending your machines to all my friends and several of them are going in for Pierces the coming season.

Faithfully yours,
DONALD B. LARKE.

HARLEY-DAVIDSON

7

The tourist rode a 1912 Harley-Davidson. The pictures represent: 1. Clearing Georgia lands. 2. The spirit of the Sunny South. 3. Near Jacksonville, Fla. 4. A Georgia forest. 5. A few Savannah riders. 6. The cotton pickers. 7. A typical Southern negro family. All of the above photographs were taken recently, while "below zero" was the rule in the North and West.

There is every reason in the world why your new 1912 machine or the one you now ride should be fitted with

UNITED STATES TIRES

They are unquestionably the strongest motorcycle tires ever built.

Where else will you find a tire that actually combines all the strong points which served to make two brands (Morgan & Wright and G & J) famous from one end of the country to the other.

Where else will you find a tire made by processes and machinery selected from the two finest motorcycle tire-making plants in the world.

UNITED STATES TIRES

stand alone in this respect.

You riders who select United States Tires as your coming season's equipment will be sure of this—that you are getting the greatest possible value for your tire money—that you are getting a tire that will add to your riding pleasure, subtract from your trouble and delays, multiply your tire mileage and divide your tire expense.

Despite their extra strength and extra service, UNITED STATES TIRES cost you nothing extra to buy.

80 per cent. of all riders use them—100 per cent. of all motorcycle makers furnish them gladly as 1912 equipment because they recognize them as

COLUMBUS IS IN THE LEAD

Ohio City Gains Ground in Contest for 1912 F. A. M. Assembly and Buckeye Riders Rejoice.—Committee Calls Attention to Inducements Offered, One of Which Is a Good Track.

AS the result of a well-arranged and enthusiastic boosting campaign and persistent exploiting of the advantages offered by their home city the motorcyclists of Columbus, Ohio, have practically clinched their claim to the 1912 convention of the F. A. M., and little doubt remains as to the ultimate success of their efforts. The Federation board of directors will not be called upon to make a formal choice of the convention city for some weeks, but their unofficial attitude toward the proposition of the Columbus riders is, to say the least, distinctly favorable; so much so, in fact, that the Ohio delegation returned from the Chicago Show entirely satisfied. After threshing out the situation thoroughly with F. A. M. officials and the manufacturers, they carried home with them the conviction that it would be quite safe to start preparations at once for keeping open house during the next assembly of the national body.

The Columbus boosters have not impressed the Federation officials to this extent without the hardest kind of campaigning and the expenditure of much time and considerable money. Their present position of prominence in the contest for the next convention is the outcome of a boom launched some months ago, and which has not been allowed to lag for a single day. Systematic newspaper publicity and a never-say-die determination to prove that Columbus is the home of high-pressure enthusiasm has kept the Federation officers apprised of the fact for the past three months that the Ohio city is just about as wide-awake a motorcycle center as can be found from coast to coast, and when the boom committee brought the matter up at Chicago the Federation executives were bound to admit that there are many reasons why Columbus should be considered favorably and none why it shouldn't.

L. P. Birkenbach, one of the most enthusiastic workers in the Columbus campaign, stated that an entertainment fund of $3,000 has already been guaranteed by the dealers, riders and merchants of his city, and that this sum will be considerably increased when it is known definitely that the convention has been "landed." He called attention particularly to the condition of the mile track in Columbus, and to the fact that it has proved perfectly safe for big speed contests in the past. In view of the fact that the F. A. M. championship meet is the feature of features for riders in general during the convention week, the track item is one not to be lightly regarded.

Home of Columbus M. C.

Birkenbach and his associates recalled Frank Hart's mile in 50⅗ seconds on the Columbus track, and referred to the fact that a 100-mile race in 1910 was run off in 105 minutes. In 1911 the time for the century was lowered to 102 minutes and a few seconds over the same course. A 200-mile automobile race was held on the track last summer without an accident, and the Columbus Automobile Club has engaged the course for a 300-mile race to be held on July 4 next.

It was also pointed out that Columbus has two large amusement parks, five high-class hotels and ten of the middle class, and excellent facilities for keeping the motorcycle visitors in good humor during the convention week. Memorial Hall, suggested as the scene of the executive sessions of the Federation, will seat 1,000 people and is well located.

The Ohio capital has over 700 motorcyclists in its population of 200,000, and it is doubtful if any city in the country is outdoing it in efforts for the general advancement of the motorcycle. It is located geographically so that delegates from all over the country may reach it with little difficulty and so that the national tour participants may journey to it with minimum confusion.

SEEKS PERMANENT HOME.

AT the regular February business meeting of the Toronto M. C., plans were gone into for the establishment of permanent quarters. A committee was selected to make a choice of fittings and find a suitable site. A resolution was introduced for the creation of a life membership class. No one can become a life member until he has served a certain number of years as an active worker.

CHICAGO CLUB OPENS FINE NEW HOME

Throng of Guests Assist Members in Carrying Through Highly Enjoyable Program in Ideal Surroundings —Plan Big Endurance Run for the Early Summer.

THE informal opening of the Chicago Motorcycle Club's magnificent new clubhouse, located at 1411-13-15 E. 60th street, on the "Midway," was held on the evening of February 8.

The members and their invited guests began to arrive at the brilliantly illuminated building at 7 o'clock. They kept coming in squads and found no difficulty in amusing themselves. They talked over last year's runs, played billiards and pool, and gathered around the piano, singing to the accompaniment of some mighty good musicians who volunteered to play. When there was a moment of silence someone would start the big Victor graphophone, and with the large assortment of records, they were able to meet each individual's fancies.

The merriment kept up until about 11.30, when a large detachment of guests, 250 strong, arrived direct from the motorcycle Show in the Coliseum. This party completely filled an Illinois Central train, and created quite a sensation on the way out.

As soon as the men in the checkroom succeeded in taking care of the avalanche of coats and hats that so suddenly came upon them, the visitors were asked to ascend into the club's large assembly hall, or ballroom. Here a photographer started to take a flashlight picture of the crowd, but when the flash went off the shock knocked his camera over, and of course broke the plate.

President Hill opened the program of the evening by introducing Samuel A. Miles, the man who is responsible for the Automobile and Motorcycle Shows. Mr. Miles gave the club a very nice little talk interspersed with many stories which were hugely enjoyed by his audience. The most important feature of his address from the viewpoint of motorcyclists was the statement that next year the motorcycles will have a more favorable location at the Show in Chicago. This announcement was received with applause. Mr. Miles expressed his appreciation of the fact that he is a member of the Chicago Motorcycle Club, and offered to help the club's interest in every possible way. He also agreed to replace the club's 18-inch flag-pole with a new 30-inch one, and furnish a new C. M. C. banner to fly from it.

Mr. Moorhouse, secretary of the Winnipeg Motorcycle Club, told of the difficulties of motorcyclists in Canada, and how prejudice is being gradually overcome. He stated that the Winnipeg club is now firmly established, and that in the near future it will affiliate with the F. A. M.

Announcement was made that because of the severe illness of President Hamilton of the F. A. M. he could not be present to give the talk he had promised.

A letter was read from Mayor Harrison, expressing his regret that owing to an unforeseen circumstance he was unable to appear before the members. The mayor is a member of the Chicago M. C. Vice-President Whitney, of the Western District of the F. A. M., told the club of the many advantages it now possessed, and also presented to many of the winners their hard-earned gold and bronze medals, which were won in the last Lake District F. A. M. endurance run.

The meeting was then adjourned, and the guests went to the lounging and billiard rooms after an announcement had been made of the tentative plans of the Chicago M. C. for a six-day endurance run now being considered. Already a half dozen manufacturers have promised to enter teams, and other pledges are expected.

Light refreshments were served to all those who did not have to hurry away, and the last member did not leave until almost daylight. The affair was acknowledged a great success, and men who are in a position to know stated that the Chicago Motorcycle Club building is by far the most beautiful and spacious of its kind in this country.

KNOCKOUT AXLE LICENSE

Eclipse Machine Company Makes Agreement with A. J. Musselman, Who Controls the Patent.

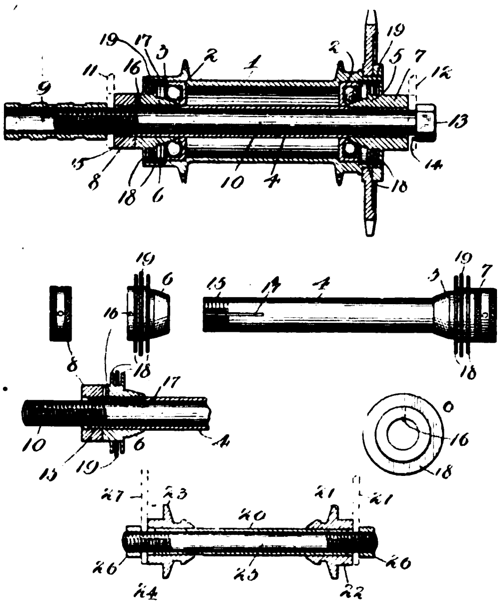
A. J. MUSSELMAN announces that he has closed a license agreement with the Eclipse Machine Company for the manufacture of knockout axles for front hubs as used at present in motorcycles, aeroplanes and similar vehicles. Being in control of the patent he is prepared to defend it against infringers and is now taking steps to protect his rights.

Owing to the comparatively limber fork sides used in bicycle construction, the knockout axle was not in demand for the pedal-propelled machines, but with the spread of interest in the motorcycle the knockout device assumed real value and became a necessity. It is now used in the front wheel of practically every standard machine, and has minimized the trouble incident to removing the wheel from the fork.

SAVANNAH WILL SEND TEAM.

THE Savannah (Ga.) M. C. will probably send a team to compete in the Columbus (Ga.) Motorcycle Club event in May. Teams will participate representing Macon, Atlanta, Augusta, Ga.; Jacksonville and Tampa, Fla.; Charleston, S. C., and Birmingham, Ala.

MOTORCYCLE officers of the Indianapolis police department operated their machines for two months at an average upkeep cost of 90 cents, and covered about 50 miles a day on each machine.



Knockout Hub; Patent Controlled by A. J. Musselman.

OPENED NEW QUARTERS

Augusta Club Held Social Program by Way of Introducing Members to Their Well-Fitted Rooms.

FORTY-THREE members of the Augusta (Ga.) M. C. assisted in the program incident to the opening of the club's new rooms on February 12, and the occasion was one to be long remembered. The quarters are in the Irish-American bank building, and are tastefully fitted with mission furniture. Every effort is being made to keep the boys interested in their new home, and from all indications this will not be a difficult task. The motorcycle journals and a dozen other magazines have been subscribed for, so that there will be plenty of current reading matter on hand and one hundred volumes of short stories have also been provided. Being centrally located the headquarters holds out many inducements for the members of the club and it is seldom without visitors after business hours.

At the last regular meeting ten new members were admitted, plans for a race meet to be held on April 26 were referred to the board of directors and steps were taken to purchase a pool table. Following the business session a tempting supper was served, and an informal entertainment program was given with marked success by the members.

THREE RECORDS FALL

In Sensational Exhibitions at New Los Angeles Bowl Hasha Clips Two, Three and Four Mile Marks

JACK PRINCE'S prediction that his new motordrome at Los Angeles would allow the speedsters to clip records was borne out in short order when the professionals took to spinning around the bowl in the opening meet on Sunday, February 11. Every race was a shoulder-to-shoulder drive to the tape, and when the program was closed Eddie Hasha and his new Indian racing machine had hung up four sensational marks.

Ed. Hasha.

Hasha won all his events except the handicap, clipping the two, three and four-mile records and averaging 39 3-5 seconds per mile in the two-mile dash. The wiry little Texan lowered the two-mile time from 1:24⅕ to 1:19⅕, the three-mile time from 2:05 to 2:01⅕ and the time for four miles from 2:47 to 2:40⅘.

DeRosier, Balke, Wolters and Seymour rode effectively, but were unable to prevent Hasha from cutting away from them. Summaries:

Two miles, amateur, 39.50—Montgomery, Excelsior; Johns, Indian. Time, 1:58.

Two miles, first heat, Class B, professional—Ward, Indian; W. T. Samuelson, Indian; T. M. Samuelson, Indian. Time, 1:30.

Two miles, first heat, Class A professional—Hasha, Indian; Wolters, Excelsior; Balke, Excelsior. Time, 1:19⅕.

Two miles, second heat, Class B—Kittle, Merkel; Albright, Indian. Time, 1:31.

Three miles, second heat, Class A—Hasha, Indian; Balke, Excelsior; Wolters, Excelsior. Time, 2:01⅕.

Five miles, final, B—Ward, Indian; Albright, Indian; W. T. Samuelson, Indian. Time, 3:53.

Four miles, final, A—Hasha, Indian; Balke, Excelsior; Seymour, Indian. Time, 2:40⅘.

Four miles, handicap, Class A scratch, Class B ½ lap—Albright, Indian; Hasha, Indian; Wolters, Excelsior. Time, 2:39⅕.

SOUTHERNERS PLAN TOUR.

SAMUEL C. RAGAN, Jr., of Vicksburg, Miss., and Thomas B. Henderson, of Mobile, Ala., are planning a long tour for the coming summer to include a stop at Indianapolis for the big automobile race on July 4, and a sojourn in Chicago. They will use 7 h. twin Indians.

EXCELSIOR DELIVERIES.

EXCELSIOR agents who visited the Chicago show were invited to make an inspection of the big plant of the Excelsior Motor Mfg. and Supply Company, and they all took advantage of the opportunity to look into the production of the machines they are selling. They were deeply impressed with the manner in which preparations are being made to fill their orders on time, and the announcement that there will be no delay on deliveries sent them off with satisfied smiles. It is announced that deliveries will be started during the week of February 20 and that before the first week in March 100 machines a day will be shipped from the factory.

DEALERS ISSUE FOLDER.

A NEW folder now being distributed by the New York Motorcycle Dealers' Association gives the names of all the dealers affiliated with the body, so that the prospective purchaser of a machine need experience no difficulty in locating an agent who is known to be reliable. A committee appointed by the Association recently looked into the affairs of all the agents mentioned before giving them the stamp of approval by placing their names in the folder.

ANOTHER LOS ANGELES SQUAD.

THE Angel City M. C. is a late addition to the list of motorcycle clubs in Los Angeles, Cal. Philip Younger has been elected president; Arthur Judd, vice-president; John Farrell, secretary; Robert McGrew, treasurer, and Luther Clark, road captain.

HANFORD PROMISES A CLUB.

MOTORCYCLISTS in and about Hanford, Cal., are preparing to organize, and there are indications that a club will be launched with about eighty members.

COMMITTEE AT WORK

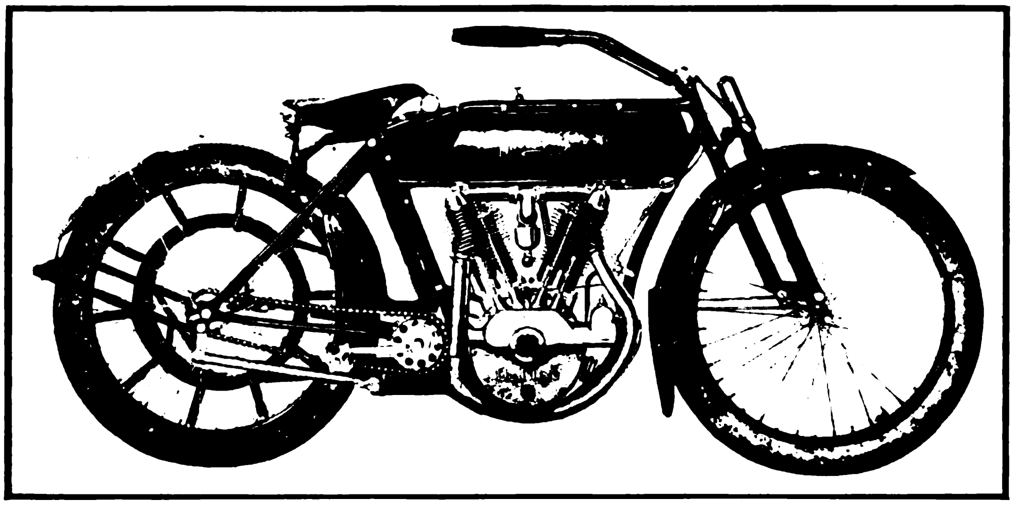
Indianapolis Boosters Take Up Preliminary Plans for Board Track and Interest Runs High.

THAT Indianapolis will have a three-lap motorcycle board track is now practically a certainty. Until very recently the track venture was little more than "optimistic talk," but the Indianapolis motorcycle dealers and manufacturers who have the money to build the track have now got together and plans for building the bowl are in the hands of a committee of fourteen, appointed at a meeting held at the Denison hotel on February 14.

The meeting at the Denison was more important than any similar gathering in Indianapolis in years. W. K. Harding, of the G. and J. Tire Company, acted as chairman of the meeting, at which over a score of dealers, manufacturers and riders were present. The motorcycle board track proposition was discussed from every angle, and when the meeting closed it had been decided that the committee of fourteen should investigate the matter more thoroughly, receive bids for lumber and contracting, make the necessary arrangements preparatory to incorporating, and draw up a prospectus for the sale of stock.

Options have been taken on the two most suitable sites for the saucer, and it is likely that the track will be built on the Riverside Park car line near the water works. The other location being considered is at Riverside Park itself. Leases may be obtained at very reasonable rates on either site.

THE members of the Fremont Motorcycle club are arranging for its annual banquet which will be held some time in February.



MINNEAPOLIS TWIN

New De Luxe Model with 10 h. Motor and Attractive Equipment Is Eliciting a Flood of Inquiries.

REPORTS from the factory of the Minneapolis Motorcycle Co., Minneapolis, Minn., are to the effect that an unexpectedly large number of inquiries have been received concerning the firm's new De Luxe twin, which is listed at $275, f.o.b. Minneapolis, and at $290 with the special spring frame attachment. The new model displays the general lines which have served to bring the company's other types into prominence and with its improved 10 h. engine it is one of the most attractive propositions on the 1912 market.

It has a one-inch, specially adjusted Schebler carbureter, mechanical valves, Bosch magneto, force pump lubrication, double grip control, heavily reinforced tanks, flat belt transmission with ball bearing idler, Minneapolis triple-spring fork with handlebar braces, 28-inch wheels, Thor coaster brake and front hub with knockout axle. It is fitted with Mesinger or Troxel saddle, United States or Goodyear tires, Adam's quick action stand, Standard pedals and a complete tool-kit. The finish is dark green with light green panels.

HOW TO INCREASE THE SALE OF MOTORCYCLES

A Simple and Practical Plan Submitted By L. J. Berger, Vice-Chairman Lake District, F. A. M., and Member of F. A. M. Membership Committee.

WHERE one family buys an expensive piano, hundreds of families buy pianos which cost less money. The same is true of homes, clothes, food, luxuries. Why not of automobiles?

The motorcycle is a two-wheeled automobile. It costs less to buy and operate, and is quicker, more efficient, more easily handled, than any other automobile requiring double the power.

Yet there are nearly 700,000 four-wheeled automobiles in this country, as against 50,000 motorcycles. The 700,000 four-wheelers include pleasure and commercial vehicles, and comprise about ¾ of 1 per cent. of the population, while the motorcycle comprises only about 1-20 of 1 per cent. of the population. In both cases the percentage of population is very small, when we consider the fact that there are about 10,000,000 horse-drawn vehicles—slightly more than 10 per cent. of the population—in use.

The motor-driven four-wheeler is much more economical than the horse-drawn four-wheeler, and the motorcycle is much more economical than either, in first cost and in upkeep. The average horse and the average motorcycle cost about the same in the beginning, but the upkeep of the horse is much costlier than that of the motorcycle, and the depreciation among horses very much greater. In the city of Chicago, in the year 1911, an average of 20 horses died every day—a total of nearly 7,000 dead horses during the year. It would have been hard to kill off 20 motorcycles every day in Chicago or any other city.

In view of the absolute facts, that can be easily supplied, as to the superior economy and efficiency of the motorcycle, there should be in use today, as there will be some years from now, a great many more motorcycles than other motor-driven or horse-drawn vehicles. Instead of 50,000 there should be today several hundred thousand motorcycles. There are various good reasons why this is not so, but we will not dwell on them here. The point is, what are we going to do about it. Will Mahomet wait for the mountain of prosperity to move over and fall on him, or, seeing the mountain, will he go to it?

There are certain ways in which certain facts can be made to produce certain results. Some of them are slow ways, some are quick ways. The slow way would be for the motorcycle industry to sit back and wait for the public to discover for itself the true efficiency, quietness, handiness, safety and economy of the motorcycle. That would mean several long years. The quicker way, the way that would keep everybody in the business on the jump and increase the total number of motorcycles in use to several hundred thousand in less than half the time the slow way would require, is to *give the public facts about the motorcycle*—not about the mechanical details of any particular motorcycle, but about motorcycles generally.

How can this best be done? The Federation of American Motorcyclists has a publicity committee which sends out motorcycle news to hundreds of newspapers. This is good work, and the writer strongly favored it and does now; but the fact is that you do not see the motorcycle properly represented in the daily newspapers, either in the reading matter or in the motorcycle advertisements. The advertisements tell about mechanical details in which the average public—the several hundred thousand people whom we have not yet reached—are not even slightly interested.

The remedy I suggest is to print plain talk about the motorcycle in the local newspapers, and to pay for this plain talk instead of, or in addition to, paying for the present kind of advertising in the same papers.

The newspaper is the best means of reaching the minds of a great mass of people who do not read magazines or class journals, but we must talk to that mass of people about the motorcycle generally, not about any particular motorcycle, if we expect to get the best results in the quickest time.

The time for telling the public about the pleasure of the motorcycle is past. We are finding out that that plan does not produce the greatest number of sales. What is needed is dollars-and-cents facts, with which can be made certain statements which will prove that, as far as noise and dirt are concerned, the 1912 motorcycle is a wonderful improvement upon previous models.

The most definite method would be this: Instead of each dealer advertising his own machine, and perhaps knocking other machines —or even if each dealer does advertise his own machine—the dealers of every town in the country should get together and jointly pay the cost of one or more advertisements in one or more newspapers, once a week or more frequently. These joint advertisements should tell people all about the motorcycle.

Where one possible buyer is interested by the present kind of motorcycle advertising, several possible buyers are not interested at all, because they do not know. They think "the thing will not stand alone," that it is noisy, expensive, a nuisance generally. Print something that will give these possible but unwilling buyers a correct understanding of the machine, and remember, their understanding is in their pocketbook more than anywhere else. Show a retail merchant that a motorcycle will do his collecting or delivering more cheaply and more quickly than his present one-horse wagon, and it will begin to look good to him. Corporations wear the same kind of spectacles. So do most other possible customers.

That this kind of talk will sell goods was recently proved in Rockford, Ill. Motorcycle dealers paid good money for some more or less useless ads in the automobile supplement of a newspaper. One of the dealers wrote and signed an article about the economy and other good features of the motorcycle, for the same newspaper. As a result, that dealer sold a motorcycle to each of two grocers to whom it had not occurred, until they read his article, that it would pay them to use the machine for collecting orders.

If that article had been used as a paid advertisement, well-displayed, in about the same space as was occupied by the more or less ordinary ads of the dealers, and if it had been signed by all of the dealers instead of by only one dealer, all would have had a chance at the customers, and the article would have impressed a much larger number of people. Some free reading matter of similar nature could have been printed in the same issue.

The time is coming when not only all the present riders of bicycles, but many others, and many hundred thousand users of commercial vehicles, will use the motorcycle. Even if only one person out of every 100 were using a motorcycle, there would be more than 900,000 machines in use. The cost of co-operative local advertising by dealers, to quickly overcome the present slow demand, would be slight indeed compared with the results obtainable, and this cost could be easily divided on the basis of each dealer's sales last year, or his estimated sales this year.

If the dealers of any city are interested in this talk, I have prepared a series of advertisements and a simple follow-up system, which I will be glad to send, together with suggestions for organizing. Any opinion you may have of your competitor should have nothing to do with the matter. The point is, there are big sales ahead and here is a simple way to start customers toward every motorcycle store in town. I have no axe to grind except that of the general good, and will make no charge. Please send inquiries on your printed letter head. L. J. BERGER.

4319 Buena Vista Terrace, Chicago.

REORGANIZATION PLANS

Dealers of Pittsburgh Are Co-operating With Riders in Movement to Inject New Life Into Big Club.

OWING to a falling off in interest in the affairs of the Pittsburgh (Pa.) M. C. during the last year steps are now being taken to reorganize the squad, and the dealers of the city are co-operating with the riders in an enthusiastic movement to bring about the desired result. The club was formed in 1910 with Benjamin Hargrave as president, and E. C. Connell, secretary and treasurer, and a number of well-attended runs and social programs kept the members on the move for the opening term. In 1911 the first officers were re-elected and some new members were taken in.

The Pittsburgh M. C. appeared to hold its own, but the proper brand of enthusiasm was not displayed, and it became evident finally that the time had arrived to take a new grip on the affairs of the organization. Since the first of the new year there has been a demand on all sides for a re-organization in order that the club may make the most of the coming season, and there is every reason for believing that concerted action will place the club on a basis of permanent prosperity. A committee has the matter in hand.

BIG SQUAD ON THIS RUN.

ON a recent run about 200 members of the Los Angeles M. C. visited Pomona, stopped for dinner and paid a social call at the headquarters of the Pomona club. In the party were many women enthusiasts who occupied tandem seats. The Los Angeles club makes a run each Sunday and always takes out a big squad.

COLE'S FINE RECORD

Canadian Youngster Set Some New Marks During His First Season and Promises More Good Work for 1912.

THE accompanying photograph of Harold Cole, the young Canadian record hunter, was taken immediately after he had lowered the Dominion time for a half-mile dirt track, from one to twenty-five miles, on the Exhibition course last September. Cole reeled off the quarter century in 30:56⅗. His time for five miles was 6:11, and he was clocked at 12:20 for ten miles. His fastest lap was turned off in 34⅗ seconds. He also holds the five and ten-mile records on the Exhibition track for stock machines of the 30.50 class.

Cole began his racing career in the spring of 1911, and out of thirteen races entered last season he captured nine firsts and three seconds. He looks forward to putting a few more crimps in the Canadian records during the coming summer.

ADAMS DEVICE ON YALES.

ANNOUNCEMENT is made by the Consolidated Mfg. Co., of Toledo, Ohio, producers of the Yale, that it has taken over the manufacture of the shock absorber formerly marketed by O. L. Adams, of Denver, and that it will appear as regular equipment on all 1912 Yales. Hereafter it will be known as the Y-A (Yale-Adams), shock absorber. All dealers and riders who have received one of the 1912 Yales will be sent one of the shock-absorbing attachments without extra charge.

For some time past the Adams shock absorber has been in wide demand, and under severe tests on machines all over the country it has backed up the claims of its producers. By acquiring it the Consolidated Company takes over a fitment with plenty of service behind it and one calculated to live up to the high standard set for the Yale.

QUAKER CITY DANCE.

THERE was a large attendance at the first annual dance of the Quaker City M. C., of Philadelphia, Pa., held recently at the Wagner Dancing Academy, and the affair was as successful financially as from a social standpoint. Feminine friends of the club were present in large numbers, and many plans for summer outings were talked over informally between dances, so that there was not a dull moment. It is worthy of note that ninety per cent. of the club riders have their machines fitted with tandem attachments, and that the fair enthusiasts of the city figure in practically all the runs arranged throughout the season.

JOINS 100 PER CENT. RANKS.

THIRTY members attended the last meeting of the South Side M. C. of St. Louis, Mo., at which plans were taken up for obtaining permanent clubrooms, following a social program. It is likely that the club will be settled in suitable quarters about March 1. The squad is now in the 100 per cent. F. A. M. class and each new member is presented with a year's membership in the Federation. Several members of the South Side Club have been engaged by the St. Louis Automobile Club to scout through the State for information to be embraced in a road guide now being prepared.

WANT $7,000 SAUCER

Indianapolis Boomers Hope to Have New Track Ready for Opening Races on the Eve of Memorial Day.

PLANS for the proposed saucer to be built in Indianapolis were taken up in detail at a meeting of riders and dealers, following a banquet on February 18. Jack Prince has promised to be on hand at an early date to go over the situation with the committee. There is talk of a four-lap track, to cost about $7,000, with facilities inside the circuit for holding football and baseball games and general athletic events, when the saucer is not in use for racing. It is likely that a stock company will be formed and shares disposed of at $25 each.

Indianapolis motorcyclists are anxious to have the track completed so that the opening program may be given on the eve of the big 500-mile automobile race at the Speedway on Memorial Day, owing to the fact that the city will then be crowded with speed fans, hungry for races. The new track will probably be located near the Speedway.

IN Indianapolis, Ind., one person out of every 350 rides a motorcycle, according to the latest report on city licenses, which shows 750 machine owners.

A 1912 Harley-Davidson Undergoing a Road Test with a Foot of Snow on the Ground.

TO CROSS CONTINENT

Spokane Motor Cop With Remarkable Record Will Ride to Atlantic Coast With Wife in Sidecar.

NOT content with several track and cross-country championships which he has won on his motorcycle in the last few seasons, Motorcycle Officer John Frese, of the Spokane (Wash.) police department, is now planning the biggest thing he has attempted yet, in the form of a motorcycle trip across the continent, a distance by road that he estimates at 3,500 miles.

He expects to fit up a Flying Merkel machine with a side-car attachment and will be accompanied by his wife and five-year-old daughter. Mr. Frese has been motorcycle officer in the Spokane police department since September, 1910, and in company with two other motorcycle officers has been kept busy.

Frese took up motorcycle racing in the summer of 1909, entering his first race on the Spokane Interstate fair ground, and appearing in fair races and those of the motorcycle association. He has been a regular competitor in every motorcycle race in Spokane since that time.

His greatest achievement in the cross-country racing line was in hanging up a record of 71 minutes 20 seconds for the round trip from Spokane to Coeur d'Alene City, a distance of nearly 70 miles. He turned that trick one Sunday in 1911. With his wife sitting on the tank of the machine Frese almost equaled that stunt last summer when he rode the 35 miles to Spokane in 40 minutes. Frese claims to have won more races than any other Northwest rider, and at his home are five big sterling silver cups to back up his claims. In 1910 a tandem machine, Frese and his brother, E. C. traveled from Spokane to Los Angeles, 1,749 miles in 13 days. As an introduction to California racedom Frese won a 20-mile amateur event on the Los Angeles saucer track during his sojourn in the Southern city.

LONDON OFFICERS NAMED.

AT the annual meeting of the London (Ont.) M. C., held recently, the following officers were elected: W. J. Cunningham, president; W. Tite, vice-president; F. Benson, treasurer; A. Thorpe, captain. The sports, tours, house and publicity committees were named and steps were taken to outline a series of events for the coming season. There was a discussion concerning the advisability of affiliating with the F. A. M., and the matter was laid over until the next regular meeting.

MAY REPEAT 24-HOUR RUN.

MEMBERS of the New Jersey M. C., of Newark, N. J., are considering the advisability of holding another twenty-four-hour run on Memorial Day. The first run of this kind to be held in the United States was carried out successfully by the club on May 30, 1911, and it is argued that a similar contest to open the coming season would arouse wide interest.

HARRISBURG ACTIVITY.

THIRTY-FOUR riders make up the roster of the Harrisburg (Pa.) M. C., and judging from the number of orders already placed with local dealers the club should experience little difficulty in doubling its membership during the coming season.

Willing to Let You Decide

Thirteen Motorcycle manufacturers are willing to give you the utmost tire quality—

Diamond
TIRES

Thirteen manufacturers are **thinking of your mileage as well as their profit.**

Their machines are: **Excelsior, Eagle, Emblem, Harley-Davidson, Marvel, Merkel, Minneapolis, M-M, New Era, Reading-Standard, Shaw, Thor, Yale.**

Diamond Motorcycle Tires cost the manufacturer a little more than other tires—that's because of their higher quality. But you can get them on any of these machines at **no extra cost to you** by specifying **Diamond** Tires. Tell your dealer to have **Diamond** Tires put on your new machine and you will get them.

Diamond Studded tread motorcycle tires are sold at the same price as Diamond Corrugated Tread motorcycle tires. Your dealer can supply you with either type.

Tire expense is the largest single item in the cost of running your machine—just as important when you get your machine as after you have had it a year.

There is only one way to put tire expense on a minimum basis at the start—specify **Diamond** Tires. And if your not getting a new machine this year cut down your tire bills by buying **Diamond** Tires from your dealer.

Our illustrated catalogue tells you why **Diamond** Motorcycle Tires are the longest wearing, easiest riding motorcycle tires ever built. Send for it today.

The Diamond Rubber Co.
Akron, Ohio

Fifty-four **Diamond** Service Stations do more than sell tires—they take care of **Diamond** tire dealers.

MOTORCYCLE SHOW SOON.

IT may not be next year, but the date of the opening of the first distinct Motorcycle Show in New York or Chicago is not far distant. The fact that the manager of the Chicago exhibition did all within reason to give the makers of motorcycles and motorcycle accessories reasonable accommodations is generally conceded by those who know something about the circumstances. However that may be, thousands of visitors walked through the commercial vehicle section the second week of the Chicago Show and made straight for the gallery in which motorcycles were displayed. They came to look over the motor two-wheeler. It was their principal object of interest, and not merely a matter of idle curiosity. They left their homes with a set purpose, and that purpose would have brought them to any hall in which motorcycles were shown.

In other words, the motorcycle has established itself as a distinct show attraction. That being so, how long will the trade resist the temptation to "go it alone?" It will cost the trade no more, and the public less. An admission fee of twenty-five cents to a show including motorcycles, bicycles and motor and cycle accessories is today in the minds of 90 per cent. of those who attended the Chicago Show early this month. If in the imagination of so many, then why not in fact? "But," say those on the inside, "who will manage it for us?" It is true that efficient show managers are few and far between. But let the M. M. A. place itself on record and the difficulty of securing proper management will soon be dissipated by the appearance of just the right man.

THE NATIONAL TOUR.

AT the Chicago session of the Motorcycle Manufacturers' Association, the national tour proposed by Messrs. Coffman and Musselman was approved except for its carrying the names of those who fathered the plan. This detail disposed of, those present at the meeting expressed their endorsement of the general idea and, with the manufacturers inclined to assist, the tour or tours to the city where the 1912 meet is to be held are now practically assured.

The proposed distance and the racing schedule, however, are both out of the question. Half the suggested mileage, or even less, and an easy-going pace, will undoubtedly be arranged for. In order to be successful, these national tours must be what their designation implies. They should afford every opportunity for light recreation awheel, and not necessitate the imposition of the slightest hardship upon even the veriest tyro of a tourist.

It is more than probable now that Columbus will be the next meeting place of the National Assembly of the F. A. M. In that event, two tours, one from the East and one from the West, will in all likelihood be arranged, as in 1911. With the experiences of last year to profit by, with improved machines, better road conditions and a much larger number of enthusiasts to interest, there is no reason why at least five hundred visitors should not ride into the F. A. M. meet town some eventful day next summer.

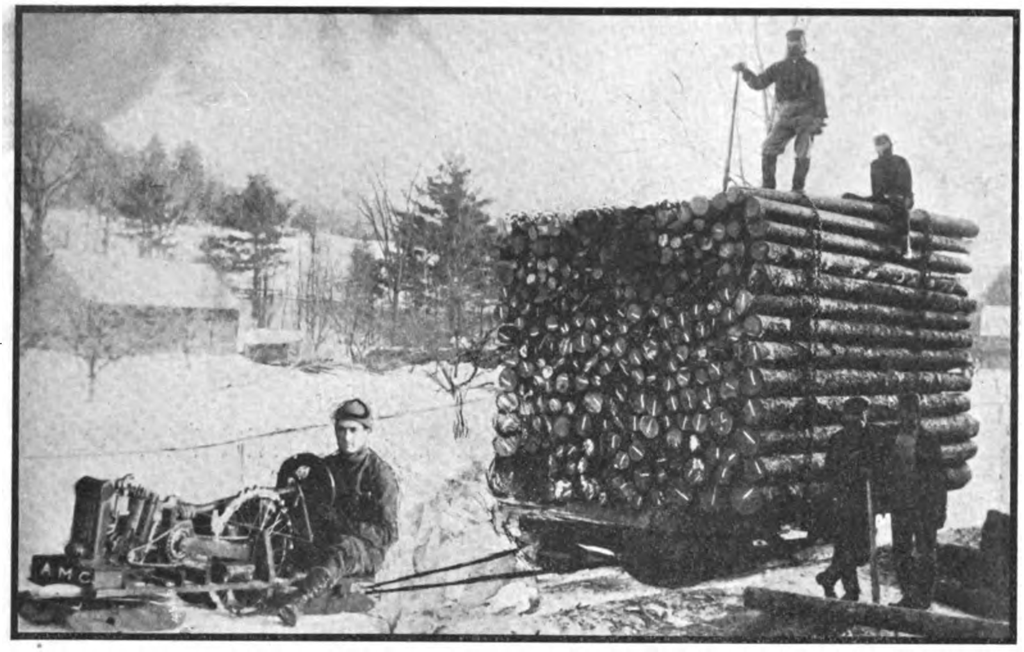
ADVERTISING THE SPORT.

UNDER the capable leadership of Jesse Edwards, the Chicago dealers are up and doing. Without any serious trouble they have raised a publicity fund of more ample dimensions than has ever before graced the treasury of a motorcycle dealers' association in this country. A systematic advertising campaign will be carried on through the newspapers, or, rather, by concentrating for the present upon one, with a wide, cosmopolitan circulation, they propose to literally force recognition of their business and the sport. The Chicago agents will advertise according to the principle that the average reader of a daily paper is not interested in comparisons between any one machine and its rivals for popular favor. Instead Mr. Edwards, in behalf of the Chicago dealers' association, will prepare his advertising copy with a view to interesting the reader in the motorcycle as a means of recreation and the transaction of business. No invidious comparisons will be made; the very fact that practically all the dealers in Chicago are jointly financing the scheme insures fairness to all. In sum and substance, the Chicago plan is to advertise just the motorcycle, not any particular make, but all makes. The names and addresses of all the dealers contributing to the support of the campaign will be incorporated in each advertisement. Present plans call for the insertion of half pages weekly during the spring and early summer.

The Chicago plan should prove successful; the dealers there are operating along broad lines. That alone is deserving of note, for too many motorcycle dealers have heretofore distinguished themselves for their inability to see any further than the ends of their noses. If Chicago demonstrates the practicability of the plan about to be tried out, other cities will follow her example, of course, and in each one where the idea is put into operation hitherto antagonistic agents will be brought into close touch with one another, induced to co-operate and shown the futility of everlastingly knocking the other dealer's machine. If only for the realization of that dream of joy—of dealers everywhere marching in harmony under one flag—we hope the Chicago plan proves a record-breaking success.

BOOM IS ON IN CALGARY.

CALGARY, a thriving city of 60,000 inhabitants, in the Province of Alberta, Canada, has thirty-five motorcyclists at present with a prospect of having more than two hundred before the close of the 1912 season. Among the machines represented are the C. C. M., Excelsior, Harley-Davidson, Humber, Indian, N. S. U., Pope and Reading Standard.



A NOVEL MOTOR SLEIGH.

D. S. ADAMS, of Elizabethtown, N. Y., forwards the accompanying interesting photograph of a "motorcycle sleigh" which he has been using for pleasure purposes as well as for such tasks as the one illustrated. He uses a 2¾ h. Indian motor, and reports that he experiences no difficulty in taking most of the bad hills in his vicinity. He is able to travel almost anywhere that an ordinary motorcycle could be driven as there is only a slight increase in weight through the fitting of the sleigh.

Traction is obtained by a spiked tire and spring tension, and the difficulty of steering with three bearing points on the ground is overcome by using flat runners on the rear section of the sleigh. The outfit is home-made, aside from the motor, countershaft and wheel, and the outlay for the sleigh attachment was about three dollars.

NOT HAMPERED BY SNOW

Toronto Sidecar Enthusiasts Find Traveling Almost as Pleasant Now as During Summer Season.

TORONTO'S sidecar enthusiasts are finding out that wintry conditions are no hindrance to the pleasures of motorcycling, and bright days this past month or two have always found a number of riders hitting the trails in and around the city. With the "sociables" attached, it is quite an easy matter to maintain a correct riding position on either deep snow or packed roads, and warmly clad, the sport of riding can be enjoyed in the cold months almost as much as in the summer, it is declared.

Bert Webb, of the T. M. C., recently made a trip into the country on a 7-twin Indian, with car attached, the total distance covered being 56 miles. One Sunday, Percy Barnes, on a Triumph, with passenger, made a twenty-mile journey over packed roads, which he found in better condition than they generally are in the summer season. W. H. Dunn, the Thor agent at Toronto, has also been doing sidecar traveling, while W. E. Amoss, the Flanders' distributor, often trots out his demonstrator and "chair."

RACES IN NEW ORLEANS.

"VOL" JENSEN, well known as a motorcyclist in New Orleans, La., staged a series of motorcycle races in connection with the Speed Carnival held there on February 17-18. Three events, each at five miles, were put on each day and the programs were well received.

JOHNS TURNS "PRO."

LOS ANGELES, CAL.—With the opening of the new Stadium Don Johns, the young Indian speedster who holds the 20-mile amateur record, entered the professional ranks. Johns, who is just turning into the twenties, is a wide-awake youngster of the Balke type, cool in an emergency, but ready to take chances with the best of them when there is a second to be clipped off a record. He has been connected with various motorcycle shops and tire companies in Los Angeles for years past, and knows his machine inside and out. He promises to make the fans sits up before he has been riding long at the Stadium, and his friends believe he can turn the trick.

MUSE STILL WORKING

Rochester Rhymster Makes a Plea for Simple Life and the Yale Despite Wintry Blasts.

WHILE the annual supply of Spring poetry is still frost-bound, there appears to be no lack of activity on the part of the motorcycle muse, and the following verses indicate that enthusiasm for the two-wheeler is an all-year product. The poem is forwarded by W. H. Reid, a representative of John Kimpson, Yale agent in Rochester, N. Y.

When you're feeling dull and 'dopey,' and life has lost its joy,
Liver pills won't cure you; take it straight from me, old boy.
You want to waken up a bit, to get about and see
All the things that folks are doing for the good of you and me.

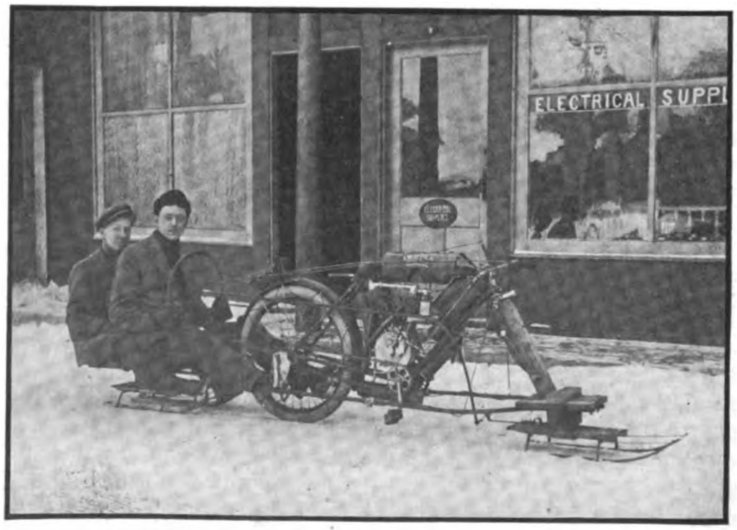
Get out into the country, where life is full of zest,
Down among the meadows where old Nature looks her best.
Get out into the sunshine where it filters through the trees,
Scent the fragrance of the wild flowers, hear the hum of busy bees.

Leave the noisy, gloomy city, and its worries for a spell;
Just go where Nature beckons, and life won't seem such a "sell."
Buy yourself a motorcycle, and you'll find you have the power
To crowd a week of living into less than half an hour.

You will learn more on one journey than you do now in a year;
Your outlook will grow brighter, and your troubles disappear.
Now, don't say you can't afford it, for you'll tell a different tale,
If you only use some judgment, and be sure you get a Yale.

ENJOYED WINTER RUN.

DR. A. M. WEBSTER, Northern Commissioner of Ohio, recently captained some twenty riders of the Lorain Motorcycle Club on a run of 37 miles to Cleveland and return. The roads were covered with ice and snow but the ride was enjoyed.



QUEER OUTFIT.

B. W. DIETER, of Greenfield, Ind., has constructed the ingenious motor sled which is shown in the photograph. He uses a 1908 Indian motor of 5 horsepower, and finds that he can get all the speed necessary. Excellent time has been made over the roads in the vicinity of Greenfield, and ordinary hills do not balk the outfit. Sitting on the rear of the sleigh is Verle Niles, an employee at the Wagner and Harley-Davidson agency.

COLD-WEATHER ENTHUSIASM

Motorcycle Devotees Find Many Ways to Utilize Their Mounts When Roads Are Covered With Snow.

THAT the motorcycle, in some form, is bound to figure in the winter amusements of its devotees, has been increasingly evident of late, and the three accompanying photographs prove that the real enthusiast is not at all particular as to what the form is. The motor sleigh illustrated is the property of Raymond Snyder, son of W. H. Snyder, Emblem agent in Columbus, Ohio. It is propelled by an Emblem motor with regulation belt drive to the traction wheel, which is fitted with chains to grip the snow and ice-covered roads. It has developed a speed of about 40 miles an hour on the road, and has plenty of power for all kinds of going.

The picture in which the box sleigh appears was forwarded from Freeport, Ill., where Joe Kagle is the Harley-Davidson representative. Joe mounted his Harley and towed the sleigh fourteen blocks through the city in competition with a machine of another make, which failed to stand the test. Needless to say, the novel outfit attracted much attention and Kagle was duly proud of his feat.

The third photograph shows R. L. Orton and wife, of Touchet, Wash., as they were about to start on their Indian for a run over snow-covered country roads. The snow was a foot deep, but little difficulty was experienced in making good headway even through drifts.

CONCOURSE OFFICERS.

W. A. McCLELLAN was chosen as president at the annual election of the Concourse M. C., of New York City, on February 13, and his associates were named as follows: George Heinig, vice-president; V. T. Nydrle, recording secretary; L. Herberger, financial secretary; C. L. Frobisher, corresponding secretary; M. P. Sullivan, road captain; J. J. McNally, D. McGregor and J. C. Foley, board of directors, and A. T. Merrick; L. Restrepo, George Heinig, A. Smith and C. L. Frobisher, board of trustees.

TRAVELS ON THE WATER

Pontoon Attachment Invented by Californian Supports Motorcycle in Novel Test on Lake Merritt.

SAN FRANCISCO, CAL.—An invention whereby a motorcycle can travel with equal facility on land or water has been perfected by Eugene Fry at 559 Sixteenth street, Oakland. The machine was given demonstrations on Lake Merritt recently.

The invention, for which a patent is pending, consists of two outrigger boats, made of galvanized tin, each boat having three compartments. When in the water the motorcycle rests on these outriggers.

A two-blade propeller, with a clutch attachment, is attached to the motor of the cycle. The boat is guided by the handle bars by means of two wires which run through pulleys and attach to two rudders, one on each outrigger boat. When in the water, the appearance is that of a man skimming across the surface on a motorcycle.

A BUSY STORE.

TO provide more floor space for their extensive stock of motorcycle and accessories, F. A. Baker & Co., the well-known New York jobbers are installing their office force on a balcony in the rear end of the store. Judging from the way their store is usually crowded with purchasers this firm is evidently enjoying prosperous business.

WHY SCHMIDT DECLINED

Pittsburgher is Willing to Boom Reorganized Club But He Doesn't Want the Job of Machine Doctor.

RECENTLY when the movement to reorganize the Pittsburgh (Pa.) M. C. was taken up one of the boosters approached A. G. Schmidt, manager of the Motorcycle Exchange, with the suggestion that he should again accept the office of lieutenant, which he held during 1910. Schmidt is a lively club worker and full-fledged enthusiast, but he informed the interviewer that the job of lieutenant was one for which he had no further harkering.

"I appreciate your efforts to make me an officer in the club," said the veteran, "but I don't believe I'm in a position to take advantage of it. I've been there, as you might say, and I know what that lieutenant office is. Every time we held a club run in 1910 I would have to put in an afternoon of hard work helping the boys out with their down-and-out machines, as this was part of the lieutenant's work. Some of the fellows would steer clear of my shop all week and then line up and tell me their troubles on the day before a run. Of course, I had to jump in and put their mounts in shape for another week's riding."

Schmidt has been riding motorcycles since the days when the little 2¼ h. mount was the rage, and he is also something of a record hunter, having ten fine cups to his credit.

VISITED HOME OF THE THOR

Messrs. Hurley and E. J. Knight Entertained Large Number of Dealers and Others One Day During Chicago Show Week

ENTIRELY successful from both a business and social standpoint was the recent journey of several score show visitors to the plant of the Aurora Automatic Machinery Company, manufacturers of the Thor machine. The company's guests were taken to Aurora in a special train, in charge of Vice-President E. M. Hurley and Sales Manager E. J. Knight; the party leaving in three chartered cars over the Aurora, Elgin and Chicago Electric Line. The party left Chicago at 11 a. m., arriving at Aurora in time for luncheon and a special entertainment, which was rendered during luncheon hour. Following the entertainment special trolley cars took the party to the factory, where guides conducted the visitors through the entire plant.

Following the inspection of the plant refreshments were served on the return trip. The party arrived in Chicago at 5:45 p. m. and a special vote of thanks was extended to the Thor company for the jolly good time afforded them. The guests included the following:

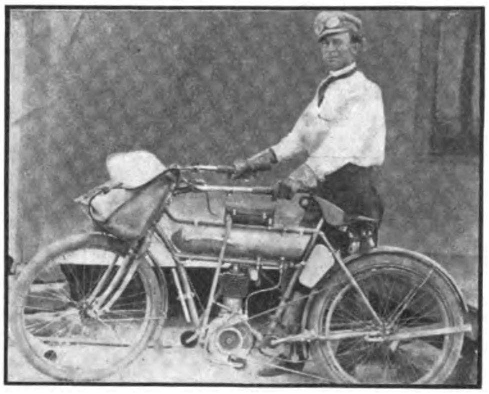
Leland Ratford, Martinsville, Ind.; John Sink, Evansville, Ind.; Paul Koutowski, Indianapolis, Ind.; M. Brothuson, Joplin, Mo.; J. H. Tubman, Lincoln, Nebr.; W. R. Brightenburg, Raymond, Nebr.; F. B. Black, Raymond, Nebr.; Nels A. Rosendahl, Minneapolis, Minn.; A. J. Keeley, Aurora, Ill.; J. H. Whipple, Jackson blvd., Chicago, Ill.; Dan Griffin, U. S. Tire Co., Chicago, Ill.; J. B. Trossel, Detroit, Mich.; C. J. Welch, U. S. Tire Co., Chicago, Ill.; O. Kuball, Kenosha, Wis.; H. Proesel, R. F. D. No. 99, Mortongrove, Ill.; W. Knust, Chicago, Ill.; W. B. Lewis, Logansport, Ind.; J. Borne & Ziesmur Co., Racine, Wis.; J. H. Loving, Alliance, O.; W. Veltman, Grand Rapids, Mich.; P. J. Van Drunnan, So. Holland, Ill.; Shorty Matthews, Chicago, Ill.; A. L. H. Verwys, Verwys Bros., Grand Rapids, Mich.; Byrd Moore, Des Moines, Ia.; Dan Popoin, Star Elec. Co., Chicago, Ill.; Ed. Hunter, Jr., Des Moines, Ia.; B. R. Merrill, Des Moines, Ia.; S. J. Wilson, Tylertown, Miss.; Jack Petska, Jackson blvd., Chicago, Ill.; Arthur Crawford, Cambridge Ill.; R. E. Buell, 916 West 71st street, Chicago, Ill.; Roy T. Lentz, La Grange, Ill.; Earl King Mandlin, Ill.; C. W. Fisher, Louisville, Ky.; A. P. Brown, McComb, Ill.; Eay Knappenberger, Macomb, Ill.; Lee Olcoffson, Manlin Ill.; Russell Smiley, Dayton, Ill.; Olive O Henlepp, Ashland, Ky.; W. H. Dunn, Toronto Can.; B. W. Bedell, Chicago, Ill.; C. O. Horstman, Peoria, Ill.; W. Cutter, Peoria, Ill.; C. R. Schwarz, 447 No. North avenue, Chicago, Ill.; E. J. Hawkins, Cleveland, O.; J. A. Zucker, Cleveland, O.; W. J. Cameron, Goodyear Tire Co., Chicago, Ill.; Al. Eckles, Akron, O.; H. A. Schultz, Monticello, Wis.; J. M. Brichbri, Chicago, Ill.; J. J. Lentry, Milwaukee, Wis.; W. H. Wallburg, Oak Park, Chicago, Ill.; A. Schuetz, Monitowoc, Wis.; G. L. Muffley, Vermont, Ill.; H. M. Bondfield, Waterloo, Ia.; D. L. Qulbins, Kenton, O.; L. P. Brenkeback, Columbus, O.; Fred Personett, Elkhardt, Ind.; G. H. Snider, South Bend, Ind.; J. A. Sheppard, Hammond, Ind.; G. W. Setty, Cedar Rapids, Ia.; W. F. Honpel, 3016 91st street, Chicago, Ill.; P. Lourzur, 9008 Sommerside avenue, 11,213 Michigan avenue, Chicago, Ill.; P. Van Wyngarden, 108 So. Michigan avenue, Chicago, Ill.; A. S. Eddy, Aberdeen, So. Dak.; W. T. Purdy, Chicago, Ill.; W. L. Dreiver, Preston, Conn.; N. T. Horney, 375 East 55th street, Chicago, Ill.; C. Roovart, 375 East 55th street, Chicago, Ill.; G. H. Kaufman, B1 World; E. N. Hurley, vice-president, Chicago, Ill.; B. P. Hogan, Ravenswood, Ill.; Paul Hanke, 3545 West North avenue, Chicago, Ill.; J. T. Minor, 854 West Jackson blvd., Chicago, Ill.; Chas. Simmerman, 1305 Sherman avenue, Evanston, Ill.; L. B. Lyman, Akron, O.; Harry Knipp, Diamond Tire Co., Chicago, Ill.; F. H. Harris, Akron, O.; Wellington Quirk, 1305 Sherman avenue, Chicago, Ill.; W. J. Hilliard, Holmhurst, Ill.; A. B. Crosby, Aurora, Ill.

EASTON'S NEW SHOP.

THE Easton Cycle Company, Easton, Pa., has opened an up-to-date headquarters at 668 Northampton street, where it is prepared to cater to all the needs of motorcyclists and bicyclists. The company has one of the finest storerooms in the city and accommodations for making riders comfortable while their machines are being attended to. It is the intention to have the repair shop registered with the F. A. M. at an early date and the firm opens its campaign for 1912 business with the brightest prospects.

BLAKE'S FINE RECORD.

MAURICE BLAKE, a rural mail carrier of Boynton, Oklahoma, writes that he has ridden a 1910 model Yale 40,000 miles over his route and on side trips, and that he has at last convinced the residents in and about Boynton that a standard motorcycle is capable of meeting every requirement under long, rough usage.



INGALLS OPENS REPAIR SHOP.

HOWARD INGALLS is the new proprietor of an up-to-date repair shop located on Main street, Scottsville, N. Y., which promises to be a busy establishment during the coming season. The shop is on the main highway between Rochester and Buffalo, being twelve miles from Buffalo by way of Caledonia, LeRoy and Batavia. Mr. Ingalls is a repairman of experience, and is exceedingly popular with the riders of his district.

The shop equipment consists of a 12-inch lathe, air compressor forge and anvil, brazier, and a full line of taps and dies with a complete outfit of modern tools. The shop occupies a space of 20 by 40 feet and is well lighted and ventilated. Mr. Ingalls will carry a line of small accessories so that the rider who experiences any ordinary road trouble may have all his wants attended to.

TO HAVE CLUB UNIFORM

Rochester Motorcyclists Plan to Maintain Their Reputation for Neatness by Adoption of Standard Suit.

PROGRESS along all healthful lines is attending the operations of the Rochester Motorcycle Club, particularly since the changes which marked the last Christmas season. Owing to its rapid growth, the club's directors have been forced to secure an additional room adjoining the present quarters. A piano will be installed and a member of the club, who has directed several musical bodies, will form a chorus and prepare a program for a later date.

There has been repeated comment on the neat appearance of Rochester riders, and the R. M. C. members feel this due in great measure to the club spirit fostered by their officers. To merit continued approbation, the riders discussed at the last meeting the matter of a club uniform, particular stress being laid on utility and neatness. It was finally decided to have a factory expert address the club on fabrics, styles and utility, after which the boys hope to make a wise choice of club clothes.

The R. M. C. members are on the qui vive over the national F. A. M. tour. President Ochs of the club, states that the Rochester men are only waiting to know that the tour is assured before balloting on the men to ride for the club. The members think the tour is the best project for the advancement of the sport and the trade that has ever been proposed.

PLANNING UTICA BANQUET.

A WELL-ATTENDED meeting of the Utica (N. Y.) Motorcycle Club was held at the clubrooms, 120 Lafayette street, on Thursday evening, Feb. 15. Their rooms are still in process of decoration and furnishing. It was expected that the quarters would be entirely finished for this meeting and although the house committee had made final arrangements, the carpenter work had taken longer than was expected and this delayed the moving in of the furniture and rugs for a couple of days. The members were somewhat disappointed on account of the delay, but made merry over a feast of spaghetti after the business session.

Arrangements are now under way for an anniversary banquet to be held as a sort of commemoration of the founding of the club about a year ago. The banquet of last year was held on March 16 and the one this year is planned for March 21. It is expected that about seventy-five riders will turn out to make it a success.

MARICOPA SQUAD ON RUN.

FIVE members of the West Side M. C., of Maricopa, Cal., recently made a Sunday morning run over the Carissa plains, with Captain J. Cedric Snook setting the pace, and the trip proved so enjoyable that regular Sunday runs will be held from now on.

FINE WICHITA PROGRAM.

A HILL climb at Winfield, several races on the track at Douglass and a run of more than one hundred miles over ideal roads were features of the program given recently under the auspices of the Wichita (Kan.) M. C.

Andrew J. Gladwell, 207 South Main street, Lima, Ohio, has the 1912 agency for the Excelsior and Thor lines.

BAY RIDGE CLUB IS BUSY

Members of Brooklyn Squad Meet Nightly in Quarters to Thresh Out Plans for the Summer.

UNUSUAL interest in plans for the coming season is being displayed by the members of the Bay Ridge M. C., of Brooklyn, N. Y., who gather almost nightly in their clubrooms to rehearse old tales of the road and look forward to new ones. The club captain and lieutenants are brushing up on tour information, and arrangements are being made for a series of summer runs, which will be started as soon as the riding season opens. The entertainment committee is also active, and a number of surprises are promised for the club's coming stag.

At the annual meeting, which was followed by a banquet, the club named its new officers as follows: Robert Campbell, president; John McCormack, vice-president; Jules Verbeck, treasurer; R. G. Hanna, secretary; William Kaiser, captain; C. Clausen, first lieutenant; Charles R. Lee, second lieutenant; F. Muller, color bearer. The club holds its meetings on the second and fourth Fridays of each month, and usually brings out its full membership of twenty-five riders. The boys have the right idea as regards good fellowship, and have extended an invitation to all visiting riders to drop in at the clubrooms and make themselves at home. The quarters are well located at 6321 Fourth avenue.

REGISTERED SHOPS.

REGISTERED F. A. M. shops, for the week ending February 16, are as follows:

Joseph Kapp, 56 W. Chester Ave., Port Chester, N. Y.; Lee McKinsey, Frankfort, Ind.; Spingler & Gosnay, 2003 Market St., Philadelphia, Pa.; T. R. Anderson, 546 W. 18th St., Erie, Pa.; Deadwood Motor Co., Deadwood, S. Dak.; New York Motorcycle Co., 318 West 48th St., New York, N. Y.; Stamford Motorcycle Co., 41 Main St., Stamford, Conn.; A. L. Hall, 1021 First Ave., Seattle, Wash.; Amana Society (William Foerstner), High, Iowa; Wauchope Bros., 114 N. Sacramento St., Lodi, Calif.; Harry F. Schnell, 345 Broad St., Newark, N. J.; Coe F. Dix, Stockton, N. J.; G. H. Walter & Co., 303 So. Main St., Butler, Pa.; George S. Maslem, 1242 Main St., Hartford, Conn.; Ben Ruderman, 1041 Bedford Ave., Brooklyn, N. Y.; C. W. Pearson, 623 Landis Ave., Vineland, N. J.

THREE MORE WORKERS.

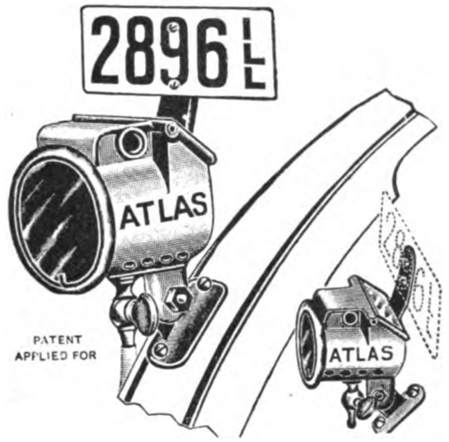
THAT State Commissioner R. Y. Leslie, of Pasadena, Cal., keeps on the move is evidenced by the acquisition of three more local commissioners to boom F. A. M. affairs in their districts. They are C. W. Livengood, of Pomona; C. C. Russell, of Stockton, and D. F. Lightner, of Bakersfield. Each of the appointees is secretary of the F. A. M. club in his town.

A SNAPPY BOOKLET.

THE latest Goodrich booklet, enclosed in a folder with an attractive cover design, tells a terse story of the company's tires for the motorcycle. It refers particularly to the new center rib feature in the firm's studded tread tire, and to the well-known corrugated tread. The demand of the day is for bigger motorcycle tires, and the Goodrich 2¾ and 3-inch tires are proving most popular sellers.

ATLAS COMBINATION TAIL LIGHT.

MADE to comply with tail light laws and ordinances, the Atlas combination tail lamp and license bracket is both practical, neat and attractive. This lamp is made by the Atlas Specialty Mfg. Company, of 557-563 West Jackson Blvd., Chicago, of a highly finished one-piece aluminum casting, with an oblong glass covered opening in upper rear part of lamp, so arranged as to completely illuminate the license plate. It has an adjustable ratchet bracket on bottom for attaching to mud guard, and is equipped with a one-sixth foot burner and special reducing cork to cut down pressure on small lamp when used in conjunction with head lamp equipped with large burner.



Also included in the Atlas line are the Reliance, Professional Universal, Protector, National Boulevard, Aviator and West Point leggings; a waterproof cover which fits all makes of machines; tool rolls and tool bags of entirely new design; leather dust and skirt protectors, lamp covers, magneto covers, hand wind-shields, tube bags, etc. The Atlas catalog may be had for the asking.

NEW BROOKS FEATURES.

WHILE its full line in calculated to attract the discerning motorcyclist as in the past, the features of special interest in the 1912 catalog of J. B. Brooks & Co., of Birmingham, England, are its new B400 type, its B170, which affords an unusually low position; its improved back-rest, sturdy and attractive cases for motorcycle belts and spark plugs and its newly designed pannier bags.

In the B400 type the saddle is 12 inches wide and 13 inches long, and the distinctive Brooks compound springs are placed directly under the weight-carrying portion of the saddle, thereby allowing it to derive maximum benefit from the springing device. The seat part of the B170 type is a carefully molded steel base, comfortably cushioned, and built throughout with a regard for anatomical requirements. In this model the springing is identical with the well-known Brooks B104.

APPOINTING JERSEY AGENTS.

SINCE the close of the New York Show W. J. Ruhle, distributing agent for the Harley-Davidson Motor Co., has been busy establishing new agencies through New Jersey, and his efforts have met with unusual success. One of the new Harley representatives in this territory is J. Fred Sauer, of 110 Catharine street, Elizabeth, N. J. His agency covers Elizabeth and vicinity, including Roselle, Cranford and Rahway.

L. P. Birkenbach, of Columbus, O., has succeeded the Franklin Cycle & Supply Company as Thor distributor for Columbus, O.

JENKINS FIRM BUILDS

Des Moines Agents Will Have Fine Quarters in Up-to-Date Building to Handle Rapidly Growing Business.

JENKINS & COMPANY, Excelsior and Indian representatives in Des Moines, Iowa, have in course of construction a new building, well located, which will embrace a modern garage and a large salesroom in about 8,500 square feet of floor space. Being on a corner it will afford unusual display facilities. The garage will be fitted with lockers for rent, and every arrangement will be made to give patrons comfort and high-class service.

A section of the upper floor will be devoted to the shop, there being simply a door shop on lower floor. The remainder of the upper floor will be given up to the firm's accessory business, in connection with which 20,000 catalogs will soon be circulated. The Jenkins company was credited with holding the motorcycle record for Iowa in 1911, and its present outlook insures similar prosperity for the coming season. Two hundred machines were sold during the last year, and there are indications that the number will reach 500 during 1912.

Mr. Jenkins is F. A. M. commissioner for Iowa, and despite the heavy demands made upon his time by his other interests he is a Federation booster of the first water. He is anxious to hear from motorcyclists who are in a position to accept appointments as local commissioners throughout the State.

GENERATOR LIQUIDS.

H. A. L.—There is no satisfactory non-freezing liquid suitable for use in an acetylene generator. Water is necessary to convert the calcium carbide into acetylene gas, leaving a powdery residue of calcium oxide. If another substance is used, trouble may result; grain alcohol, of low freezing point, on calcium carbide, will give a sort of acetylene gas, but the residue will be objectionable. A very weak solution of grain alcohol in water may be of some use, but we cannot recommend its employment.

ROLLED GOOD SCORES.

AT the last meeting of the Motorcycle Bowling League of Columbus, Ohio, steps were taken to enter two teams in the city bowling contest which started recently. Birkenbach's Yales and Haynes' Harley-Davidsons were entered and have bowled fair games in the contest. The scores of the Yales were 807, 755, and 799, and the Harley-Davidsons rolled 818, 748 and 788.

FRED P. AMES, who has done much to popularize the Emblem in Kansas City, Mo., has moved from 1835 Benton Boulevard to commodious quarters at 2112 East Fifteeth street. The move is coincident with his renewing for the Emblem agency this season, his old quarters having proved too small to adequately handle his growing business.

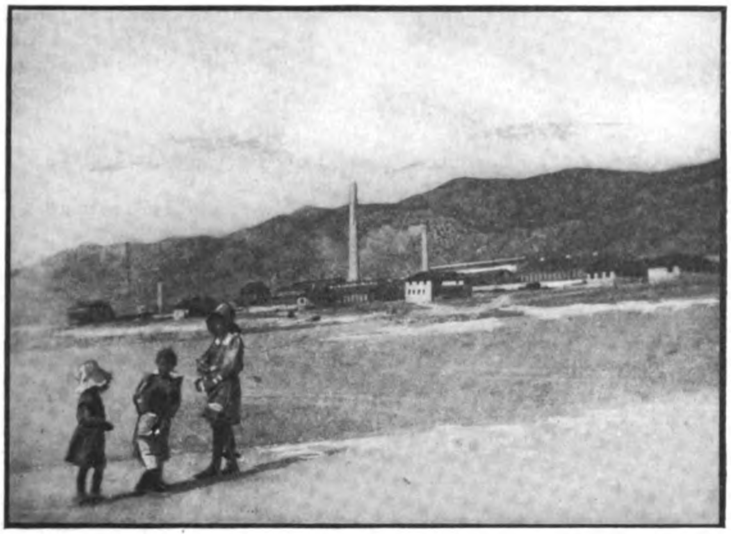
P. H. VOGEL, of the Franklin Cycle & Supply Company, Columbus, agent for the Excelsior and Reading-Standard machines, speaks in optimistic terms of the coming season, and says that the outlook for motorcycle business was never better.

C. E. BARR, of the Barr Motorcycle Company, Columbus agent for the Indian, is preparing for a big year, and has placed an order for a car-load of machines, 60 in all, to arrive within the next two weeks.

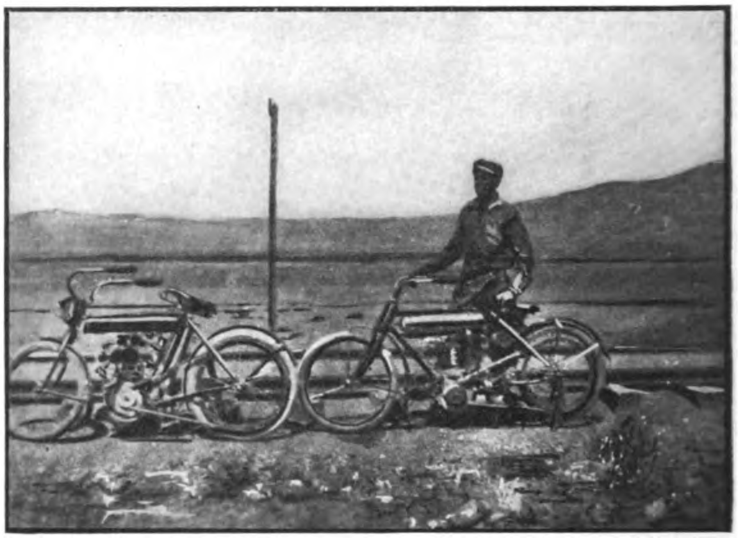
HARROWING TRIP OVER NEVADA TRAILS

Bruised and Weakened by Falls and Suffering from Thirst Western Motorcyclist Is Lost in Desert with Wrecked Machine as Night Comes On—Graphic Tale of a Perilous Tour.

By R. E. HEGNER.



A Smelter Near the Town of McGill.



Down in the Valley of the Desert.

IN the following remarkable article R. E. Hegner, now a resident of San Francisco, paints a vivid picture of road conditions in Nevada and unfolds the story of a motorcycle tour which is probably without precedent in this country for hardships and daring. It is difficult to imagine more desperate circumstances than those which attended Hegner's perilous journey over the barren, alkali "roads" of the far-western State, or to conceive a more hopeless situation than that which confronted him when his machine was wrecked on a desert trail with no sign of life as far as the eye could reach. Hegner's graphic story will be concluded in the next issue of MOTORCYCLE ILLUSTRATED.

On September 1, 1911, I set out from McGill, Nevada, for San Francisco, intending to make the 500-mile run and return inside of two weeks. From this simple announcement it will be inferred that I expected little difficulty in carrying out my plans, but it may be stated without further parley that I was figuring on a false basis. It is my humble opinion that the annals of motorcycle touring in this country will never be complete without the story of my harrowing trip, and it is for this reason that I have made a formal record of it.

My intended partner for the journey turned wise at the eleventh hour, and in a moment of recklessness I decided to take to the trail alone. In planning for the trip we had made provision for every contingency, but I discovered that a motor van would be needed to carry my outfit if I operated on this broad basis, and the work of pruning down the luggage was undertaken. When I finally started out of McGill inner tube patches and a blow-out sleeve with a few light tools made up my machine kit, and my personal effects were limited to the clothes I wore, a toothbrush, and an indestructible flask, filled with an "antidote" for rattlesnake bites. Rattlesnakes are quite numerous in Nevada.

The First Mishap.

I must say that I did not entirely overlook the dangers of such a trip, for I knew something of the roads. Many of the trails I would have to cover are seldom traveled, all are in bad condition and water holes are widely separated in some of the stretches. A few days previous to the start heavy showers had drenched our locality, but I believed them to be mostly local in nature, and so did not hesitate to get under way.

For the first ten minutes nothing worthy of note happened, but when I reached the bottom of the valley my machine kicked out from under me and I went down, bending a pedal crank and pedal into the frame of the machine. As this had been done several times previously the threads on the crank were weakened and now they were almost stripped. Finally I pounded the crank into fair shape and started again. I quickly found that riding on this clay bottom was no task for an amateur, and so was obliged to push the machine a great part of the fifteen miles to Ely. I made this stage of the trip in four and a half hours. After lunch I set out to make up for lost time and did so at the nerve-racking rate of five to six miles an hour! The road was bad but ridable, and I finally reached the summit of Veteran Hill. Going down was easy enough but the climb up the next grade was another matter. All the ruts were now small watercourses, and I was forced to push the machine again in order to top the hill.

Over an Embankment.

The road in the valley beyond was fair for a short distance, but I soon ran into a stretch where the mud had been churned up by heavy wagons and cattle, and once more it became necessary to push my mount. On gaining higher ground I was able to ride again and a ranch house was reached as the sun was going down. I decided to pass this place and go on to another ranch I knew of for the night. Accordingly I put on speed and went by with flying colors. Then I tried to check my speed to take a turn, but failed and went over an embankment. On extricating myself from the frame of the machine I found that my only injuries were cuts and scratches, and that the machine had come through fairly well. My lamp was broken, the carbureter lever was smashed, a pedal crank was bent into the frame again and one handlebar was bent, but I felt that conditions might have been worse.

Supper at a Ranch House.

I made hurried repairs and returned to the ranch house I had just passed. Being in time for supper I enjoyed a hearty meal. On the following morning I was informed that the Kirkland Valley offered great touring possibilities, so with only a hasty overhaul of the machine I started. The road was bad, rough and hilly, and at noon I had traveled only six miles. At that I was taking some big chances. In time—a long time—I rode down into the valley and obtained some milk at a ranch house. I was informed that the road beyond was in the worst possible condition, so decided not to proceed to Kirkland. Then I inquired as to the condition of the road to Eureka.

"Bad, very bad," said the rancher. "All washed out. You'll have an awful time getting through with that cutter of yours."

Hard Trip to Eureka.

With this cheerful information I started. One pedal was now out of commission and the going was slow and very tiring. I had to dismount and climb back into the saddle every few minutes, and any motorcyclist of experience can appreciate what this meant, especially on rough roads and up grades. I reached the foot of a long grade, eleven miles from Eureka, about sundown, and realized that I would have to ride the remaining eleven miles in an hour. My lamp being ruined I could not count on night riding.

The distance would not have been so formidable, even for an amateur, but for the fact that at this point I struck sand. The best I could do was to gain the summit three miles outside the city before darkness fell, and how I got into the city is something of a mystery to this day. When I arrived in Eureka I was glad to turn in and sleep. On the following morning I set the village blacksmith to work on the bent crank of my machine and tinkered with the lamp until I made it emit a feeble light. By 11 o'clock I was ready to start, but was persuaded by the only other motorcyclist in the town to wait until the next day. This chap held practically every office in the once famous silver camp and was also telegraph operator, photographer and orchestra for the town dances.

Machine Is Abandoned.

The following morning was cool and crisp and by 7 o'clock I was well on my way to Austin. I followed the old stage trail which is supposed to be 80 miles distant by the old stage-coach road. For the first 25 miles I had little trouble. Then I struck a flat stretch of alkali road. Unknown to me this mud accumulated in the drive pulley and the belt became badly strained, breaking a ply here and there. Smoky Valley was reached and here the traveling became heavy. At first I alternated between riding and pushing the machine and finally I was unable to ride at all. The greater part of the next six hours was given up to the strong back act, pushing. Having finished my rock and rye the reaction set in, and to say that I was weak is putting it mildly.

I became so exhausted that I experienced difficulty in putting the machine on the stand, and at this point thirst began to add to my troubles. I sat down to rest for a few minutes and fell asleep in that position. I awoke soon, however, and realizing that sleeping along the road was dangerous in more ways than one I left the machine and stumbled along through the black night toward town. At the foot of another hill I found water which served to revive me somewhat. Although too much water after long thirst is worse than none, I must have gulped from that spring for ten full minutes. Finally I reached the summit of the hill and found an Indian camp. An Indian informed me that the town of Austin lay just at the bottom of the hill and so I tottered on again, reaching the settlement more dead than alive.

Off on New Trail.

It was not much of a town, but it looked mighty good to me. At that hour the restaurant was closed, but a bartender managed to get me some sandwiches and I have never relished anything more than this much-needed meal. Then I turned in. At 10 o'clock the next morning I had breakfast, later inquiring as to the condition of the road to Fallen. They told me it was almost impassable. At one point an automobile—how it ever got out into this country is a mystery—had disappeared in quicksand and the Austinites told me I would find a party fishing for it. This turned me sick at heart. I decided to head for the Southern Pacific railroad which I hoped to strike somewhere near Palisade.

Procuring an empty varnish can I filled it with gasoline and headed back over the road to the point where I had abandoned the machine. On the way I discovered that my shoes were almost in ribbons and that my feet were in bad condition. Nevada roads do not seem to be exceptionally hard on tires—strange to say—but they do eat shoes to pieces in quick order.

A Plunge Into a Waterhole.

Before night fell I reached the Grass Valley ranch, 25 miles from Austin. Here there was considerable grass and many head of cattle. About a dozen men, half of them Indians, were working at the ranch. A good meal was disposed of and I rolled under a blanket. When the gong was hammered at 5.45 the next morning I washed up and ate a hearty breakfast. The road was fair, in spite of the watercourses which cut across it at many points, and in time I reached the Warm Spring ranch house. I had traveled 18 miles. From this point on, the road was unrideable in many places. Soon the carbureter started to cause trouble, but I plugged ahead, riding and pushing alternately.

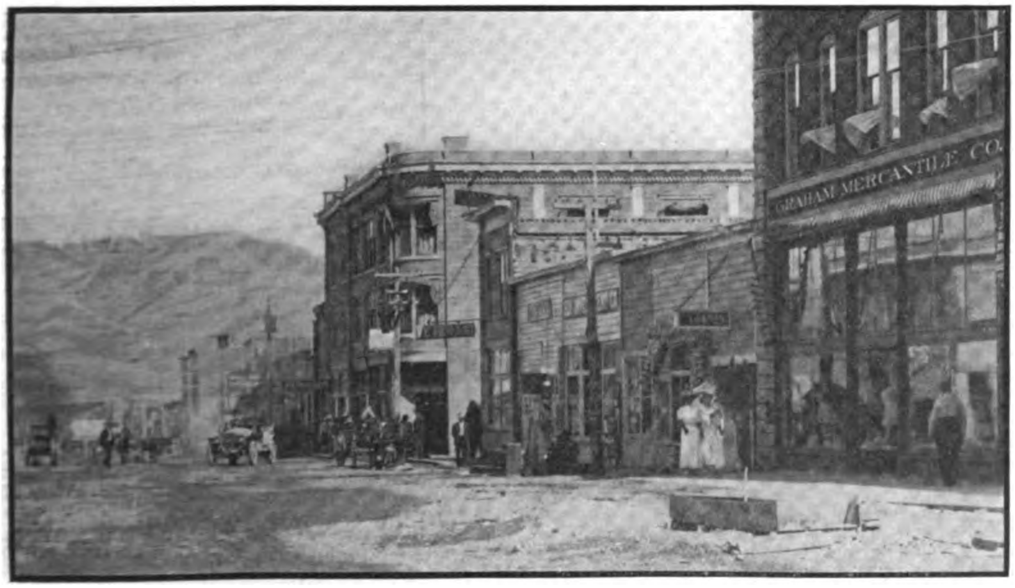
More roads than I had been informed of were found branching from the trail and of course I took the wrong one. Later I met a rancher in a wagon who told me that the road I was on would take me to Cordez, a deserted mining camp of the palmy days in Nevada. He helped me to get back on the proper road and an hour later I reached a spring and took a good rest. When I started again I tried to tinker with the carbureter "on the wing" and did not see a big waterhole ahead. When I crawled out of it with about half my senses in working order I scrambled back to the machine, which was trying to tear itself to pieces, and shut off the power. Somehow I dragged the mount up on the stand and looked it over. The front fork was broken and there was other damage.

Forgotten by the World.

I felt as if I had broken a bone or two, but could find only cuts and scratches. I considered myself fortunate. As I looked at the wrecked machine a cold shiver ran down my spine. What was I to do? The whole thing seemed like a bad dream from which I might awake—but I didn't. To repair the fork with bailing wire was out of the question. I decided this after trying. There was nothing to do but take off the broken part and carry it to some ranch having a forge. But where was the ranch? After two hours of the hardest kind of work I had the fork out and after propping the machine against a rock I set out for Palisade.

My sensation at that moment is beyond words. There were no water signs—such as a green cluster—in the direction of Palisade and I was afraid to go on. I turned back and finally reached the machine again. Then I dropped on the ground in despair. Night was coming on and I had only a vague idea of my location. As I lay on the hot sand it dawned upon me that I might die of thirst and starvation in this barren waste, and that there would be only my wrecked machine to tell the story. I raised on my elbow and looked about; there was only sand and silence. The world had forgotten me.

(To be concluded.)



The Town of Austin, in the Midst of the Desert.

Resting Under the Sage Brush.

POINTERS FOR OLD WORLD TOURISTS

Member of Columbus Party Which Traveled Europe by Motorcycle Gives Valuable Instructions for Riders Who Contemplate Similar Trips on Their Machines.

BY K. M. McKEE

THE writer, in company with three friends, spent four months last summer in a most enjoyable motorcycle tour which covered a large part of Europe, and as some readers of MOTORCYCLE ILLUSTRATED probably have in mind similar trips for the coming summer a few words of advice and a warning or two should be quite timely.

The itinerary will, of course, depend largely on time and personal preference, but our experience would lead us to believe that the average motorcyclist will enjoy the different countries in about the following order: Italy, Switzerland, Spain, Holland, France, England and Germany. The districts to avoid are Belgium, where the roads are all of rough paving; Italy, south of Naples, and all of Spain except the northern frontier. With any good 4 h. p. machine this trip may be undertaken without hesitation, although it will be highly advisable to have an extra pulley or sprocket for mountain work, or better still, a two-speed gear.

Equipment should be cut to the minimum, and should consist of such spare parts as are absolutely necessary, one change of clothing and a good, small kodak. We made the mistake of taking too much luggage, and were compelled to pay a considerable sum for having it forwarded from place to place by train. Photographic films can be purchased anywhere at reasonable prices and need not be carried. Before starting it will be advisable to get a good supply of maps (printed in English), which can be obtained from the Michelin Tire Company, of Paris, or from the automobile or motorcycle clubs of the different countries.

We traveled under membership of the Touring Club of France and found it recognized everywhere. It costs only $1.30, and furthermore, we saved 10 per cent. of our bills quite often, by showing our membership cards. An international license, however, can be secured without much trouble, and we understand it is very satisfactory. We all had passports, although they proved unnecessary. A dictionary, or phrase book, for each country is indispensable.

For shipping, the machine must be free from gas and oil, and well crated; the universal freight charge on the boat is $5. We shipped our machines without pedals, handlebars or controls, and by jollying the baggage-master on the boat, received permission to uncrate and set them up before we landed, thus saving about a day. It is much better to make a large crate and to unpack your machine tuned up and ready to run, the rate being no higher for the larger crate. It is also cheaper to dispose of the crate and have a new one made for the return trip, as we found out by experience. Going over we took the precaution to lacquer all the nickel work on our machines and coat the rest with heavy oil, as we feared the action of the salt water.

Customs formalities we found to be stricter at home than anywhere else, and the only precaution necessary is to get signed statements that the customs have been passed. Neglect of this cost us a week in Milan, Italy, where we were arrested as smugglers. We had it all planned out how we would start at 5 a. m. every morning and ride only in the cool of the day. Do not neglect to make this resolution. We never succeeded in carrying it out, but it was very useful for getting the boys up at 8 or 9 o'clock.

In riding we tried all combinations, in a squad of four, single and two and two, and found the latter to be by far the better method. While riding in a party each puncture, accident or repair meant the loss of time multiplied by four, and the dust is also most disagreeable. Riding single is lonesome work and means a loss of time in waiting for extra parts or guide books which some one else always has. Gas and oil can be procured almost anywhere in sealed cans. Extra casings proved unnecessary in our case, and we were told that the metric casings would fit our rims, although we did not try any.

We had figured on spending one-half our time in sight-seeing, and the other half on our machines. This worked out about right, with the exception of a week's walking tour in Switzerland, which we took from our riding allowance, and which proved to be one of the best investments as to time, money and enjoyment. We had also figured on an average of 75 miles per day while we were riding, but actually only averaged about 50 miles. Seventy-five miles per day, however, is not too high, and should be accomplished without trouble if things go right.

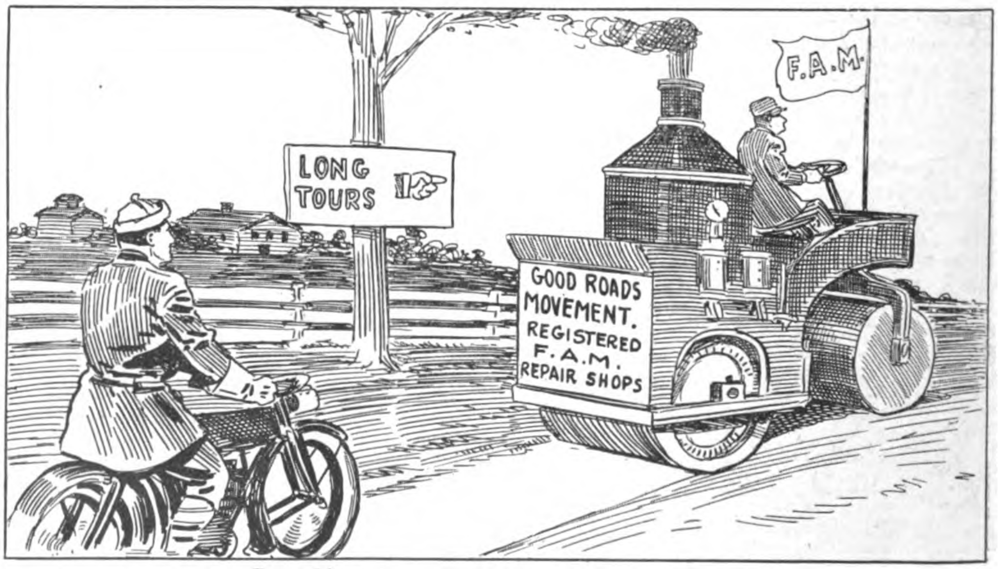
We found that our trip cost us about $600 each, not including the fare from New York. We were out about four months and toured Italy, Switzerland, France, Germany, Holland, Belgium and England. Our steamer fare, second class, was $117.50 each, for the round trip. Our expenses on the road averaged about $4 per day each, including a room and meals at about $1.25 to $2, gas at 30 cents to 60 cents a gallon, and oil at 80 cents to one dollar a gallon. In the cities our expenses averaged about $6 a day due to guides, taxicabs and other incidentals.

Garage and storing charges were normal in all towns of any size, and are about 20 cents per night. For any slight repairs be prepared to be "stung" right. We had our machines cleaned and the carbon removed at Lausanne, Switzerland, and after refusing to quote us a price until the motors were taken down, the garage people compelled us to fork over about $50; if we had refused, enough parts would have been "mislaid" to stop our trip entirely. In conclusion, I might say, there is no investment which will give such returns in health, pleasure and delightful memories as a trip to the old countries, and for all who can spare the time and money, I can only say, "You will never regret it."

HARTFORD TO MONTREAL.

E. L. BIERWORT.—Go from Hartford to Springfield, Mass., via East Hartford, Windsor, Enfield, Thompsonville, and Longmeadow. Go next to Huntington, North Chester, Peru, Hinsdale, and Dalton to Pittsfield. From Pittsfield go to Lanesboro, then New Ashford, Williamstown, Adams, Pownal, Pownal Center, Bennington (Vt.), South Shaftsbury, Shaftsbury, Arlington, Manchester, East Dorset, North Dorset, Danby, South Wallingford, Wallingford, Clarendon, and into Rutland. Road conditions, good, Hartford to Williamstown, macadam and dirt; fair dirt, Williamstown to Rutland.

From Rutland to Burlington, roads are mostly good, but there are some clay stretches in upper half. In wet weather route should not be attempted. From Rutland go to Pittsford, then to Brandon, Salisbury, Middlebury, New Haven, Vergennes, Charlotte, and Shelburne, into Bur-



F.A.M.
LONG TOURS
GOOD ROADS MOVEMENT. REGISTERED F.A.M. REPAIR SHOPS

Smoothing the Path of Thousands of Tourists.

lington. From Burlington go to Winooski, then to South Hero, North Hero, Alburg Center, and Alburg. At this place there is the Canadian Customs House. From Alburg go on next to St. Johns, P. Q., through St. Pauls', then to Chambly, St. Hubert, Longueuil, Montreal-Longueuil ferry and Montreal. This route is good, dirt roads mostly.

HARTFORD TO CHICAGO.

JOHN WERNER.—Hartford to Windsor, then to Warehouse Point, Enfield, Thompsonville, Longmeadow and Springfield, West Springfield, Westfield, Fairfield, Russell, Huntington, West Becket, East Lee, Lee, Lenox, and Pittsfield comprise the first leg of the trip. From Pittsfield go to Shaker Village, New Lebanon, New Lebanon Center, Nassau, Schodack Center, East Greenbush, Rensselaer, and Albany; go from the latter place to Schenectady, Hoffmans, Amsterdam, Fonda, Yosts, Nelliston, St. Johnsville, Little Falls, Herkimer, Utica, Kirkland, Clinton, Oneida, Anastota, and Fayetteville to Syracuse, this constituting the second leg. From Syracuse go to Camillus, Elbridge, Port Byron, Weedsport, Savannah, Clyde, Lock Berlin, Lyons, Palmyra, Macedon, Macedon Center, Fairport, and into Rochester. From Rochester go to Greece, Parma, Clarkson, Hulburton, East Gaines, Gaines, Ridgeway, Johnson Creek, Gas Port, Lockport, Williamsville and Buffalo. From Syracuse to Buffalo constitutes the third leg of the trip.

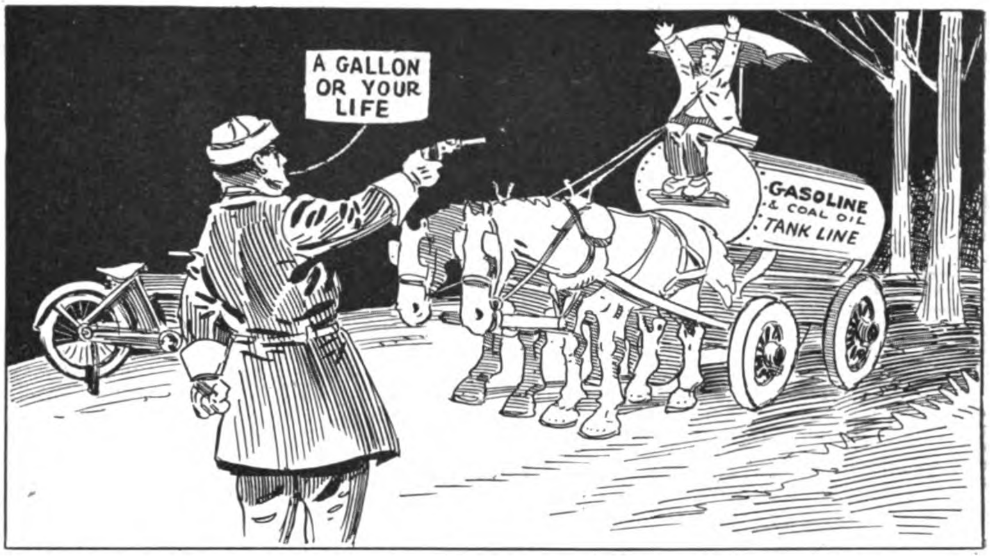
From Buffalo go to Bay View, Wanakah, Farnham, Silver Creek, Shetidan, Fredonia, Brocton, Westfield, Ripley, Northeast (Pa.), Harbor Creek, Erie, Fairview, Girard, East Springfield, West Springfield, Conneaut, Amboy, North Kingsville, Ashtabula (O.). Saybrook, Geneva, Unionville, Madison, Painesville, Mentor, Willoughby, Euclid, and into Cleveland, the fourth leg. From Cleveland, go to Dover, Elyria, Amherst, Birmingham, Norwalk, Monroeville, Bellevue, Clyde, Fremont, Woodville, Toledo, Caraghar, Swanton, Delta, Wauseon, Archbold, Bryan, Waterloo, Kendallville, Brimfield, Wawaka, Ligonier, Goshen, Elkhart, Mishawaka and South Bend (Ind.). From South Bend go to New Carlisle, then to La-Porte, Westville, Valparaiso, Hobart, Highlands, Hammond, South Chicago, Jackson Park and Chicago (Michigan Boulevard).

LITTLE ROCK TO CINCINNATI.

ROY STEUBER.—The route from Little Rock to Cincinnati, via Memphis, is in outline as follows: Little Rock, Lonoke, Clarendon, Helena, Tunica, Lake Cormorant, Memphis. From Memphis, go to Moscow, then to Saulsbury, Corinth, Burnsville, Cherokee, Tuscumbia (Ala.), Sheffield, Florence, St. Florian, Green Hill (Ala.), Loretta, (Tenn.), Lawrenceburg, Crestview, Williamsville, Ridley, Columbia, Brentwood, and Nashville. There are toll-roads between Columbia and Nashville.

The best route to Cincinnati via St. Louis, is to go to Fort Worth, Texas, via Texarkana, De Kalb, Paris (Tex.), Bonham, McKinney, Dallas. From Fort Worth go north to Bowie, then to Lawton (Okla.), El Reno, Oklahoma City, Guthrie, Enid, and follow on to Wichita (Kan.). From this place go to Peabody, Florence, Clements, Elmdale, Cottonwood Falls, Plymouth, Emporia, Waverley, Arcola, Ottawa Edgerton, Gardner, Bonita, Olathe and Kansas City. From Kansas City go to Independence, Blue Springs, Oak Grove, Odessa, Higginsville, Blackburn, Marshall, Glasgow, Armstrong, Higbee, Clark, Mexico, Martinsburg, Wellsville, New Florence, Warrenton, Wright City, Wentzville, St. Charles and finally St. Louis.

From St. Louis go to East St. Louis, Collinsville, Troy, Highland, Pocahontas, Greenville, Mulberry, Hagerstown, Vandalia, Effingham, Montrose, Woodbury, Greenup, Casey, Martinsville, Marshall and Terre Haute. Go next to Brazil, Reelsville, Manhattan, Stilesville, Plainfield, and Indianapolis. From the latter place go to New Palestine, Carrolltown, Morristown, Rushville, Connersville, Brookville, Cedar Grove, Harrison, Miami Station, Cheviot, and then into Cincinnati.



A GALLON OR YOUR LIFE
GASOLINE & COAL OIL TANK LINE

CHANGES IN MIAMI STAFF.

E. M. JACKSON, who has been sales manager of the agency division of the Miami Cycle and Mfg. Company, has tendered his resignation, and will from now on be associated with the Elyea-Austell Company, distributors of Flying Merkels in the Southern States. He will occupy the position of sales manager.

Edward Buffum, who has been connected with the Miami Company as sales manager of the motorcycle department, is to take over the distribution of Merkel machines in one of the important Eastern centers. The growth of the Merkel business has been so rapid that it is found necessary to have an Eastern distributing point for the proper handling of the trade in that territory and Mr. Buffum's long association with motorcycle affairs and his knowledge of conditions assures the agents in the Eastern States that they will receive the best possible service.

A BUSY OHIOAN.

L. P. BIRKENBACH, located at 17 North Fourth street, Columbus, Ohio, who has closed contracts for the Thor and Yale agencies for 1912 is arranging to improve his store-room extensively. The repair shop will be moved from the rear room to the basement, where up-to-date machinery will be installed. The salesroom will be remodeled.

J. W. KIDD and his wife, who are well known as long-distance tandem tourists, have moved from Oklahoma to Illinois, where Kidd has opened a garage at Fisher. He will handle the Emblem motorcycle exclusively.

HAVE WAGNER AGENCY.

THE Hagstrom Bros. Mfg. Company, of Lindsborg, Kans., makers of the well-known motorcycle plug of that name, have taken the agency for Rice, Reno, Harvey, Marion and McPherson counties for the Wagner motorcycles. This branch of their business will be conducted under the personal supervision of P. E. Zimmerman, known as "Zim," who works at the game of advertising manager when not engaged in motorcycling.

Zim is the district F. A. M. commissioner, and will be the captain in charge of a division on the big Central District tour through Kansas, Colorado, Wyoming and Nebraska next August.

McKAY IS OPTIMISTIC.

E. B. McKAY, western sales manager of Empire Tire Company, who was in charge of the firm's exhibit at the Chicago show, is very enthusiastic over results during the show, and says they were successful in appointing many new agents throughout their territory. Mr. McKay expresses a very optimistic opinion of business conditions for the next twelve months throughout the West, and states that business conditions never looked more favorable than at present.

MILITAIRE IN CANADA.

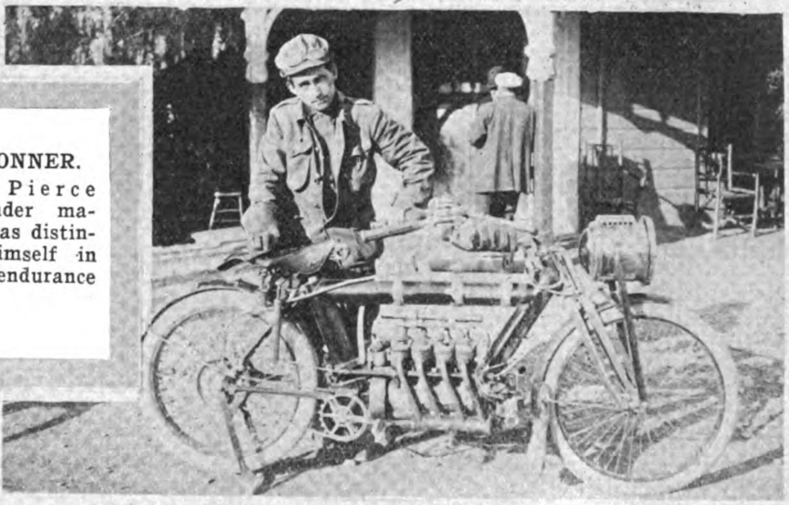
THE Canadian Militaire Auto Company just taken out incorporation papers for the Dominion of Canada. The new firm, which will be a branch of the head office at Cleveland, Ohio, will be located at Toronto where a manufacturing plant will be erected. The new company has secured the plans and patents for the Militaire auto-cycle and will produce this distinctive type of machine for the Canadian trade. H. S. Johnston, head of the Cleveland concern, will hold the presidency of the second establishment while his son, D. J. Johnston, of Toronto, is the principal stockholder. The capital will be $200,000. Until the erection of the Toronto factory, the Toronto Motorcycle Supply Company, 279 College Street, Toronto, will act as the distributors and head agency for the Dominion.

BUTTE HAS A CLUB.

R. D. BARNARD, of Anaconda, Mont., State commissioner for Montana, writes that an F. A. M. club has been organized in Butte, and that plans are under way to make the coming season a busy one.

PACIFIC COAST ROAD AND TRACK STARS.

The illustration opposite shows Frank Karslake and Harry Eustadillo on the Oakland Motordrome.



S. W. CONNER.

Riding a Pierce four-cylinder machine, he has distinguished himself in several endurance runs.

O. WALKER.

The pace he has set on his Harley-Davidson single seems to promise a bright racing future for him.

OHIO RACE CIRCUIT.

PLANS are well under way for the operation of a motorcycle race circuit to include Cleveland, Ohio, and neighboring cities and Dr. A. M. Webster, of Lorain F. A. M., commissioner for northern Ohio, is the most enthusiastic booster of the project. In addition to Cleveland, Elyria, Lorain, Akron, Norwalk, Canton, Erie and Painesville, and possibly Toledo, will be included in the circuit. Many of the best known riders of the district have signified their willingness to co-operate with Dr. Webster and his associates, and if the plan goes through Don Klark, Huntsberry, Willis, Kissig, "Shorty" Matthews and others who have been doing good work will be seen in action. According to the present plans three meets will be held in each of the cities mentioned, with two special programs in Cleveland.

FAVOR BOARD SAUCER.

M. F. BRAMLEY, of Cleveland, Ohio, who has announced his intention to construct a three-lap oval track for motorcycle races, is receiving many suggestions these days from motorcyclists who argue that he should build a saucer, even on a four-lap basis, in preference to the proposed oval. It is pointed out that race followers now demand the highest possible speed from motorcycles, and that only a well-built board saucer will allow the riders to go after the records with safety. Dr. A. M. Webster, of Lorain, F. A. M. commissioner in Northern Ohio, is one of those who are opposed to the type of track specified by Bramley, and he is of the opinion that when all the data are placed before the promoter he will decide to erect an up-to-date saucer.

MOTORCYCLIST WINS SUIT.

THE Toronto Jury Assize Court has awarded Alex McLean, of the Toronto Motorcycle Club, damages to the extent of $900 against the Taylor Soap Company, Toronto, for injuries received by falling from his motorcycle into some acid which had spilled from one of the company's wagons which had preceded him up the street. The defense was that McLean had fallen because of traveling at too high a speed. The accident occurred last April 29, the scene of which was long marked by ruts in the pavement made by the deadly fluid.

RODE ON THE HUDSON.

NATHANIEL E. NEY, of White Plains, N. Y., reports that he made a trip over snow and ice with his 1912 American on February 11, which proved to be one of the most pleasant motorcycle outings he has known. He rode through the country in the vicinity of White Plains until his cyclometer showed 45 miles, and later chugged his way to Tarrytown and crossed the Hudson on the ice. Throughout the trip he experienced no trouble in hitting up a good clip, despite the fact that he was obliged to climb some fairly steep hills. His American has a 7 h. motor and Eclipse free-engine clutch.

JOHN HOGAN, of Saginaw, Mich., announces that he will touch at the capital of every state in the Union on a motorcycle tour to be made during the coming summer.

CALIFORNIA WORKERS

State Commissioner Leslie Now Has Large Staff of Busy Assistants, but Is in the Field for More.

R. Y. LESLIE, of Pasadena, state F. A. M. commissioner for California, forwards the following list, complete to date, of the local commissioners he has appointed: W. G. Ramer, Corning; G. G. Willsey, Elsinore; E. S. Barron, Monravia; E. F. Rose, Oakland; S. L. Lyon, San Diego; Frank McIntyre, San Bernardino; W. B. Shortman, Porterville; A. C. Banta, San Jose; C. H. Lashlie, Redlands; A. W. Taylor, Watsonville; P. E. Marlott, Santa Rosa; E. A. Shoemaker, Sacramento; E. B. Ellis, Berkeley; T. B. Haines, Maricopa; Lincoln Holland, Los Angeles; R. E. Gilbert, Colton; Harry Erickson, Fresno.

The State Commissioner announces that he still lacks local representatives in a number of important California towns, and that he will be pleased to hear from motorcyclists who can take up the F. A. M. work at points which are not covered at present.

READING BANQUET.

PRESIDENT JOHN S. HARTMAN acted as toastmaster at the first annual banquet of the Reading M. C., of Reading, Pa., which was held on February 8. There was practically a full attendance of the members, the following being present: President Hartman, Paul Eisenhower, John G. Nuebling. William Schaeffer, William Buel, James Mayo, A. E. Keeport, Robert Drayer, Charles Hart, Paul Ganster, George Snyder, William Stout, J. S. Deysher, A. E. Bruderick, Charles Kinsey, Roy Deem, Calvin Holloway, R. S. Fritz, J. Landis, Samuel Kellian, Harry Straub, William Eisenhower, Walter Clauser, George Mack, Dr. William Wertz, Clarence Raphje, Harry Wentzel, Albert Quinn, Harry Oswell and Earl Tobias.

ASSISTED CITY OFFICIALS.

FOR the purpose of considering a proposed new motor traffic ordinance, representatives of the Pueblo Auto Club and the Sunville Motorcycle Club, of Pueblo, Colo., recently held a conference with the officials of the city.

ONE-ARMED RIDER A HERO.

MICHAEL RUTOWSKI, a one-armed motorcyclist of Scranton, Pa., rushed into a burning house recently and saved the life of a child. He was riding past on his machine when he discovered the fire.

MOTORCYCLE SAVED HIM.

OVERCOME by the fumes of gas Burt Mooney had a narrow escape from death while taking a bath at his home in Port Huron, Mich., and it is due to the racing efforts of his brother on a motorcycle to bring a physician to the home that the young man is alive today.

TWO new contenders for "attractive costume" honors are Fred Kreusler and A. H. Hyde, Jr., who appear in the photograph herewith. They believe that almost any kind of a road can be traveled on a motorcycle without making a serious sacrifice as to appearance.

ILLINOIS RIDER'S TRIP THROUGH SNOW

Jaunt of 130 Miles, From Sterling to Chicago, Was Made on a Wager with Mercury Hovering Near Zero.

FOLLOWING is an interesting story of a motorcycle trip through five inches of snow from Sterling, Ill., to Chicago, a distance of about 130 miles. It was accomplished by Glenn Engle, a young enthusiast of Sterling, on an Eagle machine.

"Two days after I received my new Eagle machine," writes Engle, "we had quite a heavy snowstorm, but like a kid with a new top I couldn't resist the temptation to take it out for a trial. When I stopped at a cigar store some of my friends poked fun at me for attempting to ride in such weather, and I was finally jollied into making a bet that I could ride to Chicago. After thinking the matter over I could see that I had undertaken a big order, but I was not to be bluffed, and after hurried preparations I started.

"I pulled out of Sterling at 8.30 a. m. on Saturday with five inches of snow on the ground and the mercury hovering around zero. However, I was dressed appropriately and did not mind the cold much. The roads were in fair shape for five miles outside of Sterling, but as I neared Dixon they became rougher. I crossed the bridge into Dixon without mishap and stopped for a few minutes at a garage to warm up and inspect my machine. I found no trouble and soon went on. The roads were fair again and my next stop was made at Franklin Grove. The going was rougher as I neared Ashton, but I continued to make good time.

"At Ashton I was informed that the roads to Rochelle were in bad shape, and after proceeding a short distance I learned that the information was correct. I managed to keep the machine in the center of the road for a time, but in rounding a corner at the foot of a hill I went down into a ditch filled with snow. I pulled the machine out, knocked the snow out of the carbureter where it was holding the air valve open, wiped off the spark plug with my handkerchief and started again. The roads improved as I neared Rochelle and I reached DeKalb without more trouble. Riding through Geneva I headed into West Chicago, examined my machine again and then plugged on to Wheaton.

"Near Wheaton I had another spill and bent a pedal but soon made repairs and went on. When I reached Maywood I was obliged to light my lamp and a short time later I was on Washington boulevard. Then I continued to my destination on Michigan avenue, arriving at 6.30 p. m., tired but triumphant."

Fred Kreusler and A. H. Hyde, Jr., of Chicago.

With the Clubs

HELD OPEN HOUSE

National Capital M. C. Entertained Many Guests With Fine Program In Its Headquarters.

FOR the first time since its organization the National Capital M. C., of Washington, D. C., held open house at its headquarters on February 8, and a highly enjoyable program was given. A general invitation had been extended to the motorcyclists of the city, and nearly 500 were in attendance. The program, arranged by the entertainment committee, consisting of Messrs. Cohen, Throop and Boyle, provided for a smoker, beginning at 8 p. m., followed by a buffet lunch.

President F. D. Yowell delivered the principal address, taking up the club plans for the 1912 season and referring to the policies which have allowed the organization to reach its present high standing. He was followed by Sergeant Headley, of the local police department and others. At 9.30 a luncheon was served, the time-honored "gasoline" being left out of the menu. At the close of the program there was a rising vote of thanks for the officers of the club; the staff is made up as follows: F. D. Yowell, president; E. Mitchell Dodson, vice-president; T. O. Wansleben, corresponding secretary; Samuel Eaton, recording secretary; Charles H. Cross, treasurer; W. H. Throop, guard; George Beall, captain; Samuel McPherson, first lieutenant, and Harry Foulds, second lieutenant.

At the last regular meeting of the club plans were laid for an endurance run to be held in the spring, and a committee is working up interest in the project.

CLEVELAND CLUB'S NEW HOME.

RIDERS of the Indian M. C., of Cleveland, Ohio, will soon occupy their new clubrooms over the motorcycle headquarters of L. J. Mueller, in his recently completed building on Woodland avenue. The rooms are being fitted with everything that might add to the comfort and enjoyment of the motorcyclists, one of the features being a fine pool table. The wall paper is of an Indian wigwam design, and the decorations throughout keep the visitor reminded of the fact that he is in the home of a big chief.

PLANNING MAMMOTH MEET.

THE plan of the Bakersfield (Cal.) M. C. to call a convention of delegates from all clubs between San Francisco and Tehacapi for the purpose of considering plans for an annual mammoth race meet is meeting with favor, and it is likely that the movement will be carried through.

SUMMER PLANS OF DETROIT CLUBS

New Clubhouse, Speed Bowl and Track and Road Events Interest the Riders of Three Busy Squads In Michigan City.

DETROIT, MICH.—Sanctions for race meets to be held on Memorial Day, July 4 and Labor Day have already been obtained by the Motorcycle Club of the Detroit Wheelmen, and elaborate plans are being laid for the programs. It is likely that the club will bring professional riders to the city for these meets, and the members are working diligently to assist the new official staff of the club which is made up as follows: Russell C. Mahon, president; James Butler, vice-president; Walter F. Sheetz, secretary-treasurer; Beverly Schlunt, captain; Joseph Adcock, Louis Beyster and Arthur Ruprecht, directors.

"A circular board track for 1912" is the slogan of the Detroit M. C., which is preparing to run several meets and road events during the coming season. The club is also arranging to occupy more spacious quarters. Its new officers have been elected as follows: J. B. Gault, president; F. Zeigen, first vice-president; A. M. Carter, second vice-president; Charles Drude, secretary; A. P. Hubbard, treasurer; R. M. Hunter, William Fields, H. G. Smith, William Wandersee and A. M. Gregor, directors.

Foremost among the plans of the West Side M. C., the youngest of Detroit's trio of motorcycle organizations, is the building of a clubhouse on the shore of Lake St. Claire. A site near Vernier's Inn, Grosse Point, has practically been agreed on and as soon as warm weather arrives, the building operations will be started. The new officers of the organization: Carl J. Stecher, president; Joseph M'Kevitz, vice-president; Peter Roegell, secretary; Wm. W. Spier, treasurer.

The West Siders also are planning a field day to be held at Bob-Lo, June 17. The steamer *Columbia* will be chartered and races of all sorts, in addition to other sports and dancing, will be the program.

A VALUABLE BOOKLET.

"THE Cleveland Motorcycle Directory" is the name of a neat little book published under the auspices of the Cleveland M. C. It contains eighty pages of interesting matter, including the names and addresses of the club members and the makes of machines they ride, the constitution and by-laws of the club, names and addresses of all the registered motorcyclists in the city, a map showing the best roads leading out of Cleveland, and other information. Copies of the directory may be obtained from the General Publishing Company, of Cleveland.

MOTORCYCLE BASEBALL TEAM.

NOTHING new under the sun? Well, perhaps not, but a motorcycle baseball team formed in Danville, Kan., comes pretty close to being a novelty. Every member of the team is a motorcyclist, and when a game is to be played in a neighboring city the players don their diamond togs, jump upon their two-wheelers and ride in a body to the scene of the game. The idea is catching on in the West and it is reported that several other motorcycle clubs will be represented by baseball teams during the coming summer.

HENRY MERRITT, of Watertown, N. Y., is trying to round up the motorcyclists in his locality to organize a club.

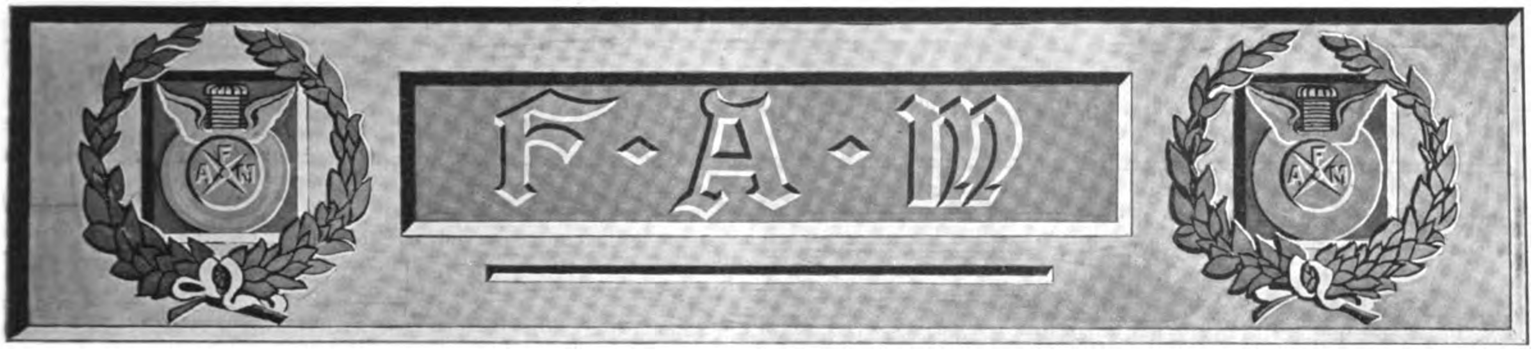
SECOND ANNUAL FEAST.

ABOUT forty members of the Boston Motorcycle Club had an enjoyable time at their second annual dinner in the "Dutch Room" at the Copley Square Hotel, on Wednesday evening, January 31, with the assistance of several professional entertainers. Dr. R. L. Colson, who was toastmaster, called upon a number of the members for remarks and they responded fittingly to the toasts given them.

The club, with a membership of eighty, is incorporated under the laws of Massachusetts, and holds its regular meeting on the first Tuesday of every month, at its headquarters, 206 Massachusetts avenue. Its officers are: President, Dr. R. L. Colson; vice-president, P. W. Richardson; secretary, F. M. Wyman; treasurer, F. L. Durkee; captain, H. F. Smith; first lieutenant, M. F. Doyle; second lieutenant, H. S. Cummings, and two directors-at-large, F. A. Savage and Rollin Abell.

Captain Smith has arranged a series of endurance runs for the 1912 season with suitable prizes, also slow runs and dinners for the members who attend them. The club is now holding a bowling and pool handicap tournament, for two large silver cups.

TWO rural mail carriers at Inman, Kans., P. S. McMullen and Henry E. Toews, averaged 216 trips last year with their motorcycles.



FIFTY LAMP PRIZES FOR F. A. M. CLUBS

Chairman Estabrook Will Award Old Sols Donated by Hawthorne Manufacturing Company in Four-Month Affiliation Race.

CHAIRMAN ESTABROOK, of the F. A. M. membership committee, announces that he is completing plans for another club affiliation contest similar to the one conducted in 1911, and that it will extend over four months, beginning March 1. In 1911 the Hawthorne Manufacturing Company donated fifteen Old Sol lamps to be awarded to the first fifteen clubs affiliating with the F. A. M. during the month of May, and as a result of the contest thirty hustling clubs were brought into the Federation during the period specified. The Hawthorne Company has again come forward with a lamp offer, far broader than its liberal one of last year and instead of fifteen lamps, Chairman Estabrook will have twenty-five to award for the opening contest of the year.

It was argued last year that one month did not allow some of the newer clubs a fair opportunity to build up their membership so that they might affiliate with the F. A. M. and win one of the lamps; hence the four-month arrangement for 1912. The Hawthorne company is donating 50 lamps of its big No. 8 type, with brackets for any standard machine, with the understanding that 25 of the lamps will be used by Chairman Estabrook before July 1 and the others before January 1, 1913. That this generous proposition will pave the way for unusually rapid growth of the F. A. M. club list and assist materially in arousing general interest goes without saying.

When the first lot of twenty-five lamps has been awarded to the lucky clubs for the four-month contest opening March 1, Chairman Estabrook will take up plans for disposing of the remaining twenty-five as prizes. Clubs, dealers and Federation workers in general who are interested in the proposition should communicate with the chairman at once in order that full details of the contest may be obtained.

NOTICE TO REPAIRMEN.

G. B. GIBSON, of Westboro, Mass., national secretary of the F. A. M., is just now actively engaged in laying out plans and preparing copy for the first list of registered F. A. M. repair shops to be delivered to all members during the latter part of March. He will communicate with every shop holding a certificate, with a view to correcting the list as at present upon the books. The names or addresses of many firms have been changed during the past year, and it is likely that some of these have neglected to notify Secretary Gibson of the change so that an opportunity will be offered them to make corrections in advance of the actual printing of the list. New or old shops that take out certificates in the meantime will be added to the list up to the last minute before going to press, but no new list will be published until 1913. There are now approximately four weeks in which repairmen can take advantage of the opportunity and list their shops.

COLUMBUS M. C. BUTTONS.

COLUMBUS, OHIO.—At a meeting of the Columbus Motorcycle Club an appropriate button was adopted to be worn by members which will be a means of identification. The buttons have a similar design to that of the F. A. M. and in addition has the letters "C. M. C."

MEMBERS of the Bakersfield (Cal.) M. C. recently made a run into the country on a goose hunt.

ADDING TO THE LIST.

CHAIRMAN ESTABROOK reports that the week ending February 9 was responsible for a gain of fourteen registered F. A. M. shops, as follows:

W. H. Knight, 219 4th St., Sioux City, Iowa; Aichele & Son, 68 Portage Ave., Ft. Wayne, Ind.; Cummings & Martin, 105 E. Greene St., Ithaca, N. Y.; Paul Hanke, 545 W. North Ave., Chicago, Ill.; R. E. Day, 944 So. D St., Tacoma, Wash.; F. E. Best, corner North Ave. and Temple St., Owego, N. Y.; Charles Petmecky, 202 West 6th St., Austin, Texas; P. E. Reichel, 14 E. Charles St., Massillon, Ohio; Arey Hardware Co., 123 South Main St., Salisbury, N. C.; P. E. Marlott, 501 5th St., Santa Rosa, Calif.; William Buel, 841 Washington St., Reading, Pa.; Harry L. Neff, 106 Federal St., Pittsburgh, Pa.; S. V. Doherty, 41 Buffalo St., Lockport, N. Y.; C. S. Hinckley, 47 LaSalle St., Aurora, Ill.

COMPARATIVE GAINS.

F. A. M. membership gains for the six months of the present fiscal year, compared with the corresponding months of 1910, which was the busiest in the history of the Federation, are as follows: 1910—August, 328; September, 242; October, 193; November, 217; December, 249; January (1911), 231; total, 1,140; for 1911—August, 592; September, 557; October, 332; November, 235; December, 233; January (1912), 402; total, 2,351.

MONTGOMERY, ALA., is to have a motorcycle and aeroplane race on March 4.

F. A. M. TOUR CERTIFICATES

Seventy Riders in Western Tour to Buffalo Convention Now Hold Proof of Their Good Road Work.

P. B. WHITNEY, who was in charge of the Western tour to the 1911 F. A. M. assembly in Buffalo, recently forwarded to National Secretary Gibson the names of seventy riders who completed the tour successfully, and they have received Federation certificates. The list follows:

S. T. Barlass, Chicago, Ill.; Harry Jacobs, Chicago, Ill.; S. W. Nicholson, Chicago, Ill.; C. S. Hinckley, Aurora, Ill.; Paul E. Kottowlski, Indianapolis, Ind.; Edward Schadde, Chicago, Ill.; P. A. Heierman, South Bend, Ind.; Lynn Jordan, Wilmette, Ill.; Emil Perkowitz, Evanston, Ill.; R. T. Lantz, LaGrange, Ill.; Sam Brown, Chicago, Ill.; M. A. Held, Chicago, Ill.; C. J. King, Lewiston, Ill.; H. Bernard, Oak Park, Ill.; J. R. Kief, Chicago, Ill.; H. Dimke, Toledo, Ohio; A. Weitzman, Detroit, Mich.; E. L. Russell, Detroit, Mich.; A. F. Gregor, Detroit, Mich.; A. R. Oberwegner, Toledo, Ohio; S. J. Chubbuck, Toledo, Ohio; E. H. Tracey, Cleveland, Ohio; D. E. Miller, Detroit, Mich.; J. J. Blank, Akron, Ohio; B. A. Waltz, Akron, Ohio; G. W. Williams, Lorain, Ohio; R. Bouton, Lakewood, Ohio; A. J. Lewis, Alliance, Ohio; R. T. Phillips, Conneaut, Ohio; R. E. Underhill, Glendora, Cal.; J. C. Hosman, Chicago, Ill.; W. W. Ingram, Rutland, Ill.; Alfred Born, Chicago, Ill.; W. G. Lauterbach, Mendota, Ill.; N. T. Back, Chicago, Ill.; F. M. Reder, Chicago, Ill.; J. Sperepoulos, Pullman, Ill.; George Kohlhardt, Cudahy, Wis.; E. L. Drummond, Chicago Ill.; P. E. Haller, Chicago, Ill.; H. P. Reynolds, Chicago, Ill.; A. H. Crocker, Chicago, Ill.; F. A. Wilhelm, Chicago, Ill.; Frank Ollerman, Milwaukee, Wis.; George Puls, Milwaukee, Wis.; O. Persons, Chicago, Ill.; Roy Bowser, Chicago, Ill.; J. R. Purdy, Chicago, Ill.; R. A. Croon, Rockford, Ill.; A. L. Johnson, Rockford, Ill.; Axel Kling, Rockford, Ill.; Alvy Anderson, Rockford, Ill.; Walter Davidson, Milwaukee, Wis.; P. B. Whitney, Chicago, Ill.; W. C. Beaman, San Francisco, Cal.; R. W. DuSell, Aurora, Ill.; Edward Harmer, Kenosha, Wis.; R. D. Wickwire, Chicago, Ill.; E. C. Marquard, Burlington, Iowa; H. H. Huntsbury, Cleveland, Ohio; H. W. Cuddington, Peru, Ind.; Albert Hanson, Kansas City, Mo.; Thomas Monroe, Chicago, Ill.; C. A. Carpenter, Milwaukee, Wis.; George Hedges, Chicago, Ill.; H. H. Hedges, Chicago, Ill.; G. H. Crocker, Chicago, Ill.; Charles A. Wellman, Chicago, Ill.; J. H. Poisson, Grand Rapids, Mich.; Roy O. Chipman, Grand Rapids, Mich.

TIPS *and* TOPICS

Fraudulent Second-Hand Machine Advertisments — How to Have Repair Work Properly Done.

IN this season of the year with the shows still on, but gradually nearing their finality, the attention of many riders is called very naturally to getting another machine. In some cases, this will be a 1912 model, but in others, from motives of economy, it will be a second-hand 1911 model. Of the new models, we will not here treat, but concerning the others the demand has given rise to one of the most flagrant forms of advertising deception, resulting in the prospective purchaser expending carfare, postage, or both, in order that some individual may have the chance of turning a dishonest penny in palming off a 1908 or 1909 mount for one of 1911, if the purchaser is inexperienced. The writer refers to advertisements in the daily papers such as the following:

"1911 Blank machine, run only 600 miles, $55. Owner must give up on account of accident. Scroggins."

How the Game Is Worked.

Now, the individual that inserts this advertisement feels reasonably safe, as the machine does not exist at all. In the first place, if an experienced purchaser goes to see the machine, it has "just been sold." Again, if the prospective buyer is inexperienced, the swindler has an old mount of the same make, but of 1908 model, which he will palm off as that represented in the advertisement. Thus, either way he gets the buyer to his place, and in either case the latter is out of pocket. The swindler, of course, only "makes" if he can dispose of the old machine as a 1911 model, or by proper representation, as a 1908 model to the experienced buyer. The latter alternative, however, is sufficiently rare to warrant its not being attempted on most buyers, as in several cases recently the advertiser sustained personal damage at the hands of the irate prospective customer.

Detecting the Fraud.

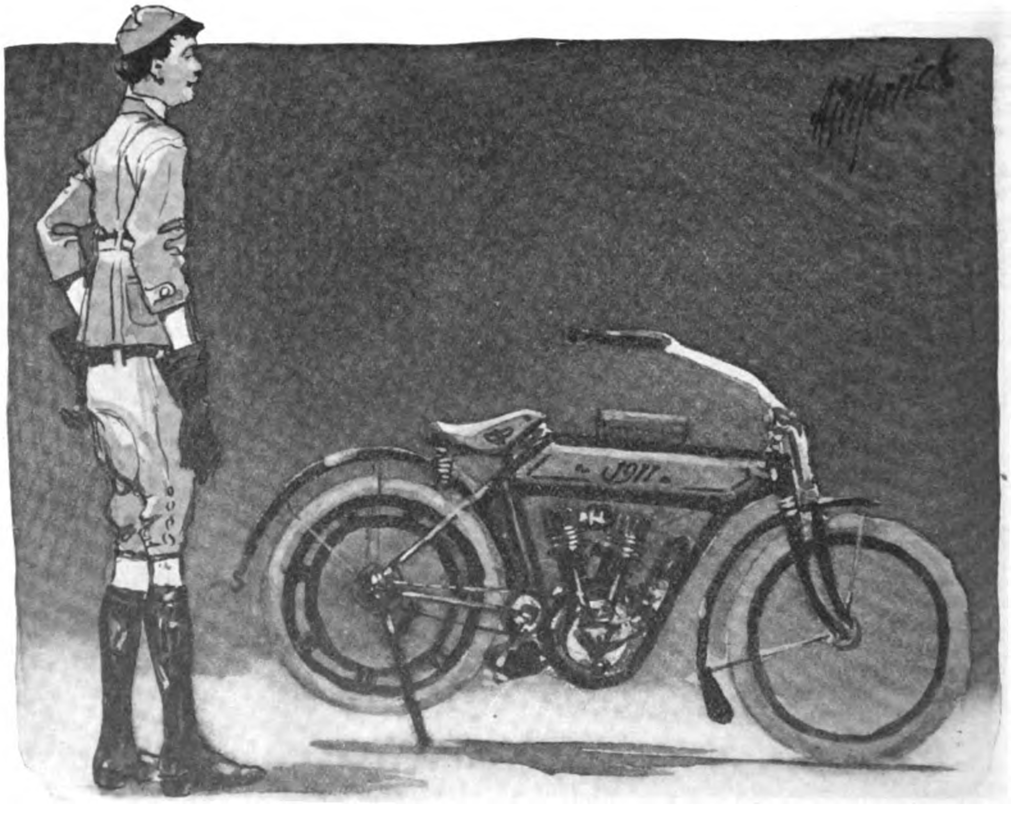
The only way to detect attempts at such imposition is to judge by the price quoted and by the excuses offered as the reason for selling. The very wording of the "excuse" is an old one in the automobile game; it has been worn threadbare, along with its companions: "Owner going abroad," "On account of ill-health," "Death in family," "Getting a 1912 model," etc. A lot of good second-hand mounts are obtainable from dealers, as a rule, and in most cases, the rider who has one to dispose of sends it to a dealer and does not advertise it in an afternoon paper. Fifty-five dollars for a 1911 machine points to the "nigger in the woodpile"; if the advertisement were legitimate, the machine would be misrepresented as to condition, is stolen goods, or the advertiser is a simpleton, the latter contingency being extremely unlikely, as any such bargain would be snapped up and re-sold at a higher price before the possessor had any reason to advertise it at all, as soon as wind of it got around. The exceptions to the above are so rare that it is doubtful if it really pays to chance even a visit in answer to the advertisements. If anyone desires a second-hand machine let him go to a reliable dealer or get the dealer to look over the advertised machine for him, paying a commission for so doing. This is not what the advertiser wants, but it ensures the would-be buyer against fraud and is worth the money.

Influencing the Dealer.

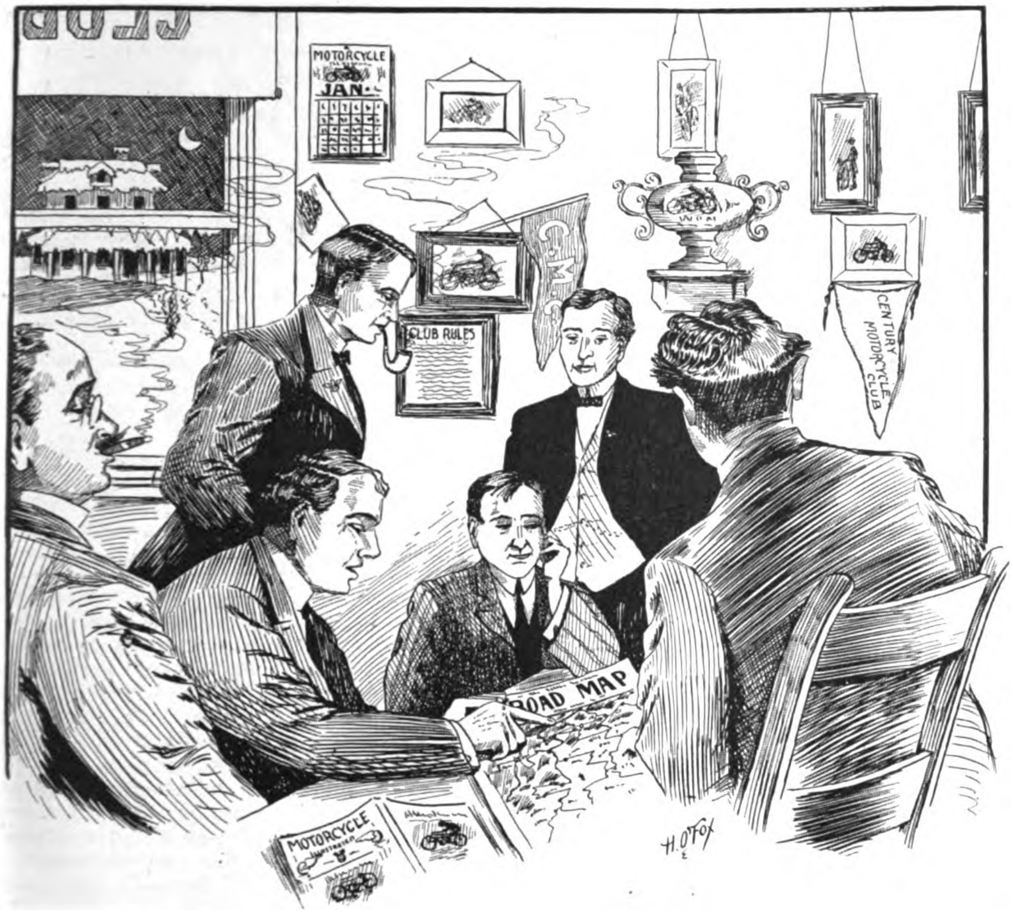
Model motorcycle shops are few, unfortunately, but the quality of the work done need not necessarily correspond to the appearance of the shop itself. But where the work is done with poor tools, most riders take the attitude that "it's none of my business as long as the work is done O. K." There they are wrong; the time will come when the work with chipped reamers, blunt drills and the like will *not* be O. K., and a howl will go up. Riders have the making or marring of the repairman in their own hands; if they don't give a "continental" as to what is used as long as the work is right, the work will cost more as it takes a longer time to work with poor edges on a drill than when the edges are sharp; you will pay for the difference of a few minutes spent in grinding, and the few pennies saved by the repairman in getting "bargains" in small tools instead of first-class articles. The remedy is obvious; keep at him, by suggestions from time to time; by pointing out the defective tools and any poor work done by them, and with enough suggestion from a number of his clients, he will get the tools all right and all will benefit.

An Illustration.

A case that illustrates this is as follows: A factory sent down a set of motor bearings to a dealer to fit in a rider's machine, but it was necessary to ream them before the fit was satisfactory. The only reamer in stock at the shop was chipped along its cutting edges, and one of these was half gone. The rider finding that the "fit" was indifferent, asked to have the bearing scraped, but there were no scrapers at hand, so one had to be made. When the scraper was made and used, there was no Prussian blue for testing for a good surface, and this the rider bought out of his own pocket. Result, a fine bearing surface all around for the shaft, two and a half hours' time charges plus 25 cents for the blue. Rather expensive for such a little job, it must be admitted. Now, with a scraper at hand and enough blue to cover the forefinger, the work would have been done well after reaming, and might possibly have been good enough by reaming alone. The charges would have been much less for both time



"My Clothes Have Shrunk a Foot—I've Grown a Foot—but My Old Boat Hasn't Changed. Why Couldn't It Have Grown Into a 1912 Model!"



PLANNING SUMMER TOURS

and material. The upshot of this was that the bunch got together and read the riot act to the repairman, and he laid in a set of good tools in quick time.

Starting With Rich Mixture.

Quite frequently a doleful complaint is heard about a motor being hard to start, everything being all right except that the mixture is too rich. A condition in which the motor has too much gasoline puzzles a great many riders, and is often brought about by excessive tickling of the carbureter. The remedy is, of course, to weaken the mixture already in the cylinders by ventilating. Where pet-cocks are fitted, these should be opened, and after closing the throttle the motor should be turned over several times, when it will generally start. If no cocks are fitted, hold the auxiliary air-valve open with a wire or knife-blade and pedal, taking care to remove the wire or blade as soon as the motor starts, or you will have the work to do over again. The throttle should be open and the jet opening not too large when this is being done, regulation being made with the needle valve as soon as the motor runs to get the proper mixture. In other words, ventilating is simply opening the inlet pipe or cylinder for an extra supply of air to dilute the rich mixture which prevents starting.

Case of Jet Obstruction.

Once in a while something occurs that must be investigated by a long process of elimination, and the rider without a Trouble Table is then down and out. A twin motor recently furnished one of these examples of getting at the trouble. The motor would run up to about 900 revolutions per minute, but would stop if the throttle was opened and the spark farther advanced. The rider, on reaching a garage, after limping along, set to work as follows: Mixture must be right, as there was no popping back into the carbureter, and the motor ran steadily up to that speed. Spark was good, gasolene flowed freely into carbureter, brake was not dragging, clutch was working properly, chain sprockets on rear wheel and countershaft were in line, rear wheel ran freely, and all connections were good. At last after much trying-out the jet was exposed and a horse-hair was found in the jet tube, partially choking the jet opening. This caused the "governed" running before mentioned. The rider had no idea where the hair came from, but the moral is obvious; fit a strainer between the carbureter and the tank, and do away with this and other troubles from clogged jets and flooded carbureters.

SEEKING CLUB SUPPORT

COLUMBUS, OHIO.—The Columbus Motorcycle Club, in its campaign to secure the 1912 meeting of the F. A. M., has named another committee, consisting of the board of trustees of the club, and an active campaign will be started to secure the support of all motorcycle clubs located in the Middle West. The committee adopted a button which was distributed at the Chicago show by a delegation of Columbus dealers. The special committee having the matter in charge consists of P. M. Sarver, George H. Bangham, W. H. Snyder, P. I. Haynes, P. H. Vogle, W. H. Matthews and Grant Lees.

WITH THE BALTIMORE CLUBS

Maryland M. C. Holds Banquet and Plans Run, and Chesapeake Club Is Busy With Its Summer Schedule.

BALTIMORE, Md.—The Maryland M. C. held its second annual banquet at the New Howard Hotel on Wednesday evening, January 31, and it proved far more successful than the initial one. Forty members of the club sat down to the feast, an attractive and appetizing menu having been prepared. Later there were addresses, and a feature of the program was the excellent vaudeville entertainment prepared by Samuel H. Congdon, a member of the club. Singing, dancing, juggling and whistling artists were engaged and they combined their efforts to make the diners forget that the bad weather since the first of the year has deprived them of the enjoyment of using their machines. President Frank O'Boyd acted as toastmaster.

The Chesapeake M. C., the infant organization of this city, is preparing for the coming season. The club holds a meeting every Tuesday evening at its new home, at which plans are promulgated and discussed. The club has determined to offer three prizes as an incentive to enthusiasm on the part of the members. A silver loving cup will be presented to the member who attends regularly the meetings of the club; a gold medal will be awarded to the member attending the greatest number of called runs, and a $5 gold piece will be given to the one bringing in the most applications for membership. The first run will be to Annapolis, over the new boulevard, some time in March, and the first endurance contest will be staged in July.

Announcement has just been made by the Maryland M. C. that it will promote an endurance run for riders in Baltimore and Washington during the early spring. The race will be from Baltimore to Westminster, Hagerstown, Frederick, Ridgeville, Washington and return.

TO TOUR CALIFORNIA.

E. B. CRAWFORD, who left New York City for California recently, accompanied by his mother, with a view to touring through the coast State by motorcycle and side-car, states in an interesting letter that he has arrived in Los Angeles and is amazed at the interest shown there in the power two-wheeler. Mr. Crawford, who is an artist, will purchase his motorcycle and side-car outfit in one of the California cities, and much of his time en tour will be given up to painting, the picturesque country and quaint settlements affording him broad scope in this direction.

WINFIELD BUSY AGAIN.

FREQUENTLY some of Chairman Estabrook's friends and corespondents change their base of operations and this is always a signal for renewed activity. This time it is E. Frank Winfield, who recently located in Grand Junction, Colo. Winfield positively cannot be happy unless he is mixed up with local motorcycle affairs and doing work in the interest of his favorite sport and the F. A. M.

MILLSTONE, N. .J is still grinding out prospects for a new 100 per cent. F. A. M. club and B. M. Dooley is duly on the job. Chairman Estabrook is responsible for the item and both puns.

QUESTIONS & ANSWERS

STRETCHING V-BELTS.

FRANK DAWSON.—Slipping of a V-belt is generally due to stretching and if this is the only reason, the belt must be allowed to stretch until it will no longer do so, or replace by another. Where small pulleys are used, stiff belts slip and are unsuitable. If the belt fits badly in the pulley groove, the contact will not be sufficient and slip will occur. See that the motor and rear wheel pulley are in line, as disalignment often causes destructive stretching and slipping. A poorly-formed groove occasionally allows the belt to "bottom," and this again causes slipping.

Rubber or rubber composition belts are very good for use in dry weather, but occasionally result in slip when wet. The stretch is not excessive, and many riders use the rubber belt for ordinary driving and a leather belt for wet or damp weather service. The rubber belt, however, deforms and takes a set quicker than the leather article, especially if alignment of the pulleys is not perfect. We advise your getting a new belt if the above conditions are found to have been fulfilled. Do not run a V-belt too tight, as stretching is encouraged, and the bearings are worn oval by the too great strain.

RACING QUERIES.

ROBERT CUNNINGHAM.—Joe Wolters' record that you refer to was not officially accepted, owing to his failure to have his machine measured before the race. (2) Salaries of professional riders vary widely, according to the length of time they have been riding and the prominence they have attained through their track work. There are no standard ratings, each company or organization of promoters having its own agreement with the rider. (3-4) We cannot give individual machine records with any degree of accuracy, and suggest that you write to the manufacturers in each case. They keep their records on file and will be glad to give you the required data. (5) The design of an exhaust cam for a motorcycle motor depends on the following: Size and lift of valve, speed of motor, bore and stroke of motor and size of shaft on which the cam is to be mounted. It is, therefore difficult for us to give dimensions, etc., as you do not give data on the above, nor even the name of the motor.

SPRUCING UP THE OLD BUS.

FROM R. L. BRUNNER, of Circleville, Ohio, comes the following timely information concerning a method of renovating a jaded looking machine for the coming season:

Clean the oil and dirt from the frame, tanks and all enameled parts of the machine, and then wash them with a rag dipped in gasoline, which will remove all the oil and make the varnish which is to be used flow more evenly. Retouch all the places where the enamel is rubbed off with enamel of the color already on the machine, then procure about eight ounces of clear, coach, body varnish from a carriage painter, and varnish all the enameled parts of the machine. This should be done in a room with a temperature not less than 75 degs. Fahrenheit, and care should be taken to avoid raising any dust while the varnish is wet. The parts should be allowed to stand more than 48 hours, after which they should be sponged with clean cold water before assembling. The result will be a surprise. The varnish will bring out the color in the old enamel and give a smooth surface. The varnish when dry is very tough, and one does not have to be an expert painter to apply it evenly if the temperature of the room is above 80 and the varnish is warmed before using, as under these conditions it will flow very evenly.

PACING MACHINES.

EDITOR MOTORCYCLE ILLUSTRATED: The writer noticed in your January 25 issue the answer to an inquiry re. the pacing machines at the Buffalo Vélodrome, Paris. The majority of machines used are made by Anzani, of 71½ quai d'Asniéres, Asniéres, (Seine), France, and are of 3.5 inch bore and 4.33 inch stroke, developing about 12 h. at normal speed. They are sold at about $400, and made only to order. The motorcyclist who visits the Palais des Sports in Paris can see pacing racers using these monsters almost nightly. For further information as to these machines, M. Durand, care of the Palais des Sports, Paris, will no doubt be glad to give it.

PEARSOL SARGENT.

MOTORCYCLE INSTRUCTIONS.

PHILIP L. ALLISON.—We do not know of a special school for motorcyclists in California, or for that matter, anywhere in this country. However, you should be able to obtain all information necessary from the agent who sells your machine. Our Motorcycle Manual, soon to be published, will also be of great practical value to you in acquiring a motorcycle education.

"DEVELINE" WHISTLE.

HARRY D. FOSTER.—You refer to the "Develine" whistle, in which there were two rotors inside which gave tones like a siren when blown. You should be able to obtain one from a good sporting goods house, or at least from one of the big mail order concerns, as Sears, Roebuck & Co., Chicago. We do not know who is the maker at present, but we know that they are on the market.

A 250-mile run is slated by the New Jersey M. C., of Newark, N. J., for Memorial Day.

GARAGE CHARGES.

J. O'LEARY.—Garage charges in New York City vary from $2 to $10, depending on the accommodation for the machines, etc. Gasoline is sold at 20 to 22 cents per gallon. Lubricating oil of good quality can be had for 65 cents per gallon upwards.

THE SPLITDORF STORY.

C. F. SPLITDORF of magneto fame, has issued an interesting brochure containing a resumé of the performances of engines equipped with his ignition in competition on road, hill and track, which forms a useful reference work of motor racing performances in general and the 1911 season in particular.

"A record of accomplishment" is the keynote to the publication and after referring to the founding of the house by Henry Splitdorf —a name associated with electrical appliances from 1858—it traces the progressive steps made by C. F. Splitdorf in the ignition field until his real entrance into the racing fold with the Vanderbilt Cup race of 1910 and his success in every branch of competition to the close of the 1911 season.

DAVIS PROMISES A CLUB.

THAT the loss of a prominent member of the Toronto Motorcycle Club, may prove a distinct gain for the Federation of American Motorcyclists, may be the case in the removal of Dan Davis, a well-known Toronto two-wheeler, to Sarnia, Ontario, which is about two hundred miles from the Queen City. Sarnia possesses a few motorcyclists but Davis, who is making a permanent change, promises that by the time he gets through, there will be another club in the F. A. M.—ily.

FERRO CYLINDERS.

IN addition to producing marine and stationary engines the Ferro Machine and Foundry Company, of Cleveland, Ohio, manufactures automobile and motorcycle cylinders and is finding a wide field for these products. The firm has contracts for motorcycle cylinders with several large companies, and among the automobiles carrying its cylinders are the Stearns, Peerless, Regal, Overland and Moon.

FITTING SIDECARS.

THE Hydro-Electric Commission, of Toronto, is equipping its fleet of twelve motorcycles with side-cars for the transportation of tools and supplies for the linemen employed. The side-cars are of the regular pattern. Several of the vans have been given a trial and have been proved to work very satisfactorily on snow-covered streets, as no storm during the past six weeks has caused an interruption in their use.

NEW CHICAGO CLUB.

ANOTHER live club has been added to the list of Chicago's busy motorcycle squads in the Englewood M. C., recently organized with the following officers: R. T. Purdy, president; H. W. Angsten, vice-president; N. Young, secretary; B. F. Koch, treasurer; J. R. Purdy, captain, and P. Thom, lieutenant. A stag party was given last week for the members and their friends and a highly enjoyable program was arranged. A number of runs and contests are being planned for the coming season.

USING MINNEAPOLIS VAN.

ADDITIONAL evidence that the two-wheeled brother of the automobile is working in close conjunction with its imposing relative is contained in the announcement that the Minneapolis light delivery van exhibited at the Chicago Show was purchased by the Peerless Motor Car Company, of Illinois, a branch of the Cleveland firm. The van will be used for collecting and delivering accessories and parts to be repaired, and the Minneapolis company just feels that the selection of its product by an automobile concern is in the nature of a tribute.

AN UPTOWN BRANCH.

THE Motor Car Equipment Co., 55 Warren Street, New York City, probably the largest exclusively wholesale automobile supply concern in the country, has opened an uptown branch at 238-240 West 56th Street, near Broadway, where an extensive stock of the best imported and domestic motor accessories will be carried for the convenience of their uptown trade and the neighboring cities in New York, New Jersey, and Connecticut.

The rapid growth of the firm's business has necessitated this additional branch, covering 10,000 square feet, and it will undoubtedly be appreciated by the trade in general. H. H. Seabrook has been placed in charge.

INVENTS DELIVERY WAGON.

A SMALL delivery wagon, to be equipped with a motorcycle motor, which was designed by F. W. Dickinson, of Columbus, Ohio, will be ready for the market in about 60 days according to the statement of the inventor. The plan is to equip the wagon with a seven or nine horse power motor and use it for deliveries. The capacity will be about 1,000 pounds. The vehicle will be called the "Automotor."

CLEVELAND AND VICINITY.

The M. E. Bertram Engine Company, of Cleveland, has been incorporated with a capital stock of $40,000, to manufacture and deal in gasoline engines for automobiles, motorcycles and motor boats. The incorporators are M. E. Bertram, Alfred A. Guthrie, K. S. Smith, L. M. Keller and A. G. Wallace.

Joseph N. Rogers, who comes from Portsmouth, Ohio, has opened a repair shop for motorcycles and bicycles in the old Grocery Building, on Third street below Madison street, in Ironton. He will have the local agency for the Indian.

The Kenton Motorcycle Company, of 114 South Detroit street, Kenton, has taken the local agency for the Thor.

T. E. Johnston, located at 16 Public Square, Lima, has taken the 1912 agency for the Flying Merkel.

LONG STROKE MOTORS.

EDITOR MOTORCYCLE ILLUSTRATED:—The motorcycle buyer of today, in looking over the different machines, may become confused because of the claims of the long-stroke people. He is told, for instance, that the long-stroke motor gives more power and greater economy. Let us discuss this question.

Suppose we have two motors of 3¼-inch bore, one motor being 3.6-inch stroke, the other being 4.0-inch stroke. Now cubic capacity, i. e., piston displacement, =

bore × bore × stroke × .7854;

thus the 4-inch stroke motor will take into its cylinder more gas, and give a corresponding increase of power, over the 3.6-inch stroke motor. This increase of power is because of the proportionately greater turning leverage due to the longer stroke. Therefore, with motors of equal bore, the one with the longer stroke is more powerful and uses more gas.

But suppose we have two motors of the same stroke, but of different bores. Then the one with the larger bore is the one with the greater cubic capacity. This means that it can take in a greater quantity of explosive mixture. Now if both motors use the same percentage of compression, they should have the same pressure per square inch at the moment of ignition of the charge. However, as the motor with the larger bore has the greater piston area, more usuable force is applied; the motor is more powerful, and uses more gas than the motor of like stroke, but of less bore.

From the foregoing, it would seem as if the long-stroke people only see one side of the question. In order to further compare the two types of motor, let us take a motor which will call "A," and compare it as regards power, with another motor "B." Let them both have the same cubic capacity, so that they will both use the same amount of gas at open throttle:

Let "A" have 3-inch bore, 4½-inch stroke, and "B" have 4½-inch bore, 2-inch stroke.

The moments of force of "B" and "A" are equal, for:

Force = the pressure of the exploding mixture (N), multiplied by the area of the piston head.

The moment of a force is the product of the force by the perpendicular distance from the center of moments to the direction of the force.

N times 15.9, (area of piston head), times 2.0, (stroke) = 7.95 N Motor "B."

N times 7.068, (area of piston head), times 3.0, (stroke) = 7.95 N Motor "A."

Thus motors "A" and "B" are equal in power. Power is a function of the cubic capacity, not of the bore or stroke alone.

HAROLD R. SHOEMAKER.

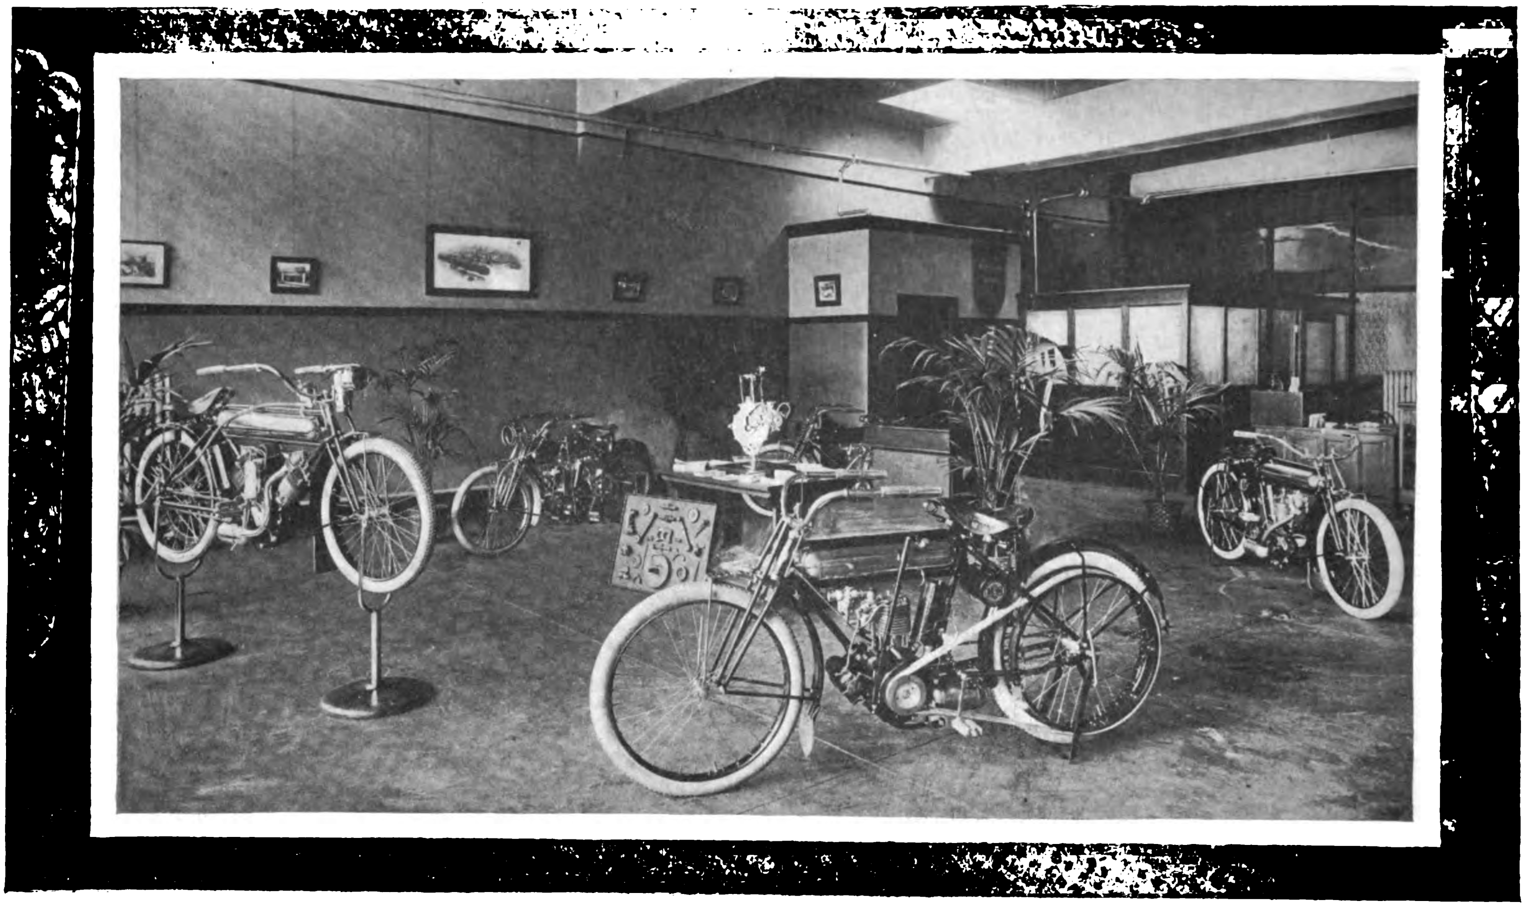
Syracuse, N. Y.

[No consideration is taken of motor speed in the above communication, which is hardly fair to either of the types under comparison. An internal combustion motor develops more power as the speed increases up to a certain point, sometimes called the "critical speed point," after which the power given off decreases in amount until the motor goes to pieces or stalls. Such being the conditions under which power is developed, a discussion neglecting speed would probably be of little value in motor design and its value in assisting a prospective rider to choose a mount would be questionable.

Undoubtedly, of two motors of the same bore, the one with the longer stroke takes in more gas per admission stroke than the other, by reason of the larger cylinder volume having to be filled on the long stroke as compared with that on the short stroke motor. Again, the practical limitations as regards speed have not been considered; motors of varying bore-stroke ratio, but of equal piston displacement, will have varying maximum speeds, and the horsepower given off will not be equal as a result. Taking the "A" motor of 3 by 4½ inches bore and stroke, the ratio is 1.1:5; the "B" motor of 4½ by 2 inches bore and stroke has a ratio of 2.25:1; the communication states that, being equal in piston displacement, they are equal in power. The experiments made to determine proper bore-stroke ratios in France, as an example, brought out the result that designs having a ratio of greater than 1.6:1 would be capable of but a moderate speed; between this ratio and the 1:1 ratio, the speed could be very greatly increased before the critical point was reached, while the very long stroke motors were capable of sustaining very high speeds. Motor "B," if fitted to a motorcycle, would probably not be able to attain 1,500 r. p. m., while motor "A" certainly should be able to do better than 2,000. The brake or the gas-engine indicator card would soon show which motor gave the more power, if one of the horsepower formulae is not considered sufficiently accurate to be used. Taking Roberts' formula, for instance: "A" should develop 5.1 horsepower, while "B" should only develop 3.8 horsepower under the conditions of speeds mentioned above.

Taking two other motors, "C" of 2¾ by 5 inches, and "D" 3¾ by 3.6 inches. Both have the same piston displacement, yet "C" will be enabled to run up to 3,000 r. p. m., while such a speed might mean destruction to motor "D." Taking the critical speed of "C" as 2,500 r.p.m., at that speed motor "D" would probably have passed its critical speed and the power developed would have fallen off. Consequently, the horsepower output would be greater at that speed for the motor "C." Again, it will be the comparison of brake tests or indicator card comparisons, rather than a consideration of relative piston-displacements or theoretical horsepower formulae.

One point which contributes to an increase in power in the long-stroke motor has not been treated in the above. This is in the more thorough burning of the charge during the longer movement of the piston when passing downward on the explosion stroke. This more thorough burning of the charge enables more power to be obtained from a given charge of air and gasoline than is the case in a motor of the same piston displacement and equal compression chamber capacity and pressure, but of shorter stroke and different bore. This is of great importance, and the proportionately greater turning leverage due to the longer stroke is not often considered in motor design and construction. The better burning of the charge results in economy in fuel consumption, and the long-stroke motor is in this the superior of that of the shorter stroke.—EDS.]



Attractive Display of M. M. Machines in the Chicago Branch of the American Motor Company.

SPEEDY DELIVERIES

Pittsburgh Merchants Praise Firm Which Operates Motorcycle Van Service Along New Lines.

PITTSBURGH, PA., now boasts of a new and promising enterprise, in the form of a "Motorcycle Quick Delivery" company, which is prepared to make immediate collections of small parcels for merchants and offices as well as for housewives. Three Harley-Davidson machines with side vans are used for the regular routes, while three fast "specials" answer the emergency calls. Merchants and others who wish to make use of the van service display a "Stop" card, and little time is lost. Approximate figuring has shown that a package collected by the company at 10 o'clock in the morning is in the hands of the consignee an hour later. In most cases shoppers at the big stores find the goods at their homes when they return, so speedy is the delivery system.

The company guarantees the safe delivery of all articles, even the most delicate, and business men in all lines, including grocers, butchers, jewelers, physicians and druggists have shown their approval of the service rendered by putting much work in the new company's path. The delivery fees are nominal. Well-known business men of the East End are at the head of the company, which has the following officers: J. M. Kelly, president; U. D. Hoffman, secretary; and Edward Schaffer, treasurer. T. C. Donahue, Pittsburgh agent for the Harley-Davidson machines, has signed a contract to provide the firm with machines and vans and also to do the repair work necessary for a term of one year.

WHERE THE MACHINES GO.

MANY inquiries are heard these days as to what becomes of the motorcycles that are exhibited at the shows, and a little information in this direction is timely. In some cases the show machines have a special finish for display purposes, but nearly all the mounts shown are taken from regular stock. The Hendee company, for instance, shows only stock models and after the shows the machines are usually turned over to the local agent to be disposed of with his regular line. This company does not ship machines from one city to another for the shows.

From the New York Show five of the Indian machines went to the headquarters of F. A. Baker & Co., downtown New York agents, and B. A. Swenson, Indian representative in Providence, R. I., took the sixth home with him. The Indian machines shown at the Chicago Show all went to the stores of the Edwards-Crist Company, and in Kansas City, Cleveland, Toronto and other show points the motorcycles displayed were taken from the stock of the local agents.

DEALERS TO ORGANIZE.

MOTORCYCLE dealers in Detroit, Mich., are discussing the advisability of organizing a dealers' association for the purpose of conducting race meets and to foster co-operation along business lines. Several meetings of the dealers have been held and definite action is expected at an early date.

William H. Loft has secured the Indian agency for Gloversville, N. Y.

MAKING SEVERE TESTS

Marketing of Black Hawk Motorcycles Is Delayed While Company Makes Exhaustive Trials of Its Product.

FOR some time past the Black Hawk Motor Co., of Rock Island, Ill., manufacturer of the Black Hawk motorcycle, has been conducting most exhaustive tests of its product with a view to demonstrating the reliability and efficiency of each detail in its makeup, and a formal announcement with reference to the marketing of the machine can be expected at an early date. Where even a slight change was found advisable after a test the company has called upon its designers to improve the part in question, and this policy accounts for the present delay in placing the machine before the public.

A reliability test of the oil pump which has just been completed gives an insight into the company's methods. It is stated that the pump was driven at a speed equal to eighty miles an hour, ten hours a day, for twenty-five days, so that an approximate total of 20,000 miles was run up. At the close of the test the pump was still working perfectly and showed little or no wear. After this test the pump was given a severe road trial with the same satisfactory results. The company announces that its tests of other parts are being conducted along the same lines.

C. W. SCHUTTE, of Wallace, Wis., reports that he has invented a steering wheel for motorcycles and bicycles, but as yet a detailed description of the device has not been made public.

TO INSURE MOTORCYCLES AGAINST THEFT

Eighty Per Cent. of a Stolen Machine's Value Will Go to Owner Who Pays Small Fee into Novel Club Proposed by Edwards-Crist Company in Chicago—Outline of the Plan.

WITH a view to discouraging the theft of motorcycles and protecting the owners of stolen machines, the Edwards-Crist Mfg. Company, of Chicago, has started a movement to organize a motorcycle insurance club and there is every indication that the idea will be widely taken up. It is the intention to assess each member of the club two per cent. of the retail value of his machine, and to insure it for eighty per cent. of its value. If the retail value of a machine is $250, the owner will pay five dollars a year and if the machine is stolen he will receive $200 from the club.

The club will be managed by a board of directors elected by the members, and the funds will be handled by a competent and responsible committee. Another committee will have charge of plans for the recovery of stolen machines and will offer a reward, probably $25, for the return of each machine. If the motorcycle is not recovered within fifteen days the owner will be entitled to eighty per cent. of its value from the organization. Should the machine be recovered subsequently the owner will have the privilege of buying it back from the committee at the price paid him by the club, plus the reward. If he should decide not to buy it back the committee may sell it and turn the funds into the club treasury.

Another phase of the plan calls for the publishing of a monthly list of stolen machines which could be placed in the hands of every agent and dealer within a radius of 100 miles of Chicago. It is pointed out that more than 100 motorcycles were stolen in Chicago during 1911, and the Edwards-Crist Company feels that the time has arrived for concerted action. The company states that the plan could hardly be made thoroughly successful unless 1,000 riders enrolled in the club, and steps have been taken to ascertain how widely the movement will be supported. That it is deserving of success goes without saying, and its promoters are of the opinion that it can be carried through.

SANDRUCK IS BUSY.

F. W. SANDRUCK, Emblem agent in Baltimore, Md., has received a 1912 demonstrator and is busy showing prospective buyers just what the machine is capable of doing on the road despite inclement weather.

BALTIMORE AGENTS.

FLANDERS machines are being handled in Baltimore, Md., by the D. C. Walker Auto Co., which is preparing to wage an active sales campaign for the coming season.

BARBEN & FARMER, for many years agents for bicycles, have secured the agency for the Flying Merkel for Watertown, N. Y., and vicinity.

BIG SHOW SALES.

BESIDES the very large number of smaller orders taken at the Show, Sales Manager Weschler, of The Hendee Manufacturing Company, closed orders at Chicago for three full carloads of Indians for immediate shipment.

GUY CAMPBELL, of Waterloo, Indian distributor for northeastern Iowa, states that he has three carloads of the Wigwam machines ordered to meet the early summer trade.

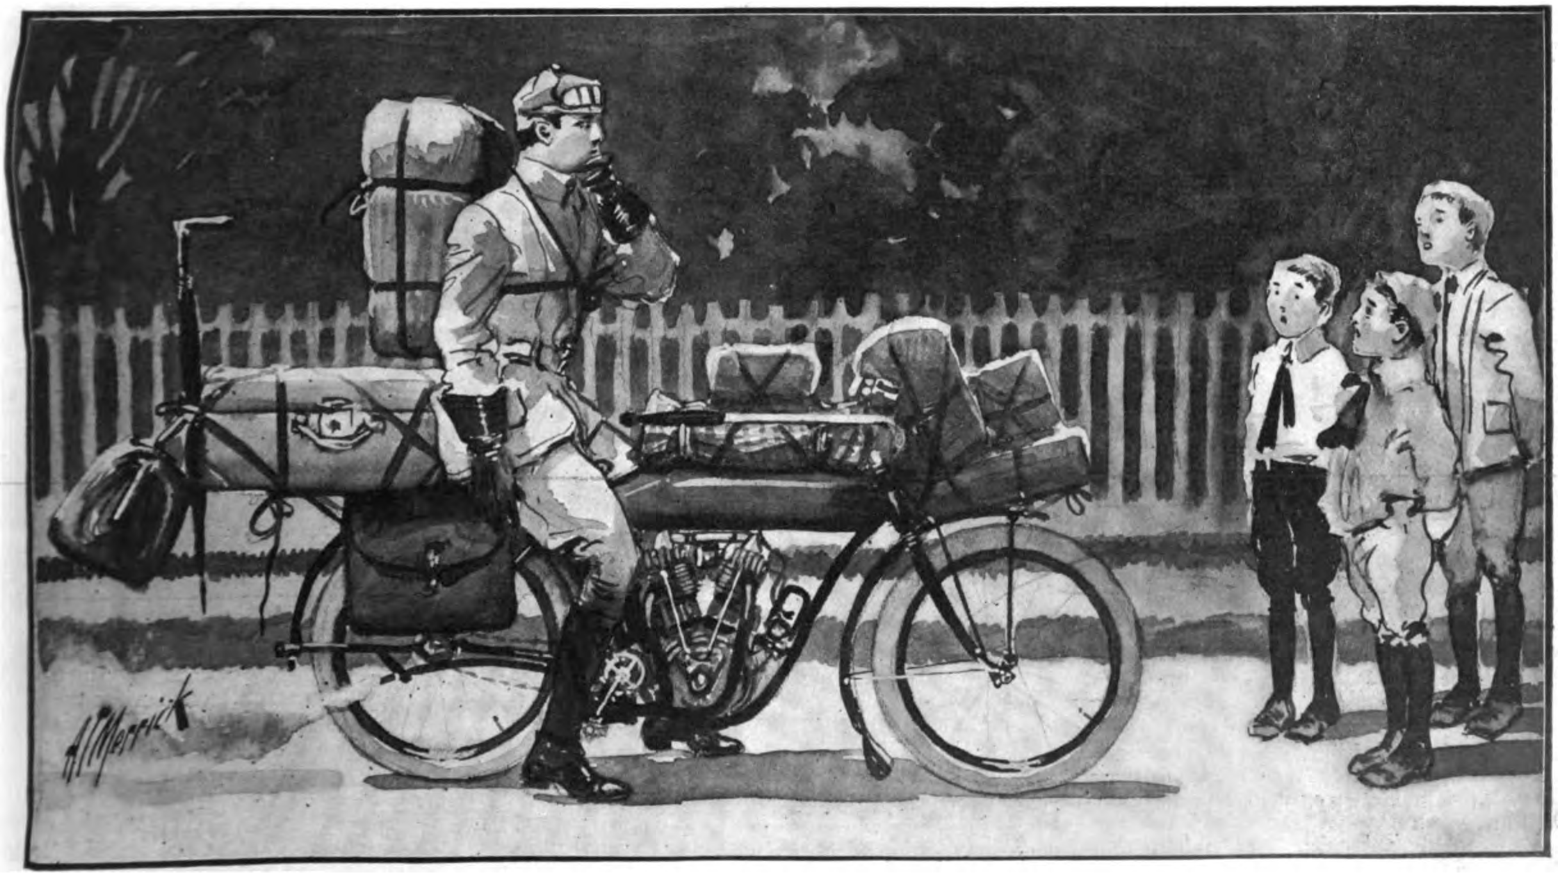
ELEVEN motorcycles are now in use by the Government in the Philippine Islands.

VISITED PIERCE PLANT.

WALTER ANDREWS, of Toronto, the Canadian bicycle champion, and agent for the Pierce motorcycle, visited the Buffalo offices of the Pierce Company recently to transact business in connection with this season's trade in the Ontario metropolis.

THE Essex County (N. J.) Park Commission has decided to equip its police force with motorcycles, and two Indian machine were purchased recently from Walter Goerke, Indian agent in Newark.

THE officials colors of the F. A. M., blue and yellow, have been adopted for the motorcycle license plates in Maine.



Tourist (Ready to Start on His First Long Journey): "I Wonder Whether I Have Forgotten Anything."

Wandersee's Model Store, the Flying Merkel's Home in Detroit.

BUSY DAYS IN LOS ANGELES DISTRICT

Clubs Are Booming, Dealers Are Selling Machines By the Score and Racing Teams Are Keyed Up to An Unusual Pitch.

H. H. WHITSELL, agent for the Excelsior motorcycle, gives out a rosy statement of last year's business. He states that he sold 1,500 Excelsiors in the Southern California territory in the year just past, and 300 of this number were disposed of in Los Angeles. Whitsell has not received his 1912 Excelsiors as yet, but has sold twenty-five in the city pending the first shipment, which he expects about March 1. Whitsell's shop is the headquarters of Jake de Rosier, Joe Wolters, Balke, and a lot of the fans.

C. M. Frink announces that there is to be a cut in prices on his shock absorbing seat devices. He has added to his stock the Kittle attachment, and will push this patent along with the well-known Frink devices. Frink handles the Wagner motorcycle, and has disposed of his first shipment of the 1912 models. His second shipment is now on the way.

The Los Angeles M. C. is making improvements in its clubrooms. The club is enlarging and refurnishing the quarters and making many desirable changes. The club recently installed its new officers as follows: G. H. Blaylock, president; F. F. Everitt, vice-president; A. H. McCollough, recording secretary; E. E. Longley, treasurer, and Bert Leadbetter, captain.

Eddie Lingenfelder, former motorcycle racer and record-breaker, who is now manager of the Los Angeles branch of the Goodyear Tire and Rubber Company, attended the Chicago Show. Lingenfelder also visited Akron, Ohio, before returning to Los Angeles to attend a meeting of branch managers of the Goodyear company.

C. W. Risden, Indian distributor for Southern California, has done a record business for the first month of the new year. He received 117 machines and has disposed of all of them over his territory and in Los Angeles. The Risden shop is quite a rendevous for motorcyclists, and most of the racers that are riding at the new Motordrome can be found there. The shop is a large and attractive place and well fitted.

C. L. Smith, distributor for Southern California for the Pope motorcycle, expresses surprise and pleasure at the great business done by him last year and the amount that he has already done in the present year. He received his first shipment of ten machines the first week in January and disposed of all of them within a week. He now has a second shipment of ten on the way to Los Angeles. Smith also handles the Merkel in this section, and reports a big demand for these machines.

Earl Armstrong, the Excelsior racer, has left Los Angeles for his home in Denver, and will not compete in the races to be held here. He explains that the races at the new motordrome will be opened in Denver about March 1, and that the local Excelsior agent wants him to ride in that vicinity.

Fred Bente, of Bente and Baumgardner, San Francisco, is in Los Angeles on his vacation. Mr. Bente has a large ranch near the city and has been spending some time there.

E. A. Meyer, recently of Salt Lake, with the Salt Lake Cyclery, has taken charge of the repair department of C. L. Smith. Mr. Meyer is well known in motorcycle circles, both in Salt Lake and Denver.

The county police force has bought recently two 7 h. p. two-speed 1912 Indians. The county force is well represented in and about Los Angeles and is doing very creditable work.

C. W. Risden has received from the Hendee Mfg. Co. a new Tourist Trophy model. It is attracting a great amount of attention.

The city authorities have recently passed an ordinance in this city compelling all motorcycles to be equipped with tail lights. It will go into effect in thirty days.

Johnnie Albright, the speedy little rider, is in this city and making a host of friends. This is the advent of this racer as a professional in Los Angeles. He was here several years ago but did no racing. Albright rides an Indian.

SANDUSKY FIRM MOVES.

THE Ogontz Garage Company, of Sandusky, Ohio, is moving its automobile and motorcycle business into larger quarters and will give special attention to pushing the motor two-wheeler throughout the coming season. The firm will continue to handle the Excelsior machines for Erie county.

WHY FRENCH IS BUSY

Baltimore Agent Is Interesting Many Firms on Possibilities of the Motorcycle as a Commercial Vehicle.

BALTIMORE, MD.—Howard A. French, of H. A. French & Co., local distributers of the Indian, reports lively business. Last year he sold 225 Indians in this city and Maryland, and he states that he expects to dispose of 500 machines during 1912. Since the first of the year he has received orders for 50 new machines, the majority of which have already been delivered.

Commercial houses here are rapidly taking to the motorcycle to facilitate the handling of business. Mr. French has just sold to J. H. Gavan & Co., Carter & Iseman and A. Burker & Co., commission merchants, a machine apiece. They have been shipped to Florida, where their agents will use them in going from farm to farm to purchase products to be disposed of in the market here. These firms believe that the motorcycles will save them a lot of expense and time in covering the territory.

The Baltimore Street Cleaning Department has just purchased three new Indians for the inspectors; the Consolidated Gas, Electric Light & Power Company has bought two, which makes five machines owned by it, for the use of its inspectors; John B. Adt & Co., plumbers, have bought one; John K. McIver, contractor, is trying to cut down expenses and time with a new Indian and special officer McCarthy, of the Maryland Automobile Commission, is the proud possessor of a 1912 model with which he is endeavoring to tra[illegible]speeding motorists. French has also delive[illegible] to the Sanders Machine Shop, Havre de Grace, Md., a 1912 Indian, which this firm will use in its work in the country.

STILL THE LIST GROWS.

NEW registrations for F. A. M. repair shops, for the week ending February 2, were as follows:

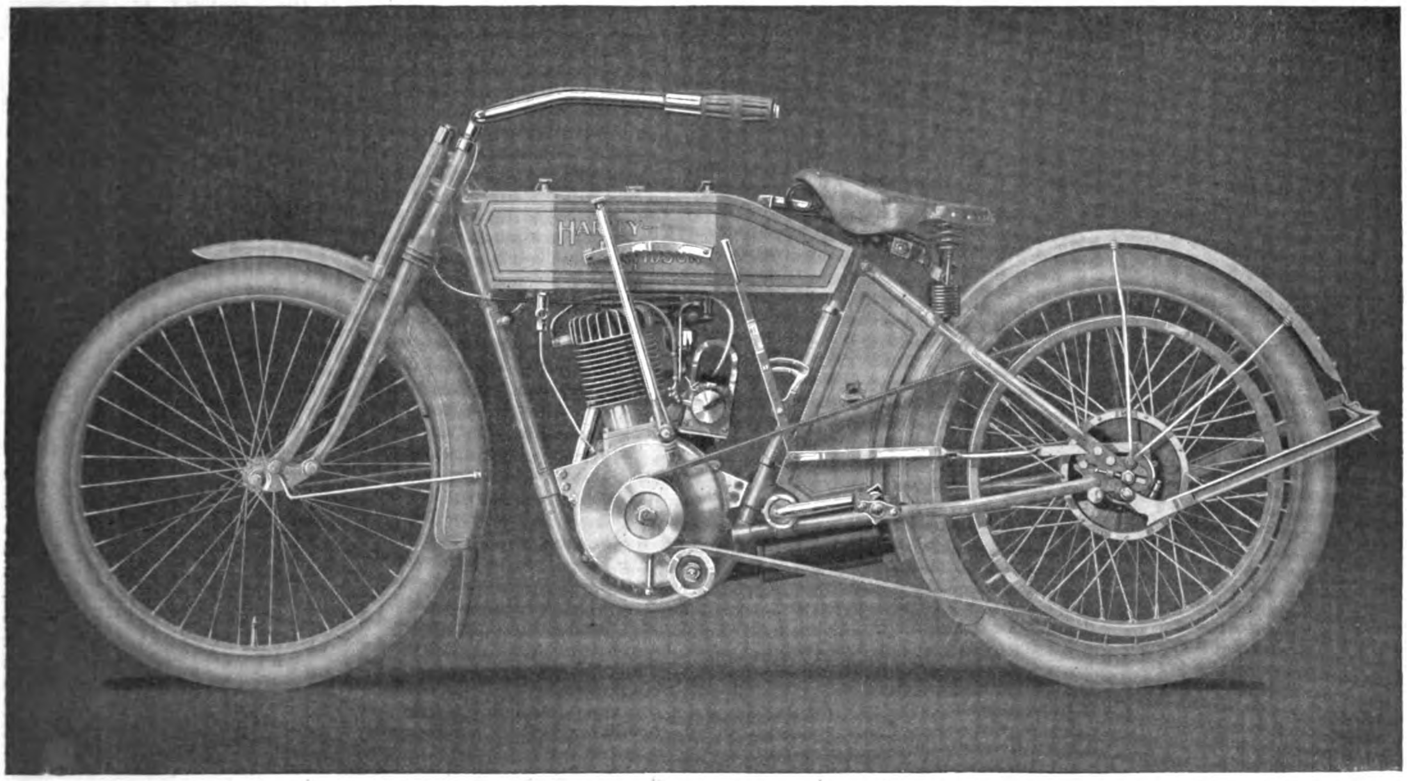
Julian Mfg. Co., Troy, Ohio; Joseph Kegal & Co., 445 Galena avenue, Freeport, Ill.; Powell Brothers, 67 N. Market street, San Jose, Cal.; Polier & Walby, 214 Jefferson street, Portland, Ore.; T. T. Hause, Excelsior Garage, 1022 Oak street, Napa, Cal.; L. E. Stair, 113 S. Main street, Mitchell, S. Dakota; F. U. Buchanan, 229 Bedford street, Johnstown, Pa.; A. W. Erpenstein, 120 N. Hamilton street, Saginaw, W. S., Mich.; W. S. Gibson, 4239 Frankford avenue, Frankford, Pa.; C. U. Fisher, 403 Broadway, Louisville, Ky.; Angus M. MacMaster, Main street, Sleepy Eye, Minn.; L. C. Notbohm, Rome, Wis.; Hagedorn & Webster, 206 E. Jefferson boulevard, South Bend, Ind.; Higginbotham & Douglas, 132 Genessee street, Waukegan, Ill.; C. U. Becker, 210 8th street, Hoquiam, Wash.; Howard D. Ingalls, Scottsville, N. Y.

SANTA ANNA AGENCY.

DE LONG and Tomblin, of Santa Anna, Cal., have taken over the agency for the Pope. They have received their new machines and are working up a good business.

POPE IN RIVERSIDE.

RIVERSIDE, CAL.—The Wheeler Cyclery have recently taken up the Pope agency in this city. The firm has a new store and is well equipped for business.



LAST YEAR there were more Harley-Davidsons sold in Akron, Ohio, than any other three makes combined. In spite of this, six times as many 1912 Harley-Davidsons have been sold and delivered there in the last four months, as were 1911 models in the same time a year ago.

This early start would not have been possible if the factory organization back of the Harley-Davidson was not on the job.

Harley-Davidson Motor Company

Milwaukee **Wisconsin**

LISTER IMPROVEMENTS.

THE Lister motorcycle establishment in Cleveland, Ohio, has been remodeled and now has additional facilities for handling the firm's growing business. An office has been built on a balcony in the rear of the store and more space has been set aside for the repair department. New tools and machinery have also been installed. A large transparent sign on the front of the buildink now catches the eye of the passerby, and indicates that the firm is up with the times. One of the new chain-driven Harley-Davidsons is the center of interest in the salesroom.

SPECIAL MOTORCYCLE DISPLAY.

WHILE the Harrisburg (Pa.) automobile show was in progress the West End Electric Company conducted a motorcycle exhibit of its own, displaying five models of the 1912 Indians. The exhibit was in charge of G. A. Gettys.

CLAFLIN BREAKS RECORDS.

LON CLAFLIN, Indian agent in Salt Lake City, Utah, reports that he has had more inquiries concerning machines so far in 1912 than during the entire year of 1911.

DEALERS ORGANIZE

Newly Formed Association in Buffalo Improves Trade Conditions and Has Bright Outlook.

AT a meeting held in the offices of the Vim Cycle and Hardware Company, of Buffalo, N. Y., on January 29, the motorcycle and bicycle dealers of the city effected a permanent organization of the Buffalo Cycle Trade Association. The following officers were elected to serve for the first year: Edward Young, president; H. Krigbaum, secretary; F. D. Barton, treasurer; Messrs. Schwegler, Nabinger and Ferrand, directors. Meetings will be held at the offices of the different manufacturers and jobbers on the first Friday of each month.

The spirit manifested at the meetings has been friendly and highly encouraging, and the association has already done more to harmonize the trade in Buffalo than any other movement attempted in years past. Already the special committee composed of President Young, George Ferrand and John W. Henry, president of the Vim Cycle and Hardware Company, has been able to correct a number of abuses which have hampered the trade in general, and the outlook for further progress is very bright. The dues in the association are $2 per year. After the organization meeting an enjoyable lunch was served.

CLEVELAND TRADE NEWS.

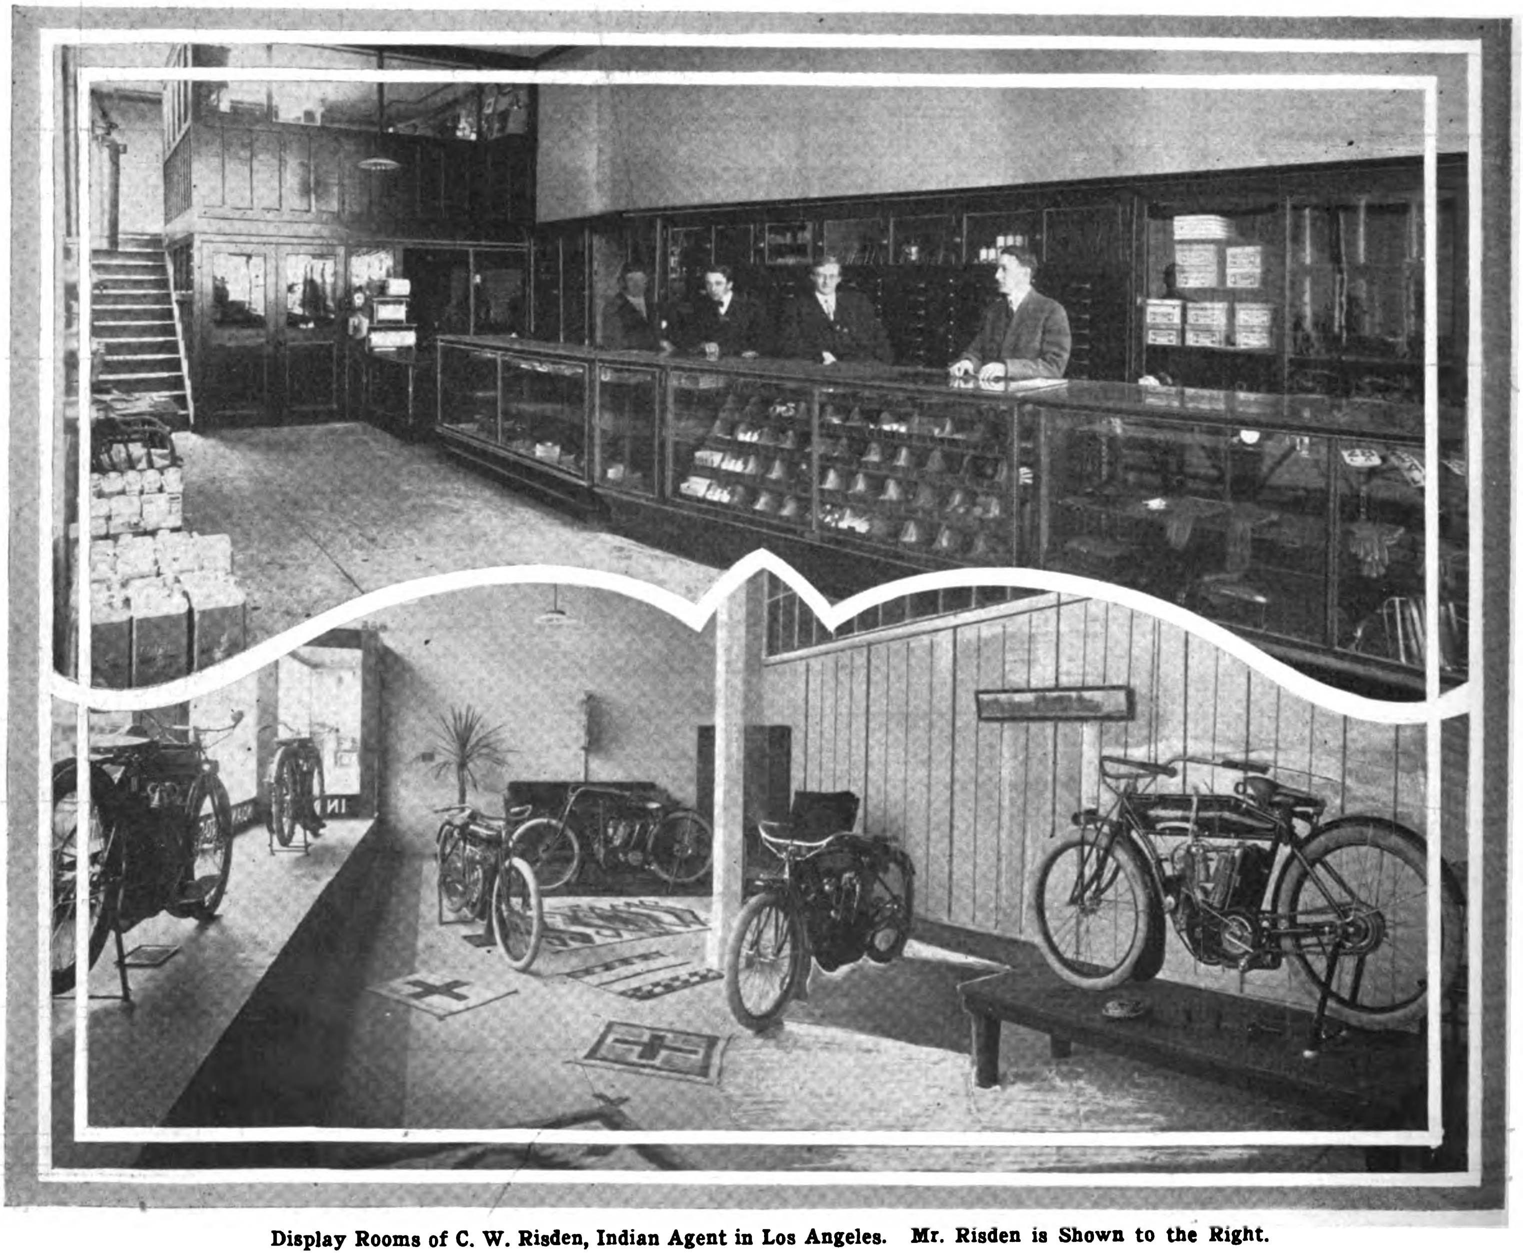
AT the Cleveland automobile show, which opened on February 17, the following dealers are exhibiting: L. J. Mueller, Indian; Lister Bros., Harley-Davidson and Flying Merkel; Kumler Bros., Reading Standard and Flanders; Cuyahoga Motorcycle Co., Marvel; Jepson Bros., Curtiss; Casino Cycle & Supply Co., Thor, Excelsior and New Era; Hall Motorcycle Co., M. M.; Ferguson Bros., Yale. The show closes February 24.

Lister Bros., Harley-Davidson agents in Cleveland, report that they have taken 135 orders for the 1912 H-D models. They are also displaying the new chain seven Flying Merkel and piling up orders for it.

Kumler Bros. recently acquired the Reading Standard agency, and several of the new models are on show in their salesrooms.

Ferguson Bros. have an attractive display in their show window, in which the new Yale 5 is featured.

The New Era has been added to the line of the Casino Cycle & Supply Co., at 6802 Superior avenue.



Display Rooms of C. W. Risden, Indian Agent in Los Angeles. Mr. Risden is Shown to the Right.

Mobiloil

A GRADE FOR EACH TYPE OF MOTOR

JAKE DE ROSIER SPEAKS FOR

Mobiloil

BIRMINGHAM, ALA., Oct. 12, 1911.

VACUUM OIL COMPANY,
Rochester, N. Y.

Gentlemen: Today I lowered the Track Record, making five miles in 4 minutes 16 seconds, on an Excelsior Motorcycle (7 horse power), making a new World's Dirt Track Record. I used MOBILOIL "B," and found it one of the finest oils made for motorcycles and especially adapted for extremely hard pulling. I recommend this oil most heartily.

Respectfully yours,
Jake De Rosier

HARLEY-DAVIDSON GROWTH

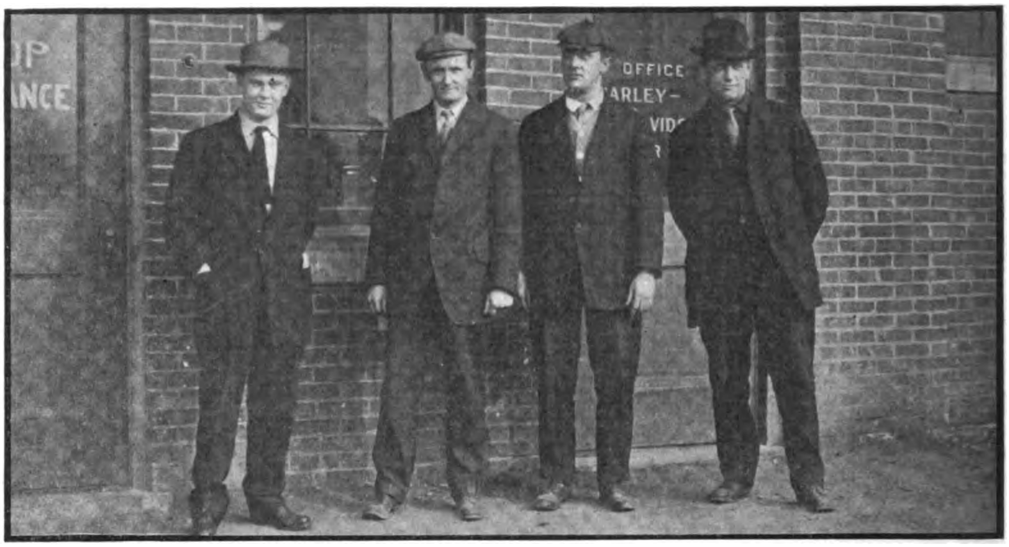
Brief Story of a Remarkable Development

SITUATED near the homes of the four young men whose brains, energy and perseverance are responsible for its existence, the Harley-Davidson factory, in Milwaukee, is a revelation in the way of marvelous development in a very short period. The Harley-Davidson factory is distinctive in that every step of its growth has been entirely financed with the resources of the founders of the business. Sacrificing every other consideration to one great purpose, Walter, "Bill" and Arthur Davidson and Will S. Harley, have not only realized their dreams of a few years ago, but have succeeded in producing results which have exceeded their fondest expectations. So rapid has been the growth of the Harley-Davidson business, that it has not always been easy to satisfy the demand; but the business has not only grown at a wonderfully rapid pace, but it has also been gradually organized, so that today the makers of Harley-Davidson machines are in position to do full justice to almost any number of orders. However, in anticipation of this and next year's increase in business, approximating the fifty per cent. annually which has been the rule during the past two or three years, the Harley-Davidson Company has given out contracts for the construction of a factory addition, which will practically double the concern's present capacity. Excavating for the new structure was begun this week.

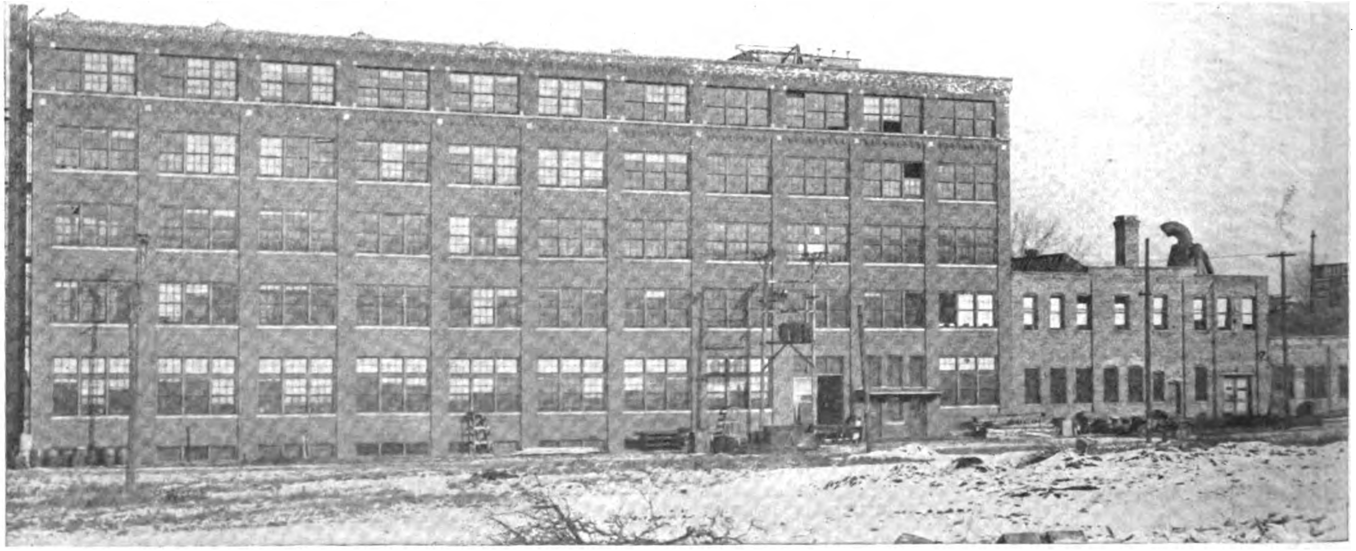
Harley and the three Davidsons are all veteran riders, and all practical mechanics. Therefore when designing and building new models, their viewpoint is that of the rider, and to their understanding of the rider's requirements they attribute the bulk of their success. Each of the four has his particular work outlined in the general scheme, and although they do not believe in high-sounding titles, it is interesting to note that Walter Davidson is president and general manager; Arthur Davidson, vice-president and sales manager; Will Harley, secretary, treasurer and engineer, and "Bill" Davidson, superintendent.

While making a tour of the factory, a week ago last Monday, the writer was especially impressed with the intimate knowledge which each one disclosed of the workings of the most intimate pieces of machinery. This is particularly true of Walter Davidson, who is an ideal factory manager. He knows his establishment from cellar to roof, and he knows his men. He is above all things else practical, and that is the keynote to Harley-Davidson success. The heads of this factory have learned from experience that simplicity of design, combined with the best possible material and workmanship, are big factors in the construction of a successful motorcycle. In the consistent pursuit of this plan, they have transformed, in the course of a few years, an insignificant little workshop into an imposing plant, employing nearly 600 people and having a daily capacity of about 50 machines. A production of a hundred a day will be possible when the addition now under construction is brought into use.

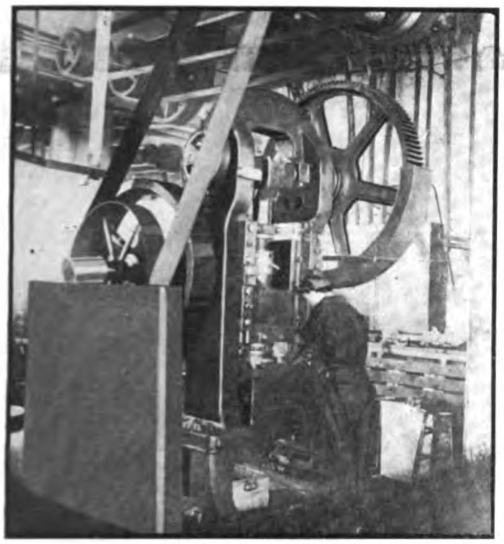
On the day of the writer's visit the first morning's mail brought in just 673 letters, and orders for the day totalled 115 machines. This is an everyday occurrence at this time of the year, a rather surprising condition of affairs in view of the fact that the company's first shop was not finished until 1905. The first structure that could be dignified with the name of factory was finished in the fall of 1906. It was originally a one-story frame



Arthur Davidson, Walter Davidson, W. S. Harley and W. A. Davidson.



The Harley-Davidson Factory, Showing Main Building and Two of the Old Structures.



The 100-Ton Press.

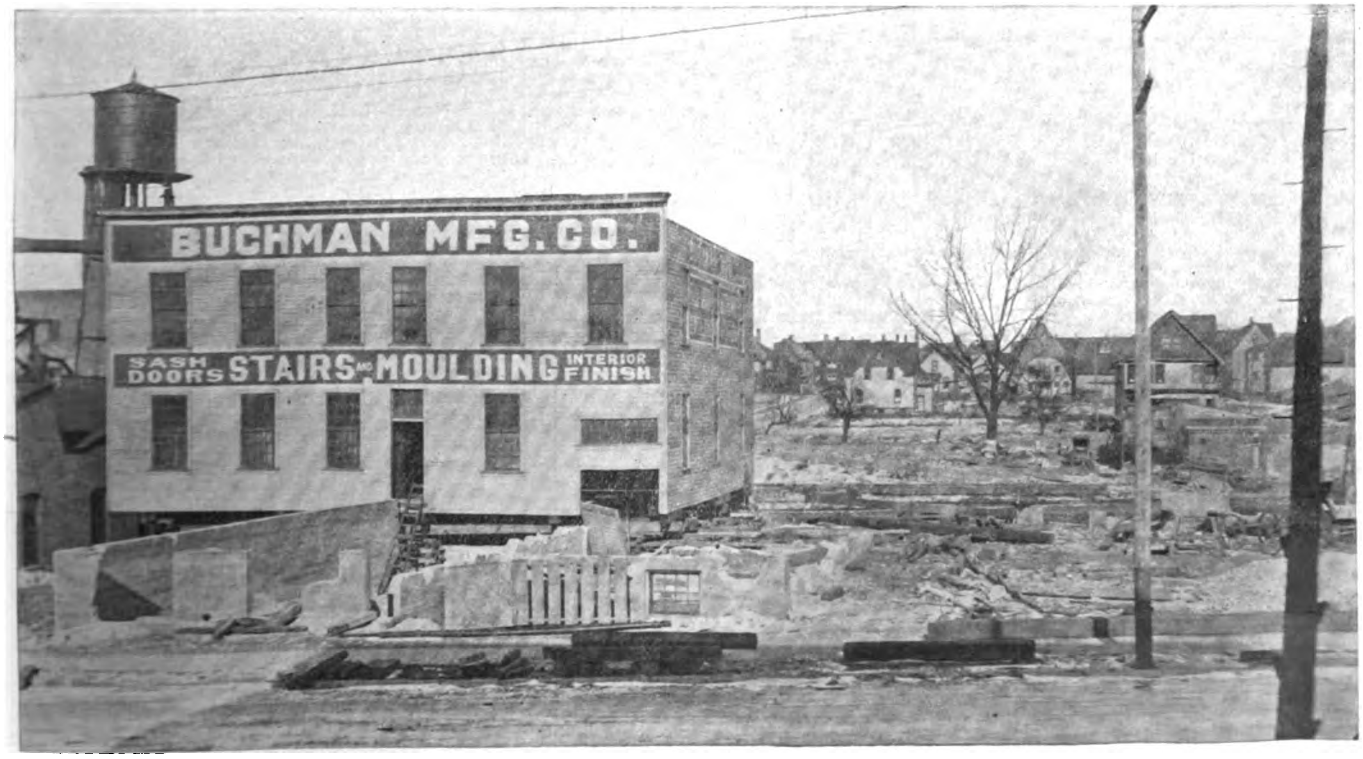
building 85 feet long by 28 feet wide. A year later, a second story was added. In 1908, an addition of the same size as the original structure was built and, in 1909, a brick building which is now used as a machine shop. In the spring of 1910, a single story frame building 90 feet long by 30 feet in width was completed, and in July, 1910, work was started on what is now part of the main factory, a five story structure, about 80 feet square. In October of the same year, one of the frame buildings, after having been used for not more than six months, was torn down to make room for the second five-story building, which was finished in April of last year. Last December the company bought property to the east of the factory and moved to one corner of the plot an old planing mill, which was put into use as soon as possible, but only as a temporary expedient. This structure will be torn down upon the completion of the new building. The latter will be L-shaped, with dimensions of 60, 170 and 180 feet respectively. There will be five stories and a twelve-foot basement.

The Harley-Davidson Company was organized in 1907 with a capital stock of $35,000. This was increased in 1909 to $100,000 and in 1911 to $500,000. With the completion of the new factory, the concern will give employment to between 750 and 800 people. Both orders and output are averaging fifty per cent. more than they did last year, and the indications are that shipments for the 1912 season will easily exceed 8,000 machines. The increased output of the new factory will bring the annual capacity of the plant to about 15,000.

At the present the different departments are somewhat cramped, notwithstanding which fact the factory organization is wonderfully complete. Aside from the cylinder castings and frame tubing, practically everything constituting the machine proper is manufactured in the Milwaukee factory. On the top floor of the most recently completed structure are the brazing and hardening departments, which are now running night and day. It is here that the writer was given an opportunity of studying the process of acetylene welding at 6,000 degrees Fahrenheit; the carbonizing and heat treatment of all moving parts, and the building up, filing and polishing of frames. The enameling, striping and transfering are done on the third floor.

The busiest and by far the most interesting part of the factory is the first floor section, with its stamping, automatic screw, machine, tool and grinding departments. It is here, also, that the polishing and plating are done. The stamping department is a distinct innovation, which, nevertheless, has been proven most successful. Here are machines exerting a force of from 75 to 100 tons, working with marvelous accuracy and despatch. The writer's attention was called to a 60 horsepower gas engine which was purchased in 1909 and which the members of the firm thought would supply all the power needed for several years. Today, that engine only runs part of the machine shop, its capacity having been outgrown within a year after its purchase.

Every Foot of Space Is Utilized in the Harley-Davidson Plant.



Old Planing Mill, Now the Machine Shop. To the Right Is the Site of the New Building.

EMBLEM, 1911 model, magneto, 5 h. p. $185; Excelsior, 1912 model, twin 6 h. p., $160; Indian, 1909 model, 3½ h. p., $85. Other machines from $20 up. Get our catalog. Wolke Motorcycle Co., Louisville, Ky.

FOR SALE.—The largest stock of used machines ever offered. All makes and models. Every one guaranteed. $40 up. Write for list. American Motor Co., 2730 Michigan Ave., Chicago.

MISCELLANEOUS

RIDERS, BE UP TO DATE, and wear a 1912 sweater Monogram to match the name of your motorcycle; hand made, of high grade felt; artistic duplicate of each factory's design; can furnish for any make. Send 50c. and receive monogram by return mail. Prices to dealers. Tappan Mfg. Co., 219 Fourth St., Sioux City, Ia.

MACHINIST, lathe, boring mill or bench hand, would like a position in motorcycle factory. Is willing to go anywhere in or out of United States. Address Mich. Csernus, 86 Church street, New Brunswick, N. J.

WANTED.—Old copies of MOTORCYCLE ILLUSTRATED previous to the year 1909. State what numbers you have and at what price you will sell them. Address "H.," care Motorcycle Publishing Co., 51 Chambers St., New York.

MOTORCYCLE WANTED.—State make, price, and condition. Welch Wilbur, Newberrry, S. C.

FEBRUARY, 1912. THIRD ANNUAL MAGNETO BARGAIN sale imported high tension magnetos at less than cost of importation. Our third annual genuine inventory sale of U. & H. Master Magnetos, made in Germany, is now in progress. All H. P. sizes and types for 1, 2, 4 and 6 cylinder motors, suitable for motor cars, motor wagons, motor boats, motorcycles, stationary engines, etc. Write now, before they are all gone, for circular and price list. The sale is a real Magneto money saver. J. S. Bretz Company, 250 West 54th Street, New York.

THE REFLECTOSCOPE.—Instantly attached to the handlebar of any make motorcycle; enables you to see everything on the road behind. As necessary as a lamp or horn. No need to twist your neck to see if your trailing companions are in sight. Its use in traffic is necessary, and it is a valuable accessory in club runs and speed contests. Designed especially for motorcyclists, and is triple adjustable in action, affording any angle of vision. Made of the finest material, quadruple-nickeled, and contains a 3-inch reflecting mirror of the highest quality imported lens. Sent postpaid to any part of the United States on receipt of price—$2.60, or sent C. O. D. on receipt of a small deposit. Money positively refunded if not better than represented. Reflectoscope Co., Angola, N. Y.

DEALER'S CARDS, Etc.

"BOB" BRAZENOR, "Specialist on Repairs." Brooklyn agent for Harley-Davidson. Parts for Excelsior, Indian, etc.; supplies. 1507 Bushwick avenue, Brooklyn.

SCORED M'CYCLE CYLINDERS REPAIRED, $3 each by autogenous welding. This includes grinding to make bore smooth and round as before scoring. Be sure to send piston with cylinder. Our method is both better and cheaper than reboring because it avoids the necessity of fitting special oversize pistons and rings. We also repair broken cylinders and crankcases at about one-quarter cost of new ones. Abundant references and testimonials supplied if you require proof. Waterbury Welding Company, Waterbury, Conn.

B. & C. TWO-SPEED and free engine gears for chain-driven motorcycles of the counter-shaft type. Bushnell & Cannon, 1268 East 80th street, Cleveland, Ohio.

THE LATEST AND BEST guaranteed Motorcycle Supplies at lowest prices will be shipped same day your order is received. You get satisfaction in every package. Write for largest Motorcycle Supply Catalog ever printed. Motorcycle Equipment Co., Hammondsport, N. Y.

T. J. SIXSMITH, expert repairing; agent for R.-S., Indian and Excelsior motorcycles. 203 W. 100th street, New York.

MOTORCYCLES.—Save dealers' profits; buy direct from the owners. I have all makes on my lists. Indians and Marshes from $20 up. Hundreds of other machines at comparatively low prices. Get my prices before purchasing. King, automobile broker, 217 West 125th street, New York City.

SECOND-HAND MOTORCYCLES.—75 of them, $25 up; three tri-cars, $125, $300 and $350, respectively; expert repairing, experimental work, aeroplane supplies. New York Motorcycle Co., Inc., 318-320 West 48th street, New York.

PARTS in stock for F.-N., Curtiss, Royal Pioneer, Indian, Thor, Marsh, Griffon and others, and sundries. Tiger Cycle and Aeroplane Co., 782 Eighth ave., New York.

FULL LINE of N. S. U. and Flanders "4" motorcycles; N. S. U. repairs and parts, two speeds, motorcycle accessories. The Sun Motor & Supply Co., 206 West 76th street, New York.

FORGET MATCHES?—Carry a Matchless Sparker; lights headlights in a gale of wind; 20 cents complete. W. Hetherington, 417 Ridgewood Ave., Brooklyn, N. Y.

YOUR BROKEN MOTORCYCLE CYLINDERS and crankcases made good as new by autogenous welding at an average charge of about one-quarter cost of new parts. No charge made unless weld is satisfactory. References cheerfully given. Waterbury Welding Company, Waterbury, Conn.

What They Say About Heitger Carbureters

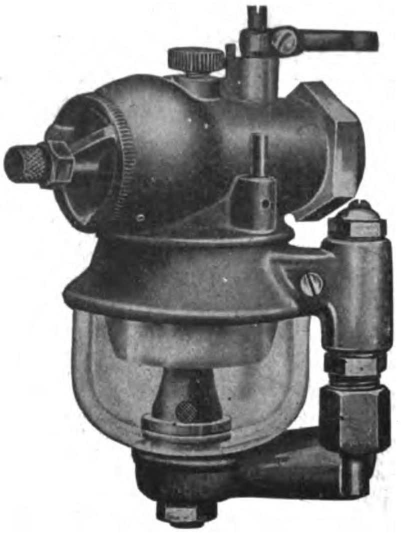
We Have Bushels of Such Letters, Given Voluntarily

DR. G. A. HAWKINS, Jerome, Ariz.—Am well pleased with carbureter for my Indian 7. In fact, it makes motorcycling a pleasure, whereas before (for me) it was hard work.

JOHNSON & VAN KEUREN, Danbury, Conn.—Our customers are delighted with Model G-D. Your carbureter is certainly perfection.

FRED M. GIDDINGS, Galesburg, Ill.—I received the carbureter for my single Excelsior and find it absolutely O. K. in every respect. It is certainly a pleasure for me to say this after the continued trouble with the old carb.

M. A. WESLING, Ludlow, Ky.—I want to say I am well pleased with carbureter bought for my Thor 4, and would have no other. Your guarantee to run motor smoother and with more power is well said. You couldn't give me my old carbureter I was using. Have increased the gear on my machine and it pulls better than with the smaller one used before.



Model H—Price, ¾ in., $9.50; 1 in., $10.00. Metal or Glass Bowl.

MARSHALL MOTOR CO., Kansas City, Mo.—We wish to state that the Heitger is giving excellent satisfaction on the New Era and Greyhound, handled by us. The high and low speed adjustment and glass bowl are the best on the market.

W. D. POPE, Athens, Ga.—Am well pleased with carbureter on my Marvel.

FRANK LIBBY VALIANT, Angola, N. Y., May 31, '11.—Since last February I have covered 2,000 miles on my sturdy Emblem. This has been during extremes of temperature from 4 degrees below zero to 102 above. So far have not had the slightest trouble with carbureter or machine, and cannot too highly commend its attention to all motorcyclists who are having carbureter troubles. I think the glass bowl splendid, and many motorcyclists who have seen it have commended it very highly.

WALTER SCOTT, JR., Philadelphia, Pa.—Feel delighted; can get 56 miles per hour geared 4 to 1. I weigh 175 pounds. This I consider good.

You see how these people are satisfied. You can get the same satisfaction by using a Heitger; gives 5 to 60 miles per hour, 75 to 125 miles per gallon; is easily adjusted, and remains so; is speedy, reliable and efficient. Glass bowl if you wish, showing gasoline level and float action, strainer, etc. Used by six manufacturers of motorcycles as exclusive equipment. Why? Catalog for the asking.

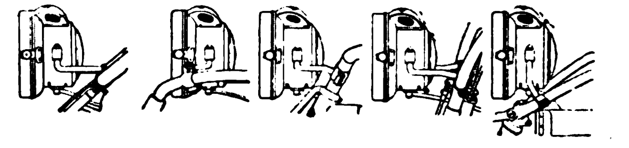
"OLD SOL"



"Old Sol" is a line of lamps for motorcycles, bicycles and carriages that has made good and the reason for this can be found in the one word: "Service." What this means in one detail may be seen in the illustrations above showing "Old Sol." No. 1 in position on various types of handle bars. Every motorcycle may be classified under one of these groups, most machines under three. This helps you in selecting brackets. Send for our copyrighted lamp and handlebar chart.

SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of any other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16-inch steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive insurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

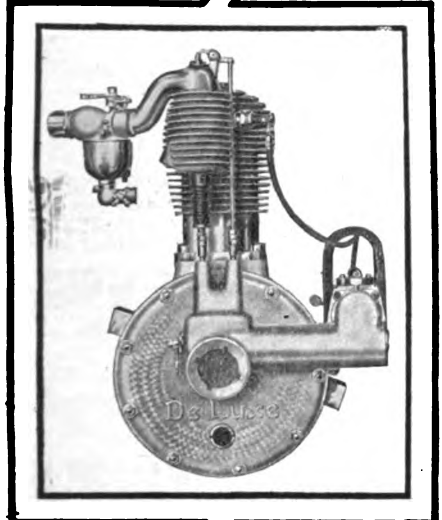
A REVOLUTION

IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

One-piece crank shaft.
One-part crank case with cover.
Improved cam and magneto drive.
Oil tight motor.
Large Valves.
Simplified design throughout.
Reduced number of parts.
Silent Motor.
Large ball bearings mounted in steel lined pockets.
Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

The materials entering into the construction of a tire are important factors, but something more than the best materials are necessary to produce the desired results—that something is the knowledge of rubber and how to handle it from its crude state to the finished article.

Kokomo Tires

SIXTEEN YEARS OF EXPERIENCE is back of every Kokomo Tire, and experience counts for more in the manufacture of rubber tires than in any other industry.

It is this experience that eliminates the guesswork and places our product beyond the experimental state.

Kokomo Motorcycle Inner Tubes command the largest sales because of their uniform quality.

Supplied in both Butt-End and Endless.

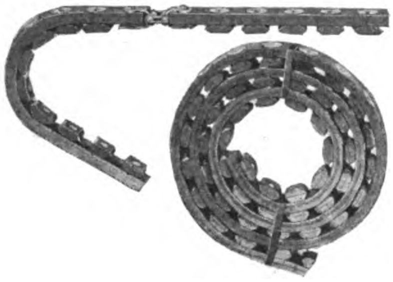
The One Best Belt

SPARTAN

Service

After all, the inevitable questions of every user of belts are, **"Will it do its work well?"** and **"What has been the experience of others?"** So we won't waste your time by detailing with what care the hides are selected, their "Spar-tannage", a secret process of tanning, or the skilled labor employed, or the many stretchings which each belt undergoes before it is declared ready for work by the inspector, and a thousand and one other things upon which we **might** dwell. But we only refer you to

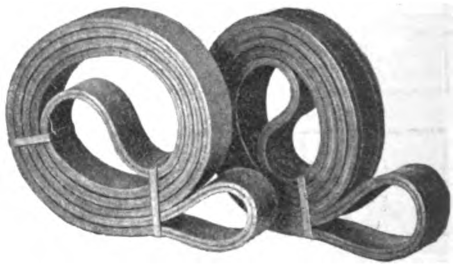


SPARTAN "V" BELT.

80%

of the

Motorcycle Manufacturers in the United States



SPARTAN FLAT BELT.

They will tell you that the **Spartan Belt** holds the record for mileage; that it has withstood the most terrific strains, in hill climbing contests, race meets, road tours and so on; that its secret tannage makes it impervious to heat, cold, oil or water—in a word, that they are SATISFIED that the **Spartan Belt** fulfills in every respect the duty imposed upon it, which is Perfect Transmission.

My Third Anniversary

Red Head

March 4th 1912

I was inaugurated March 4, 1909—the same day as President Taft.

When I took the oath of office, I knew that I was better fitted than any other spark plug to serve the people. To-day a happy family of over 1,000,000 RED HEADS have been elected by the motor industry throughout the world.

But I would feel disappointed if I could boast only of the largest *national* sale. I am jubilant on this occasion because I am the *accepted Standard for Service.*

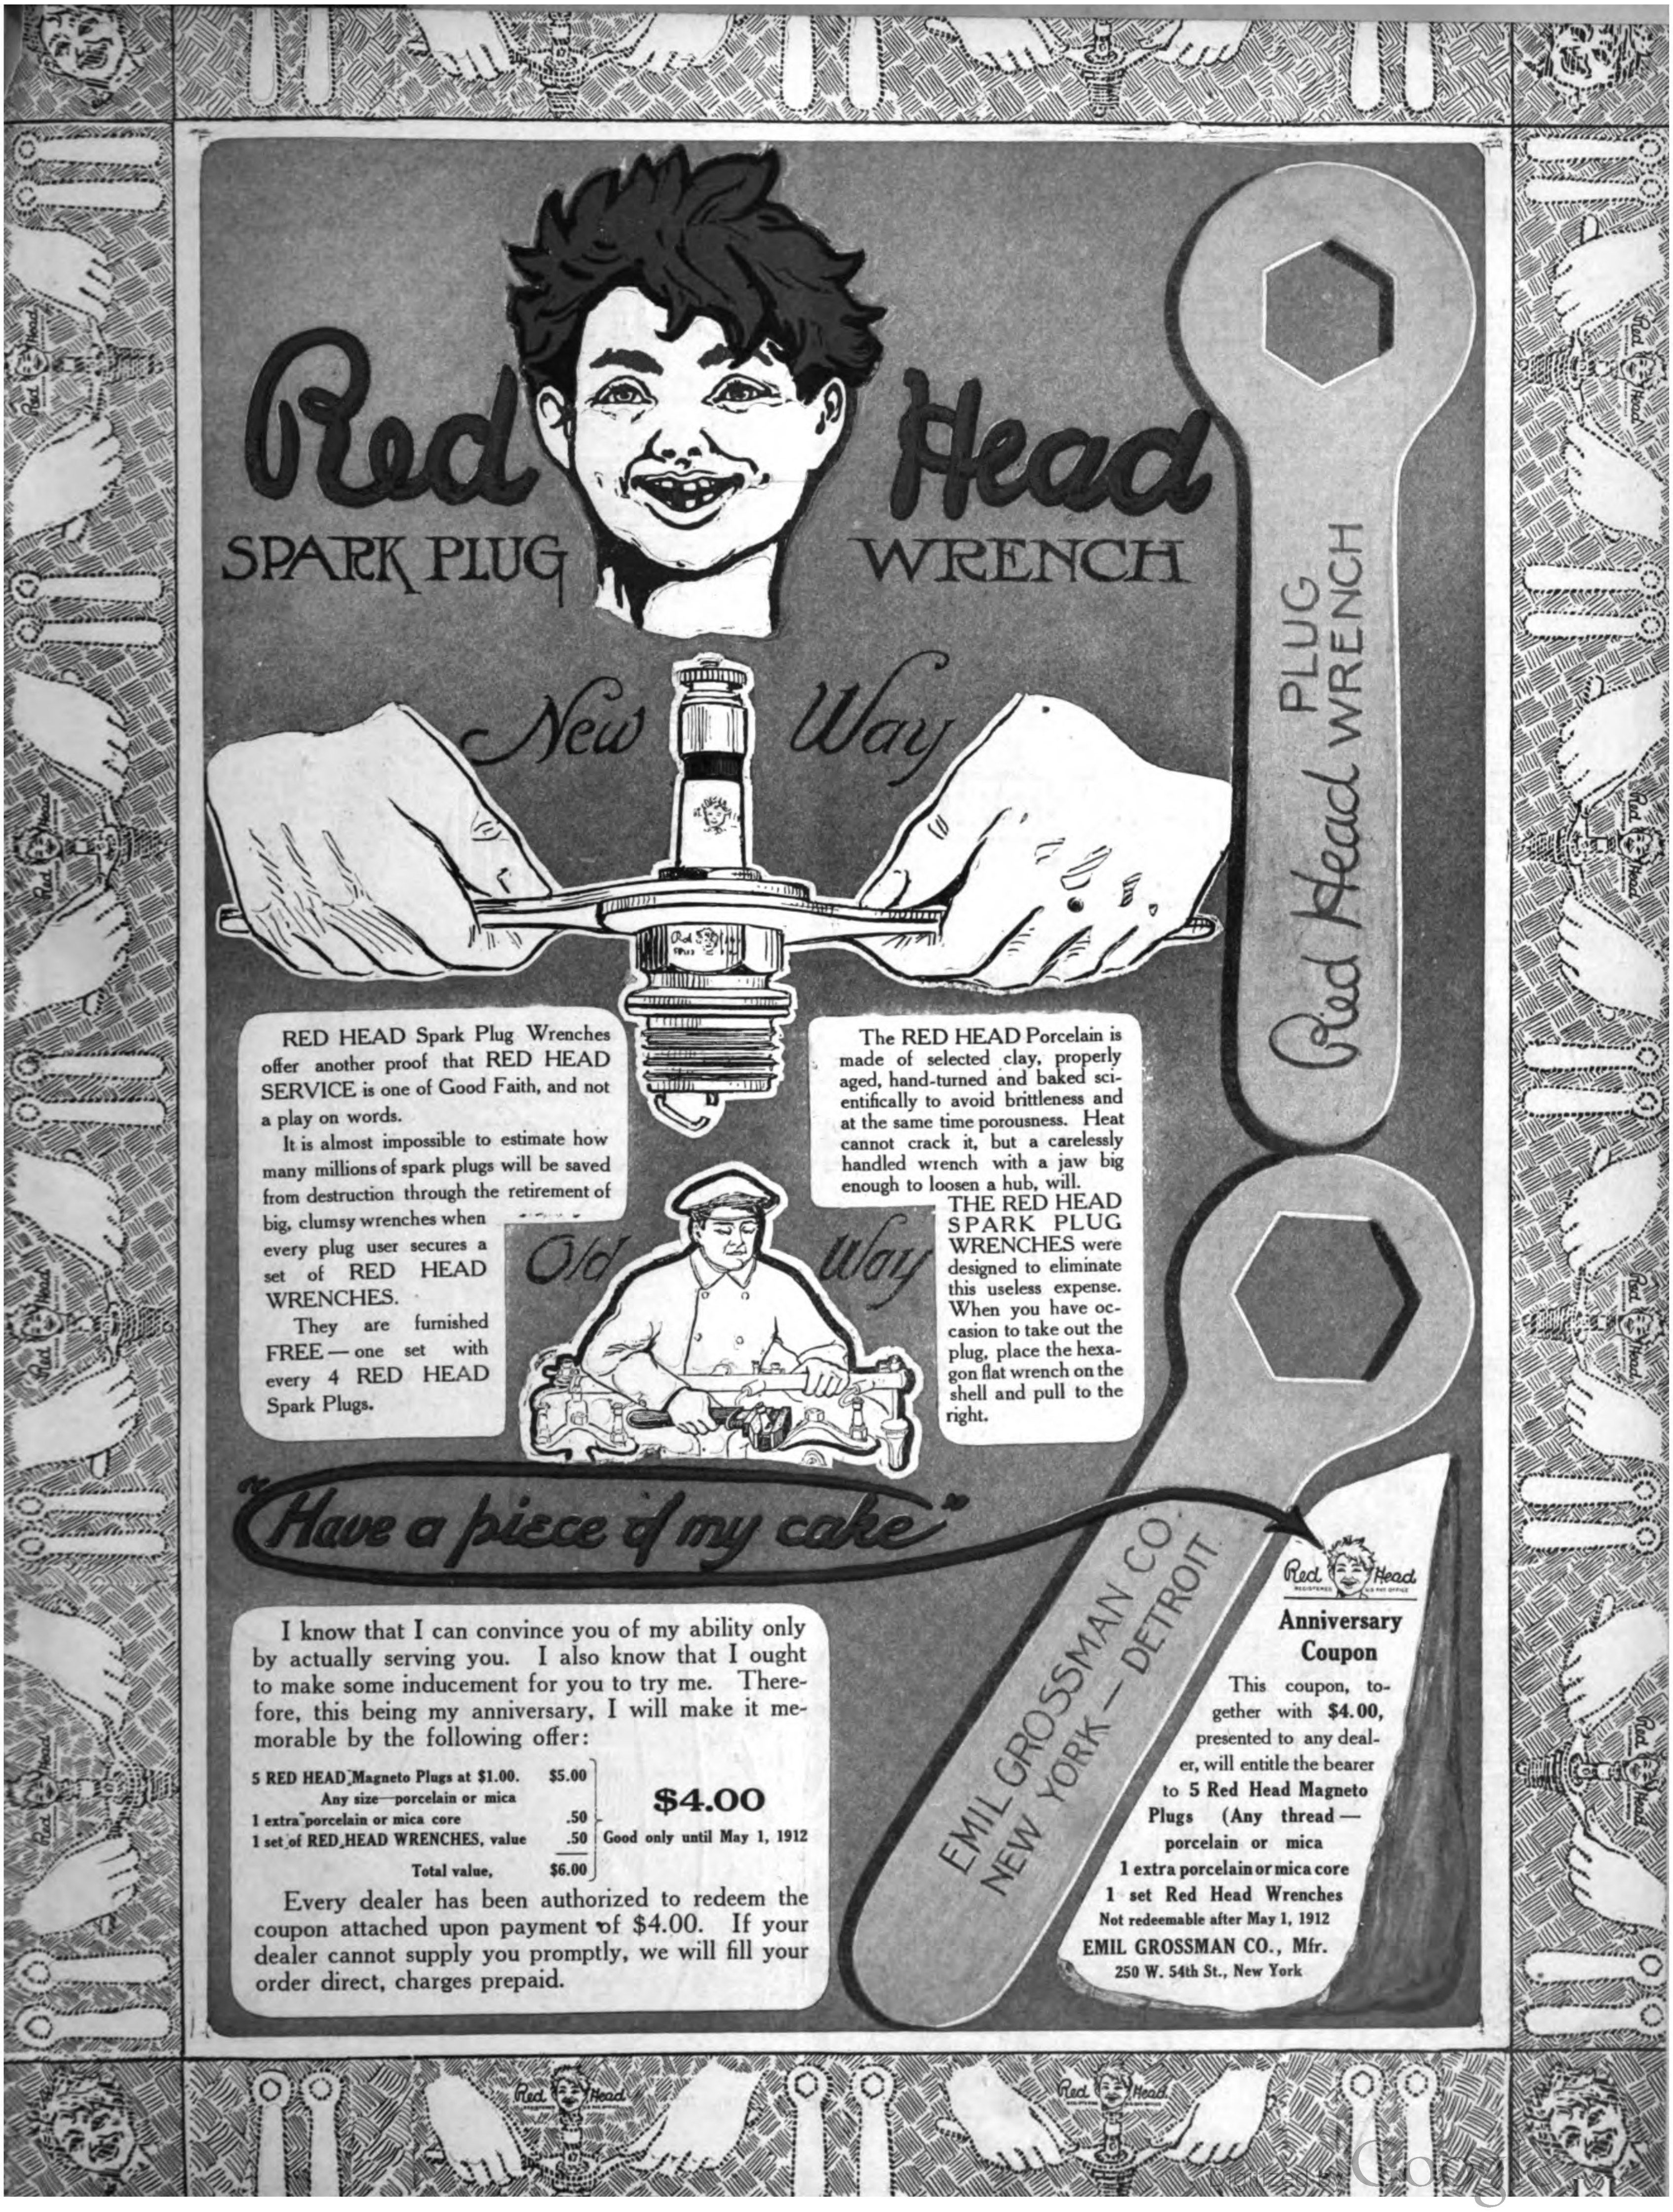
If you are not personally acquainted with me, the introductory anniversary coupon on the last page entitles you to participate in my birthday party.

Emil Grossman Company, Manufacturer, New York

Western Branch and Factory, 844 Woodward Avenue, Detroit

Canadian Distributor: Hall Motor Supplies Co., 141 King St., E., Toronto

R. S. V. P.



RED HEAD Spark Plug Wrenches offer another proof that RED HEAD SERVICE is one of Good Faith, and not a play on words.

It is almost impossible to estimate how many millions of spark plugs will be saved from destruction through the retirement of big, clumsy wrenches when every plug user secures a set of RED HEAD WRENCHES.

They are furnished FREE — one set with every 4 RED HEAD Spark Plugs.

The RED HEAD Porcelain is made of selected clay, properly aged, hand-turned and baked scientifically to avoid brittleness and at the same time porousness. Heat cannot crack it, but a carelessly handled wrench with a jaw big enough to loosen a hub, will.

THE RED HEAD SPARK PLUG WRENCHES were designed to eliminate this useless expense. When you have occasion to take out the plug, place the hexagon flat wrench on the shell and pull to the right.

I know that I can convince you of my ability only by actually serving you. I also know that I ought to make some inducement for you to try me. Therefore, this being my anniversary, I will make it memorable by the following offer:

5 RED HEAD Magneto Plugs at $1.00. Any size—porcelain or mica	$5.00	**$4.00**
1 extra porcelain or mica core	.50	
1 set of RED HEAD WRENCHES, value	.50	Good only until May 1, 1912
Total value,	$6.00	

Every dealer has been authorized to redeem the coupon attached upon payment of $4.00. If your dealer cannot supply you promptly, we will fill your order direct, charges prepaid.

Empire Tires

WEAR LONGEST

Because they are made of the best material obtainable, consisting of strictly long staple cotton duck and a tough wear-resisting compound of rubber, by expert workmen under the supervision of men who KNOW HOW and have the interest of EMPIRE POLICY at heart

REMEMBER WE ONLY MAKE ONE GRADE

"February 28th, 1912.

"Empire Tire Co., 1305 Michigan Avenue,
"Chicago, Ill.

"Gentlemen:

"Replying to your inquiry as to what I think of Empire Tires, my Harley single, equipped with Empire Tires, I rode in the Western F. A. M. tour last July from Chicago to Buffalo and return, together with R. E. Underhill.

"We saw lots of tire trouble on this trip, but we both made the entire trip to Buffalo and return without once touching our tires.

"Since that time I have ridden my machine almost every day and a good deal during the winter, and would estimate my mileage between 3,000 and 4,000 miles. A careful examination of my tires at this time shows them to be in perfect condition and from appearances should be good for at least as many more miles.

"You can put me down on your BOOSTER list, as I am certainly all for Empires, and have specified Empire Tires on my new Harley twin for 1912.

"Yours very truly,

"J. C. Hosman."

RIDE EMPIRES AND FORGET TIRE TROUBLES

Do not take any other. INSIST on your dealer equipping your new machine this year with EMPIRE TIRES Then you know you have the best. Do not be persuaded to accept a cheaper or inferior tire, but ask for EMPIRES.

CLUTCH CONTROLLED FROM THE HANDLEBAR

SPECIFICATIONS;

1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm., bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1:5, 1:4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handlebar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

ALSO TWO-SPEED GEARS

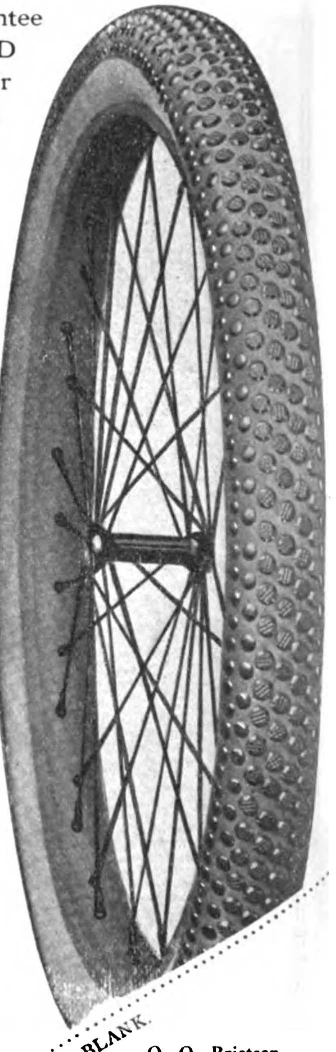
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50
26 x 2½	6.00	28 x 2½	7.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. Yale Quality

Model 27, 7 H. P., $285.00

The Quality That Shows

When a manufacturer claims Quality for his product, he should be able to show you.

YALE Quality is no mystery. It is DOMINANT and TANGIBLE from tires to handle bars and proves itself by accomplishment.

Its source is drop forged frame fittings, motor parts, cranks, controlling levers, etc. The best seamless tubing scientifically reinforced; skilled workmanship throughout and the highest grade equipment on the market, such as Bosch Magneto, Yale-Eclipse Free Motor Clutch, 2¾-inch studded tires and the Y-A Shock Absorber.

Its proof is the enthusiastic support of every YALE owner and the winning of every big endurance test of material importance.

Such is YALE Quality. It costs a little more than the other kind, but it is worth the money.

Four models for 1912, single and double cylinder, 4, 5 and 7 horse power. Prices, $210 to $285.

Our catalogue describes them all. Write for it today, or see the nearest YALE Agent.

THE NEW

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

You're Not Spending Money When You Buy An Excelsior Auto-Cycle

You're not spending money when you buy an Excelsior Auto-Cycle—you are investing it. The Excelsior will not only prove to be a time and car-fare saver—but it will be, because of its long life, its durability, its sturdy and careful construction, **a life-time investment.** The Excelsior is clean, comfortable, strong, speedy and simple.

The Excelsior Is Built—Not Made

Piece by piece, part by part, the Excelsior Auto-Cycle is **built.** The frame is of Shelby steel tubing and reinforced—the fittings throughout are drop forged—all to give strength and durability. The cylinders and bearings are ground to size and absolute roundness, with proper allowance for running fits to an accuracy of 1/4000 of an inch. The engine is hung low to give steadiness. Auto-type mudguards, chainguard, aspirator and oil-proof bearings give cleanliness. The Kumfort-Kushion spring seat post and perfected cradle spring fork give comfort—the small number of parts and ease of operation, give simplicity. There is nothing wanting in the Excelsior—that's why it **always makes good.**

We Take Care of the Future

We believe in the future of the motorcycle. We are building a business besides building a machine. We feel that serving past purchasers deserves as much consideration as selling new machines.

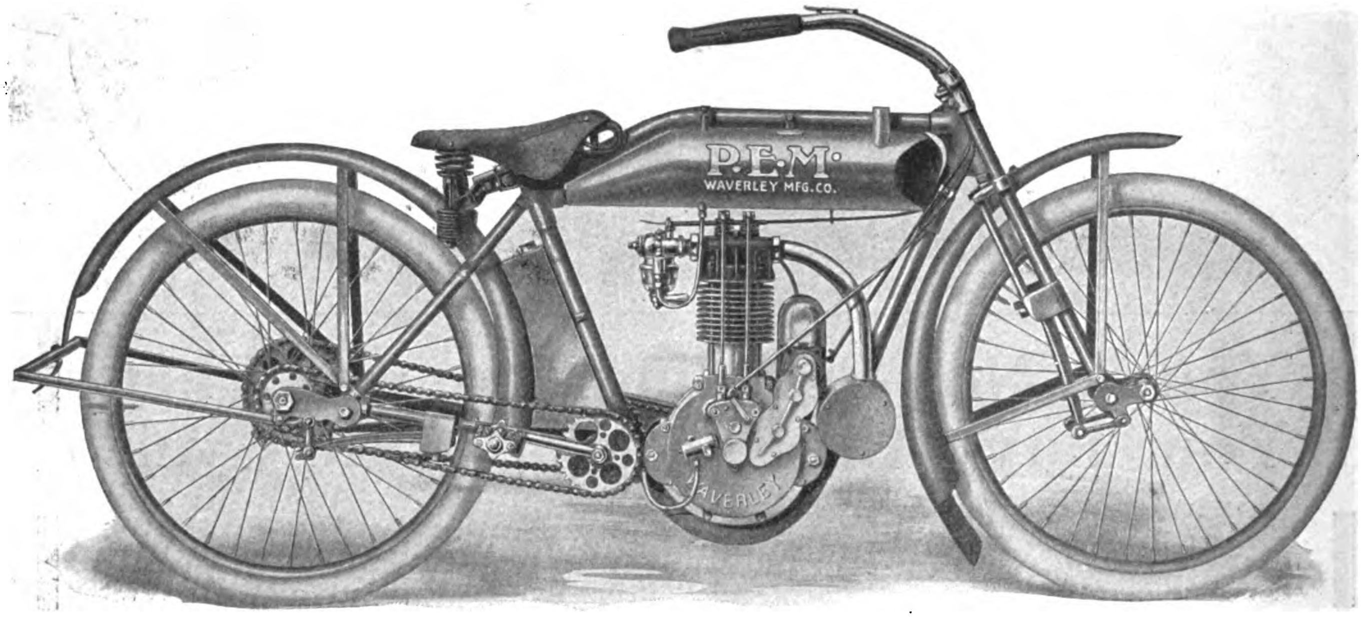
The P. E. M.

Formerly the Waverley



P.E.M.
WAVERLEY MFG. CO.
WAVERLEY

Most motorcycles are pretty much alike. The P. E. M. is distinctly different and every difference has a reason.

The P. E. M. Cushioned Frame is as different from spring posts and similar devices as a modern limousine is from a farm wagon.

Instead of a coil spring, hidden away in the frame tube, you ride on four cradle springs with three leaves each, and there is no tiring change of distance between the saddle and pedals.

A STILL BETTER POINT—this high degree of comfort is attained without the use of a hinged or otherwise weakened frame.

The Waverley overhead valve motor is equally ahead of the common kind.

These are only two of the many features of practical excellence that make

FEDERAL TIRES

THESE "Extra Service" tires constantly gain in popularity. Pronounced favoritism is shown for them among motorcyclists who understand the true meaning of *mileage.* In point of tire upkeep Federal Tires afford a decided saving. *They endure.* But they also have other distinctive advantages that appeal strongly to motorcycle riders.

Federal Tires are comfortable because of their wonderful elasticity and their exceptional ability in absorbing road irregularities. They are speedy, safe and easy riding.

The main reason for this big preference for Federal Tires is summed up in one word—*Quality*—simon-pure, unadulterated, "all-wool-yard-wide" quality.

Federal Motorcycle Tires are supplied through leading dealers everywhere. Interesting tire book mailed on request

THE RUSH IS NOW ON

The large volume of orders which we are receiving from all parts of the country and abroad, shows that dealers everywhere are responding to the lively demand for Pope Motorcycles.

The appeal of *Quality* and the appeal of *Price* are responsible for the Pope's popularity. As a light, compact, reliable machine of fine appearance it is in a class by itself. It has no rivals or competitors.

An examination of the Pope will convince you that no machine, regardless of price, embodies better materials or workmanship. A large demand is the logical result of the Pope's quality and price.

THIS BOOK IS AIMED AT YOU
GUARANTEED MOTORCYCLE SUPPLIES
What you Want When you Want It
Motorcycle Equipment Co.
Largest Motorcycle Supply House in America

YOU

are a present or prospective buyer of motorcycle accessories. Our aim is to teach you through its use the art of successful and economical buying. It is the most complete and comprehensive catalogue of motorcycle accessories ever printed. Only the best of everything in the way of accessories and only those of recognized worth are listed. Not *one* article is undesirable or of questionable quality. Every accessory is thoroughly tested before it is listed and then guaranteed. You run no risk, therefore, in ordering through it.

ARE WE HITTING YOU?

When we say that some people are too indolent or too skeptical about investigating the Trouble Saving, Time Saving and Money Saving opportunities of buying through the mail? We have never lost a customer who once started to deal through us. The Meco guarantee tag or money-back pledge goes with each purchase and we consider no sale complete until you would rather have the goods than the money you paid for them. That's how we have built up a large and permanent business. Quality Goods—they only are the kind that create permanent customers. Lowest Prices—we are under no heavy expense for handsome show rooms and offices or large selling force, so can afford to sell very low. Prompt Deliveries—goods shipped same day as receipt of order; we believe that when you want a thing you want it right away. Square Deal Policy—we never question the reason for any change in the order, requested substitution or money refunded.

THERE IS ABSOLUTELY NO RISK

then in using the Meco catalogue. It explains *why* to buy, *where* to buy and *how* to buy—and our credentials are stated on page 1. There are

FIFTY THOUSAND (50,000)

catalogues in the press run this year, and we will have no trouble in disposing of them. Big, handsome fellows they are, even better in the inside than the outside, and that's a pretty strong statement. Cover drawn and presented to us by a satisfied patron of six years standing. Every page is clear and bright with illustrations and descriptions of articles you want. In a word, its a winner of friends and incidentally business. And *then it saves the user money*. Where shall we send yours? Just fill out the coupon, detach and mail. *Do it now.* You can spare two cents and 2 minutes.

SEAT POST
UPPER REAR STAY
MUD GUARD
SEAMLESS TUBE
STAND BRACKET
FORK SIDE
RIM
EXHAUST TUBE.
LOOP TUBE.
LOWER REAR STAY
PULLEY RIM

THE BACKBONE OF YOUR MACHINE

is the *tubing* of which it is constructed.

The *boast* of the *largest* motorcycle manufacturer is that he has *never* had a frame go wrong in *ordinary* usage and this manufacturer uses "**Standard**" Tubing entirely; also our rims, mud guards and pulley belt rims.

At the recent Madison Square Garden Show, New York City, *sixteen* motorcycle exhibitors displayed sixty-five models. Of the sixty-five models, *fifty-seven* were made in whole or in part of "**Standard**" Tubing.

Fourteen of the sixteen exhibitors, the country's *best* and *largest* motorcycle manufacturers, use "**Standard**" Tubing and price is *not* their reason—it's *quality*.

They have tried *other* tubing but it *failed*. It did *not* give the *combination* of *lightness*, *strength* and *finish* that a *first-class* motorcycle frame requires and which the use of "**Standard**" Tubing *insures*.

When you order your machine, it *would* be well to ask what tubing it is made of, or better still write us and we will tell you *who* uses it.

Remember the *strength* of the *frame* and *rims* of your motorcycle *dictates* its capacity to carry *heavy* loads or to "*Speed her up.*"

UNITED STATES TIRES

The Strongest Motorcycle Tires in the World

There is only one absolutely sure way to solve the tire problem—Buy Strong Tires. The stronger they are the more you get out of them. Experience proves that your mileage service increases and your bills decrease in direct proportion to the strength the manufacturer builds into them.

As a matter of fact the whole question of tire service rests upon one essential—STRENGTH.

It is the strength in your tires that resists the wear and tear of road travel. It is the strength in them that carries the load. Therefore, if you hope to operate your motorcycle on a satisfactory, money-saving basis you must buy strong tires.

In no other motorcycle tires in the world will you find the strength of United States Tires. They are made to resist the bumps and carry the load. They combine all the strong points of two famous brands—G & J and Morgan & Wright. They are made by the world's foremost experts. They are the products of manufacturing resources not even approached by any other tire concern.

**Tires made as these tires are made are bound to reduce
your tire expense and add to your riding pleasures**

They cost no more than you are asked to pay for other brands

Motorcycle Illustrated

Vol. 7. Thursday March 7th 1912 No. 5.

TRACK FOR CLEVELAND FANS

Luna Park Managers Are Planning to Build a Board Motorcycle Speedway for Big Races.

CLEVELAND will undoubtedly see some motorcycle speed records smashed this summer on a saucer board track. The management of Luna Park has assured motorcycle fans of a four-lap track that will rival the famous Western saucers for speed. Work on the track will commence just as soon as the frost has left the ground.

A small model has already been completed and the design of the grandstand is a beauty. The Cleveland track will have a sharper incline than that at Los Angeles. It is figured that 100 miles an hour will be possible.

George Kreamer, of Brooklyn, N. Y., who is to take charge of the construction work, is an old bicycle rider. Accommodations for 10,000 fans will be made in the grandstand. It will take about six weeks to build the track and the opening meet will undoubtedly be held in May. The Cleveland Motorcycle Club has been called upon to furnish riders and will have some of the best riders of the country on hand for the opening card.

INDIANAPOLIS TRACK PLANS.

LATE reports of the special committee named to take up preliminary plans for the board track to be erected in Indianapolis, Ind., lead to the conclusion that the big bowl will cost in the neighborhood of $18,000. It was at first believed that the track could be built for about $10,000. The proposed increase in the outlay has not daunted the dealers and others who are interested in the project, and there is every reason for believing that the plans will be carried through. It is figured that the track proper will cost from $10,000 to $12,000 and that the balance of the estimate will be taken up in electric lighting and other incidental furnishings. Another meeting of the committee will be held at an early date when steps will be taken to incorporate the Indianapolis Motordrome Company, which will erect and control the track.

DENVER TRACK SITUATION.

DR. J. P. THORNLEY, chairman of the F. A. M. Competition Committee, is endeavoring to induce the managers of the Lakeside and Tuileries Tracks in Denver to agree upon a satisfactory and fair division of sanction dates. Sometime ago Gilpatrick, of the Tuileries track, made an application for exclusive franchises for thirty-two dates, including all the Sundays. His application, however, has not been acted upon and the tenor of subsequent correspondence between the doctor and the two managers prompts him to believe that the matter will be adjusted satisfactorily to both in the near future.

COASTER BRAKE PATENTS SUSTAINED.

JUDGE JOHN R. HAZEL, of the United States District Court, at Buffalo, has issued a decree sustaining the coaster brake patents held by The New Departure Manufacturing Company, of Bristol, Conn. The decision of the Court allows every claim made by The New Departure Manufacturing Company, and orders that a perpetual injunction be issued restraining The Forsyth Manufacturing Company, of Buffalo, from making, using or selling the coaster brake of their manufacture. The decision holds that the New Departure patents are good and valid and cover the "original, first and true invention" of the coaster brake. By this decision The New Departure Manufacturing Company recovers all the profits and advantages which The Forsyth Company received by reason of the infringement, together with damages and all costs of the case.

The Court has appointed Harris S. Williams, of Buffalo, special master to go over the books of the Forsyth Manufacturing Company and determine the amount to be paid by that company to The New Departure Manufacturing Company.

The New Departure Manufacturing Company was one of the six companies and eighteen individuals indicted by the last Federal Grand Jury at Buffalo, on a charge of violating the Sherman Anti-Trust Law. A petition to have the indictments quashed is now pending before Judge Hazel. The companies indicted are The New Departure Manufacturing Company, Bristol, Conn.; Licensor, and The Corbin Screw Corporation, New Britain, Conn.; The Aurora Automatic Machine Company, Aurora, Ill.; The Eclipse Machine Company, Elmira, N. Y.; The Miami Cycle & Manufacturing Company, Middletown, Ohio; and the Buffalo Metal Goods Company, Buffalo, N. Y. The last five companies named are licensed to manufacture under the New Departure patents.

The Federal authorities admit that these indictments grew out of the action against The Forsyth Manufacturing Company.

The importance of this decision, which so thoroughly maintains the validity and value of the New Departure patents, is emphasized because the Government has insinuated all through the indictment proceedings that the New Departure patents are not of value, and are simply being used as a cloak for restraining trade in violation of the Sherman Anti-Trust Act.

NEW YORK INCORPORATION.

WM. B. HAGGERTY, 25 W. 42d street; Frank B. Mansfield, 127 Duane street, and Mary E. Wilson, 1547 Broadway, all of New York City, have incorporated the Bryant Sales Company, for the manufacture of automobiles and motorcycles. The company is capitalized at $15,000.

COLUMBUS BREAKS THE ICE

Dealers of Ohio City Could Not Accept Terms of Auto Boomers and Held Fine Show of Their Own.

COLUMBUS, OHIO.—The first independent motorcycle show ever held in the United States opened its doors in this city on Saturday evening, March 2, in a storeroom at 39 East Chestnut street. The show was under the auspices of the Columbus Motorcycle Club, which intended to join with the Columbus Automobile Club in holding a show but which was forced out because of unreasonable conditions imposed. Six dealers of the Buckeye Capital joined in making the show a success. They were W. H. Snyder, of the American Machine Company, agent for the Emblem; L. P. Birkenbach, agent for the Thor and Yale; Franklin Cycle & Supply Company, agent for the Reading-Standard and Excelsior; the Barr Motorcycle Company, agent for the Indian; P. I. Haynes & Co., agent for the Harley-Davidson; and A. C. Edwards, agent for the Flying Merkel. A band was in attendance during the evening and hundreds of people attended the show to look over the 30 or more motorcycles shown. A small admission fee was charged in order to keep out the rabble and the proceeds will be donated to charity.

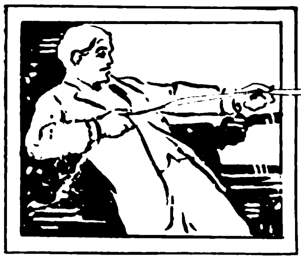
NEW COMPANY LAUNCHED.

ARTICLES of association of the Triumph Manufacturing Company, a $75,000 corporation have been filed with the Secretary of State at Lansing, Mich. The factory and general offices of this company will be located in Detroit, Mich., where it will engage in the business of manufacturing and selling motorcycles.

Rumors have been current of late that the new venture is backed by a number of prominent Detroiters, that Messrs. Robert M. Brownson and George W. Sherman, who were formerly connected with the Flanders Manufacturing Company, at Pontiac, Mich., will be identified with it and that an organization of men who through long years of experience in the motorcycle industry have acquired the knowledge of how properly to design and build motorcycles has already been secured. The development of this newcomer in the field will be watched with interest by those in the trade and some surprises are looked for.

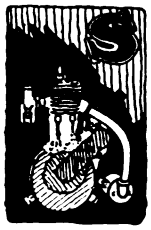
TO PAY DIVIDEND.

ANNOUNCEMENT is made that upon the petition of Gabriel H. Parkhurst, trustee of the Herring-Curtiss Company, of Hammondsport, N. Y., an application will be made on March 14 for an intermediate accounting of the affairs of the company. Steps will be taken to authorize the trustee to dispose of the remaining assets of the company and to prepare for the payment of a dividend, not exceeding 5 per cent., to be turned over to the creditors of the firm.



TEARING apart a competing machine seems to be the favorite occupation of many a motorcycle dealer who ought to know better. And still the knockers wonder why they are not doing the amount of business to which they consider themselves entitled. To be brutally frank, they are doing better than their deserts.

FAILURE OF CHICAGO DEALERS' PLANS



SOMEWHAT interesting and more or less instructive are the sermons which are being preached these days at the obsequies of the Chicago Dealers' Association. A different diagnosis of the trouble which caused the premature death of the organization is given by everyone who has tried to ascertain the reason. To the average outsider, however, it is plain that the trouble was the old one involving trade jealousies of a petty and at the same time deep character. The efforts to organize the dealers of Chicago have failed because of the impossibility of persuading each interested party to bear his share of the responsibilities and the necessary support in an entirely *impersonal* manner. Then, too, the project fell down because of the difficulty of any attempt to guarantee the promoters of the scheme that share of the benefit to which each one considered himself entitled.

Finally, the prospective expense of carrying out the plan on a proper scale had a more or less disquieting effect upon a number of the members who, unwilling to take the risk, found no trouble in unearthing a half dozen other good reasons why they did not feel that they would be benefited in proportion to the expense that would be entailed.

To a representative of MOTORCYCLE ILLUSTRATED Jesse Edwards, who was at the head of the project, said:

"If you will remember, President Coffman, of the M. M. A., let me down easy on the contribution that I had just asked the M. M. A. to make to our initial fund. Mr. Coffman said that the only fund the M. M. A. had was derived from the New York and Chicago Show and they could not afford to give any part of it up for any other purpose than that of defraying regular expenses.

"This was cold water from hose number one. A dealer in Chicago who maintains a wholesale branch and a retail store in Chicago objected to the papers we proposed to use. This was hose number two. Another one of the directors was quite willing to go in but did not have time to attend the meetings, and required that everything be submitted to him before anything could be passed on definitely. This was faucet number three.

"The directors met on the second Wednesday following the Show, and I notified them of the meeting by telephone. Some had engagements with their girls, some of them had to go to the "Mothers' Club" and so forth, and we were only able to raise six out of the eleven. There were one or two new ones on hand who had not attended the previous meetings and the whole matter, from start to finish, had to be re-hashed and explained to them. After that I submitted the constitution and by-laws for the association, with the request that it be passed on by the directors, so that when it was submitted to the association as a whole, it would not entail so much discussion There seemed to be some differences of opinion as to whether the proposition was entirely fair in regard to the division of the assessment and also the number of addresses, etc., that should be listed in the advertising. All these things were hashed and re-hashed and a great deal of quibbling done over small details and every angle of the situation was looked into by the smaller dealers to see whether or not there was some way whereby the larger ones would take advantage of them.

"For instance: One small dealer asked me the question, 'What is to hinder you, after the association has put in a big ad. from following it up next Monday with a big ad of your own and scoop in the whole effect?' My answer was, 'Absolutely nothing—what is to hinder you from doing the same thing?' 'Well,' he said, 'I can't afford to.' 'Well,' I said, 'I can, but I have not gone into this association with any intention of making any scoops or taking any advantage of the association's advertising, but the association is not going to dictate to me how our firm shall advertise personally. I propose to advertise. I agree not to advertise in the same issue of the same paper in which the association's ad. occurs, but will not bind myself not to do any more advertising than the rest of you or to allow this association to have any influence whatever upon my advertising campaign. My idea of this is that we are going into this thing for general publicity and if it is going to interfere with my private business, I am out.'

"It is not true that the smaller dealers were to pay more per store than the larger ones. The assessment was made per machine and not per store. If a machine had a distributor and he had two sub-agents he was entitled to list under that machine the three places. This would make his pro rata per store $25 while our pro rata was $66⅔.

"Another thing that I would here make clear to you is that we opposed from the start and have always been opposed to listing machines or names with addresses in the advertisements. This feature was injected into the association by others and I concurred in it in deference to their wishes, although it is contrary to my idea of an absolutely impersonal advertisement.

"This is a true statement of affairs. Of course, I do not care whether I am held responsible for the failure of this association or whether I am cleared of this responsibility: there is one thing, however, that I want understood, namely, that my intention in this association was to play absolutely fairly with

MOTORCYCLE SCOUT CORPS

First Squad of its Kind Has Been Formed in Toronto and Training Camp Will Be Pitched at Niagara.

UNUSUALLY interesting as a new step in the adaptation of the power two-wheeler to army service is the organization of a motorcycle scout corps by the military authorities in Toronto, Can. The idea was developed beyond the experimental stage last summer and it has now been carried to a point where army officials are displaying deep interest in it. The complement of the "iron-horse" squad is sixteen men over which there will be two lieutenants, one sergeant mechanic, two sergeants and four corporals. The file will be divided into squads of four men.

The corps will have its annual training camp at Niagara next June, where each man will take a course in signaling and telegraphing. It is the intention to fit the riders for conveying long-distance information by heliograph, lanterns and flags, as well as by telegraphy, as it would be the duty of the motorcycle scouts in time of war to make flying trips to points of vantage and signal their findings back to headquarters. The squad is the first of its kind in militia and is rated as a city corps and placed on the same standing with Canadian or American militia regiments. The motorcycle scouts will have their own tents, cooks and equipment, and the government will pay the rental of machines used during the training camp exercises and will also foot the bill for gasoline and oil. Uniforms, arms and other supplies are also provided by the army authorities.

William G. Self, of Toronto, is in charge of the corps, which has already attracted much attention, and he predicts that the government will soon see the necessity for organizing similar squads throughout the Dominion.

everybody concerned. I do not go into anything under any false colors or false pretenses. If I hadn't been willing to co-operate fairly in this matter or if I had considered that there was any chance for someone else to get the better of me in it, I would not have gone into it. Knowing our concern as you do and knowing the magnitude of our business, I am sure that it will appear absurd to you on the face of it, that we would go into any kind of an association to try to skin the little fellow. We made the terms of the association liberal for the small fellow, in order that he might be able to come in and get the benefit. In conclusion I will say that the causes, briefly stated, for the failure of this association, are the attitude of the M. M. A., the suspicion of the smaller dealers that the larger ones would take advantage of them, and the indifference and crude business ideas of a number of the Chicago agents."

As might be expected, Edward's views are not at all concurred in by the "little fellows" to whom he refers. They claim that their suspicions were well founded.

THE Franklin Cycle & Supply Co., of Columbus, located at 142 East Gay street, is starting a new plan in placing sub-agents in the territory surrounding Columbus. Instead of placing representatives in the larger towns or county seats it is the plan to place an agent covering four or five townships.

CLEVELAND SHOW DREW BIG CROWDS

Five Firms Figured in Excellent Display of Motorcycles and Assessories and Sales of Machines were Plentiful.

AN unusually fine display of motorcycles and accessories was given by the dealers of Cleveland, Ohio, at the recent show, and it is stated that the interest shown in the two-wheelers was as great proportionately as that manifested at the New York and Chicago exhibitions. There was an attendance roughly estimated at 10,000 on the opening night of the show, and throughout the week the stands were always hemmed in by crowds of spectators. The motorcycle exhibits were staged as follows:

Casino Cycle & Supply Co., 6802 Superior avenue; four Thors, one New Era and five Excelsiors. In attendance were John Zucker, manager; Edward Hawkins and Ed. Rischel. The Casino company was fortunate in obtaining the largest space in the motorcycle section, and the machines were shown to good advantage.

L. J. Mueller, of Woodland avenue; five Indians, four 7 h. models and one 4 h. machine. Mueller also showed a side-car which attracted unusual attention and which promises to pave the way for sales of a number of these attachments in Cleveland during the 1912 season. In attendance at the Mueller stands were L. J. Mueller and Mrs. Mueller, T. H. Tucker, W. M. Tracy and Don Klark, the latter being well known as an Indian rider in racing circles. Mueller celebrated the opening of the show by making twice as many sales as had been expected.

Lister Motorcycle Company, Payne and East 55th streets; four Harley-Davidsons and two Flying Merkels. It was the intention to have more Merkels on show, but owing to pressure of orders at the factory shipment of the show machines to Cleveland was delayed. Manager William Lister was in charge of the show display, assisted by Charley Lister, Albert Lister, A. Lees, L. B. Lindsay and Charles Coulter. The Lister line was given an effective exhibition and the cut-away Harley-Davidson motor, arranged so that all the details of construction were visible, proved a feature of never-failing interest.

Kumler Bros., East 55th street and Lexington avenue; three Reading-Standard machines and one Flanders. The Flanders machines intended for the show were delayed in shipment so that only one could be shown. Manager E. F. Kumler presided at the firm's stand, assisted by H. H. Kumler. A number of sales were reported for the opening night.

Yale Cycle & Supply Company, 10,228 Superior avenue; four Yales, two fours, one five and a seven. In attendance at this stand were A. H. Ferguson and salesmen. The Yale company, while comparatively new in the Cleveland field, has made a host of friends and its exhibit was never without its group of enthusiasts throughout the show.

The total value of the show exhibits was placed at $1,000,000, and the decorations represented an outlay of $15,000.

McCOLL'S CLOSE CALL.

KEN McCOLL, the Harley-Davidson agent at London (Ont.), claims to have had a thrilling experience recently when riding on the railway tracks near his home town, on a "Silent Gray Fellow." He claims to have been chased by a Grand Trunk Flyer for a distance of five miles, until he reached the station at London just in advance of the train. He says that he was standing between the rails with his machine when he heard the whistle of the locomotive. He barely had time to mount his machine but he was away like a flash, riding over cattle guards and everything else until he reached the stopping place. McColl was quite the hero at the recent show at Toronto. which he attended constantly. He has announced that he intends to go to Calgary, Alberta, in a few weeks, where he will open a Harley-Davidson depot.

Fred T. Kerr, of London (Ont.) has secured the Emblem agency for that city.

SELLING IN THE STATES.

SEVERAL Toronto (Ont.) dealers are doing a little exporting on their own account, having found a market in border cities of the United States for British side-cars. One of the orders recently filled by A. E. Humphrey, the Flying Merkel distributor, was for six baskets to H. Peters, the Harley-Davidson agent at Buffalo.

How and What The Dealer Should Advertise

The Second of a Series of Articles on Local Publicity Campaigns—A Sample Advertisement

IN a previous article the writer invited dealers to write to him at 4319 Buena Vista Terrace, Chicago, for sample advertisements which could be used by dealers individually, or co-operatively with other dealers, in local newspapers, in connection with a simple method of following up prospects.

The advertisement here reproduced is one of the series. Such advertising talks to the average person who may use a motorcycle, in a way which is more likely to make him buy than the kind of advertising generally used.

If the cost of such an advertisement, which is small but so displayed that it is sure to be seen in a newspaper, were divided between several dealers, the amount payable by each dealer would amount to very little indeed, and the returns should be much greater than is possible with the present kind of advertising.

Any dealer could do his own advertising in addition to this co-operative advertising, but if dealers will forget their differences, if they have any, and join hands in telling the possible buyers facts which will make them probable buyers, several motorcycles will be sold where only one is sold today.

Newspapers receiving this advertising from several or all of the dealers of a town will, as a rule, be glad to pay more attention to the motorcycle in their news columns than they have been doing, and will in most cases be willing to print articles which will help and back up what is said in the advertisements.

Any dealer can receive a set of these advertisements, reading articles, follow-up cards and follow-up letters, without charge, by writing to the above address. L. J. BERGER.

Motorcycle

OR

Horse?

Do you know that in one city alone —Chicago—about 7,000 horses die every year? That means 20 dead horses every day. Hard to realize, but it's so. Do you know that the price of a horse and of a motorcycle is about the same, that the motorcycle costs much less to feed and does much more work in much less time; and that a motorcycle never wears out?

You can't kill off the motorcycle. It is here to stay, because it is a time and money saver; and when the man on it uses horse sense, it is quiet. It easily carries 100 lbs. or more. Its quick service gets customers and keeps them. In 1911, in hundreds of cities, the motorcycle has proved its superiority to the horse, or the man on foot or in a street car, for collecting orders or cash, for delivering goods, and other purposes.

Call on any dealer in town, or send your address, for more information.

How to Change the Balance in Favor of the Machine

STUDY for a moment the above illustration. It pictures the fact that at the present time, the wagon or cart is superior to the motorcycle as a means for making light deliveries. That is the situation *now,* but some day the scales will be reversed. The change will come about gradually. Refer again to the illustration, and note that a balance in favor of the motorcycle will be established when its *commercial utility* is advanced to a point where the motorcycle's practical value in business outweighs that of the small horse-propelled vehicle. Now the question is: By what means can the motor-driven two-wheeler be made a commercial *necessity*?

The motorcycle is already considered *desirable* for the transaction of certain kinds of business. But, with few exceptions, its use is not imperatively necessary. In fact, the opportunity to introduce it cannot be availed of in thousands of instances because there is *lacking something* without which the motorcycle cannot be *generally* requisitioned for light delivery purposes.

That "something" is a perfectly *efficient luggage carrier*—light yet durable; capacious without being clumsy, so designed and so equipped to the machine as to afford the maximum of service with the least possible sacrifice of appearance, accessibility, the rider's comfort and safety, together with his ability, now limited, to make light deliveries economically and with dispatch.

To sum up, the problem is, to what extent can the motorcycle's present capacity for making deliveries *be increased* without diminishing the motor two-wheeler's remarkable utility in other respects.

The market is already fairly well crowded with luggage carriers, many of them cleverly designed, staunchly constructed and well adapted to the purpose for which they are intended, viz., the carriage of the rider's personal belongings and extra machine equipment. But their capacity is limited. They are not intended, for example, to displace the grocer's horse and cart, or to be used for a thousand and one similar types of light delivery.

As an indication of what is possible in this direction it may be said that one manufacturer is marketing a luggage-carrying attachment which most successfully meets the requirements of rural free delivery. This luggage carrier is scientifically designed, well built, of great practical utility, and still it does not in any way discomfort the rider or interfere with the operation of the machine as a motorcycle pure and simple.

In order to stimulate interest to the end of bringing to the front a large number of practical suggestions and designs, having in view the *ultimate* luggage carrier, MOTORCYCLE ILLUSTRATED will give cash prizes of $25 and $15, respectively for the best and second best suggestions offered before June 1 of this year. The conditions under which this contest is to be conducted are as follows:

1. All are eligible and each contestant may submit as many designs as he chooses.
2. The idea submitted must embody a luggage carrier suitable for attachment to a motorcycle and adapted for conveniently carrying a number of small parcels of moderate weight.
3. Sketches must accompany descriptions, but these drawings need not be either artistic nor absolutely accurate. A rough sketch will do, but the description should be complete, with all the details carefully noted. Prizes will be awarded according to the *practical value* of the *ideas* presented, and not the symmetry of the drawings.
4. The prize winners will be determined by a committee of three disinterested persons, and they will base their awards upon the respective *practical values* of the designs submitted, in connection with their adaptability to the purposes mentioned above.
5. Three Dollars will be paid during March and April, and Two Dollars during May for *every* suggestion considered deserving of publicity through the columns of this paper. However, every design submitted, whether published or not, will be turned over to the judges on the closing date of this contest.
6. In the event of a tie for first, second or both prizes—a very improbable result—the prizes will be equally divided.
7. Competitors are requested to address all their communications as follows: "Luggage Carrier Contest, MOTORCYCLE ILLUSTRATED, 51 Chambers street, New York City." Prompt replies are promised those who may have any questions to ask.

Through the NEVADA

"Rocking Chair," Who Has Thrown Every Rider Up for Two Years.

AFTER lying in the hot sand for a time I managed to get back some of the nerve that had been oozing out of me, and finally decided that it was up to me to get under way again, even if I had to crawl. Accordingly I consulted my map and arrived at the vague conclusion that by striking off in a westerly direction I might find a camp known as Cortez. There was a fair-sized mountain to be crossed, but I had got past the stage where road conditions bothered me and I set out. I found it impossible to walk fast, owing to an injury to my left foot, but after tearing up my handkerchief and wrapping it about the foot I managed to make headway.

A short time later I found a road, evidently a new one, and I was puzzled. Should I follow it? I decided not to, and plugged along on my original course. I had traveled about a mile when I chanced to look back and discovered a team and wagon. At first I was inclined to doubt my senses, but on turning back I soon was able to hear the crunch of the wheels. It was just about the most welcome sound I could imagine.

Meeting with a Rancher.

The rancher with his team had evidently turned in from some side trail. When he was within speaking distance of me I called to him, asking if he had any water. He replied in the negative, but said there was a pail in the back of his wagon with some food in it. Later he explained that a spring would be found down the trail about a mile. It developed that the stranger was on his way from Buckhorn, a new mining camp, to his ranch which was about twelve miles distant.

After explaining the situation which confronted me I asked him to take me back to Buckhorn, eight miles away, but he stated that he could not make this trip before returning to his ranch. Of course, I wanted to reach Buckhorn at once, and tried to make it clear that I was willing to pay well for services rendered. Money did not tempt the rancher. He stood firm and announced that if I would accompany him to his ranch he would drive back to the mining camp with me two days later. As for turning back then, even a twenty dollar bill had no effect upon him. I had about $400 in my pocket, and if this rancher had been out for business he could have bled me to a fare-you-well.

The Hike to Buckhorn.

Finally I gave up dickering with the rancher and started on my eight-mile walk to Buckhorn. I found the spring and bathed my feet, which helped considerably, and about 7:30 in the evening I dragged myself into the mining camp. How I covered those miles in my condition would make a long story. They received me cordially and I was soon the center of a curious group in the hotel, which also served as a barber shop and gambling hall. Later I had supper and in due time I located the camp's tool sharpener, who was quite a mechanic.

I showed him my broken fork and he agreed to fix it on the following morning. He was as good as his word and turned out a satisfactory job. The lugs could not be tapped out as there were no taps in camp of the proper size, so I had to dispense with the spring feature of the fork, but this did not worry me. If I could only get back to the machine and hammer it into some sort of riding shape I would not miss the spring attachment.

Hitting the Trail Again.

I paid the camp mechanic four dollars without a kick, and immediately set out to carry the fork back to the machine. Somehow I made the trip, but when I started to fit the fork again I discovered that it had been bent so far back that it would not clear the magneto. What I thought and said is neither here nor there, but it is easy to imagine that I was desperate. Would I have to carry the fork back eight miles to Buckhorn and then back to the machine again? Not while there was a rock in the neighborhood. My decision was quickly arrived at. After finding a good sized stone I pounded that fork until it looked like a remnant from a junk heap, and finally battered it into such shape that it would allow the wheel to turn past the magneto.

Then I fitted it to the frame and prayed fervently that it would last until I reached Palisade. I followed a trail which I took to be the Buckhorn-Palisade road, but as usual I was mistaken. The going was hard and in time it was a case of alternate riding and pushing—mostly pushing.

Another Ranch House.

I was suffering from thirst, and the alkali dust had left my lips cracked and bleeding so that it was painful to get out even a good cuss word, a terrible handicap for a motorcyclist in Nevada. The sun had set, and it began to look as if I would sleep under the stars, but I struggled onward and finally reached the top of a hill from which I could see a ranch house. When I reached it I made a dash for the well, and then told the ranchers my story. They fed me and put me up for the night, and on the following morning I set out on a road which was supposed to intercept the main trail. After following it for a time I found it dwindling into a mere cow trail and realized that there was something wrong again.

I was forced to turn back to the ranch and the boys gave me a fresh start, this time setting me on the right course. The best part of the forenoon was gone, not to speak of a lot of precious gasoline, but I struck out at once without waiting for dinner. As a result I went

BILLIARD HALL

Best Part of a Nevada Desert "Town."

from early morning until evening without eating. My next trouble came in the form of gasoline shortage. The tank ran dry several miles from a railroad section house and I had to walk in, buy about half a gallon of gas and carry it back to the machine.

Too Much Buttermilk.

I had continued only a short distance when my belt broke, but this happened only about a mile from a place known as the Hay Ranch, so I walked in and had it fixed. At this ranch I found a good-hearted old lady who gave me buttermilk, buttermilk and then more buttermilk. I became so sick that I was actually afraid I was going to die; then as time wore on I was afraid I wouldn't. They brought me around, however, and late the next morning I was able to start for Palisade, seven miles distant.

The junction of this road with that leading to Carlin was reached and I realized that I was once more heading toward home. Of course, the idea of reaching San Francisco had long since been abandoned, and I felt that I would be fortunate if I could get back to my starting point in the time allowed.

The Homeward Grind.

I had very little gasoline left but decided to go on to Palisade. Finally I reached the top of a steep hill and looked down upon the town. I was unable to obtain any gasoline there, and without delay I started for Carlin. On the way I encountered some bad hills, but reached the top of the last one with a few drops of fuel left in my tank, and then was able to coast nearly all the way down into the town. My engine gave its last gasp only a few hundred yards from the hotel. Carlin is a division town of the Southern Pacific railroad, and there is nothing in the place but the ramshackle hotel, a round-house and a few shanties.

I learned that Elko, 25 miles distant, was a fair-sized town, so on the next morning I struck out for it, after obtaining some gasoline at the Carlin round-house. While in Carlin I spent several pleasant hours with an ex-motorcyclist of Los Angeles who was "hoboing" his way back to his home in Salt Lake City. I reached Elko without any particular trouble—nothing short of a calamity would look like trouble to me at this time—and managed to have my damaged pedal repaired after a fashion.

Safe in McGill Once More.

On the following day I reached Ruby Valley and found a ranch house where I was treated royally. I remained overnight and set out the next day for Cheery Creek over the famous Pony Express road, about which so many Indian stories have been written. It is said that mail was carried over this trail from Omaha, Neb., to Sacramento, Cal., in eight days, but it is difficult to believe this. It was mighty hard going for me. I arrived at Cheery Creek, in the Steptoe Valley, late in the afternoon and hammered out the remaining 45 miles to McGill the next morning.

On the way I struck a fence post which made it necessary to batter the fork with a rock again before it would work, but being used to this operation I made short work of it. On arriving in McGill I lost no time in getting back to work, for it was a rest after what I had been doing. I had been on the road only thirteen days, but it is safe to say that I crowded thirteen years' of motorcycling hardship into the trip. I am still a rider, but I won't attempt another tour over Nevada roads unless I grow tired of life.

WITH THE CLEVELANDERS.

MANY trade representatives, as well as dealers and riders, were present at the banquet of the Cleveland (Ohio) M. C., held at the Gilsey Hotel on February 21, and the affair was voted one of the most successful of its kind ever undertaken by the club. "Troxel" Roberts acted as toastmaster and made the most of his opportunies to enliven the occasion.

President R. S. McConnell, of the Cleveland M. C., has appointed a committee to arrange for a lease of Snake Hill or Button Hill, on the outskirts of the city, for the club's hill-climb to be held on May 30. The same committee will provide an electrical timing apparatus for the events. The committeemen are Tracy, Sheridan and Penniman.

Now that the Cleveland Baseball Club has announced its summer schedule, the Cleveland M. C. is in position to pick out the dates available for race meets, and steps are being taken to put the oval track at Luna Park in condition. It is the intention to offer prizes which will tempt all the good riders of the vicinity, and some fine programs are expected. Doc Webster, of Lorain, beloved of all the motorcyclists in his district, is expected to manage the racing programs at the park.

The initiation fee of the Cleveland club for 1912 remains two dollars, but the regular dues have been reduced to fifty cents a month.

RAPID BALTIMORE SALES.

FROM the Chase Motor Co., of Baltimore, Md., comes the announcement that all the Harley-Davidson machines it had on display at the recent show were sold before the close of the exhibition. The last Harley, a big twin, was purchased by a local coal and coke company for use by its salesmen between Baltimore and Hagerstown. The same firm has just sold three Harleys to the Baltimore police department.

MY CAREER AS A RACER

BY FRANK HART

BELOW is given the first in a series of three articles prepared especially for MOTORCYCLE ILLUSTRATED by Frank Hart, the amateur champion. They deal graphically with his racing career, from his appearance as a novice at the Guttenberg track in 1909 to his championship performances at the last F. A. M. meet in Buffalo. The articles were written by Hart while he was confined to St. Luke's hospital in New York City, following the accident at Guttenberg when he was struck by Jake DeRosier's machine while the latter was taking a turn at top speed.

Hart was standing at the outer edge of the track when DeRosier, forced to make a wide turn, crashed into him. For weeks afterward there was a question as to whether the surgeons would be able to save Hart's injured leg in which the bones were shattered below the knee, but his condition improved slowly and a short time ago he was able to leave the hospital on crutches. It was while he was convalescing that the idea of writing a brief history of his racing career was suggested to him. Somewhat reluctantly he consented to prepare the articles and as a result race followers will be given a series of interesting sidelights on the rise of one of the best known motorcycle speedsters of the day.

It was during a race meet at the Guttenberg track in 1909 that I was approached by one of the officials and asked if I would not like to enter the novice event, which was just about to be run off. The suggestion came as a surprise to me, although I had a hankering to try my machine in a speed contest, and for a few moments I was on the verge of stating that I would hold out until a later meet. A few of my friends argued with me, however, and to make a long story short, I entered the race. My friends insisted that I had a good chance to win, and when the boys lined up at the tape I was there. The pistol cracked and I was off for the first race of my career.

There were six entrants and I got as good a start as any of them, which was fortunate. I made the first turn in good shape, but when I found myself cutting out a hot clip I wondered how I was going to take the second. I had never skidded on a motorcycle before, and didn't realize at the time that this is a fine art. When I hit that second turn at a fifty-mile clip I decided that it was a case of strike the fence or fall. I tried to do the latter, but instead of falling I felt my rear wheel skid. Every second I thought I was going down, but I discovered that by putting out my left foot I could take the turn and keep upright.

First Circuit in Fast Time.

I covered the first mile in 1:10, and as I passed the grandstand I could hear my friends shouting to me. I rode into the first turn again, stuck my foot out and got around safely. On the upper stretch I passed a poor chap who was stuck with engine trouble, and a short time later I heard something coming up like a cyclone on my right. It proved to be a chap with a machine of the same horsepower as mine but a little faster. He beat me down the stretch, but on the turn (with my foot down), I passed him again. On the back stretch I passed a single and then realized that I had only one machine to worry about. I was leading and when the starter waved a white flag to indicate that I had only one more lap to go I let out another notch and rode home the winner.

After the race, however, came trouble. When I had crossed the tape I slowed down on my brake and rode back on the track to the judges' stand, a thing I should not have done, of course. The officials were undecided whether to give me the race, or disqualify me for turning around on the track, but as it was a novice event and I was a raw beginner they decided in my favor. I walked off the track feeling as if I had just been elected president.

Hart on R-S Twin.

Fourth in Second Race.

The second event that day was a 10-mile open race. The officials and my friends urged me to enter it and I did. There were nine starters, three of them trade riders with factory machines. I got another good start, but on the upper stretch I was passed by the three trade riders on their higher powered machines, who threw enough dust in front of me to make me think I was in the desert of Sahara with a sandstorm coming. In the sixth mile I was lapped by two of the factory riders, and in the ninth I was lapped by the other one. I was in fourth place and held it to the finish, feeling that I had done my best under the circumstances.

I was not discouraged and entered the next event, a handicap, with forty seconds' time allowance. When the race was started I was fifth to get under way. In the second mile I caught two machines of the same horsepower as mine, in the seventh mile I overhauled a rider on a single and in the next mile I drew up to the other single. I was then in first place. Not until the ninth mile did the factory machines bother me. Then I saw something coming out of the lower turn spitting smoke like a locomotive, and knew that I was in for a hard finish. However, I felt that by taking a few chances I could hold my lead and I did, the nearest factory rider being twenty yards behind me at the tape. The winning of these two events netted me about fifteen dollars in prize money.

A Prize Money System.

The promoters of these meets had an agreement with a large jewelry firm whereby a rider who won a prize at the meet was given a note entitling him to any article valued at the amount specified. When the holder of one of these orders went to the jewelry house he was asked to deposit his note, with the understanding that his account would be credited to that amount. It was explained that when he had piled up enough orders he could purchase something really worth while. There was something wrong with this system somewhere, as the following incident will show. I had about $110 to my credit at the end of the season and decided to pick out a nice stick-pin. When I visited the jewelry house the man who always took the deposit slips of the riders did not wait on me, and the clerk who did was not aware that I had a deposit account with the firm. He told me I could have a certain pin for $60, and I stated that I would call the next day for it.

Where the Hitch Came In.

When I next visited the store the clerk who had taken my deposit slips throughout the season was present, and when I pointed out the pin he said it would cost me $80. I explained that the other clerk had offered it to me for $60, and then came the solution to the mystery.

"He didn't know you had a rider's account here," said the salesman.

I was mystified and demanded an explanation. Then he confessed that someone connected with the management of the races was supposed to receive $20 for every $100 worth of goods the jewelry firm sold to a rider, and of course the extra $20 had to be made up in some way. I mention this merely to show that the rider who risks his life sometimes has a pretty hard time getting just what is coming to him, and as a rule it is little enough.

Every Sunday, after that first meet, I participated in races at the Guttenberg track, and surely did have a bad case of the racing fever. I watched the motorcycle papers and whenever I learned that a race was to be held within fifty miles of New York City I rode my machine to the meet and competed in as many events as possible. In this way I soon picked up quite a few valuable prizes. The only outlay I had was for entry fees, and at half the meets they failed to ask me for any.

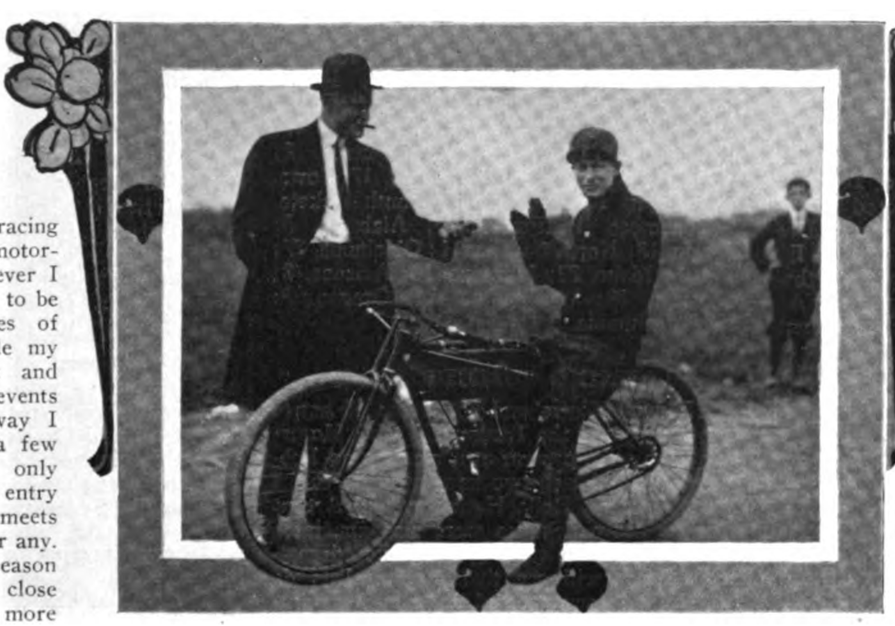
The 1909 racing season was now drawing to a close and there was only one more meet to be held in my territory. It was at Guttenberg. In the first three events the best I could get was fourth, as there were three factory riders on hand. The fourth race was a handicap, and I was given a fair allowance. It happened that a friend of mine who was present had a machine similar to mine but faster, and without the officials seeing us we exchanged mounts. When we got under way the judges were surprised to see me doing each mile in 1:15, when they had me gaited at 1:20. I rode like a mad-man on the stretches, but took the turns carefully and won, the scratch men being just behind me when I crossed the tape. After the race I feared that someone had seen me exchanging machines but no one had. The judges handed me a gold watch and I went my way rejoicing.

The First Factory Mount.

At one of the first meets in 1910 a factory rider was hurt in practice, but his machine was unharmed, and I asked for permission to ride it. The man in charge of the racing camp made inquiries about me and when the boys lined up for the opening event, ten miles for trade riders, I was on deck mounting a Reading Standard factory machine. I was speed mad; all I wanted was a chance to compete with the best of them, but I did not like the idea of turning trade rider to enter the race. However, I was told that if I made good the factory would supply me with a machine for every meet, so I entered the trade rider ranks. At this meet I rode in three events and won two of them which delighted the factory representative and myself.

Hungry for More Races.

Before going home that day I learned that there were to be races in Plainfield, N. J. I notified the Reading Standard folks and they stated that I would be supplied with two machines, a four and a six. At this point I began to worry over whether my boss, a banker, would allow me the time off for my races and I explained the whole situation to him. He gave me permission to go to Plainfield and I won five out of six events. A strange and pathetic accident occurred at this meet. While taking one of the turns I skidded and rode so close to the inside fence that a little chap who was sitting on the rail fell off backward and broke his neck.



Seery Offering Hart Real Money—Just in Fun.

How the Agents Benefit.

A few days after my clean-up at Plainfield I received a letter from the agent there stating that he had sold three machines because of my victories in his town. One of the Plainfield papers printed a story of the meet with this headline: "Big Clean-up by Hart," and when I showed this clipping to my boss, accompanied by several gold watches, he was very proud of me. He thought I was a real champion. By the way, he was a champion golfer and a thorough sporting man. After this I had very little trouble in getting off to attend the different meets.

Racing at Philadelphia.

The next big races were at the F. A. M. meet in Philadelphia and I managed to arrange my annual vacation so that I could be present. I was anxious to enter the F. A. M. endurance run, but the factory folks advised me to save myself for the track races on Friday and Saturday and I did. I suggested the names of several good riders who could be depended upon for clean scores in the run and the company advised me to bring them on. As a result three of them accompanied me to Philadelphia. We traveled in style and the company footed all bills.

We reported at the factory each morning and did everything possible to acquaint ourselves with the machines. At the end of a week the boys were ready for the big endurance run, which started early on Monday morning. With a few other factory riders I accompanied the contestants as far as Reading.

On Wednesday of the race week the machines were shipped to the track and the boys who were to ride them went down to try them out. Somehow I managed to squeeze the best time out of each mount and when the races finally were opened I was given the fastest machines in the company's camp. During practice I had noticed that there were several other mighty fast makes of machines on hand, but felt that I would be able to hold my own after making carbureter adjustments to obtain more speed. But I did not. The next morning the machines were overhauled and the carbureters readjusted, but in their haste the mechanics were unable to do justice to the work and several try-outs convinced me that our chances for big winnings were slim.

A Crestfallen Speedster.

Finally the race for the hour championship was put on and I felt that I would have a chance in it. I picked out an old machine on which I had often won races, but which was not as fast as some of the company's new machines would have been if they were working at their best. All the riders had trouble in this event but I seemed to have more than my share and a broken valve retired me after I had been riding about forty-five minutes. I jumped off at the pit completely discouraged. I had seen my machine do much better work and I could not understand why everything should go against us at this particular meet.

While all the boys had done their best under the circumstances they were downhearted and glum, and I was as crestfallen as any of them. That night, discouraged and sore, I packed up and left, and on arriving home the next morning I told my mother in all sincerity that I would never race again.

(To be continued.)

RACING QUERIES.

GEORGE A. BLACK, Pittsburgh, Pa.—Address both your inquiries concerning racing to Will R. Pitman, acting chairman of the F. A. M. competition committee, Hotel Ansonia, New York City.

A FOUR-CORNERED race between an aeroplane, an automobile, a motorcycle and a passenger train between Houston and Galveston is being planned for March 24.

F · A · M · Notes

FAST WORK IN TACOMA

State Commissioner Gorman Lines Up Twenty-seven F. A. M. Recruits at One Rousing Session of Club.

AT the last regular meeting of the Tacoma (Wash.) M. C. officers were elected and State Commissioner J. F. Gorman, of Seattle, who attended the session gathered in twenty-three recruits to the F. A. M. Twenty-seven members of the Seattle M. C. made the trip to Tacoma in a special car and assisted in carrying through the evening's program. Following the business meeting covers were laid for seventy diners at a downtown cafe, and the boys made the most of a fine spread. Speeches were made by Mr. Glasgow, Harley-Davidson agent; Mr. Fentress, Excelsior representative, and manufacturer of the Fentress tandem attachment; Mr. Hoska, secretary-treasurer of the Tacoma club, and Mr. Hull, the newly elected president. Brief addresses were also made by Dr. Hawley, president of the Seattle M. C.; E. L. Moore, F. A. M. vice-president of the Northwestern District; J. F. Gorman, F. A. M. State commissioner; Mr. Fox, manager of the firm producing the Fox tandem attachment; Mr. Spinning, Indian agent in Seattle and A. G. Taft, Excelsior representative.

There were discussions with reference to the suppression of the open muffler fiend and the general advancement of motorcycle affairs, and anecdotes harking back to the early days of the motor two-wheeler in the northwest. As the Seattle delegation was boarding its special car the visitors gave three rousing cheers for the Tacoma squad and the Tacoma riders returned the compliment with interest. The meeting in Tacoma was the most successful ever held by motorcyclists in the State of Washington, and there are indications that it has paved the way for rapid progress during 1912.

State Commissioner Gorman reports that he is in touch with the newly organized Olympia (Wash.) M. C., and that the squad will be brought into the F. A. M. ranks at an early date.

CLUB IN ST. CLOUD.

A. E. BAKEMAN, of St. Cloud, Minn., is arranging to organize a motorcycle club in his vicinity. A meeting will be called soon and definite arrangements made.

CALIFORNIA LIST GROWS.

STATE Commissioner R. Y. Leslie of California, with headquarters at Pasadena, reports that he has appointed two more local representatives, P. J. Bennett, of Whittier, and J. E. Farris, of Turlock. Both the new commissioners have long been F. A. M. boosters and they are well fitted to give a good account of themselves.

WATCH IT GROW!

F. A. M. renewals for February, as reported by Secretary Gibson, are as follows for the various districts: New England, 20; Atlantic, 42; Lake, 53; Peninsular, 2; Gulf, 1; Central, 9; South Western, 8; Pacific, 2; Total, 137. New members were taken in as follows: New England, unaffiliated, 10; affiliated, 6; Atlantic, unaffiliated, 23; affiliated, 67; Lake, unaffiliated, 20; affiliated, 109; Peninsular, unaffiliated, 3; affiliated, 25; Gulf, unaffiliated, 1; affiliated, 27; Central, unaffiliated, 0; affiliated, 21; South Western, unaffiliated, 10; affiliated, 21; Pacific, unaffiliated, 4; affiliated, 75; Canadian, unaffiliated, 0; affiliated, 9; total, 440.

The distribution of new members for February throughout the states is as follows: Massachusetts, 12; Connecticut, 2; Rhode Island, 2; New York, 55; New Jersey, 18; Pennsylvania, 14; Maryland, 3; Ohio, 41; Illinois, 18; Indiana, 9; Wisconsin, 2; Missouri, 7; Minnesota, 5; Kansas, 17; Iowa, 2; Michigan, 2; Nebraska, 3; South Dakota, 3; Tennessee, 1; Florida, 9; Alabama, 5; Georgia, 13; North Carolina, 1; Oklahoma, 27; Utah, 1; Idaho, 22; Montana, 18; Arizona, 2; California, 28; Washington, 36; Oregon, 3; British Columbia, 9.

PLANNING SUMMER RUNS.

THE new officers and 50 of the 60 active members of the Tacoma (Wash.) Motorcycle Club were present at a meeting on February 26 and elected two new members to the Run Committee, Rolla Hathaway and Arthur Whisner. Five deputies were also appointed who will be given stars by the police department. They will see that motorcyclists do not break the laws enacted by the city governing the operation of motorcycles. Following are the deputies: Edward Shaper, Dr. Button, Jack Lilenthal, Henry Edmondson and Joe Duncan. The Run Committee is busily engaged in preparing a schedule of runs and endurance contests for the coming summer. It has already been decided to give a series of moonlight runs in conjunction with the members of the Seattle Motorcycle Club.

BOWLING SCORES.

THE Harley-Davidsons won three games from the Flying Merkels in the last meeting of the Columbus (Ohio) Motorcycle Bowling League. The scores were as follows: Harley-Davidsons, 895, 928, and 851; Flying Merkels, 730, 772, and 827. The Indian team succeeded in winning two games from the Excelsiors. Scores: Indians, 747, 815, 730; Excelsiors, 819, 714, 634.

THREE NEW CLUBS.

AMONG late additions to the F. A. M. ranks are the following clubs: Enid M. C., Enid, Okla., J. A. Olinger, secretary; Boise M. C., Boise, Ida., G. A. Hill, secretary; Butte M. C., Butte, Mont., J. E. Seaker, secretary.

CLUBS SHOW NEW LIFE

Reorganization Meetings Are the Order of the Day, and F. A. M. Reports Show General Activity.

"IT is an encouraging sign of the times," writes Chairman Estabrook, of the F. A. M. membership committee, "that quite a few old clubs, whose members have not been active of late, are now holding reorganization meetings and preparing for new activity throughout 1912. Among them is the Queen City M. C., of Cincinnati, Ohio, F. A. M. No. 13, which held a rousing session recently at which fifty members pledged themselves as boosters. The outlook for the club is excellent, and it is the intention to affiliate it with the Federation on a 100 per cent. basis at an early date."

Hart A. Dickason, proprietor of an F. A. M. repair shop in Elyria, Ohio, is one of the live wires responsible for the organization of a new club in that city. The squad consists of 17 members, all of whom are striving for a membership of fifty before taking up affiliation with the F. A. M. on a 100 per cent. basis.

The Attleboro (Mass.) M. C. has just been organized with the following officers: Herbert James, president; Ira Cook, vice-president, and Charles H. Obrist, secretary. The club charter closes on March 8 in order that steps may be taken without delay to join the Federation ranks.

TEN MORE F. A. M. SHOPS.

DURING the week of February 19 Chairman Estabrook, of the membership committee, had his list of registered F. A. M. shops increased as follows:

Michael Curnow, 205 South Montana street, Butte, Mont.; G. H. Tompkins, 327 North Broad street, Richmond, Va.; Victor R. Stenger, 111 South 10th street, Nebraska City, Neb.; Jacob Petska, 2514 West Jackson boulevard, Chicago, Ill.; F. M. Bailey, 919 Tacoma avenue, Tacoma, Wash.; Progress Auto Co., 1736 Richmond turnpike, West New Brighton, N. Y.; A. C. Shaw, 414 Commercial street, Emporia, Kan.; Gene Johnson, 469 North Beach street, Daytona, Fla.; J. E. Sayre & Co., 331 Ohio street, Terre Haute, Ind.; E. F. Horn, agent for Reed & Dwinal Garage, Sixth avenue and Superior street, Antigo, Wis.

CLUB ORGANIZERS.

AMONG club boosters who report that they will soon have squads ready for the consideration of the F. A. M. are the following: Roy Hansen, 37 Pennsylvania avenue, Warren, Pa.; H. B. Child, 214 Stewart street, Reno, Nev.; Earl J. Roberts, P. O. Box 518, Lawton, Okla., and Frank A. Wahl, Spring and Summit avenues, Summit, N. J.

News from the Clubs

TERRE HAUTE CLUBS COMBINE

Two Lively Squads Merge Their Interests and Plans Are Being Laid for an Active Season.

As the result of concerted action by the Terre Haute and Indian motorcycle clubs, of Terre Haute, Ind., plans are being perfected for the coming season on a much broader scale than ever before and there are indications that the riders of the city will establish a new record for activity during 1912. At a recent joint session of the two clubs an agreement was reached by which the squads were reorganized as one, under the name of the Terre Haute M. C. The officers of the Terre Haute club have been retained for the joint organization as follows: H. E. Baldwin, president; C. O. Powell, vice-president; Frank A. Houff, secretary, and Edward Wagner, treasurer.

The dues have been fixed at one dollar a month and a committee has been empowered to lease permanent quarters in a central location. Steps have been taken to launch a membership campaign, and it is believed that the club will have about seventy-five riders on its list when the season opens.

BLACK HILLS CLUB.

At the first meeting of the Black Hills M. C., held in Deadwood, S. Dak., on February 19, ten members were enrolled, and the following officers were elected: Albert Wolley, president; Phil Shoenberger, secretary; A. E. Bailie, treasurer; J. De Picaza, captain, and C. E. Applegarth, lieutenant. The club discussed plans for a St. Patrick's day dance to raise funds for fitting clubrooms, and plans were also taken up for races to be held during the summer at the half-mile track in Spearfish.

PICKED A "LIVE ONE."

Joseph A. Ochs, president of the Rochester (N. Y.) M. C., has appointed Dr. Clint W. La Salle as chairman of the press committee, and has given notice that all publicity communications must come through the chairman.

NEW CLUB PENNANT.

The official colors of the Federation of American Motorcyclists, blue and white, have been adopted by the New Jersey Motorcycle Club of Newark, N. J., for club pennants.

A motorcycle club was formed in Ithaca, N. Y., on February 20, and John T. Hastings was elected president; Frank Martin, vice-president, and Levi C. Morris, secretary-treasurer.

Motorcyclists of Atchison, Kan., are preparing to organize a local club, lease a speedway and join the F. A. M.

COLORADO SPRINGS OFFICERS.

At the annual meeting of the Colorado Springs M. C., on February 13, the following officers were elected: Orin G. Lewis, president; U. S. Emmick, vice-president; H. G. Schif, treasurer (re-elected); U. S. Johnson, secretary; H. W. Clark, captain; Freeman W. Weatherby, lieutenant; C. A. Penny and Matthew Kraus, directors. A new rate schedule was adopted, and hereafter dues will be payable semi-annually. Each member who brings in five recruits will be credited with half a year's dues. The club has had three enjoyable and well-attended runs since the first of the year, and the outings are to be continued throughout the summer. In the past the members of the club have gathered in one of the local motorcycle shops, but from now on meetings will be held in a building at 1013 N. Wahsatch Ave., and all the club runs will start from that point.

OAKLAND BANQUET.

The Oakland (Cal.) M. C. held its first annual banquet at the Key Route Inn on Saturday, March 2, and the program for the affair proved successful even beyond the expectations of the committee in charge. A string orchestra furnished music and songs were given by a quartette. Finally the floor was cleared for dancing and this feature added materially to the enjoyment of the guests. Nearly one hundred couples were in attendance.

MOTORCYCLE MASQUERADERS.

The accompanying photograph shows a group of Worcester motorcyclists as they appeared during a carnival in the Massachusetts city. In the most grotesque costumes imaginable they rode their machines through the streets and created something of a sensation.

ABERDEEN WANTS CLUB.

Preliminary arrangements for a 100 per cent. F. A. M. club in Aberdeen, Wash., were perfected at a recent meeting attended by 30 motorcycle enthusiasts.

Members of the York (Pa.) M. C. held their first meeting in the new clubrooms on February 21.

TO BUILD CLUB HOME.

Steps have been taken to affiliate the newly organized Washington (D. C.) Motorcycle Club with the F. A. M. on a 100 per cent. basis, and a committee is looking up a site for a permanent home. At the last session there was some talk of a race meet and an endurance run, and it is likely that definite plans will be outlined for these events at the next regular meeting. The first officers of the club are as follows: George Cockran, president; Edward Mangold, vice-president; G. C. Billard, secretary; C. F. French, treasurer; Thomas R. Dedge, publicity representative, and Edward Mangold, captain. The membership of the squad will be limited to fifty.

OPENING INVINCIBLE RUN.

Beginning with a double-century run on May 5, the Invincible M. C., of Brooklyn, N. Y., with headquarters at 78 Herkimer street, will carry out a highly interesting program for the 1912 riding season. The opening event will be arranged for three classes of contestants. Riders in Class A will compete in a 200-mile run to Southampton and return, the time schedule running from 6 a. m. to 6 p. m.; those in Class B will ride over a 100-mile course to Patchogue, L. I., and return, on a time schedule extending from 8 a. m. to 5 p. m., and Class C will be for professionals.

A CALIFORNIA OUTING.

Members of the Harley Club, of San Jose, Cal., recently enjoyed an outing to Alum Rock Canyon, where several photos were taken; then the riders rode through the main streets of San Jose and Santa Clara, in single file and with closed mufflers. This stunt created an excellent impression. The run was well attended and many members of the fair sex occupied the tandem attachments. The club expects to hold many of these social events throughout the summer and perhaps something in the way of a contest for prizes.

SEEKS TOURING PARTNER.

Chauncey Ewing, of Bluffton, Ind., is looking for a partner to accompany him on a motorcycle trip to the Pacific coast next September, and will be glad to hear from a rider who contemplates making such a tour at the time stated. Ewing intends to join his brother, Professor Will Ewing, of Leland-Stanford University and visit his mother and sisters, all of whom reside in California.

REAL HILL-CLIMBING.

A Toronto rider, Percy Barnes, who uses an English Triumph and side-car, recently carried three passengers up Avenue Road hill, which is the steepest in that city. Two of his passengers were seated in the "carette," while the third was perched on the luggage carrier. The machine was a 3½ h. single cylinder model without clutch.

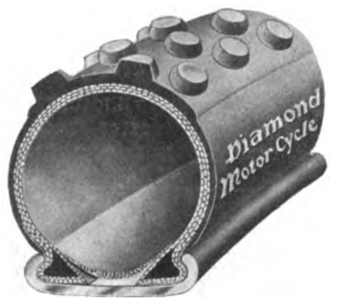
Thinking of Your Mileage as Well as Their Profit

Thirteen motorcycle manufacturers are willing to give you the utmost tire quality—

Diamond
TIRES

Their machines are: Excelsior, Eagle, Emblem, Harley-Davidson, Kokomo, Marvel, Merkel, Minneapolis, M-M, New Era, Reading-Standard, Thor, Yale

Diamond Motorcycle Tires cost the motorcycle manufacturer a little more than other tires—that's because of their higher quality. The makers of the machines named above are willing to pay this extra cost and give you the benefit of these higher quality tires at no extra cost to you. But you must tell them that you want Diamond Tires. Have your dealer order Diamond Tires for your new machine and you will get them.



Studded Tread Diamond Motorcycle Tire. Costs no more than Diamond Corrugated Tread.

Tire expense is the largest single item in the cost of running your machine—just as important when you get your machine as after you have had it a year.

There is only one way to put tire expense on a minimum basis at the start—specify Diamond Tires. And if you're not getting a new machine this year cut down your tire bills by buying Diamond Tires from your dealer.

Our illustrated catalogue tells you why Diamond Motorcycle Tires are the longest wearing, easiest riding motorcycle tires ever built. Send for it today.

THE DIAMOND RUBBER COMPANY
Akron, Ohio

Fifty-four Diamond Service Stations do more than sell tires—they take care of Diamond Tire users

THAT CHICAGO FIZZLE.

CHICAGO was expected to show the right way toward the organization of its dealers into an effectively working whole. But Chicago has failed, and the failure is apparently complete. A month ago, there was every reasonable prospect that the organization would prove most substantially successful; today, its erstwhile promoters are sadly contemplating the ruins of the structure which began to fall away so soon after building operations had started that it is hard to distinguish as between the builders and the wrecking crew. The hammers requisitioned to put things together in practical harmony were soon being used to play the anvil chorus. Some say that the structure fell of its own weight—top-heavy, perhaps.

M. M. A. Not to Blame.

The moving spirit in the enterprise was Jesse Edwards who, accustomed to doing things in a big way, gives voice to his impressions in an interview published elsewhere in this issue of MOTORCYCLE ILLUSTRATED. He talks plainly, and his comments are worth the reading thereof. But Edwards, we believe, is in error in charging part of the responsibility to the Motorcycle Manufacturers' Association. In fact, we do not know upon what basis he thought the manufacturers as a national association could consistently contribute to a local dealers' fund. If to the one that was then being raised in Chicago, then why not in Squeedunk, Podunk et cetera? The precedent would have been a bad one, if only because the M. M. A. is not in position to localize its endeavors. The organization is national in its scope, and it could not have favored Chicago without bringing on applications from dealers' associations in all parts of the country. Had the M. M. A. planked down a cool five hundred for local publicity in Chicago, dealers' associations would have grown up over night in scores of other towns, and from everywhere would have gone forth appeals for slices of the "graft." It would have meant making the dealers still more dependent, when their greatest present need is self-reliance, the acquisition of those qualifications which permit businessmen to stand on their own feet. It is about time that all the motorcycle dealers in the United States, large and small alike, threw away their crutches.

Up to the Dealers.

Is there any valid reason why the dealers of any town should not do their own publicity work and pay for it out of their own pockets? Are they so impoverished that in order to accomplish anything they first have to beg? We cannot get ourselves to think so disparingly of the Chicago dealers, or, for that matter, the dealers of any other enterprising city in the country. If, though, there is one iota of justification in the charges ordinarily made, then an awakening to responsibility is more than due. We hold that the manufacturer has done his duty when he has given an agent territory, a reliable machine delivered on or ahead of time, and the benefit of the makers' general advertising. Co-operation in the way of making good a guarantee marks the limit of the manufacturers' responsibility to their local representatives

Silly Rivalry.

It is an established fact that no competition is so bitter as the competition in a trade whose original basis is sport. As long as sporting competition is strong, trade jealousies continue intense. Probably because the average competitor is not a sportsman in the traditional sense of that word, and the narrowness of his disposition is communicated to the trade at large. The germ is most virulent, and its eradication a serious, discouraging task. As long as the small dealer in any community nurses the suspicion that his already more prosperous competitor will benefit in greater proportion from united action, just so long will the successful union of local trade enterprise be impossible.

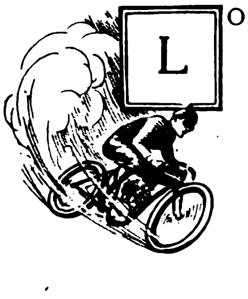
A Good Lesson.

This and other interesting lessons have been taught through the Chicago fiasco. Here we have a failure unerringly pointing the way to success. It has given further proof of the propriety of the claim that petty trade jealousies of which, by the way, some of the manufacturers are not entirely guiltless, are by far the greatest obstacle to development along the right lines. A broadening of the trade spirit is the present-day *sine qua non* in the motorcycle business, and the tendency is to disassociate the sport from the business, and thus relieve the latter of the burdensome rivalries which have been characterizing competition. In these endeavors to make the merchandizing of motorcycles a genuine business proposition will be found the trade's ultimate salvation.

A publication should be considered responsible for both its advertising and its news matter. Only reliable advertisers and trustworthy and accurate news correspondents are wanted by MOTORCYCLE ILLUSTRATED. Accordingly, our readers will confer upon us a great favor by calling to our attention any deliberate misrepresentations which may escape our strict censorship of both news and advertising. To the best of our knowledge the news and advertising in MOTORCYCLE ILLUSTRATED are both reliable. If there is a single exception we want to know of it at once. That is our conception of the duty we owe to the more than 100 firms who advertise in this publication and the more than 15,000 persons who read each issue.

DE ROSIER BESTS WOLTERS

In Two Straight Heats in Match Race in Los Angeles—Wolters Breaks Three-Mile Record.



LOS ANGELES, CAL.—Jake DeRosier, the old warhorse of motorcycle racing, was the star of the Stadium meet on February 25, when he defeated "Farmer" Joe Wolters, of Denver, in two straight heats of a match race, each heat being for two miles. De Rosier also won the six-mile, free-for-all, in which both Class A and B riders contested. This was the only open race in which he took part. Wolters was excused from this event by Referee Gates, because "Farmer" Joe had ridden in the three Class A events besides the two heats of the match race, and, as Joe expressed it, he was "all in."

Early in the week Eddie Hasha, who has been nicknamed locally the "Texas Cyclone," had an accident in practice at the new track and broke a valve inside of his Indian twin-cylinder engine, while going at top speed. He was not able to get the engine in the best of running order for the races on the twenty-fifth, but the little Southerner was game, and while he was excused from a match race in which it had been announced he was to meet Wolters, he started in the Class A open races. He had to drop out of the second, when a valve tappet broke and put his machine out of commission for the day. Hasha had been able to hold third in the three-mile race in which the record for this distance was broken for the third time at the new track. With Hasha known to be handicapped by his accident of Tuesday, and DeRosier turning miles faster than ever, on account of having new cylinders on his Excelsior, those in the know looked for Jake to come back to championship form again, which he did nobly.

The form displayed by Albert Ward, riding the small 8-valve Indian, was a surprise to all. He took the five-mile event in 3:23⅘, the same time made the week before, when the record was cut from 3:29⅕ by Hasha, and in the six-mile, free-for-all he led all but DeRosier, although the world's record was cut three seconds in this race. Both Balke and Seymour were at a disadvantage through engine trouble, neither being able to get the speed they usually show; in fact, Balke had something go wrong when he was in third place in the free-for-all, and had to give up all hope in this event as the others shot by him in the stretch.

The steep banking of the track, 50 degrees, which would figure out over 100 per cent. as a grade, is none too steep, although Paul Derkum had a hard fight with Jack Prince to get that pitch. Prince now sees that he built better than he knew, for world's records are cut almost every time the Class A men get the flag. By dividing the riders into classes finishes have been close and no one has been disappointed. For once the public is getting all it asks and races go off so fast that some are now kicking because the program is not longer. The management, on the suggestion of the referee, has added a "best-two-in-three" match race, which adds at least two more events to the program. There is seating capacity for all and the press has a position far above all the stands.

There were no accidents at the meet on February 25, although there were two close shaves. In the Class A for four miles Wolters, Ward and Balke performed a billiard shot stunt, and Balke, who was at the top nearly went into the stand. A similar accident a week ago occurred when DeRosier hit Wolter's rear wheel and Wolters was shot into another rider. As there are but six men allowed in a Class A race, and all expert riders, chances of a fall are slight.

Theodore Samuelson, of Salt Lake City, was allowed to use a Class A machine in the B races last week, as he had constantly complained to the referee and promoter that he had no show with his own machine against the faster mounted riders in Class B. Will Samuelson, his brother, who also rides an Indian, but which was rebuilt by the factory and thus made faster, easily defeated his brother in the final, mounted on the Balke factory Excelsior.

L. I. Humiston, a local rider, who made his debut in Class B on February 25, won two prizes and was closely watched by a lot of local riders with racing ambitions, who have figured on having their 7 h. machines tuned up for racing as Humiston has done. If this is done Class B will do away to a considerable extent with the factory trouble and focus attention on the rider and his track ability. Owning his own machine and keeping it up will mean that a Class B man will ride to win all the time.

Summary: First race: first heat two-mile match race, won by J. DeRosier (Excelsior); Joe Wolters (Excelsior), second; time, 1:21⅕.

Second race: first heat, four-mile Class B professional, J. Albright (Indian); W. Samuelson (Indian), second; time, 3:02⅕.

Third race: three-mile Class A professional, won by J. Wolters (Excelsior); C. Balke (Excelsior), second; W. E. Hasha (Indian), third; R. Seymour, Los Angeles (Indian), fourth; time, 1:59⅗. Present official world's record, 2:01⅗.

Fourth race; four miles, second heat, Class B professional, won by T. M. Samuelson, Salt Lake (Indian); L. I. Humiston (Indian), second; time, 3:09⅗.

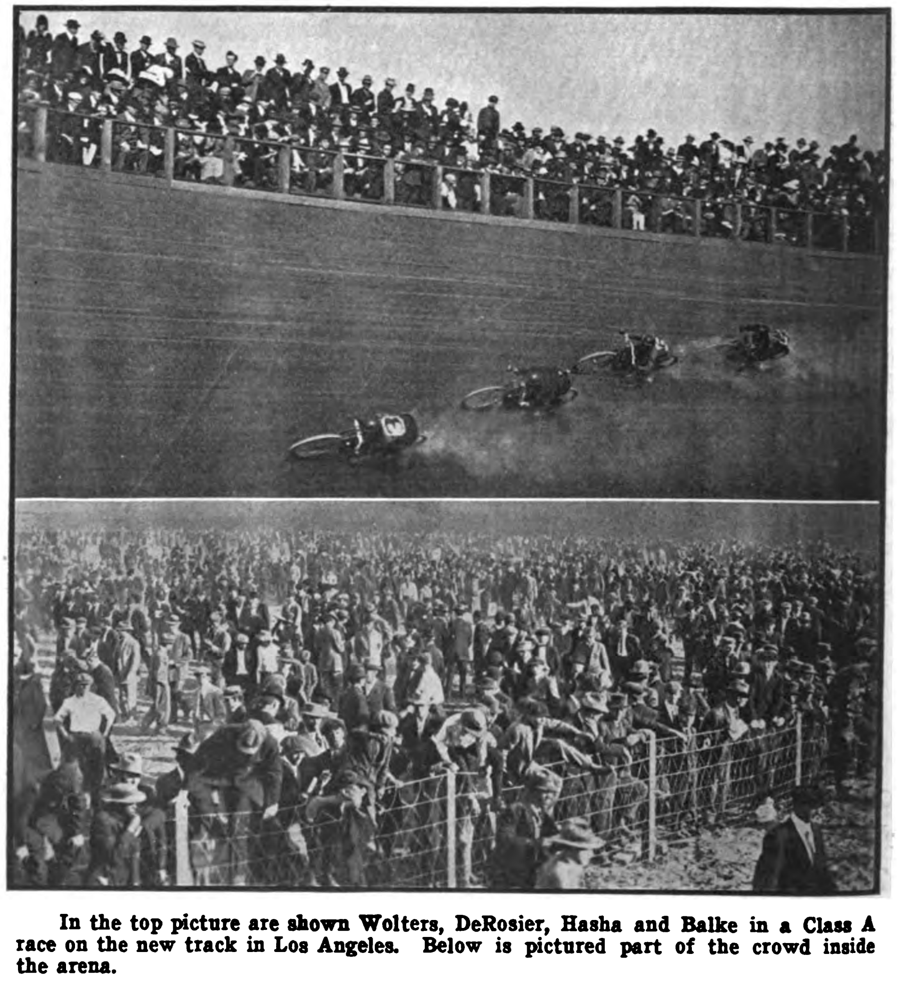
Fifth race: four miles, Class A professionals for points, won by C. Balke (Excelsior); J. Wolters (Excelsior), second; R. Seymour (Indian), third; time, 2:40⅖.

Sixth race: five miles, final heat, Class B professional, won by W. Samuelson (Indian); J. Albright (Indian), second; L. I. Humiston (Indian), third; T. M. Samuelson (Indian), fourth; time, 3:52⅗.

Seventh race: two miles, second heat match race, won by J. DeRosier (Excelsior); J. Wolters (Excelsior), second; time, 1:24⅗.

Eight race: five miles, Class A professional, won by A. Ward (Indian); J. Wolters (Excelsior), second; C. Balke (Excelsior), third; R. Seymour (Indian), fourth; time, 3:23⅘.

Ninth race: six miles, free-for-all Class A and B professional, won by J. DeRosier (Excelsior); A. Ward (Indian), second; R. Seymour (Indian), third; W. Samuelson (Indian), fourth; L. I. Humiston (Indian), fifth; time, 4:08⅕.



In the top picture are shown Wolters, DeRosier, Hasha and Balke in a Class A race on the new track in Los Angeles. Below is pictured part of the crowd inside the arena.

Questions ??? and Answers

TRANSMISSION——CYLINDERS.

H. DETTMAN, San Francisco, Cal.—We have often stated in this department that it is utterly impractical for us to determine the relative merits of the various types of transmission. That is largely a matter of personal preference, although it is conceded that while the chain is more positive, the belt is somewhat more flexible. For purely speed work, the chain drive is undoubtedly superior. For touring it is largely a matter of personal choice. Tests prove that the chain transmits a greater proportion of power than does the belt, but the very positiveness of this type of transmission prejudices some riders against chain drive. In this country there are more chain-driven than belt-driven machines, and this year several manufacturers who had heretofore built only belt-driven motorcycles are now cataloging one or more chain-drive models. On the other hand, in England chain-driven motorcycles are decidedly in the minority.

Your second question is rather vague. You ask whether there is any advantage in having a twin instead of a single cylinder. It is obvious that there must be some advantage, otherwise purchasers would not pay more for the double-cylinder equipment. In the first place, the twin is more powerful on the hills and in sand, and also faster. It is also better balanced than a single, so that the vibration caused by the power impulses in the engine is reduced. But the standard single cylinder is an absolutely reliable machine, a good hill climber and fast enough to satisfy the requirements of the average rider.

KNIGHT MOTORS.

G. A. BERINE.—The Knight motor has not as yet been fitted to a motorcycle, and it is very doubtful whether an air-cooled Knight motor has even been constructed. If there are any such the builders are keeping very quiet about them, and no news has been received by us to date. Possibly a difficulty in cooling through the two sleeves and the cylinder walls may not have been overcome, and the cost of construction being heavy, the type may not be seen for some time to come. The motor is patented by Chas. Y. Knight, of Coventry, England.

LIGHT FITTINGS FOR SPEED.

PHILIP T. J. COTE.—1. The lighter piston may result in an increased speed at the expense of the life of the piston. It will affect the balance of the motor, as it is customary to balance a certain portion of the reciprocating parts, and with the lighter piston this balance will be changed. 2. The fitting of a lighter connecting rod in addition, or boring to reduce weight, will affect the balance to a further degree, and rebalancing will be necessary. 3. The compression may be changed by the fitting of the lighter piston, hence the weaker the exhaust. This will be the case if the two pistons are not of the same length over all. The vibration is very probably due to the lack of balance. A reduction of compression pressure (enlargement of compression space), results in slightly weaker explosions and affects the mixture. See that the exhaust has a dark blue-violet color at low speeds, and verify the timing of the valves also.

MOTORCYCLE MANUAL.

JOHN DAVIDSON.—Our Motorcycle Manual will contain descriptions of the various parts of the motorcycle (carbureter, ignition devices, muffler, etc.), with their functions, the usual and a host of unusual troubles that occur to them. The troubles are all indexed and the remedies therefor are given at length. Numerous illustrations will appear throughout the work. In addition to the above, the operations of both the four-cycle and two-cycle motors are explained and illustrated. Sections of the volume are devoted to State motorcycle regulations, F. A. M., equipment for ordinary and extended tours, clubs, etc. The price is 25 cents.

CRANKCASE BREATHER.

RALPH C. CHESNUTT.—As the flywheels and big-end rotate in the crankcase they generate a pressure within the case, and unless this pressure is relieved, the oil will be forced out through the bearings or up into the cylinder past the rings. The first result will be a "weepy" motor and the second one that smokes. By fitting an open end pipe to the crankcase, known as a "breather," the pressure escapes and the oil fulfils its functions of oiling only. Where the speed is high, the breather may not be of sufficient size to quickly relieve the pressure, hence a slight shoot of oil will be thrown out of the end from time to time. A number of makers have the end of the breather over the chain so that the overflowing oil will lubricate the chain.

RACING INFORMATION.

LUDWIG FLACK.—*Motor* is published by the New Publication Company, 381 Fourth avenue, New York City. The managing editor is Julian Chase. The *Motor Age* is published at 910 South Michigan avenue, Chicago, Ill. Address the managing editor. We suggest your writing to the makers of the car in question if it is still in existence. The address of the American Automobile Association is 437 Fifth avenue, New York City.

REPLACING A STUD.

P. LINDEMAN.—You will have to get a new stud, as should you re-thread the stud and use it, too much strain would be put on the other studs, and a failure of any might necessitate replacement of all studs or a new head. When a stud is reduced in diameter and re-threaded it is weakened and gives way easier. Have the stud replaced at once, and clean the cylinder and head, noting whether the ground joint at the head and cylinder top is uninjured. If it is damaged, give the job to a reliable repairman to fix up.

On the 8-valve Indian, two inlet and two exhaust valves are fitted to each cylinder. This conduces to an increase in speed, as the gases are admitted and exhausted with greater ease than where only one inlet and one exhaust are fitted per cylinder. The inlets naturally are operated simultaneously, and the exhausts likewise in each cylinder. There being two exhaust valves, burning or overheating of the valves is practically overcome and this trouble, common to many motors run at high speed, is absent in this arrangement of valves. One mount having this valve arrangement was fitted with auxiliary exhaust ports near the foot of the stroke. Both the direct chain drive and the regular countershaft-and-double-chain drive have been used.

CAUSES OF OVERHEATING.

V. C. FLEMING.—Overheating is primarily due to an over-rich mixture, especially when the motor loses power after running for some time. First try reducing the quality, or proportion of gasoline and air, in the mixture. See that the color of the exhaust at low speeds (at the exhaust chamber or muffler cut-out) is dark blue verging on violet, while at higher speeds the color should be lighter, due to the admission of more air through the auxiliary air valve. If this is not the case, regulate jet opening and lift of auxiliary air-valve until the correct color is obtained.

The timing of the valve might be bettered. Try having the inlet valve open a trifle earlier; one tooth on the gear may do the trick. Look at the clearance between the tappet and end of exhaust valve stem; it should be about 15-1,000 of an inch or slightly less. Is the crankcase hot after running? If so, the rings may be worn or broken or the piston head cracked. Is anything out of line or dragging between the rear hub and the motor shaft? Is the contact maker clean, and are the batteries in good order? A dry cell will not give off current at less than 6 ampéres. Use an ammeter and note the result. Replace the defective cells, if any, with new ones, showing over 20 amperes. Examine all wiring, bending it at intervals for breakage under the insulation. Note the quality of the spark at the plug. The batteries should be connected in "series," the zinc or side binding-post to the carbon or center binding post of each cell in succession. See our forthcoming Motorcycle Manual.

REPAIRING BROKEN CONNECTION

GEORGE M. CRAWLEY, JR., of Newark, N. J., forwards the following pointers on repairing a broken carbureter connection:

Cut a machine thread on the new tube, screw it into the carbureter union and then clean well with muriatic acid. Next take

Touring

CLEVELAND TO PROVIDENCE.

NATHAN NUDDLEMAN.—From Cleveland go to Euclid, Willoughby, Mentor, Painesville, Madison, Unionville, Geneva, Saybrook, Ashtabula. North Kingsville, Amboy, Conneaut, West Springfield, East Springfield, Girard. Fairview, Erie (Pa.), Harbor Creek, Northeast, State Line, Ripley, Westfield, Portland, Brockton, Lamberton, Fredonia, Sheridan, Silver Creek, Irving, Farnham, Evans Center, Buffalo. From Buffalo go to Bowmansville, Mill Grove, Crittenden, Corfu, Batavia, Leroy, Caledonia, Scottsville, Rochester, Fairport, Macedon Center, Macedon, Palmyra, Lyons, Newark, Lock Berlin, Clyde, Savannah, Port Byron, Weedsport, Elbridge, Camillus, Syracuse, Fayetteville, Mycenae, Chittenango, Canastota, Oneida, Oneida Castle, Vernon, Kirkland, New Hartford and Utica. From Utica go to Deerfield, West Schuyler, Herkimer, Little Falls, St. Johnsville, Palatine Church, Yost, Fonda, Amsterdam, Hoffmans, Schenectady, Lisba Kills and Albany. From Albany go to Rensselaer, East Greenbush, Schodack Center, Nassau, East Nassau, Lebanon Springs, and Pittsfield; from thence go to Lenox, Lee, East Lee, West Becket, Bonnyrigg 4-corners, Chester, Huntington, Russell, Westfield and Springfield (Mass.). From Springfield go to North Wilbraham, Palmer, West Brimfield, West Warren, Warren, West Brookfield, Brookfield, East Brookfield, Spencer, Liecester and Worcester. From the latter place go to Millbury, Uxbridge, Millville, Woonsocket, Ashton, Lonsdale and Providence, R. I.

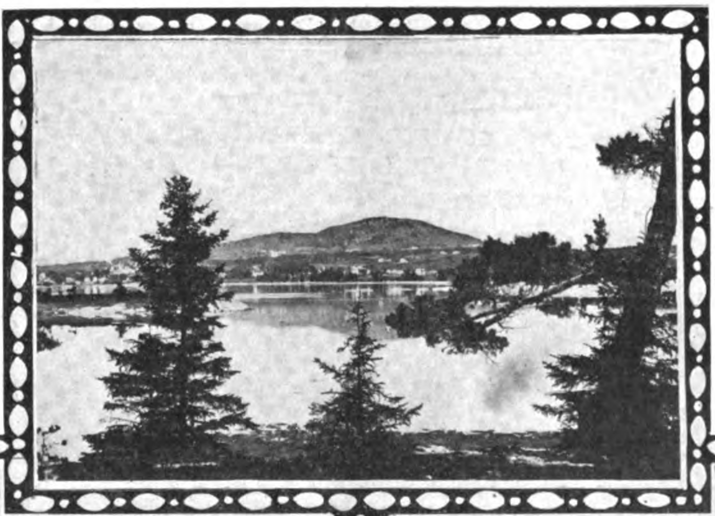
To Providence via Philadelphia.—Go from Cleveland to Chagrin Falls, Auburn Center, Auburn Corners, Troy, Parkman, Southington, Warren, Girard, Youngstown, Boardman, Poland, New Middletown, Petersburg, Enon (Pa.), Homewood, Darlington, Beaver Falls, Rochester, Economy, Sewickley, and Pittsburgh. From the latter place go to Wilkinsburg, Wilmerding, Irwin, Greensburg, New Alexandria, Blairsville, Black Lick, Homer City, Indiana, Penn Runn, Kenwood, Pine Flats, Garmans Mills, Spangler, Carrolltown, Ashville, and Altoona. From the latter place go to Juniata, Tyrone, Water Street, Alexandria, Huntingdon, Mill Creek, Allensville, Bellville, Reedsville, Yeagertown, Lewistown, Mifflintown, Thompsontown, Millerstown, Newport, and Harrisburg. From Harrisburg, go next to Steelton, Middletown, Elizabethtown, Mount Joy, Landisville, and Lancaster; from there go to Strasburg, Sadsburyville, Coatesville, Downingtown, Malvern, Paoli, Wayne, Devon, Bryn Mawr, Ardmore, and Philadelphia.

From Philadelphia, go to New York, as follows: Ogontz, Bustleton, Langhorne, Oxford Valley, and Trenton (N. J.); Lawrenceville, Princeton, Kingston, Monmouth Junction, New Brunswick, Metuchen, Menlo Park, Iselin, Rahway, Westfield, Elizabeth, Newark, Jersey City and New York. From New York go to New Rochelle, Larchmont, Mamaroneck, Rye, Port Chester, Greenwich (Conn.), Mianus, Stamford, Darien, Norwalk, Westport, Southport, Fairfield, Bridgeport, Stratford, Milford, and New Haven. From New Haven go to East Haven, Branford, Guilford, East River, Madison, Clinton, Old Saybrook, Lyme, Laysville, Flanders, and New London; from there to Mystic, Stonington, Westerly, Charleston (R. I.), Wakefield, Saunderstown, Hamilton, Wickford, East Greenwich, Apponaug and Providence.

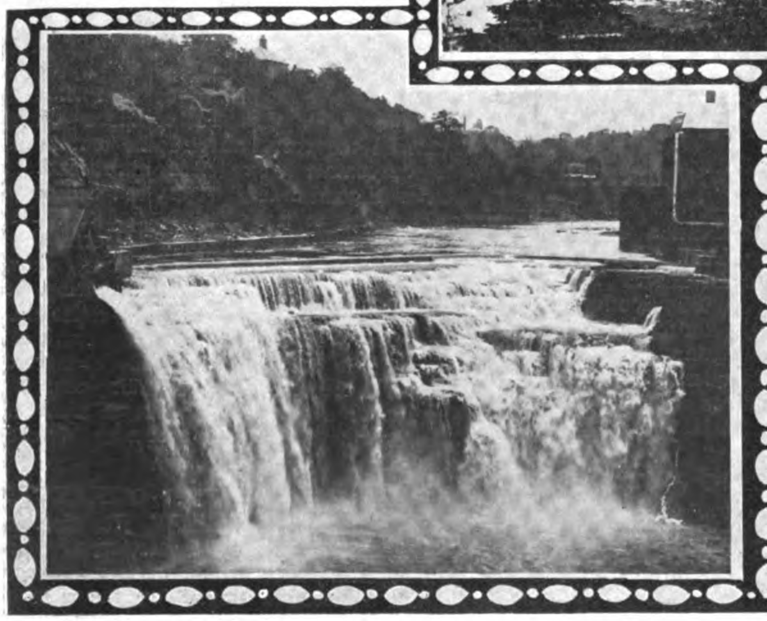
SOUTH BEND TO WASHINGTON.

IRA. W. NOLAND.—From Sound Bend go to Ligonier, Wolf Lake, and Noblesville into Fort Wayne. Go next to Van Wert, then through Delphos, Elida, and into Lima. From Lima go on to Westminster, Huntsville, Bellefontaine, Zanesville, Marysville, Dublin, and into Columbus. From Columbus go next to Reynoldsville, then to Hebron, Jacktown, Gratiot, Mt. Sterling, Zanesville, New Concord, Cambridge, then through seven toll-gates to Bridgeport. From thence go to Wheeling, W. Va.

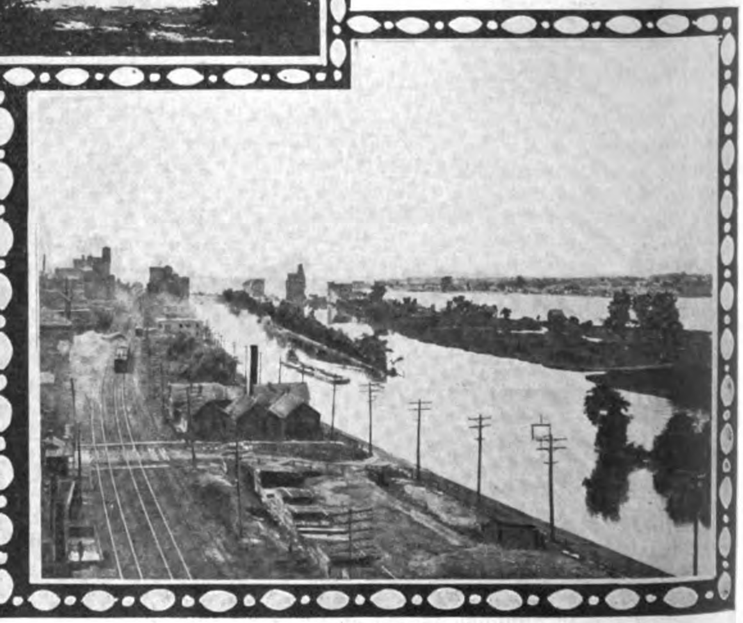
From Wheeling go to Cumberland, through the following towns: West Alexandria, Claysville, Washington, Pa., Strabane, Scenery Hill, Beallsville (over the National turnpike), then over the old government road through Brownsville, Uniontown, Farmington, Somerfield, Grantsville, Frostburg,



Top—Massachusetts Blue Hills.



Left—Falls Near Rochester, N. Y.

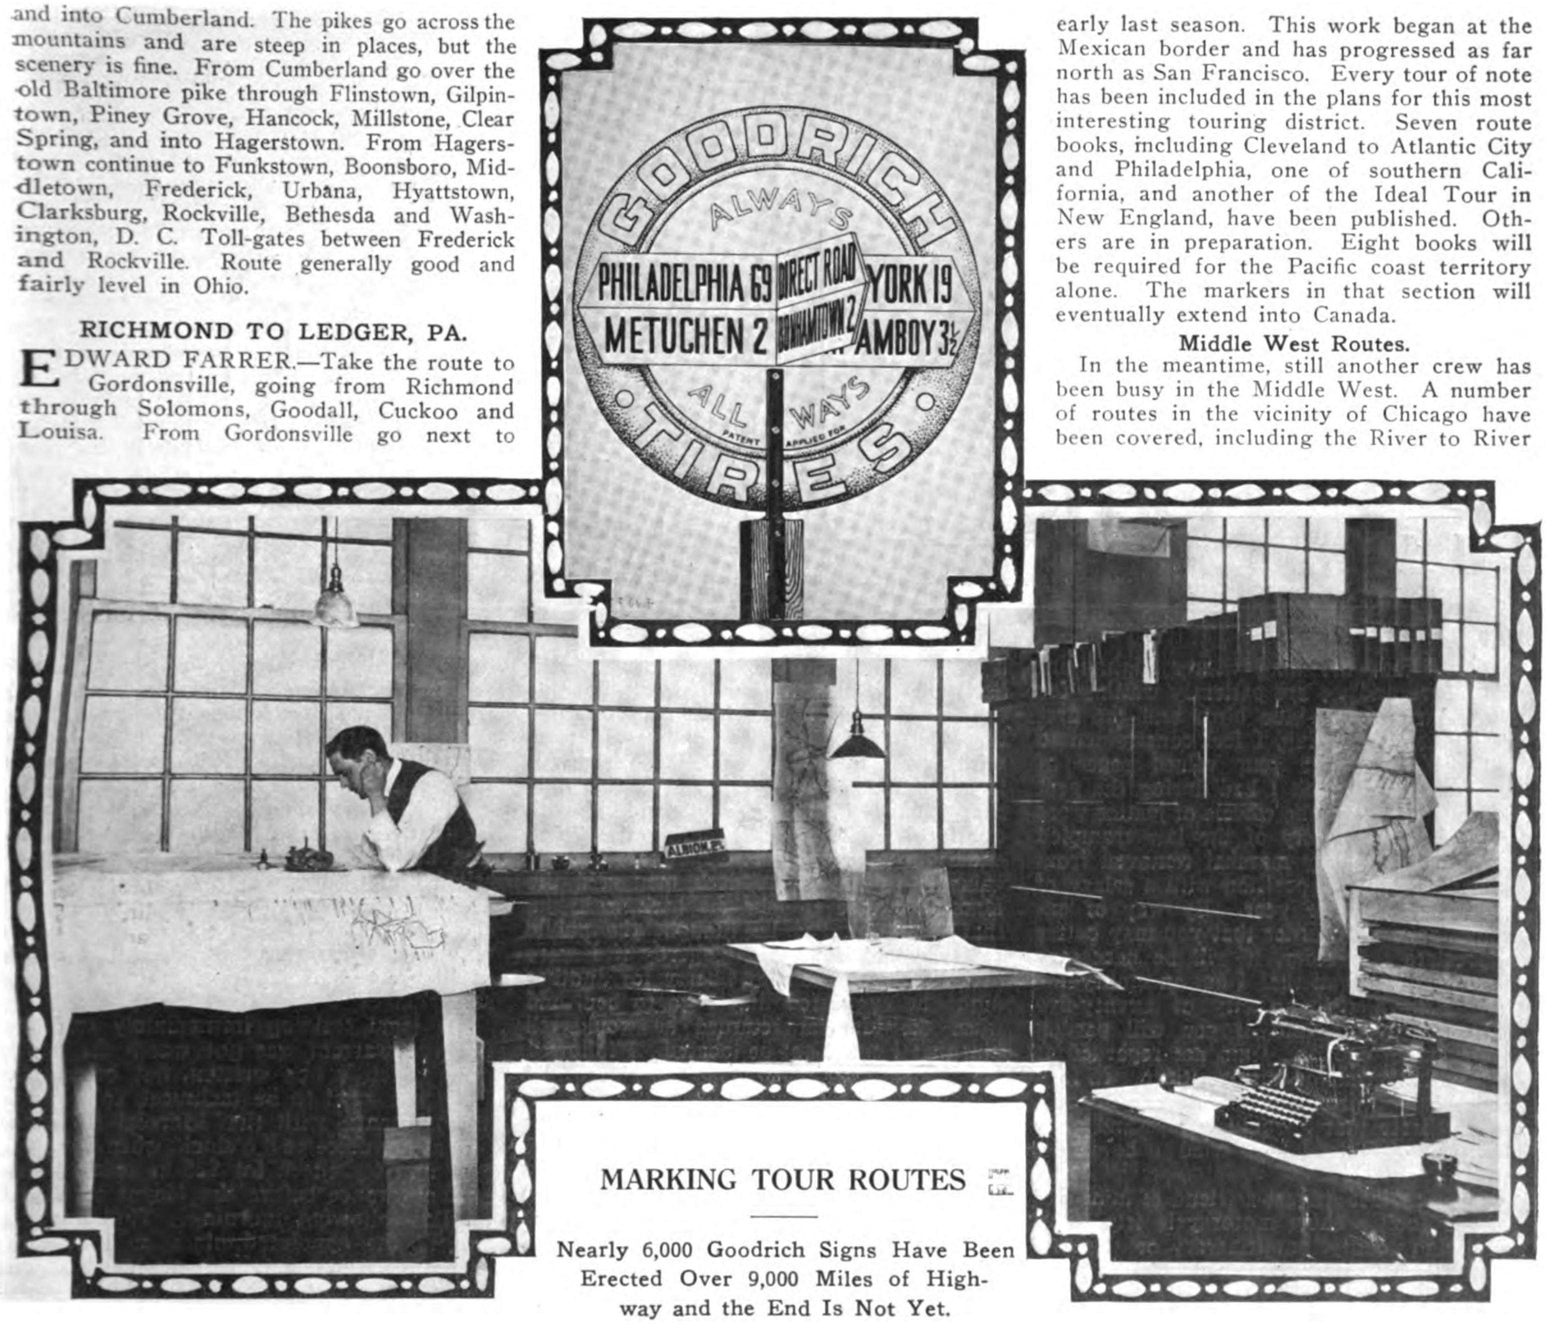


Right—Black Rock Harbor, Buffalo.

and into Cumberland. The pikes go across the mountains and are steep in places, but the scenery is fine. From Cumberland go over the old Baltimore pike through Flinstown, Gilpintown, Piney Grove, Hancock, Millstone, Clear Spring, and into Hagerstown. From Hagerstown continue to Funkstown, Boonsboro, Middletown, Frederick, Urbana, Hyattstown, Clarksburg, Rockville, Bethesda and Washington, D. C. Toll-gates between Frederick and Rockville. Route generally good and fairly level in Ohio.

RICHMOND TO LEDGER, PA.

EDWARD FARRER.—Take the route to Gordonsville, going from Richmond through Solomons, Goodall, Cuckoo and Louisa. From Gordonsville go next to Orange, then to Locustdale, Culpeper, Jeffersonton, Warrenton, Academy, Plains Station, Middleburg and Leesburg. From Leesburg go to Falls Church and into Washington, D. C. From the latter city go to Baltimore via Laurel and Relay. From Baltimore go to Towson, Lock Raven, Glenarm, Belair, Churchville, Havre de Grace, Perryville, North East, Elkton, Newark (Del.), Wilmington, Chester (Pa.), Norwood and into Philadelphia. From Philadelphia go to Ardmore, Bryn Mawr, Devon, Wayne, Paoli, Malvern, Downingtown and Coatesville. From the latter place go next to Sadsburyville and Leaman Place, where you should be able to make Ledger via Vites. The distance from Richmond to Leaman Place is about 413 miles. No toll roads except between Philadelphia and Ardmore and Ardmore and Malvern. At present no Maryland license is necessary for a Virginia rider, provided that he carries his plates, etc., from his own State. The same is true of Pennsylvania. Two periods of seven days each are the limits of non-resident exemption in Maryland.



MARKING TOUR ROUTES

Nearly 6,000 Goodrich Signs Have Been Erected Over 9,000 Miles of Highway and the End Is Not Yet.

LATEST reports on the road-marking project which is being carried through by the B. F. Goodrich Company, of Akron, Ohio, show that 5,800 markers have already been erected along 9,400 miles of the most popular touring routes in the country. This remarkable record is to be continued throughout 1912, as the company's plans call for the posting of 13,000 miles of road, and the erecting of at least 4,500 additional signs. The road-marking work in New York State was the first to be completed. Starting at Cleveland, Ohio, the Goodrich staff worked eastward to Buffalo, Rochester, Albany, New York City, and then southward to Philadelphia and Atlantic City. A side tour was also posted from Poughkeepsie, N. Y., to Delaware Water Gap and then back to Newark.

New England Tour.

Immediately following this the Goodrich crew marked Long Island and the Ideal Tour through New England. On the other side of the continent another crew began to mark the highways of the Pacific coast early last season. This work began at the Mexican border and has progressed as far north as San Francisco. Every tour of note has been included in the plans for this most interesting touring district. Seven route books, including Cleveland to Atlantic City and Philadelphia, one of southern California, and another of the Ideal Tour in New England, have been published. Others are in preparation. Eight books will be required for the Pacific coast territory alone. The markers in that section will eventually extend into Canada.

Middle West Routes.

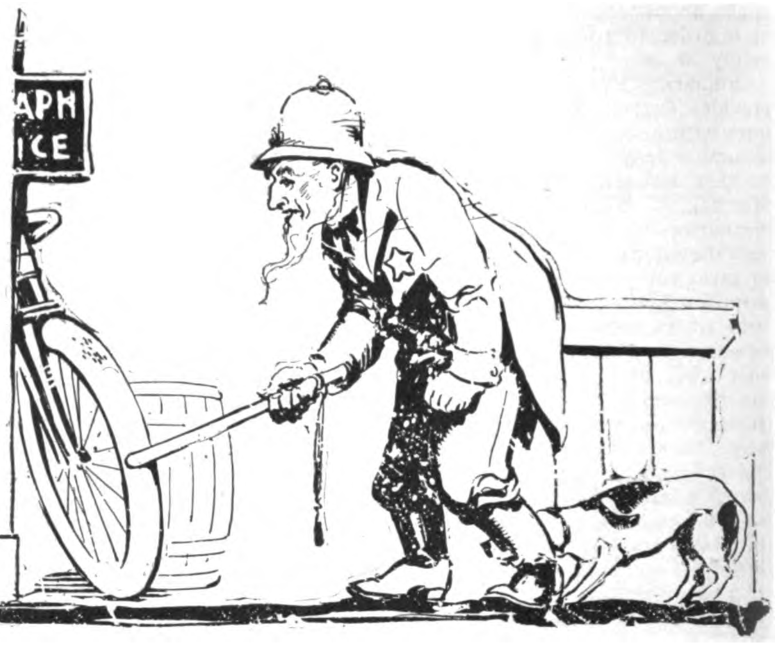
In the meantime, still another crew has been busy in the Middle West. A number of routes in the vicinity of Chicago have been covered, including the River to River Road across Iowa. With the Cleveland to Chicago route, this gives a line of Goodrich markers from New York to Omaha, Neb. Michigan has just recently been completed, practically every city in the State being included. At present the Middle West crew is putting up a system of markers that will connect all the towns of importance in Indiana and Ohio.

During the winter months attention is being directed to the South. The principal roads in Florida, Georgia, North and South Carolina, Virginia, Maryland, Pennsylvania, Kentucky, Tennessee, Alabama, Arkansas, Texas, Kansas, Colorado, Nebraska, Missouri and Illinois are being mapped out by the Touring Bureau. Work will continue in northern California at the same time, and the northern States will follow as the weather permits.

Route books are being prepared as rapidly as the crews complete their work. Besides the seven Pacific coast books to follow the first one, there will be two more of the New England territory, and a number for the Middle West and the South.

HOW A TOWN MARSHALL LOST HIS OFFICE

by L. J. MYERS



NOW that the long winter nights are here and we are patiently waiting for the return of the blue birds and the first balmy days of spring, I feel constrained to tell the readers of your valued paper of an experience which I had during the past summer, in which the wheels of justice were clogged, the majesty of the law trampled upon and a county marshal removed from a lucrative official position with a salary of twelve dollars per year. By way of explanation, and in order that you may better appreciate this story, it will be necessary for me to tell you that I am an embryonic lawyer in a thriving city of twenty-five thousand people, and, if you will pardon the seeming egotism, I am not regarded as a very dangerous or unruly citizen. In fact, ever since I promised the Supreme Court of our State that I would uphold and obey the laws of Ohio, I have tried to be a law-abiding citizen.

One day last August a friend of mine and myself took a short motorcycle trip to an adjoining county, our itinerary on the way home including the city of Blank. Now Blank is a wonderful place, situated at the intersection of two country roads, and consists of a town pump, post-office, blacksmith shop and a grocery store where the local statesmen and politicians coagulate to decide all the momentous social, political and economical problems of the times. As we approached the "public square" a vicious looking canine came running out at my machine and got directly in front of it. To avoid upsetting him, and incidentally, myself, I shut off the spark until he had gotten out of my path, when I again turned on the power, with the result that several charges of mixture which had passed the explosion chamber, exploded in the muffler with sharp reports. The rest of our journey was uneventful and we arrived home with the satisfaction of having had a successful and enjoyable trip.

When I arrived at my rooming place that night, after attending one of our local theatres, my landlady told me that two men had called at the house to see me, and not finding me at home, had left word for me to call at the police station. I did so, thinking that one of my clients had probably fractured a city ordinance or violated a state statute and needed my professional assistance to gain his freedom, but, imagine my surprise when the desk man told me that the Marshal from Blank was in town with a warrant for my arrest. Perhaps it is not out of place to tell you at this time that I have a fairly good "stand-in" with our local police force, including the Chief, and right here was where that fact became valuable to me. The desk man said the Marshal wanted to take me back with him that night, but, as he thought the public safety would not be in jeopardy if I were permitted to remain at liberty for another night, he suggested that I go to bed, and when the Marshal returned he would tell him that I could not be located. I followed his directions and as my conscience did not bother me, I slept well.

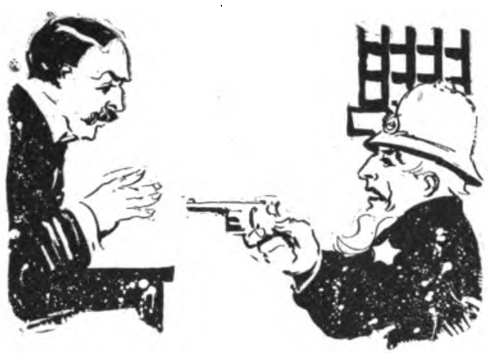
The next morning, Ringling Bros.' circus was scheduled to arrive in our town and as one of the little folks at my rooming place wanted to see them unload, I arose at 4:30 for the purpose of taking him down to the railroad yards. About six o'clock, the Marshal called at the house and when he found that I was not there, he became very angry as he thought that I had left solely to evade him and decided then and there to play Sherlock Holmes and capture me.

By a very subtle and artful cross examination of my landlady, he learned where I had gone and immediately started upon his detective work with an air of official dignity that would have made old Sherlock turn green with envy. Between my rooming place and the railroad yards, there are several places where liquid courage is dispensed by the drink, pint or quart, and, as the Marshal came from a dry town, he visited several of these places to nerve himself for the dangerous yet important duty which his position imposed upon him.

Upon his arrival at the railroad he located my motorcycle and waited until I appeared to get it, when he stepped forth with a look of victory upon his face and informed me that he was the Marshal of Blank and that he had a warrant for my arrest. I asked him to produce it, and here is what I was charged with (quoting verbatim from the warrant): "Speeding rapid with a moter sickel inside the incorporated village of Blank, and of shooting in the limits of said village."

My legal training immediately told me that the warrant was not worth the paper upon which it was written, but, of course, I did not want to be technical, so I made arrangements with the Marshal to meet him at my office at 8 o'clock, when I was to give him my check for $25 as security for my appearance before the Mayor of Blank on the following morning. The Marshal was at the appointed place on time, but several matters detained me and I was about ten minutes late in keeping my appointment. The Marshal was evidently very suspicious of me and he took this as another indication that I was trying to evade him and about two minutes after eight, he went to the police station and, walking into the Chief's room, threw down the warrant and told the chief that he wanted me caught if it took the entire police force to do it. He also wanted to know if he could borrow a pair of handcuffs to take me back with if they succeeded in catching me. This was more than the chief and his assistants could stand, and they took advantage of their opportunity to have some fun at the Marshal's expense, so they asked him if he did not want to borrow a gun. He immediately assured them that he did not need one as he had come prepared in that line and to prove it he produced a six-shooter which, from its looks, had at one time been the property of Noah. When I arrived at the office, I did not find the Marshal and as I imagined what he would do, I called at the police station and the desk man told me of what had transpired and intimated that if the Marshal got about two more drinks, it might be necessary for them to lock him up in order to preserve the peace and tranquility of our fair city.

Ordinarily our Chamber of Commerce provides entertainment for such royal visitors within our gates, but for some unaccountable reason, no action had been taken by that honorable body to entertain the Marshal, so my friend appointed himself a committee of one to see that the Marshal was shown about the town. I am unable to give you their program, but I have a suspicion that it included several visits to some of our "wet goods" stores, for I received a message from the police station soon after the program commenced, stating that the Marshal had registered as a guest at the city's boarding house. He had been found on Main street, fondly embracing a telephone pole. It is customary to search all guests that register at this hotel and, in searching the Marshal they were surprised not to find his official badge, but he explained this by saying that the city council of his home town had not seen fit to purchase one for him and, as his salary was but twelve dollars per year, he did not feel justified in purchasing one out of his own funds. One of the other guests felt sorry for him when he heard his sad story, and in order that he might not be embarrassed again, placed a Star tobacco tag upon the lapel of his coat as his official badge.



"He produced a six-shooter."

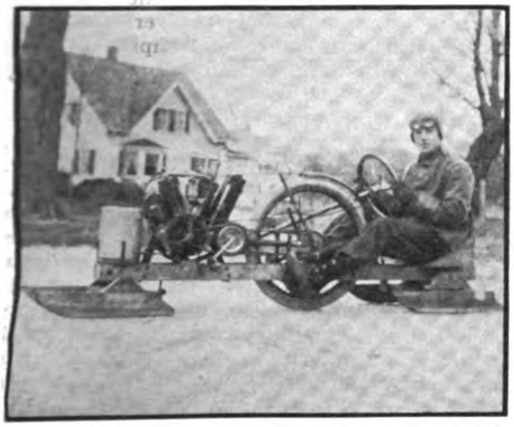
I decided it would be advisable for me to go over to Blank and have a talk with the Mayor, so I arranged with the Chief of Police and the Mayor of our town to defer the Marshal's case until the last one on the docket, in order that I might get to Blank before the Marshal would, and the next morning I took my suit case, filled with law books of all kinds, and started for Blank. Fortunately, the Mayor was at the station and we held court under an old cherry tree near by. I explained the weakness of their case, both as to the law and the facts, and the Mayor, fearing criticism from his constituents if he did not punish me for shooting up the town, said if I would plead guilty he would fine me one dollar and costs, and suspend both. I knew that I could not get off easier if I should stand trial, so then and there, in that courtroom of Nature, with the horizon for its walls, the blue heavens for a ceiling and a few hungry robins in the cherry tree above us for an audience I pleaded "guilty," and was sentenced as per our arrangement.

Our friend the Marshal did not fare so well, as our Mayor thought his board, lodging and entertainment were reasonably worth $5.60, and he was compelled to separate himself from that amount in order to gain his liberty so that he could go back to Blank, to resume his official duties. However, his troubles were not at an end, for a special session of the village council was called the next night and they decided that they could dispense with his services, and he was removed from office.

All because a mongrel pup did not like my 4 h. Yale.

ANOTHER MOTOR SLEIGH.

THURBORN MARSH, of Bedford Hills, N. J., has succeeded in knocking a lot of fun out of the motor sleigh shown in the photograph during the last few weeks. It is driven by a 5 h. motorcycle motor, which has carried it over the snow at the rate of twenty-five miles an hour with the gas throttle practically closed.



HILL-CLIMBERS TO COMPETE.

BALTIMORE, Md., March 4.—The hill-climbing ability of the members of the Maryland M. C. and the Chesapeake M. C. is now at issue. One of the Chesapeake boys knows of a hill that only one motorcyclist has been able to pull, but this is doubted by the riders of the Maryland club. Director Kuhl, of the Chesapeakes and Treasurer William Wood, of the Maryland squad, will probably get together as soon as the cold weather breaks and arrange for a contest between the two clubs. A joint run of the two clubs had been planned for Sunday, March 3, but the weather was so severe that it had to be called off at the last moment. Quite a party of the riders, however, had their mounts out for an airing and they enjoyed themselves immensely notwithstanding many of them returned home half frozen.

LORAIN QUARTERLY RUN

Ten Club Riders Figured in Interesting Contest Over Ohio Roads with Mercury Near Zero.

WITH the roads in the best of condition, the Lorain (Ohio) Motorcycle Club held the first of its quarterly trials on Sunday, March 3. Beginning at 7:30 a. m., the ten contestants made the start from Lorain at intervals of 2 minutes. The roads were frozen and the thermometer registered 5 degrees above zero.

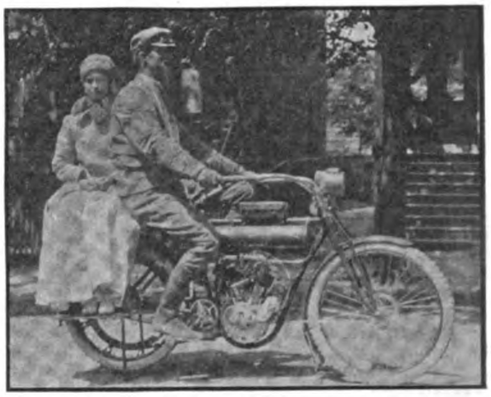
The first man to start was Carl Miller on a Thor. He was followed by Geo. Reger, H-D; L. Reamer, Wagner; Harry Johns, Wagner; John Keinzle, Indian; Robt. Parker, Thor; Geo. Williams, Indian; Thos. Lynch, Indian; Geo. Andrews, Flanders, and Doc. Webster, Indian. All the starters checked in at Elyria promptly at 8 a. m. and proceeded to Cleveland, where they were checked in at the Cleveland M. C. quarters by President McConnell at 9:45 a. m. Fifteen minutes was allowed for taking gasoline and oil and the riders left for Bedford, and were checked in there at 10:45 a. m. by Herbert Myers. They immediately returned to Cleveland and again checked in at 11:45 a. m. Dinner was taken by the riders and 2 p m. was set as leaving time for Elyria. After dinner the riders amused themselves telling jokes, playing pool, etc., and extended an invitation to the Cleveland M. C. to visit them.

Promptly at 2 p. m. they left for Elyria. The only rider suffering a loss of points was L. Reamer, Wagner, due to being late; 10 points being deducted for losing his way getting into Cleveland. Hiller suffered a puncture and broke a terminal on his battery connection. He obtained another battery at Cleveland. Parker had a puncture at Bedford and Lynch had one at Cleveland. The next trial will be held the first Sunday in June.

The Hauss & Bitler Auto Company, of Wapakoneta, O., has taken the agency for the Flanders line of motorcycles.

A SIDE-SEAT TANDEM.

MR. AND MRS. A. L. COX, of Newburgh, N. Y., are among the most enthusiastic tandem riders in their district. The photograph shows them on their 6 h. Merkel with the side-seat attachment occupied by Mrs. Cox During 1911 they made many long trips through the eastern section of the Empire State and they have plans mapped out for regular outings to be enjoyed in the coming season.



A UNIVERSITY SQUAD.

BALTIMORE, Md., March 4.—Baltimore is to have another motorcycle club. It was formed this morning and will have as its members those students at the University of Maryland who own two-wheelers. James M. Hepbron, captain of the R. S. Motorcycle Club, a law student at the university, formed the club, the charter membership numbering seven. This will be swelled to a greater number shortly, as quite a few of the students contemplate purchasing motorcycles before the scholastic term ends. Hepbron was chosen captain of the club, whose official name will be the University of Maryland M. C.

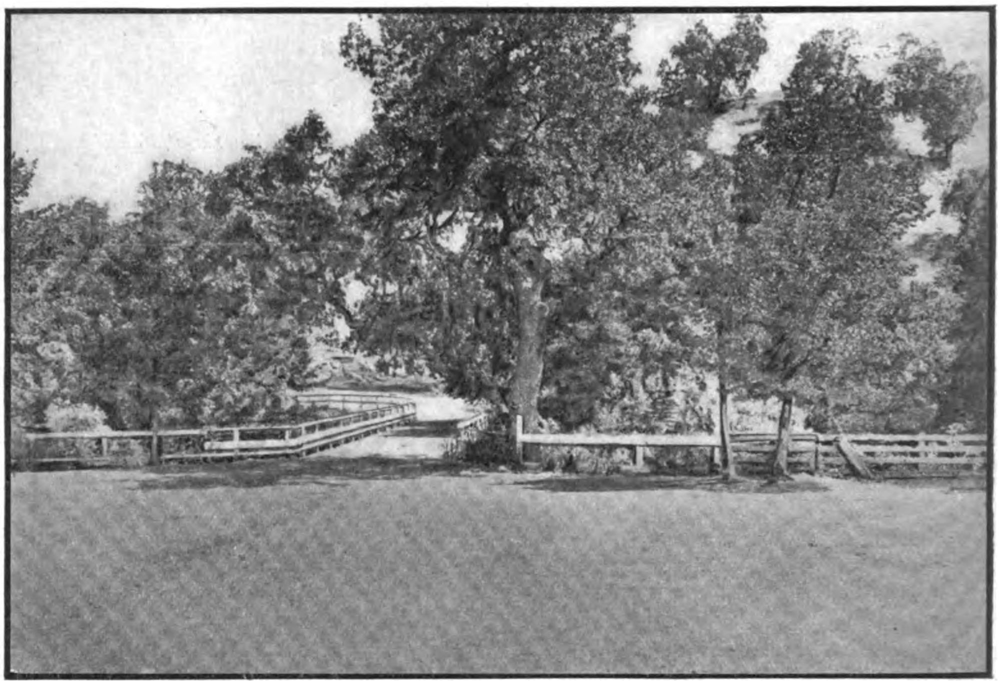
Hepbron is well known in the local motorcycle world, having participated in a number of races and carried off a good many laurels.

TOPPING MT. HAMILTON BY MOTORCYCLE

California Rider Makes Twenty-three Mile Climb to Famous Observatory Without Mechanical Trouble or a Single Mishap—Interesting Photographic Record.

By H. CONBOY

NOT long ago I decided to make a motorcycle trip up Mt. Hamilton and to obtain a photographic record of the journey. I had longed for just such an outing and when my plans were finally complete I took to the road with enthusiasm. Starting about 5.30 one morning, with a camera slung over my shoulder, I struck a good clip and was well out on the road before the heat of the sun started to bother me. The run from Alameda to Haywards was made without incident and I stopped at the latter point for a cup of coffee. In due time I reached San Jose and headed out Santa Clara street for the starting point in the Mt. Hamilton climb.



Bridge Over Smith's Creek, One of the Beauty Spots Along the Route.

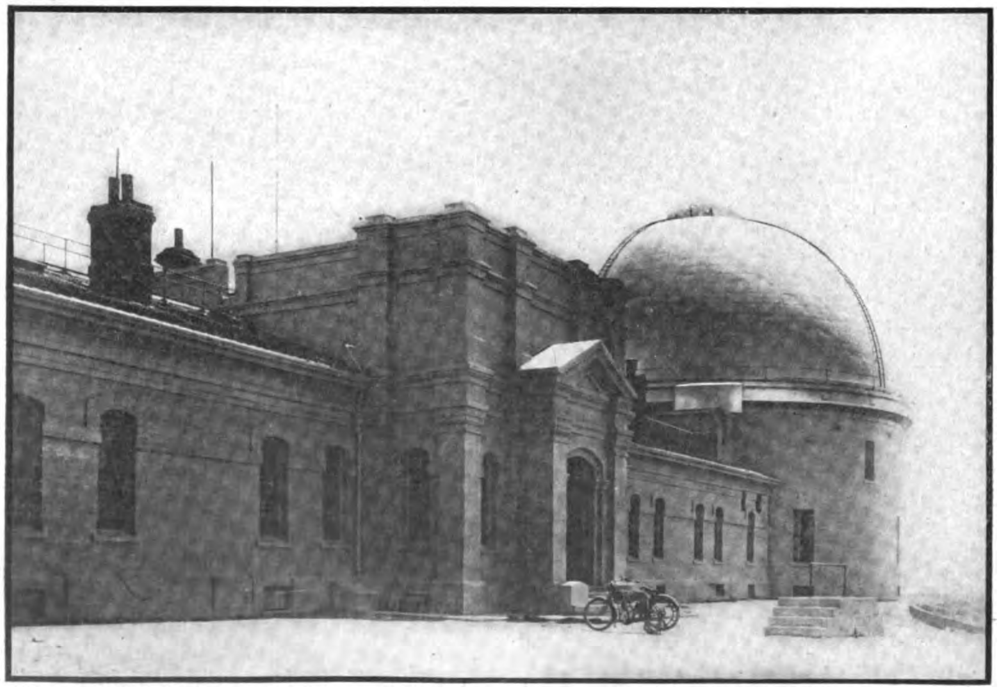
Beginning the Long Climb.

At 7.30 a. m. I pulled away from the Junction House, after taking a few photographs, and entered upon the first stage of my climb to the top—23 miles, embracing all kinds of grades and turns. After riding a few miles I became used to the hairpin twists and managed to cling to the saddle as I spun around jutting rocks and sharp corners. Without mishap I reached my first stopping point, the Grand View House, six miles up, and dismounted to obtain some pictures. From this point it is possible to view the Santa Clara valley for miles, and the scenery is entrancing.

After a short rest I mounted again and started for the next stopping place, two and a half miles farther up, and known as Mt. Hamilton Vineyard. Here are made some of the finest wines produced in California. After a short tour of inspection afoot I headed for Hall's Valley, finding that from this point the roads were down grade for quite a distance.

Some Real Climbing.

Having enjoyed an easy ride down into Hall's Valley I unslung my camera for action again, and a short time later took up the journey to Smith's Creek, five miles away. I now discovered that my single would be called upon to do some real climbing, and as the sun was getting rather hot, making headway was not altogether a joke. On this stage of the trip I found many sharp and dangerous turns, one of them being known as Cape Horn because of the peculiarly cold blasts of wind which often sweep around it.



Front View of the Famous Astronomical Observatory.

After turning Cape Horn I came out into a straight stretch of road from which I could see the famous observatory, its big dome outlined sharply against the clear blue sky. After riding a short distance I started a long coast which led me to Smith's Creek. At the Creek there is a roadhouse and a large barn for sheltering the horses of travelers on the mountain. I rested for some time, took a few photographs and finally started the last stage of the ride to the summit. My Harley-Davidson single was giving me no trouble and I made good time. The last stretch of the ascent is seven miles long and is all upgrade.

On the Summit.

At some of the worst turns fences have been erected to prevent horses and motor vehicles from slipping off the road, and it is just as well that these precautions have been taken. There would no doubt be many accidents but for these guards. The fences are painted white so that they may be distinguished at night, as many automobilists make the trip to the top on Saturday nights, the only nights when the observatory is open to visitors.

A wonderful view is obtainable from the summit of Mt. Hamilton. As the air was very clear I could see the Sierra Nevada mountains in the distance and notice snow

Top of Mountain; Settlement to the Left, Observatory in Background.

upon them. There is quite a settlement on top of Mt. Hamilton. Bricks for the buildings are brought from a place called The Brickyard, three miles down from the summit, and the other material must be hauled from San Jose, 27 miles distant.

Inspecting the Observatory.

The observatory and surrounding buildings were erected with funds donated by James Lick, who, according to the story, is buried beneath the big dome. A building adjoining the observatory proper contains a remarkable collection of photographs of astronomical interest and of great value from a scientific standpoint. There is a well-arranged electric plant and the accommodations throughout are excellent, considering the difficulties which have to be overcome in getting material of any kind to the summit.

One of my photographs shows a group of women and children who posed for me, and another is of myself and the Harley, the latter being taken for the benefit of any of my friends who might announce that they were "from Missouri," as proof that I had made the climb. The latter picture was taken with the aid of a long rubber tube and bulb. To the left can be seen what is known as Hiker's Trail, leading by a short cut down to Smith's Creek.

The Homeward Journey.

After leaving the summit for the return trip I coasted the full seven miles to Smith's Creek, and have never had a more exhilarating ride. From the Creek to Hall's Valley there was very little coasting, but I reached the Grand View House in good time. I stopped here for a drink of cool spring water and then resumed the journey. From Grand View it was possible to coast a great part of the distance to the Junction House, my starting point for the climb. The ride through San Jose, over level roads, was a fitting climax for the trip and I arrived home just as night was falling.

I have never made a more enjoyable or novel trip by motorcycle, and it is only fair to say that no description can do justice to the scenery or the exhilaration which will repay the rider who chugs his way to the summit of Mt. Hamilton. My pleasure was materially increased by the fact that I was able to take pictures of each point of interest, and also because I had gone through the outing without mechanical trouble or a mishap of any kind.

A VERSATILE RIDER.

BALTIMORE, Md.—Former Captain H. Matthew Gault, of the Maryland M. C., is an enthusiastic motorcyclist, but he is also a designer of monuments, and he is now congratulating himself for having landed the contract to erect a memorial in this city to John E. Burbage, founder of the Knights of the Golden Eagle. The design he submitted was accepted at a recent meeting of the order in Philadelphia.

AN ECHO FROM 1910

Arthur Davidson Proves That Milwaukee Club Opposed Use of Cut-Out Two Years Ago.

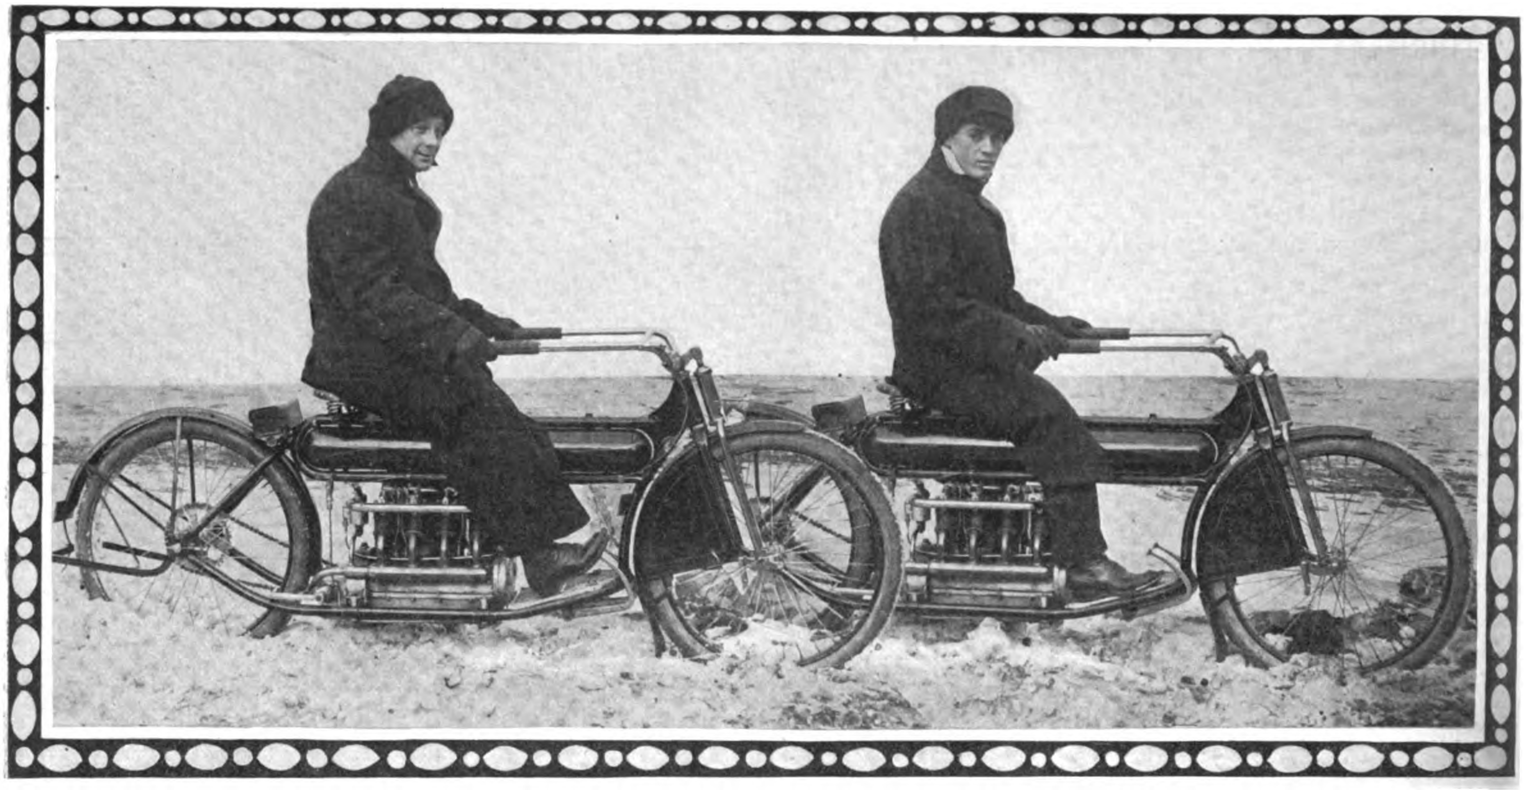
WHILE looking through the drawers of his heavily-laden desk recently Arthur Davidson, of the Harley-Davidson Motor Co., unearthed a resolution, dated back in 1910, which shows that two years ago the Milwaukee M. C. set out upon the trail of the open muffler fiend and sought to have him curbed. The resolution, requesting the passage of an ordinance to prohibit the use of the cut-out within the city limits, was drawn up by the Milwaukee club and presented to the city officials, but it never got past the pigeon-hole stage with the city fathers.

The matter was held up, allegedly through the efforts of the Milwaukee Automobile Club, whose members evidently feared that such an agitation would result in similar prohibition being directed against them. In time the resolution was forgotten, but its recovery by Mr. Davidson serves to prove, at least, that the Milwaukee motorcyclists were among the first in this country to realize that the open muffler was a detriment to the power two-wheeler and its interests.

ANOTHER SAUCER PLANNED.

LATE reports are to the effect that the board track bee is buzzing overtime in Rochester, N. Y., and that a committee has been appointed by the Rochester M. C. to consider the advisability of erecting a saucer. The plan suggested to the club calls for an issue of stock to finance the track and the building of a clubhouse adjoining it, the latter to be a purely club enterprise with only the members holding stock. Prizes to the value of $30 will be awarded to the members bringing in the most recruits before July 1.

EIGHTEEN 7 h. twin Indians have been ordered for the Hudson County (N. J.) Boulevard police, and six of the same type for the Detroit motor cops, through F. A. Baker & Co., and W. E. Metzger & Co. respectively.



Harvey Bernard and Freddy Huyck Have Become Staunch Admirers of the Henderson Four.

CALIFORNIAN'S STORY OF SEVERE TRIP

Over Hair-Raising Ruts and Through Six Inches of Clay and Adobe Dixon Rider Makes A Successful Run.

WILL S. CLUFF, of Dixon, Cal., writes the following account of a recent severe trip on his 1912 Indian:

Leaving Dixon at 7 a. m. on February 4 in a fog that was so dense I could not see the road fifty feet ahead, I set out over a course which was in about the worst possible condition. Heavy rains had softened the road so that passing wagons cut deep ruts in it, and when the surface hardened again it produced a sort of corrugated effect that was anything but satisfactory. After some mighty hard going I reached Rio Vista and headed for the ferry across the Sacramento River. This road is a mile and a half in length, and is probably the worst in the State.

The road runs along the bottom of the levee and as a result had not dried to any appreciable extent. The wet clay and adobe were from four to six inches deep. The fog had not lifted, so there was little chance to dodge the ruts and water holes, but I floundered through them without stalling. A dredger had been working at this point and throwing great quantities of the river bottom onto the levee. This material slid down into the road and formed a sticky mass which can be better imagined than described.

With my right pedal at its highest point I dropped into one rut that snapped it off cleanly, indicating that the hole must have been a full foot and a half deep. This was the only break or machine trouble I experienced during the trip, and I soon fitted a repair pedal pin and continued on my way. Even with the high gear with which my machine is equipped I pulled through the sticky clay and adobe, sometimes with my muffler buried in it, and never had a mis-fire.

From the ferry landing to Lodi the roads were in good shape, and I completed the trip of 76 miles in four hours. To my surprise I found that I had used only one gallon of gasoline on the journey. It was necessary to clean the machine with a hose, but with the new enclosed magneto the water caused no ignition trouble. After a thorough cleaning the machine did not show a mark, aside from the damaged pedal, and I was exceedingly thankful to have come through the experience as successfully as I did.

BIG CANADIAN MEET.

IT is announced that Saturday, June 30, and Monday, July 31, are the dates set aside for the 1912 meet of the Canadian Wheelmen's Association, which will be held in Waterloo, Ont. Among the features of the program are Dominion and International championship races and a big automobile show. Waterloo has a four-lap track which is to be greatly improved for the championship events. It will be practically rebuilt. There are indications that Waterloo will be thronged with motorists on Dominion Day, June 30, and the committee in charge of the race schedule is determined to furnish some sport that will make them sit up and take notice. The highways and byways are now being scoured for crack riders.

SHAUGER'S ECONOMY RECORD.

IT costs William Shauger, rural free delivery carrier and farmer at Elyria, Ohio, only 15 cents a day and requires but three hours each day to deliver mail to ninety-nine mail boxes on his route.

SPRINGFIELD RIDERS ON TRIP

Cold-Weather Squad Enjoyed Run into the Country, Although Thawing Roads Kept Them Guessing.

ON February 17 some enthusiastic riders of the Springfield (Mass.) Motorcycle Club indulged in a run into the country. The route taken was the Boston road to Brookfield where dinner was eaten at the Old Inn. On the run out, the roads, although rough and icy in some places, were in fairly good condition, for they were frozen hard; but the bright sun in the middle of the day thawed out the surface, and the return journey was a continuous splash for the whole thirty-two miles.

At one place a smoothly coated pond offered a temptation and Charlie Spencer, the head Indian tester, went out on the ice for a trial. There was enough snow to give the wheels a good hold, and finding a smooth ridge where the ice had pinched, Spencer tried some motorcycle jumping. Rushing the ridge at a speed of about thirty miles an hour, his wheel was shot into the air between two and three feet, but he always succeeded in landing straight on his wheels without accident.

Among the riders were Sales Manager Wechsler, of the Hendee Manufacturing Co., Superintendent Ellingham, Messrs. Cross, McNaughton and O'Brien, of the office force; Dr. Brackett, Messrs. Kothe, Mason and Carroll. Notwithstanding the moist experience of the afternoon the run was regarded as an entire success.

WICHITA HILL-CLIMB.

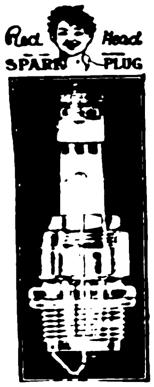
IN the single cylinder class, which competed in the recent hill-climb of the Wichita (Kan.) M. C., Max Wilson, mounting a Harley-Davidson, led the field to the summit, with Ray Weishaar, Indian, in second place and J. K. Brown, Yale, in third position.

THIRD ANNIVERSARY

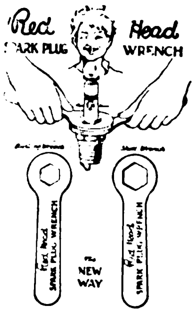
Of Red Head Spark Plugs Being Celebrated with the Announcement of Big Special Offers.

WITH a blaze of publicity pyrotechnics, the third anniversary of the inauguration of Red Head spark plugs was commenced by the Emil Grossman Company March 4. Custom gives mortals but one day in which to celebrate their birthdays, but the sorrel-topped sparking success will stretch the joyous occasion over a space of two months. That is to say, the owner's coupon issued in honor of the event, which entitles motorists to a generous slice of the birthday cake in the shape of five Read Head Plugs, one porcelain or mica core and one set of Red Head Spark Plug Wrenches, will be redeemable until May 1, 1912.

In special trade literature novel anniversary package assortments have been announced. These packages, offered in four varieties contain a proper assortment of sizes of Red Head Plugs, a percentage of extra porcelains and a liberal supply of advertising matter and circularizing material, are designed to relieve dealers and jobbers of perplexity in ordering, insure a continuous supply of fresh advertising matter and eliminate much detail and dispute over possible shortages.



The same thoughtfulness that considers the problems of the trade is responsible for the Red Head spark plug wrench. Although the need for a flat wrench for handling spark plugs always existed, the Emil Grossman Company is the first to recognize the fact. The Red Head wrench set consists of an 11/16-inch wrench for the bushing and a ⅞-inch wrench for the shell. By using them damage to plugs is eliminated, for the size of the wrench does not permit of a leverage sufficient to produce a pressure dangerous to the porcelain. Also, Red Head wrenches being flat, grip the hex firmly, and cannot slip off and break the porcelains. One set of Red Head wrenches is given with every set of four Red Head plugs at the regular price.



Red Head
SPARK PLUG WRENCH
Red Head SPARK PLUG WRENCH
The NEW WAY
Red Head SPARK PLUG WRENCH

The mechanical success of the Red Head Magneto Plug ushered into the motoring world on July the 4th last doubled the previous year's sales. This is evidenced by the published roster of 234 jobbers who are handling Red Heads, by the contracts with 73 manufacturers of automobiles, motor trucks, motor boats, motorcycles and gas engines, among whom are to be found the Simplex Automobile Company, Hup Motor Company, Interstate Automobile Company, Metzger Motor Car Company, Grabowsky Power Wagon Co., Federal Motor Truck Company, Mais Motor Truck Co., Miami Cycle & Manufacturing Company, New Era Auto Cycle Company, Foos Gas Engine Co., Brennan Motor Co., etc. During the past season additions to the Red Head racing "staff" include such successful drivers as Eddie Hearne (Benz), Evans (E-M-F), Parker (Fiat), Sydney Smith (Fiat), Mitchell (Abbott-Detroit). The nucleus of this winning combination was made up of Ralph DePalma, David Bruce-Brown and Caleb Bragg.

HANDSOME GOODYEAR BOOKLET.

THE growing relative importance of the motorcycle business of the country is nowhere better evidenced than in the quality of the literature produced by manufacturers of motorcycles and their accessories. An unusually fine and instructive booklet is that issued for 1912 by The Goodyear Tire & Rubber Company, makers of the famous Blue Streaks and other motorcycle tires. The Goodyear Company does not merely present pictures of tires with prices attached. The company's motorcycle offering this year is an exceedingly practical and artistic booklet and is in demand as much for the "reason why" talk with which it is filled as for its typographical quality.

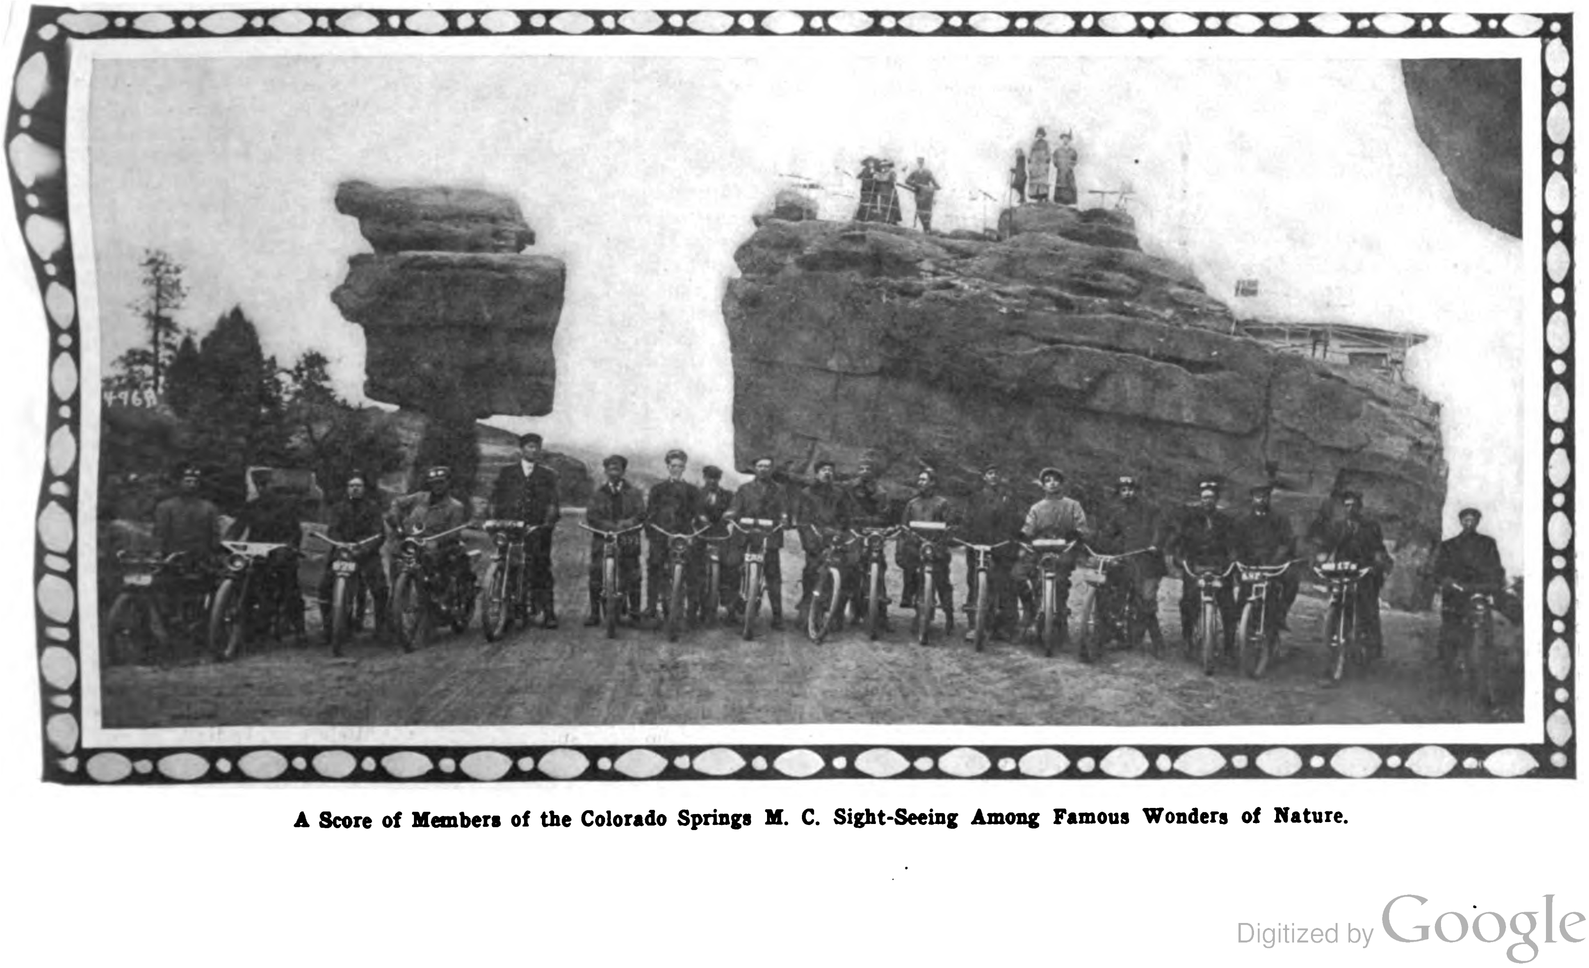
The outside cover, spread open, presents a section of the track where the speed kings strove for mastery in the F. A. M. meet at Buffalo last summer. On the front half of the cover are Balke and Hasha, neck and neck and side by side, only a few feet from the fence—snapped when they were doing five miles in four minutes—on Goodyear Blue Streak Tires.

MOTORCYCLES FOR INSPECTORS.

SEVEN inspectors in the building department of Cleveland, Ohio, will use motorcycles during the coming summer if an ordinance which has just been introduced is approved by the City Council. The measure provides for the expenditure of $1,400 for the machines. It is argued that each inspector, mounted on a motorcycle, will be able to do the work of three men making the rounds on foot.

WILLIAM CHRISTOPHERSON, of Racine, Wis., is planning a motorcycle trip to New York for this summer.

THERE are over one hundred motorcyclists in India according to Consular Reports from Madras, in that country.



A Score of Members of the Colorado Springs M. C. Sight-Seeing Among Famous Wonders of Nature.

PLUGGING ENGLISH ROADS BY NIGHT

Graphic Story of How Gold Medals Were Captured in a Cross-Country Reliability Trial Through a Downpour of Rain and Over Flooded Roads—Value of Three Speeds.

By Roy W. Walker

FOLLOWING is an unusually interesting story of a long-distance contest over English roads, in which Roy W. Walker, of the New Hudson Cycle Co., Ltd., of Birmingham, carried off a gold medal for a perfect score. An insight is given into the sort of traveling the British enthusiasts have to put up with in some of their cross-country events, and there is also food for thought in the performance of the 3-speeded machine mounted by Mr. Walker in the trial referred to. His story follows:

There is no doubt that a 24-hour trial in midwinter, like that held by the Motorcycling Club from London to Exeter and back, is a very severe test for both machine and rider, as the roads were very bad and two-thirds of the time, or sixteen hours in all, were in pitch darkness. I had competed in this run on Boxing Day 1910, on a well-known 3½ h. single-cylinder, fixed-gear machine and only gained a silver medal after a perfect nightmare of trouble with tires, lamps, and failing to surmount the numerous hills owing to my having to rush them "all-out" and skidding on the thick grease. I was dead beat last year at the end of 25 hours, so did not under-rate the difficulties this time.

Boxing Day morning, December 26, 1911, saw me swathed in oilskins like a lifeboat man, and starting out for London in pouring rain with the roads inches deep in mud—in fact no less than four roads near Hounslow were flooded to a considerable depth for some hundred yards, and we had to take a fifth. This did not promise well, as the Exeter road has a nasty habit of being under water near Wilton, west of Salisbury. Another rider of a 1912 3½ h. Colonial Model New Hudson 3-speeder, joined me at the starting place, and we adjourned for the biggest meal we could eat in the time, as we were scheduled to leave at 7 p. m., and the next stop was not till Salisbury, about 80 miles off, which would be reached about midnight. Meanwhile it rained hard and looked like sleet and fog, hardly an encouraging prospect for twelve hours' riding in darkness.

It is a great boon to be able to sit in the saddle and glide away from a standstill on the clutch like a big car—particularly when the road is greasy and uphill, with a large crowd looking on and you're rigged out something like Captain Scott going for the South Pole. Under these circumstances, we had the better of the fixed-gear brigade, some of whom had to do a lot of pushing before the engines would fire, being encouraged meanwhile by a crowd of urchins. There was a strong Southwest headwind and the roads were beyond words through Staines as far as Camberley. Most of the roads had been tarred, but had cut up into deep ruts. This meant going cautiously on the middle speed of about 6 to 1, which makes a wonderful non-skid as the engine turns round smoothly and fast with the throttle nearly closed. Red lamps with arrows had been put up to mark the way in places, and after an uneventful trip (for us two), we took in gasoline at Basingstoke and started out for Salisbury Plains.

Of course, all the railway level crossings were shut and the wind was blowing half a gale over the bare undulating downs, where there are no hedges or trees to break its force. Some of the fixed-gear lightweights with small engines, as well as many others, were having a very rough time and it meant going "all-out" with their noses on the handlebars. The result was their engines ran hot and they stuck on the most paltry hills. H. Graham Dixon and I kept together throughout for company, and as I knew the road, we got in at the Salisbury control as early as we dared in view of the time schedule. There we filled up both our machines and lamps, also the inner man. Hot coffee and bovril is a very good drink, as it keeps one awake and keeps out the cold. Both our 3½ h. New Hudson engines were pulling better and better as time went on, and ran very steadily with their moderate compression and heavy flywheels.

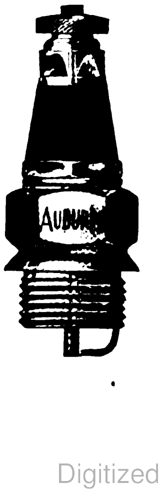
There were no floods at Wilton, but to make up for this the road was under water in two places near Henstridge. However, this does not matter much if you have proper mudguards to stop splashing and a waterproof magneto carried behind the engine and eighteen inches from the ground. It is tiring work keeping up 25 to 30 m. p. h. on greasy and hilly roads in pitch darkness, and no one was sorry when Yeovil was reached, where we put in half an hour on hot coffee, sandwiches and a smoke at the Mermaid Hotel. A good crowd was about, considering it was 3 a. m., but some of the machines were making enough noise to wake the dead. One big twin-cylinder carried a large silencer about two or three inches from the ground and got the end knocked out—after that gatling guns weren't in it.

Chard and Yarcombe hills are the two worst on the whole journey and caused nearly half the competitors to dismount or pedal, but the New Hudson took my thirteen stone weight up on middle gear with the throttle half open. I treated Yarcombe with some respect as it is two miles long, very skiddy and winds the whole way. One hairpin corner brought me off last year trying to "rush" the hill in the dark with a 4½-1 fixed-gear single. The Armstrong gears gave no trouble throughout, and there were a good few fitted to various machines. Belts seemed to clog up with mud and water far less than the chains, and the belt drivers went fast over roads, where the rigid-drive brigade had to crawl along and were even then sliding about.

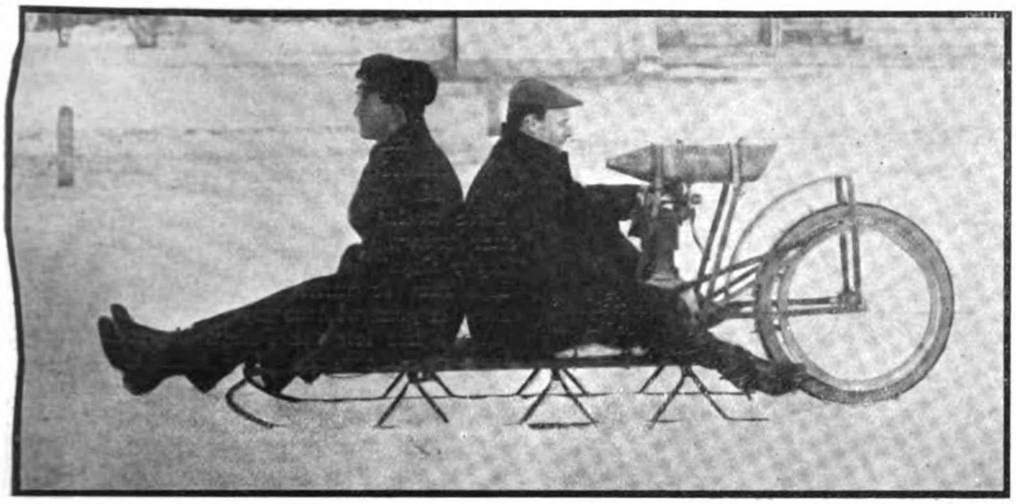
"THERMO" BELTS.

A DISTINCTIVE feature in the belt product of the Hide Leather and Belting Co., of Indianapolis, Ind., which is calculated to attract the attention of experienced riders, is an inner lining of heat-resisting fabric which is designed to protect the belt from "burning" should it slip while the pulleys are spinning. This inner covering, combined with high quality leather, treated by a special process, provides a belt of unusual strength without detracting from its flexibility and other desirable attributes. It is credited with being waterproof, stretchproof and shrinkproof, and one of the belts used on a tire-testing machine was operated for 9,000 miles without developing a weakness. The company's belt products are sold under the trade name "Thermo."

AUBURN SPARK PLUG.



THE Auburn motorcycle plug contains a chamber larger than any other plug now on the market and as it possesses all of the other general features of the "Wright" line it is unsurpassed for motorcycle use. The manufacturers of this plug, the New York Mica & Mfg. Co., of Auburn, N. Y., cater especially to the motorcycle trade, and their plug is found as a part of the regular equipment of some of the leading motorcycles. It is small and compact and the parts are all interchangeable.



HILAMAN'S MOTOR SLEIGH.

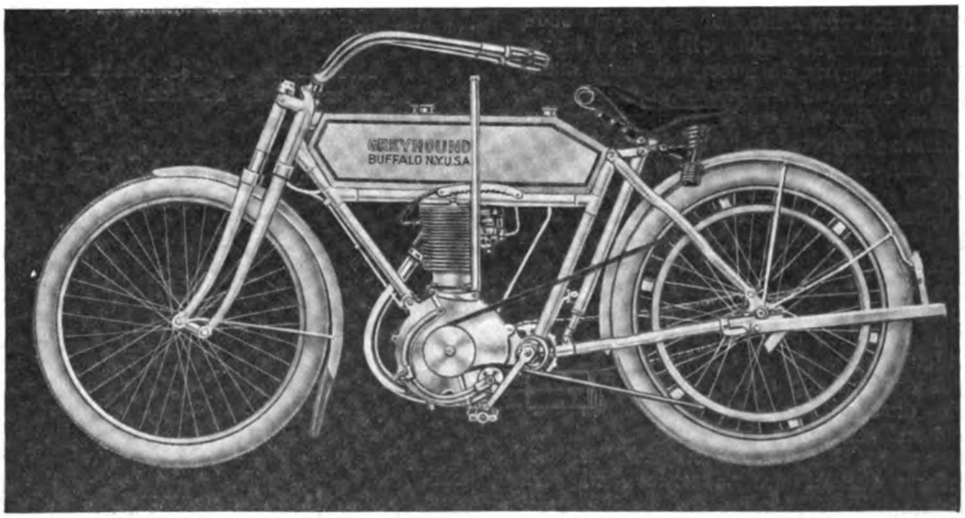
A. L. HILAMAN, Thor agent in Camden, N. J., is another addition to the ranks of motorcyclists who refuse to abandon their motors during winter weather. He has fitted the sled shown in the photograph with flexible runners six feet long, a 4 h. motor of his own design and a flanged band clamped over an ordinary tire on the drive wheel. By making a snug fit of the metal band and then inflating the tire he succeeded in getting a stanch traction wheel which has stood up under severe tests. He states that the outfit is capable of making over 40 miles an hour, and 10 per cent. grades have been climbed without difficulty. Hilaman is of the opinion that motor-sleighing would surpass motorcycling for enjoyment if weather conditions and smooth snow surfaces could be depended upon throughout the winter.

1912 GREYHOUND

Buffalo Firm Has Attractive Mount with No Radical Changes Over Design of Past Season.

THE Greyhound Motor Company, of Buffalo, N. Y., in designing its 1912 models, has found it unnecessary to make radical changes and is placing on the market a reliable machine of standard type and design which contains many of the good features of previous models, one of the most important being the Greyhound Shock Absorber, a device which effectively and permanently disposes of the shock problem. This together with the cushion fork and 56-inch wheelbase insures stability and comfort to the rider.

The size of the motor, bore 3¼ inches, stroke 3 11/16 inches, brings it to the limit of 30.50 cubic inches, and is rated at 4½ h. The offset cylinder is placed slightly ahead of the main bearing which greatly reduces the wear on the cylinder-wall and the thrust of the rod on main bearings. It is equipped with automatic inlet valve, Breeze or Heitger carbureter and jump spark ignition. Lubrication is by gravity feed from a combination tank which is mounted in the upper panel of the frame. A sight-feed glass is located just below the tank, while in the crank case an oil window is placed where the level may be seen at all times. The oil is fed through the right hand crank bearing from which it drains to a well beneath, afterward proceeding by a path, especially contrived, to the other bearing points, both centrifugal force and direct splash being utilized to lubricate the various bearings. Inclosed flywheels, weighing 24 pounds, have the weight chiefly in the rim, assuring easy starting and smooth running.



The standard transmission equipment is flat belt with hand operated idler. Double grip control is employed with the connecting cables neatly passed through the handle bar tubes and frame head. Long handle bars, liberal mudguards and low rear saddle position add greatly to the appearance of the new model, which will list at $175.

NEW MACHINE NAME

Mount Embodying Waverley Motor Will Hereafter Be Known as the P. E. M. —Named for Designer Mack.

AT a meeting of the directors of the Waverley Manufacturing Co., a few days since, it was decided that as the company is selling Waverley motors to the trade it would be advisable to give the complete motorcycle a distinctive name. In recognition of the results accomplished by Perry E. Mack, who not only organized the original Waverley Manufacturing Company, but designed the Waverley motor and cushioned frame which is a distinctive feature of the Waverley product, it was decided to call the motorcycle the P. E. M. Mr. Mack is not only a pioneer in the motorcycle industry but has put in several years in automobile designing.

Like many others he dates his beginning back to the bicycle days, having been both a racer and a builder of bicycles. His first motorcycle engine was put in a regular road frame and tried out on the old Garfield Park cement track at Chicago in 1905. He entered a race held there on July 4 of that year. As many of the old time Chicago motorcyclists will remember Mr. Mack was leading the field at close to a mile a minute clip when some one let a small dog on the track with disastrous results. Mr. Mack was thrown and seriously injured and the machine and dog got theirs.

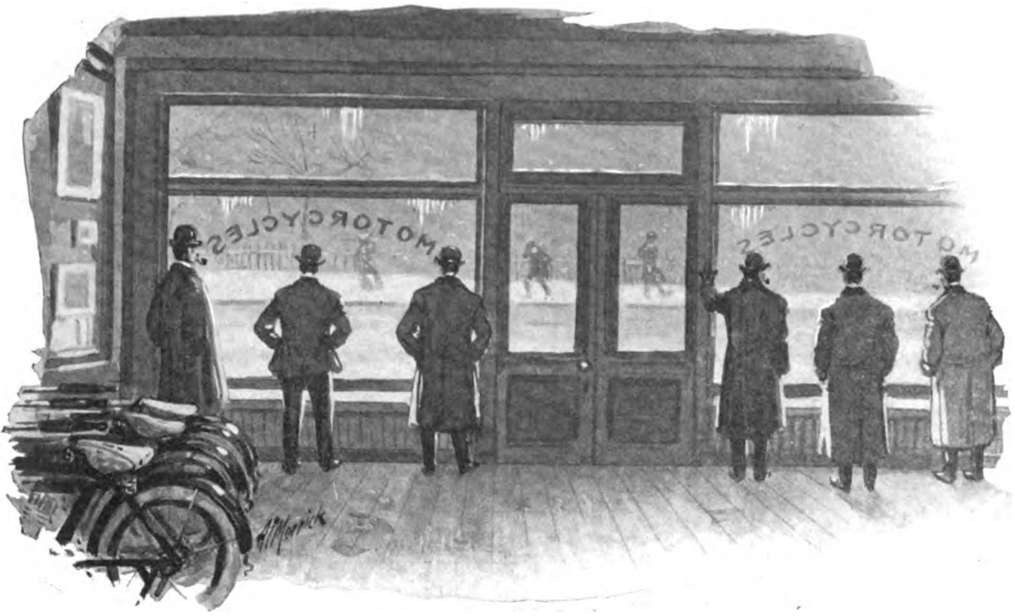
As soon as he recovered Mr. Mack resumed the development of the motor but was for a time induced to give his attention to automobile work. About three years ago he again took up the Waverley motor, perfecting it in detail and adding such refinements as greater experience suggested. The new motors were tried out privately until they met Mr. Mack's satisfaction after which they were quietly put on the market. They immediately attained a local reputation through the riding of Ralph Sporleder both at Milwaukee and Chicago. Several motors were shipped to Europe where they were equally successful.

From its first appearance the Waverley motor made both the motorcyclists and the spectators sit up and take notice as it not only ran away from nearly every single cylinder motor with which it competed, but in several instances entered open races, defeating a number of high class twins.

While the change in name may be for a while confusing it is a graceful compliment to Mr. Mack and the combination of P. E. M. and the Waverley motors will soon become familiar as the prominence of the Waverley motors both locally and in Europe where the motors have shown their quality in several big events, is bringing in orders at a very pleasing rate. The cushioned frame is creating equally favorable comment and the combination is undoubtedly a strong one.

LOUIS E. STROH has just completed a motorcycle trip from Decatur, Ill., to Jacksonville, Fla.

THE Motorcycle Inn, a branch agency for the Indian, which was located at 1164 North High street, Columbus, O., has found the storeroom too small and has moved into larger quarters at 922 North High street, in the same city.



Only a Few Days More of This Waiting and Watching for Spring.

INDIANAPOLIS SHOW

Motorcycles and Automobiles Will Be Shown Under Huge Tent Stretched Across a Main Street.

THE first automobile and motorcycle show in Indianapolis, Ind., will be held March 23-30, and remarkable interest is being manifested by dealers of the city in connection with the plans. The motorcycle representatives are co-operating with the Indianapolis Automobile Trade Association in mapping out the program. In order to exhibit jointly with the automobile agents the motorcycle dealers have been obliged to join the trade association. Six dealers in the two-wheelers, representing ten makes, will have displays at the show which is to be held under a huge tent. The canvas will be stretched over a third of a mile of Meridian street, one of the city's chief thoroughfares, and the street will be closed to traffic during the show. The motorcycle exhibitors and the machines they will show are as follows: Motorcycle Sales Co., Flanders; Gus Habich, Excelsior and Thor machines; G. H. Westing, Indian; George C. Detch, Reading-Standard, Pope and Pierce; H. L. Dipple, Harley-Davidson; Merkel Motor Shop, Flying Merkel.

TRADE NOTES FROM CLEVELAND.

KUMLER BROS., Reading-Standard and Flanders distributors for Cleveland and vicinity, report that returns from the show have exceeded all expectations. Despite adverse weather conditions they have booked a number of orders for immediate deliveries, and seven of the new machines have already been forwarded to purchasers.

Ed. Rischel, who has heretofore been connected with the sales department of the Casino Cycle & Supply Company, is preparing to take up his duties as a road representative of the New Era folks in Cleveland. Ed. is well known throughout the Cleveland district and his friends expect him to pile up orders in keeping with his past record.

L. J. Mueller, Indian agent in Cleveland, has just placed an order for a Mora auto truck to be used primarily for transporting shipments of machines and supplies to the freight stations. Mueller has entered the jobbing line on an extensive scale and this, combined with his heavy orders for Indians, has forced him to purchase the truck in order that no delays may be necessary in handling large consignments. Mueller has received his first carload of Indian machines and a number of the new models have been delivered.

F. W. Mullenhour, of 136 North Union street, Lima, has taken the local agency for the Indian.

The American Machine Company, 25 West Church street, Newark, O., has taken the local agency for the Harley-Davidson.

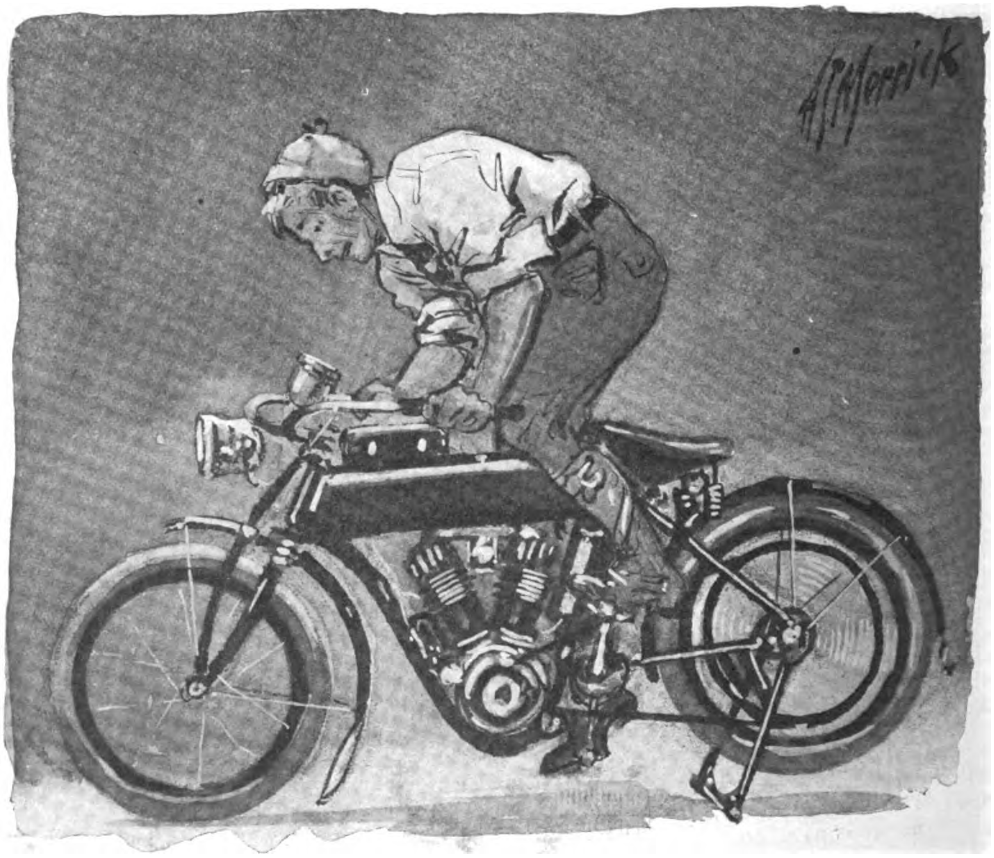
THORNLEY ON VACATION

"Happy Days" Pitman Is Directing Racing Affairs, While Competition Chairman Takes Needed Rest.

CHAIRMAN J. P. THORNLEY, of the F. A. M. competition committee, is enjoying a three weeks' vacation and Will R. Pitman, better known to cyclists of the country as "Happy Days" Pitman, is acting head of the competition committee in the doctor's absence. It goes without saying that Chairman Thornley has left the Federation racing interests in good hands. For some time past Doctor Thornley's professional duties have placed him under unusual stress, and this pressure combined with close application to racing matters now engaging the attention of F. A. M. officials, brought him to a point where several weeks of relaxation became necessary. He has not made known his itinerary or destination so that telephone messages and telegrams will not worry him for the present.

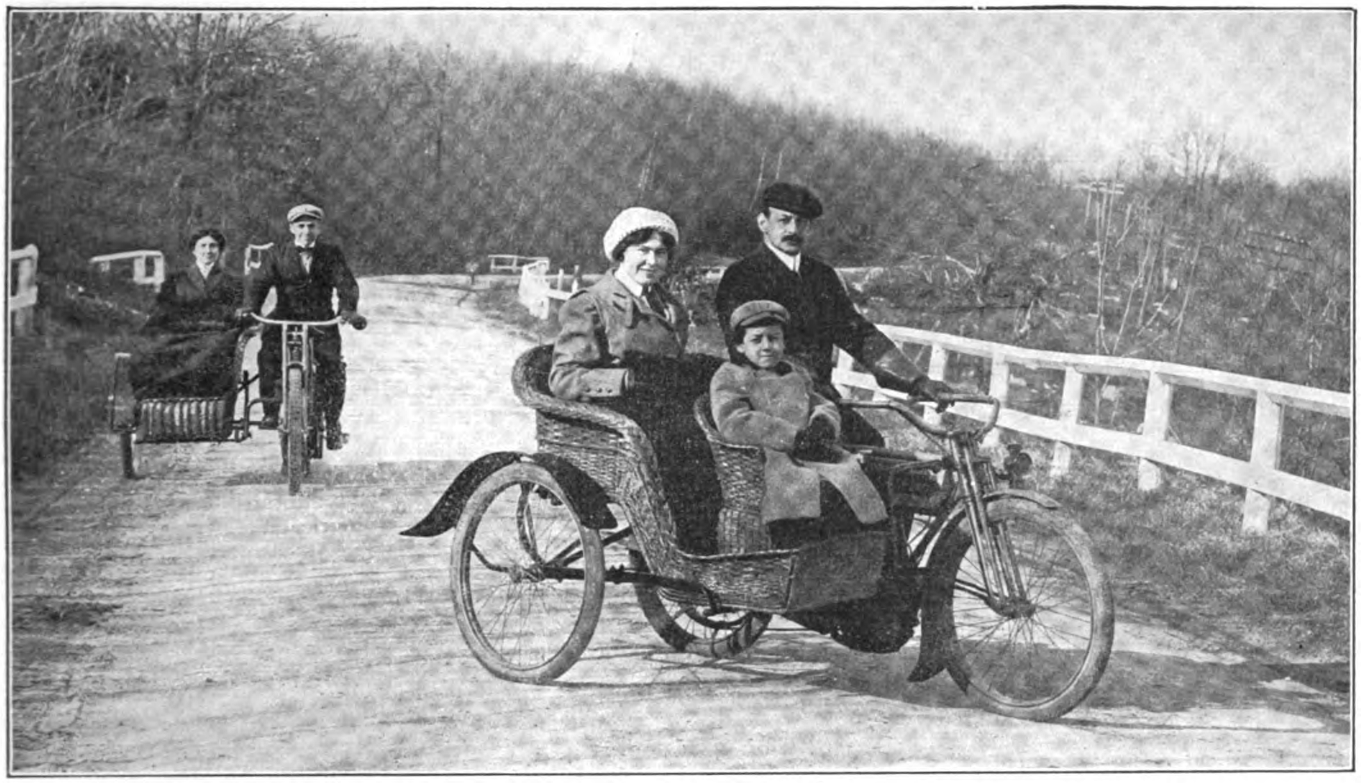
Acting Chairman Pitman has made the following announcement with reference to the proposed revisions in the F. A. M. racing rules:

"In view of the fact that some of the changes considered necessary in the rules are so vital to the F. A. M. members, it has been considered advisable after careful consideration by President Hamilton, and Chairman Thornley of the Competition Committee, to withhold definite action until the matter can be taken up at the National Meet. Therefore, as the present rules will remain in force during the coming season a new edition of the same will be printed, and immediately upon their being ready for distribution notification will be made through the motorcycle journals for the benefit of race followers."



A CONSIDERATE RIDER.

"Can't—blame—it—for being—a little rheumatic and stiff in its joints after several months of cold storage."



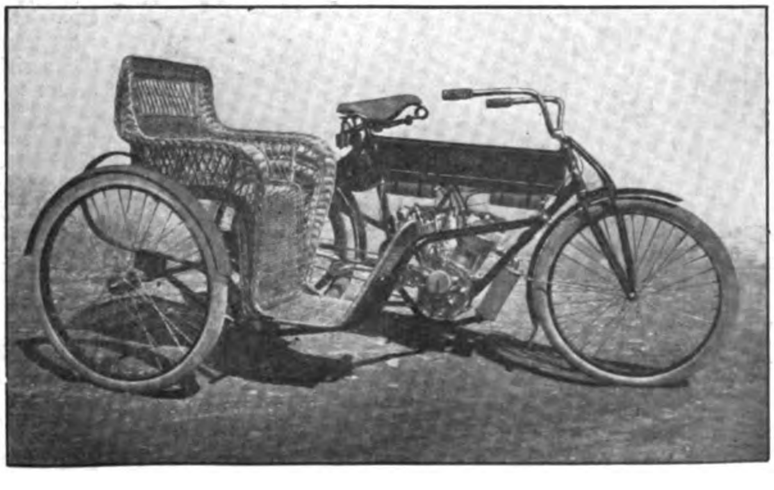
Majestic Side-Cars and Happy Occupants Snapped on a Massachusetts Road.

NEW MAJESTIC MODEL.

RECENTLY a new model of the Majestic sidecar, particularly adapted for use with a twin machine, was turned out at the plant of the Majestic Mfg. Company, in Worcester, Mass., and it is announced that the demand for this type is exceeding all expectations. The new design has the sidecar body elongated in front and reinforced, and a child's seat is added. This seat is of ample proportions for a child five years of age, but the youngster shown in the photograph has passed his seventh year and weighs sixty-five pounds. In a test one of the new sidecars was driven from Worcester to Fitchburg and return, sixty miles, with two men in the car. The seat is so constructed that it may be turned to face either forward or backward.

CURTISS SIDECAR.

STURDY, attractive in appearance, and simple in the method of attaching to a machine, the improved sidecar being offered by the Curtiss Motor Company, of Hammondsport, N. Y., for 1912, is an offering calculated to attract attention from riders who desire to have a friend accompany them on their trips. The Curtiss sidecar is fastened to the machine in such a way that it is strong but flexible. The tongue fastens to the front frame member with a ball and socket joint which is intended to take up all side strain and road jars, at the same time forcing the third wheel to run parallel with the wheels of the machine proper. The rear fastening is a hinge joint, so constructed as to make the turning of corners an easy operation for the beginner. The sidecar seat is large and will easily carry 200 pounds. It is supported on two shock-absorbing springs. The company is offering its attachment at an attractive price, and will be glad to forward detailed information upon request.



ENGLISH SIDE-CARS.

SAYS *Motorcycling*, of London: "It would appear that our American friends are at last awakening to the possibilities of the side-car. At any rate, the Hendee Manufacturing Co., of Springfield, Mass., has, through its London representative, placed a very large order with an English maker of side-cars for shipment to the States. In view of the tariff to be paid on all these side-cars and the enormous manufacturing facilities at the disposal of those across the water, this certainly seems like an admission that, so far as passenger machines are concerned, they have something to learn. However, we do not suppose much time will elapse before we see an all-American passenger machine on the English market. Other types of vehicles which our American cousins do not seem to have thought about yet are such machines as the A.-C. Sociable, Morgan runabout, and monocars and duocars."

SIDE VAN FRAMES.

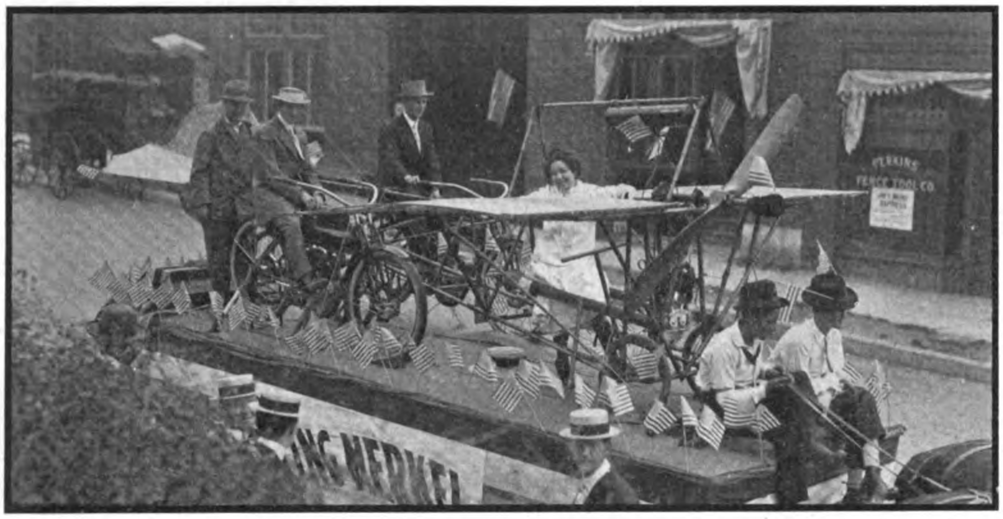
W. B. LEVIN.—Write the Hendee Mfg. Co., Springfield, Mass. We think that at present you will have to get the chassis of the side car and have your own van body built, as no firm has as yet brought out a van mounted on a side-car chassis. The Majestic Mfg. Co., Worcester, Mass., also make side-cars for pleasure purposes and doubtless you would be able to procure one of their chasses. See our advertising columns.

PLAN BIG MEETING.

PLANS for a convention of the motorcyclists of San Joaquin Valley, Cal., have been completed and the riders will convene in Porterville during the month of May to discuss road improvements and other matters of interest to the valley riders. It is the intention to have a big race meet during the convention in Porterville, as this will give the members something to occupy their attention and also entertain the local citizens.

HANDLES EXCELSIOR.

F. D. BENTZ, of Marion, Ohio, is the pioneer motorcycle and bicycle man in his town and a hustler who has been largely responsible for the progress made by the power two-wheeler in Marion and vicinity. He is preparing to devote more time to his motorcycle business during 1912 than in the past, and is looking forward to a busy season. He has just closed a contract with the Oberwegner Motor Company, of Toledo, for the exclusive sale of Excelsior machines in Marion county.



A Kansas City agent for the Merkel illustrating the slogan, "Next Thing to Flying."

SANDT'S PERILOUS FEAT

Young Aviator Who Piloted Biplane Across Lake Erie Was Formerly a Motorcycle Rider.

EARL SANDT, the young Erie (Pa.) aviator, who recently attracted attention by flying over Lake Erie in a Curtiss biplane and then losing his machine, and almost his life, on the return trip, became acquainted with gasoline motors and their possibilities as a motorcyclist. Sandt rode one of the first Indians to arrive in his section of the state, and established a reputation for endurance work as well as speed. He remained an enthusiastic motorcyclist until aeroplanes became comparatively common and then joined the ranks of the fliers.

For the return leg of his sensational trip across Lake Erie Sandt started late in the afternoon, and after flying for a few miles his engine stopped while he was 2,000 feet in the air. He volplaned successfully to the ice but his machine was carried along by a high wind until it struck an ice hummock and was wrecked. Sandt was painfully injured. When the accident occurred the young aviator was 15 miles east of Erie and about 10 miles from the shore. He managed to reach land in the darkness, but had to abandon the biplane, which has not been recovered. It is believed that the ice shifted and allowed it to sink into the lake. An Erie newspaper has started a fund to supply Sandt with another aeroplane.

A COMBINATION PROGRAM.

PROMOTERS of Montgomery, Ala. staged a motorcycle meet on March 4 in connection with an aviation program and automobile show, and the events were witnessed by throngs of enthusiasts.

HARDY RIDERS IN BURT.

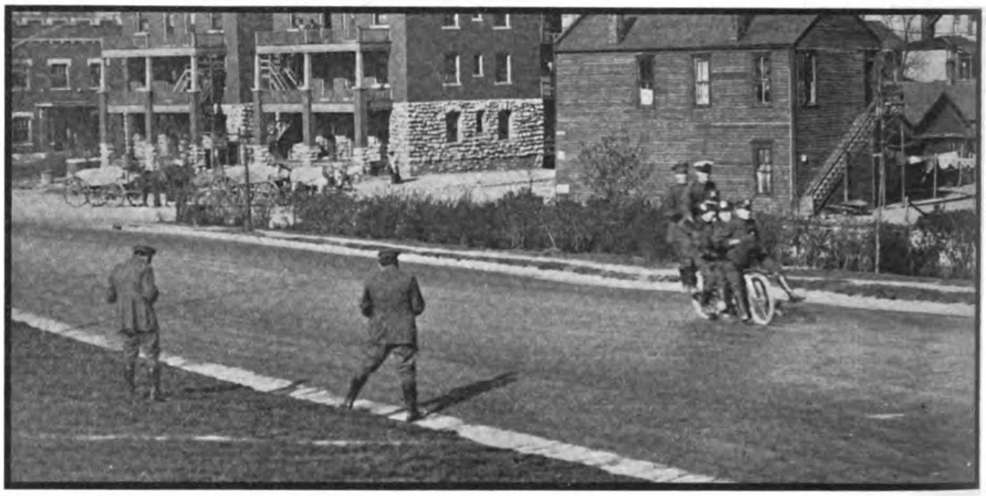
RECENTLY six motorcyclists of Burt, Iowa, made a cold-weather run over the snowy roads of their district and enjoyed it thoroughly. The photograph shows them ready for the start.

YORK'S NEW SQUAD.

ONE of the busiest new squads in Pennsylvania is the York M. C., which was formed in January with 11 members. It now has 18 riders, with a prospect of having this number increased to 25 before the riding season is far under way. The club meets every Wednesday night in rooms at 16 N. Beaver St. Visiting riders are invited to call upon the York motorcyclists when in their bailiwick in order that they may be given a sample of Pennsylvania hospitality. The club places special emphasis on the fact that no lines are drawn as to makes of machines, and that the latchstring is out for all riders regardless of their mounts.

THOR IN MACOMB.

RAY KNAPPENBERGER, of Macomb, Ill., has leased quarters at 205 South Lafayette street, and will soon open a motorcycle and bicycle repair shop. He has taken the Thor agency.



A HEAVY LOAD.

IN the illustration above appear six motor police, having a total weight of 1,085 pounds, on a 7 h. Merkel. From a standing start 200 feet away from the bottom of a hill, the machine climbed a six per cent. grade at a speed of 26 miles an hour.

ECHO OF EUROPEAN TOUR.

A RECENT issue of the *Irish Cyclist*, published in Dublin, Ireland, contained an article dealing with the visit of Joe Esler and William Streiff to the metropolis of the Emerald Isle. Needless to say, the American riders created a good impression and were given a warm welcome by the cyclists of the city. They visited Dublin at the start of their European tour which was made last summer, the serial story of which was finished in a recent issue of MOTORCYCLE ILLUSTRATED.

SHERIFF WANTS TWO.

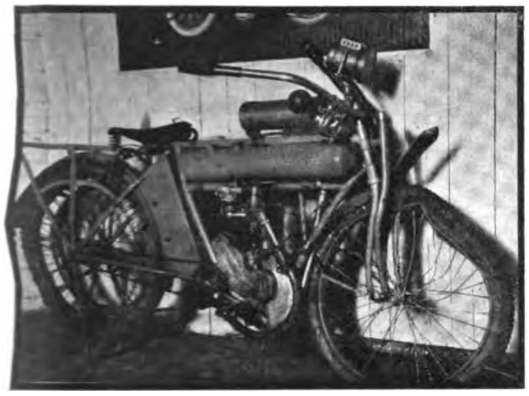
SHERIFF LANGUM, of Minneapolis, Minn., has petitioned the county commissioners for two motorcycle policemen to patrol the district about Lake Minnetonka during the summer months.

SEVERAL powerful new motorcycles will be given to the Hudson County (N. J.) boulevard police, according to the plans of the Boulevard Commission.

F. W. Mullenhour, 136 North Union street, Lima, is now agent for the Indian and Yale motorcycles in his city.

A TEST OF STURDINESS.

OF unusual interest is the accompanying photograph of a 4 h. 1912 Yale machine which was run down by an automobile truck in Toledo, Ohio, recently. It will be noted that the top tube, seat mast tube and lower reach tube are buckled and the battered fork tells its own story. Despite these conditions there is not a broken piece anywhere on the machine aside from the spokes, several of which pulled their nipples through the rim. Although the left handlebar is bent at a right angle the grip control may still be operated and the motor was started without difficulty. The general condition of the machine speaks volumes for the sturdiness of present-day motorcycle construction, and particularly for the standard of workmanship involved in the Yale.



MIDWINTER RUN.

THE annual midwinter run of the Rochester Motorcycle Club to LeRoy, N. Y., held on February 18, was declared a huge success. The riders left at 9:30 a. m. and made good time to LeRoy, although the snow had commenced to thaw. After dinner it was found that the warmth of the day had softened the roads so that the return trip was featured by spills, skids and weird dashes into roadside drifts. There were no accidents worthy the name.

One rider of a flat belt machine broke his belt. Another rider of a high-powered twin, not used to so much power took several spills, and another in trying to derrick his machine from one rut to another, fell on his machine and lost some of his clothes through the belt sawing them off. These three entrained home. The remaining twelve finished in a couple of hours. The trip will be repeated, as the participants declare winter riding in the country is good fun.

PITTSBURGH'S NEW CLUB.

PITTSBURGH now has a new motorcycle squad which is preparing to affiliate with the F. A. M. It has been named the "Happy Days Motorcycle Club."

MEMBERSHIP CONTEST.

THE Marion (Ind.) M. C. has selected two teams which will compete for members until April 17, and the losing team will pay for a banquet for the winners.

W. F. GERKEN has been elected president of the Port Arthur (Tex.) Motorcycle Club which was recently organized.

PITTSBURGH'S MOTORCYCLE SHOW

Visitors Crowded Stands At Which Two-Wheelers Were Given Initial Display In Big Automobile Exhibition.

PITTSBURGH, PA.—The first motorcycle display ever seen in this city was arranged in connection with the annual automobile show held under the auspices of the Pittsburgh Automobile Association, February 17-24. The main floor was given up to the motor cars and motorcycles and accessories occupied the entire balcony. Many visitors to the show who intended to devote all their time to inspecting the automobiles found themselves attracted to the motorcycle section and demonstrators of the two-wheelers were surprised by the number of inquiries received concerning their products. It is now being argued that the motorcycle dealers of the city should have a separate show, and steps may be taken toward such an arrangement for 1913.

Harley-Davidson machines were displayed by T. C. Donahue, of the H.-D. Exchange, together with Harley motor parts and fittings, and special attention was given to the Ful-Floteing seat and Free-Wheel devices. Mr. Donahue and his assistants were busy at all times, and a number of orders were taken.

The Motorcycle Exchange, of Pittsburgh, also had an attractive display, four 1912 Indians being shown. Orders were plentiful and many appointments were made for road demonstrations. A. G. Schmidt, manager, and H. McK. Payne, proprietors of the Exchange, were in charge, assisted by Ralph Merrill.

Many other features of interest to motorcyclists were seen on the balcony, among them Brictson Tire Protectors, with the new type of steel tread, shown by J. B. and C. W. Rodgers. All the dealers and agents are enthusiastic in their reports of business resulting from the show, and it is safe to say that from now on it will receive more attention from motorcycle enthusiasts each year.

THE LIGHT MOTOSACOCHE.

THE accompanying photograph shows Percy A. McBride, Excelsior and Motosacoche dealer in Toronto, Ont. He is seated on a Motosacoche of 1¾ h., which weighs only 90 pounds. It has lever control, magneto ignition, Whittle belt, belt idler and luggage carrier and is credited with being sturdy enough for any ordinary road.

LADIES ARE INTERESTED.

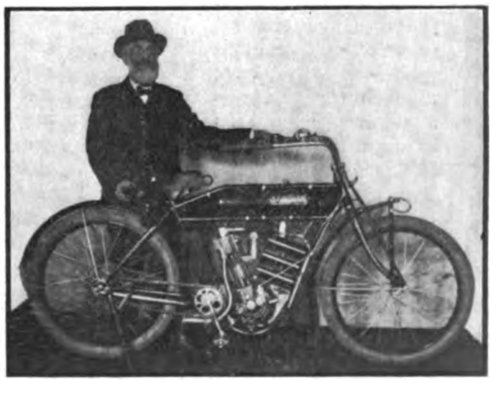
THAT the women of today are taking a much more active interest in motorcycling was evidenced by the attendance of the fair sex at the second annual "Ladies' Night" given by the Toronto Motorcycle Club on Wednesday evening, February 21, at the club quarters. The first event held one year ago proved a rank failure, but on this occasion, the club's assembly hall was completely filled with the crowd of merrymakers in spite of blizzard conditions and counter attractions in the shape of auto show openings and choral concerts. About one hundred couples were present and a program of cards, music and eats was thoroughly enjoyed. Needless to say, prospects of side-car jaunts this coming summer formed the chief topic for conversation. Members of the club may put on a dance in the near future.

SEEKING INFORMATION.

THE National Capital M. C., of Washington, D. C., is seeking information concerning the system by which members of certain clubs throughout the country are able to tender their membership cards as a bond for their appearance in court, should they be arrested for a traffic violation. The Washington club purposes entering into such an agreement with the authorities of its city if possible, and details from organizations now using the system will be welcomed. Communications should be addressed to Harry B. Cohen, chairman of the publicity committee.

READING'S VETERAN RIDER.

BENJAMIN KINSEY, of Reading, Pa., 65 years old, is the oldest motorcyclist in his home city and one of the oldest in the country. He started his cycling career by riding a bicycle in 1896 and turned off many a century with the younger enthusiasts. In 1908 he purchased an Indian motorcycle which he rode consistently, and a few weeks back he placed his order for a 1912 Indian. He attributes his excellent health to outdoor sports, in which he has always been deeply interested, and states that the motorcycle should add years to the life of any man. The photograph is forwarded by John G. Nuebling, one of Reading's progressive dealers.



Manufacturers

COLLEGE-BRED TIREMAKERS

Goodyear Company Has Alumni from Fifteen Colleges on Its Staff of Rubber Working Experts.

THE development of the finer details of the tire business was never more forcibly exemplified than in the statement of W. D. Shilts, manager of salesmen for The Goodyear Tire & Rubber Company, who says that many of the largest and best universities in the country are represented on the Goodyear staff of experts.

"It used to be," says Mr. Shilts, "that the business of creating a rubber product was considered purely a workman's job, but the technical side of the business has developed wonderfully in the last few years. Rubber and tire manufacturers are reaching out in every direction for experts, for trained men. For example, the Goodyear Tire & Rubber Company has in its employ, in the experimental and other departments of production, not less than seventeen alumni of the Massachusetts Institute of Technology, to say nothing of the alumni of other first-class colleges who are Goodyear men.

"Among the colleges represented on our payroll I might mention Yale, Harvard, Pennsylvania, Michigan, Cornell, Princeton, Reserve, Bowdoin, Williams, Bethany, Case, Buchtel, Wooster, Mt. Union and Colgate. Tire manufacturers, judging from the experience of the Goodyear company, have realized that there is a difference between modern and old-time business methods, and they are equipped accordingly. University men have had a great deal to do with bringing the tire business to its present state of advancement and perfection. Goodyear university men could quickly form a football team that would include names very well known on the gridiron. Their work in the laboratory is not less noteworthy."

FRAME ORDERS PLENTIFUL.

THE Excelsior Cycle Company has completed the installation of new machinery in its big plant and is now turning out frames at the rate of 150 a day. The company is receiving many rush orders for motorcycle frames and parts. Mr. Mitchell, who travels the South for the Excelsior firm, made a flying trip to Chicago to attend the show, but is now back on his southern circuit. He is sending in many orders for immediate deliveries. James C. Baine is busy directing affairs in the office and factory, and Peter P. O'Horo may be found on the jump at all times. Harry Svensgaard was also much in evidence as a representative of the company at the Chicago Show.

ERO NIGHT SHIFT.

IN order to keep abreast of the demand for its specialties the Ero Mfg. Co., of Chicago, now has a night force at work, and several new salesmen have been added to its staff. Frank Eiler, who is in charge of the Ero headquarters, states that business has kept him on the jump of late to such an extent that he was able to pay only one brief visit to the Chicago Show.

The police department of Montgomery, Ala., plans to purchase two motorcycles.

PUNCTURE-SEALING TUBE

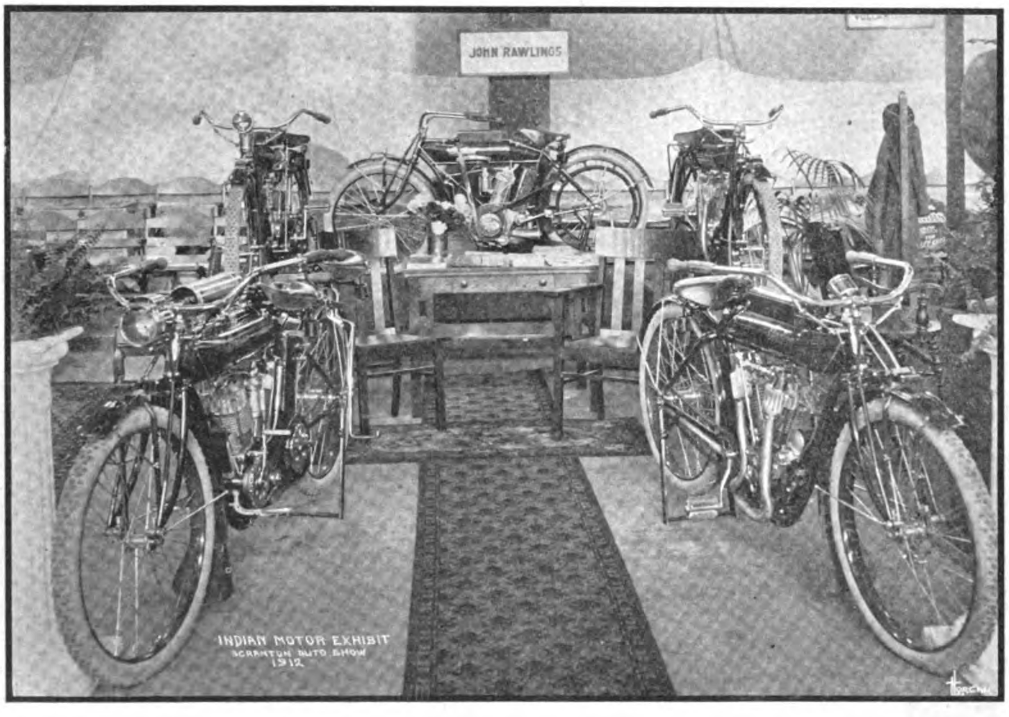
New Product with Fabric-Covered Tread Closes Hole and Remains Airtight After Being Pierced.

ONE of the most interesting offerings now demanding the attention of motorcyclists is a puncture-sealing inner tube manufactured by the Voorhees Rubber Company, of Jersey City, N. J., and handled by the Brown Scientific Tube Company, with offices at 150 Nassau street, New York City. The tube embodies a scientific principle not heretofore applied to such products, in that it is designed to close a puncture automatically when the foreign object is withdrawn. The tube has a tread of unusual thickness, covered by a layer of fabric. When a puncture is sustained and a nail, for instance is withdrawn, the tube tread acting in conjunction with the fabric closes the hole and leaves the tubing still airtight.

At the New York and Newark (N. J.) automobile shows one of the new tubes was demonstrated by K. B. Spencer, representing the Brown company. It was shown inflated and encased in a tire in which "windows" had been cut so that sections of the tube were exposed. Nails were pushed through the tube in a dozen places, but there was no appreciable loss of air through the punctures. The company states that this tube, with its dozen punctures, held air at fifty pounds pressure for five days without flattening noticeably. The Brown tubes are now being handled in New York City by the New York Sporting Goods Company, F. A. Baker & Co. and Bidwell & Conklin.

FOR FIRE SERVICE.

CITY Purchasing Agent Henry Campbell, of Milwaukee, Wis., plans to purchase one or more motorcycles and equip them with chemical apparatus to be used in extinguishing small fires.



FINE SHOW IN SCRANTON.

THOUSANDS of motorists visited the Automobile and Motorcycle Show, recently closed in Scranton, Pa., and dealers of the city report that returns from the exhibition are larger than they have ever been in the past. The photograph shows the exhibit of John Rawlings, Indian agent in Scranton.

NOVEL FACE PROTECTOR.

DESIGNED to afford complete protection for the face and to meet the needs of motorists under all conditions of weather, the "Autoface," a recently patented shield, which is produced by the Autoface Company, of Lawrence, Kan., is an offering calculated to meet with the approval of motorcyclists. It embodies a well-made pair of goggles, and these with the cloth section cover the face so that the wearer does not suffer from dust or sunburn in summer or icy winds in winter weather. Two flaps, covering the nose and mouth, permit of free breathing and still afford maximum protection.

When the members of the Kansas Short Grass Club made their 900-mile tour last summer, practically all the riders used the "Autoface" and found that it measured up to the claims made for it. The mask proper may be had in poplin, broadcloth, khaki, linen, cravanetted silk, dustproof silk and pongee silk. One of the most popular materials used for the mask is cravanetted linen, which is rainproof and still sufficiently porous to permit of free circulation of air.

KIPP A REAL ENTHUSIAST.

HERB KIPP, the well-known Canadian rider, who travels Canadian territory in the interests of the Indian, recently found one of the new 1912 models at the agency in Calgary, Alberta territory, and although the thermometer was forty-six below zero, he took it out for a trial.

The excessive cold had no effect on the Indian, which traveled as well as on a summer day, but it was far different with the rider. Before he had gone a great distance a stranger stopped him and told him his face was frozen, and an investigation showed that his cheeks and the end of his nose were badly touched. A prompt application of snow proved effective, and Kipp suffered no particular inconvenience from his experience.

A WIDE FIELD.

AN interesting evidence of the popularity of the Indian is shown by the various addresses on machines recently shipped from the Indian factory. On one day last week shipments were made to New York, Wisconsin, Oklahoma, New Jersey, Pennsylvania, Washington, Texas, Missouri, Indiana, Kentucky, Ohio, Kansas, Michigan, Massachusetts, Iowa, Montana, North Carolina, California, Georgia, South Dakota, Minnesota, London, Eng., Japan, New Zealand, Hawaii, Argentine, Chile, Toronto, Montreal, Alberta and Manila. In all, 272 machines were included in one day's shipment.

MAY ADOPT TWO-WHEELER.

FIRE CHIEF TEN EYCK, of the Hamilton (Ont.) fire department, is considering the advisability of introducing the use of fire motorcycles in his city. The machines will be put to a thorough test before they are finally adopted. Ten Eyck is the first Canadian fire-fighter to consider the two-wheeler as an equipment.

TORMEY ON THE JUMP.

JIM TORMEY, of the Goodyear staff on the Pacific coast, is now on a business trip through the north coast territory, his itinerary including Portland, Seattle and Spokane.

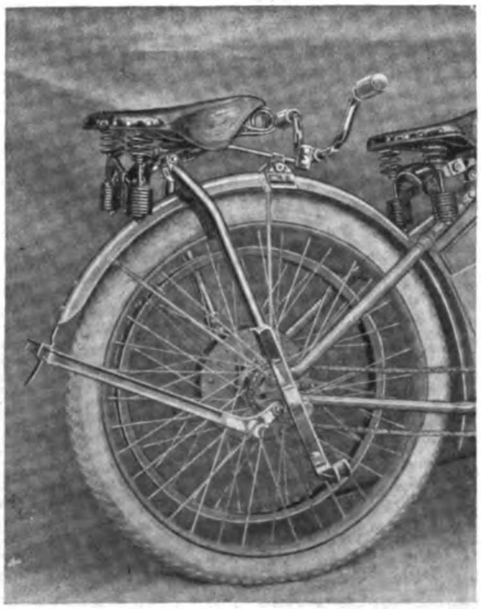
OPPOSE CUT IN DUTY

American Chain Makers Say Tariff Reduction Would Put Them at Mercy of Foreign Firms.

RECENTLY the Diamond Chain and Manufacturing Company, of Indianapolis, Ind., submitted a brief to the United States Senate committee on finance in support of the claim that it would be inadvisable to reduce the present tariff on chains, and as a result it is not likely that undesirable action will be taken. The present tariff is 45 per cent. ad valorem, and it is the contention of the Diamond company and other American chain manufacturers that with a lower tariff they would not be able to remain in the field against foreign makers of chain products. The brief is comprehensive and convincing, and appended to it are letters of approval from the Whitney Mfg. Co., of Hartford, Conn.; the Duckworth Chain & Mfg. Co., of Springfield, Mass.; the Lefever Arms Co., of Syracuse, N. Y., and the Link Belt Co., of Indianapolis, Ind.

H-D TANDEM ATTACHMENT.

THAT the Harley-Davidson designers are never idle is indicated by the appearance of a new tandem attachment from the big Milwaukee plant, embracing several improvements and providing for a more satisfactory method of fastening than has been used in the past. Its general make-up suggests the design of the Harley-Davidson spring fork; the springs are enclosed to prevent grease and oil from reaching the clothing of the rider, and it is impossible for a garment to be caught in open springs and torn. A new method of fastening the seat post bar to the machine is used; it is attached to the mudguard with a neat quick-detachable clamp. The bars are of a new shape which is calculated to give the rider greater comfort. The attachment embodies two complete sets of cushion springs, the main and recoil springs, both being readily adjustable to the weight of the rider.



MOTOR HARLEY-DAVIDSON CYCLES

H. W. Haskell, who travels the Central States for the Harley-Davidson Company.

TORONTO SHOW

Eleven Makes of Machines, Including Four Foreign Types, Attracted Unusual Attention from Canadians.

EIGHT dealers were represented by motorcycle displays in the Toronto (Ont.) motor show which closed on February 28, and visitors were of the opinion that the power two-wheelers had never been given a more effective exhibition. Four of the eleven makes shown, the Rudge-Whitworth, Triumph, Douglas and Motosacoche, have never been seen in a motor show in the States. The American lines included the Emblem, Indian, Excelsior, Harley-Davidson, Flying Merkel, Reading-Standard, Pierce and Flanders. The total number of motorcycles shown was over thirty, and other products of interest to the motorcyclist were three styles of side-cars and a delivery van, Goodyear, Goodrich and Dunlop tires, Bosch magnetos and accessories.

Emblem motorcycles were displayed by Hyslop Bros., Ltd., Toronto agents, and in addition to their own representatives L. S. Taylor, the Emblem racing man, went up from the factory to demonstrate the fine points of the machines. President W. G. Schack, of the Emblem Company, was in attendance two days. The other exhibitors were as follows: H. M. Kipp, three twin and two single-cylinder Indians, side-cars and engine parts; Percy A. McBride, two twin Excelsiors and one single, one Motosacoche and a side-car; Walter Andrews, three Indians, one four-cylinder and three single cylinder Pierces; License Brothers, two Harley-Davidsons; Tangent Motorcycle Company, one T.T. Triumph and one Triumph roadster; Motorcycle and Equipment Company, two Flanders machines, one Rudge-Whitworth T.T. model; T. Eaton Company, one single and a chain-drive twin of the Reading-Standard line, and one 2¾ h. Douglas; Humphrey Bicycle and Motor Company, four Flying Merkels.

CHANGES IN TIRE STAFF.

T. R. BURTON, manager of the Pittsburgh branch of the United States Tire Company, has been appointed assistant to O. S. Tweedy, eastern district manager of this concern. Mr. Burton will move to New York. His successor in Pittsburgh will be C. C. Gehring, who during the past year has been connected with the company's Philadelphia branch. J. C. Weston, western district manager, has moved from San Francisco to Chicago to assume charge of the central district, and C. A. Gilbert has gone from New York to San Francisco to take Mr. Weston's place.

Dealers Department

NEW YORKERS INCORPORATE.

ARTICLES of incorporation were filed at Albany a few days ago by the Bidwell-Conklin Company, of New York City, which conducts a motorcycle headquarters at 2142 Broadway, in the building formerly occupied by F. A. Baker & Co. The incorporators are Harold F. Bidwell, Kennedy Conklin and William F. Stubner, all of New York City. Mr. Bidwell was identified with the Baker company as manager of its uptown store, and when the firm decided to give up this branch he formed the company which took over the business. The company has a well-equipped shop, a large line of accessories and parts and is prepared to meet all the demands of riders.

VICTORY FOR MOTORCYCLES.

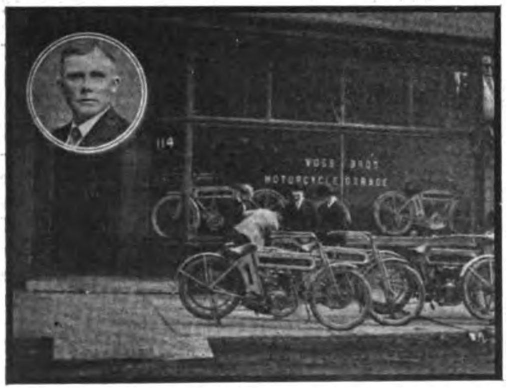
C. L. SCRIVENS, of Ashtabula, Ohio, recently gave up an automobile business to turn his attention to motorcycles. He will also carry bicycles and supplies, but after he has disposed of the cars on hand, automobiles will not figure in his line.

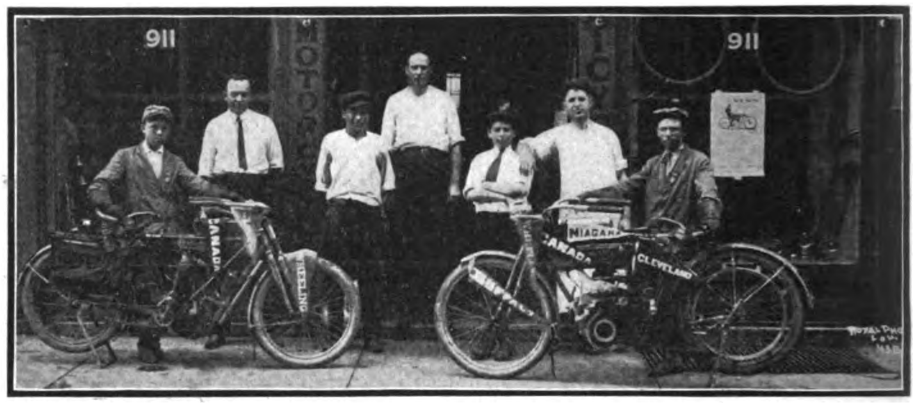
NEW ENGLAND AGENTS.

NEW ENGLAND Emblem agents appointed last week include Groise Bros., Holyoke, Mass.; United Cycle Co., Hartford, Conn.; L. R. Elliott, Attleboro, Mass., and the R. G. Davis Automobile Co., Providence, R. I.

PEORIA'S NEW GARAGE.

VOSS BROS., agents in Peoria, Ill., recently opened the first exclusive motorcycle garage in their city. The firm's bicycle business will be continued at 419 S. Adams street, and the motorcycle headquarters is located at 114 Franklin street. In the corner of the photograph appears a picture of W. C. Voss, who will manage both stores, assisted by Roy Dickerson at the bicycle store, and Walter Rieker at the motorcycle establishment.





DAVIS HEADQUARTERS.

NO shop in Louisville, Ky., is busier than the one presided over by R. L. Davis, which is shown in the accompanying photograph. Davis is a booster for good roads, lively clubs and in fact everything that goes to advance the cause of the single-tracker.

DE SALVO OPENS STORE.

JOSEPH DE SALVO, of Chicago, well known in racing and trade circles, opened his new motorcycle headquarters on West Jackson boulevard, Chicago, on March 1, and is now prepared to cater to riders, particularly of the West Side. He will handle Excelsiors for this section of the city and also carry a line of Excelsior bicycles.

RACINE AGENCY.

THE Emblem will be represented in Racine, Wis., this season by the G. W. Burkert Co., of 611 Wisconsin street. This is a large concern which has been identified with automobile interests, but which sees a bright future for the two-wheeler.

J. P. WOLF and his Flying Merkel agency in York, Pa.

A BARGAIN PRICE.

A BARGAIN sale of Reading Standard motorcycles at a record low price almost took place recently in the big departmental store of the T. Eaton Company, Limited, Toronto, when preconcerted action alone prevented about a dozen young men from obtaining a machine for the small sum of $2.45. An advertisement in a morning paper conveyed the information that the stock of 1911 R.-S. models would be cleared out for that amount each, whereas it should have read $245. As soon as the store opened, about two hundred intending purchasers made a dash for the motorcycle department to find only that they had been forestalled, employees of the store having bought up the whole stock at the advertised price. The throng caught sight of the bright and shining 1912 models, however, and crowded around the circle to examine the new amounts, so that the mistake proved to be a good "ad" for the new stock after all.

The initial order by the Eaton firm for the new machines this year was for forty mounts. The firm is importing the wheels without tires in order to shoe the machines with a new "Traction Tread" tire manufactured by a local plant.

EMBLEM IN OHIO.

C. J. JOBE, of Canton, Ohio, has closed with the Emblem Mfg. Co., to represent the sturdy Emblem motorcycles in several Ohio counties. Jobe is now busily engaged in placing sub-agencies. Stephenson & Campbell, of Gaylord, will represent several counties in Kansas, and one of their first sub-agents to be appointed is C. W. Green, of Natoma, who will travel for this concern.

GETS SHOW EMBLEM.

W. H. Snyder, president of the American Machine Company, 338 North Fourth street, Columbus, central Ohio agents for the Emblem, has shown his usual progressiveness by securing the twin Emblem which was the feature of the display in the Chicago show recently. The machine has been placed on exhibition in the window of the store.

The official colors of the Federation of American Motorcyclists, blue and white, have been adopted by the New Jersey M. C. for club pennants.

Interior of the Store of George C. Detch, of Indianapolis.

BALTIMORE DEALERS JUBILANT.

BALTIMORE, MD.—The motorcycle show held in the Fifth Regiment Armory here February 20-28, inclusive, was the finest this city has ever witnessed. The five dealers who participated in the exhibition are the happiest men in the Monumental City just about now. The success of the show has greatly encouraged them and they propose to have one next year much more elaborate. The manner in which space was allotted them was rather unfortunate, as they were distributed throughout the vast armory. They would have preferred to be assembled in one corner, which would have made their showing much more impressive, but this was impossible under the circumstances. Next year, however, the management has promised to congregate them in one corner of the building.

It is possible that the motorcycles next year will not be exhibited in connection with the automobile show. There are well founded rumors that an aeroplane show will be held here and the dealers have indicated their intention of joining with the men of the air in displaying their machines. The dealers feel that their machines would then be displayed to better advantage.

The five booths occupied by the dealers were decorated with American flags, penants and oriole colors, the effect produced being highly pleasing. Their machines were conspicuously displayed and all during the show the motorcycle exhibits attracted a great deal of attention. Over fifty machines were sold and twice as many promises were received

Howard A. French & Co. displayed Indians, including a T. T. model and a Milford side-car. Both of these features attracted much attention. Little Joe Wiesenfeld showed two Yales. The Randall Manufacturing Company's exhibit included the Pope and Reading-Standard and a fine showing was made. F. W. Sandruck had the Excelsior, Emblem and Merkel on view, while the Chase Motor Company was kept busy demonstrating the Harley-Davidson.

On Friday evening, February 23, the armory was turned over to the motorcyclists and they made things hum for a few hours. The Maryland M. C. was on the job with both feet.

LEONARD B. SHEPARD is President of the recently organized club in Northampton, Mass.; Theodore Bablock is Vice-President, B. G. Torrence Secretary, and C. P. Rustemeyer Treasurer.

Arthur Johnson and Arthur Stauff, tallest and shortest in the Harley-Davidson Co.

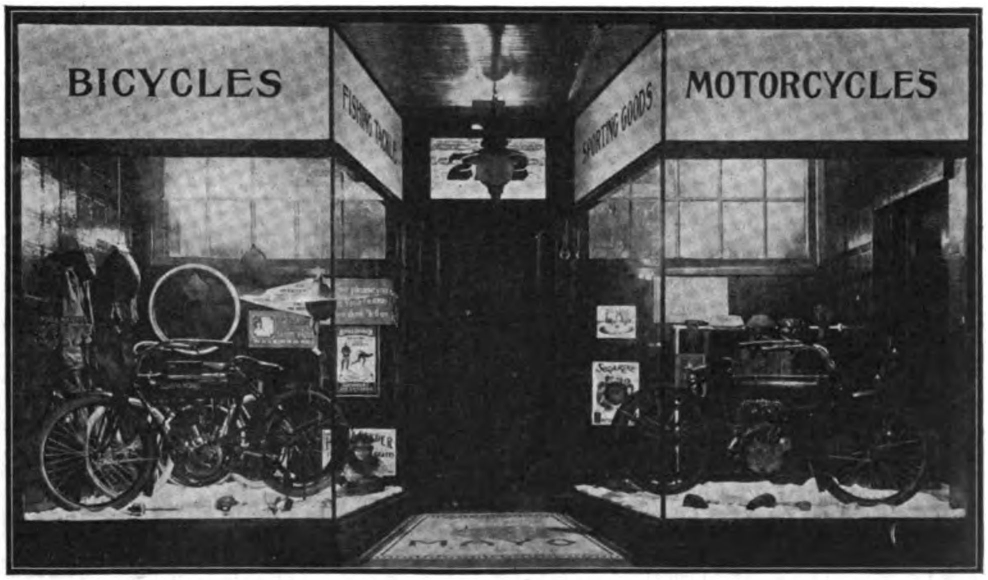
DES MOINES SHOW.

MOTORCYCLES are playing an important part in the third big auto show which is being held in the Des Moines (Iowa) Coliseum, March 4-9. This is the first year that the motorcycle can be said to be taking its proper place in any Iowa motorcar show. Jenkin & Co. have a space thirty feet square and in it a splendid exhibition of Indian and Excelsior machines, with the latest improvements and attachments, including a side-car. Carl Larson, handler of the Harley-Davidson, has an exhibit, as has the Anthony Cycle Co., with a stock of Yale, Reading Standard, and Merkel machines. It was stated that the Thor, Minneapolis, Flanders and Pierce might also be on exhibition, but no definite arrangements had been made to show them at latest reports. The Coliseum contains 27,000 square feet of space, which is being utilized by the exhibits of various cars, accessories and motorcycles. The motorcycles all have prominent places and are not being slighted in any instance for the automobiles.

A LITTLE late to make note of the fact, but we overlooked mentioning in our Chicago Show report, that the first Chicago Show sale of a Henderson machine was made by Chicago Agent Fred Huyck to W. B. Pearson, a Chicago millionaire, who purchased the machine for his son. The sale was made a few minutes after the opening of the Show.

NASHVILLE TO CINCINNATI.

M. E. MOSLEY.—The best route from Nashville to Cincinnati is as follows: Go to Franklin, Ky., from Nashville, then to Bowling Green, Mammoth Cave, Cave City, Uno, Hardville, Magnolia, Buffalo, Athertonville, Bardstown, Mt. Washington, Louisville, Middletown, Shelbyville, Fisherville, Frankfort, Lexington, Georgetown, Corinth, Williamstown, Le Crittenden, Kensington, Florence, Covington and across the Ohio to Cincinnati.



MAYO'S NEW STORE-FRONT.

JAMES MAYO, a well-known dealer in motorcycles, bicycles and general sporting goods, at 222 Penn street, Reading, Pa., recently improved his place of business by the addition of a handsome plate glass store front which shows to advantage in the accompanying photograph. Mayo has the local agency for Flying Merkel machines, and for Columbia and Iver Johnson bicycles. In the rear of his store is located a machine shop with complete vulcanizing facilities, and on the whole, Mayo is well prepared to handle his 1912 business.

DUTIES OF A LOCAL F. A. M. COMMISSIONER

Chairman Estabrook Outlines Work Expected of Federation Representatives and Makes A Plea For Greater Activity To Encourage New Clubs During 1912.

FOLLOWING is a timely and unusually interesting letter from Chairman Estabrook, of the F. A. M. membership committee concerning the duties of a Federation commissioner and the opportunities that are open to him for advancing motorcycle interests. It is intended to answer numerous inquiries which have been received along these lines and to suggest new lines of endeavor for the officials who head the State and city branches of the national body. The Bangor Oracle writes as follows:

"During the past three years numerous inquiries have been received at this office for a definition of the term 'commissioner' and an outline of the duties falling to such an official, and in the absence of more authoritative ruling the chairman has replied along these lines: 'A commissioner is the F. A. M. local representative, having charge of membership and other Federation interests in his territory, excepting control over competitive events; these are directly under the competition committee or officers delegated to act for the committee. In the interest of local members and the Federation the commissioner should endeavor to prevent irregularities in local competitive events and to report all such cases to the State commissioner.'

"With reference to the duties of a commissioner I have replied as follows: 'Assisting the State commissioner in building up the F. A. M. membership; developing ways and means of popularizing the sport and pastime locally; organizing local motorcyclists into fraternal clubs, to the end that local motorcycling interests may be conserved and advanced; furthering the work of the F. A. M. in cities by appointing and instructing ward assistants and commissioners; assisting the State commissioner in carrying out his State or local policy; doing anything further in the interests of the local F. A. M. membership, of which he is the official head, which his judgment may dictate as long as it does not conflict with the established Federation rules.'

"The F. A. M. by-laws state that the vice-presidents shall appoint, in each State represented by their membership, a State official who shall be termed 'State commissioner,' and such district by-laws as are at hand read as follows: 'The State commissioners shall have general oversight of affairs in their respective States, and to assist them they may appoint a State secretary and also local commissioners wherever it may be deemed advisable.'

"With this much settled, and being in possession of a copy of the by-laws referred to, the State commissioner should feel at liberty to go ahead, make his own plans and carry them out according to his own policy and his knowledge of the particular territory involved. He is allowed plenty of latitude, and if he is awake to his opportunities he should not experience difficulty in showing results. Newly appointed commissioners may communicate with their vice-presidents at any time and obtain instructions and suggestions, but in nearly every case the success of a commissioner's operations depends on his own initiative and the enthusiasm with which he enters upon his duties. Information relative to stationery, printing and other expenses should be obtained through the district vice-president or the national secretary.

"With the spring riding season almost at hand and new clubs springing up on all sides there is much work to be attended to by the commissioners, and it would be lamentable if even one rider should be lost to the F. A. M. through hesitancy on the part of a local representative to act upon his own ideas and keep things moving. Keep your State commissioner posted as to your operations, but never miss a chance to start a boom on your own account. If you have an idea that seems workable, work it. As long as you do not conflict with the general rules of the Federation—and there would seem to be little danger of that—you will find the Federation officials and district and State heads prepared to back you up to the last trench."

JAMES FINMORE and Miss Anna Tubridy of Syracuse, N. Y., recently made their wedding trip to Sayre, Pa., on a motorcycle.

EL PASO (Tex.) motorcyclists have recently opened their new club rooms in that city.

S & C BRANCH MOVED.

THE Stewart & Clark Mfg. Co. has moved its Minneapolis branch from 45 South 10th St. to 1202 Hennepin Ave., where it will have much larger quarters, more conveniently located, and with facilities for installing speedometers, as well as a crew of men ready to make installations in either St. Paul or Minneapolis when required. The new office will be in charge of T. J. Snelling, who has been with the Stewart & Clark Mfg. Co. for some time. A. H. Champlin, who has had charge of the office, will call on all the Minnesota trade outside of Minneapolis and St. Paul, and on all the Iowa trade.

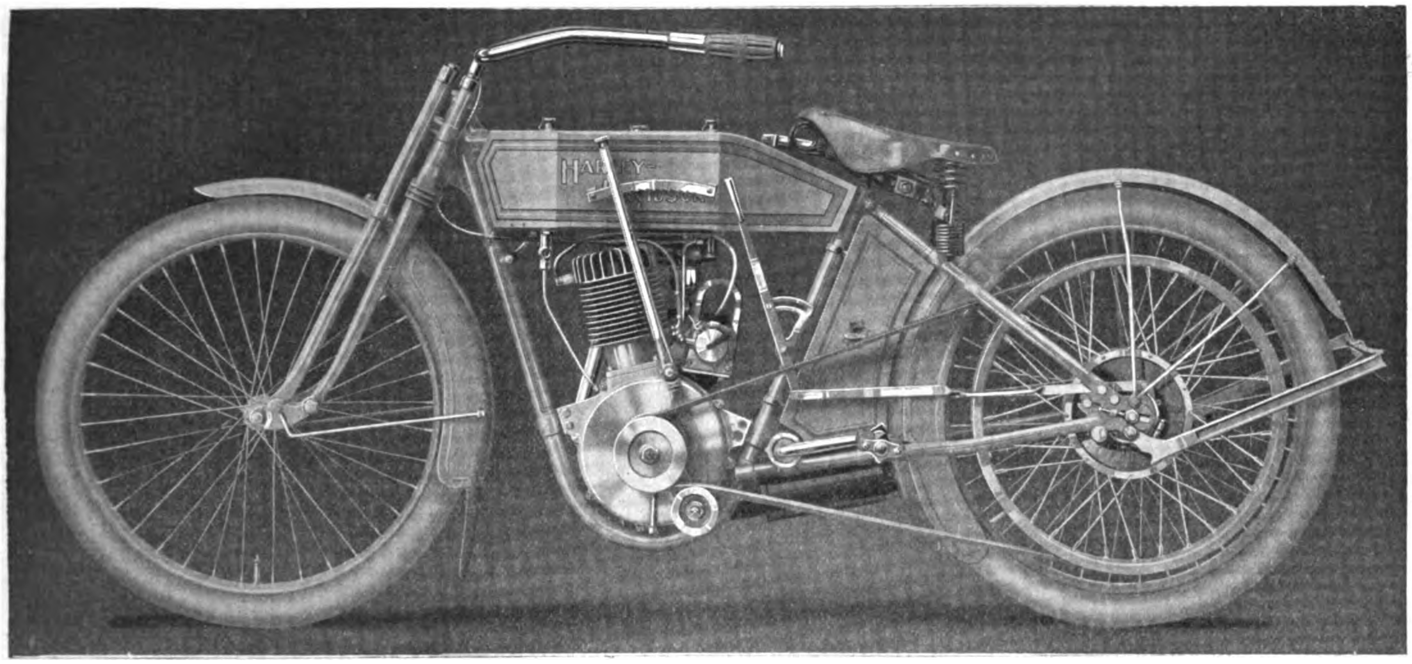
EXCELSIOR motorcycles will be sold in Nashville, Tenn., during 1912 by the Motor Truck Company.

"AND THE GIRLS."

J. M. BUSH, of Los Angeles, has sent in these two photographs. The upper one shows his friend Burbank, "and the girls," in Mint Canyon, Los Angeles County. "The Girls and Myself" at the Mouth of New Hall Tunnel is the title Bush has given to the lower picture.

J. W. BRANDT, of the Troxel Mfg. Co., and Mrs. Brandt are making a six weeks' tour of the West Indies.

Three Carload Orders in Three Days



FEBRUARY 26, 27 and 28 each brought us a carload order — one from the Appeal Company, Los Angeles; one from Weaver-Ebling, New York City, and one from our New England branch in Boston.

The Los Angeles and Boston cars ***have been shipped.*** The New York car will go on the very day promised —***positively.***

Is the organization back of the machine you handle in a position to make eight-day shipments on carload orders for genuine 1912 models?

Are you protecting yourself on this delivery question?

Are you receiving the same service as Harley-Davidson dealers?

Our new plant is under way. When this is completed it will just double our present capacity.

Harley-Davidson Motor Company

180 C Street Milwaukee, Wisconsin

MOTORCYCLE

FOR SALE OR EXCHANGE

NEW MERKEL SINGLE, never ridden, $135. Also Merkel twin, almost new, ridden 300 miles, $175; $20 with order, balance C. O. D. H. Emrick, 905 Woodlawn Ave., Middletown, Ohio.

FOR SALE—Harley-Davidson 1911 magneto four motorcycle, brand new; guaranteed. $155, cash. George W. Wills, Canal Dover, Ohio.

MOTORCYCLE BARGAINS.—Twenty in first-class condition. Will be sold at 1912 values regardless of cost. Send for descriptive list. W. D. Andrews, Buffalo, N. Y.

ONE 4 h. R. S. MOTORCYCLE in best of condition, with cyclometer, lamp, horn, one extra shoe and inner tube, brand new; one set of brand new chains, full set of tools, one extra valve, two spark plugs, goggles, and luggage carrier. Outfit cost $285.00; will sell for $125.00. Chas. W. Jones, 196 Horton St., Wilkes-Barre, Pa.

MOTORCYCLE TIRE BARGAINS.—A. C. C. A. PRICES TALK! Diamond, Goodrich, G. & J. and other standard makes; guaranteed. YALE MOTORCYCLE.—4 h. p. 1911 Model, in perfect condition. $100 if taken at once. Will demonstrate any time. Address Frank W. Smith, 302 Fallowfield Ave., Charleroi, Pa.

FOR EXCHANGE.—Nine volumes I. C. S. Encyclopedia of Electrical Engineering; never used. Winchester pump gun, 16 gauge; good condition. Want motorcycle. R. G., Box 44, Bluffton, Ind.

MOTORCYCLE BARGAIN.—1911 Greyhound motorcycle, fitted with two-speed and free engine, practically new Nobby Tread tires, in very good condition. Will sell for $125.00. Will ship C. O. D. on receipt of $10.00. William C. Walters, 512 Meadow Ave., Charleroi, Pa.

CUSSIN'! Why? Tank dry. You know. Next—Rider green; plenty gasoline. Why? Johnston gauge. Plain sight, easily attached. Returnable sample $1.50. Circulars free. Don't walk and cuss. Get one. System, St. Joe, Ind.

FOR SALE OR EXCHANGE.—1910 Indian motorcycle, 1910 improvements, perfect condition, for twin machine, same make. Taken care of by machinist. George L. Schlott, 318A 7th St., Allentown, Pa.

FEBRUARY, 1912. THIRD ANNUAL MAGNETO BARGAIN

sale imported high tension magnetos at less than cost of importation. Our third annual genuine inventory sale of U. & H. Master Magnetos, made in Germany, is now in progress. All H. P. sizes and types for 1, 2, 4 and 6 cylinder motors, suitable for motor cars, motor wagons, motor boats, motorcycles, stationary engines, etc. Write now, before they are all gone, for circular and price list. The sale is a real Magneto money saver. J. S. Bretz Company, 250 West 54th Street, New York.

THE REFLECTOSCOPE.—Instantly attached to the handlebar of any make motorcycle; enables you to see everything on the road behind. As necessary as a lamp or horn. No need to twist your neck to see if your trailing companions are in sight. Its use in traffic is necessary, and it is a valuable accessory in club runs and speed contests. Designed especially for motorcyclists, and is triple adjustable in action, affording any angle of vision. Made of the finest material, quadruple-nickeled, and contains a 3-inch reflecting mirror of the highest quality imported lens. Sent postpaid to any part of the United States on receipt of price—$2.60, or sent C. O. D. on receipt of a small deposit. Money positively refunded if not better than represented. Reflectoscope Co., Angola, N. Y.

FOR SALE.—M. M. motorcycle, 3½ h. p., fitted with Wata-Wata V belt and adjustable pulley. Lamp, generator, luggage carrier and horn. Two-in-one tank with oil and gasoline gauges. First money order for $100.00 takes it. W. H. Johnson, Box 159, Berlin Mills, N. H.

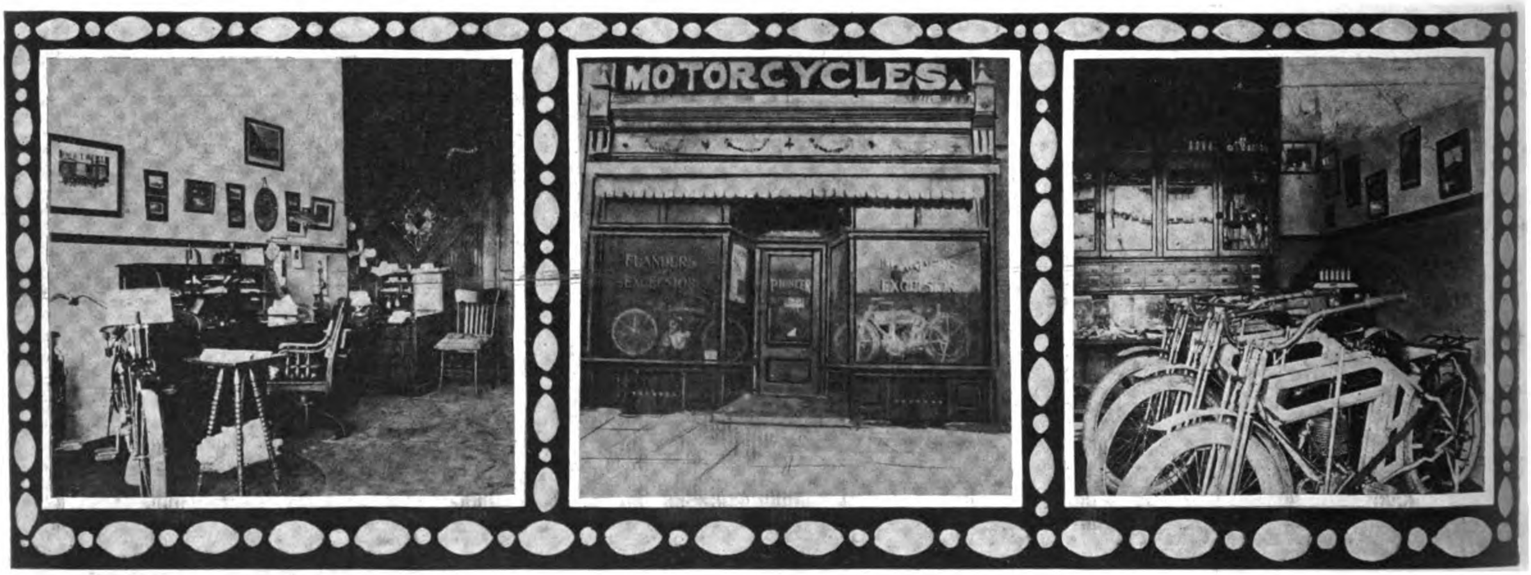
FOR SALE.—Four-cylinder, two-speed Pierce. Just overhauled by factory. Lamp, luggage carrier and metal tool box. Machine and tires first-class. $225.00. Send for photograph. L. G. Meredith, Marietta, Ohio.

FOR SALE.—4 h. p. Curtiss—$65 takes it. Correspondence solicited. L. Darby, Belvidere, Ill.

EMBLEM, 1911 model, magneto, 5 h. p. $135; Excelsior, 1912 model, twin 6 h. p., $160; Indian, 1909 model, 3½ h. p., $85. Other machines from $20 up. Get our catalog. Wolke Motorcycle Co., Louisville, Ky.

FOR SALE.—The largest stock of used machines ever offered. All makes and models. Every one guaranteed. $40 up. Write for list. American Motor Co., 2730 Michigan Ave., Chicago.

MOTORCYCLE DESIGNER and mechanical draftsman, with over three years' experience; good theoretical and shop knowledge open for position. Address "A. K." MOTORCYCLE ILLUSTRATED.



PIONEER HEADQUARTERS.

ONE of the busiest motorcycle establishments in Philadelphia, Pa., is the Pioneer Motorcycle House at 2123 North Broad street, from which Excelsior and Flanders machines are distributed for the Philadelphia district. The Pioneer business was started back in the early days of motorcycling by Charles Krauss, who received his first patrons in a small building at 1406 Oxford street. His trade grew so rapidly that in 1908 he purchased the North Broad street site and brought his equipment up to date. His property extends through a block, so that a rear entrance is afforded for machines, and every arrangement has been made for the comfort of riders.

Krauss held the Indian agency until last year, and in 1908 he took on the Excelsior. Of late he has improved his salesroom facilities and extended his repair shop so that he is prepared to meet all the demands that may be made upon him for some time to come. Krauss states that he expects to dispose of more than 650 machines during 1912, nearly all of which will be retail sales.

MART

RATES One time, three cents a word; twice or oftener, two cents a word per insertion. Dealer's Cards, five cents a word; two or more times, three cents a word each insertion.

FOR SALE—3 Indian diamond frames; price each, $4.00. E. F. Phelps, 4 Bennett St., Bridgeport, Conn

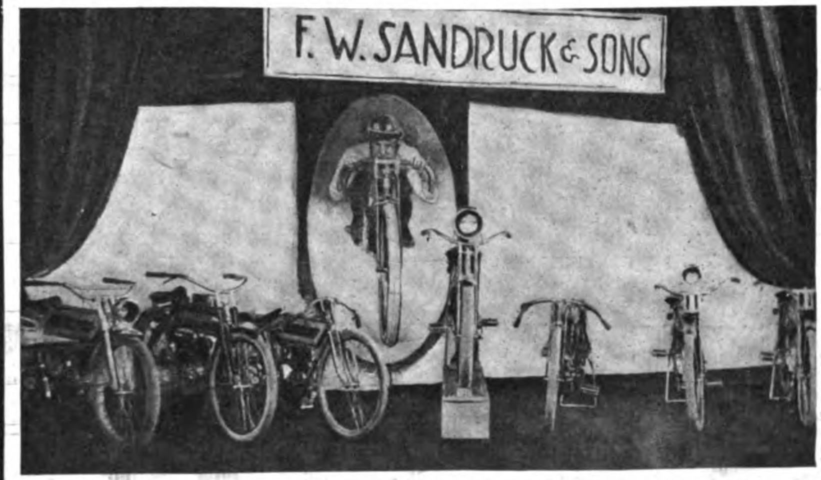
HARRY L. NEFF 106



HARRY NEFF'S NEW STORE.

HARRY NEFF, Indian agent in Pittsburgh, is located centrally at 106-108 Federal street, of which the business men in the district are going to make a "White Way." Neff's place is listed as an F. A. M. repair shop. He announces that he will store tourists machines free of charge.

SANDRUCK'S DISPLAY.

ONE of the most interesting motorcycle exhibits at the Baltmore Show, February 20-28, was that arranged by F. W. Sandruck, agent for Excelsior, Flying Merkel and Emblem machines in his district. He displayed seven machines, including a duplicate of Joe Wolters' racing Excelsior, which, as in Chicago, attracted widespread attention.

Another feature was the Emblem racer on which L. S. Taylor clipped the 100-mile record on the Columbus (Ohio) track. The machines were arranged in a semi-circle, with a decorative panel in the rear showing Joe Wolters in racing form.

JUST OUT

MAY WE SEND IT TO YOU?

THE illustration above is a full-sized reproduction in black and white of the cover of a very interesting twenty-four page booklet just off the press; the title page tells its own story, but we have added a chapter on Lubrication. The text, illustrated by thirty drawings, is printed in black on heavy, coated, India tinted paper with the borders in brown, the whole forming a simple, practical, elementary treatise on the subject, and which should be carefully read and studied by those interested in the conservation of energy by the application of ball bearings to revolving parts.

QUESTIONS AND ANSWERS

(*Continued from page* 41.)

killed" muriatic acid, which is prepared by putting zinc into it until it is "dead," and paint the connection with it. It is then ready or soldering, which should be done with a well-tinned iron. When the tube is soldered nto the union in this way it is certain to make a tight joint. Needless to say, the union should be taken off the tank during the oldering operation, to avoid an explosion.

MISFIRING ON LOW SPEED.

E. H. STANGOR.—Try the mixture, noting at the exhaust valve chamber that he color of the gas is dark blue verging on violet at low speeds. Adjust until you get his color. See that all connections are sound, no leakage at any point and that the magneto s clean. Try the spark at the plug points; it hould be deep blue in color. Are the valves set according to that made at the factory? s there a leak in the inlet pipe or connections? Have you altered the timing of the magneto? Do not set the flat belt up too tight, especially when running slowly or starting off.

SEE THE MANUAL.

ARTHUR YOUNG.—We think our Motorcycle Manual will give you the information you desire.

HOW TO PRONOUNCE IT.

CHARLIE W. DYER—(1) The pronunciation of the word is mo-tor-si-kl, with the accent on the first syllable. Other pronunciations are common, but incorrect.

(2) The make you refer to has run regularly, year in and year out, with not more than the ordinary amount of care, and the workmanship is quite representative of the best American motorcycle practice. Every make of machine has its opponents, but that does not prove that the make in question is poor, expensive to run, etc. As to stating that any machine is always out of order, the statement reflects no credit on the rider, as he is presumably incapable of taking ordinary care of his mount and therefore ought not to ride at all. Usually a "knocker" knows nothing directly about what he is running down, but has got his information from someone else.

(3) Statistics on this matter are best obtained from the makers themselves. Write them.

FOREIGN MACHINE MAKERS.

ED. DUNZWEILER.—Following are the brand names and makers' addresses of principal European motorcycles: Triumph, Triumph Cycle Company, Ltd., Coventry, Eng.; Douglas, Douglas Bros., Kingswood, Bristol, Eng.; Matchless, H. Collier & Sons, Ltd., Herbert road, Plumstead, London, Eng.; Zenith, Zenith Motors, Ltd., Weybridge. Eng.; Rudge, Rudge-Whitworth, Ltd., Coventry, Eng.

German machines are: N. S. U., Neckarsulmer Fahrradwerke, Neckarsulm; Phanomen, Phanomen Fahrradwerke, Gustav Hiller, Zittau; Magnet, Motorenfabrik Magnet, Weissensee, Berlin: Wanderer, Wanderer Fahrradwerke, Reichenbrand (Sachsen). French machines are: Peugeot, les fils de puegeot freres Valentigny (Doubs); Griffon, Griffon, 40, rue Louis Blanc, Courbevoie (Seine) Demeester, Demeester, 22 avenue de la Grande Armee, Paris; Anzani, Anzani, 71½ quai d'Asnieres, Asnieres. Switzerland is represented by the Motosacoche, made by H. & A. Dufaux, Geneva; Austria by the Styria, made by Johann Puch, Graz (Styria).

FRENCH PUBLICATIONS.

JOHN HERIOTT.—The chief French trade publication on the motorcycle is *L'Industrie Vélocepédique et Automobile,* published at 31, boulevard Magenta, Paris. This was founded in 1881 as a bicycle publication. *Le Motocycle,* published at 56, rue Pergolése, Paris, is the only club journal that we know of, it being the official organ of the Motorcycle Club de France. Journals corresponding to those in America and Great Britain are unknown, apparently.

"SHORTY" AND HIS TROPHIES.

THE accompanying photograph shows "Shorty" Matthews, his racing Thor and some of the trophies he carried off during the 1911 season. "Shorty" broke the record for single cylinder machines last year at the Riverview Motordrome in Chicago by making five miles in 4 minutes and 11 seconds, and one mile in 46 seconds, the latter time forcing him to spin the big bowl at the rate of about 80 miles an hour. At the New York State Fair track he turned off five miles in 4 minutes and 46 seconds and one mile in 53⅕ seconds, which is recognized as the fastest time for a single cylinder machine over a dirt course. "Shorty" competed in 137 races and won 81 per cent. of them. He also landed in first place in the Chicago Motorcycle Club's endurance run, being the only contestant to receive 1,000 points.

The Thor company has just completed three new 7 h. racing twins, built on the lines of their little 4 h. racers, and "Shorty" will be seen piloting them.

LONG AND SHORT STROKES.

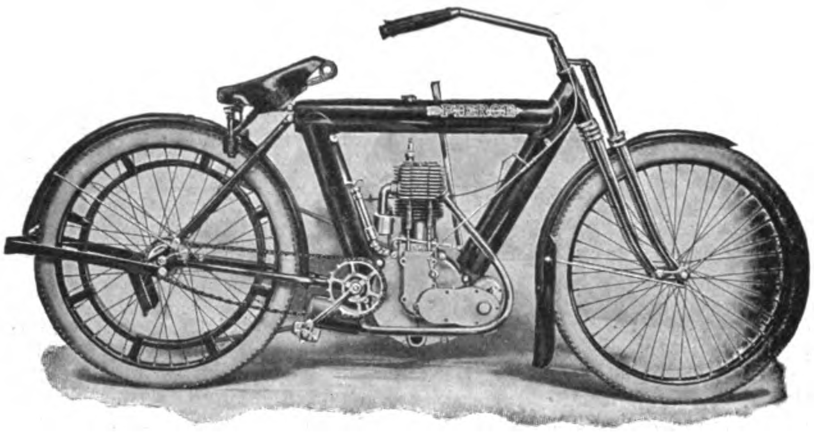
EDITOR, MOTORCYCLE ILLUSTRATED:—I did not mention "revolutions per minute" in my communication on page 51, February 22, for it follows that two motors of the same piston displacement and same compression would turn out the same r. p. m. if the "moment of force" of the two engines were the same.

Of course, if the charge did burn better in the long stroke motor, its "moment of force" would be greater. However, in the tests of 144 engines, by the Horsepower Formula Committee, representing the Incorporated Institution of Automobile Engineers of England, the Royal Automobile Club and the Society of Motor Manufacturers and Traders, it was shown that the larger the bore the higher the mean effective pressure, which proves that between two engines of equal power, the one with the larger bore and the shorter stroke—that is, the short stroke engine—will have a higher mean effective pressure in the cylinder and therefore a higher efficiency. Doesn't this look as if it were doubtful if the charge burned better in the long stroke motor?

Of two motors of same piston displacement, I believe the short stroke motor, if properly designed, could show as high a number of r. p. m. as the long stroke, without "going to pieces;" I think the majority of engineers would back me in this.

HAROLD R. SHOEMAKER.

Syracuse, N. Y.



Durability, Power, Speed, Simplicity, Cleanliness and Symmetry are severally and collectively developed and combined in Pierce motorcycles in the highest degree, assuring the rider the greatest return for his money and the dealer absolutely satisfied customers.

The model shown above is the Pierce Single Cylinder model 12B. This model has a full 5 h. p. four-cycle engine, fitted with roller bearings, mechanical valves, and magneto ignition. Its range of speed is from 5 to 55 miles per hour. The frame is made from 3½" steel tubing strongly reinforced, and will not break or buckle. It also serves as gasoline and oil tank, thus eliminating the necessity of the usual attached tanks, which are hard to keep clean.

The Pierce line for 1912 consists of five models, and no prospective owner should purchase a motorcycle without first writing for our catalog "G," which gives a full description of each.

SPRING FORK. More serious motorcycle accidents have occurred through broken front forks than from any other source of trouble, and faulty design is more common in this important element than in most any other part of the machine. Reading forks are perfect in design as well as in mechanical construction. Compare the springs of the Reading fork with those of any other machines and you will readily appreciate the difference. Instead of using a multiplicity of small springs we use a single load-carrying spring several inches in length, comprising nearly 65 inches of 3/16-inch steel spring wire of the highest possible grade. The rebound spring is correspondingly large, thus insuring an extreme flexibility of action and positive insurance against breaking. Another serious trouble in many spring forks is the rapid wear at the joints of the rocker arms. This is due to the excessive load sometimes carried on this mechanism. On the Reading Standard fork the load is not carried on the rocker arm but on the forward member of the fork, and the rocker arms act only as distance rods to preserve proper relation of the forks, and carry no direct vertical load whatsoever.

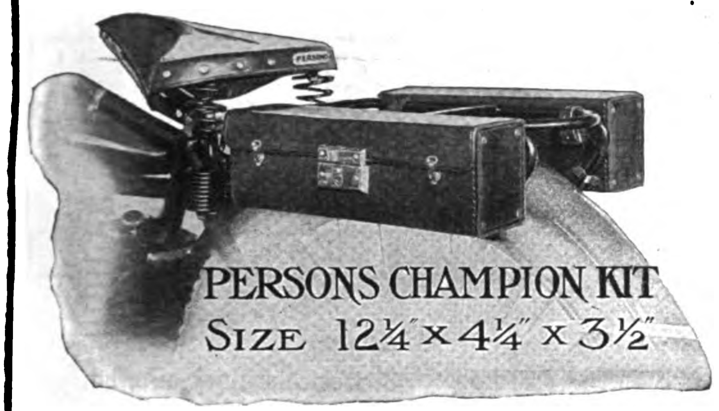
AGENTS AND RIDERS!!

SOMETHING NEW AND USEFUL



PERSONS CHAMPION TOOL KIT

For attachment to side of luggage carrier, top of bags being flush with carrier. Can be supplied singly or in pairs.

Quality

Heavy sole leather of uniform thickness, maroon color. The ends are reinforced for rigidity. All metal work is heavily plated.

Attachments

Suspended from the luggage carrier at two points. In addition there is a steel collar encircling the carrier support; the lock nuts are WITHIN the kit, making malicious detachments practically impossible.

Price

Regular list price is $5.50, but we are in position to offer it through regular motorcycle agents to riders at $4.50 each.

Workmanship

Every detail of construction is carried out in true PERSONS style. The stitching is all hand work, the limit of capacity of the most skilled craftsman being about seventeen kits per day.

The Lock

Pad-locks rattle. The CHAMPION KIT is fitted with a patented flat key lock of Persons design, permanently riveted to the kit. Two keys with each kit.

Deliveries

In spite of the unprecedented volume of our output, orders are being handled promptly, and business direct from all motorcycle agents and distributors will receive immediate attention.

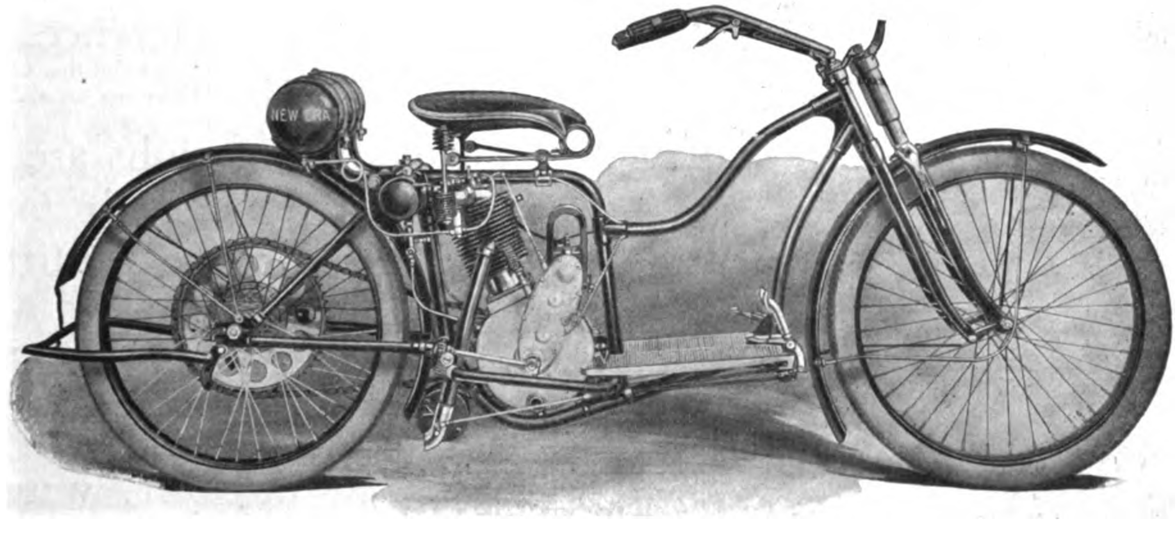
YOU'RE RIGHT! THIS IS THE

NEW ERA

THAT GOES "ANYWHERE UNDER ANY CONDITION"



4 H. P. ROADSTER

As a common sense proposition, when you buy a Motorcycle you want to know six things:

I.	Will it take me where I want to go?	The two speed construction of the NEW ERA will take you anywhere, up any hill or through any sand or gravel.
II.	Will it take me the way I like to go?	The NEW ERA has a range on low from one to fifteen miles and on high from five to fifty-five miles. Guess your speed is in there somewhere, isn't it?
III.	Is it easy to operate?	The NEW ERA is hand cranked like an auto, the two speeds are controlled by foot pedals and its free motor means you can let your engine run while you are standing still. Cinch, isn't it?
IV.	Is it comfortable?	The NEW ERA has compound cushion spring fork, three point suspension form seat, aluminum foot boards, large tires and extra heavy rims. That all goes for comfort, doesn't it?
V.	Is it constructed right?	Each part of the NEW ERA is made of the material which practical experience has proved best for that particular purpose. For the workmanship, don't take our word. Look the machine over.
VI.	Is the price reasonable for what I got?	If you will only look the NEW ERA over carefully we are not afraid of the way you will answer this question.

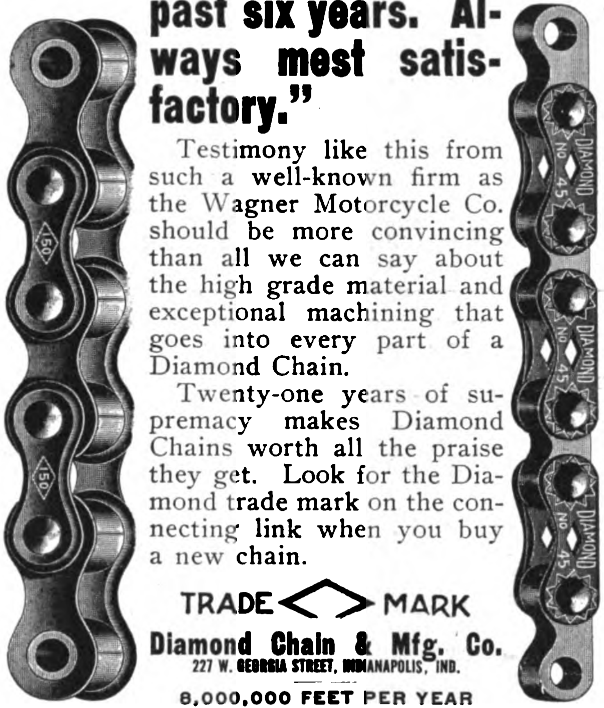
"We have used Diamond Chains exclusively for starting chains on the Wagner Motorcycle for the past six years. Always most satisfactory."



Testimony like this from such a well-known firm as the Wagner Motorcycle Co. should be more convincing than all we can say about the high grade material and exceptional machining that goes into every part of a Diamond Chain.

Twenty-one years of supremacy makes Diamond Chains worth all the praise they get. Look for the Diamond trade mark on the connecting link when you buy a new chain.

MR. DEALER Write for Discount

The tandem is so constructed that the rider's feet move up and down with the body, thus preventing any bending of the knees.

The tandem is made to fit any motorcycle. Will not interfere with the stand. It has no side play, but has an up and down motion of three inches.

The Spankers are the "best ever."

We are the Pioneers in the Spring Attachments and have had them in the market for five years. All others are imitations.

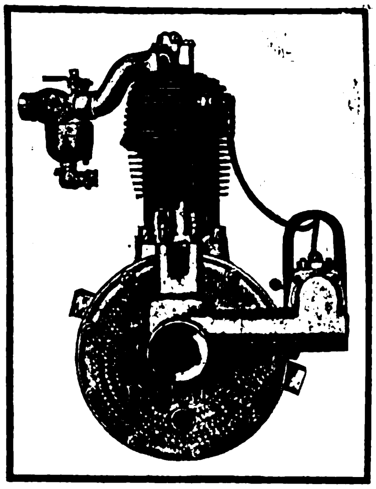
A REVOLUTION IN MOTORCYCLE MOTOR DESIGN



In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

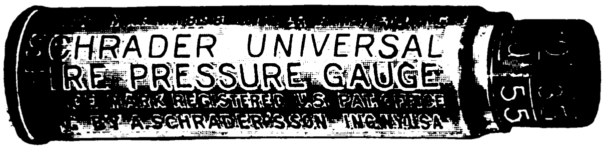
Have You Had Trouble With Your Tires?

A very large percentage of all punctures and blow-outs occur from improper tire inflation.

WOULD YOU PAY $1.00 TO OVERCOME

delays, difficulties and expense resulting from these misfortunes?

Schrader Universal Tire Pressure Gauge



SCHRADER UNIVERSAL
TIRE PRESSURE GAUGE
TRADE MARK REGISTERED U.S. PAT. OFFICE
BY A. SCHRADER'S SON INC. N.Y. U.S.A.

(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

Guaranteed Simple and Absolutely Accurate

Can be obtained from all tire manufacturers, jobbers and dealers, or

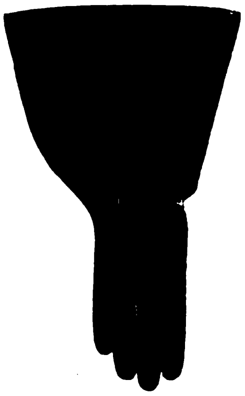
What Handsome Gloves!

—is a compliment often paid those who wear Grinnell Gloves. They are decidedly distinctive with their classy, deep cuffs and correct workmanship.



Style 4920

They fit like dress gloves and are always cool and comfortable because of the *Ventilated Back*. The cuffs are always kept up in place by the patented "Rist-Fit." They wear like iron, because made of real velvet coltskin, are exceedingly soft and flexible and washable in soap and water or gasoline.

What They Sav About Heitger Carbureters

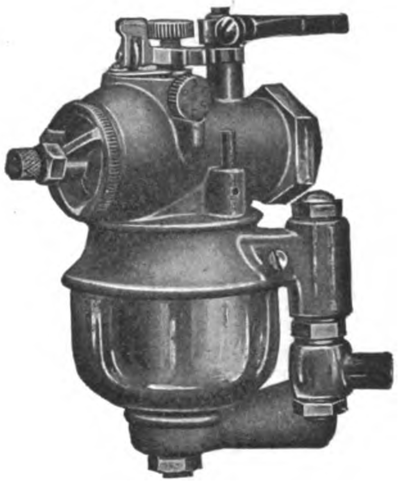
We Have Bushels of Such Letters, Given Voluntarily

DR. G. A. HAWKINS, Jerome, Ariz.—Am well pleased with carbureter for my Indian 7. In fact, it makes motorcycling a pleasure, whereas before (for me) it was hard work.

JOHNSON & VAN KEUREN, Danbury, Conn.—Our customers are delighted with Model G-D. Your carbureter is certainly perfection.

FRED M. GIDDINGS, Galesburg, Ill.—I received the carbureter for my single Excelsior and find it absolutely O. K. in every respect. It is certainly a pleasure for me to say this after the continued trouble with the old carb.

M. A. WESLING, Ludlow, Ky.—I want to say I am well pleased with carbureter bought for my Thor 4, and would have no other. Your guarantee to run motor smoother and with more power is well said. You couldn't give me my old carbureter I was using. Have increased the gear on my machine and it pulls better than with the smaller one used before.



MARSHALL MOTOR CO., Kansas City, Mo.—We wish to state that the Heitger is giving excellent satisfaction on the New Era and Greyhound, handled by us. The high and low speed adjustment and glass bowl are the best on the market.

W. D. POPE, Athens, Ga.—Am well pleased with carbureter on my Marvel.

FRANK LIBBY VALIANT, Angola, N. Y., May 31, '11.—Since last February I have covered 2,000 miles on my sturdy Emblem. This has been during extremes of temperature from 4 degrees below zero to 102 above. So far have not had the slightest trouble with carbureter or machine, and cannot too highly commend its attention to all motorcyclists who are having carbureter troubles. I think the glass bowl splendid, and many motorcyclists who have seen it have commended it very highly.

WALTER SCOTT, JR., Philadelphia, Pa.—Feel delighted; can get 56 miles per hour geared 4 to 1. I weigh 175 pounds. This I consider good.

You see how these people are satisfied. You can get the same satisfaction by using a Heitger; gives 5 to 60 miles per hour, 75 to 125 miles per gallon; is easily adjusted, and remains so; is speedy, reliable and efficient. Glass bowl if you wish, showing gasoline level and float action, strainer, etc. Used by six manufacturers of motorcycles as exclusive equipment. Why? Catalog for the asking.

CLUTCH CONTROLLED FROM THE HANDLEBAR

SPECIFICATIONS

1. Motor, 5 H. P.; cylinder capacity, 498 cubic centimetres; 57 mm., bore; 52½ mm., stroke.
2. Ignition by high-tension, armored magneto with distributor fixed thereon, with which it forms a whole, entirely tight. It is entirely protected against water, dust and mud. The armored magneto first appeared in this country on the F. N.
3. Highly efficient automatic carbureter.
4. Separate gasoline filter.
5. Transmission by bevel pinions (ratio 1:5, 1:4).
6. Improved elastic fork, with counter check spring.
7. One lever for controlling carbureter, fitted on right hand side of handlebar.
8. Height of frame, 20 inches.
9. Wheels, 26 x 2½ inches.
10. Wheel base, 56 inches.
11. Lubrication by pump inside the tank; simple, safe and effective.
12. Free engine by multiple disc clutch, running in oil.
13. Declutching device is controlled by Bowden wire from handlebar—the only machine in the world having this feature.
14. Plugs, short in length, fitted with ebonite, eliminating the possibility of electric discharges when the rider touches the plugs with his knees.
15. Foot rests are regular equipment.

THE NEW

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

RE-ORDERS TELL THE STORY OF EXCELSIOR RELIABILITY

The Detroit Police Department has just purchased 10 more Excelsior Auto-Cycles. They have used Excelsior Auto-Cycles before,—have used other machines before,—and now they are re-ordering Excelsiors. Police service demands reliability and dependability—and that's why Detroit chose the Excelsior. One Chicago officer rode 27,000 miles in 14 months without a single repair. Records of that sort have made the Excelsior famous for reliability in every kind of service.

Reliability is only one of many Excelsior features

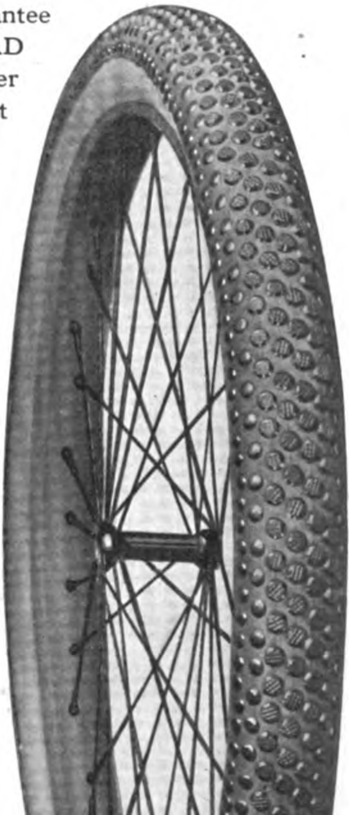
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.50
26 x 2½	6.00	28 x 2½	7.00	29 x 3	8.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. YALE QUALITY

WHAT AND WHERE IT IS

The term "Quality," like Charity, often covers a multitude of sins.

YALE "QUALITY" IS NOT OF THE CHARITY TYPE

It is the DOMINANT FEATURE of YALE construction and is the natural result of DIRECT PRODUCTION and UNIT MANAGEMENT.

YALE Motorcycles are built from the raw material to the finished product in our own plant and there is no shifting of responsibility between maker and user.

Every part, large or small, is inspected by men who are in no way responsible for productive cost, but are held rigidly to account for any flaw or imperfection that may get into the finished machine.

This is the one system that assures mechanical perfection, such as found in every YALE Motorcycle, and has built up the reputation of YALE Quality.

Our catalogue tells the story in detail. Write for it today, then

DENVER MAN RIDES 6000 MILES

EMPIRE TIRE Co., 1305 Michigan Avenue, Chicago, Ill. FEBRUARY 19, 1912.

GENTLEMEN:

Just a few lines to thank you for being directly responsible for the successful trip I made from Denver, Colo., to Boston, Mass., via Buffalo, Springfield, Hartford and Providence, and return to Denver.

When I left Denver on this trip my machine was equipped with ———— tires, and upon reaching Chicago they were entirely worn out, and I congratulate myself that I happened to stumble into your place of business in Chicago, where your Mr. McKay succeeded in convincing me that Empire Tires would carry me through on this trip.

I found them everything he represented. I made the complete trip, getting back to Denver with the same air in the front tire with which I left Chicago. The rear tire sustained several punctures, which, of course, were unavoidable.

Considering I traveled over every known kind of road imaginable, I consider Empire tires are positively the best tires made, and I have used all makes.

Wishing you every success, I am,

Yours very truly, GEORGE LYBY, 3336 Elliott Street, Denver, Colo.

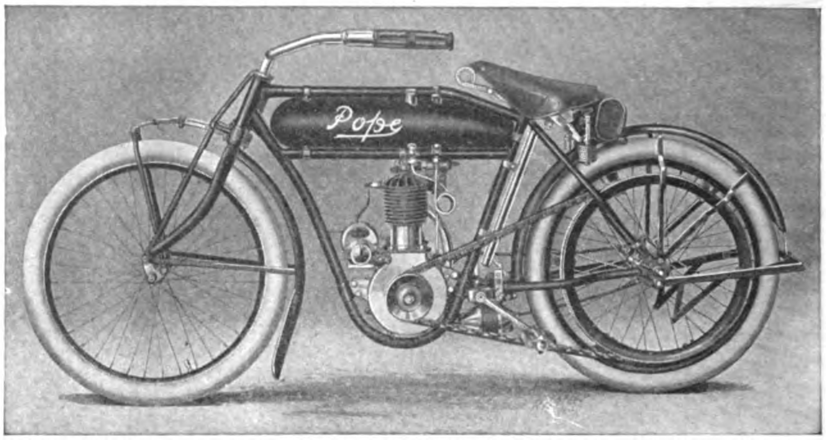
A Machine That is Made Right

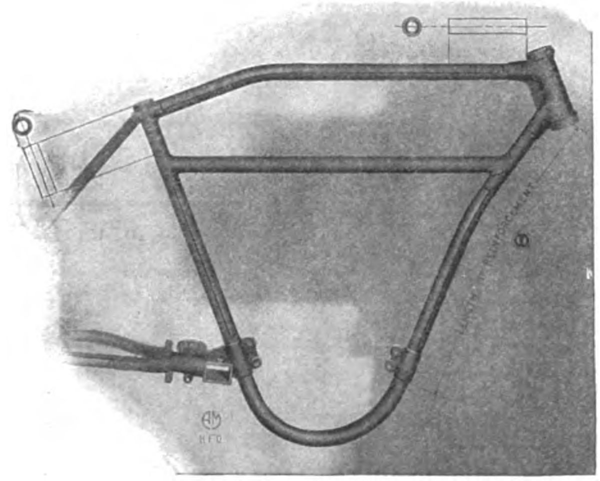
Pope Motorcycle

With Imported Magneto

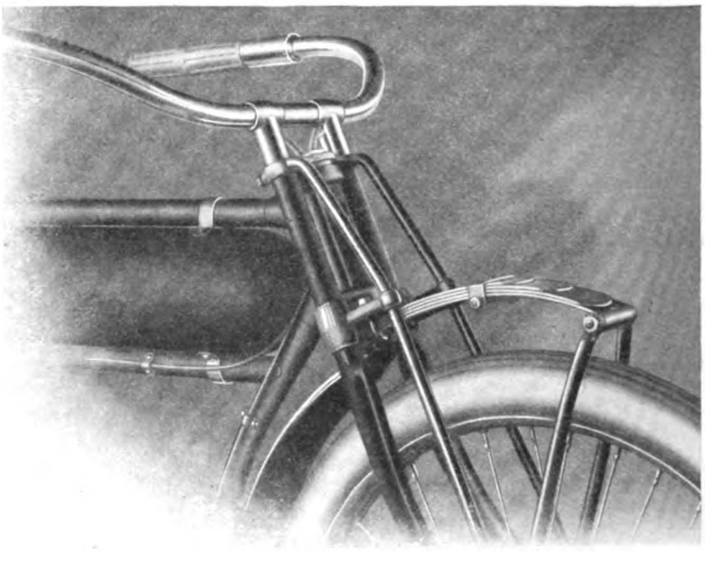
$165



Two Important Features of Pope Construction



The Pope Frame is light, strong and rigid. It is of the double tube-loop type made of the finest heavy gauge seamless steel tubing. All connections are ***drop forgings*** and all joints are strengthened by long fish-tail reinforcements. The loop is reinforced from the frame head to the motor connection by two "D" shaped tubes set back to back and driven into place so as to form a girder plate construction of great strength.



The Pope Spring Fork is of the leaf spring type. Road shocks are transferred through rocker plates and connecting rods to a resilient four-leaf high-grade steel spring, where they are completely absorbed. Efficient spring fork action helps to make the Pope a most comfortable and smooth riding motorcycle.

¶ The R-S is built along the lines which experience has shown to be the best. Yet it is different, in that it combines symmetry with strength; sturdiness with speed; ingenuity with simplicity. To these features can be attributed its many victories on the road and the track.

¶ Note its long, lean lines, every curve of which tends to give that forward impulse so necessary in the ideal motorcycle. Safety, convenience, cleanliness and comfort are insured by double brakes, footrests, an inimitable spring fork, double lubrication, protected Bosch magneto; a powerful, long stroke motor with imported ball bearings, mechanical intake valves and integral cams and gears. The R-S combines all the virtues of other machines in a concrete form, with several radical improvements and a total absence of faults.

Skeptics are our delight. All we want is a chance to prove it to you. Our catalog is yours for the asking.

SPARTAN

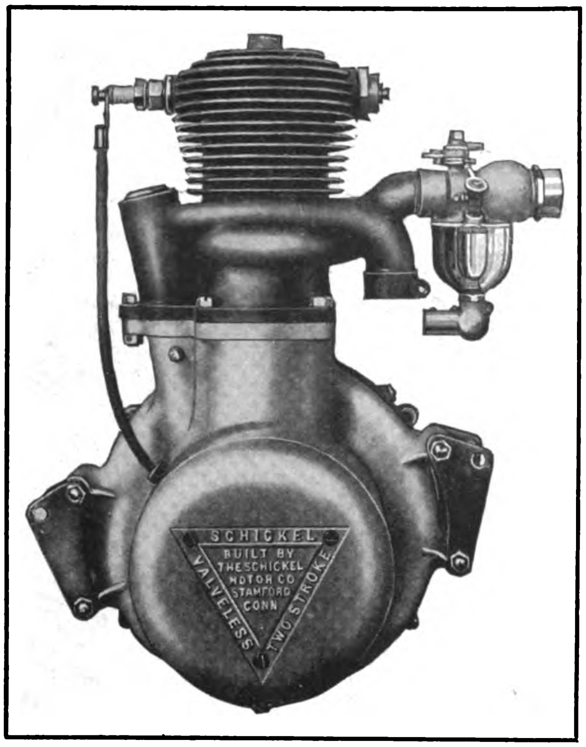
MOTORCYCLE TALKS

No. 1

(Note: This is the first instalment of the series of talks to appear in this paper dealing with those practical features that you should look for in the machine that you require for everyday service.)



The Motor

The motorcycle, like its big brother, the automobile, has its heart in the motor. It is then highly important that you insist that your new mount has a stout heart and carries a motor that best satisfies all requirements. The engine in the motor car is well protected. It is under the hood and therefore out of sight. In face of this we find the designers of automobiles laboring harder than ever before to build a motor with as few working parts as possible.

It is their aim to completely enclose these few parts to secure silent running. By placing these moving parts within the engine, the chance for wear is minimized, as dust and grime from the road is kept from the small working surfaces. With the exterior of the engine free of all mechanism and the surface left smooth, these eminent designers, who have been laboring for years and years, hope to produce an engine in which there will be but little chance for wear; which will be nearly silent, free from the accumulation of oil and grit and neat and graceful but businesslike in appearance. Remember that this engine is even now completely covered, protected and out of sight. The average passerby never sees this engine and the owner himself sees it only when doing work on it. For one moment guess what one of these hard-working, energy-multiplied, brainy engineers would say if you showed him the average motorcycle engine. Do you suppose that after all his vast experience in designing and building motor units for general utility he would overlook the following points: The motorcycle engine is necessarily exposed to every contingency and is at all times exposed to the gaze of every passerby—the owner rides immediately over it and comes in direct contact with it frequently—one must not expect the average rider to be an engineer or even of a mechanical turn of mind. This will undoubtedly be your opinion and this eminent designer would agree with you heartily—First, the motorcycle engine should be built as ruggedly as possible. The fewer the moving parts the better. These few should have large wearing surfaces, well oiled and completely enclosed. The exterior surface should be free from oil and made easy to keep clean—Second, the motor should be neat in appearance and have graceful lines.

The Schickel Motor Company has made an engine to order for you and we submit the cut shown above for your consideration. In the next issue of this paper we will take the motor apart. We will carefully consider the make-up of the three moving parts constituting the entire mechanism of this engine. In the meantime should you desire to know all about our motorcycle, just write us and you will receive the information in the next mail.

CUT ACROSS THIS LINE

The one Big fact about tires

When you select tire equipment for your motorcycle there is one dominating fact you should bear in mind

It is absolutely impossible for you to get more out of a tire than the manufacturer puts into it.

The more strong points incorporated in a tire the more it is certain to give you service.

United States Tires

The Strongest Motorcycle Tires in the World

combine all the strong points that made both G & J and Morgan & Wright tires world-famous.

Tires made as these tires are made are bound to possess extra service-yielding qualities.

If you are ordering a new machine specify United States Tires. They cost no more than other kinds.

Why not try them?

WOULD PROHIBIT RACING

Bill With That End In View Introduced In The New York State Legislature Last Week—Opposed By Representatives of the F. A. M. and Various Automobile Associations—Prompt Action Imperative.

ACTION was taken last week by the chairman of the F. A. M. National Committee on Legal Action, through Lawyer Charles Thaddeus Terry, of New York, to prevent the passage of what is known as the McManus Motor Vehicle Racing Bill. This bill, introduced by Senator McManus, prohibits automobile and motorcycle road tests and racing except on private tracks or courses to which the public is not charged admission. In sum and substance, the bill is designed to practically put an end to automobile and motorcycle racing in New York State. Incidentally, it is only one of several pieces of prospective legislation which, affecting the rights and interests of motorists, have appeared in the Empire State legislature during the last two or three weeks. The McManus anti-racing bill, however, is by far the most radical of the motor measures introduced at this session, and it has come in for some vigorous opposition on the part of automobile owners, dealers, manufacturers and associations. As the bill aims at motorcycle competition to the same extent that it affects automobile road and track racing, the chairman of the Legal Action Committee of the Federation of American Motorcyclists promptly took action to the end of having the interests of the sport in New York State properly represented at the hearing in Albany last week.

The hearing took place before the Senate Committee on Codes, on Tuesday, March 12, Senator Stilwell presiding. Mr. Terry argued at length in opposition to the bill, and presented a brief setting forth a number of arguments showing that there was no call or necessity for such legislation; that it was unreasonable, harsh and drastic, as well as discriminatory in that it prohibited the racing of automobiles and motorcycles, while it permitted the continuance of motor boat contests, horse-racing, etc. Mr. Terry showed that the automobile associations and Federation of American Motorcyclists were regulating competition on road and track, particularly with a view to making motor racing as safe as possible. He also showed that this sort of competition greatly benefited manufacturers in that it enabled them to severely test their products. Finally, he argued that the sport is clean, healthy and attractive and should not be hampered by such unnecessary legislative restrictions.

No action has since been taken on the bill, but it may be reported at any time. As the two houses of the New York legislature went into Committee on Rules on the 19th and reach final adjournment on the 29th, Mr. Terry has advised the Legal Action Committee's chairman that it is of the utmost importance that many communications by letter and telegram go forward to the senators and assemblymen of the State, protesting against the passage of the McManus Motor Vehicle Racing Bill, during the next two or three days. To that end, manufacturers, dealers, clubs and individual members of the F. A. M. and other riders who are interested in motorcycle racing in New York State, are specially requested to send telegrams or letters to the senators and assemblymen in their respective districts, urging them to do all in their power to prevent the passage of this unreasonable and unnecessary bill.

For the guidance of those who live in Greater New York, a list is given below of the names and respective districts of the senators and assemblymen in Manhattan, Brooklyn and the Bronx. It is important, however, that not only the motorcyclists of New York City, but also dealers and riders in other parts of the State, get immediately in touch with their legislative representatives and bring every possible influence to bear to prevent a favorable vote, should the bill be reported, as it may be at almost any moment.

Senators—District 3, Thomas H. Cullen, 256 President street, Brooklyn, N. Y.; district 4, Loring M. Black, Jr., 376 McDonough street, Brooklyn, N. Y.; district 5, Barth. S. Cronin, 573 Clinton street, Brooklyn, N. Y.; district 6, Eugene M. Travis, 436 Grand avenue, Brooklyn, N. Y.; district 7, Thomas C. Harden, 161 Metropolitan avenue, Brooklyn, N. Y.; district 8, Thomas F. Duhamel, 202 Bay 28th street, Brooklyn, N. Y.; district 9, Felix J. Sanner, 58 Breman street, Brooklyn, N. Y.; district 10, James H. O'Brien, 21 Sheperd avenue, Brooklyn, N. Y.; district 11, Christopher D. Sullivan, 277 Broadway, New York City; district 12, Timothy D. Sullivan, 214 East 11th street, New York City; district 13, James D. McClelland, 43 Barrow street, New York City; district 15, Thomas J. McManus, 452 West 49th street, New York City; district 16, Robert F. Wagner, 1297 Lexington avenue, New York City; district 17, John Godfrey Saxe, 44 West 45th street, New York City; district 18, Henry W. Pollock, 309 Broadway, New York City; district 19, Josiah T. Newcomb, 27 William street, New

York City; district 20, James J. Frawley, 51 East 96th street, New York City; district 21, Stephen J. Stilwell, 3311 Olinville avenue, New York City; district 22, Anthony J. Griffin, 891 Cauldwell avenue, Bronx, New York City.

Assemblymen (Kings County)—District 1, Daniel V. Barnes, 24 Schermerhorn street, Brooklyn, N. Y.; district 2, William J. Gillen, 12 Vanderbilt avenue, Brooklyn, N. Y.; district 3, Michael A. O'Neil, 12 Duqueer street, Brooklyn, N. Y.; district 4, George Langhorst, 133 Rutledge street, Brooklyn, N. Y.; district 5, Abraham F. Lent, 960 Jefferson avenue, Brooklyn, N. Y.; district 6, George Heiberger, 451 Willoughby avenue, Brooklyn, N. Y.; district 7, Daniel F. Farrell, 378 17th street, Brooklyn, N. Y.; district 8, John J. McKeon, 413 Smith street, Brooklyn, N. Y.; district 9, Albert H. T. Banzhaf, 75 82d street, Brooklyn, N. Y.; district 10, Fred M. Abern, 425 Sterling place, Brooklyn, N. Y.; district 11, William W. Colne, 11 Irving place, Brooklyn, N. Y.; district 12, Frederick W. Singleton, 506 8th avenue, Brooklyn, N. Y.; district 13, Charles Schmitt, 9 Judge street, Brooklyn, N. Y.; district 14, Thomas J. Garvey, 78 Nassau street, Brooklyn, N. Schector, 445 East 140th street, New York City; district 33, William B. Ruddick, 627 Eagle avenue, New York City; district 34, Charles I. Fleck, 1788 Bathgate avenue, New York City; district 35, John Yule, 943 Grant avenue, New York City.

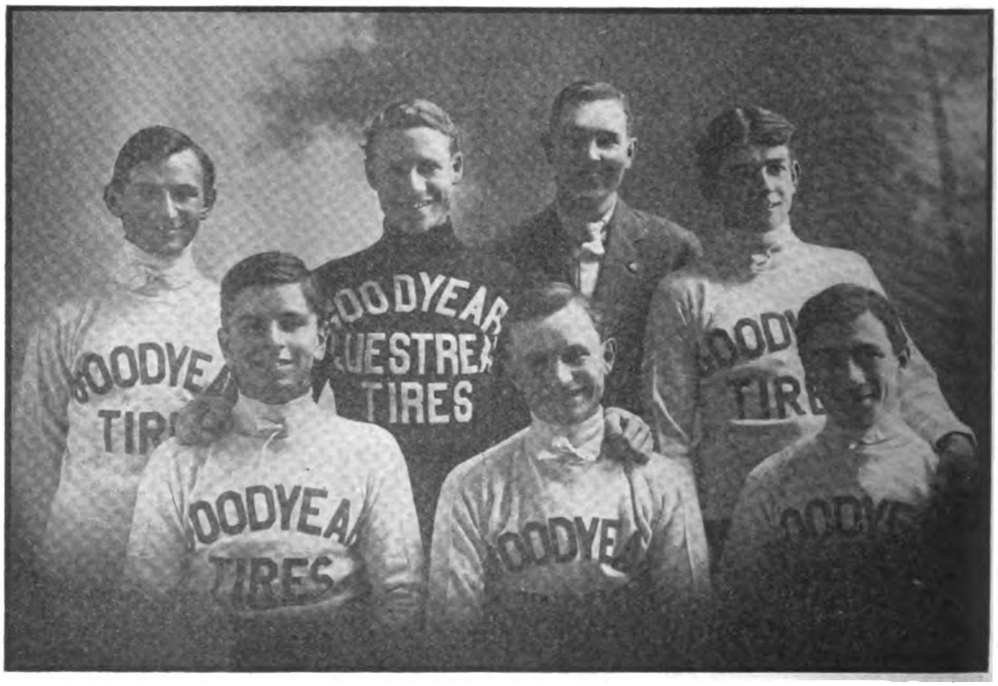
PATENT DECISION

Just Handed Down by Supreme Court Seems to Weaken Coaster Brake Case.

ALTHOUGH the Federal authorities claim to think differently, there seems to be no question that the patent rights decision handed down by the United States Supreme Court last week will seriously affect the Government's plans for prosecuting the so-called coaster brake combine. Insofar as the coaster brake manufacturers are concerned, the decision is most opportune, and adds materially to the strength of the defendants' case.

In the case decided by the Supreme Court a firm owning the rotary mimeograph, a form of stencil duplicating machine, sold with the restriction that it must be operated with supplies, paper, ink, etc., manufactured by the patent owners, brought suit for contributory infringement against a dealer who sold ink used in the stenciling to the purchaser. Four Justices in a majority opinion held that there was "no difference in principle between a sale subject to specific restrictions of the time, place, or purpose of use (which are undoubtedly valid) and restrictions requiring a use only with other things necessary to the use of the patented article, purchased from the patentee."

The gist of the decision is to the effect that a patent implies a monopoly for the inventor, whose control over the patented article is absolute



GOODYEAR BOWLERS DOING WELL ON LOS ANGELES ALLEYS.

SAN FRANCISCO, CAL.—While in Los Angeles, J. S. Tormey formed a Goodyear Tire bowling team to compete in the International Bowlers' Congress. Bowling has become very popular with the motorcycle men in Los Angeles and the Goodyear and Indian teams have been doing some very capable work. The accompanying picture shows the Goodyear team. The young men that compose it are all enthusiastic bowlers, and they had the highest standing among the teams at latest reports.

CLEVELAND CLUB'S HAT IS IN THE RING

Motorcyclists of "The Sixth City" Make Formal Bid for 1912 Convention of the F. A. M. and Submit Circular Outlining Their Proposition to the Federation Directors.

WITHIN the last week the motorcyclists of Cleveland, Ohio, have brought to a head a well-defined movement to obtain the next national assembly of the F. A. M. for their city, and the project is being boomed in a manner calculated to impress the Federation officials. Copies of a circular embodying the claims of the Cleveland club have been sent to the directors of the F. A. M. stating, among other pledges, that not less than $5,000 will be raised for the entertainment of delegates and visiting riders if the next convention is staged in the Sixth City.

The circular calls attention to Cleveland's well-paved streets and to the fact that every main road leading out of the city is in excellent condition. It points out that the city may be reached by twelve trunk railroads, that it is the center of a fine system of interurban lines and that its hotel accommodations are of the best. The club agrees to have guide posts placed on all roads within a radius of twenty-five miles of the city for the benefit of motorcyclists who participate in the big tours to the convention, and also to provide space for free checking of the machines of F. A. M. members during the week of the assembly. It is announced that an up-to-date board saucer will be erected for the racing features and that an elaborate social program will be arranged; in fact, the Clevelandites are prepared "to go the limit" if they are encouraged in their plans by the Federation executives.

The announcement of the Cleveland boomers that "their hats are in the ring" comes as something of a surprise, for it has been taken for granted up to this time that the motorcyclists of Columbus just about clinched their claims to the big assembly during the week of the Chicago show. They waged such a spirited campaign that when they finally headed homeward again it was with the conviction that Columbus would entertain the F. A. M. and its friends for the 1912 session. How far they were justified in this belief will not be determined until the directors of the national body cast their votes for the next convention city, but that Columbus is bound to set a merry pace for Cleveland and any other competitor in the assembly race goes without saying. The Columbus club has the advantage of a lively campaigning organization which has been in full swing for months past, but this does not appear to have dampened the enthusiasm of the Cleveland optimists who assert that they will do big things in record time if the outlook seems to warrant it.

The circular which is being forwarded by the Clevelandites suggests that the convention be held between July 4 and July 20, as between these dates there are no other big assemblies scheduled for their city. Besides, the parks and amusement places in the vicinity will then be at their best and most satisfactory arrangements can be made for side trips. It is stated that Cleveland has 1,800 acres of parks and 50 acres of inland lakes. Three of the city's twelve parks are on the shore of Lake Erie. The board track referred to is to be erected at Luna Park, passed by five trolley lines, and within fifteen minutes' ride of the heart of the city. The seating capacity of the proposed track is to be 10,000 and its cost has been estimated at $20,000.

Cleveland now has 1,050 motorcyclists and the ranks are being increased rapidly, so that the present movement does not lack supporters. In addition, merchants and civic bodies of the city have pledged their co-operation in the effort to land the convention, and it begins to look as if the Columbus club will be called upon to "scratch gravel" most industriously if it is to maintain the lead it secured by its early appearance as a bidder for the convention. It is impossible to state definitely at this time when the F. A. M. directors will vote upon the selection of the assembly city, but it is taken for granted that their choice will rest between Columbus and Cleveland. Chicago was a pretender some time ago, but the Windy City riders appear to have withdrawn from the present contest, possibly with a view of entertaining the F. A. M. in 1913.

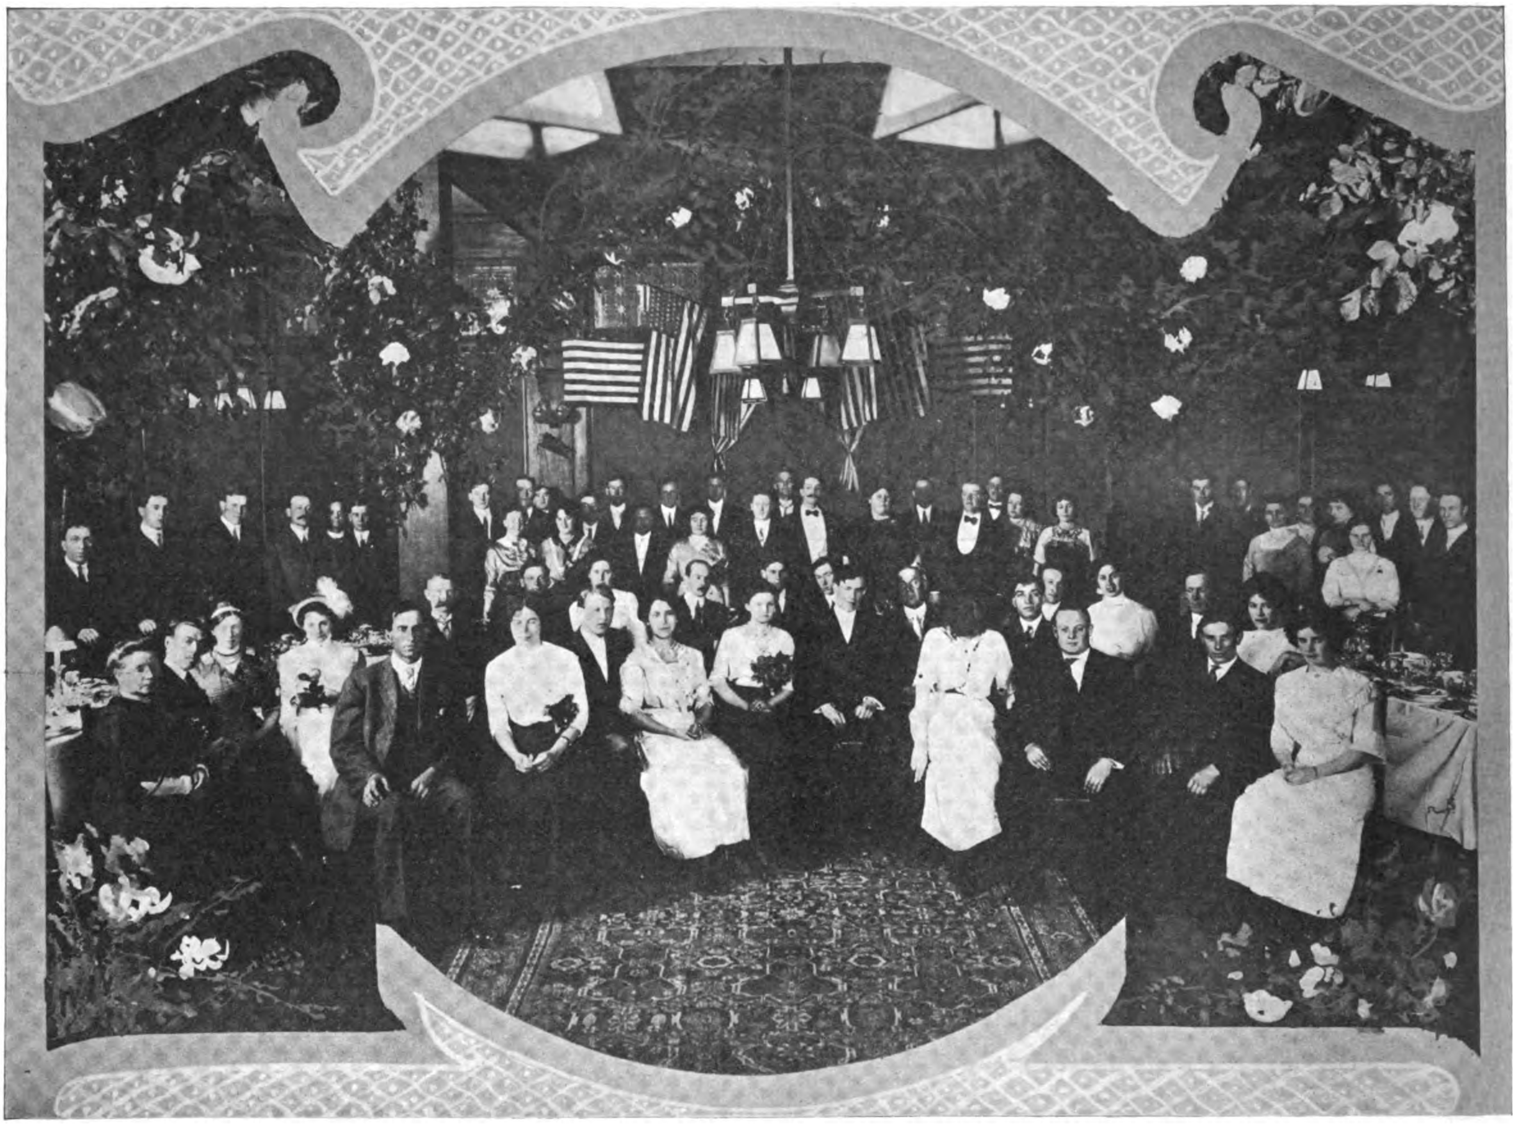
Arthur Davidson, Sales Manager of the Harley-Davidson Motor Company, at His Desk in the Milwaukee Factory.

DE ROSIER HURT

Limb Fractured in Two Places and Body and Head Bruised by Fall on Stadium Track.

LOS ANGELES.—Jake DeRosier is lying in a local hospital with his left leg fractured at the thigh and kneecap, his body bruised and his head badly lacerated, as a result of a smash-up on the Stadium track, Sunday, March 10. The accident was caused by Balke's losing control of his machine, which fell directly in front of DeRosier. Although his injuries are not likely to incapacitate him permanently, the French-American will not be seen on the track again for several months.

Peter Young is now sole owner of the Stadium, Jack Prince having sold out his interest in the track to take up other contracts.



Members and Friends of Oakland (Cal.) Club at Recent Annual Banquet.

RACES AT BENNINGS

National Capital M. C. Will Treat Washington Fans to Fine Opening Program of Speed Events.

TENTATIVE plans have been mapped out for a race meet to be held on the Bennings track at Washington, D. C., on Memorial Day, and the National Capital M. C., under whose management the events will be staged looks forward to a highly satisfactory program. It is the intention to have seven races, the last two for automobiles. It is stated that the club will provide prizes of such value that there will be marked inducements for local riders to compete, and to this end a generous sum has been set aside. The National Capital club has gained ground rapidly since its reorganization several months ago, and there are now about 100 riders on its roll. Papers of incorporation will be filed by the club at an early date.

The following "live wire" committee is directing plans for the Memorial Day meet: President F. D. Yowell, T. O. Wansleben, Charles H. Cross, J. S. Berryman, Samuel McPherson, W. F. Throop, W. E. Anderson, John Guntow, E. M. Dodson, S. B. Eaton, H. B. Cohen, George W. Beall, Harry Foulds, Paul A. Draper and T. N. Mudd, Jr.

ELMIRANS PLAN MEETS

Will Co-operate with Baseball Club and Give Speed Programs on Memorial Day, July 4, and Labor Day.

ELMIRA, N. Y.—At least two race meets will be held by the Elmira Motorcycle Club this summer. The success of last year's race meet, at which quite a sum was added to the treasury, has spurred the members on to greater things this year. The club has increased its membership, and everything is booming. A conference between a committee of the club and officials of the local State League Baseball Association will be held in the near future, at which time a proposition to hold a race meet will be submitted to the motorcyclists by the baseball officials.

The officials of the baseball club have no desire to conflict with the race meets, and the motorcyclists feel the same way in regard to the baseball schedule. At the proposed conference a plan whereby both parties will be satisfied will be taken up, and a definite understanding reached. The local club hopes to promote races on Decoration Day, the Fourth of July, and Labor Day.

On Friday last the members of the local club held an informal supper and social evening at their rooms on West Water street.

TO BUILD BIG BOWLS

Motordrome Company of America Has Been Formed to Take Up Saucer Construction on a Large Scale.

SUBSTANTIAL proof that the present board track boom which is sweeping the country is not a mere flash in the pan, so to speak, is embodied in the announcement that the Motordrome Company of America, with offices at 540 West 31st street, New York City, has been organized to take up speed bowl construction on a broad and systematic scale. The company has started work on a saucer at Philadelphia, which is to be turned over to the management in 21 working days, and it is stated that plans are complete for the erection of a new track in Cleveland, Ohio. Some idea of the company's scope will be gained from the declaration that it is prepared to handle the construction of ten saucers simultaneously, should the necessity for such extensive operations develop.

Included among the incorporators of the new company are Arthur Jarvis and J. B. Ritchey, of the Coaster Company, of Chicago, and George I. Kreamer, of Los Angeles, the latter having long been identified with track affairs in the West. Of late Mr. Kreamer has submitted propositions to several clubs and companies that contemplate erecting tracks, and he became convinced finally that the organization of a motordrome company of national scope was warranted.

Referring to the Philadelphia and Cleveland tracks Mr. Kreamer states that the banking problem is being worked out on a mathematical basis so that the precise degree of incline necessary to permit of a specified speed may be determined before a nail is driven in the structures. In this way it is possible to guarantee the speed expected by the track managers. An improvement is also being effected in the construction of the approach to the saucer proper from the running board. Instead of having the track banking rise abruptly from the running board the new bowls will have a gradually curved approach extending entirely around the circuit. This feature will allow the riders to work up on the track automatically as their speed increases, instead of having to make a risky "jump" from the flat running board to the banking.

It is announced that the Cleveland contract calls for the completion of the saucer in that city on May 10 in order that the opening events may be staged on May 15.

PREPARING FOR BIG TOUR.

WICHITA, Kansas.—The Short Grass M. C., an organization of western Kansas motorcyclists, is making plans for its annual Rocky Mountain tour. Two hundred riders are expected to make the trip this year. They will start from Dodge City late in August, will be in Cheyenne, Wyoming on Frontier day, will attend races in Denver, Colorado, and in Pueblo, and will furnish races for Melon day at Rocky Ford, Colorado.

CLEVELAND AGENCIES.

The Casino Cycle & Supply Company is expecting at any time its first consignment of Excelsiors. Manager Zucker has many orders for these machines. The firm also handles Thor and New Era machines, which have proven quite popular with the Clevelanders.

W. R. Spear, of the Reading Standard Motorcycle Co., was in Cleveland recently and closed a deal with the Kumler Brothers for a number of Readings, for which there is a rapidly growing demand.

Practising for Those Board Tracks.

WITCHITA DOINGS.

WICHITA, Kansas.—Prizes have been anounced for winners of the first spring endurance run to be held this year by the Wichita Motorcycle Club Managers of the run have as yet been unable to announce the date on account of impassable roads, but they now believe they can put on their first 1912 endurance test about April 1.

The route includes two trips to Newton, Kans., and return, and three trips to Augusta, Kans., and return, a total distance of approximately 200 miles. A twenty mile schedule has been arranged, and secret controls will be established to govern the riders. It will not be a race in any sense of the word.

Riders will be divided into three classes: professionals, trade riders and private owners. A silver loving cup will be given to the winner of each class. Every man riding the course with a perfect score will be presented with a medal.

The Wichita club is conducting a membership campaign. Two teams of eighteen members each have been appointed and are carrying on a membership contest. The team losing the contest, which will close April 3, will serve the new members and other old members of the club with a banquet.

AGAINST OPEN MUFFLER

New York Board of Aldermen to Pass Ordinance Prohibiting Use of the Cut-Out.

THE ordinance recently introduced by Alderman John J. Boschen, to prohibit the use of the muffler cut-out in New York City, was reported from the Committee on Laws and Legislation at Tuesday's meeting of the Board of Aldermen. It is expected that the Board at a subsequent meeting, probably next week, will pass the ordinance. The measure provides that a violation of the ordinance is to be punishable by a fine of $10.

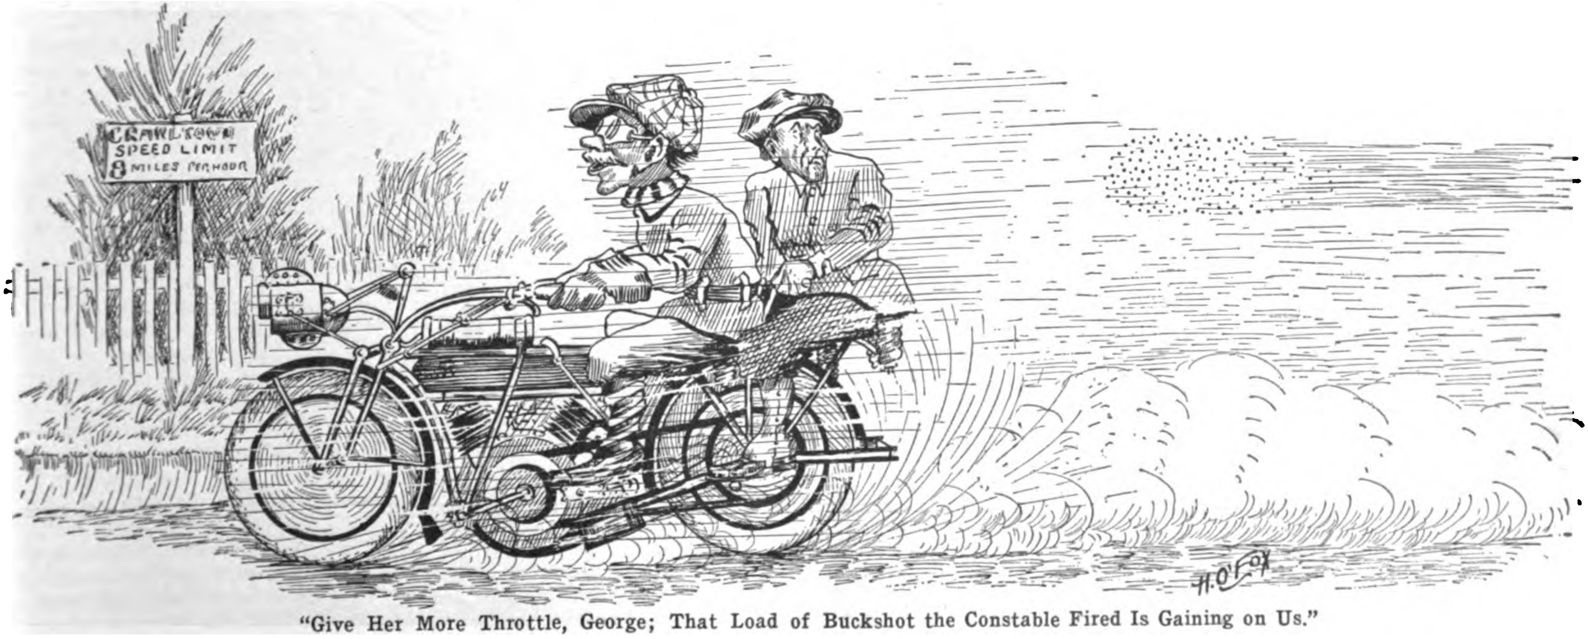
Public interest in an ordinance of this type is marked, because the noise made by motorists in employing the cut-out is generally believed to be unnecessary. Not long ago Prof. F. R. Hutton, chairman of the technical committee of the Automobile Club of America, said so. Furthermore, with a view to demonstrating that a motor equipped with a properly designed muffler will develop its maximum power without the use of a cut-out, tests were run on a dynamometer by Joseph Tracy Tuesday, at his laboratory in Rutherford, N. J.

Horse-power readings were taken at engine speeds varying from 200 to 2,000 revolutions a minute, with the muffler connected, and later with the cut-out open. The results seem to show definitely that the cut-out is not a necessity. Among the readings taken were the following:

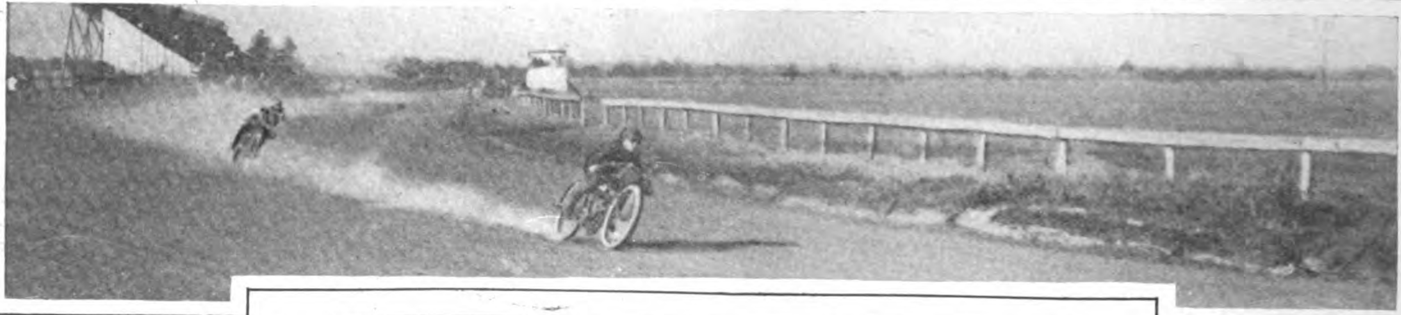
R. P. M.	H. P. (Cut-out closed).	H. P. (Cut-out open).	Car speed. Miles an hour.
300	13.5	13.625	10
900	38.5	38.5	30
1000	43.	41.75	33
1800	47.5	48.	60

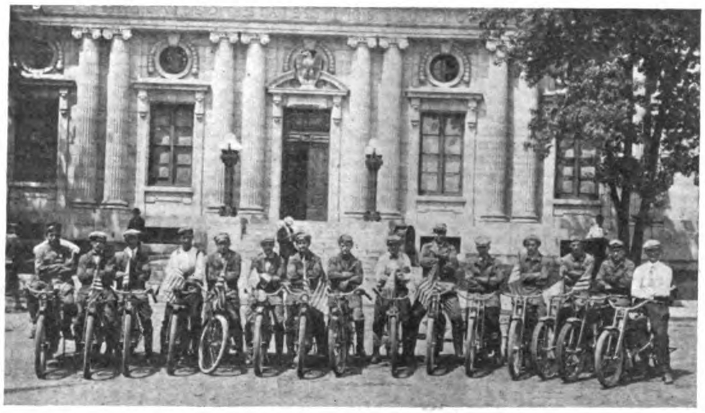
It is worthy of notice that the difference where there was any advantage in favor of the use of the cut-out, was small and that at a car speed of thirty miles an hour, the readings were identical. At 1,000 revolutions a minute, the findings favor the closed muffler.

TWELVE motorcycles have just been added to the equipment of the Department of Public Safety at Pittsburgh, Pa.



"Give Her More Throttle, George; That Load of Buckshot the Constable Fired Is Gaining on Us."





KENOSHA'S LIVE ONES

Wisconsin Squad Set a Hot Pace Last Season and Will Maintain It During 1912.

THAT motorcyclists of Kenosha, Wis., know how to make the most of their opportunities is evident from the accompanying photographs, which show club riders in two track events and a squad of the members prepared for a road trip. On a ratio of membership the Kenosha squad is one of the most active in the country, and the plans already laid for 1912 lead to the conclusion that its officials will live up to their past record. The club was affiliated with the F. A. M. on July 4, 1911, on a 100 per cent. basis.

The photograph at the top shows Otto Kuball, on a 7 Indian, winning the ten-mile race for the championship of Racine, Kenosha and Waukegan counties, which was one of the club's speed features of last season. Kuball went over the route in 10 minutes and 21 seconds—very creditable time for a dirt track performance. The other racing photo depicts the start of a race for machines of the 30.50 class, which was won by William Hamilton, of Kenosha, on his Indian 4.

WHISTLES IN CHICAGO.

THE City Council of Chicago has adopted an ordinance amending Chapter 79 of the Code of 1911, regulating the operation and equipment of automobiles and motorcycles. By reason of the amendment, it is now lawful to use whistles and horns as warning signals on the streets of Chicago; in fact, Section 2728-D of the Code as amended, makes it compulsory to use a warning device that will "produce an abrupt sound sufficiently loud to serve as an adequate warning of danger." It is also provided that it shall be unlawful for any person operating an automobile or a motorcycle "to make or cause to be made any unnecessary noise with any such bell, horn or other signal device, or to use the same except as a warning of danger."

WASHINGTON TRACK TEAM

Speedsters of the Capital City Will Figure in Races in Their Vicinity Throughout Coming Season.

HAVING been listed with the F. A. M. as a one hundred per cent. organization the Washington (D. C.) Motorcycle Club is now taking up plans for the riding season, and arrangements are being made to place a racing team of three riders in the field. It is the intention to invite challenges from other affiliated clubs in order that the Washington club speedsters may be given a chance to represent their squad in track and road contests.

Considerable interest has been aroused in Washington over the announcement that Jack Prince is to build a board saucer in Baltimore, and as the Capital City is without a creditable speedway it has been suggested that the old bicycle course near Glen Echo should be transformed into a motorcycle bowl. The fact that 30,000 race fans turned out at the last Labor Day meet at the Bennings track leads the Washingtonians to believe that a modern motorcycle track would bring big returns.

At the last meeting of the club five new members were admitted.

LIMA'S NEW OFFICERS

Reorganized Club Has Bright Outlook and Races Figure in Plans for Busy Summer.

HAVING perfected reorganization plans for the season of 1912, the members of the Lima (Ohio) M. C. are anxiously awaiting the arrival of riding weather, and there are indications that the club will be more active throughout the coming summer than it has ever been in the past. The new organization is headed by Edward Edmonson, as president, and his associates are as follows: William Hawkins, vice-president; T. E. Johnson, treasurer, and M. W. Thomas, secretary. The board of directors is made up of F. W. Mullenhour, A. J. G. Gladwell. T. E. Johnson, Z. L. Bedford, Dr. Carl Villmer, Everett Edmonson, D. F. Phillips and Harry Ward. William Rumsey has been chosen road captain, and Clarence Eberle is his lieutenant.

The clan meets every two weeks in clubrooms at 122 West High street, and the sessions usually bring out a full attendance of the members. During the summer of 1911 the Lima boys managed several speed programs, and it is their intention to arrange events for holidays, and possibly for Saturday afternoons and Sundays during the coming season.

BATAVIA HAS A CLUB.

WITH thirty-two charter members the Batavia (N. Y.) M. C. was organized on March 7, and the following officers were elected: Edward E. Perry, president; Herbert Snyder, vice-president; Lee F. Kingden, secretary; Walter K. Francis, treasurer. The president, treasurer and secretary will act as a board of directors. Victor Perry has been chosen as road captain and Henry E. Ford as lieutenant. Lee Salway, Harold Pratt and Edward Nye were named on a committee to obtain permanent quarters for the club.

NEW STAFF CHOSEN

Louisville Club Considers Changes in Its By-Laws and Elects a Set of Hustling Officers.

OFFICERS for the coming year have been elected by the Louisville (Ky.) Motorcycle Club as follows: C. R. Gilmore, president, to succeed E. M. Hughes; P. J. Kuhn, vice-president, succeeding J. B. Coblens; P. H. Kline, secretary and treasurer, succeeding C. E. Rodgers. Kline also was elected captain of tours, to succeed Mr. Coblens. Frank Marshall was elected a director for a term of three years, and R. J. Buxe for one year.

President Gilmore is connected with the Louisville Lighting Co., and although not an old rider, having entered the game last year, he is very enthusiastic. He entered upon his term of office with great activity, suggesting many desirable changes in the by-laws to meet new conditions. Vice-president Kuhn rides a Harley and an R.-S. alternately, and is one of the best known cyclists in the city. Kline, the new secretary and treasurer, is a partner in the local Harley agency and a popular rider.

Everybody in Louisville knows Frank Marshall, and Buxe, the other director, is also one of Louisville's prominent motorcyclists.

It was decided to continue holding the charter open until June, thus giving a sixty-day extension over what was voted about two months ago.

CANADIANS ORGANIZE

Form a National Association of Their Own — Separate and Distinct from the F. A. M.

CANADIAN motorcyclists have come out in their true colors, the announcement that a "Canadian Motorcycle Association" has been formed having recently been made. The new association is receiving the support of practically all of the clubs of the country and is quite independent of the Federation of American Motorcyclists, with which organization the Canadians were said at one time to be anxious to affiliate. The charter members of the new association are located in Toronto, Winnipeg, London and Hamilton. All of these clubs were, at one time or other, asking for F. A. M. protection, but the tide turned.

It is not expected that the Canadian Wheelmens' Association, the bicycle-governing body in the Dominion, will now make any bid for F. A. M. affiliation. At a recent meeting of the C. W. A. the decision was arrived at that it was advisable for other organizations to assume control of the motor sport in the country.

The Canadian Motorcycle Association will probably ask for a reciprocal arrangement with the F. A. M. to provide for international competition and a friendly relationship will no doubt be established.

Late reports are to the effect that club conditions are more harmonious than ever before.

IN NEW HOME

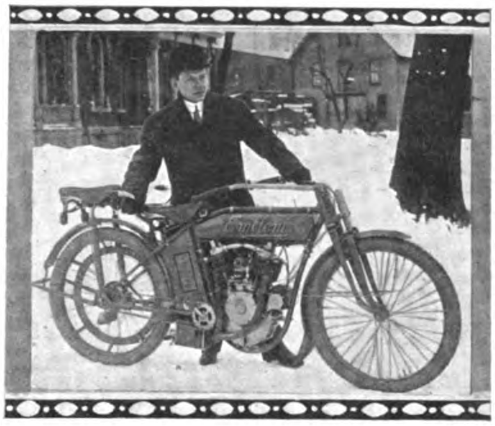
Syracuse Club Furnishes Comfortable Quarters and Prepares to Aid Summer Tourists.

RECENTLY the Syracuse (N. Y.) M. C. opened permanent quarters, centrally located, and its members have raised sufficient funds to furnish the rooms in very creditable style. The club occupies two large, airy rooms, which are shown effectively in the accompanying photograph, and it goes without sayinng that the boys spend much of their time in the new home. As there is no available track in Syracuse, the club was unable to raise money through holding a race meet, and all the credit for obtaining and furnishing the rooms goes directly to the riders. Plans are now being laid for a dance to be held soon after Easter.

The club officials announce that a series of government maps of the country surrounding Syracuse has been obtained and that special efforts will be made to assist touring motorcyclists who visit the city during the coming summer.

MOORE IS A BUSY OFFICIAL.

A. C. MOORE, one of the most energetic of its members, has just been elected captain of the Cortland (N. Y.) Motorcycle Club. Moore is an enthusiastic rider as well as a capable executive. The accompanying photograph shows him about to start for a demonstration ride with plenty of snow on the ground and the thermometer near zero. Moore is Cortland County agent for the Emblem and has proved a hustler. He is now busily engaged in stimulating interest in the race meet the club plans to hold on Decoration Day.



INDIANS IN MARDI GRAS.

DURING the recent Mardi Gras in Mobile, Ala., the Indian riders of the city turned out in full war paint and particularly in a street parade which was one of the most interesting features of the big program. The riders were in Indian costumes and their machines were covered with bunting and floral decorations. The big chief of the Mobile squad set in a road cart which was drawn by a twin Indian mounted by another brave. Another twin machine drew a small float on which a boy posed in Indian togs, and O. Overton, Indian agent in Mobile, mounted a machine which propelled a canopied sidecar, occupied by Minnehaha. On all sides were warriors in buckskins and feathers and to say that they entered into the spirit of the carnival is putting it mildly. After the parade the braves adjourned to their wigwam where they executed a war dance around a series of well-filled tables, the refreshments being provided by Agent Overton. See frontispiece, page 21.

GRAND RAPIDS MEET.

AT the last meeting of the Grand Rapids (Mich.) M. C. steps were taken to enter into an agreement with the West Michigan Cycle Club for the purpose of holding a race meet on Decoration Day. The events are to be staged on the Comstock track at Grand Rapids. It is the present intention to have at least five motorcycle races on the program. Prizes will be donated by the motorcycle dealers of the city, and competition for them promises to be keen.

BRYANT IS NO. 13,000.

L. W. BRYANT, of 64 Forest street, Middleboro, Mass., has the distinction of holding No. 13,000 in the F. A. M. ranks. Bryant, who is secretary of the Middleboro M. C., received his card on March 8.

The RIGHT SORT of AGENT

By GEORGE M. JOHNSON

THESE few thoughts are not the result of many years' experience selling motorcycles, for that is not my business. Nevertheless, I have my own ideas as to what a motorcycle dealer should be, and how he should treat his patrons, though it is of course possible that my opinions would change greatly were I to take on an agency. This article is not written with the design of telling agents how to run their business, but it may emphasize the point that a dealer never loses in the long run by remembering the rider. The Golden Rule ought to be a practical possibility even in the motorcycle business.

A Matter of Policy.

In the first place I think too many agents make the mistake of neglecting a customer once they have his check for the price of the new machine. He may be more or less unfamiliar with his recent acquisition, but they are willing to let him work out his own salvation, unless he actually comes back to the shop for help, when the advice may even be grudgingly given. My own case is an illustration to the contrary. When I started out from the shop, after paying down my good money, I had never straddled a motorcycle before. I was stalled in less than a hundred yards, but was gratified to find that the dealer had sent an assistant after me to help out should any such need arise. This chap started me again, and again did my inexperience cause me to stall the engine, but the lad from the shop was still there to lend a hand. That was a small matter, and didn't cost the agent anything, but you may be sure that it made a big hit with me.

One Way to Boost Sales.

A new rider likes to feel that the man who sold him the machine is genuinely interested in his welfare, and the least a salesman can do is to look up his customer once a month or so and see that he is getting satisfaction. Perhaps an occasional inquiry by postal card would be enough. An agent should never lose sight of the fact that satisfied riders will do him more good, and bring him in more business, than any amount of any other kind of advertising. The rider may not need any assistance, but the mere knowledge that the agent is willing and ready to help cannot fail to make a good impression upon him, and he will recommend both seller and machine to his friends. That means more sales.

The Repair Bill Problem.

Then there are the repair bills, for even the best of machines will require some repairing, through damage caused by accident, abuse, neglect, etc. The agent should not forget that any particular rider will probably be a candidate for a new machine some day, and that he can easily afford to scale his repair bills down a bit now and then. Several years ago, when I had first become a victim of the motorcycle germ and was looking around for a machine, I chanced to be talking with a certain agent. The latter made a very startling statement, against all the ethics of good salesmanship, since it was made to a possible customer.

MOTORCYCLE AGENT
$
REPAIRING MAGNETO $10.
REPAIR BILL

"Oh, I don't get much out of selling a machine," he remarked. "I get my money out of the repair bills."

"Very well, old scout," was my unspoken comment. "If that's your system, you won't get any money of mine, either for a machine or repairs."

Generosity That Pays.

However, the agent who does a bit of repairing for nothing or at a reduced rate should make the recipient clearly understand that this is done as a special favor, a scheme that is not to be followed out on all occasions. I once heard of a motor car dealer in the West who sold an expensive automobile to a wealthy cattleman. The latter, after a few lessons, attempted to drive the car back to his ranch. In an emergency, he threw in the reverse gear in a rash effort to stop the machine when it was traveling at good speed, and of course utterly wrecked his transmission. The auto was towed back to town, and after showing the owner that the trouble was entirely his own fault, the man who had sold the car put in a new transmission, giving his customer a receipted bill for the same—and motor car transmissions come high. The wisdom of his course was evident later, for he sold the same man three other automobiles, and the buyer told him that the above-mentioned receipted bill had done the business.

Naturally a motorcycle dealer could not afford to be as generous as this, nor would anyone expect him to, but he might, upon occasions, be generous in the same proportion. At any rate, the moral of the story ought to be clear. We riders expect decent treatment from the men who have sold us our machines, and have a right to expect it. If the dealer is willing to be more than decent occasionally, so much the better.

Art of Making Friends.

How many times, I wonder, has an agent seen a competitor with an inferior machine doing more business than he does, and been unable to tell why? The failure may be due to poor salesmanship, but it is more likely the result of personal characteristics of the unsuccessful agent which drive prospective customers away.

"I like the machine ——— sells," is a remark not infrequently heard, "but I don't like ——— himself. He couldn't sell me the best motorcycle in the world."

Personally I have known of many instances where an owner of a certain make of machine has taken all his repair work, not to the man who sold him his motorcycle, but to a rival. And why? Simply because he did not like the attitude and business methods of the dealer who originally sold him his mount. And what is more natural, in cases of that kind, than for the rider, when he comes to buy his new machine, to do business with the dealer who has had his repair work, in preference to the disliked agent?

Then there is the way repair work is done. When a job can be rushed through in a few minutes, why not do it promptly, thus saving the rider a tiresome delay. If a repair man is willing to stop what is busying him at the time in order to do a small piece of work for a rider who is in a hurry, the latter is sure to appreciate it, but if he is forced to wait two or three hours for a fifteen minute job, he will most certainly not appreciate it. Next time he will probably go elsewhere for his repairs, and perhaps for his new machine.

REPAIR DEPT
GONE TO DINNER

A Magneto Experience.

One of my own experiences along this line which happened two seasons ago will not soon be forgotten. I had some magneto trouble while on rather a long tour, and coming to a somewhat pretentious motorcycle shop, I concluded to have the difficulty attended to there. I reasoned that an expert could probably do the work better and more quickly than I could. My adventure at this shop was almost laughable, though I did not feel inclined to do much laughing at the time. First I was held up while the expert (?) went to dinner, after which he assailed my poor machine as if he really hated it.

"If it isn't all right," he said as I paid the bill—a good big one, too—"come back and I'll tackle it again."

Though she ran beautifully when he had finished—ran on the stand, that is,—I verily believe that never was repair work more poorly done. Rather than risk a second visit to the lair of that doubtful expert, however, I got busy on the roadside and did the job myself, a thing which I should have had courage enough to attempt in the first place.

On Using Diplomacy.

Many dealers who have well-equipped agencies, and this is especially apt to be the case in the larger cities, have strict rules against admitting outsiders to their workshops. I don't know that anyone could blame them for this, since it must be a nuisance to have two or three persons loafing around in the way, but such a dealer could never sell me a machine. If there is a little tinkering to be done to my motorcycle, I like to do it myself if possible, and sometimes I take occasion to use the tools in the workshop of my friend, the dealer. He has never kicked yet, nor does he keep an eye on me to see that I do not absent-mindedly depart, carrying away a Stillson wrench and a couple of cold chisels in my coat pockets. That agent, judging by the way he has treated me, deserves to do a rushing business.

We riders prefer to have dealings with agents who are not apt to be careless with the truth. Three of us once got together and compared notes as regarded what a certain man had said to each, and the result—well, I hardly believe that the dealer in question ever thought his remarks might be thus compared. Otherwise he might have been more careful. When we find a man who is willing to take these glaring liberties with the truth in general, we will not likely be over credulous concerning what he tells us.

The Helping Hand.

How many agents would lend a rider a machine while his own was being repaired, and charge nothing for it? I know a dealer who did that, though of course he would be careful that the borrower was a person who knew enough to treat a machine as it should be treated. He is the agent already referred to.

The same dealer, in answer to telephone calls, twice dispatched an assistant, via motorcycle, to help me out when trouble struck me on the road, and neither time was there any charge, when I tried to settle. The disgust I had felt at the trouble was largely dissipated by the handsome way the agent made it good. He didn't lose by it, either.

By all means, Mr. Motorcycle Dealer, don't forget the rider after you have landed him. Don't consider him as merely so much possible revenue, or you may find that revenue failing when you least expect it. Try to put yourself in the rider's place, and then try to treat him as you would like a dealer or repair man to treat you. It's good business and good advertising.

A PATHFINDING RECORD.

FRANK CRAYTON, of Plain City, Ohio, who made 8.698 miles on a Harley-Davidson last year in pathfinding work for automobile road guide books, will ride a Harley-Davidson in similar work this year. Crafton announces he is going back on the roads in the spring, and probably will work in Ontario, Canada, and in Minnesota.

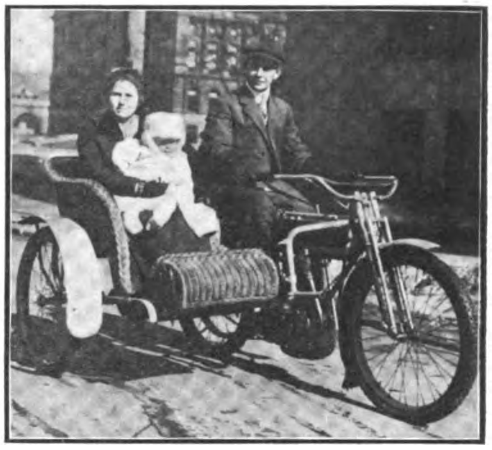
"I rode a 1910 model last year and could not have asked for better service, especially over the country which I traveled," said Mr. Crayton.

TANDEM RIDER SUES.

MRS. CLARA COON, of Elyria, has brought suit against Sol. Mendelson, a contractor, for damages to the amount of $2,000 as the result of injuries alleged to have been sustained when the motorcycle on which she was occupying the tandem seat came into contact with a pile of dirt on Furance street.

A SIDE-CAR ENTHUSIAST.

O. J. OBERWEGNER, one of the most active motorcycle dealers in Toledo, Ohio, is a great side-car enthusiast. He says that a 4 h. Excelsior machine is capable of taking his "basket" anywhere he wants to go in and about Toledo, and that he knocks a lot of real enjoyment out of the passenger attachment. Mrs. Oberwegner explains that the slight frown noticeable on her face in the photograph is due to the glare of the sun, and that it is not to be credited to any dissatisfaction with the outing she is enjoying. She adds, by the way, that a side-car is a bully cure for frowns. The Oberwegner brothers are distributors for the Excelsior machines in northwestern Ohio and southern Michigan.



Lester Bach, of Bucyrus, Ohio, has taken the agency for the Flanders in Crawford County, and J. E. Swank, 338 South Sandusky avenue, Bucyrus, has taken the agency for the Harley-Davidson.

HOME OF INVINCIBLES.

ONE of the most attractive motorcycle club houses in the country is the home of the Invincible M. C. at 78 Herkimer street, Brooklyn, N. Y., which is shown in the photograph herewith. The original cost of the structure was about $30,000, and when it was leased by the Invincible club a considerable sum was expended for improvements. It has a first class restaurant, three pool tables, two billiard tables, three excellent bowling alleys, card rooms, reading rooms, shower bath and a fine garage in the basement with a runway which affords easy access. Interest in the club is on the boom and the members are ready for a lively season.

STILL THEY COME

New Touring Squad Is Added to the List of Lively Motorcycle Clubs in Baltimore, Md.

BALTIMORE, Md.—Still another motorcycle club has sprung into existence in this city. The new baby has been christened The Motorcycle Touring Club of Maryland, and its principal object will be the promoting of tours. The members will become affiliated with the F. A. M., but they will not go in for racing. The officers are: William C. Horn, president; David W. Bridges, vice-president; James M. Hepbron, secretary-treasurer; William D. Randall, captain; Philip Sprecker, mechanician. Runs will be made every Saturday and Sunday, weather permitting, and during the summer months the boys will go off on long tours when they take their vacations. The official mechanician is a novelty here, but he will go on all the runs and tours, and no member will be compelled to stay behind on account of an ordinary mishap.

Vice-President Bridges is planning a tour across the continent to San Francisco during the early spring. He is anxious to have a companion, and President Horn, who is also contemplating a long journey, may change his plans and go with Bridges. Secretary Hepbron is working on a tentative route, but will not definitely decide until the official list of F. A. M. repair shops is out. Some members are figuring on tours to New York and through New England, while others may go south and still others toward Chicago.

CANADIANS OPEN SEASON.

THE Canadian season for 1912 was officially opened at Toronto on March 8, when three local riders accomplished a thrilling trip to Hamilton, Ontario, and return, a total distance of ninety miles, the trio of tourists being Herb Kipp, who represents the interests of the Indian in Canada, Jack Scott, who rode in a side-car attached to Kipp's mount and Jack Booth who straddled a solo Indian of 7 h. p. The latter had numerous spills in the snow, but the tumbles wreaked little damage to either man or steed At the end of the journey each machine bore about twenty-five pounds extra weight of ice, but this did not affect the running of the machines. The return trip of 45 miles was made in exactly two hours. It was found that the motorcycle with side-car exactly fitted the sleigh ruts of the road, so that progress was easy.

RUSH ON IN SANTA ROSA.

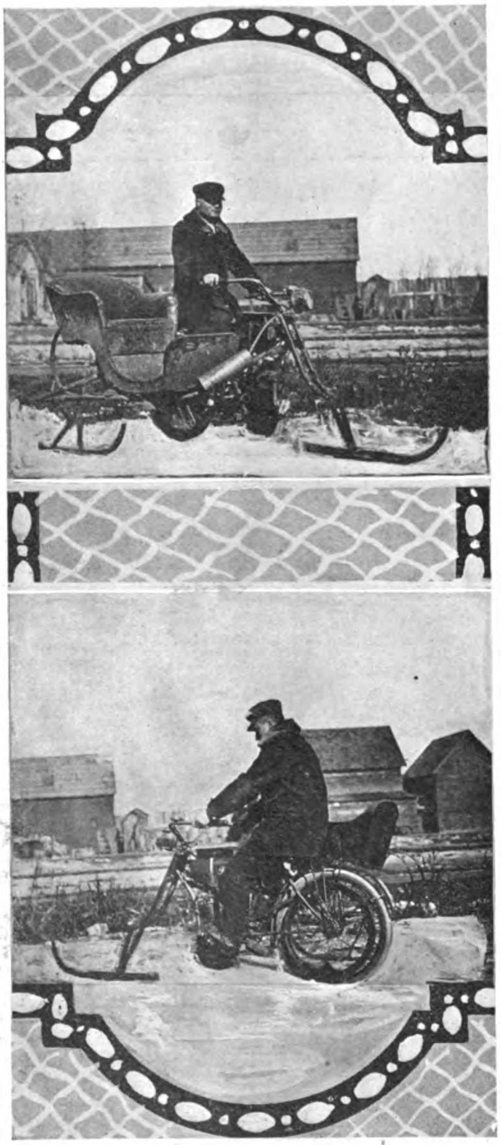
HENRY JENKINS, proprietor of the Jenkins Cyclery in Santa Rosa, Cal., reports that he has already sold twelve Indian twins and two singles, nine Thor singles and one twin since the first of the year and that the outlook for a motorcycle boom in his district has never been brighter. He states that there has been comparatively little rain in the vicinity of Santa Rosa of late, and that continued open weather has caused a rush of orders for the single-trackers.

NEW SHOP IN IRONTON.

R. D. WASHINGTON is the proprietor of a new shop just opened in Ironton, Ohio, which will be a headquarters for the Indian. Washington is an enthusiastic rider himself, and he states that visiting motorcyclists will have all their wants properly attended to at his establishment.

SIDE-CAR WITH RUNNER.

WHILE many motorcyclists throughout the country have devised ingenious runner attachments to permit of the use of their machines over snowy roads, John Miller, a Wadena (Minn.) enthusiast, has gone a step farther and arranged a special runner for his side-car, thus making it possible to carry a passenger comfortably on his winter trips. He has attached a runner of medium weight to the side-car axle and another to the fork of his machine, the propelling power coming from the rear wheel, as usual. Miller reports that he is able to carry a passenger over snow and ice-covered roads with all the ease and enjoyment experienced when he is using the full equipment of wheels for summer riding. The side-car is of the rigid type, full road width, and was built by Miller after his own design. The pictures are forwarded by R. A. Beitz, of Perham, Minn.



IMPROVING STORE.

TORONTO.—Percy A. McBride, the local Excelsior agent, is having his entire store remodeled in order to take care of an ever increasing business. The repair shop is being removed to the basement and a thirty-foot cement runway is being laid to allow easy access to the basement. A handsome double front window is also being installed.

GILL IS INTERESTED

Baltimore Aviator on Return from Los Angeles Proposes to Take Stock in New York Bowl.

BALTIMORE, Md.—Howard W. Gill, the Baltimore aviator, who holds the American endurance record for sustained flight, and who has been in Los Angeles for some time, arrived home a few days ago and will go into the proposition for a track in this city with Howard French. He is greatly interested and believes it will be a paying proposition. It is possible that he may utilize the inside of the track as an aviation school such as he conducted on the coast.

When Jack Prince arrives here he, French and Gill will go over the plans as outlined so far and then the selection of a site will be made. Electric Park now seems to be out of the running, as local interests, it is said, have acquired the track for horse racing. Several other sites are available.

Gus Heinz, the local racer, who went out to Los Angeles in January, is back home. He is more than enthusiastic for a saucer since witnessing the racing at Los Angeles, and is hoping that there will be a good track here this summer so that he can try his luck.

REAL ECONOMY

Representative of Pierce Branch in Oakland Made 449-Mile Trip with a Total Outlay of $10.

FRED L. BROWN, Pierce agent in Oakland, Cal., has forwarded to the Pierce Cycle Company a highly interesting statement concerning the outlay incident to a recent trip from Oakland to Fresno by one of his assistants. He reports that the rider made the run both ways, a distance of 449 miles, on a total expediture of $10. This was distributed as follows: Hotel bill, $7.90; gasoline, $1.70 and oil, 40 cents. On this basis the machine expense figured up to .0046 per mile, and the cost per mile for both machine operating and hotel was .0222. To make the round trip between Oakland and Fresno by rail would have cost $11.50, and the hotel bill, of course, would have been extra.

The machine used was a 1910 Pierce single. It is stated that no special effort was made during the trip to save oil or gasoline, but that the rider hit up a fast clip between towns. He made the run from Oakland to Fresno in seven and a half hours.

RACING TEAM IN TRIM.

BALTIMORE, Md.—The Reading Standard M. C. held its annual meeting recently and elected the following officers: Andrew Winfield Rupp, captain; James Moore, first lieutenant; Porter Bond, second lieutenant; Charles W. Heisterman, color bearer; Wulford Taylor, tour master. The club is planning a program of races and hill climbs to be carded as soon as the weather breaks. The racing team of the club has been augmented by Heisterman and J. F. De Pignataro, called "Fearless Frank," a title conferred on him for his reckless riding on the Point Breeze track in Philadelphia.

PLANS for organizing a $100,000 company to make Ludlow Lagoon, near Cincinnati, Ohio, into a large amusement park and also to stage motorcycle races are being considered.

Columbus Show

IT is stated that no less than 4,000 persons visited the first exclusive motorcycle show in the East, which closed in Columbus, Ohio, on March 9, and that the business transacted during the week of the exhibition exceeded the expectations of the dealers. All the leading agents of the city had attractive displays of the machines they handle, the large store in which the show was held was tastefully decorated, and music was furnished every afternoon and evening. Plans are already being outlined for another exclusive motorcycle exhibition on a much larger scale for 1913. The exhibits shown on this page are as follows: 1. Harley-Davidson, Iver Johnson and Reading-Standard; 2. Indian; 3. Emblem; 4. Thor and Yale; 5. Merkel; 6. Excelsior.

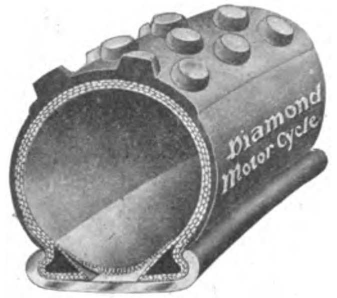
Have Your New Machine Come Equipped With

Diamond TIRES

Their higher quality and the extra mileage that is built into them make them cost the motorcycle manufacturer a little more, but there is no extra cost to you.

Thirteen leading manufacturers are willing to give you Diamond Tires when you specify them. Tell your dealer that you want Diamond Tires for your new machine and you will get them.



Studded Tread Diamond Motorcycle Tire. Same price as Diamond Corrugated Tread.

Tire expense is the largest single item in the cost of running your machine; just as important when you get your machine as after you have had it a year.

There is only one way to put tire expense on a minimum basis at the start—specify Diamond Tires. And if you're not getting a new machine this year, cut down your tire bills by buying Diamond Tires from your dealer.

Our illustrated catalogue tells you why Diamond Motorcycle Tires are the longest wearing, easiest riding motorcycle tires ever built. Send for it today.

THE DIAMOND RUBBER COMPANY

Akron, Ohio

54 Diamond Service Stations do more than sell tires — they take care ot Diamond Tire users

Editorial

CIRCULATION, THIS ISSUE:
Total, 11,325; Net paid, 10,350.

Motorcycle Illustrated

Published every other Thursday at 51 Chambers Street, New York. Home Subscriptions, $1.00; Foreign Subscriptions, $2.00; Single Copies, 10 Cents.

Entered as second class matter July 6, 1908, at the Postoffice at New York, N. Y., under act of Congress, March 3, 1879.

J. LEO. SAUER, *President* THURSDAY, MARCH 21, 1912 H. N. CONDICT, *Secretary*

THE FEDERATION.

FOR want of a better term, *looseness* seems to us to be most characteristic of the present organization of the Federation of American Motorcyclists. The association is well-officered and its membership is large, but it lacks compactness. For example, take the State organizations, weak in most cases, it must be admitted, not, as a rule, through any fault of the District Vice Presidents or the State Commissioners, but rather because their duties, and particularly those of the commissioners, are not clearly enough defined in the F. A. M. Constitution.

Within a few weeks, the Board of Directors will decide upon the time and place of the 1912 Meet and National Assembly. Now the Constitution provides that amendments must be given publicity in one or more of the trade papers at least thirty days before the date of the National convention. Accordingly, members of the Federation who are readers of this paper are invited and urged to propose, through MOTORCYCLE ILLUSTRATED, any Constitutional amendments which in their opinion would benefit and further the healthy development of the F. A. M. Its growth has been rapid enough, but mere numbers are not everything. The proper aim is to make the Federation still more effective as a working whole, with the endeavors of the District Vice Presidents and the State Commissioners dove-tailing as accurately as possible with development along national lines. The national committees, as the writer knows from practical experience, are hampered to a great extent because, on the one hand, they have no means for keeping closely in touch with the work in each case. To be more to the point, there is not anything approaching a system of information interchange between the national committee chairmen and District and State officials. Without accurate and up-to-date knowledge of District and State conditions and needs the national committees are all but helpless. Surely, there is no sense in the president's annually appointing to committee memberships a number of well-intentioned men who, in the very nature of things, cannot be much more than figureheads.

This state of affairs should be remedied at the next Assembly and no doubt will be. Suggestions to that end will gladly be given publicity by MOTORCYCLE ILLUSTRATED.

CANADIANS ORGANIZE.

NOT at all unexpectedly comes the announcement from Toronto that four Canadian clubs have taken steps to organize a national association of motorcyclists. For a time last summer and fall the impression was abroad that the Canadian clubs would affiliate with the Federation on the same basis as local organizations in the United States. At that time the Federation, through its President and National Legal Action Committee Chairman, expressed itself to the effect that while it would welcome the affiliation of Canadian clubs, the Federation would offer no objection to a Canadian Association.

As far as can be learned, those who are principally responsible for the present move in Canada seem disposed to organize along the lines of the F. A. M. constitution and by-laws and to conduct their race meets in conformity with the F. A. M.'s rules for competition. If these indications are borne out by subsequent developments, there will be nothing to prevent a close working alliance between the F. A. M. and the Canadian organization.

In any event, no harm can come of the effort on the part of Canadian riders to organize and successfully conduct a national association. There is no reason why success should not crown the endeavors of those who are now trying to bring the riders in Canada together. If failure should result, it will be because of local jealousies, although these are not likely to arise provided the Toronto Club, whose members are to the front of the movement, takes into careful consideration the interests of other Canadian clubs.

Some may be disposed to criticise the Canadians for their change of view, apparently at the expense of the Federation; but the fact remains that as the American Association has its hands full in this country, its officers are not at all anxious to assume the larger responsibilities which they would be called upon to shoulder in the event of their extending the Federation's jurisdiction over the wide expanse of the Dominion.

RULES REVISION.

OUR New York contemporary is unduly exercised over the postponement of final action in the matter of the revision of the F. A. M. rules for competition. True, the revision was ordered at the last National Assembly, and a year is rather a long period of time in which to complete the work. Also, the sub-committee having long ago finished its task of drafting a revision, there would not at first sight appear to be any good reason why the rules committee at large and then the Board of Directors should not pass judgment upon the said sub-committee's recommendations. However, the fact remains that it has been impossible to get together the members of the revision committee, in default of which a mail vote was contemplated. The result could hardly have been satisfactory, in view of the many important changes incorporated in the revision, and any endeavor to reach an agreement, by mail, on all controverted points would undoubtedly have precipitated a muddle which would have postponed the committee's final decision two or three months in any event. A mail vote of the Board of Directors would have then been necessary, and it is highly improbable that the rules could have been made effective much before midsummer.

In the interval, the present rules will do very well. There is no reason to anticipate any very serious trouble in that connection, even though many of these rules are sorely in need of decisive amendments, additions, elucidations, etc. Then, too, the proposed changes in the classification of competitors are rather radical, to say the least, and the responsibility for making them ought very properly to be shared by the entire Federation. Finally, the idea is to establish the rules for competition upon a sound and permanent basis, and a few months delay will have proven to have been well worth while if it results in the adoption of rules that will stand the test of time. Under the conditions it seems advisable to "make haste slowly."

IOWA MOTORISTS ARE BOOSTING GOOD ROADS

Enthusiastic Meetings in Des Moines Result in Plans for Improving Famous "River-to-River" Highway and Maintaining Fine County Road System.

DES MOINES, IOWA.—At a meeting held in this city on March 5, the Polk County Board of Supervisors, in which county Des Moines is located, passed a resolution providing for the condemnation or purchase of a gravel pit in every township in the county. From these beds gravel will be given free to the farmers and road men for use in improving the roads. The resolution met with the approval of all the members of the board, and was received with enthusiasm by the road makers of the county. This step is the first taken toward permanent roads in the vicinity of Des Moines. Money to be used for the purchase of gravel pits will come from the country road fund, which will amount to $25,000 this year. The supervisors also heard a discussion of the road drag law, and the light road drag was voted for.

The executive committee of the Iowa State Automobile Association met at the Savery Hotel in Des Moines, March 5. The meeting was called by W. E. Moyer, president of the association, and also president of the Des Moines Auto Show. H. Leslie Smith, of Des Moines, was elected as the new secretary of the body. Good roads was the principal topic for discussion. The roads around Dubuque, which are on the direct route from Des Moines to the East, were condemned in vigorous terms, and State Attorney-General Cosson will be asked to take action to have obstructions in those roads removed. Mr. Smith, the new secretary, was instructed to go into every county of Iowa and organize a local automobile association. These will be affiliated with the State association, and through it with the National Automobile Association.

A group of boosters from towns along the line of the "River to River" road met in this city March 6, and voted to organize a good roads club in every county. The efforts of the new organization are to be directed to the improvement and maintenance of the "River to River" road. E. H. Spaulding, of Grinnell, was elected president and H. E. Stewart of Iowa City, secretary.

T. Fred Henry, the march king of Iowa, and director of "Henry and His Band," has written a special band march, which he has dedicated to the third annual auto show of Des Moines. He calls it "The Auto Triumphal." The march has made a decided hit and auto dealers from all over the State and factory representatives at the show congratulated the show management.

Jenkins & Co., of this city, are making preparations to move into their new quarters at Twelfth and Locust streets. The building will be ready for occupancy about May 1. Mr. Jenkins is agent for Indian and Excelsior machines, and has found his old quarters too small to meet the requirements of his increased business. The new building will be up to date in every particular. It will have offices and a waiting room, a large garage on the first floor and shops on the second floor. The front room, facing on Locust street, will be the show-room. The front rooms of the second floor will be the new quarters of the Des Moines Motorcycle Club. These will be well lighted and cozy club rooms, and will do much to boost interest in club affairs. The club now has thirty-five members, and with the improved machines for 1912 interest in motorcycling in Des Moines is growing rapidly.

AN ECHO FROM ALASKA

Former Motorcyclist of Philadelphia Writes an Interesting Letter from Hospital on the Arctic Coast.

GEORGE KRAUSS, proprietor of the Pioneer Motorcycle House in Philadelphia, Pa., recently received a letter from a former motorcyclist of the Quaker City who is now identified with a hospital in Candle, Alaska. It is interesting as proof of the fact that a full-fledged devotee of the single-tracker retains his enthusiasm under almost any conditions. The letter came from Dr. Harold L. Foss, who is now superintendent of the Fairhaven Hospital in Candle, and read in part as follows:

"I am situated on the Arctic coast in northern Alaska, where at this season (December 30) it is pitch dark most of the time. The thermometer is often down to 45 degrees below zero. I went off on a dog trip not long ago and at no time during the outing did the mercury get above 40 below. No weather for a motorcycle, believe me. Still I have suffered from the cold in Philadelphia just as much as I ever do in this region. The whole secret lies in dressing properly for the weather.

"I have planned to leave here next summer and make a trip to Europe. My idea is to take a motorcycle over and then tour England, France and Germany on it. My old Excelsior gave me satisfaction, and I will probably want another of that make. I am anxious to get back into the saddle, although it may seem funny to talk of motorcycles in such an out-of-the-world place as this. I would give a dollar a minute just now to spin up Broad street on my old machine. The nearest town is Nome, 200 miles to the south of me, and the only other doctor in this vicinity is 100 miles away."

Dr. Foss was one of Philadelphia's best known motorcyclists.

RACES FOR EVANSVILLE

Lively New Squad Will Have Track and Road Programs Beginning on Memorial Day.

THE Evansville (Ind.) Motorcycle Club was organized March 23 with a fair charter membership, and a campaign was begun which will not end until every motorcycle rider of the city is on the roster. The riders met in the parlors of the New Vendome Hotel and there formed the organization with the following temporary officers: John Sink, president; Mike Schaeffer, secretary, and August Schnell, treasurer. A board of directors was elected consisting of the various dealers of the town, with one or two of the riders.

The chief object of the club will be to promote track and road races, hill climbs, etc. The track races will begin on or before May 30. The races will be open, but the professionals will be classed by themselves. The club enrolled sixteen members on the first night, and at last reports had over seventy riders.

Arrangements have been made to secure a permanent home for the club, and a committee was appointed for that purpose. They selected and leased the old Cooper homestead in Lincoln avenue, on the outskirts of the city. This place is ideal for a club home, being situated on high ground and having about an acre of lawn in which swings and hammocks will be placed as soon as the weather permits. The house will be repainted, repapered, wired for electricity and made thoroughly modern. It is the intention of the club to have everything in readiness for an open house session about the middle of April.

The club decided to hold the charter open until April 5, and all riders desiring to become members are invited to get in line before that time.

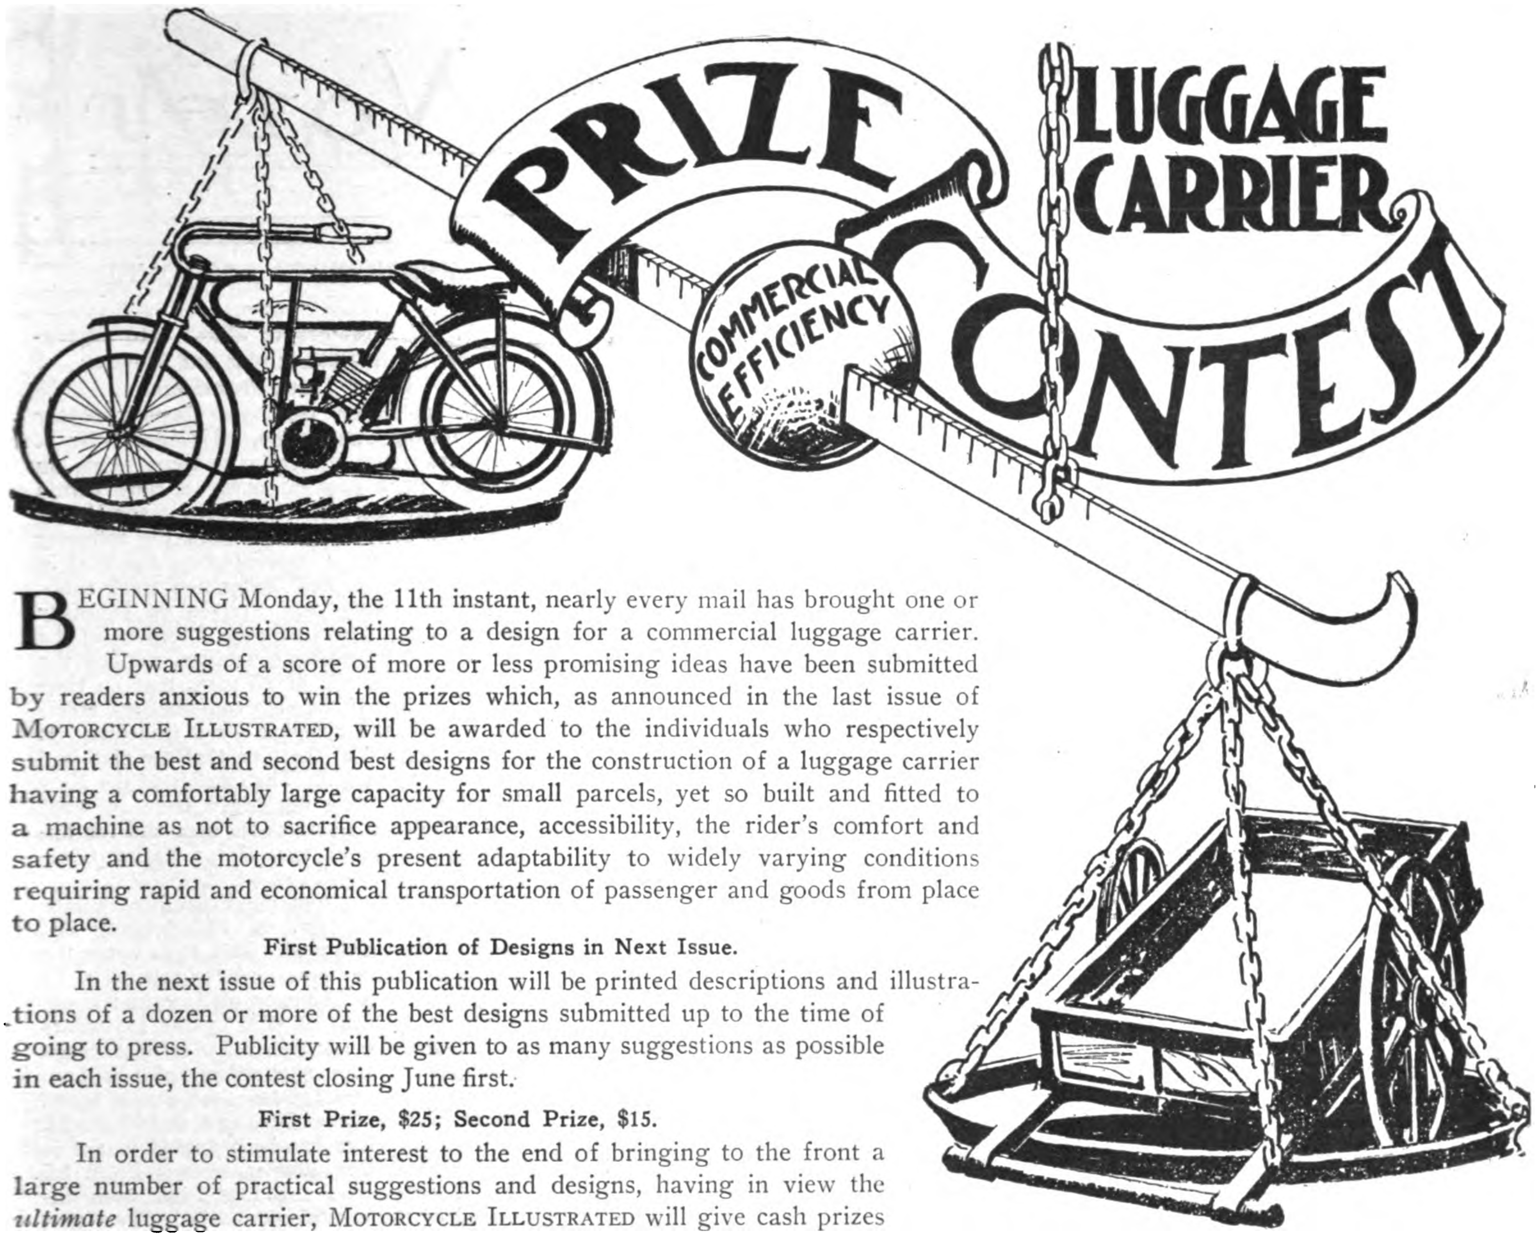
SAVANNAH RACES

Active Southern Club Will Open Season on May 30, With Endurance Run Over Famous Course.

SAVANNAH, GA.—The Savannah M. C., no doubt the most energetic squad of motorcyclists in this part of the South, is planning several feature runs for the early summer, and nearly all the club members have their machines in readiness for road work. On Washington's Birthday an endurance run was held, and the riders gathered later at Bailey's Hotel, where an oyster roast was prepared. The next big event on the club schedule is a lantern parade, which will probably be held early in April. It is expected that 200 motorcyclists will be in line, each carrying two colored lanterns on his machine. After the parade a dinner and social program will be given.

Two pathfinders, John Balmer and Octavus Meyer, left on Saturday evening, March 16, for Augusta, 137 miles distant, with a view to learning whether it will be advisable to hold a moonlight run over that route. If the roads are in good condition steps will be taken at once to prepare for the outing. Balmer mounted a Harley-Davidson and Meyer piloted a Merkel single. A night trip has not been held by the club so far and the members are strongly attracted by the novelty of the idea.

Plans are under consideration for a 150-mile endurance run, to be held on May 30, over the famous Grand Prize course. On the Fourth of July there will be either a road race or beach races at Tybee. The beach events have proved exceedingly popular, and as throngs of amusement seekers visit the island on holidays, the club is anxious to arrange such a program. All things point to an unusually prosperous season for the Savannah boomers.



BEGINNING Monday, the 11th instant, nearly every mail has brought one or more suggestions relating to a design for a commercial luggage carrier. Upwards of a score of more or less promising ideas have been submitted by readers anxious to win the prizes which, as announced in the last issue of Motorcycle Illustrated, will be awarded to the individuals who respectively submit the best and second best designs for the construction of a luggage carrier having a comfortably large capacity for small parcels, yet so built and fitted to a machine as not to sacrifice appearance, accessibility, the rider's comfort and safety and the motorcycle's present adaptability to widely varying conditions requiring rapid and economical transportation of passenger and goods from place to place.

First Publication of Designs in Next Issue.

In the next issue of this publication will be printed descriptions and illustrations of a dozen or more of the best designs submitted up to the time of going to press. Publicity will be given to as many suggestions as possible in each issue, the contest closing June first.

First Prize, $25; Second Prize, $15.

In order to stimulate interest to the end of bringing to the front a large number of practical suggestions and designs, having in view the *ultimate* luggage carrier, Motorcycle Illustrated will give cash prizes of $25 and $15, respectively, for the best and second best suggestions offered before June 1 of this year. The conditions under which this contest is to be conducted are as follows:

Conditions of Contest.

1. All are eligible and each contestant may submit as many designs as he chooses.

The Most Important Point.

2. The idea submitted must embody a luggage carrier suitable for attachment to a motorcycle and adapted for conveniently carrying a number of small parcels of moderate weight.

Sketches and Descriptions.

3. Sketches must accompany descriptions, but these drawings need not be either artistic nor absolutely accurate. A rough sketch will do, but the description should be complete, with all the details carefully noted. Prizes will be awarded according to the *practical value* of the *ideas* presented, and not the symmetry of the drawings.

Committee Will Award Prizes.

4. The prize winners will be determined by a committee of three disinterested persons, and they will base their awards upon the respective *practical values* of the designs submitted, in connection with their adaptability to the purposes mentioned above.

Payment for Every Good Idea.

5. *Three* Dollars will be paid during the month of *April* and *Two* Dollars during *May* for *every* suggestion considered deserving of publicity through the columns of this paper. However, every design submitted, whether published or not, will be turned over to the judges on the closing date of this contest.

In Case of a Tie.

6. In the event of a tie for first, second or both prizes—a very improbable result—the prizes will be equally divided.

How to Address Letters.

7. Competitors are requested to address all their communications as follows: "Luggage Carrier Contest, Motorcycle Illustrated, 51 Chambers street, New York City." Prompt replies are promised those who may have any questions to ask.

F·A·M Notes

BANGOR BULLETIN

Chairman Estabrook Calls Attention to Eight Fields of F. A. M. Activity.

EIGHT very promising club prospects have entered the arena during the past week and made public announcement that they are "in" on the club contest for Old Sol lamps, donated by the Hawthorne Manufacturing Company and now being offered as prizes by the F. A. M. Membership Committee.

Local riders interested in the sport or the organization of a local motorcycle club should communicate with the following workers:

Geo. C. Ladd, Box 7, Vineland, N. J., circulation manager for the *Evening Jorunal*, has thirty local riders marking time while the membership is being built up through their united efforts. Drop Mr. Ladd a card; he gets around quickly; he uses a motorcycle.

James A. Trent, advertising-printing expert, Knoxville, Tenn., is now doing the preliminary advertising and "setting up" the forms which, a little later—soon as spring opens up—will outline the policy of one of the liveliest F. A. M. clubs in the South.

W. E. Simons, Box 171, Salem, Ore., reports that motorcycle interest is running high. There are between forty and fifty riders in Salem, with an excellent prospect of doubling that number in the immediate future.

Further proof of good times in Oregon comes from President P. S. Steenstrup, of the Pacific Motor Supply Company in Medford, Ore. The company desires to register its new repair shop. Young men connected with the company, together with their friends, are now organizing an F. A. M. club.

Greenwood, S. C., has thirty riders, with T. S. Chipley on the job as club organizer.

F. A. M. interests in Fort Recovery, Ohio, will be well looked after by Henry Z. Fox, who is registering his repair shop and organizing a local club.

E. Ellsworth Alexander is promoting a club in Red Bank, N. J., and Carl A. Vogel is doing the same in New Albany, Ind.

PROSPECTIVE RECRUITS.

CHAIRMAN ESTABROOK, of the F. A. M. membership committee, reports that he has had encouraging bulletins from the following workers who are seeking to organize clubs:

H. L. Jennison, Farnsworth, Kan.; Chas. W. Von Parmelee, Helena, Mont.; W. P. Smallwood, Culebra, Panama (Canal Zone); L. A. Wetmore, Kent, Ohio. The following clubs are considering affiliation with the F. A. M.: The Motorcycle Touring Club of Maryland, with rooms at 3 East German street, Baltimore, Md.; the Washington Motorcycle Club, G. C. Billard, secretary, 2445 18th street N. W., Washington, D. C.; the Black Hills Motorcycle Club, Philadelphia, Shoenberger, secretary, Deadwood, S. D.; the Ithaca Motorcycle Club, of Ithaca, N. Y., Levi C. Morris, secretary.

REGISTERED SHOPS.

THE latest batch of F. A. M. registered repair shops is listed by Chairman Estabrook as follows:

Girard Cycle Company, 140 N. 14th street, Lincoln, Neb.; The Motorcycle Shop, 124 Pearl street, Trenton, N. J.; Pinaire Bicycle Company, 917 East Douglass street, Wichita, Kan.; The Motoraid, 11 Jay street, Sacramento, Cal.; The Motor Shop, Seventh and Main streets, Grand Junction, Col.; Hyatt W. Norton, East Bloomfield, N. J.; Hall Garage, Fort Collins, Col.; Charles Z. Clements, 6004 Houston street, E. E., Pittsburgh, Pa.

REED A HARD WORKER.

WILLIAM T. REED, of Camden, State F. A. M. commissioner for New Jersey, is one of the most active workers in the Federation ranks and an official who has the happy knack of making the boys feel that he is ready to meet them half way at every stage of the game. Commissioner Reed has been a rider for the last two years, and while in middle life he is not inclined to take dust on the road or balk at a long grind. He is an Elk and a Mason, and, needless to say, a good mixer.

NEW F. A. M. BOOSTER.

E. O. CLARK, presiding over the Twin City Motorcycle Shop, West Main street and Colfax avenue, Benton Harbor, Mich., announces that he will handle Thor and Reading Standard machines for the coming season. Clark has just entered the field, and has already placed his repair shop in the F. A. M. registered list.

FRANCHISES APPROVED

F. A. M. Directors to Enter into Agreement with Philadelphia and Newark Board Track Promoters.

AN application from the Eastern Motor Racing Association, of Newark, N. J. for a restrictive agreement to cover meets on a board track now in course of construction in that city has been voted upon favorably by the F. A. M. board of directors, the company having presented a certified check for $250 in keeping with the new Federation track rules.

This application was received on February 14, and a day later Chairman Thornley, of the F. A. M. competition committee, notified the New Jersey M. C., of Newark, that no time should be lost if the club contemplated erecting a track and applying for a franchise. It was understood at the time that the club had such action in mind. The officials of the New Jersey squad were not heard from in what was considered a reasonable time and the application of the Eastern Motor Racing Company was approved.

An application from the Point Breeze Motordrome Association, of Philadelphia, Pa., has also been approved. This is to cover the new board saucer now under construction by the Motordrome Company of America; it entailed the payment of $750 by the promoters for a restrictive franchise. No certified check accompanied the application of William Fowler, for a sanction to cover a new board saucer in Salt Lake City, and the F. A. M. board of directors has been unable to act in the premises. Mr. Fowler, who is F. A. M. state commissioner for Utah, has been informed of the conditions and it is likely that the regulations will be complied with at an early date.

SWELLING THE RANKS.

THIRTEEN dealers registered their shops with the F. A. M. during the last ten days, as follows: Kroesen & Plock, 506 E. Main St., Streator, Ill.; Trieber Bros., 105 Grove St., Elgin, Ill.; Pierce Motorcycle & Supply Co., 703 Pike St., Seattle, Wash.; Miles & Schofield, 300 Fourth St., Olympia, Wash.; Fred Levee, 314 E. 4th St., Olympia, Wash.; W. G. Ashley, 313 Columbia St., Olympia, Wash.; Watt Shipp, 223 Commercial St., Salem, Ore.; S. P. Hunsaker, 220 W. Third St., Pomona, Cal.; Frank Walling, East End, State Road, Oneonta, N. Y.; A. B. Crosby, Aurora, Ill.; Twin City Motorcycle Shop, Colfax Ave. and N. Main, Benton Harbor, Mich.; Greyhound Motor Co., 1443 Niagara St., Buffalo, N. Y.; Randall Mfg. Co., 28 So. Charles St., Baltimore, Md.

TO MAIL LISTS SOON.

NATIONAL SECRETARY GIBSON states that he will probably have all F. A. M. repair shops properly listed about March 30, and that the printed lists will be ready for mailing on April 15.

News from the Clubs

RAPID CLUB GROWTH

Lively Washington Squad Nears the Limit of Its Membership, Although a Newcomer in the Field.

TEN new applications for membership were received at the last meeting of the Washington (D. C.) M. C., which bring its list of riders very close to the limit of fifty, decided upon when the club was organized. Voting upon the three offices left open at a previous meeting resulted in the election of J. McL. Seabrook as first lieutenant; Charles P. Knowles as second lieutenant, and F. W. Hippler, as sergeant-at-arms.

On a recent run the club riders viewed the beautiful scenery in the vicinity of the Great Falls of the Potomac, and the outing proved a complete success. Others will be held regularly during the summer. At the last session a resolution was adopted condemning the current idea that the club was formed in the interest of any one make of machine. President George Cochrane has just purchased an Indian 7, and there is a suspicion prevalent that he is suffering from an attack of "speeditis."

TO PROTECT TOURISTS.

PRACTICAL, straight-from-the-shoulder work in the interest of its riders is now being done by the touring committee of the Oakland (Cal.) M. C., and as a result Oakland motorcyclists who make trips throughout the State from now on will find improved conditions. The committee is obtaining detailed information as to hotels, restaurants and garages from clubs in all the cities on touring routes throughout California, and these data will be at the disposal of the Oakland riders. When the system is perfected it will be impossible for hotel proprietors or garage owners to impose upon visiting motorcyclists, as parties in the habit of resorting to such methods will all be down in the black list.

CENTRAL M. C. FORMED.

TWENTY-FIVE riders of Brooklyn, N. Y., have formed the Central M. C. and opened comfortable quarters at 1195 Bedford avenue. Although the organization has been in the field only a short time, it has laid plans for summer activity, and there are indications that the squad will be heard from at regular intervals. The boys are anxious to have it made clear that the club has not been organized in the interest of any one make of machine and that all motorcyclists will be welcomed.

JOHN MERZ, an Indianapolis motorcyclist, is marking twenty-one roads leading into Indianapolis with mile road markers. He is traveling ten miles out on each road, and the motorcycle is his chief assistant.

BOSTON CLUB ACTIVITY.

FIVE new members were elected at the last regular meeting of the Boston (Mass.) M. C., and steps were taken to perfect plans for the club's first official run, which is scheduled for April 19. Captain H. F. Smith, assisted by his lieutenants, M. F. Doyle and N. F. Cummings, will map out a tour through the White Mountains to Portland, Me., and back to Boston on a three or four-day schedule. The pool and bowling tournaments which the club is promoting, have created much friendly rivalry among the members, and impromptu social program held from time to time of late have done much to maintain interest in the club affairs. Silver cups will be awarded to the winners of the bowling and pool contests. The accompanying photograph, forwarded by President R. L. Cohen, was taken during the summer of 1911 on the club's run to Springfield.

TORONTO CLUB RUN.

ONE of the last runs of the Toronto (Ont.) M. C. in 1911 was to Guelph, a distance of 75 miles, and there was almost a full turnout of the members. All the riders reached Guelph without mishap, and after having dinner they returned to Toronto in good time. The photograph, showing the riders lined up preparatory to the run, is forwarded by W. F. Kerr.

RECENTLY the Hagerstown (Md.) Motorcycle Club made a run to Martinsburg, W. Va.

A COMBINATION MEET

Canadian Club Will Hold Motorcycle Events in Connection with Aviation Features.

AT the last regular meeting of the London (Can.) M. C. plans were taken up for a combination motorcycle and aviation meet to be held on May 24. The Curtiss staff of aviators will have charge of the air features, and the motorcycle races will be arranged by the club. If the forthcoming program proves as successful as is now indicated, another along similar lines will be arranged later in the season.

Although the roads in the vicinity of London are still covered with ice and snow, the boys cannot resist the temptation to try out their old busses as well as some of the new models, and local dealers report lively business. Among the agents who are showing 1912 machines are the following: Kenneth McColl, Harley-Davidsons; Bicycle and Motor Sales Company, Pope; F. Benson & Co., Indians, and Fred Kerr, Emblem and Flanders machines.

FORM CLUB IN PLAINFIELD.

AT a recent meeting of the motorcyclists of Plainfield, N. J., a permanent organization was effected and the following officers were elected: Ralph Auerbach, president; J. J. Moore, vice-president; R. Van Doren, secretary; W. DeW. Miller, assistant secretary; Jack Horner, financial secretary; P. F. Haberle, treasurer; G. Johnson and L. Hampson, directors; Edward R. Honeyman, captain; N. Thul, first road surgeon; B. Howell, second road surgeon. The club will be represented in the 24-hour endurance run to be held by the New Jersey M. C., of Newark, on Memorial Day, and will open its own season with a run in April.

LIVE SQUAD IN DEADWOOD.

THERE was a large attendance at the first annual dance and reception of the Black Hills M. C. of Deadwood, S. D., which was held recently, and the affair proved as great a success financially as from a social standpoint. The club is mapping out a series of summer runs and meets, and it is announced that hardly a week will pass without some sign of activity from the Black Hills squad. There is a creditable track at Spearfish which will be used by the club for its speed events. A. H. Wooley is president of the organization, and his associates are as follows: Roy Faulkner, vice-president; Philip Schoenberger, secretary; A. E. Baillie, treasurer, and J. D. Picazá, road captain.

J. F. BLAIR, O. O. Spell and Will Plandel, of Canon City, Col., recently made a motorcycle trip to Pueblo and return.

MY CAREER AS A RACER

By FRANK HART

Although I was perfectly sincere in the announcement that I would never race again after my defeat in the Philadelphia meet it soon became evident that I could not shake off the racing fever, and that I would not be able to resist another opportunity to enter the ranks of the speedsters. Several weeks passed and in due time I received a letter from the Reading Standard factory asking whether I desired to do any more riding for the company.

After thinking the matter over and realizing the chances I had taken in the Philadelphia races I decided that I had just about as good an excuse for sticking to track work as anyone, and I informed the Reading folks that I would continue racing if they would give me a regular salary of $25 a week. In a few days they notified me that I had been placed on the salary list at the figure mentioned. So much for that.

Drawing Two Salaries.

My next problem was to arrange with my New York employer so that I could get off to attend all the meets, and this did not prove difficult. I was allowed to absent myself from the office at any time except during the last few days in each month when it was very necessary for me to be on hand. So well did this system work that I missed only one meet during the season, and that was held on September 30.

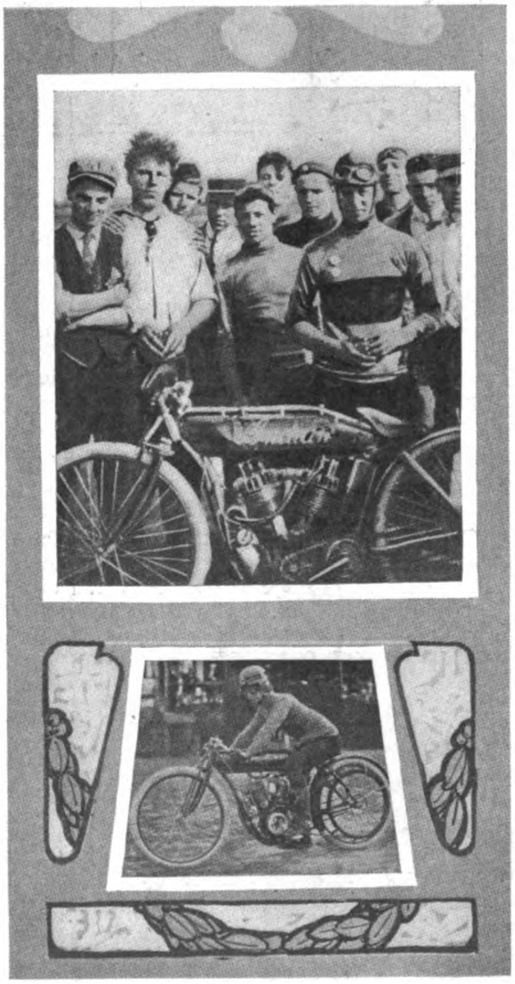
I now drew two salaries which amounted to $45 a week, and life was quite rosy. I was having a good time, knocking about the country and finding plenty of things to interest me, and I finally arrived at the conclusion that I had not made a mistake in sticking to my racing machines. My friends said I was a "comer," but I was satisfied simply to do my best at all times and draw my twenty-five a week. I hardly felt like a champion at that time.

Clouds on the Horizon.

My first engagement for the Reading Standard folks under the salary arrangement was at a meet in a Pennsylvannia town where I won two out of three events. I did not have to ride my head off to land these victories, for I had a considerable advantage over the other boys who were entered. This was late in September and I did not attend another meet until the end of October. In the meantime I had been drawing my twenty-five a week regularly, and I felt a bit uneasy because I was not given more work to do. About the first of November I received a letter that I had been expecting. It was from the company and explained that my salary would be discontinued in view of the fact that steps were being taken to specialize on touring machines instead of racers.

The Trophy Bugaboo.

During the season of 1910 I had won about $480 in prizes and had saved $300 in cash. On the whole I regarded this as a satisfactory showing. I had several funny experiences at the meets and a number of narrow escapes from injury. On one occasion I competed in a town where the promoters of the races were riders themselves; they were listed in the amateur trade class. At this meet each rider was asked whether he wanted to ride for the prizes, which were gold watches and stick-pins, or whether he would accept $25 as his share, win or lose. It goes without saying that the boys passed up the prizes, for the watches were worth only about $15 each, and the stick-pins could be bought for five dollars apiece.



The Old Class Problem.

This meet called my attention to a mighty interesting phase of the racing game, which is not less interesting today. It convinced me that the class of so-called amateur trade riders was a joke and that it would be more satisfactory to bring all competing riders out in their true colors. For instance, I knew one rider who drew twenty-five dollars a week from a factory and the same salary from a tire company, and when I called at his home one day he was able to show only a few cups and medals which were won in his first meets. There was no mystery about it. In all his later races the money looked good to him and he had passed up the prizes. This chap is one of the leading amateur riders today.

It would be quite a joke if Chairman Thornley, of the F. A. M. competition committee, should take a notion some fine day to ask certain trade riders if they could show such and such prizes which were won at meets. It would be an eye-opener. In my humble opinion the sooner the F. A. M. turns all the trade riders into the professional class the better it will be for the sport.

Big Risks and Small Gains.

Here is another argument in favor of having only two classes in motorcycle racing: The risks that an amateur is obliged to take are far out of proportion to the small premiums he receives for riding. Let us hark back to Walter Goerke's case, for instance. Walter broke his leg in a contest on the Long Island Motor Parkway early in 1911, and is still going about with the aid of a cane. His injury has proved quite serious, and still if he had been the winner of the race in which he was hurt he would not have received anything but a $25 watch.

It must be admitted that no such prize could repay him for the risk he took. This is not intended as a reflection upon the management of the contest in question, for the same system is in operation all over the country. It simply goes to prove that there is room for improvement in this direction. Since his accident Goerke has spent about $700, and he is not yet through paying doctor's bills.

A Percentage of Receipts.

My suggestion would be for the F. A. M. to recognize only two classes, professionals and private owners. It would also be well to perfect such regulations as would prevent race promoters from dictating unreasonable terms to the riders, so that the men who risk their lives for the amusement of the spectators may profit by having a fair percentage of the gate receipts. Here's another point: Our present system tends to discourage races between private owners, and this is lamentable in view of the fact that many meets are started through friendly rivalry between club members.

The private owner is discouraged by being forced to ride against amateur trade riders who are mounted on fast machines, and who enter every event to ride for their lives, as the saying goes. If the trade rider fails to win he hears about it from the factory, and if he loses too often his job is gone. As a result he puts up a desperate fight and the defeated private owner and his friends leave the track disgusted.

Fostering Racing Interest.

If the trade riders were removed from the amateur ranks the genuine private owner would have a chance, and it is safe to say that many meets would give greater satisfaction to the folks who patronize them. The trade riders are mounted on the fastest machines their factories can produce, and there is no good reason why they should not class as professionals. This would certainly be fairer than the present system, which allows a trade speedster to drop into a town and carry off the bulk of the winnings at a meet in which private owners are competing.

Some people go to a race meet solely to witness dare-devil riding, others go to see friendly arguments settled, but it is safe to say that every lover of racing wants to have fair play. Let the professionals fight out their own battles and give the private owners a chance to compete without the annoyance and danger of riding against experts on high-powered machines. If this is done the sport will be cleaner, racing interest will be fostered and the amusement-loving public will be much better satisfied.

On the Indian Staff.

Shortly after Goerke's accident had put him in a hospital I asked to be placed on the Hendee Manufacturing Company's racing staff in his place, and was informed that I would be supplied with a machine. A few days later Jake DeRosier notified me by telephone that the company desired me to ride with him at a meet in Washington, D. C. We competed on the old Bennings track and I captured two out of three races I entered, breaking a chain and being forced out of the third. This was on Saturday and races were also scheduled for Sunday, but as the management refused to turn over the prizes for the first day's events until the close of the program the boys decided not to ride on the second day. I was obliged to leave for home without my cups, but I had the consolation of knowing that I had made good in my first meet as an Indian rider.

In Fast Company.

My next appearance as a representative of the Wigwam was at Guttenberg, N. J., on May 14, 1911. I entered two events and captured one. In the other I blew out a tire. On May 21 I again rode at Guttenberg, competing in three races, a 10-mile event, another at 20 miles and a half hour race. I won the first and third and blew out two tires in the 20-mile event. Some folks figure that tires do not influence racing to any great extent, but they do, as will be noted from my references to different meets.

On May 26 the Hendee company offered me an opportunity to ride in the 5-mile championship event at Chicago and I jumped at it. Having never ridden the track before I tried to get a little practise, but was not permitted even to give my machine a try-out until two minutes before the races were called.

A Spill at Top Speed.

When the pistol was fired I got away with thirteen other starters in a 10-mile event. On the first stretch I took the lead and held it until I struck the turn when Bill Teubner gained about ten feet on me. Coming down the home stretch I was just pulling alongside Teubner again and we went into the turn at about 70 miles an hour. Then I heard an explosion and a second later I was sliding forty feet across the track. Knowing that there were other riders close behind me I lay flat and figured that my finish was at hand. I heard several machines z-z-z-zip as they flew past only a foot away from me and I was prepared for the worst.

I did not know where my machine was and didn't dare look up for a time. When it seemed to be quiet about me again I rolled over near the inner rail and stood up. The dust was so thick that I could not see anything, but I could hear several motors still buzzing around the saucer.

What It Means to Fall.

Never have I realized more clearly than at that instant what it means to fall in a big race. I knew that some of the other riders must have struck my machine and my heart was like lead as I looked about and tried to see what had happened. It developed that seven of the thirteen contestants had gone down and that Poor Harry Nixon had crashed into the fence and sustained fatal injuries. A few of the riders were so far behind that it was possible to flag them before they came into the turn. Someone had picked up my machine.

When I examined the machine later I found dents two inches deep in the tank where the other machines had battered it. The pedals were gone and the handlebars were twisted in forty different directions. In short, my mount was a wreck. I used another machine in five other races and won three firsts.

(To be continued.)

OHIO RIDERS MOURN

Death of Dr. A. M. Webster, of Lorain, Comes as Heavy Blow to Legions of Friends Throughout the State.

HAVING contracted pneumonia after a long, cold run on his motorcycle recently Dr. Albert M. Webster, of Lorain, F. A. M. commissioner for northern Ohio and one of the most popular riders who ever piloted a machine in middle western territory, succumbed on March 14. His passing came as a crushing blow to hundreds of motorcyclists and to legions of friends outside the ranks who had long regarded him as a comrade in the truest sense of the word. No greater tribute can be paid the doctor than to say that everyone who knew him feels a personal bereavement. His comparatively brief span of life—thirty-seven years—was marked by an unselfish devotion to projects which brought him little or no gain, and it is safe to say that the breach left in the ranks of motorcycle workers in Ohio will not readily be filled.

One year ago Dr. Webster made a motorcycle tour of Europe, accompanied by William Chadeayne, of the Greyhound company, and for the last four years he has been active in motorcycle affairs in Lorain and vicinity. He was born in Oberlin and spent some of his earlier years in Elyria, taking up his practice of medicine in Lorain in 1910. Besides his mother, Mrs. I. A. Webster, and a sister, Dr. Webster leaves one daughter, who has been living with her grandmother since the death of her mother several years ago.

The members of the Cleveland and Lorain motorcycle clubs turned out in a body at the funeral which was held on Saturday afternoon, March 16. Dr. Webster was a member of the Cleveland club and the founder of the Lorain organization.

The Late Dr. A. M. Webster.

ON SOUTHERN TRIP.

CHAS. S. BROOKS, who has been in the employ of the Twentieth Century Manufacturing Company, of Newark, is now on a business trip South. He reports excellent business, and good prospects for a fine season.

A MOTORCYCLE, aeroplane and automobile meet is being planned for Peoria, Ill., May 5. The leading riders, aviators and drivers will appear.

FIGHTING NEW TIRE BILL

Manufacturers Oppose Passage of Unreasonable Measure Providing That All Rubber Casings Must Be Dated.

REPRESENTATIVES of many of the prominent tire companies attended a hearing in Albany on Tuesday, March 19, for the purpose of protesting against the final passage of a bill which provides that all tires must be branded with the date of manufacture, under penalty of a fine of $50. Just what is to be gained by the adoption of such a measure has not been made clear, but strenuous efforts were made to rush the bill through before the tire manufacturers could marshal their forces and take a formal stand against it.

The manufacturers argue that such a law would render it practically impossible to supply tires for the motor vehicles of the country, as the casings would, in effect, become perishable goods. Purchasers of cars or motorcycles would not be inclined to accept tires dated back a month or two, in the belief that there must be a good trade reason for the dating system, and as a result the business of dealers and manufacturers would be demoralized. It is shown that tires cannot be produced in sufficient quantities so that dealers may keep them up to date at all times, and that there is no excuse for such an arrangement anyway.

At Tuesday's hearing the manufacturers stated their objections to the bill and announced their intention to contest its passage to the last trench. The proposed measure appears to be without a single reasonable excuse for existence.

BERGER RESIGNS; DEALERS' BUREAU CONTINUES

Merle Sidener, of Indianapolis, Is Now In Charge Of The Work.

L. J. BERGER having resigned in order to go to California, Merle Sidener, of 23 East Ohio street, Indianapolis, has been placed in charge of the National Motorcycle Dealers' Information Bureau. Under Mr. Sidener's direction the original plans will be developed, and every possible endeavor will be put forth to supply dealers with the means required to carry on successful publicity campaigns. The scope of the Bureau's activity is well stated in a letter just received by MOTORCYCLE ILLUSTRATED from Messrs. A. B. Coffman, George Meiser, and Arthur Davidson, the committee appointed by the Motorcycle Manufacturers' Association to organize an information bureau for dealers. Their letter follows:

MARCH 14, 1912.

WITH Spring just ahead, and with prospects for one of the most prosperous seasons in motorcycle history, many motorcycle dealers throughout the country are taking an active interest in the National Motorcycle Dealers' Information Bureau, which was authorized and established by the Motorcycle Manufacturers' Association, during the Chicago show in February.

The purpose of this bureau is to increase the sales of motorcycles—to help the dealer increase his business. To this end the bureau will promptly and gladly furnish, without cost to any dealer, copy for advertisements, selling letters, follow-up letters, and will, at all times, answer questions and offer suggestions relating to advertising and publicity.

All that is necessary is for a dealer to say that he is interested. Everything that is prepared by the bureau will thereafter be forwarded to him, and in addition he will receive answers to any questions relating to advertising and selling.

This work was placed in the hands of L. J. Berger, at Chicago, and a start has been made. Mr. Berger has, however, decided to remove to California, and he will be unable to give the affairs of the bureau further attention. This work has, therefore, been placed in the hands of Merle Sidener, 23 East Ohio street, Indianapolis, Ind., and will be carried on by him.

This change in management will result in some slight delay in handling inquiries recently received, but Mr. Sidener will take up the work at once and dispose of these inquiries as fast as possible.

In the meantime, all dealers who are interested in the plans, suggestions and help to be offered by the bureau, are urged to write to Mr. Sidener and tell him so. Just say to him that you'd like to have whatever the bureau prepares for interested dealers, and it will come to you.

Nearly all dealers use some advertising space in their local newspapers. It will be the business of the bureau to help these dealers use such space to the best advantage by preparing copy that will attract and interest newspaper readers.

Most dealers are too busy to take the necessary time to prepare these advertisements, just as a big dry goods merchant is too busy with other things to write his display ads. He has an advertising department, which takes the matter out of his hands. This bureau, created by the motorcycle manufacturers, is the advertising department of all dealers who wish to avail themselves of its services. Form and sales letters will be prepared in a series, so that an "inquiry" can be systematically followed. Various suggestions will be made from time to time and the bureau will always be ready to answer "advertising and selling" questions.

There's a good season just ahead of the motorcycle dealers, but it can be made a better season yet if the dealers will take advantage of the service and suggestions of this bureau and write to Mr. Sidener at once. A postal card will do. Just say, "I'm interested in the Motorcycle Dealers' Information Bureau"—and he will do the rest.

GEORGE MEISER,
ARTHUR DAVIDSON,
A. B. COFFMAN,
Committee of the Motorcycle Manufacturers' Association.

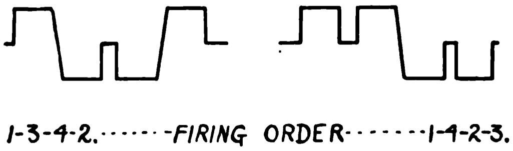
IT STOOD THE TEST.

AS a result of severe testing of the Harley-Davidson motorcycle under all weather conditions in both day and night service by linemen of the Milwaukee fire and police alarm system, the city of Milwaukee has ordered another motorcycle of that make for immediate delivery.

Questions ??? and Answers

ORDER OF FIRING.

FRANK K. SCANLAN—The order of firing of the Pierce four-cylinder motor is 1-3-4-2, and the crankshaft has the two end throws together and the two inner throws also together. The inner and outer throws are, however, 180 degs. apart. For a motor firing 1-4-2-3, the throws would be as in the accompanying sketch, 1 and 2 together and 4 and 3 together. This arrangement, while at one time in use by several foreign designers, has been abandoned for the better balanced form giving the order 1-3-4-2, or 1-2-4-3.



Write the Société des Cycles Clément et Gladiateur, Pré-St.-Gervais, France. Campani & Cocchi, 2142 Broadway, New York, may have Clement parts also.

The weight of the flywheel rims, at a radius of 10 inches from the shaft center would be 6 pounds. The weight of a flywheel or pair of flywheels (total rim weight) is derived from the formula $w = 10.6 \frac{bl^2}{r}$ when b is the bore, l the stroke, and r the radius of the flywheel rim. The outside diameter of the flywheel is often calculated as 3.3 times the stroke, but in some motor constructions this may give too large a crankcase. Cast iron is taken at 0.26 pound per cubic inch.

BUYING SECOND-HAND MOUNT.

F. G. MUGGLESWORTH—When a machine is advertised, it is very difficult for the journal in which the advertisement appears to guarantee the truth of the description in the said advertisement. Notices of second-hand machines appear in the Motorcycle Mart in our issues, and are usually as represented. In order to determine whether a second-hand motorcycle is as represented, an examination of the machine is necessary. If you are not experienced enough for this, have one of your rider friends go over the machine for you. Select a man whom you can trust and with him ascertain the condition of the compression, valve gearing, brakes, transmission, spring fork, ignition devices, pedaling gear control devices, frame and, finally, tires. The compression should be tried by means of the pedals, the exhaust valve being down. The valve gearing should be observed to operate the valves at the proper intervals, while the motor is being pedaled, and again while the motor is running on the stand. The motor should be run with the spark well advanced at all times, and should have a sharp note and bluish color to the exhaust at the outlet of the exhaust chamber. During the pedaling tests, listen for hissing sounds which denote leaks, and when the motor is running, for knocking. If any knocking cannot be corrected by changing the spark position, it indicates either looseness or too much deposit of carbon in the cylinder.

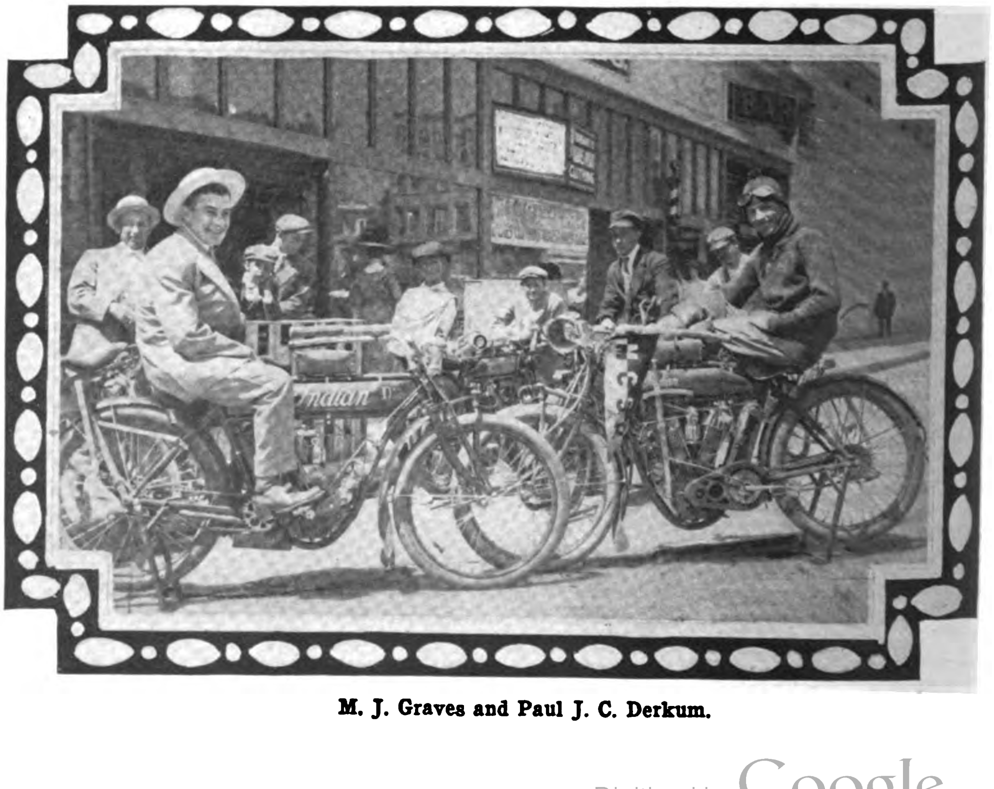
The brakes should be tried out when riding the machine on the road, and also on the stand against the motor running slowly. The last test must be done with great care, and good brakes should appreciably slow down or even stop the motor. Any trouble with the pedaling gear will be detected when the above tests for the other functions are being made. A road run on the machine will demonstrate the efficacy of the control devices, and if excessive play in the connections is noticeable, the machine should not be bought. The cables and ignition connections should be gone over, and the nature of the spark at the plugs determined; they should be deep blue between the points of a clean plug. If not, the source of current is defective or the coil (of a battery and coil machine) is not in good order. Try moving the wheel sideways while holding the spring fork device rigid; if there is considerable side-play the repair of the fork may not be worth the trouble and expense. The tires should be examined to see that the fabric is not exposed, that the shoes are not torn or too badly worn and that the rims are not dented or deformed. Poor tires should not disqualify a machine, as they can be replaced, and usually are the first thing about a second-hand motorcycle that needs replacement. Any breaks in the frame should unquestionably be sufficient to prevent your purchasing it.

DIFFICULTY IN STARTING.

N. BALDWIN—Possibly a readjustment of the mixture will effect easier starting. If you have a two-adjustment carbureter set the low speed jet so that at about 300 r. p. m. or less, the exhaust will have a dark blue color, verging on violet. Often a motor that starts with difficulty can be started with greater ease by blocking the air-ports in the carbureter, so that a very rich mixture is sucked in as the motor is turned over by the pedals. Many motors are timed to be speedy, and are consequently a little hard to start, but the setting of the carbureter is usually the trouble. How is the valve gear? Is there any wear in the cams, rockers, etc.? If the readjustment of the mixture or blocking the air-ports will not render starting easier, examine the carbureter for the operation of the cone,' etc. See our *Motorcycle Manual*, just published. The price is 25 cents, prepaid.

GEAR FOR TWIN MACHINE.

SUBSCRIBER.—The 4½:1 gear we think would be about right, although a 4¼:1 might do, unless very steep grades were encountered. This is figuring that you will not increase your load on the machine. Six actual horsepower is big; it will pull nearly 4 tons over ordinary roads, at a speed of close to 6 miles per hour on an electric truck. You should be able to negotiate any kind of hill that the wheels will hold on with that powered motor and with a 4½:1 gearing. A free-engine clutch will enable you to climb steeper grades than with a fixed engine, but the manipulation of the clutch must be learned in order to do this.



M. J. Graves and Paul J. C. Derkum.

A. B. COFFMAN

A LIVE WIRE COMBINATION.

A "HUMAN dynamo" plus a "fat spark." That is the way some people size up the Yale combination that is going after the motorcycle trade in Indiana, Ohio, West Virginia and western Pennsylvannia.

A. B. Coffman, vice-president and sales-manager of the Consolidated Manufacturing Company, makers of the Yale motorcycle, is, of course, the "human dynamo." He is always busy. And Mr. Coffman, having a pretty good opinion of Squier, calls him a "fat spark." George Squier keeps pretty busy, too, so everybody's happy. Until February 29 he was with the Flanders Company. He began carrying the Yale banner March 4.

BREAKING TROXEL RECORDS.

THE Troxel Mfg. Co., of Elyria, Ohio, reports that it is now cutting 1,000 sides of leather a week to provide tops for its well-known line of motorcycle and bicycle saddles. The firm is turning out in the neighborhood of 50,000 saddles a month for the single-trackers, and the demand for its products is unprecedented. The greatest demand appears to be for the company's new cavalry saddle which is featured by special springing and provision for an unusually low riding position.

J. W. Brandt, of the Troxel staff, is home again after a trip to the West Indies. He states that he feels fit to go into the motorcycle field with more enthusiasm than ever before, which means something. Mr. Brandt was quite busy down in the islands collecting bets from his friends. He was accustomed to stroll into a motorcycle or bicycle store and offer to place a bet that most of the saddles in stock were Troxels. He says he won so steadily that his friends finally refused to lay a bet against him.

GEORGE SQUIER

CHAIN-BELT TRANSMISSION.

WM. R. BERGMAN.—The wrapped-chain transmission is considered too light for motorcycle service, as to keep it any way efficient it must be run very tight. The loss of power is considerable also, and these troubles you naturally have experienced. We advise your replacing it by a V-belt transmission, ¾-inch size, with motor and rear wheel pulley to correspond to the sizes of the present motor and wheel pulleys. It will be better for you in the long run, as the use of the present transmission will be a continual source of trouble, and will probably prevent your riding to any extent. We do not think that you would get any better satisfaction with a leather belt, as the surface is hardly sufficient to transmit the power of the motor. It will probably be difficult to get a round belt of this size, also, without importing from Europe or having it cut to order.

HAVE NO RECORD OF IT.

MICHAEL CSERNUS—We have no record of the makers of the machine you name. It may have been one of a number of machines that were turned out to meet the orders of small dealers, and in such case it would be rather difficult to trace it, as many of these dealers ceased to put out the machines after the first year.

PENNSYLVANIA LICENSE.

JOHN P. SAMPSON, JR.—The license is obtained from the State Highways Department, Harrisburg, Pa., the cost being $2. Write for application form, or better, see one of the garages in your city, such as that of C. R. Zacharias. You will not have to appear in person. A Pennsylvania license entitles you to ride in all the Middle States excepting New Jersey; in all the New England States for a period of from 10 (Rhode Island, New Hampshire, Massachusetts, Vermont) to 30 days (Maine, Connecticut). Exemption also in the following Southern and Middle Western States: Maryland (2 periods of 7 days), Virginia (2 periods of 7 days), North Carolina (only when passing through), Georgia (30 days), Florida (30 days), Mississippi, Ohio (in some cities for 10 days), Indiana, Illinois (60 days). See the MOTORCYCLE MANUAL for information on Touring State regulations, licenses, etc.

PEUGEOT MOTORS.

G. V. Peugeot motors and parts are obtainable from Campani and Cocchi, 2142 Broadway, New York City. For importing such motors, parts, etc., see the shipping department of the Compagnie Générale Transatlantique, 19 State street, New York. The makers are: Les fils de Peugeot Fréres, Valentigny (Doubs), France.

THE LUBRICATION PROBLEM.

EDITOR MOTORCYCLE ILLUSTRATED:—In looking over the various technical reports of motorcycles on the American market, the systems of lubrication appear to the writer to be the weakest point and the one that needs the most immediate attention. To one with some experience with motor vehicles since the days of the de Dion 1¾ h. tricycle with its "pleasing" air, spark, gas, and compression taps situated at intervals along the top tube, it seems to show too great a conservativeness, considering the improvement in the motorbike along other lines, to still employ the same old "oil-mist" that the 1897 tricycles used, and over which dozens of riders wasted their energies and language in trying to keep the oil level proper for all conditions of service. In those pioneer days, we had to ride with momentary expectation of some microscopic oil duct becoming clogged, and what better condition are many of the riders of today in, especially as we did not depend nor do they depend on anything but gravity (within the crankcase) for the descent of the oil to the main bearings?

Not that the "oil-mist" is necessarily unreliable, but there are even more reliable systems, the force-feed, for example. Why not use a pump taking oil from the sump in the crankcase and force it to the piston through the walls of the cylinders, through the main bearings and big-end bearing and let it return by gravity into the sump, where the return will not damage any part if it is defective? Of what value is a pump if it merely sends the oil into the gear- or crankcase to be splashed up into the cylinder, lubricating the walls and piston, but not the wristpin and big-end bearing?

There are some fine systems of lubrication in use on motorcycles, but only on relatively few makes. The others need fairly constant attention; the hand pump every 5 to 20 miles and the gravity systems anywhere from 6 drops per minute up, with increase for high speeds. And how often do the motors get the proper amount of oil? In other words, in the anxiety not to under-lubricate, riders are fined in some localities for emitting smoke, or the inevitable smoking results in legislation against the motorcycle. With the gravity feed, what provision is there for keeping the oil in flowing condition when the mercury is down near the zero mark?

It ought not to cost such a great amount more to fit a good mechanically-driven pump in place of or in connection with the sight-glass, and certainly, from the rider's standpoint, the extra money (if the rider has to pay for it) would be more than made up by the saving in oil and bearings during the year the machine was in use. The writer would be glad to have opinions on this subject of lubrication from users of the various systems, and feels that it would be for the good of the industry and sport if the reasons for the present state of lubrication means were definitely explained. PEARSOL SERGENT.

HUNGRY FOR RACING.

COFFEYVILLE, Kan., has twenty-five motorcyclists who are anxiously waiting for the opening of the riding season. They have a good track and arrangements are being made to hold a series of race meets during the summer.

Touring

TOUR INTO NEBRASKA.

CHAS. R. PALMER—Pittsburgh to Cleveland, 129 miles, route fair, with some clay and sand in Ohio. Itinerary: Pittsburgh, Sewickley, Economy, Rochester, Beaver Falls, Darlington, Unity (O.), Columbiana, Salem, Deerfield, Edinburgh. Ravenna, Streetsboro, Twinsburg, Bedford and Cleveland. Cleveland to South Bend (Ind.), 264 miles, fair to good route. Cleveland, Ridgeville, Elyria, Oberlin, Kipton, Wakeman, Norwalk, Bellevue, Clyde, Fremont, Woodville, Pemberville, Bowling Green, Liberty Center, Napoleon, Ridgeville, Bryan, Edgerton, Butler, Waterloo, Kendallville, Brimfield, Wawaka, Ligomier, Benton Station, Goshen, Osceola, Mishawaka, and South Bend.

South Bend to Chicago, 101.6 miles, good macadam and gravel roads. South Bend to New Carlisle, then through La Porte, Westville, Valparaiso, Wheeler, Hobart, Highlands, Hammond, Wolf Lake, South Chicago, Jackson Park, and Chicago. Chicago to Davenport (Iowa.), 172.5 miles, good stone and gravel, except between DeKalb and Dixon. Chicago to Lombard, West Chicago, Geneva, Maple Park, Cortlandt, DeKalb, Malta, Creston, Rochelle, Ashton, Franklin, Dixon to Sterling, then through Galt, Lydon, Erie, Hillsdale, East Moline, Davenport.

Davenport to Des Moines, 187 miles, mostly black dirt roads, fair even in wet weather. Davenport to Wilton, then through Moscow, West Liberty, Iowa City, Tiffin, Homestead, South Amana, Marengo, Ladora, Victor, Brooklyn, Grinnell, Newton, Colfax, Mitchellville, Altoona, and Des Moines. Des Moines to Omaha, 163 miles, practically all dirt roads; some steep grades. Des Moines to Waukee, then through Ortonville, Adel, Redfield, Montieth, Guthrie Center, Exira, Brayton, Lorah, Atlantic, Marne, Walnut, Avoca, Minden, Neola, Underwood, Council Bluffs and Omaha. From Omaha go to Beatrice (Neb.), 103.5 miles; good dirt and macadam. Omaha to Millard, then through Louisville, Waverley, Havelock, Lincoln, Princeton, Cortland, Pickerell, and to Beatrice. From Beatrice go to Alexandria via Ellis, Harbine, Jansen, Fairbury, K. C. & O. Junction, and Powells, about 40 miles over country roads. Total estimated distance, 1,260.6 miles.

NEW JERSEY-NEW YORK TOUR.

G. HALL.—From Somerville go to Bedminster, Bernardsville and Morristown; then to Mendham, Chester, German Valley, Hackettstown, Vienna, Danville, Buttzville, Bridgeville, Delaware, Myers Ferry (put on Pa. numbers); cross to Portland, Pa., and into Delaware Water Gap. From the Gap go on to Stroudsburg, Analomink, Henryville, Paradise, Mt. Pocono, Tobyhanna (poor stretches), Gouldsboro, Moscow, and through two toll-gates to Scranton. From Scranton go to Providence, Clarks Summit, Wallsville, Fleetville, Glenwood, Hartford, New Milford, Great Bend, Pa., Kirkwood N. Y., and into Binghamton.

From Binghamton go next to Endicott, Applachian, Owego, Smithboro, Waverley, Lowman, Wellsburg, and Elmira. From the latter place go on to Corning, Painted Post, Coopers, Campbell, Savona, Bath, Kanona, Avoca, Cohocton, Perkinsville, Dansville, Groveland, Geneseo, Avon, East Avon, West Henrietta, and into Rochester. Total distance, 264½ miles.

STAMFORD TO WASHINGTON.

P. N. M.—Leave Stamford City Hall, and go through Greenwich, Portchester, Rye, Mamaroneck, Larchmont, New Rochelle, Pelham Bay Park, along Pelham Parkway, Bronx Park, Fordham road to Jerome avenue, New York. Continue down the latter avenue and cross the Harlem river at 155th street, then across to Broadway and down the latter street to 42d street. Go west on 42d street and take the ferry to Weehawken, passing across the town to the Hudson County boulevard and going south on the latter to Newark avenue, Jersey City. Go out to Newark over the Turnpike; from Newark go to Elizabeth, Wheatsheaf, Rahway, Iselin (dangerous railway crossing), Menlo Park, Metuchen, New Brunswick, Monmouth Junction, Kingston, Princeton, Lawrenceville and to Trenton. From Trenton go next to White Horse, Bordentown, Columbus, Burlington, Bridgeboro, Camden; take ferry to Philadelphia and continue to Penn Square, that city. Do not forget to change to New Jersey tag before arriving at Weehawken, and to put on Pennsylvania or Connecticut number again before entering Philadelphia. From City Hall, Philadelphia, go over the route to Washington mentioned in the latter portion of the answer to H. F. Drake and C. J. Frolke in this issue.

FROM A SCHOOLMASTER.

"A COUNTRY School-Teacher at Leisure" is the caption forwarded with the accompanying photograph by Elmer Wohlers, Indian agent at Rock Rapids, Iowa. Wohlers presides over a school twelve miles from his home during the winter months, and gives up much of his time throughout the summer to advancing the cause of motorcycling in his district. As an indication that the schoolmaster is prepared for any emergency that may arise, in the matter of school discipline, note the set of boxing gloves hanging at the corner of his desk.

TO OLD POINT COMFORT.

C. J. FRONKE—The road from Baltimore to Washington is mostly macadam, with one or two stretches of about 1½ miles each of sandy surface. The roads in the State of Virginia are in the worst possible condition. From New York the route is to Philadelphia via Jersey City, Newark, Elizabeth, Rahway, Iselin, Menlo Park, Metuchen, Highland Park, New Brunswick, Dayton, Hightstown, Windsor, Edinburg and Trenton; then Langhorne, Pa., Bustleton, Ogontz, and Philadelphia. The route from Philadelphia to Baltimore is through Darby, Norwood, Chester, Village Green, Chelsea, Wilmington, Del., Newark, Elkton, Md., North East, Perryville, Havre de Grace, Churchville, Belair, Glenarm, Lock Raven, Towson and Baltimore. From Baltimore to Washington the route is through Relay, Laurel and Blagdensburg. From Washington to Richmond the route is through Alexandria, Fairfax, Centerville, Manassas, Calverton, Remington, Culpepper, Locustdale, Orange, Gordonsville, Trevillians, Louisa, Cuckoo, Goodall, Solomons. From Richmond to Newport News and Old Point Comfort, the route is through Seven Pines, New Kent, Sisterville, Brownsville, Toano, Williamsburg, Hallstead's Point, Warwick, Newport News, Hampton, Phoebus, and finally Old Point Comfort.

TO SCHWENKSVILLE.

AUG. G. NEEDS—From Hightstown go to Windsor, then to Edinburg and Trenton. Cross the Delaware at Trenton (change to Pennsylvania tags), and go on to Langhorne, then to La Trappe, Bustleton (toll gate), then to Ogontz, and into Philadelphia. From the latter place go to Chestnut Hill, Hickorytown, Springtown, Fairview, Providence Square and Collegeville. From Collegeville, go north to Rahns, Graterford, and then to Schwenksville, following the Perkiomen from Collegeville. The river and the P. & R. Railroad (Perkiomen branch) will act as general guides.

COLUMBUS TO INDIANAPOLIS.

ERNEST WOLLERMAN.—The National Pike between Columbus and Indianapolis, is quite level and is mostly gravel surface. From Columbus, go through Alton, West Jefferson, Lafayette, Somerford, Brighton, Vienna, Harmony, Springfield, Donnelsville, Forgy, Brandt, Fountaine, Tadmor, Vandalia, Englewood, Arlington, Lewisburgh, Gettysburg, Richmond, Centerville, Germantown, Cambridge City, Dublin, Lewisville, Ogden, Raysville, Knightstown, Charlottesville, Cleveland, Greenfield, and into Indianapolis. Road maps can be obtained from Rand-McNally & Co., of Chicago. The speed indicator you mention has, as far as we know, never been officially tested, and we are therefore unable to state its accuracy.

TOWANDA, PA., TO WASHINGTON.

H. F. DRAKE.—The route from Towanda, Pa., to Washington, D. C., will be via Wilkes-Barre, Tamaqua, Reading, Pottstown, Philadelphia, Wilmington, Del., Baltimore and Laurel, Md. The first part is from Towanda to Wilkes-Barre, a distance of 70 miles over steep, winding roads, but some macadam near the end. The cities passed through are: Wysox, Wyalusing, Skinner's Ferry, Tunkhannock, Kunkle, Luzerne and Wilkes-Barre. From Wilkes-Barre the next part of the trip is to Harrisburg, 108.8 miles, over fair mountain roads with some poor stretches and macadam. From Wilkes-Barre go through Nanticoke, Shickshinny, Berwick, Bloomsburg, Danville and Northumberland, into Harrisburg. From Harrisburg go to Reading next, a distance of 53.5 miles, over a toll road of good surface. Go through Hummelstown, Swatara, Palmyra, Annville, Lebanon, Avon, Meyerstown, Union, Stouchburg, Womelsdorf, Robesonia, Wernersville, Sinking Spring, and into Reading. From Reading go next to Philadelphia, 57 miles over good macadam roads. Go from Reading through Black Bear, Baumstown, Douglassville, Pottstown, Limerick Center, Limerick Square, Collegeville, Providence Square, Fairview, Springtown, Hickorytown, Chestnut Hill and into Philadelphia. From Philadelphia go next to Baltimore, 108.4 miles, over macadam and dirt roads. Leave Philadelphia and go to Darby, then to Norwood, Chester, Village Green, Chelsea, Wilmington, Del., Newark, Elkton, Md., Northeast, Perryville, Havre de Grace, Churchville, Belair, Glenarm, Towson and to Baltimore. From Baltimore to Washington completes the trip, the distance being 44 miles and the surfaces sandy. Leave Baltimore and go to Relay, then to Laurel, and continue on to Washington. The total distance is 441.7 miles.

TOURING BY SIDE-CAR.

J. L. MOORE.—We think the more comfortable method of transporting your passenger would be by sidecar for the three-hundred mile trip. If your mount has a 6 or 7 h. motor, you should have no difficulty in riding over average country roads, unless these average roads are quagmires, bogs or deep with sand. The other attachment is lighter, but not so comfortable for the passenger, and with the power mentioned you should be able to carry at least 600 pounds passenger and attachment weight anywhere that the wheels will bite. This does not mean that you will be able to burn up the roads or race passing machines, but it does mean that you should be able to traverse practically all average roads with either attachment at a speed within the legal limit.

THE "DEVELINE" WHISTLE.

EDITOR MOTORCYCLE ILLUSTRATED.—Seeing a recent inquiry as to the "Develine" whistle, would say that any reader can obtain one from Maher & Grosh, of Toledo, Ohio. J. L. MOORE.

STATE MAPS.

R. A. BEITZ.—Write the Rand-McNally & Company, Chicago, Ill., for maps of the State you desire.

TAMPA, Fla., now has a motordrome association and meets are being scheduled at the Tampa Bay Athletic grounds.

LONG SIDE-CAR TRIP.

H. S. ROTHERA, of Peekskill, N. Y., is an enthusiastic side-carist who has made some long interstate runs without finding any obstacles which his outfit could not overcome. He uses a Minneapolis "Big 5" and an imported side-car. Recently Mr. Rothera, accompanied by his wife and son, made a trip from Peekskill to Philadelphia, Pa., via Tarrytown, Nyack, Newark, Princeton and Trenton in eight hours, actual road time. He reports that his trips with the side-car attachment give him no more trouble than runs with the single machine.

DAYTON SHOW

Motorcycle Dealers in Ohio City Will Have Exclusive Exhibition of Mounts Late in April.

ARRANGEMENTS have been practically completed for the motorcycle show to be held in Dayton, Ohio, in the latter part of April, and the new officers of the Dayton M. C. who are in charge of the project look for big returns from it. Spacious quarters have been obtained in a downtown building, and the dealers of the city are preparing for a fine display of machines. In addition to the motorcycles a full line of accessories and supplies will be shown, but no motor cars will figure in this show.

The new officers of the Dayton club are as follows: O. A. Stuhlreher, president; R. E. Coffield, vice-president; Charles Zetler, secretary, and L. F. Jacobs, treasurer. The trustees are E. D. Hensley, C. G. Blackwell and A. J. McCollum. Charles Zetler will direct the business end of the show.

TEMPTATION TOO STRONG.

FASCINATED by a new Indian machine which was displayed in the establishment of Jacob Pfotzer, Jr., at 2335 Boulevard, Jersey City, N. J., Frank Russell, an 18 year old youth of Hudson City, broke into the salesroom and made off with the coveted mount. Members of the Hudson County motorcycle police were placed upon his trail in short order, however, and Frank had barely learned how to operate his new possession when the minions of the law swooped down on him.

ANOTHER IN CALIFORNIA.

THE chief topic of motorcycle interest in Modesto, Cal., is the motorcycle club that has recently been organized there. The club was formed about three weeks ago with a charter membership of forty-three. It is a 100 per cent. F. A. M. club. The officers elected are George Wallace, president; Albert Johnson, vice-president; J. J. O'Keefe, secretary, and A. W. Nuding, treasurer. The position of captain has been tendered to J. H. Harding. The club has two rooms, one a reading room, and the other a workroom and shop.

AN OLD-TIME SESSION.

THE Buffalo (N. Y.) M. C. held a rousing, old-time meeting on March 6, at which thirty-four members participated in a lively business and social program. Lunch was served, pipes and tobacco were plentiful, and impromptu addresses were many and interesting. A feature of the evening was a match game of shuffleboard, in which H. H. Sill and William Mench met Doc. Hanson and Hough Pohl. Sill and Mench carried off the honors after a hard-fought contest. Later there was a pool match between Charles Logan and Oliver Walters, Logan winning by one ball. Throughout the contest friends of the players crowded around and cheered them, and there was no scarcity of enthusiasm. Plans were outlined for a two-day endurance run to be held May 30-31.

RACE FEVER IN JACKSONVILLE.

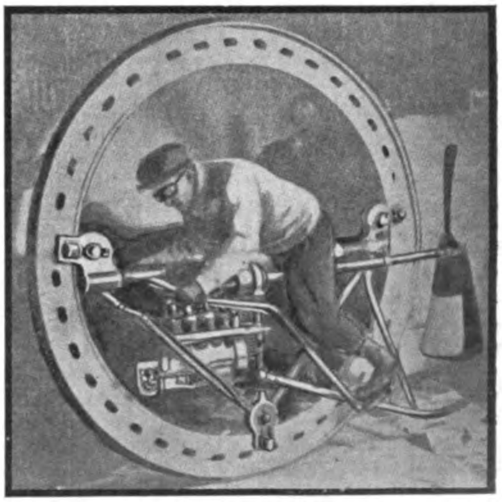
THE Jacksonville (Fla.) M. C. recently purchased a site near the heart of the city on which a fine clubhouse will be erected in the near future. The club has 200 members and is in a prosperous condition. It is the intention to have a two-story building with a basement specially fitted for use as a garage. The organization has also opened negotiations with the management of Phoenix Park for the erection of a four-lap motordrome. The club plans to provide a first-class track and then offer such inducements as will bring the best racers in the country to their city.

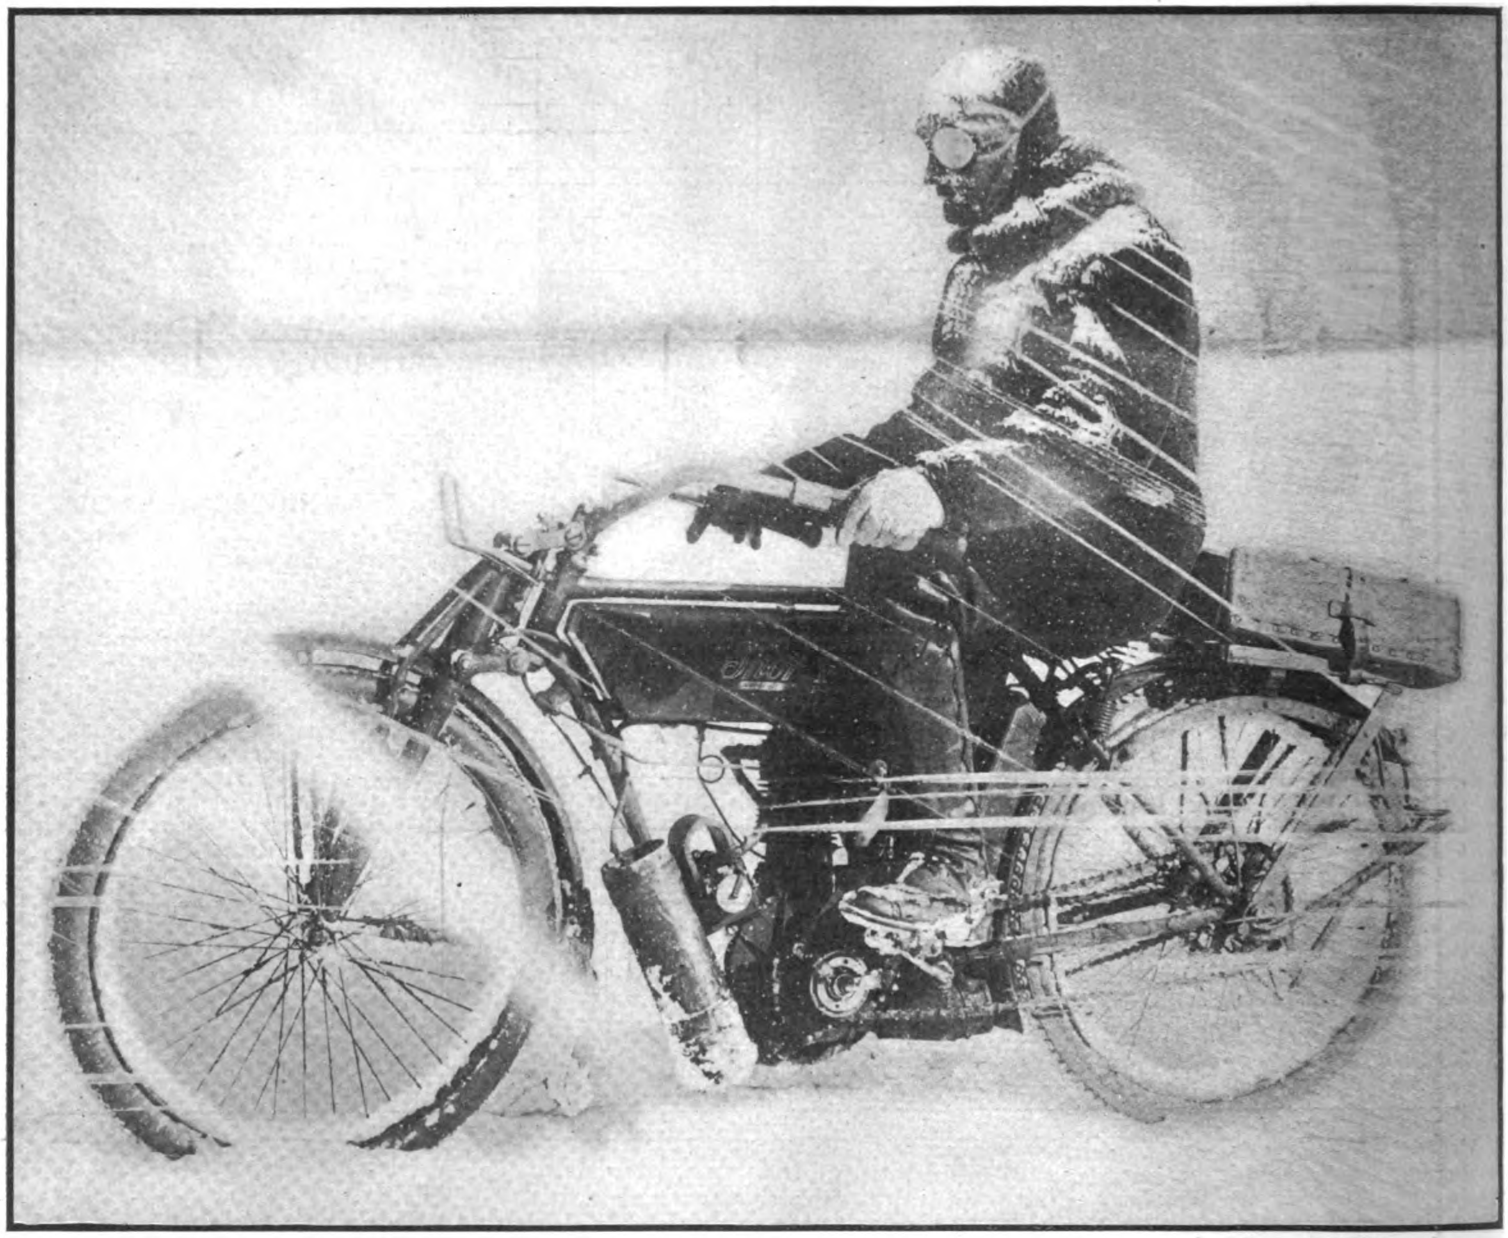
CEDAR RAPIDS SMOKER.

THERE was a large attendance of motorcyclists at the smoker given by the Cedar Rapids M. C. on March 14, and the affair proved so successful that another program along similar lines may be given to mark the close of the winter season. The last smoker was in the nature of a celebration attending the opening of the club's new quarters

AN ODD MACHINE.

THE unique vehicle illustrated above was made by Coates & McDonald, 617 Liggett Building, St. Louis, Mo. It will be noted that it is a unicycle of a rather unusual design, the particular model illustrated above having been manufactured for exhibition purposes. The machine is equipped with a Pierce four-cylinder motor, the same as is used on the Pierce 4 motorcycle. The unicycle has been tried out on the track and, according to its designers and manufacturers, has traveled as fast as fifty-five miles an hour.





TO LOCATE IN DENVER.

W. B. GLASSER, who has been connected with the Reading Standard Company, of Reading, Pa., for some time past as assistant sales manager, has just returned from an extended Western trip in the interest of the company. He visited Denver, Col., and found highly encouraging conditions, the dealers there being confident that no less than 1,000 machines will be sold in Denver and vicinity for the 1912 season. About 150 of the new models have already been delivered. Mr. Glasser announces that personal interests will demand his attention in Denver for some time to come, and that he will retire temporarily from the motorcycle field. Hereafter letters may be addressed to him at 780 Downing street, Denver.

A SERIES of motorcycle races will be held in Dubuque, Iowa, on Decoration Day, May 30, according to the plans of the Motorcycle Club in that city.

CHARLES JOHNSON, of Mesa, Ariz., has discarded the horse and saddle for the two-wheeler to carry him to and from his ranch.

A HARDY CHICAGOAN.

PHILIP LOMBARD, who rides a motorcycle in a commercial capacity for Carson, Pirie, Scott & Co., general merchants of Chicago, claims to hold the record for winter riding in and about the Windy City. The accompanying photograph was taken on February 21 while Lombard was plugging through the worst snowstorm Chicago has experienced in 24 years. Lombard has ridden his machine every day except Sundays throughout the winter season, and has maintained a daily average of 60 to 80 miles. He uses a United States, Bailey tread tire on his front wheel and a Pennsylvania Vacuum Cup tire in the rear, and states that he has experienced little trouble from skidding. The hardy Chicagoan is preparing to leave the employ of the general merchandise firm above referred to and accept a position as foreman for the repair department of the retail branch of the Aurora Automatic Machinery Co. He will take the place of M. N. Graves who is to act as assistant to Mr. Freeman in the sales department.

THE new motorcycle license plates in St. Louis, Mo., are made of aluminum with the numbers printed in black.

ANOTHER BROOKLYN SQUAD.

THE latest addition to the list of clubs in Brooklyn, N. Y., is the Bushwick M. C., which was organized on March 2. The clan has opened quarters at 1507 Bushwick avenue and elected the following officers: Walter Hoff, president; Joseph W. Gildersleeve, vice-president; John J. Ward, secretary-treasurer; William Burman, captain, and John Schumacker, lieutenant. Meetings will be held on the first and third Mondays of each month, and it is stated that plans are being perfected for a number of summer runs, economy tests and hill climbs. At last reports the club had twenty riders, with a prospect of increasing this number at an early date. Applications for membership may be obtained from John Ward, 1507 Bushwick avenue.

THE annual report of the Toledo (Ohio) police department shows that twelve motorcycle policemen traveled a distance of 64,677 miles on their machines, a record of nearly three trips around the world.

CHIEF of Police De Miller, of Joliet, Ill., is advocating the use of motorcycles for police officers in that city.

THE DOMINION VIEWPOINT

Canadians Are Fair in Estimates of Machines and Praise Both American and English Makes.

CANADIANS argue that riders of a country in which thirty-two different makes of motorcycles are represented, should be in a position to offer a first-hand comparison of the respective national style of machines, and point out that the Dominion presents just such a situation. Canadian enthusiasts are of the opinion that the English machines possess features which could well be adopted by American producers, although the American machines are preferred on account of their suitability for local conditions. This means that the United States two-wheelers are considered more durable and hardy than their British cousins, but the refined construction of the English motorcycle is also praised.

Grip control is distinctly an American invention, being almost unknown in British circles where the lever system is the choice. The Imperialists are noted for their changeable speed gears, however, which in the opinion of Toronto experts, must some day become universal in the States. A very recent British offering is a multi-speed gear device which allows of thirty distinct changes to suit all conditions, the contrivance being worked by simultaneous contraction and expansion of the front and rear pulleys.

The Englishman has long since had his low saddle position—in fact the British wheel is always very low, to which style the States' producers are rapidly coming. On account of their smaller size, British machines are frequently lighter than Yankee wheels. The over-seas enthusiasts are content with much lower horsepower rating than the riders of the Republic, the popular size in the Old Country being 3½ h., while on this side we lean to sixes and sevens and twins at that. Single-cylindered engines are very acceptable to the English artists.

Push-starters, against which there is some prejudice on this side of the Atlantic, on account of the difficulty in starting in cold weather, have great favor in the British Isles. Mounts without pedals are quite common there. The American rider will have to be shown considerable before he is likely to take to the footboards. The English are to be complimented upon their wheel accessibility. There is hardly a model which does not possess some arrangement allowing free access to all parts of a machine in case of emergency. This arrangement either consists of detachable mudguards or demountable wheels.

Tandem riding is tabooed in England, but the side-car industry has been greatly developed. Thousands of sidecars, some of them of very elaborate nature, are in use in the Old Country whereas in the United States they are the exception, not the rule. The English idea is likely to spread with lightning rapidity here, however, during the coming summer, and American manufacturers seem to realize it, judging by announcements.

British makers deserve all commendation for the manner in which they plate their machines. They do more than polish steel, so that the onslaughts of rust are greatly deterred. This feature has probably been developed on account of the rainy spells in the old land. The "polish" of the British product is, to say the least, ahead of the majority of American makes.

The "Over-Omers" are very particular about their silencers, or—as they are called on this side—mufflers. Even in races, a silencer is seldom discarded. At Brooklands, the entrants in an hour or other long distance contest, or even when making attempts for records, never remove mufflers. Late editions of English machines give no connection between the pedals and the driving wheel other than through the engine. In this way a machine is capable of being started without first being placed upon the stand. Many English mounts have stands for the front wheels to save tires.

The question of relative speed between the British and American models is not readily answered, judging by past performances in Toronto. The best riders use American machines, which fact somewhat discounts the genuine ability of the British models. But in a class race of limited horsepower, the English mount sometimes scores over its rival. Several T. T. models of different makes are owned in Canada, and these can be depended upon for a good showing in track events. In open races, however, the hunks of chain lightning bearing the names of well-known American brands, are unbeatable seemingly.

WHITTIER CLUB A SUCCESS.

THE Whittier (Cal.) Club recently formed has been a great success. There is a good-sized enrollment and the membership is steadily growing. The officers for the year are as follows: Percy Bennet, president; N. Horton, vice-president; Chas. Miller, secretary and treasurer; Rolph Crum, captain.

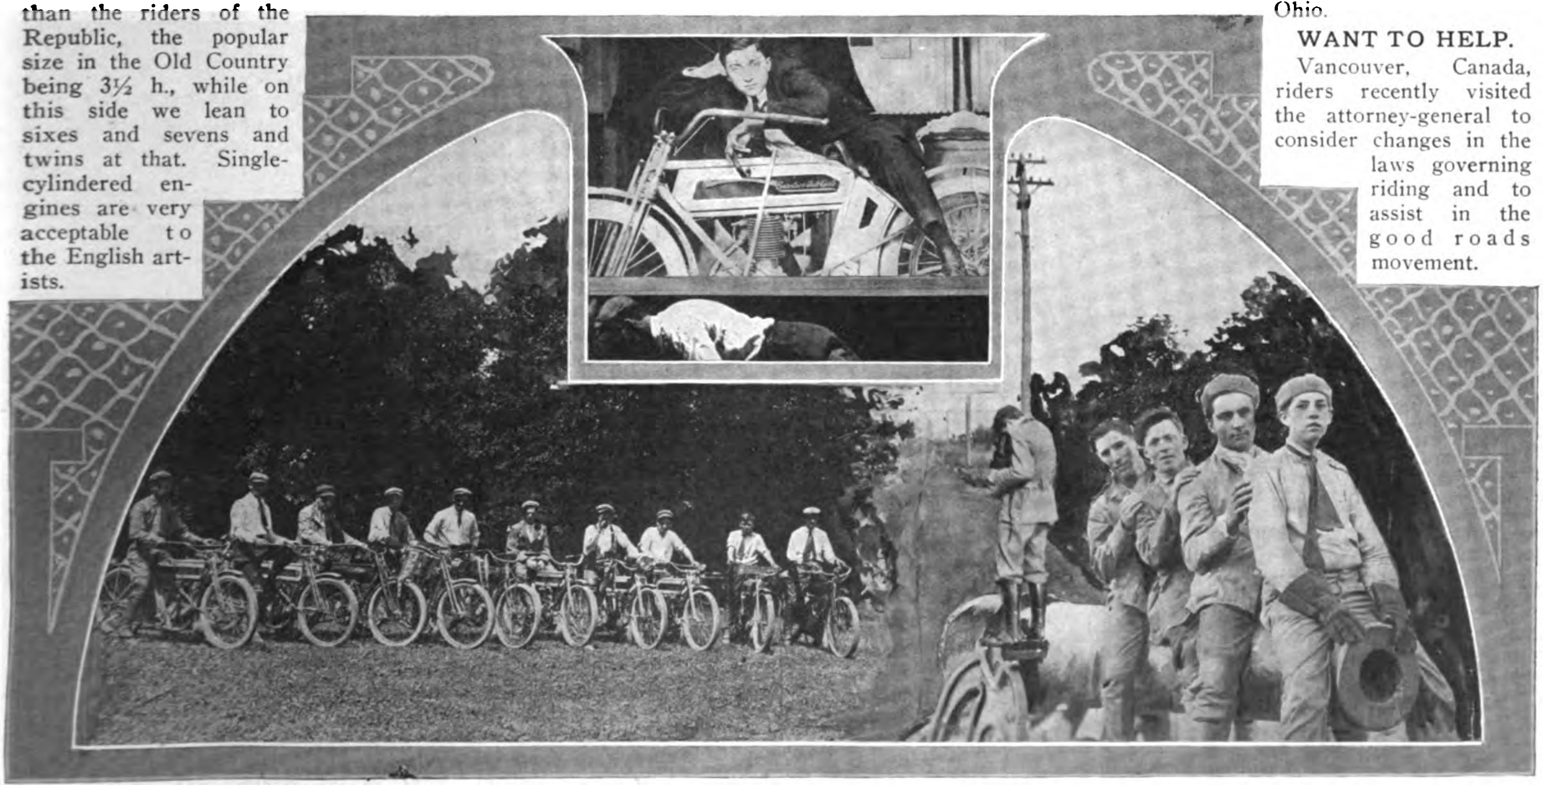
The Modesto Motorcycle Club is promoting racing at Newman, Cal. The detail work has been in the hands of a committee from the club. The track at Newman is a half-mile dirt course, and is in good condition.

FOR BUILDING DEPARTMENT.

SEVEN motorcycles will soon be added to the equipment for the Department of Buildings at Cleveland, Ohio.

WANT TO HELP.

Vancouver, Canada, riders recently visited the attorney-general to consider changes in the laws governing riding and to assist in the good roads movement.



CLEVELAND SNAPSHOTS.

THAT Cleveland, Ohio, has a squad of active and versatile motorcyclists will be inferred from the accompanying photographs which show members of the Cleveland M. C. One of the pictures gives a rear elevation of the Cleveland correspondent of MOTORCYCLE ILLUSTRATED, snapped while he was operating his camera during one of the club runs; another shows a line-up of the club members during one of the social rides held last summer; the narrow panel at the top depicts a C. M. C. athlete caught in the act of doing a handspring at one of the club's outings, and the gun photo tells its own story. The fifth picture shows one of the club riders "waiting for good weather."

TRIUMPH FACTORY

Five-Story Structure in Detroit, with an Annual Capacity of About 6,000 Machines.

A FIVE-STORY building at 51-55 East Woodbridge street, Detroit, has been secured by the Triumph Mfg. Company with which, as announced in the March 7 issue, George W. Sherman and Robert M. Brownson, formerly of the Flanders Co., are identified. The building contains 25,000 square feet of floor space, all of which is already being rapidly filled with new special machinery. All tools, patterns, jigs and other essentials are completed, and orders for material for construction have been placed.

The Triumph Mfg. Company is incorporated for $75,000. The capacity of the factory will be between five and six thousand machines a year. The officers are: President, Robert M. Brownson; secretary, Muir B. Duffield, a prominent Detroiter; treasurer, G. W. Sherman.

BUFFUM ON INDIAN STAFF.

EDWARD BUFFUM, until recently identified with the Miami Cycle & Manufacturing Company, makers of the Flying Merkel, is now associated with Frank Weschler in the sales department of the Hendee Manufacturing Company. "Buff" is so well known in the trade that anything beyond an announcement of the change is quite unnecessary. It will be generally conceded that the acquisition of Buffum is a fine stroke of business policy on the part of the "Big Chief." Titles are not very numerous among the folks who conduct the affairs of the big factory in Springfield, and, as yet, none attaches to Buffum's name. For the time being he will be general utility man at the sales end of the organization, and the energy and perseverance so characteristic of him promise to be strongly felt throughout the wide territory in which Indian machines are sold.

MONARCH ON DISPLAY.

AT the recent automobile show in Syracuse, N. Y., unusual attention was attracted by the new Monarch motorcycle which is being manufactured by the Ives Motorcycle Corporation, of Owego, and riders who gave it a thorough inspection were favorably impressed. Harold F. Turner, who represents the Ives company in Syracuse. was in charge of the exhibit. It is announced that Mr. Turner will take the machine out on the road in a week or two for the purpose of establishing agencies in the principal cities of the Middle West.

FABRIC PULLEY LAGGING

MOTORCYCLISTS who have an eye to keeping their transmission systems up to the highest point of efficiency will be interested in a new offering of the Kraft Knitting Co., of Akron, Ohio, in the form of a fabric pulley lagging. The Kraft material is specially treated and is gummed so that no screws are required to keep it in its proper position on the pulley. It does not burn readily under hard service and will not produce a glossy surface on the belt. The fabric is self-vulcanizing and extremely simple to apply, as it is supplied in a roll and unwound as it is needed. Exhaustive tests have backed up the company's claims for its product, which is being marketed under the trade name "Pull-E-Tape." It is not necessary to remove the pulley to apply it. Inquiries addressed to the Kraft Knitting Co., 150 East Exchange street, Akron, will receive prompt attention.

NEW ENGLAND OUTLOOK BRIGHT.

E. B. NATHAN, of the Nathan Novelty Mfg. Company, of New York, has just returned from a New England trip. He reports that the outlook is very promising for the motorcycle business. On calling upon the M. M. Sales Company, Hub Motorcycle Company and George N. Holden, he was informed in every particular that the sale of motorcycles had been extraordinarily good and that the machines were waiting for delivery. At the Boston Show everybody was asking, "Where are the motorcycles exhibited?" Mr. Nathan thinks that next year it would be advisable for the motorcycle trade to have a good exhibit at the Boston Show.

THAT DE LUXE TWIN.

NUMEROUS inquiries of late have led the Minneapolis Motorcycle Co. to call attention once more to the fact that its big De Luxe twin is equipped with chain drive and free engine clutch at the list price of $285, f. o. b. factory. The De Luxe model is enjoying a popularity far beyond the expectations of its designers, and the factory is already working under pressure to keep abreast of orders.

CONTINENTAL CHANGES.

WALTER S. TULLIS, who has been traveling in the Middle West as a representative of the Continental Rubber Works, of Erie, Pa., will, on April 1, take charge of the company's New York branch, which supplies New England, the eastern section of New York State, Pennsylvania, and the eastern coast territory as far south as Jacksonville, Fla. Mr. Tullis has had wide experience in the tire business, and it goes without saying that he will continue in his new position the consistent and result-getting work which has justified his promotion.

The Continental company has just added to its sales force E. H. Strickland, who will succeed Mr. Tullis in the Middle Western territory. He has been connected with the Overland Rubber Company, of Denver, Col., and the Denver branch of the Goodyear Tire & Rubber Company.

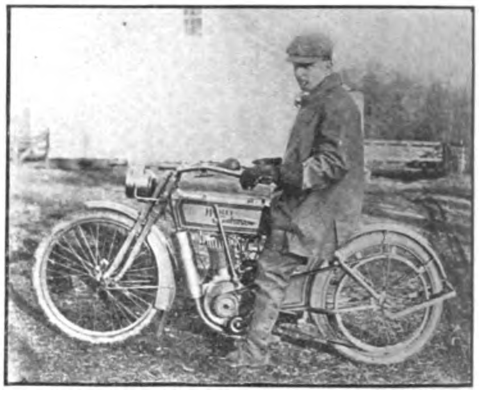
CLEVELAND, Ohio, has a new motorcycle quick delivery company which is using four Thor machines to serve its patrons.

THE Richmond, Va., police department recently added two motorcycle policemen to the squad.

DOING MISSIONARY WORK

Zimmerman Will Preach Harley-Davidson Doctrine in the South and Boost Things Generally.

FROM Baltimore comes the information that August Zimmerman, of that city, has started on a missionary trip through the South as a traveling representative of the Harley-Davidson company. He will, of course, devote most of his time to boosting the H-D product, but he counts on doing much practical work to advance the general cause of the motorcycle throughout the Southern States. Much credit for taking up the work in this co-operative spirit must be given to Arthur Davidson, sales manager of the H-D company, who decided on a recent Southern trip that motorcycle interests in this section of the country were not being developed as rapidly as might be expected.



A short time ago L. C. Rosenkrans, special Harley-Davidson photographer, was sent into Georgia and Florida to obtain unusual pictures which would help to attract attention to the motorcycle. He was successful in getting a large number of striking photos, many of which have been reproduced in newspapers and trade journals.

NEW "MECO" CATALOG.

A WELL-ILLUSTRATED and unusually comprehensive catalog of motorcycle accessories and supplies is now being distributed by the Motorcycle Equipment Company of Hammondsport, N. Y., for the 1912 season. It contains thirty-two pages, every one of which shows several articles calculated to interest the motorcyclist. The company's line includes tires, tire chains, horns, lamps, belts, tandem attachments and shock absorbers, side-cars, carbureters, speedometers, saddles, tanks, brakes, clothing, goggles, luggage carriers, spark-plugs, tool kits and a hundred and one other accessories, all of which are illustrated in the new catalog. It will be forwarded promptly on application. This firm is the only one in the country handling motorcycle accessories exclusively.

EMBLEM AT BOSTON SHOW.

THE Boyd Motor Company, of 23 Stanhope street, contracted to represent Emblem motorcycles in Boston just in time to secure a shipment of the new models for display at the Hub exhibition. Business has proved so good that the wires between Boston and Angola have been unusually busy of late.

AN ATTRACTIVE LINE.

THE Twentieth Century Manufacturing Company, of Newark, N. J., is having a substantial demand for its line of bicycle and motorcycle lamps. This firm is one of the pioneer lamp manufacturers, and the reputation for a high standard product, gained in the early days of bicycling and motorcycling, has always been upheld. The firm's bicycle oil lamps and its acetylene gas bicycle lamps are so universally known as to need no comment on their special efficiency. Their motorcycle searchlight, though of more recent manufacture, is none the less a great favorite and ready seller. The lens and mirror are of the most improved type, and, together with the large sized burner, combine to produce a powerful, penerating light for a long distance ahead and at the sides of the road also. A patent swing-back is a special feature of this lamp, permitting at all times an easy access to the lamp interior for the purpose of cleaning and light adjustment. This feature appeals especially to those who value light efficiency, the result of a clean lighting apparatus. The Twentieth Century generator is notable in its sturdy construction and handsome appearance. It also is featured by a patent locking device instead of the old screw method of locking the two parts together. With no screw threads to corrode and tighten the generator parts can be most easily disconnected. The Twentieth Century catalog will be sent promptly to anyone on request.

WITH THE CLEVELAND TRADE.

LISTER BROS. have reopened their branch on West 25th street near Detroit avenue, after a suspension of work during the winter. They are receiving many orders for early deliveries on Harley-Davidson and Flying Merkel machines.

Manager Ferguson is delivering his spring orders of Yale machines. The past week several orders were placed with the Yale Cycle & Supply Company, of which Mr. Ferguson is manager.

ANNUAL DEALERS' MEETING

H. A. Gliesman Retained as President at Busy Session in Which Work of the Year Was Reviewed.

AT the annual meeting of the Motorcycle Dealers' Association of Greater New York, held on March 12, H. A. Gliesman was retained as president and the balance of the official staff for the coming term was made up as follows: A. H. Patterson, first vice-president; T. J. Sixsmith, second vice-president; G. Rotholz, secretary (re-elected); E. G. Kicherer, treasurer. G. P. Jenkins and F. B. Widmayer were retained as directors and Charles Krebs was chosen as the new member of the board.

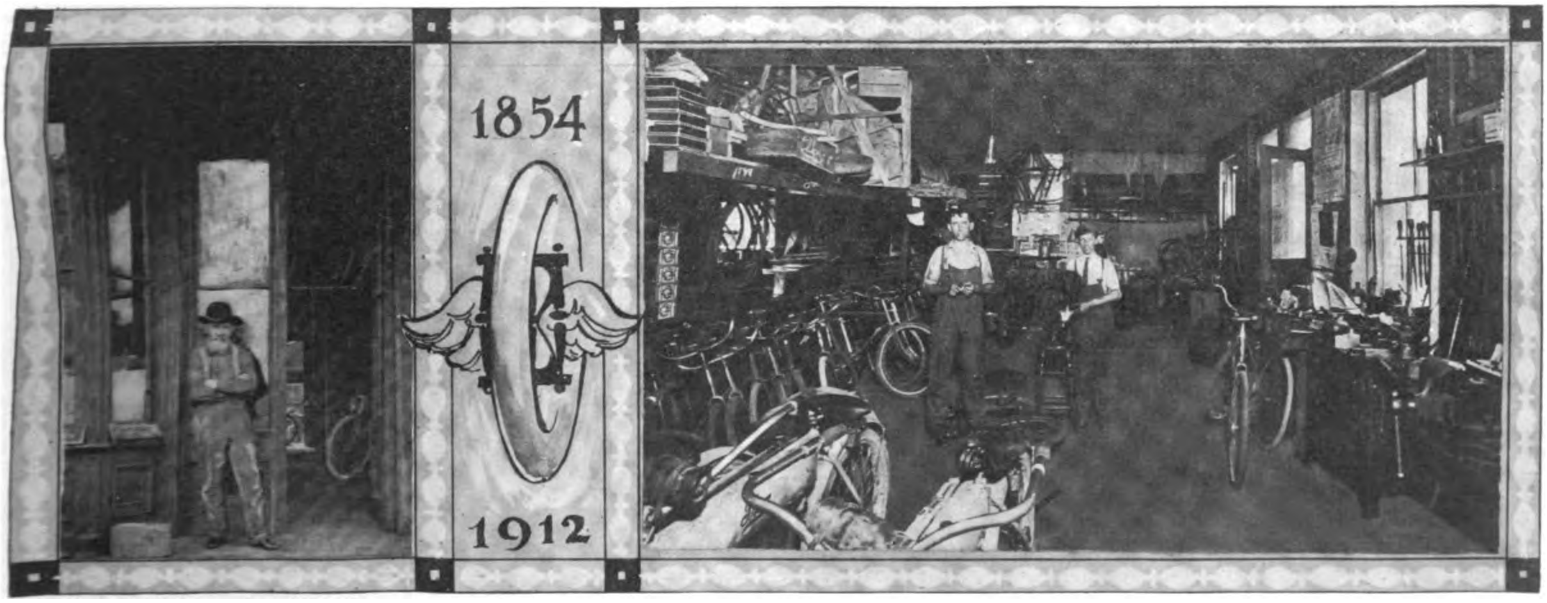
President Gliesman submitted his report which called attention to the achievements of the association since it was formed, and predicted a bright future for it, provided the dealers manifest the interest which the project deserves. He stated that every eligible motorcycle dealer in Greater New York is now a member and that seven dealers in neighboring towns have also been admitted to membership. He referred to the success of the association in having the word "motorcycle" stricken from the recently adopted motor vehicle law which would have worked a serious hardship on dealers had it been allowed to include the motorcycle in its provisions. The president stated that a considerable sum has been spent for advertising and incidental expenses and that the treasury of the organization is still in satisfactory condition.

The committee which had in charge the plans for the annual dinner reported that a substantial profit was realized. As was previously agreed upon, this money will be forwarded to the Olympic Team Fund as a donation from the associated dealers.

ST. CLOUD, Minn., has 31 registered motorcyclists, but they believe the number will be doubled during the spring and the coming summer.

ALTHOUGH spring has asserted itself in many places there is still plenty of snow at Angola, N. Y., where Emblem motorcycles and bicycles are made. The accompanying photograph was taken Sunday, March 17, and shows L. S. Taylor, the Emblem racing man, out for a snow plug. The photograph was snapped about two miles out on Lake Erie. For most of the winter Lake Erie has been covered with from two to four feet of ice and the surface of the lake is a favorite speedway for the Emblem testers. There is plenty of snow inshore, but further out riding is easy. That they are busy at the Emblem factory is attested by the fact that last week the factory started running a night shift in order to catch up with orders.

KUMLER BROS., of Cleveland, have an array of green R.-S. machines on display in their show window. They advise that this color has made a hit with purchasers. Kumler Bros. also handle the Flanders and a good many have already been delivered this year.



A VETERAN DEALER.

OF unusual interest are the accompanying photographs which show the Koch motorcycle and sporting goods headquarters in Rock Island, Ill., and John Koch (at the left), now approaching his eighty-third year, who founded the business in 1854. The actual work of handling the establishment now falls upon Koch's two sons, Ben and John, Jr., but the veteran dealer still spends much of his time tinkering about the shop. The business has been located at its present stand, 218 Seventh street, for the last 48 years. Ben Koch directs the affairs of the motorcycle department and John gives his attention to the bicycle and gun departments. The firm has the Thor agency for Rock Island and vicinity and has placed many machines.

DEALERS

HARMONY IN DETROIT

Dealers Are Pulling Together in New Association, and Riders Have Formed a Touring Club.

DETROIT, MICH.—Detroit has added to its motorcycle list two organizations within the past two weeks, the Detroit Motorcycle Touring Club and the Detroit Motorcycle Dealers' Association. Following are the officers of the new motorcycle club: President, John A. Wilkowski; vice-president, Geo. Hachor; secretary, Leo Dybowski; captain, Rudolph Schulz. These officers, together with Alvin Thoms and William Teodecki, compose the board of directors. The club starts with a charter membership of fifteen, all East Side riders.

The dealers' association was formed for the purpose of promoting the general interests of motorcycling in Detroit, the members believing that concerted action in promoting race meets and other details of the business will be for their mutual benefit. The organization had an opening program March 18, on which date all dealers displayed the latest machine models and decorated their stores. Next year a motorcycle show is to be held. Heretofore but few machines have been placed at the Detroit auto shows, and for the last two years nothing has been done along this line. The general belief is that a show will boom the trade wonderfully, and that an exhibition devoted exclusively to motorcycles is the better business getter.

Racing, the like of which never before has been seen in this section of the country, is another of the projects on the dealers' program for 1912. The first meet of a series which they will conduct will bring the representative riders of all the makes handled in Detroit to this city, which has been impossible heretofore at the meets conducted by the clubs, owing to the rivalry existing. The first meet will be held May 20 at the State Fair Ground track. The officers of the association are: J. B. Trossel, treasurer, and Joseph Adcock, secretary.

NO SCARCITY OF DEALERS.

TORONTO (Can.) is still alive with motorcycle dealers. The opening up of several new stores in the past few weeks has increased the list of agencies for that center to almost a score, with a number of the dealers selling more than one make of machine. The city now possesses four Indian agencies, the branches being scattered in all parts of the city, with the headquarters located in a fine new shop at 384 Spadina avenue. W. H. Dunne, the Thor agent, now has two stores, one at 1492 Queen street West and the second at 368 Yonge street, while a second Flanders agency is to be found at 269 College street. The Emblem is also a new one on the list, Hyslop Brothers, Shuter street, as previously announced, having taken the selling rights for that line.

Marking Off the Winter Days.

BRIGHT OUTLOOK IN FLORIDA.

J. E. McGRAW, of the McGraw Bros. Company, Jacksonville, Fla., has just returned after a visit to the Thor and Harley-Davidson factories, whose products the firm distributes throughout the State. Mr. McGraw is quoted as saying that the motorcycle business in the South will increase almost 500 per cent. during 1912. He attributes this remarkable growth of interest to road improvements as well as to the more dependable machines and reduced prices. The Jacksonville agent is convinced that in the near future Florida will be the second best State in the Union for motorcycle business, giving way only to California. He points out that the all-year riding will do much to bring this condition about when good roads are afforded.

NEW BAKER SPEEDOMETERS.

REALIZING that there is always a market for a product which embodies an exclusive feature of practical value and combines the best points of previous practice, F. A. Baker & Co., of New York City, have just brought out a new line of speedometers under the trade name "Infallible." The exclusive feature referred to is a device by which it is possible to disconnect the drive gears of the computing instrument when the motor is being tested on the stand; this arrangement will undoubtedly appeal to all experienced riders. The new Baker instruments are of the centrifugal type, and are shown in three models. They may be had with 60 or 80-mile dials. While the rear drive is standard, front drive fittings may be obtained for machines which carry the front wheel on the main fork. The drive is through a flexible shaft and worm gears.

SAVANNAH OPENS SEASON

Fine Weather Brings Out Scores of Riders, and Dealers Are Swamped With Rush Orders.

SAVANNAH, GA.—This city and vicinity has been favored with mid-summer weather of late and as a result motorcyclists who had placed orders with local dealers are clamoring for their new machines. Some difficulty is being experienced in obtaining prompt shipments from the factories, but the purchasers have been assured that they will receive their mounts without unreasonable delay. The trade is very lively and competition between dealers is keen.

The Balfour Hardware Company, handling Excelsior and Harley-Davidson machines, counts upon selling at least 150 of the new models; the Harris Tire Company looks forward to disposing of 100 or more Indians, and R. R. Oakman, who has the Pope, Merkel and Yale agencies, is confident that his sales will double those of last year. Orders are also piling up at the headquarters of the Williams Motorcycle Company, which sells the Thor and M. M. machines, and O'Neil & Burch, Flanders agents, and Thomas, the Pierce dealer, report unprecedented activity.

The first 1912 model to arrive here was a Harley-Davidson single. About ten days ago the first Merkel appeared and was sold to a veteran rider before it was uncrated.

GOOD NEWS FROM WICHITA.

MOTORCYCLE dealers in Wichita, Kan., are unanimous in predicting big business for the 1912 season. Agents who have been able to display their new models have made numerous sales in spite of the fact that the roads have been practically impassable since the first of the year. The Drouhard Motorcycle Co., handling the Harley-Davidson machines, has disposed of twelve of the 1912 models, and Honer & Chaney, Indian and Thor agents, are also filling orders. In every instance the dealers report their 1911 business far beyond that of 1910 for the same period, although crop conditions in the last year were exceptionally poor. The motorcycle is making steady gains throughout the Wichita territory, and the boomers of the city have hopes of seeing the number of riders doubled before the close of the coming season.

EXCELSIOR IN BUFFALO.

WILLIAM F. HANAVAN, of Buffalo, N. Y., returned recently from Chicago, where he closed a contract with the Excelsior Motor Manufacturing and Supply Company for the sale of Excelsior motorcycles in Buffalo and vicinity.

P. J. HAYNES & CO., Columbus agents for the Harley-Davidson, announce the following sub-agencies: The Creighton & Strickland Company, of Plain City, agency for Madison County, Ohio, and C. L. White, of Delaware, agent for Delaware County, Ohio.

DEPARTMENT

CALIFORNIA JOTTINGS.

E. H. HOLDRIDGE recently purchased the motorcycle business of W. L. Saxby. Holdridge is the Indian agent at Modesto, and has recently moved his business into new quarters where he has the largest and best equipped shop in the city. In connection with the Indian agency Mr. Holdridge handles a large line of accessories, and is the agent for the Racycle and Iver-Johnson bicycles. Prior to buying the business in Modesto Holdridge had an establishment in San Francisco.

J. A. Paterson, who has the agency for Harley-Davidson motorcycles in Modesto, reports big business. He has already disposed of a good number of machines and expects another shipment soon.

Sargent Brothers, of Santa Barbara, have taken the agency at that point for the Pope motorcycles. Motorcycling has a strong hold in the vicinity of Santa Barbara, and the demand for machines has been greater this year than in any preceding year since the Sargent company began business.

George Crofts, of Pomona, has been appointed agent in that city for the Pope. He has received his first shipment of ten machines, and has disposed of all of them.

F. S. Hobbing, the enterprising motorcycle dealer of Pasadena, reports booming business. He has the Thor, Harley-Davidson and Pope agencies, and his place of business is a center of motorcycling interest in Pasadena.

The B. R. Stanfield Cyclery, of Whittier, has discontinued handling motorcycles and has gone in for specializing on repair work. Stanfield has a large, well-equipped workshop and is doing good business. The Stanfield Cyclery handles a large line of bicycles and accessories.

TWENTY-FIVE THUS FAR..

C. H. DANFORTH, Indian agent at Whittier, Cal., has ordered 25 machines so far this season and has disposed of the greater part of this shipment. He has recently made improvements in his place of business and has added a repair shop.

WITH THE OHIO TRADE.

THE Erie Supply Company, of Toledo, has been incorporated with a capital of $10,000 to deal in automobile and motorcycle supplies and accessories. The incorporators are Wm. J. Fritsche, Fred. H. Kruse, Jennie Samsen, F. A. Brown and Mark Winchester.

H. P. Birkenbach, of Columbus, central Ohio distributor for the Thor, announces the following sub-agencies: The Lancaster Auto Supply Company, of Lancaster, agency for Fairfield County; A. A. Case, of Delaware, agency for Delaware County; and James Smith, of Circleville, agency for Circleville.

MINNEAPOLIS AGENCIES.

MINNEAPOLIS machines will be handled for 1912 by the Boyd Motor Company, of 27 Stanhope street, Boston, Mass., and another agency recently placed by the Minneapolis company is with John P. Erich, 1409 Michigan avenue, Chicago.

WICHITA SHOP CHANGES NAME.

THE Wichita Bicycle Shop, of Wichita, Kan., has changed its name, and will hereafter be known as the Dickson Cycle Company. The firm last week signed for a goodly number of Emblem motorcycles, and will represent this make exclusively.

THIEF TAKES NEW MOUNT.

WALTER W. WHITING, Harley-Davidson agent in Denver, Col., reports the theft of a brand new Harley twin, and describes it as follows: Engine No. 2807, A. B.; equipped with free-wheel and "Ful-floteing" seat, Goodyear studded tires. The machine was taken from the Whiting store on the night of March 6 last, with about $200 worth of repair parts and accessories, including goggles, leggins and cyclometers. Parties having information concerning the missing machine should address their letters to Walter Whiting, 1407 Broadway, Denver. He is prepared to pay a reasonable reward for the recovery of the stolen property.

NEW PITTSBURGH SHOP.

WALTER G. REINEMAN announces the opening of the Auto and Cycle Supply Company at 12 West Stockton avenue, Pittsburgh, Pa., and states that the firm will carry a complete line of accessories for motorcycles, motor cars and bicycles, in addition to handling Pierce motorcycles and bicycles. Mr. Reineman was for five years manager of the Allegheny Auto Co., and he is well fitted to cater to the motorists in his section of the city.

EXCELSIOR motorcycles will be sold in Nashville, Tenn., during 1912 by the Hicks Motor Truck Company.

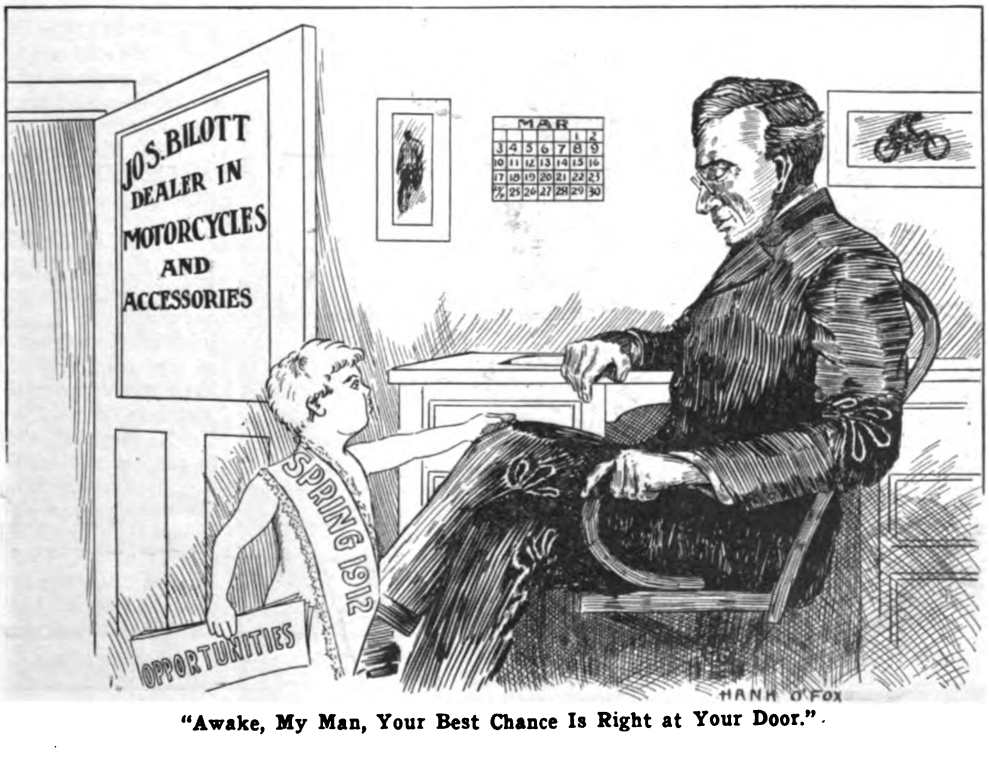
IVER-JOHNSON motorcycles are being handled in Ashtabula, Ohio, by the Paine-Ford Company.

THE Napoleon Hardware Company, of Napoleon, has taken the agency for the Indian in Napoleon and vicinity.

ANOTHER DEPARTMENT.

THE Hagstrom Bros. Mfg. Co., of Lindborg, Kan., has recently sprung another innovation by adding a department for the manufacturing of dies, tools, special machinery and model making. The firm will also perfect patents and do the contract work. There is no machine shop west of St. Louis with the equipment of the Hagstrom factory for turning out this class of work. The company formerly confined its operations to the manufacture of rim-cut blow-out patches, spark plugs and inner-liners.

FORTY riders at Lancaster, N. H., are forming a club.

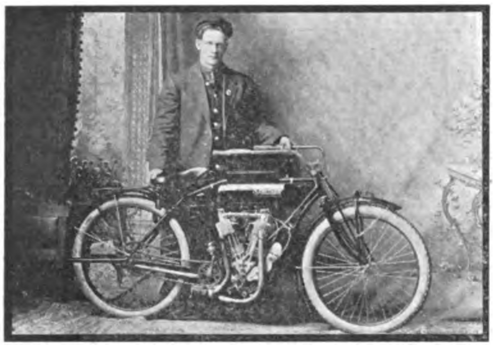


"Awake, My Man, Your Best Chance Is Right at Your Door."

"MINNIE" IN LOS ANGELES.

GUY W. WINNOR, who has just opened a motorcycle establishment in an excellent location at 816 South Spring street, Los Angeles, Cal., will handle Minneapolis machines for his district and carry a complete line of parts. Winnor announces that he is prepared to give prompt and comprehensive service to the riders throughout his territory, and that a fully equipped repair shop will be a feature of his headquarters.

ALTHOUGH the Alameda (Cal.) Motorcycle Club has been in existence only two weeks, it already has fifty members.



FROM NORTH DAKOTA.

A. S. THORSEN, who appears in the photograph, is agent for Indian machines in Bottineau, N. D. He is an enthusiastic rider and has done much to arouse interest in the power two-wheeler throughout his territory.

BOOM ON THE COAST

Every Dealer in Golden Gate City Is Breaking Records in Effort to Keep Abreast of Rush Orders.

SAN FRANCISCO, CAL.—Without exception all the dealers in this city are in a good frame of mind over the business that has already been accomplished this year and the prospects of future business here.

One firm in this city that handles one of the best sellers in the motorcycle line has not even received its sample machine from the factory. This works a hardship upon the agents, but no doubt there are reasonable factory reasons for the late shipments. In spite of the fact that many dealers are behind in shipments they are all satisfied that when they do arrive there will be little trouble in disposing of their stock. The weather conditions have been very propitious and the roads are in good shape all over the State.

The San Francisco branch of the Hendee Manufacturing Company has just received its sixth carload of 1912 Indians. This entire consignment was sold before the shipment arrived here. The machines are equipped with Goodyear Tires.

A. Freed, San Francisco agent for the Thor, received on March 11 a shipment of six Thors. Three of the machines are 7 h. twins and three are 5 h. singles. Mr. Freed says that he already has orders for 773 motorcycles. Last week he sold sixteen 5 h. Thors equipped with lamps, speedometers, horns and luggage carriers, to the Pacific Telephone and Telegraph Company of this city. Business has been so heavy at Freed's place that he has had to double his working force both in salesroom and shop.

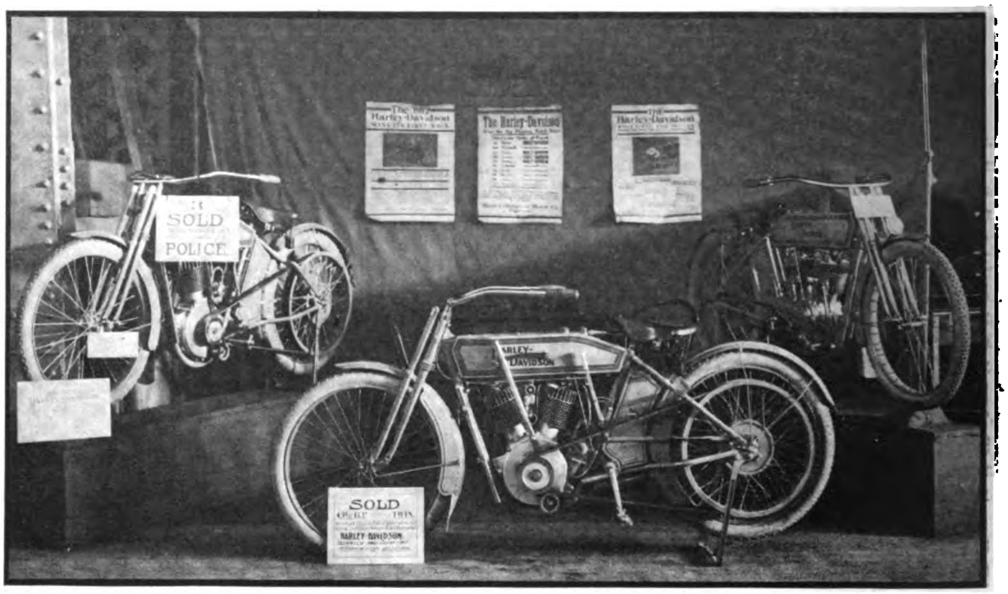
John T. Bill & Company, agents for Reading Standard and Emblem motorcycles in this city, report that it is impossible for them to meet their orders. The call for their machines has been greater this year than ever before. The Bill company also carries a complete line of accessories and bicycle repair materials.

Harry Swegles, of the Flanders Manufacturing Company, who has been in San Francisco of late, has gone to Los Angeles on a business trip. Mr. Swegles will have headquarters in San Francisco and will look after the interests of the Flanders company on the Pacific coast. He will have charge of the adjustments and will be located with Zimmerlin Brothers, on Van Ness avenue.

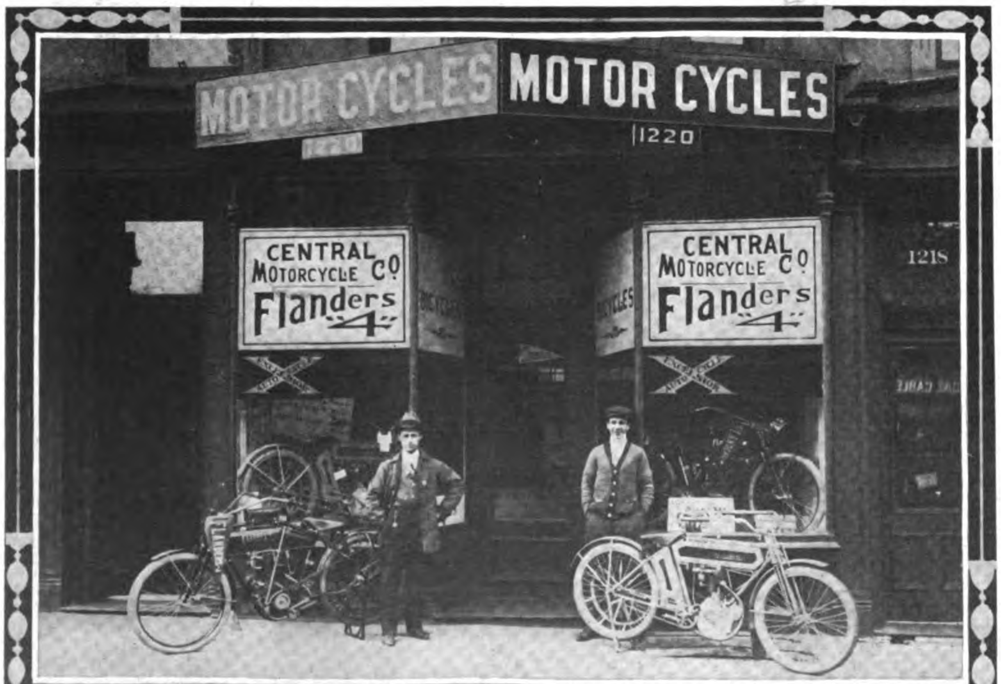
J. S. Tormey, motorcycle expert for the Goodyear Tire and Rubber Company, has returned to this city after having spent a month in the southern part of the State attending the motorcycle races and looking after the trade in that territory.

M. V. Moriarty, manager for the San Francisco branch of Jno. T. Bill & Company, is making a trip through the San Joaquin Valley in the interest of the Bill company.

Edwin F. Merry has received his fourth shipment of Flanders machines and is awaiting the arrival of the fifth. Mr. Merry is the state distributor for the Flanders, and has been most successful in introducing the machine.



Chase Motor Company's Harley-Davidson Display at the Baltimore Show.



INCORPORATED.

O. E. SHORT AND COMPANY, INC., New York City.—To manufacture and deal in engines, motors, motor cars, motorcycles, tires and accessories of all kinds. Capital $25,000. Incorporators: Orville H. Short, 15 West 91st street, New York City; Harlan W. Short, Morsemere, N. J., and H. L. Starr, 1808 Clay avenue, New York City.

A BROOKLYN AGENCY.

H. E. HILLYER, who presides over a well-equipped shop at 1220 Bedford avenue, Brooklyn, N. Y., reports that he has sold 32 Excelsior machines since the first of the year, and that the outlook has never been more promising. Hillyer handles the Flanders in addition to the Excelsior line. Ferdie Mercier, widely and favorably known in racing circles, is now representing Hillyer in a sales boosting campaign, and he has been remarkably successful in lining up prospects. Ferd will be seen astride an Excelsior at most of the important meets in Eastern territory during the coming season, and now that he is a full-fledged pro his friends look for big things from him.

A. H. Crocker, cashier for the Hendee branch in San Francisco, has just received for his personal use a 7 h. Indian.

RUSH ON IN DETROIT

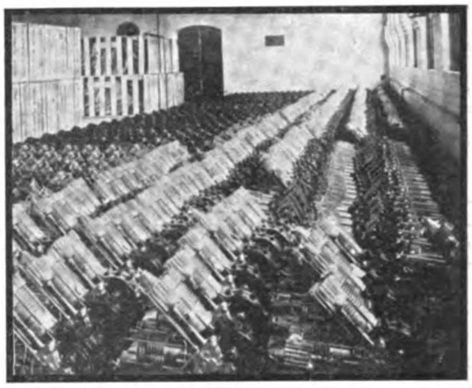
Dealers in City of The Straits Are Confident of Selling 1,500 Machines Before Season Closes.

DETROIT, MICH.—Detroit motorcycle dealers are reporting an unprecedented demand for the little brother of the auto this season. Without exception the dealers of this city claim that their sales at the present time are more than double those of last year in the same period. Last year there were some 1,100 machines sold in the City of the Straits, and this year it is freely predicted that the number of riders will be increased by at least 1,500.

Several sales to women enthusiasts are reported, and one dealer states that three riders and their wives have purchased twin machines to be used on a cross-continent trip which will be made this summer. The Excelsior Motorcycle Company has sold ten machines to take the place of eight now in use by the minute men of the Detroit police department. These machines are of the single cylinder type. The minute men number about 30 at the present time, working in eight-hour shifts.

SNYDER MAKING IMPROVEMENTS.

W. H. Snyder, manager of the American Machine Company, 38 North High street, Columbus, central Ohio distributor for the Emblem, has made a number of alterations in his store room. The space has been enlarged by taking out several partitions, decreasing the size of the office. The basement is used as a repair department. Mr. Snyder left recently for a business trip to the Emblem factory at Angola, N. Y.

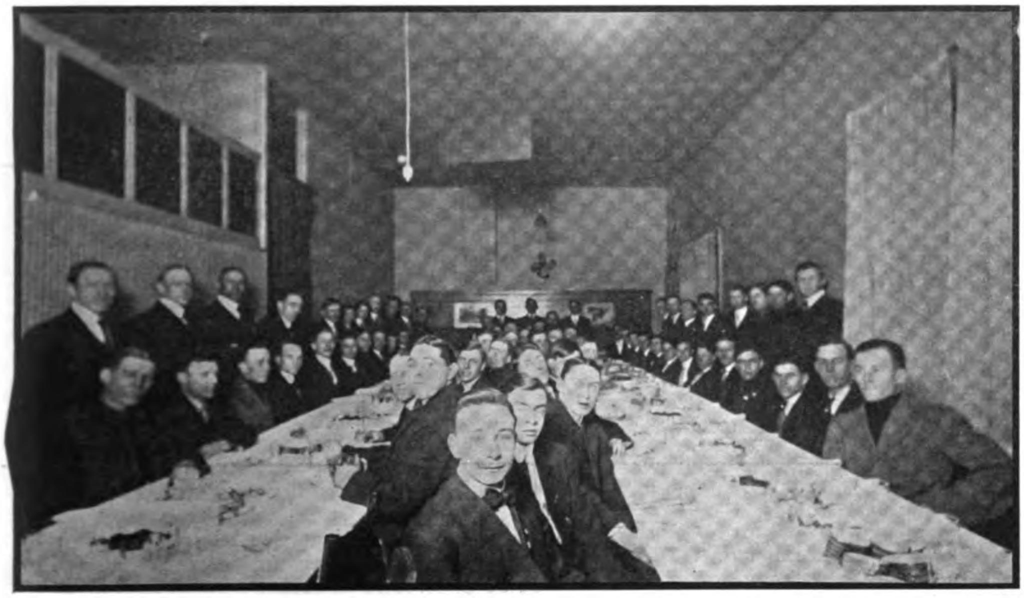


PREPARED FOR THE RUSH.

AS far back as last summer the Hendee Manufacturing Company was convinced that the season of 1912 would be the greatest one yet seen in motorcycling, and that the difficulty would not lie in the direction of selling machines, but in filling orders. To anticipate as far as possible any delay of this sort preparations were commenced early in the manufacturing season, and the entire big factory was put under high pressure months earlier than has been customary. Provision was made for all of the changes in the 1912 models, and the component parts were piled up as rapidly as possible.

One of the results of this policy can be seen in the accompanying photograph which shows a corner of one of the stock rooms at the Indian factory. There are between 1,200 and 1,500 motors on the floor. At the right hand and in the foreground are seen the 7 h. twins, while at the left side of the picture in the distance is an assembly of the 4 h. single cylinder motors.

In addition to these motors there was another similar regiment along the opposite wall of this floor, while the end of the room, not shown, and all of the middle portion, is piled up with crates containing complete machines ready for shipment.



CAMPBELL AS HOST.

RECENTLY G. W. Campbell, Indian dealer in Waterloo, Iowa, tendered a banquet to the motorcyclists of his city and the accompanying photograph indicates that the boys were not lax in accepting his invitation. Over one hundred invitations were sent out and eighty riders were on hand to assist in carrying out the program for the evening. A four-course turkey dinner was served, and after the repast music and impromptu speech-making helped to while away several hours.

SAUCER IS ASSURED.

INDIANAPOLIS, IND.—If the latest plans of the Indianapolis Motordrome Company do not go askew actual work on the proposed motorcycle board track in this city will begin within two weeks. Radical changes have been made in the plans for the speedway, but according to W. A. Gibson, of the Empire Tire Company, the prime mover and general manager for the proposed board track, the saucer is now a certainty. The Indianapolis Motordrome Company has been formed, with Jack Prince and Mr. Gibson among the heaviest stockholders.

The motorcycle dealers and manufacturers of Indianapolis decided not to build the track themselves, for they felt that it would cost too much money for a stock company proposition.

ONE of the most fully equipped motorcycle establishments in western territory is that presided over by G. W. Campbell, at Waterloo, Iowa. In addition to handling the Indian Campbell carries a full line of sporting goods and bicycles.

Tips & Topics

Question of Power—Early Tri-Car Service—Variable Gears — Appearance — Small Twins — Control

TO one who has ridden (and pushed) various machines on both sides of the pond, the gradual adoption of the side-car for passenger carrying in place of the more speedy but less secure "perch" on the cushioned luggage-carrier or in the absolutely dangerous position on the steering-head or tank, is a cause of immense satisfaction. First, it is an assurance of progress, not only to the riders and devotees of motorcycles in this country, but also to our foreign brothers in that we are not content with producing machines by the hundred-thousand and letting it go at that. It may surprise some readers to learn that riders in the old country look upon even our best two-wheelers as quite ingenious but comparatively crude specimens of the genus motorcycle, with the possible exception of our carbureters and frame-tubing, but such is the case. They put down the relatively widespread use of high-powered 6 and 7 h. twins as due to a desire for speed first, and on account of what they call the "vile" roads here as the second reason. Our carbureters are admired by reason of their being practically automatic; the great majority of European carbureters are hand-controlled for both the primary and auxiliary air.

The Question of Power.

Frankly, our roads are not what they should be, and for a rider who wants to travel at a good clip over all kinds of surfaces, considerable power is needed. A 30½ cubic-inch motor, fitted with a clutch, ought to be able to take any but a heavy-weight rider over any place that the wheels will get traction and without assistance from the pedals. If any rider cannot get this out of the average machine, he ought to practice riding over poor but fairly level roads a bit more before he is qualified to number himself in the real-rider class, and criticise other people's riding on road or track. The bright sayings of the members of local Boulevard Record-Butchers Associations are not nearly so valuable to the sport and industry as the experiences of the telephone lineman or the R. F. D. rider.

An Early Tri-Car.

For the benefit of riders of single cylinder machines here are two things that don't need a high-powered twin alone to get away with. When the 4 h. single was first produced in this country, one of the prominent members of the F. A. M. had a tri-car outfit rigged up to carry his 180-pound person and his wife (weighing 160 pounds), and used the rig for two seasons, with practically little recourse to the pedals. The total touring weight with the family on was in the neighborhood of 525 pounds, and one season showed about 5,000 miles covered. The average was 131 pounds per horsepower, and clutches or variable gears were only golden dreams of the future. Now, if such service could have been got out of a fixed-engine rig, it ought to be bettered with a two-speed and free-engine today. A side-car outfit does not weigh any more than the tri-car attachment did in 1906, and slender girls are now the fashion.

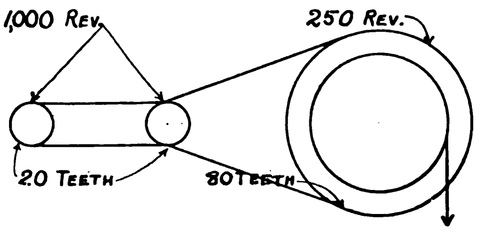
The above service was obtained over American roads, which were not even as good as they are now. The writer thinks he is correct in saying that few people will consider the roads up the Alps on the Swiss side as superior to those over here, and only this summer an English rider went up one of the larger peaks into four feet of snow on a 2½ h. single mount weighing about 120 pounds. He stated his weight at 160 pounds, and used his high-gear 5½ to 1, most of the trip. This gives 112 pounds per horsepower, a better result than the tri-car average just mentioned. The writer considers these two performances as showing what can be done with a passenger mount and a solo mount in the hands of private owners, and employing strictly stock machines in both cases.

Effect of Variable Gears.

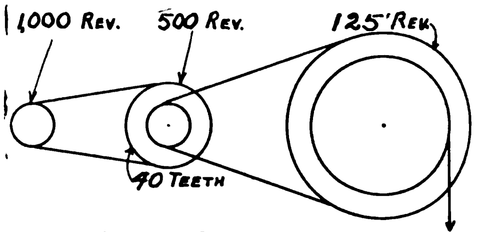
With variable gears, which will soon be fitted to most machines, it is hoped, it is no longer a question of high power to carry along a side-car or tri-car attachment. Results bettering the tri-car performance with a 4 h. mount are obtainable in any kind of touring, and in reliability trials, as the European motorcycle journals will attest. In fact, one English make of machine which has a gear variable between 3:1 and 13:1 has been barred from competing by the governing body corresponding to the F. A. M. in hill-climbs, reliability trials, etc., as it swept the field in every case, and with a single 4 h. motor in the frame. Incidentally, there are dozens of these mounts running with side-cars throughout the British Isles today, and they go all the year around.

Two-Speed Gear Action.

Let us see how any two-speed gear acts, and the reason why a big twin is not necessary will be clear. With a 4:1 gear, for instance, a 4 h. motor will carry a load of 500 pounds on a smooth, level road. Now if we can only get 4 h. out of the motor, if the load is doubled and the gear ratio unchanged the motor will have to be reduced in speed, when of course it will not give off 4 horsepower. But if an 8:1 gear is used, the 1,000-pound load can be carried with the motor running at the same speed as before, but with the speed of the machine correspondingly reduced. If the low speed in the variable gear gives a 2:1 reduction as compared with that on the high speed, then double the load can be carried at a speed of the machine equal to one-half of that when running on the high speed with the ordinary load. With a third speed, having the ratio of 2½:1, a load of 1,250 pounds could be carried with the motorcycle speed reduced one-third. The loads in riding are represented by hills, sand, etc., and rarely are as great as those used in this example. Any variable gear, for automobile, motorcycle, lathe or motor-boat, depends on the mechanical principle that a gain in work done is accomplished at the expense of a loss in time (or speed) for a given power. There has been considerable misinterpretation of this principle; such as stating that a 4 h. motor on the low speed gives 8 h. at the high speed gear ratio. This is a very ingenious manner of stating the above law, but facts do not bear out its truth, as very few 4's can be speeded sufficiently high to give 8 horsepower for more than a few seconds, and would never deliver that 8 horsepower when driving the motorcycle.



HIGH GEAR (4:1).



LOW GEAR (8:1).

The Matter of Appearance.

Back to the side-car again. The passenger can ride in comfort therein, and need not appear like the monkey mentioned by our sarcastic but observant competitors. Speaking as regards appearance, a thin rider's form does not show to advantage when he is grasping the tiny handles of a tandem attachment, with his knees bent well forward and the usual forced look of enjoyment on his face. Nor does the person of weight show any more grace, as he seems to dwarf the machine or appear to be cruelly straining it. Then when the rider goes off, the passenger goes also, but the latter generally has the advantage of having the unfortunate rider as a buffer against shocks. Ye scribe, who rides at 136 pounds, has been both buffer and buffee, and while preferring the latter position, still better prefers the side-car as the safer and more sociable arrangement. Conversation with the passenger at the rear is necessarily brief, and only effective when the wind is in the right direction.

Side-Car Taxation.

Possibly the financial disadvantage of the side-car may lie in the direction of the imposition of an extra license fee for the passenger attachment. At present, side-car outfits are not taxed any more than solo mounts, but legislation against tank and handle-bar riding is growing rapidly. Unless the class of users of any form of mechanical traction appear to have surplus wealth which the municipality can garner on some pretext or other, they are generally let alone unless they bring themselves into notice by noise, misconduct or offensive odors from their machines. Thus the motorcyclist has a distinct advantage over the car owner and gets taxed last, and the increase in taxation for the side-car may be reasonably figured on not sooner than 1914 or 1915 in most States.

The Small Twin.

What has been said about the 4 h. single refers also to the twin of the same or lower power. This type has not been developed at all here, but the wider introduction of variable gears will probably result in the production of the small twin. At present there are the 5 h. twins to represent the low-powered multi-cylinder motor, but is there any information as to their adaptability for side-car use obtainable? If so, it has been carefully concealed. If there are any reasons that a motor with more explosion strokes per minute and an additional horsepower cannot waft a side-car outfit and average weight rider and passenger along over average roads, they ought to be brought out, and if the build of the motorcycle is wrong, then it ought to be corrected. Let us hear from some 5 twin riders as to what they think about this. Lack of power is no excuse; a 2 h. motor on an electric truck will and does transport loads of 2,000 pounds day in and day out, year after year at an average speed of 8 miles per hour, and why should not a 5 h. twin gasoline motor be able to carry about 500 pounds at a good round speed?

Handle-Bar Control.

A rider the other day voiced a very widespread fallacy about the complication of foreign control systems to ye scribe, who rides a mount fitted with one of these "terrible" systems. Briefly, the throttle and auxiliary air are operated by levers on the right handle-bar, the exhaust valve lifter by a lever below the left grip, the spark by a lever on the left bar, and the brake by a foot-pedal. On comparing the control systems of the two mounts there didn't seem to be so much complication as the rider thought, and the table below will show this:

Foreign Machine.

Throttle (handle bar).
Auxiliary air (handle bar).
Spark (handle bar).
Valve lifter (handle bar).
Brake (foot pedal).
Starting pedals.

American Machine.

Throttle (right grip).
Auxiliary air (on carbureter).
Spark (left grip).
Valve lifter (left grip).
Brake (by back-pedaling).
Starting pedals.

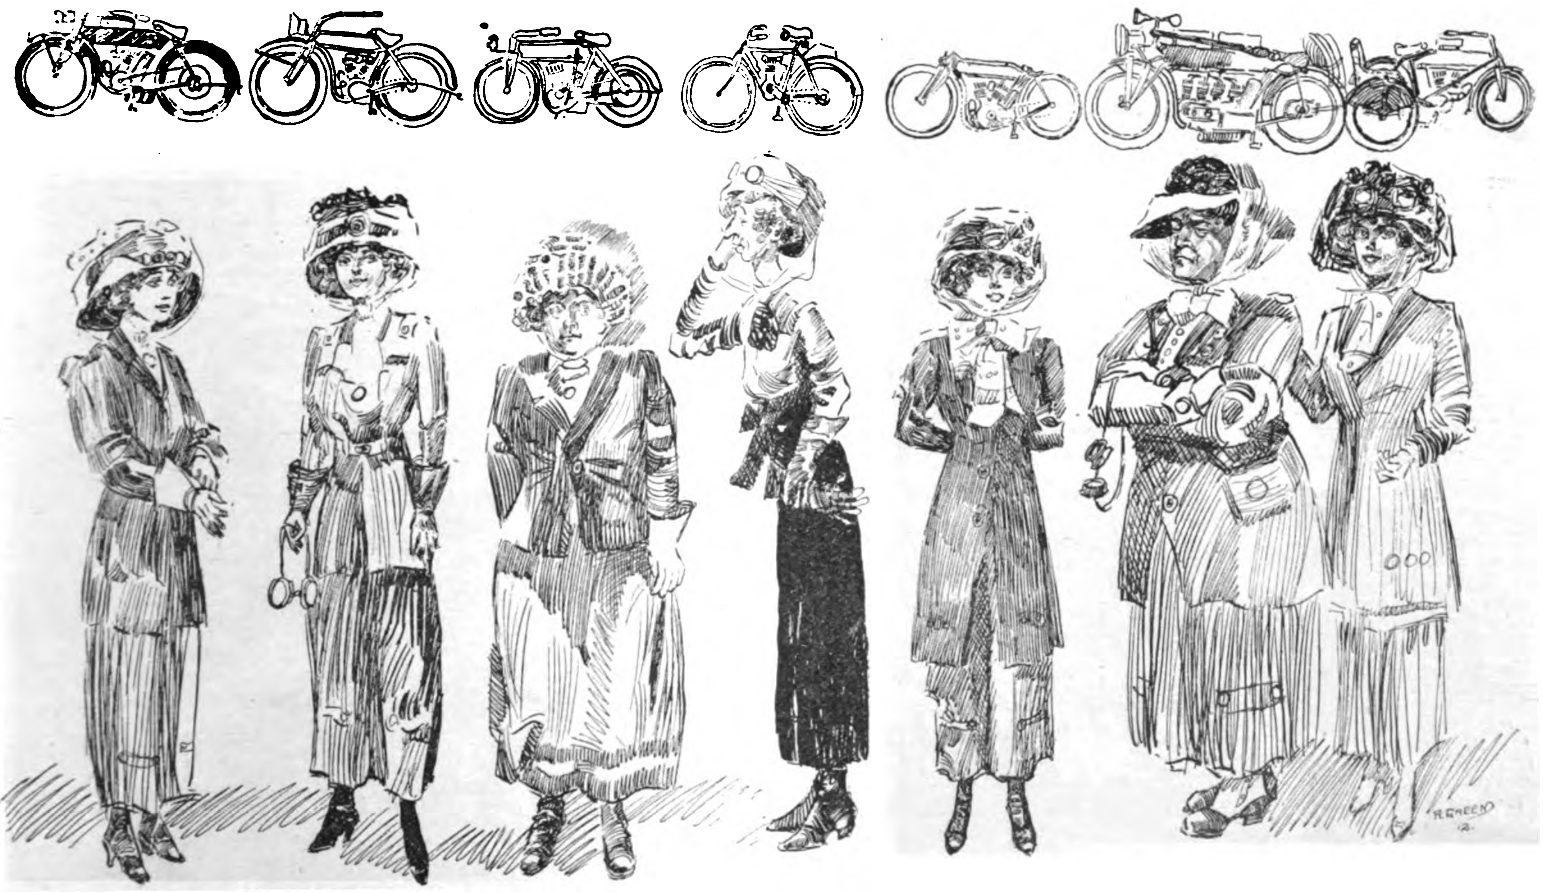
What Comparison Shows.

On this being shown, the rider pointed to the three Bowden sheaths along the bars and the one (valve lifter) inside the left bar, as being liable to damage in case of falls. This was admitted, but on the other hand, the rider could not lift his valves without disturbing his spark timing nor start off without the use of the spark grip. This could be done on the other mount, as the valve lifter was not attached to anything else, and the spark and throttle thus remained set. To change the adjustment of the auxiliary air-valve the rider had to reach down under the tank and turn a knob; as a rule, he dismounted to do this. On the other machine it was done by a small movement of a lever, but the carbureter was not automatic as on the American machine, and needed occasional attention. A movement of the lever or grip throttle through four inches opened it wide in either case, but the spark movement on the foreign mount was less for a given advance.

The writer does not advocate the lever control as better than the twisting grip, but naturally considers it better suited for his own use. He does strongly advocate the use of a separately operated exhaust valve lift on all motors. The operation of two things from one lever or grip is not new. Today, if there are any two devices on a free-engine fitted machine that ought to be interconnected, they are the throttle and the clutch lever, so that the motor will not race when the clutch is out.

SPRING STAND DEVICE.

T. K. LEE, a rider of Birmingham, Ala., submits the following description of a simple spring stand attachment which has given satisfaction on his Indian machine: A bracket to clamp over the side member of the stand is made up of a flat piece and one curved to fit the "D" shaped tubing used for the Indian stand. The flat piece of the bracket extends about half an inch outside the stand member so that the spring which is attached to it will clear the stand and avoid rubbing. A spring four inches long and about three-eighths of an inch in diameter is fastened to this bracket arm and then carried up and hooked at the bottom of the mudguard braces.



Seven "Tandem Attachments," With Appropriate Mounts for Each One of Them.

FOR SLOW SPEEDS AND EASY STARTS

Veteran Rider Describes Simple Methods of Obtaining These Desirable Characteristics in Any Standard Machine.

By H. R. Shoemaker.

THERE are many motorcyclists who would like to be able to run their machines slower and start them easier, but naturally do not care to disturb the adjustment of their motors. Many of the devices ordinarily proposed involve a permanent change in the engine or its appurtenances, and if the changes fail to produce the desired result, the experimenter may find he has "fixed" his machine for the worse. However, there are two devices which I have found very satisfactory that do not carry with them the foregoing disadvantages. The first attaches to the spark plug, the other to the intake valve cap or cover.

The spark plug attachment is simple, consisting of a small piece of wood or fibre interposed between the spark plug wire terminal and the spark plug binding post, and attached to the plug. The wire end is wound around or otherwise secured to the wood or fibre in such a way as not to come into contact with any part of the plug proper, but to be distant from it about one-twelfth of an inch.

In my case, fitting the Herz spark plug, I used a cylindrical piece of wood with a hole through the center for the binding post, and fastened the wire hook terminal from the spark coil around it. This induced a positive spark at starting and at slow speeds. It tended to do away with pedaling, puffing and priming.

The other attachment, for intake valves, might require, as well as the foregoing device, a little ingenuity to adopt it to some other make of machine than my Thor IV. However, the principle of this attachment is simple and there are several ways to accomplish the same result. The idea is that a stout intake spring, ideal for speed, is not as sensitive as is desirable at small throttle openings. A weak spring will not do, on the other hand, for speed work, although it may be right for slow speed and for easy starting. Now, if a strong spring, in conjunction with a somewhat lighter, pressure-exerting, counter-spring working during the first fraction of the valve lift is used, a peculiar result is obtained. The valve opens very readily and positively, yet the strong spring comes into action when the throttle is opened wider, and causes a proper valve action at this time.

I accomplished this with my machine as follows: I shortened the push pin on the valve dome by filing so that it only opened the automatic valve one-third of its lift. Next I had a U-shaped spring made from a thin piece of steel one-half inch wide and four and one-half inches long. A hole was drilled in one end, then the piece was tempered with the ends together. Next, from the intake valve dome I unscrewed the push pin with its collar, placed the spring hole over the outside end of the push pin bushing of the valve dome cap, and screwed the push pin collar back into its usual place. The spring now bore down upon the pin, and that in turn upon the valve, with a pressure of one and three-quarters pounds. Against this pressure was the three pounds pressure of the valve spring proper; thus the valve was, for the first one-third of its lift, held on its seat by a pressure of one and one-quarter pounds, but during the remaining two-thirds of its lift, the full pressure of the valve spring, three pounds, tended to return the valve to its seat. As a result of the change, a much smaller suction than usual tends to open the valve to the fresh explosive mixture, making for easy starting and slow, steady speed when desired.

With these spark plug and valve attachments I can start and ride the motorcycle at a "fast walk" speed, and, moreover, the engine runs as well, or better, than before.

A MOTORCYCLE, an automobile, an aeroplane and a railway train of five coaches will race from Houston, Texas, to Galveston on March 24, according to plans arranged by several Houston business men.

PISTON DISPLACEMENT

Simple Table Based on Bores and Strokes of Standard Motorcycles.

The figures under the Caption "P. D." are the capacities of single cylinder motors having bores and strokes as indicated in the "B" and "S" columns respectively. In the case of a twin or four cylinder machine, multiply the figure given under "P. D." by the number of cylinders. For instance, the piston displacement of a single cylinder machine having a bore of 3 inches and a stroke of 3⅛ inches is 22.1 cubic inches; the capacity of a twin having the same bore and stroke would be 22.1 × 2, or 44.2 cubic inches.

Halley's Comet—"Hurry, Children, There's One of Those American Motorcyclists Hot on Our Trail."

Can You Solve Danzer's Problem?

IF a dealer can sell twenty-one 1912 Harley-Davidsons in the same time it took him to sell one 1911 Harley-Davidson a year ago, and if he sold ten Harley-Davidsons altogether last season, how many Harley-Davidsons will he sell in 1912?

F. P. DANZER

IN two short years F. P. Danzer, of Racine, Wis., has built up what is now the largest motorcycle business in his town.

Starting out in but a small way, he was up against the strongest kind of competition imaginable, with seven other makes represented in Racine beside the Harley-Davidson.

So far this season, as closely as he can figure, Danzer has sold twice as many machines as all of his competitors combined. In one day alone —March first—he sold six machines.

When he was asked why he had made so many sales so early in the season and when there was still a foot of snow on the ground, Danzer replied, "First, I am selling the best machine made. Second, I am getting prompt deliveries, and third, the Harley-Davidson is so well advertised that it is a standard article. I have traced some of my sales directly to your extensive national advertising."

Danzer himself is certainly a believer in advertising. He has not been satisfied with simply following up the prospects that we have brought him in touch with through our advertising, but he himself has tied his local business up with our national campaign by means of heavy newspaper advertising. At present he is running a campaign of quarter-page ads in the Racine daily papers three times a week.

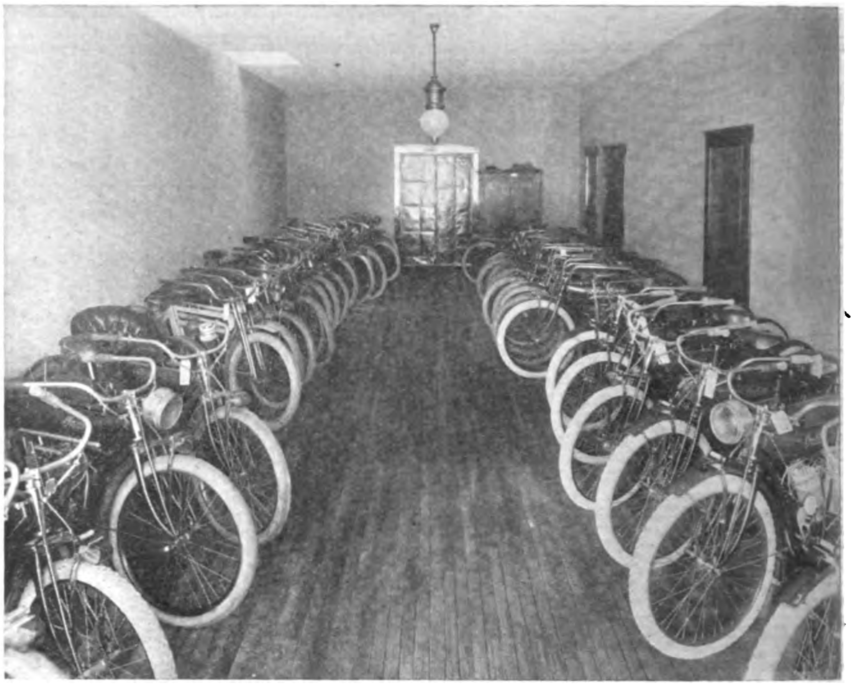
MUELLER'S NEW INDIAN HEADQUARTERS IN CLEVELAND

One of the Best Appointed Establishments of Its Kind in the United States.

BEYOND a doubt one of the finest motorcycle establishments in the country is the new headquarters of L. J. Mueller in Cleveland, Ohio, built throughout with a special regard for the requirements of the business and fitted with every device which might add to the satisfaction of patrons and the facility of handling work. The store is entered through the large salesroom, in the rear of which is the office of Mr. Mueller and his assistant, H. J. Tucker. The walls, which are hand painted, show motorcycling scenes and framed photos of all the well-known racers. In the office is one large frame which surrounds a most interesting exhibit. It contains postal cards sent to the Hendee factory by Mr. Mueller at the close of each day as he made his way across the continent on his record-breaking trip years ago. Naturally this collection is highly prized by its owner.

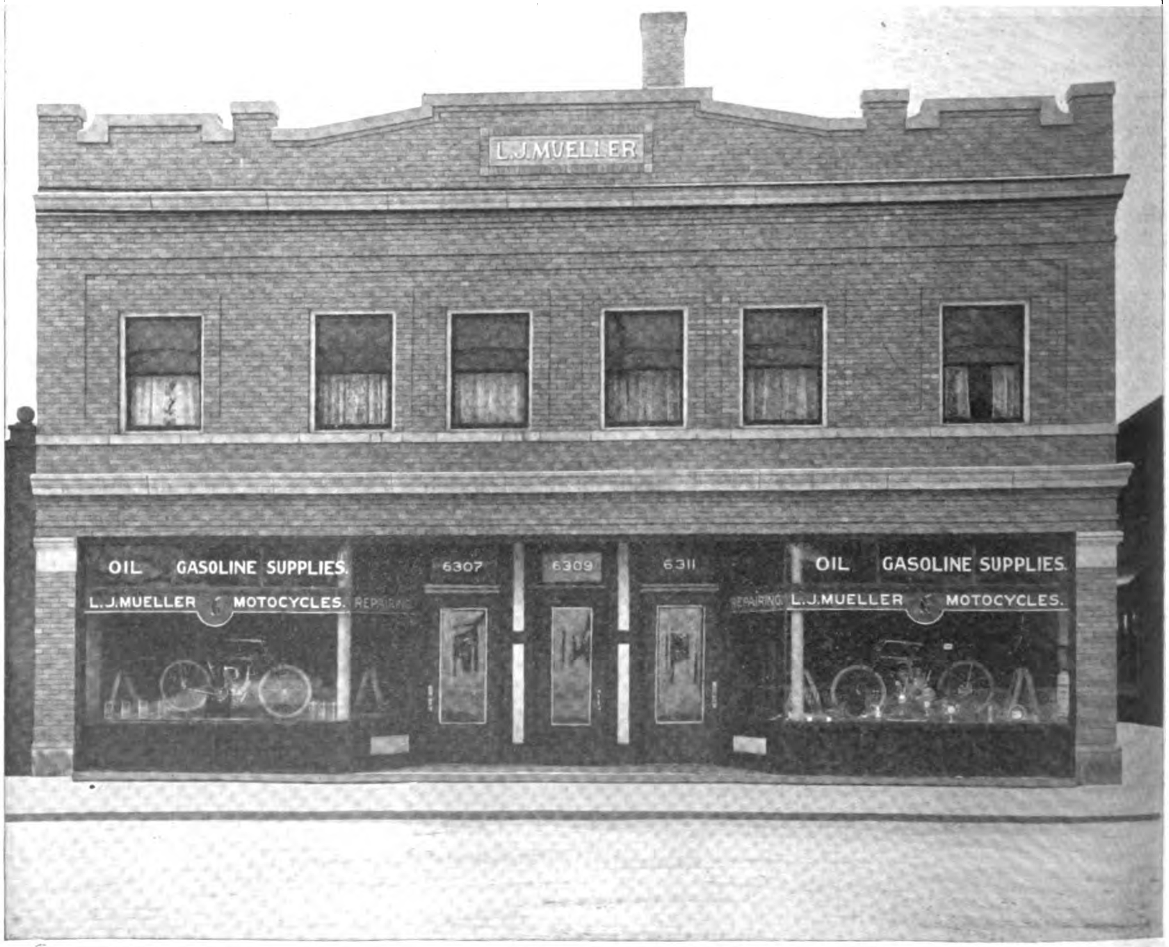


Interior View of the Store of L. J. Mueller, Cleveland, O.

Well-Arranged Departments.

Unusually large show windows afford an opportunity for a fine display of machines. Adjoining the main salesroom is another large chamber set aside as a show room. It is filled with machines, so arranged that they may be inspected to advantage by patrons. The repair shop in the rear extends across the full width of the two front rooms and is equipped with all the latest machinery. A large gas engine supplies power. On the right is an oil and gasoline room, which is accessible to riders without the necessity of their running machines into the building. In the basement it is possible to store two carloads of machines.

On the second floor are the rooms of the Indian M. C., provided for the squad by Mr. Mueller. There are four in number—a card room, a reading room, a pool room and a kitchen. The latter is so equipped that small lunches may be prepared there by the club. For the benefit of racers and tourists a bathroom with shower bath is provided, and on all sides there are furnishings calculated to make life pleasant for the riders who have access to the quarters. Needless to state, Mueller's new establishment is doing a rushing business and his pride in the structure is justifiable. Despite the broad scope of the new establishment, the Cleveland hustler states that he has no more room than he needs. The recent growth of his business has been phenomenal.



Front View of L. J. Mueller's Pretentious Indian Headquarters in Cleveland.

MOTORCYCLE

FOR SALE OR EXCHANGE

FOR SALE.—1911 7 h. Indian, in perfect condition; lamp gas tank, new, three-inch tire. A bargain at two hundred dollars. S. B. Lane, Farmington, Ill.

FOR SALE.—7 h. p. Indian tri-car delivery van; left factory September, 1911; used only one month; absolutely perfect; price $225. A. G. Seiler, 1224 Amsterdam avenue, New York.

MOTORCYCLE BARGAINS.—Twenty in first-class condition. Will be sold at 1912 values regardless of cost. Send for descriptive list. W. D. Andrews, Buffalo, N. Y.

MOTORCYCLE TIRE BARGAINS.—A. C. C. A. PRICES TALK! Diamond, Goodrich, G. & J. and other standard makes; guaranteed. Gridiron, Basket and Bailey Treads, 28 x 2, $4.95; 28 x 2¼, $5.70; 28 x 2½, $6.20; 26 x 2¼, $5.45; 26 x 2½, $6.20. Guaranteed tubes priced proportionately low; shipped on approval. Don't buy until you receive your price list. The Automobile and Cycle Company of America, Dept. X., 1769-1787 Broadway, New York City.

WILL EXCHANGE camera and outfit for good motorcycle. L. J. Hyer, Cuyler, N. Y.

FOR SALE.—1911 Indian 7 h. p.; out of factory September 23. Run less than 100 miles; $175. A. G. Seiler, 1224 Amsterdam avenue, New York.

F. N. 4-CYLINDER, shaft-drive, magneto; new tires; first-class running condition; cheap if taken at once. Borden, Campbell, N. Y.

ATTENTION, RIDERS.—$5.00 English sole leather puttees sent prepaid anywhere in the U. S. for $2.75. Sizes 14 to 18 calf measure. Russet only. Box 386, Norwich, Conn.

$75 TAKES 3½ h. p. N. S. U. MOTORCYCLE, two-speed gear, extra tire, etc.; first-class condition; new last spring. No time to ride. G. H. Chase, 92 Pearl street. Providence, R. I.

FOR SALE.—Brand new 1912 4½-5 h. p. M. M., $175.00; also slightly used 1911 4 h. p. magneto M. M., same as new, $150.00. Both machines have 28 x 2½ tires. Box 85, Staffordville, Conn.

THIS YEAR'S INDIAN, 1912, seven horse power twin. Tourist Trophy model. Free engine, self starter and two speed gear. Many extras. It is brand new. Will be sold at considerable discount as I want to buy auto. Address J. Phillips Briant, New Rochelle, N. Y.

YALE MOTORCYCLE.—4 h. p., 1911, perfect condition; new last May; looks like new; $100.00. Richard Ward, 1215 Hadden avenue, Camden, N. J.

CUSSIN'! Why? Tank dry. You know. Next—Rider green; plenty gasoline. Why? Johnston gauge. Plain sight, easily attached. Returnable sample $1.50. Circulars free. Don't walk and cuss. Get one. System, St. Joe, Ind.

FOR SALE OR EXCHANGE.—1910 Indian motorcycle, 1910 improvements, perfect condition, for twin machine, same make. Taken care of by machinist. George L. Schlott, 318A 7th St., Allentown, Pa.

FEBRUARY, 1912. THIRD ANNUAL MAGNETO BARGAIN

sale imported high tension magnetos at less than cost of importation. Our third annual genuine inventory sale of U. & H. Master Magnetos, made in Germany, is now in progress. All H. P. sizes and types for 1, 2, 4 and 6 cylinder motors, suitable for motor cars, motor wagons, motor boats, motorcycles, stationary engines, etc. Write now, before they are all gone, for circular and price list. The sale is a real Magneto money saver. J. S. Bretz Company, 250 West 54th Street, New York.

THE REFLECTOSCOPE.—Instantly attached to the handlebar of any make motorcycle; enables you to see everything on the road behind. As necessary as a lamp or horn. No need to twist your neck to see if your trailing companions are in sight. Its use in traffic is necessary, and it is a valuable accessory in club runs and speed contests. Designed especially for motorcyclists, and is triple adjustable in action, affording any angle of vision. Made of the finest material, quadruple-nickeled, and contains a 3-inch reflecting mirror of the highest quality imported lens. Sent postpaid to any part of the United States on receipt of price—$2.60, or sent C. O. D. on receipt of a small deposit. Money positively refunded if not better than represented. Reflectoscope Co., Angola, N. Y.

FOR SALE.—M. M. motorcycle, 3½ h. p., fitted with Wata-Wata V belt and adjustable pulley. Lamp, generator, luggage carrier and horn. Two-in-one tank with oil and gasoline gauges. First money order for $100.00 takes it. W. H. Johnson, Box 159, Berlin Mills, N. H.

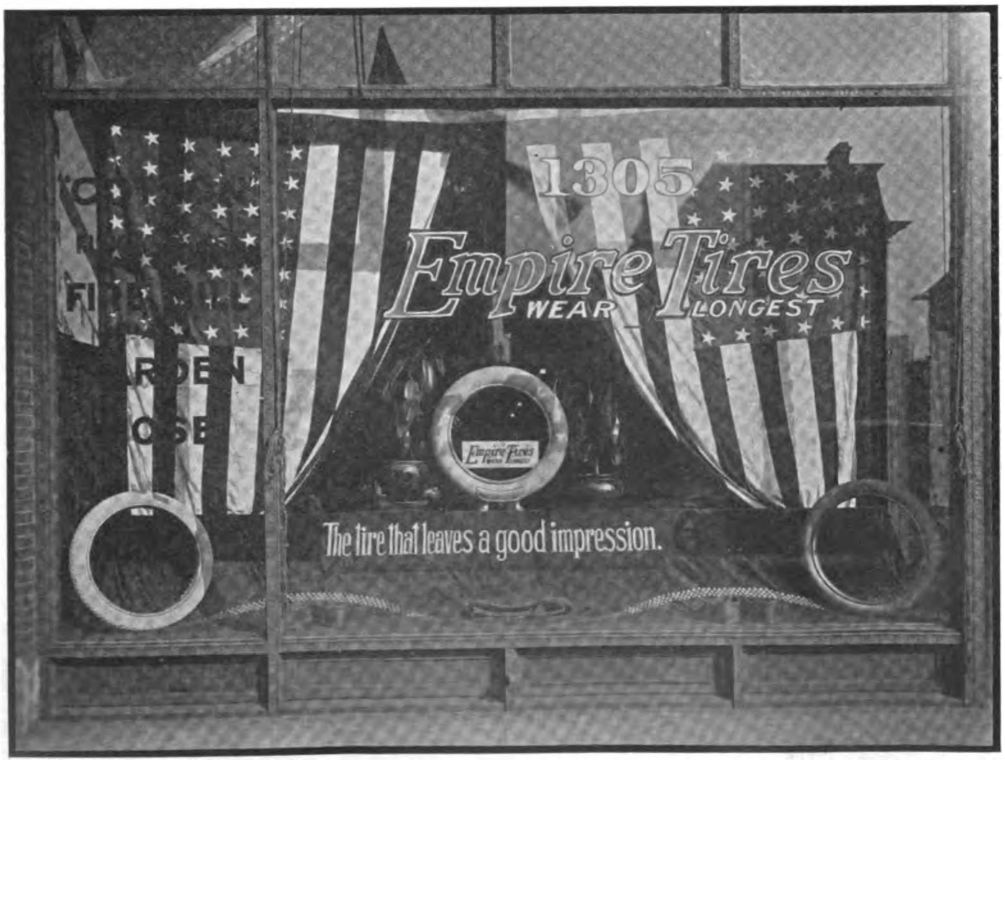
FOR SALE.—Four-cylinder, two-speed Pierce. Just overhauled by factory. Lamp, luggage carrier and metal tool box. Machine and tires first-class. $225.00. Send for photograph. L. G. Meredith, Marietta, Ohio.

FOR SALE.—4 h. p. Curtiss—$65 takes it. Correspondence solicited. L. Darby. Belvidere, Ill.

EMBLEM, 1911 model, magneto, 5 h. p. $135; Excelsior, 1912 model, twin 6 h. p., $160; Indian, 1909 model, 3½ h. p., $85. Other machines from $20 up. Get our catalog. Wolke Motorcycle Co., Louisville, Ky.

"WHOOPEE!" Schebler carbureters, $7.75; "Speed" special belt dressing for racing machines, gallon, $3.25; Troxel saddles, $4.95; platinum points, 35c.; platinum replaced on screws and springs, 45c. Discounts on wholesale orders Thos. King, Kingman, Kan.

MOTORCYCLE DESIGNER and mechanical draftsman, with over three years' experience; good theoretical and shop knowledge open for position. Address "A. K." MOTORCYCLE ILLUSTRATED.



EMPIRE TIRE DISPLAY.

AN unusually attractive tire display is now gaining attention at the Chicago headquarters of the Empire Tire Co., and a number of clever advertising ideas have been evolved in connection with it. The company's checkered tread motorcycle tire has been given wide publicity as the tire that "leaves a good impression," and to prove that the impression is a good one from every viewpoint, a checkered tread tire was rolled across a piece of black velvet in such a way that it left a white impression of its gripping surface. The idea scored a bull's-eye.

TWO RAYFIELD AGENTS.

FINDEISEN & KROPF MFG. CO., of Chicago, have appointed the Hall Motor Supplies Company, of Toronto, Can., as Dominion distributors of Rayfield carbureters, and has also added to its already long list of representative the R. C. Hall Electric Company, of Cleveland, Ohio.

HENRY CAMPBELL, city purchasing agent of Milwaukee, is planning to furnish each fire engine house in that city with one or more motorcycles equipped with chemical apparatus to be used in extinguishing small fires.

MART

RATES One time, three cents a word; twice or oftener, two cents a word per insertion. Dealers' Cards, five cents a word; two or more times, three cents a word each insertion.

FOR SALE—3 Indian diamond frames; price each, $4.00. E. F. Phelps, 4 Bennett St., Bridgeport. Conn

FOR SALE—The best equipped motorcycle and bicycle repair shop in the Southwest; electric power. A. J. Penrose, Arkansas City, Kansas.

FOR SALE—1908 C. V. S. 4 h. motorcycle, in good running order; best offer over $50 takes it. F. Scholl, 15 Sayre St., Elizabeth, N. J.

FOR SALE—M. M. 1909 model at $75.00 for quick cash sale. Guaranteed by responsible firm to be O.K. Anderson's Motorcycle Store, Batavia, Ill.

FOR SALE.—1911 4 h. Wagner, magneto, flat belt and idler. $140.00. Wm. N. Bennett, Killingly, Conn.

FOR SALE.—Brand new 1912 Harley-Davidson motorcycle with magneto, free-wheel, spring seat post. Used about fifty miles. Must sell; $200. Also best offer over $160 takes New Excelsior twin. Used about 100 miles. Arthur J. Henderlong, Crown Point, Ind.

The Encyclopedia of Motorcycling

That's what the Motorcyclists are calling our new, big, 1912 Supply catalog. It lists all the good things—scores of supplies you never heard of before. There is none other like it.

The immense assortment our catalog contains enables you to buy just what suits your requirements and nothing else. The best is at your finger tips when you open this catalog. Prices are lower than ever.

You can have the "ENCYCLOPEDIA" catalog free for the asking. Write today.

Motorcycle Equipment Co. - Hammondsport, N. Y.

A Motorcycle is no Better Than its Motor

Perry E. Mack designed and perfected the **WAVERLEY** motor and then designed the

P. E. M. Motorcycle

to be as good as the motor. The leading points of superiority in the **WAVERLEY** motor are:

OVERHEAD VALVES, located directly in the cylinder head, giving maximum efficiency and assuring perfect cooling. They cost more to build but are worth the money. Other manufacturers use them only in special motors built for racing purposes. We use them in all Waverley motors.

VANADIUM STEEL connecting rods, crank shafts, piston pins and other important parts.

IMPORTED BALL BEARINGS—Another feature generally limited to special motors, but standard equipment in the Waverley.

EXTRA HEAVY FLYWHEELS, perfectly balanced to overcome vibration and insure steady running at low speed, making the P. E. M. the greatest hill climber on the market.

The Proof of Quality

The real proof of quality is accomplishment and the Waverley motor has already made good.

Ralph Sporleder with a regular stock Waverley motor won a ten-mile race at Milwaukee, Wis., July 1st, last, in 9 min. 46⅕ seconds, making intermediate miles in 56 seconds.

Another Waverley motor shipped to Dublin, Ireland, won the 100-mile race of the Dublin Motorcycle Union, defeating 13 other machines of prominent American and European makes.

The SUPERIORITY of the WAVERLEY MOTOR is real and fully explained in our catalogue, which will be freely mailed upon request.

If you want a machine for your own use write for catalogue and special terms to buyers in open territory.

If you are a live dealer and want a machine that will stand strictly up to the guarantee, write for terms and open territory.

WAVERLEY MFG. CO., 103 Waverley Place, Jefferson, Wis.

Why "The Coventry" Chains Are the Best

(Trade Mark Registered)

In introducing "The Coventry" Chains to the trade at large and to the rider in America, our main purpose is to demonstrate just how efficient an imported chain can be. In Europe, "The Coventry" Chains are known as the "non-stretchers." Their enormous popularity has been achieved by sheer merit only, and we are confident that "The Coventry" Chains will soon be in the specifications of the majority of motorcycle manufacturers in the United States, as well as the unanimous choice of all riders.

Material

A special quality of high-tension steel is necessary to produce a chain that will stand the innumerable strains attendant on motorcycling. From the steel bar to its finished state, "The Coventry" Chain undergoes hundreds of inspections as it passes from one skilled hand to another.

Testing

A test, to be a real test, means a trial of the article under any and all conditions which may arise when in actual use. A man is employed to ride a guaranteed mileage per day over all sorts of roads, in order to ensure the quality being maintained.

Durability

By means of a pronounced reinforcement at the ends of the inside plates, which adds 20% to the life of the chain, and the more than 3,000 separate operations each five foot chain undergoes before it leaves our plant, we are prepared to guarantee more wear for "The Coventry" Chains than any other chain on the market today.

THE MARCH OF TIME

has produced no headlight equal to The 20th Century for an efficient and dependable motorcycle lamp. Its unquestioned superiority is shown by the unhesitating selection of it by seasoned clubs and veteran riders.

LET THE 20th Century BLAZE YOUR TRAIL

This model typifies the finest in lamp construction and design. It projects a wonderfully clear, penetrating, far-reaching light both on the road ahead and at the sides of the road. Handsome, compact, strong. The special "open-back" feature permits easy access to the inside of lamp for cleaning and adjusting purposes. Used with our Model No. 10 generator or storage tank.

BICYCLE GAS LAMP

OUR LEADER

The best-known and most widely sold acetylene lamp on the market. Favorite of all bicycle riders at home and abroad. Sold by the retail trade everywhere. SPLITDORF

PLUGS

"Always There"

Hasha, riding an Indian, SPLITDORF equipped, smashed four world's motorcycle records at Los Angeles on February 12, when he rode one mile in 39⅗ seconds; two miles in 1:19⅖; three miles in 2:01⅗, and four miles in 2:40⅗.

It proves SPLITDORF SUPERIORITY when a rider smashes one of the existing world's records—it is a result of a combination of the machine and equipment. Hasha uses SPLITDORF plugs because he knows them to be best. For his work he cannot afford to trifle with a spark plug that is not the best on the market.

The riders who know the difference in quality—the riders who are particular, who want the best, always use SPLITDORF spark plugs and magnetos. They stand for superiority.

55

(Made under patent dated March 1, 1898.)

Accurately registers at all times the exact air pressure in tires.

Simply hold gauge to tire valve for a second and recording sleeve will indicate air pressure and remain fixed until pushed back into place by the finger.

Carried easily in vest or change pocket, being only 2½" long. So simply constructed as to almost never become out of order, and if it does go wrong it will immediately tell by the action of the indicating sleeve that it needs repairs. Leather case comes with it.

PRICE $1.00 EACH

What They Say About Heitger Carbureters

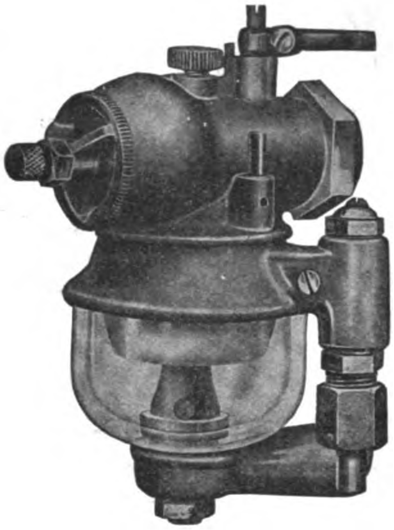
We Have Bushels of Such Letters, Given Voluntarily

DR. G. A. HAWKINS, Jerome, Ariz.—Am well pleased with carbureter for my Indian 7. In fact, it makes motorcycling a pleasure, whereas before (for me) it was hard work.

JOHNSON & VAN KEUREN, Danbury, Conn.—Our customers are delighted with Model G-D. Your carbureter is certainly perfection.

FRED M. GIDDINGS, Galesburg, Ill.—I received the carbureter for my single Excelsior and find it absolutely O. K. in every respect. It is certainly a pleasure for me to say this after the continued trouble with the old carb.

M. A. WESLING, Ludlow, Ky.—I want to say I am well pleased with carbureter bought for my Thor 4, and would have no other. Your guarantee to run motor smoother and with more power is well said. You couldn't give me my old carbureter I was using. Have increased the gear on my machine and it pulls better than with the smaller one used before.



Model H—Price, ¾ in., $9.50; 1 in., $10.00. Metal or Glass Bowl.

MARSHALL MOTOR CO., Kansas City, Mo.—We wish to state that the Heitger is giving excellent satisfaction on the New Era and Greyhound, handled by us. The high and low speed adjustment and glass bowl are the best on the market.

W. D. POPE, Athens, Ga.—Am well pleased with carbureter on my Marvel.

FRANK LIBBY VALIANT, Angola, N. Y., May 31, '11.—Since last February I have covered 2,000 miles on my sturdy Emblem. This has been during extremes of temperature from 4 degrees below zero to 102 above. So far have not had the slightest trouble with carbureter or machine, and cannot too highly commend its attention to all motorcyclists who are having carbureter troubles. I think the glass bowl splendid, and many motorcyclists who have seen it have commended it very highly.

WALTER SCOTT, JR., Philadelphia, Pa.—Feel delighted; can get 56 miles per hour geared 4 to 1. I weigh 175 pounds. This I consider good.

You see how these people are satisfied. You can get the same satisfaction by using a Heitger; gives 5 to 60 miles per hour, 75 to 125 miles per gallon; is easily adjusted, and remains so; is speedy, reliable and efficient. Glass bowl if you wish, showing gasoline level and float action, strainer, etc. Used by six manufacturers of motorcycles as exclusive equipment. Why? Catalog for the asking.

A REVOLUTION IN MOTORCYCLE MOTOR DESIGN

In bringing out our DE LUXE line of motorcycle motors, we have introduced a large number of improvements, and offer these motors as the most advanced now before the trade.

NOTEWORTHY IMPROVEMENTS.

- One-piece crank shaft.
- One-part crank case with cover.
- Improved cam and magneto drive.
- Oil tight motor.
- Large Valves.
- Simplified design throughout.
- Reduced number of parts.
- Silent Motor.
- Large ball bearings mounted in steel lined pockets.
- Equipped with Bosch Magneto.

These improvements in design, together with the high grade materials used in construction, the modern methods of manufacturing applied, and the remarkable performance of these motors in road tests mark a revolution in motorcycle motor building.

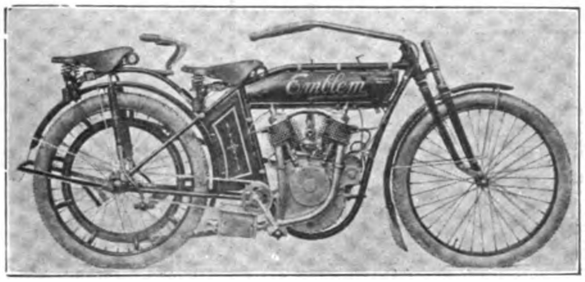
OUT IN GAYLORD, KANSAS

There is a young man less fortunate than his fellows in that he has but one arm. However, this young man—Mr. Ernest Sonnenberg—is better off than many because he knows how to enjoy life. Mr. Sonnenberg rides a motorcycle and spends most of his time in the saddle—good weather and bad—often covering roads that his two-armed brethren fight shy of. Yes, friends, Mr. Sonnenberg rides a

STURDY EMBLEM MOTORCYCLE



and there is a mighty good reason for his choice. Physically handicapped, he must have a machine that always can be relied on to do its full work and more. Not only this, but the machine must be mechanically perfect and easy to handle in all conditions of traffic. The EMBLEM certainly fills the bill, as witness this entirely unsolicited letter from Mr. Sonnenberg. In fact, we were not acquainted with Mr. Sonnenberg until we received his letter. He says:

> ". . . As regards the Emblem Motorcycle with special control purchased from your dealers, Stephenson & Campbell, of Gaylord, Kan., will say that I have owned three different motorcycles and I find the Emblem to be the most powerful, speediest, and, moreover, the easiest to handle on the road, as it never skids on the sharpest turns." (Signed) Ernest R. Sonnenberg.

THERE'S A REASON FOR EMBLEM POPULARITY—*"They Are Different Because They Are Better."* **Have we an Agent in *your* town?**

JUST MISSED IT!

Did you ever make a long throw at a mark and have the missile fly straight and true almost to the object, then suddenly lose its momentum and fall short?

You started well, but couldn't finish.

So it is in attempting mechanical perfection at a predetermined selling price.

The "steam" is taken out of the manufacturer's effort just before attaining the end by the limit of productive cost and the finishing touches that make mechanical perfection are left undone.

That is exactly why the YALE Motorcycle is distinctly better than those made to meet an arbitrary cut in the selling prices.

The difference is the difference between Sterling metal and rolled plate and the value lies in life-long service and absolute dependability.

Thousands of YALE Motorcycles have been sold during the years the YALE has been on the market and not one has ever worn out or been put out of service except by violent accident.

YALE QUALITY is the natural result of scientifically correct design, the best of materials and the finest workmanship, built into a motorcycle by a powerful organization under unit management, working with the sole purpose of producing a perfect motorcycle at a right price.

Four models for 1912, all YALE QUALITY, Singles and Twins, 4, 5 and 7 horse power, $210 to $285.

Write for catalogue or see the nearest YALE agent

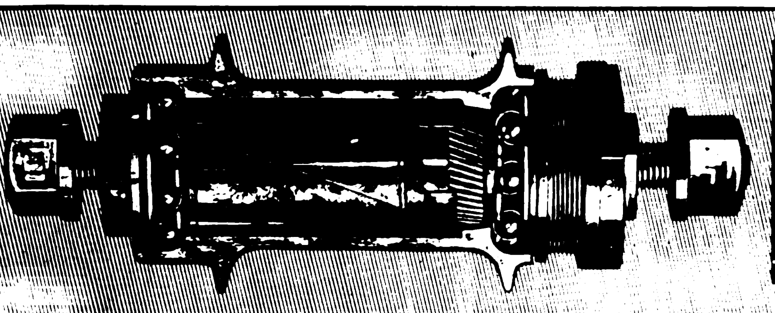
"If it's FEDERAL -it's right"



Musselman Bicycle Brake

Looks just like ordinary hub—weighs but 25 ounces—no springs, levers, braces or complicated mechanism—but one-third as many working parts as in other brakes—no side arm or lock washer—no slipping, clicking or rattling—free in coasting—positive and sensitive in driving and braking—fits any bicycle.

MUSSELMAN
COASTER BRAKE
M
"The little fellow with the Big Grip"

BRAKES, like Caesar's Wife, must be "above suspicion." It seems to us that the one with the largest braking surface must be the strongest, especially as it has but one-third the number of parts and no springs, levers, braces or other complicated parts to get out of order. Perhaps we are prejudiced, but so are a large proportion of riders. Ask them!

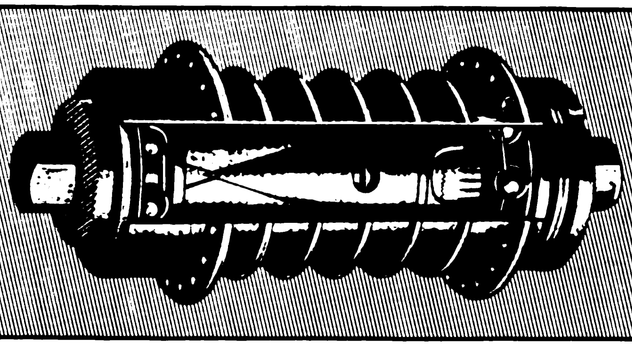
MIAMI

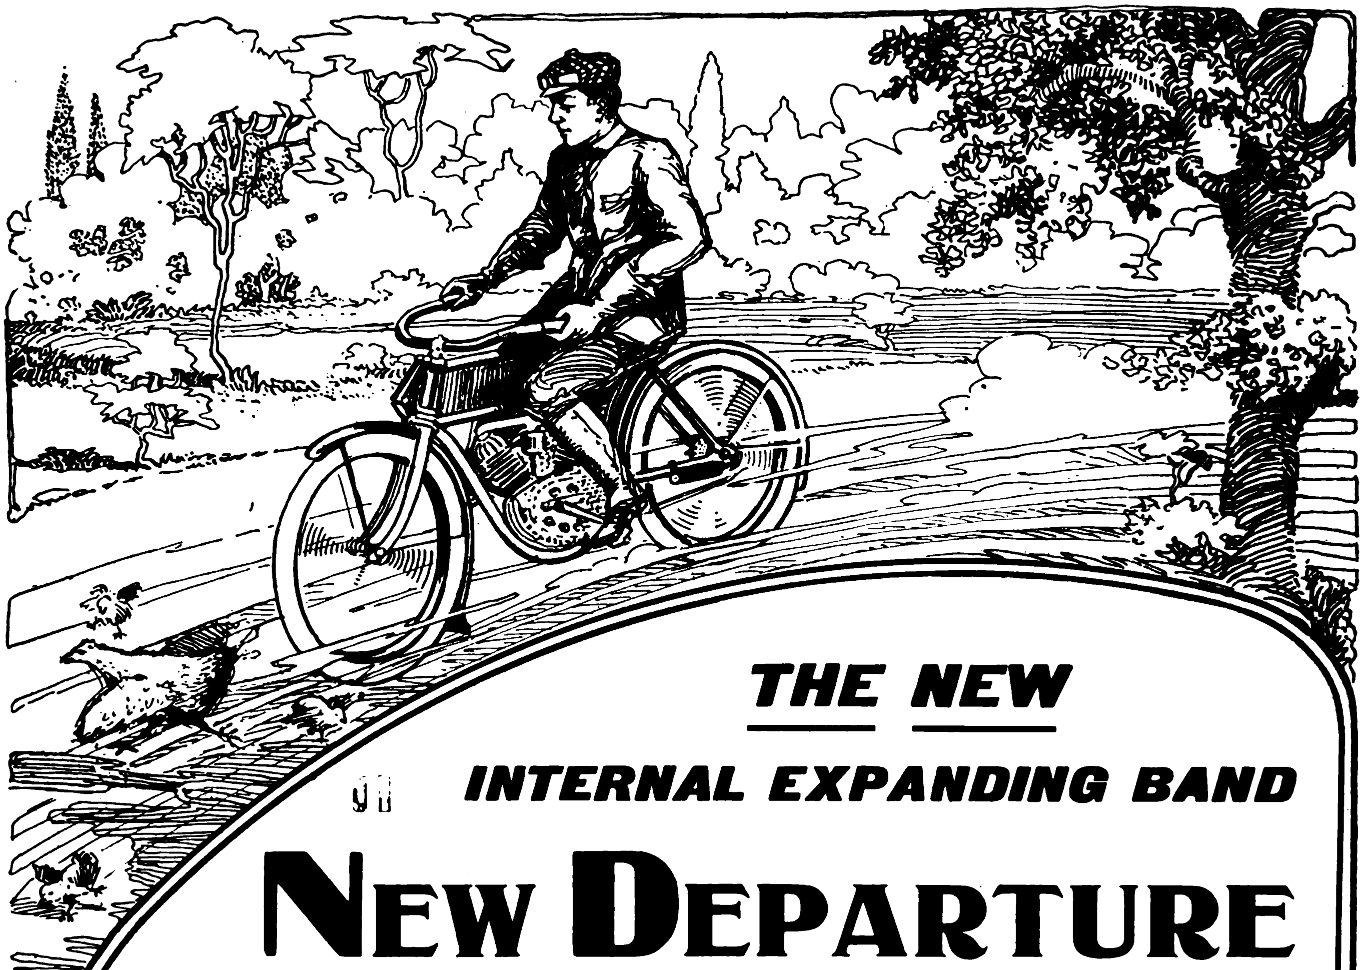
The Miami Cycle & Mfg. Co.
MIDDLETOWN, OHIO
MEMBERS OF M.M.A.
Licensed Coaster Brake Manufacturers

MIAMI

Musselman Motorcycle Brake

Note cooling flanges—15 sq. in. of braking surface—short pitch, giving unusual leverage in braking—large axle to prevent bending—no side arm, hence no leverage on rear forks—holds sufficient grease for season's lubrication—large bearings—costs no more than inferior makes.





THE NEW

INTERNAL EXPANDING BAND

NEW DEPARTURE

COASTER BRAKE FOR MOTORCYCLES

The same type of device as the emergency brake in automobiles for quickly retarding speed or stopping instantly.

You can depend upon it all the time and every time.

It is absolutely impossible for the brake to lock, wind or bind.

The new transfer spring has stopped all of the "picking up" of the pedals.

It is all steel.

The wearing parts are specially treated to withstand hard service.

The parts on which the severe strain comes are made as strong as it is possible for any metal to be.

In fact, this brake is ideal and gives the rider everything that he wants for controlling his machine under all circumstances.

DON'T FORGET THE GIRL

THE Finishing Touch of Happiness in Motorcycling; the Charm of Companionship can be found only with a Majestic Side-Car. All other plans fade away, once one becomes acquainted with the Majestic. It is, as a joy giver both to rider and passenger, the **last word!**

Mormonism Runs Rampant!

It empties many a girl's purse to buy a divided skirt suit for tandem riding. After you have jollied her into it you feel mean about leaving her behind occasionally, don't you? Then get a Majestic car; take her out just the same. If you mean business, take her mother once in a while; her aunt, too; take the whole damsel's family. If she gets fussy, take s'm'other girl; take s'm'other, anyhow. Variety's the spice! Look them all over. Say, "I'll try to remember to bring a little lunch." She'll say: "Don't bother; I'll attend to that. Mother puts up preserved hippo knuckles beautifully."

The Live and the Dead Dealer

Slow, indeed, is the Dealer who waits for a rival to introduce the Majestic car to his town. The progressive ones are getting theirs now, two or three in a shipment and **booking** orders. "Every little order added to those they've got will make three or four more."

DO YOU WANT TO KNOW MORE ABOUT THIS? THEN WRITE

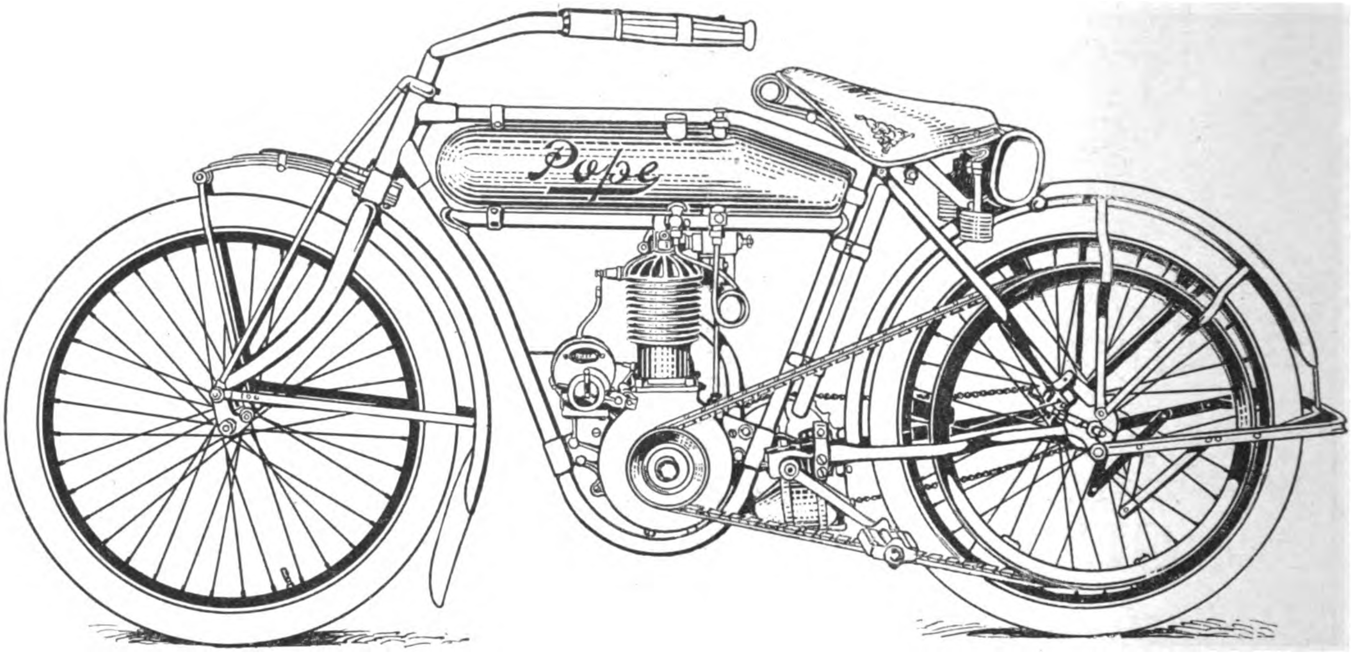
Pope Motorcycles

With Imported Magneto, $165

LIGHT SILENT RELIABLE



Couldn't Be Built Better At Any Price

Were it not for the unequalled equipment of our great bicycle plant at Westfield, Mass., and the extensive resources of our magnificent automobile factories at Hartford, Conn., which enable us to make all our purchases on an enormous scale, the low price and high quality of the Pope Motorcycle would **not** be possible. But extensive manufacturing activities and the systematic application of intensive methods of production, make it possible to keep the cost of Pope Motorcycles down to the very lowest level. That's why we can offer a first-class motorcycle which couldn't be built better at any price for $165.

Pope Has No Superior For All-Round Use

For rational pleasure-riding, for routine "going back and forth," and for general commercial or utility uses, the Pope Motorcycle is giving hundreds of riders the best all-round service. It is light, silent, reliable, comfortable to ride and economical to run. Into its production has gone the experience gained by 35 years of successful bicycle, automobile and motorcycle manufacturing experience. Quality of material, accuracy of workmanship, beauty of design, and refinement of finish mark the Pope Motorcycle as they mark all Pope products. The appeal of Quality and the appeal of Price as exemplified in the Pope Motorcycle are unique.

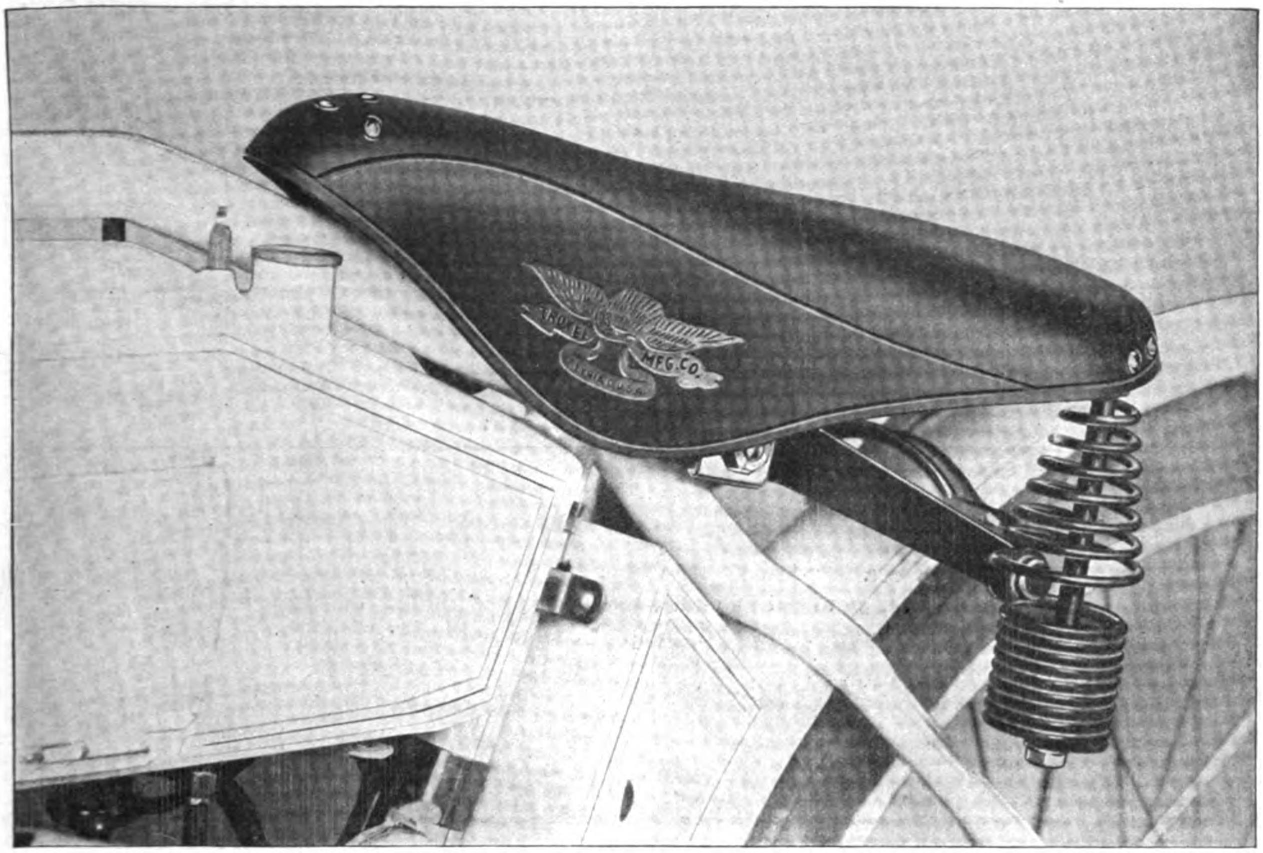
Every Motorcycle Should Be Equipped With This New Troxel Saddle



This is the only saddle that was ever designed exclusively for the Motorcycle rider.

There is no nose coil, which allows the saddle to fit close to the frame.

The spring action never hits bottom, and rides like a velvet cushion.

Every Motorcycle Rider should demand this Saddle and enjoy every mile of the road.

A poor saddle will spoil all your riding.

"Ask any Motorcyclist."

Watch the experienced rider Specify and ride Troxels.

"There is a difference."

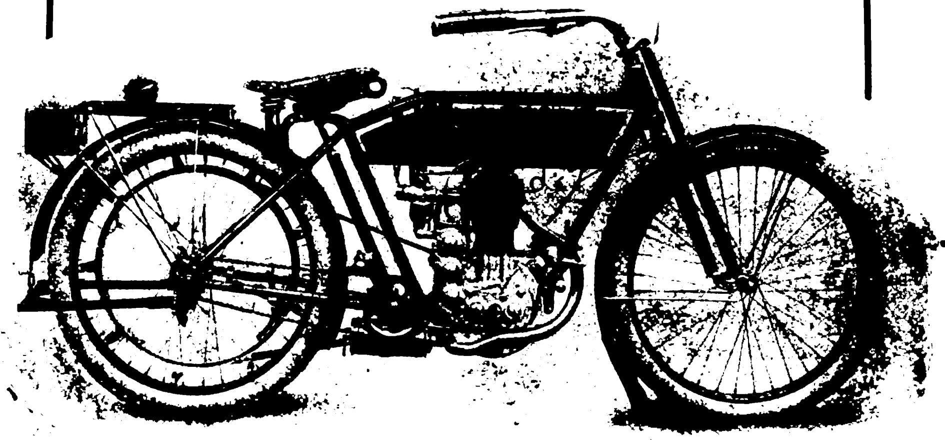
FIRST IN THE LONG RUN

The New "R-S"

THE FIRST MOTORCYCLE IN THE LAND

THE TRIUMPHANT RESULT OF SKILL PLUS BRAINS PLUS EXPERIENCE

A Quality Proposition



Immediate Deliveries

"That Willing, Winning Worker"

Of the skeptical veteran and the cautious new-comer in the motorcycle field, we ask that a critical, unsparing and comprehensive analysis be made of every detail in the construction of the R-S Motorcycle.

Upon a foundation of honest endeavor, superior designing and engineering skill, high-class material and years of experience, we base our claim that the R-S is the peer of motorcycles. Let your dealer "show you".

Some Exclusive Features

Foot-rests, double brakes, double oiling system, R-S shock-absorbing spring seat post, adjustable to weight of rider, and many other points which place the R-S one year in advance of others. A powerful, silent, long-stroke motor with imported ball bearings, mechanical intake valves, and integral cams and gears. We make two Singles, belt or chain drive; one Twin "seven". All models with free engine clutches.

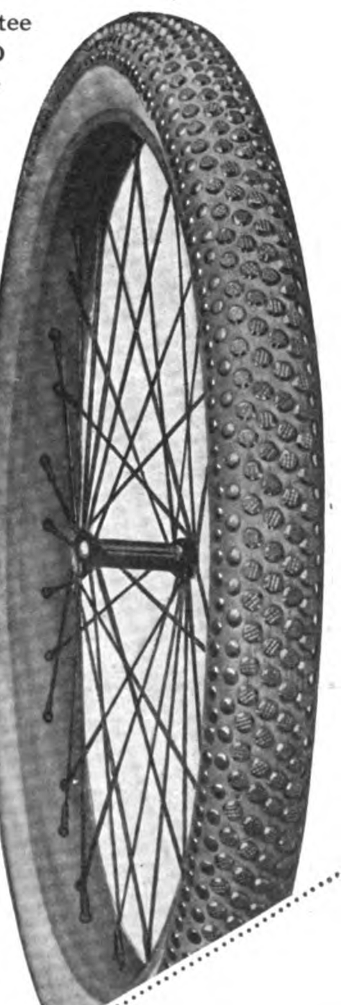
TIRE PROTECTION WITH A GUARANTEE

No longer is it necessary for motorcyclists to worry about PUNCTURES, BLOW-OUTS, GLASS CUTS, SKIDDING and unnecessary tire expense, which heretofore has MARRED the pleasure of all motoring—"BRICTSON" DETACHABLE TREADS will eliminate all this.

10,000 Mile Guarantee

SEND FOR COPY OF SAME



Yes, we will give you a 10,000 mile written guarantee with every "BRICTSON" MOTORCYCLE TREAD on a daily mileage basis of twenty-five miles per day. Can you get this kind of a guarantee on your rubber tires? Figure this guarantee out and you will see that it covers a period of 400 days.

Design and Construction

Made of select, specially prepared chrome tanned leather, soft and pliable, which gives with the "BRICTSON" the full benefit of the pneumatic tire. Studded on the surface with small neat-looking steel studs, designed to give perfect traction as well as a perfect "non-skid." There are layers of the best tire fabric between the layers of leather, which add strength and keep the tread from stretching. In addition to all these important features, the "BRICTSON" is lined perfectly smooth on the inside so there are no rivets or studs in contact with the rubber casing, making it impossible for the tread to injure the casing in any way.

The "BRICTSON" is the only scientifically constructed tread in that it CANNOT slip or slide on the rubber casing in ANY direction, owing to the patented, scientific method of fastening. It is held in position on the rubber casing by equal tension from all points of the circle, and for this reason may be adjusted to PERFECTLY fit the casing over which it is applied, which CANNOT be accomplished with any other method of fastening, and also envelops the entire casing, excluding sand, stones, mud, or even water from coming in contact with the rubber casing.

The "BRICTSON" is the ONLY TREAD THAT HAS PERFECT TENSION ADJUSTMENT FROM ALL POINTS OF THE CIRCLE, which other tread manufacturers have tried to imitate with metal contrivances that only detract from the appearance of the tread, add weight, and destroy the pneumatic feature, but still do not accomplish the desired result.

The "Brictson" Exclusive Patented Way of Fastening

The "BRICTSON" has no HOOPS, HOOKS, BUCKLES, SPRINGS, or any other unnecessary metal contrivances to add weight, break or eat into the rubber casing; neither is it cemented, laced, vulcanized, riveted or fastened to the rubber casing in any way—NATURAL INFLATION OF THE TIRE DOES THE TRICK—Simply clamped between the head of casing and rim—strictly Quick Detachable.

PRICES: One-half the price of a rubber casing and guaranteed three times as long. Compare the following prices:

26 x 2¼	$5.50	28 x 2¼	$6.50	28 x 2¾	$7.50
26 x 2½	6.00	28 x 2½	7.00	29 x 3	8.00

Other sizes on application.

Ask Your Dealer for "Brictson" Detachable Treads

Ask the best dealer in your town to show you the famous "BRICTSON" Guaranteed Detachable Tread. If for any reason he cannot supply you, fill out the attached ORDER BLANK, pin your check to same, mail it, and I will ship you the treads on TEN DAYS' FREE TRIAL, and if you don't find them perfectly satisfactory within 10 days from receipt of treads, return them and I will cheerfully refund your money. Remember, I take all the risk.

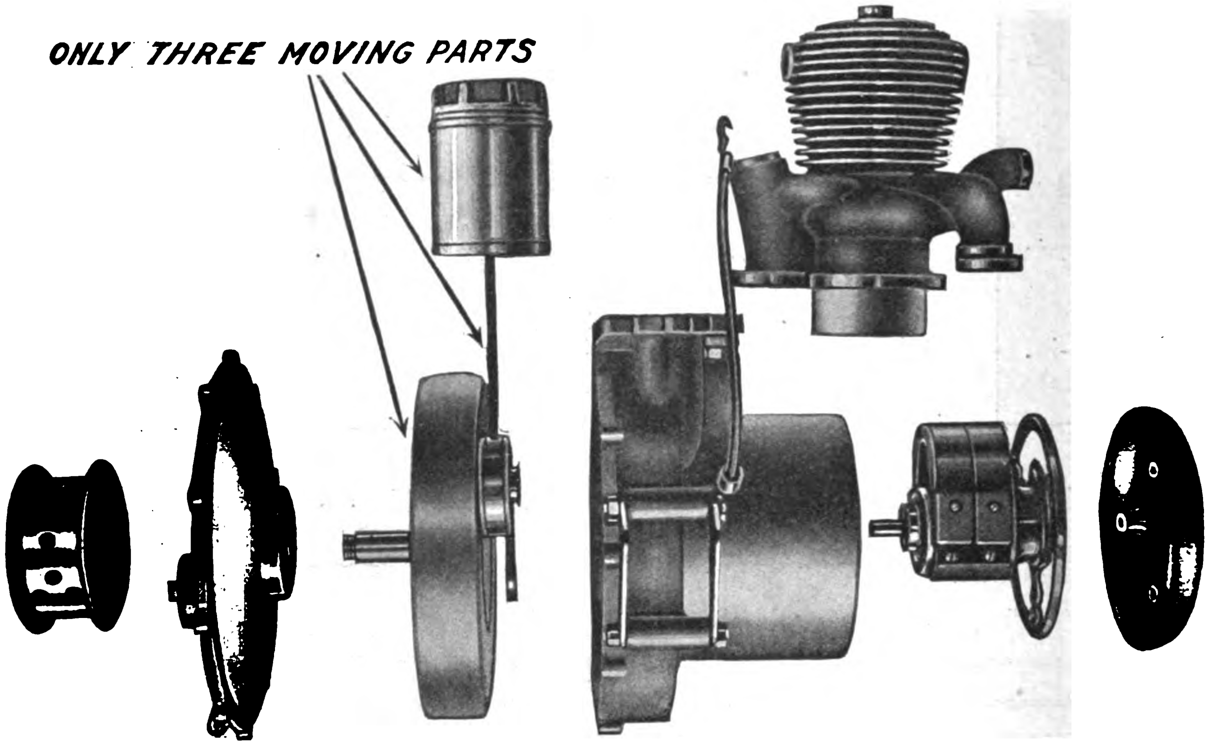
MOTORCYCLE TALKS

The Schickel Motor **No. 2** (NOTE: This is the second instalment of the series of talks to appear in this paper dealing with those practical features that you should look for in the machine that you require for everyday service.)



Wear occurs wherever two parts move in contact with each other. It is impossible to secure material with which to build motorcycle engines that will resist wear. Therefore, the fewer moving parts that you have in your motor, the less wear there will be, the motor will be more quiet, and it will outlive a motor that has many moving parts. You know that the average motorcycle engine uses thirty-three or more moving parts—valves, gears, cams, rods, rocker arms, pins, etc. THIRTY-THREE MOVING PARTS must show considerable wear—and wear means trouble. But if a man advised you to throw away all those extra parts and the consequent trouble—you wouldn't listen to him. But—if you were shown a motor with only three moving parts—a piston, connecting-rod and flywheel and this man were to *guarantee* that the motor would lug better on the hills, run smoother on the level and make no mechanical noise whatever—we believe you would want to know more about this motor.

Remember These Important Facts

Fewer moving parts—three instead of thirty-three means this to your motor—

SIMPLICITY **QUIETNESS** **LONG LIFE**

and this to you

LOW MAINTENANCE COST **and** **BETTER SATISFACTION**

ON THE ROAD TO SUMMER AND SUNSHINE.

If tires are not your first thought *now,* they will be later on.

You motorcyclists probably are getting ready for the touring season. Chances are you have tuned up the old machine, or it may be that you are casting envious glances at a new one.

In either event you are going to need tires.

This question of tire equipment is important. You ought to devote a good deal of thought to it. If you make tires your last thought *now* they are likely to be your *first* thought on many occasions during the next few months. You will be compelled to reckon tire expenses that are absolutely unnecessary. Undependable tires are frightfully expensive.

Start right this Spring—

Equip your machine with tires that offer you the most strength, the greatest aggregate of staying qualities, the highest standards of manufacturing methods—

UNITED STATES MOTORCYCLE TIRES

These tires are made as no other tires in the world are made. They combine all the strong points of two brands of tires that have been recognized as standards of quality since the pioneer days of the bicycle—G & J and Morgan & Wright. They have the same toughness, the same resiliency, the same exclusive staying qualities that have made United States Automobile Tires America's PREDOMINANT Tires.

Unquestionably tires made as these tires are made are economical tires for you to buy.

They cost no more than you are asked to pay for other kinds. ***Why not try them?***

THORNLEY SCORES LOS ANGELES RACING

Calls Situation in That City a "Perennial Blot on the Motorcycle Racing Map." Riders Rebel Against Fines Imposed By Referee Gates.

MORE records went to smash at the meet held on the new Los Angeles speed bowl on Sunday, March 24, and with them went the hopes of race followers on the coast who have been looking forward to a continuance of the sensational performances which marked the Stadium programs. Disputes arising over the races of the twenty-fourth have set agents, riders, promoters and the referee at loggerheads, and the track has been closed. That it will be reopened during the summer is unlikely.

"Farewell" races were staged on the saucer on Sunday, March 31, at a benefit for Jake DeRosier, which netted the injured speedster $600, and the motordrome project which was launched under such auspicious conditions is now high and dry on the rocks. At the DeRosier benefit Balke and Graves rode stock Indians, borrowed from the Los Angeles police department, and "Daredevil" Derkum and Albright also mounted borrowed machines, all the Excelsior and Indian fliers having been formally withdrawn from the track following the trouble on March 24. Even were the promoters so inclined, they could not stage races now without buying their own machines and contracting with riders over the heads of agents and factory officials. Thus thoroughly has the racing game been blanketed for the present in Los Angeles.

Detailed consideration of the developments held responsible for the contretemps would make a long story, but authoritative reports from Los Angeles simmer down to the fact that trade jealousies contributed largely to the general disorder. This phase of the situation is treated with characteristic straightforwardness by Chairman Thornley, of the F. A. M. competition committee, in a letter printed below. However, all the responsibility for the mix-up cannot be laid at the doors of the dealers, for the riders themselves were well to the fore throughout the disputes.

Following the second class A event on March 24, Referee Charles Fuller Gates fined Balke and Graves $25 each for fouling, and both riders protested vehemently. Neither had filed a claim of fouling, and other officials on the scene failed to back up Referee Gates in his statement that there had been a breach of the rules. While this argument waxed hot Fred Hofer, an Excelsior mechanic, was put out at the gate, and this precipitated action by Agent Whitesell, Excelsior representative in Los Angeles, who ordered all Excelsior machines taken off the track.

This turn of affairs caused Referee Gates to remit the fines, but later in the box office he again fined Balke $25 for what he considered unnecessary vehemence in the rider's denunciation of the management. Thereupon Balke threatened to throw over his riding contract with the Stadium promoters, and this fine also was set aside. Agent Whitesell stood by his order withdrawing the Excelsior machines, and later an order from Oscar Hedstrom of the Hendee Manufacturing Company brought about the withdrawal of the Indians. It has been announced that Hasha will next appear on the Denver track, that the Samuelsons will go to Salt Lake City, and the other racers will probably shift to Chicago for the opening of the season there.

On March 26 there was a conference, attended by Referee Gates and the riders, agents and promoters, but no progress was made toward an amicable settlement of the disputes. On the contrary Ray Peck was fined $2.50 for talking to Agent Whitesell, and an argument between Joe Wolters and the referee almost culminated in blows. If anything, the breach was widened by this meeting, and when it was over even the most optimistic fan could not cajole himself into believing that there was the slightest possibility of a readjustment at this time. Agents and riders involved in the muddle insist that Referee Gates adopted a despotic attitude, and he in turn asserts that if the racing situation in Los Angeles is not ruled with an iron hand it cannot be supervised at all.

The present rumpus has raised a question as to the final acceptance of the records recently hung up on the Los Angeles track. While the machines were officially measured, it is claimed that the verifying of the timing watches and the measuring of the track were not properly attended to. Certain it is that the papers so far received by Chairman Thornley from the coast are incomplete, and if any affidavits are lacking in the final summing up the records will not go down in the F. A. M. books.

Chairman Thornely's letter, above referred to, is in full as follows:

"The perennial blot on the motorcycle racing map has again shown up, this time breaking out with peculiar virulence. Exactly where the fault lies is still a question in my mind. As a matter of fact, after carefully analyzing the situation it would seem that for some reason or other California, and Los Angeles in particular, is not a place where discipline and fair dealing can be easily established. There has never been anything but trouble in Los Angeles since motorcycle racing began.

"The way in which the races were conducted in Chicago last year with the same set of riders, and the way they have been conducted in Los Angeles, make a striking contrast. I do not hesitate to say that I believe most, if not all the trouble, is due to the fact that the motorcycle agents in Los Angeles are, have been, and I suppose always will be, offensively active in trying to push their own machines forward without regard to any rules of sportsmanship, decency, or fair dealing.

"With possibly one exception that I know of, each dealer seems to want to own the referee and the track, and put them to the use of advertising his own machine. One dealer starts this sort of thing and the others have to trail in or be run out of business; the result is the usual mix-up in Los Angeles.

"In Chicago last year the dealers were conspicuous by their absence from active interference at the Riverview track. This was due to several causes. I don't care to be personal, or to make injurious comparisons, but certainly the Chicago dealers seem to behave in a more sportsmanlike and decent manner, and to have more regard for the good of the game than the dealers in Los Angeles.

"In the second place, Mr. Johnson was informed at the opening of his track that the wisest thing for him to do would be not to let the manufacturers or dealers say one word as to how his track was to be managed. He had sense enough to take that advice, and finally, I had a referee in Chicago that was the best referee I have ever had, barring none. He was big enough and husky enough to make anyone think twice before they would disregard what he had to say, and he was honest to the backbone. What he would be able to do with the Los Angeles crowd I don't know. Whether he could do any better than Mr. Gates, or whether he would finish up by licking the whole crowd and kicking them out of the grounds I don't know, but this I do know; that I have tried any number of referees out in Los Angeles, men who have been recommended to me by the club, men who have had outside recommendations, men of ability and honesty, and they have either been unable to handle the situation, or have voluntarily thrown the thing up in disgust because the game wasn't worth the candle. Until the management of the Los Angeles track becomes absolutely independent of local dealers and manufacturers and puts on races for racing and not for advertising, they will lose money and continue to be a disgrace on the motorcycle racing map. Races run independently and fairly for sport will be real advertisement for the best machine, and the one that wins. If board track managers expect to make money they have got to eliminate the manufacturers and dealers. Let them buy machines in the open market if the manufacturers will not sell them racers, and have an expert man to tune them up, and get the best out of the stock machine. The track manager who will have the sand to so buy machines in the open market that are usually sold as stock, and put them on the track will soon have the manufacturers on their knees begging him to let them furnish him with racers at a reasonable figure.

"I had occasion to tell one manufacturer last year what I thought of interference of the manufacturers in the racing game. I shall not hesitate to do this again when it becomes evident that a manufacturer or dealer is trying to use the F. A. M. unfairly or improperly for advertising ends. That is what has broken up racing in Los Angeles, and the sooner it is recognized the better it will be for all concerned. The manufacturers and dealers possibly at this time have it in their power to kill the goose that lays the golden egg and break up racing all over the country by each one trying to make out of a track an opportunity for advertising his individual machine to the exclusion of others. It is useless to jump on a referee or myself. I believe that the riders can be handled very easily, because they were handled with ease at Chicago last year, but the dealers can only be handled by keeping them off the track and out of the paddock, and by the management having enough machines of its own to be independent of any one dealer or manufacturer. I am fully convinced that Mr. Gates wants to be fair, but it would take an angel from Heaven to continue to want to be fair after a little experience with the motorcycle dealers of Los Angeles."

DE ROSIER BENEFIT RACES.

LOS ANGELES, Cal., April 1.—Despite the fact that borrowed machines figured in nearly all the races at the DeRosier benefit on the Stadium there were some tight finishes, and the spectators were given an interesting program. The feature of the meet was a mile exhibition against time by Eddie Hasha, who went the route in 39⅗ seconds, thus clipping the world's record. Summaries:

First heat, Derkum-Albright match race, a dead heat for two miles; time, 1:47⅗.

Two miles, class D race, W. Samuelson, first; Humiston, second; Albright, third; time, 1:30⅗.

Two miles, class A race, Hasha, first; Ward, second; Seymour, third; time, 1:27⅕.

Three miles, class B race, Samuelson, first; Albright, second; Humiston, third; time, 2:20.

Three miles, class A race, Hasha, first; Ward, second; Seymour, third; time, 2:04⅘.

Five miles, class B race, Albright, first; Humiston, second; time, 3:46⅕.

Four-mile free-for-all, Seymour, first; W. Samuelson, second; Ward, third; time, 2:51.

Two-mile match race, stock machines; Graves defeated Balke; time, 1:57.

Final heat, Derkum-Albright match race; won by Derkum; time, 1:33⅗.

One mile against time by Eddie Hasha; time, 39⅗.

RESOLUTIONS OF CONDOLENCE

Cleveland Club Laments the Untimely Death of Dr. Webster and Expresses Its Sympathy.

AT a special session of the Cleveland (Ohio) Motorcycle Club resolutions of sympathy on the death of Dr. A. M. Webster were adopted as follows, and a copy was forwarded to Dr. Webster's mother:

"Whereas, It has pleased the Almighty Ruler of the Universe in his infinite wisdom to invade our ranks and take from our midst our much-loved and respected comrade, Dr. A. M. Webster, and, whereas, recognizing in Dr. Webster a man of unusual ability and pleasing personality, we feel that in his death we have suffered an irreparable loss in his untimely removal from the active duties of this life.

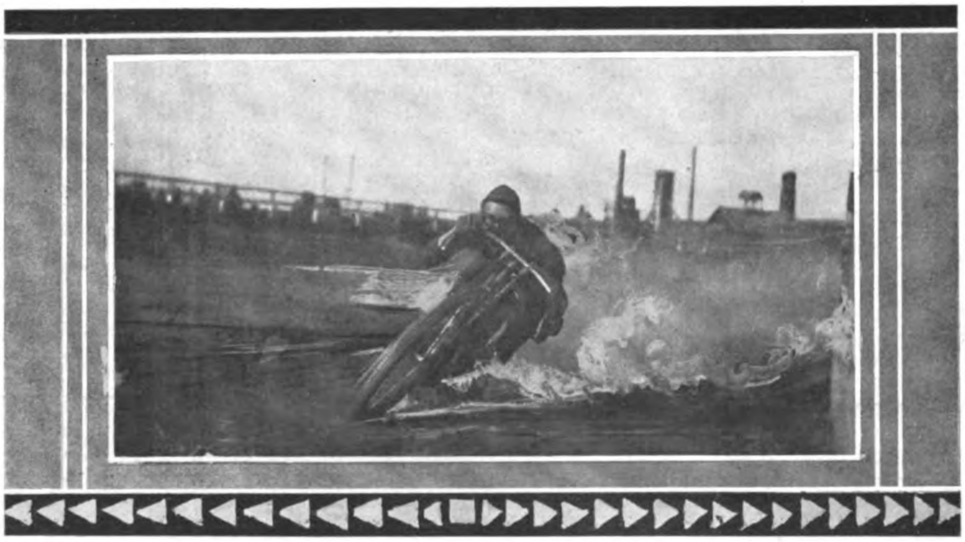
"Therefore, be it resolved; that we shall greatly miss his presence and influence in our gatherings and that we shall ever cherish his memory as one who was true to his convictions and gave his best for the furtherence of manly sports and a desire to give to each a square deal.

"Resolved; that as an organization we tender to the bereaved mother and daughter our deepest sympathy in their hour of sorrow and commend them to the care of Him who doeth all things well.

"Resolved; that these resolutions be spread on the minutes of our club and a copy be sent to his mother and daughter.

"Deem it not vain, a silent tear,
But let it kindly fall;
'Twill be a gem to deck your bier,
When death's shrill voice shall call.

"THE CLEVELAND MOTORCYCLE CLUB."

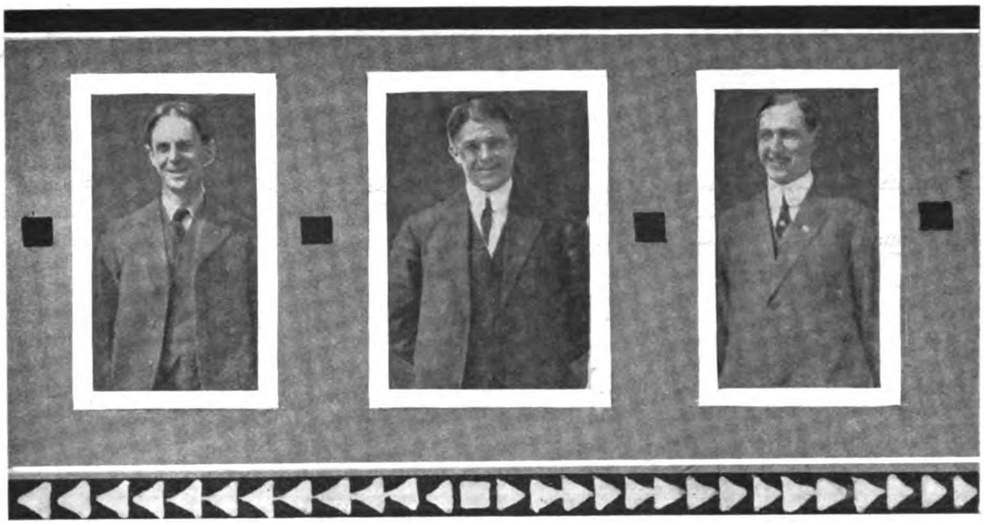


"MARTY" GRAVES

Graves, whose balking at a fine imposed by Referee Gates "started something" in Los Angeles recently, is quite popular on the Coast, he being a native of Los Angeles. Graves has become one of the fastest men on the track, and has been very successful in the races conducted until recently at the Stadium. This picture was made while Graves was going at high speed during a tryout on the dirt track at Los Angeles.

HALL A GENIAL HOST

DURING the automobile show recently held in Cedar Rapids, Iowa, H. W. Hascall, of the Harley-Davidson Motor Co., and H. M. Baird, of the Consolidated Mfg. Co., were both entertained at the home of E. H. Hall, agent in Cedar Rapids for Harley motorcycles and Yale bicycles. From this it will be inferred that the three boosters mentioned are not bothered by petty trade jealousies, and that they can find time now and then to live up to the broad doctrine of good fellowship. The accompanying photos show Baird on the left, Mine Host Hall in the center and Hascall on the right.



H. M. Baird. C. H. Hall. H. W. Hascall.

MOTORING RECIPROCITY IN NEW JERSEY

Bill Granting Concessions to Visiting Motorcyclists and Automobilists Is Approved by State Legislators and Will No Doubt Be Signed by Governor Wilson.

HAVING approved the motoring reciprocity bill recently submitted with a view to affording visiting motorcyclists and automobilists the privileges allowed tourists in neighboring States, the legislators of New Jersey are being liberally commended, and it seems certain that the new measure will have a far-reaching influence upon motor interests of the State. Having passed the Senate, slightly amended from its original form, the bill went back to the Assembly on March 28, and was there given another favorable vote, so that it is now ready for Governor Wilson's approval. That this will be forthcoming appears certain, in view of statements recently credited to the State executive.

The section of the new bill which most deeply concerns motorcycle and automobile visitors to New Jersey reads as follows:

"Any motor vehicle belonging to any person who is a non-resident of this State and who has registered such motor vehicle and has complied with all the laws of the State, Territory or Federal District of the United States in which he resides with respect to the registration of motor vehicles and the display of registration numbers and who shall conspicuously display such registration numbers as required thereby, may be driven in this State during a period of not to exceed fifteen days in each calendar year on two or more occasions not exceeding in the aggregate the period of fifteen days in any such year, without complying with or being subject to the provisions of Sections 15 or 21 of the act to which this is a supplement or either of them, or with any of the preceding sections of this supplement; provided that each day or part of a day during which any such motor vehicle is within this State shall be considered as one of said fifteen days; and provided further that the provisions of this action shall be operative as to any such motor vehicle owned by non-residents of this State only to the extent that under the laws of the State, Territory or Federal District of his residence substantially similar exemptions and privileges are granted to motor vehicles duly registered under the laws of this State."

Failure of the New Jersey legislators to adopt a reciprocal motoring law in the past has been based upon the claim that its roads are subjected to much heavier traffic than is imposed upon the roads of adjoining States. Lying as it does in the path of practically all motor traffic between New York City and Philadelphia, and being much traveled by motorists on their way to Atlantic City and neighboring resorts during the summer months, New Jersey has had to contend with a serious problem in the maintenance of its highways. It was not altogether unreasonable that the parties responsible for a great part of the wear and tear on the State's roads should be expected to help foot the bills. This was the argument advanced against granting the fairly liberal concessions that nearly all other States allow to touring motorists.

An echo of this argument is to be found in the new bill in the section relating to motor trucks. Acting in the knowledge that the heavy commercial vehicles have much to do with the wearing down and rutting of improved highways, the State legislators have written in a provision for a fee in addition to that charged under the regular horse-power rating. Commercial vehicles weighing unloaded more than 4,000 pounds will entail a special fee of $10. On the whole, however, the law is regarded as satisfactory.

TRENTON, APRIL 2.—Governor Wilson today signed the Stickel motor reciprocity bill, granting concessions to visiting motorists, and the measure at once became effective.

HANDY AND ECONOMICAL.

PRESIDENT FRED JOHNSTON, of the Toronto Motorcycle Club, has come out as a staunch champion of the motorcycle for all classes of people.

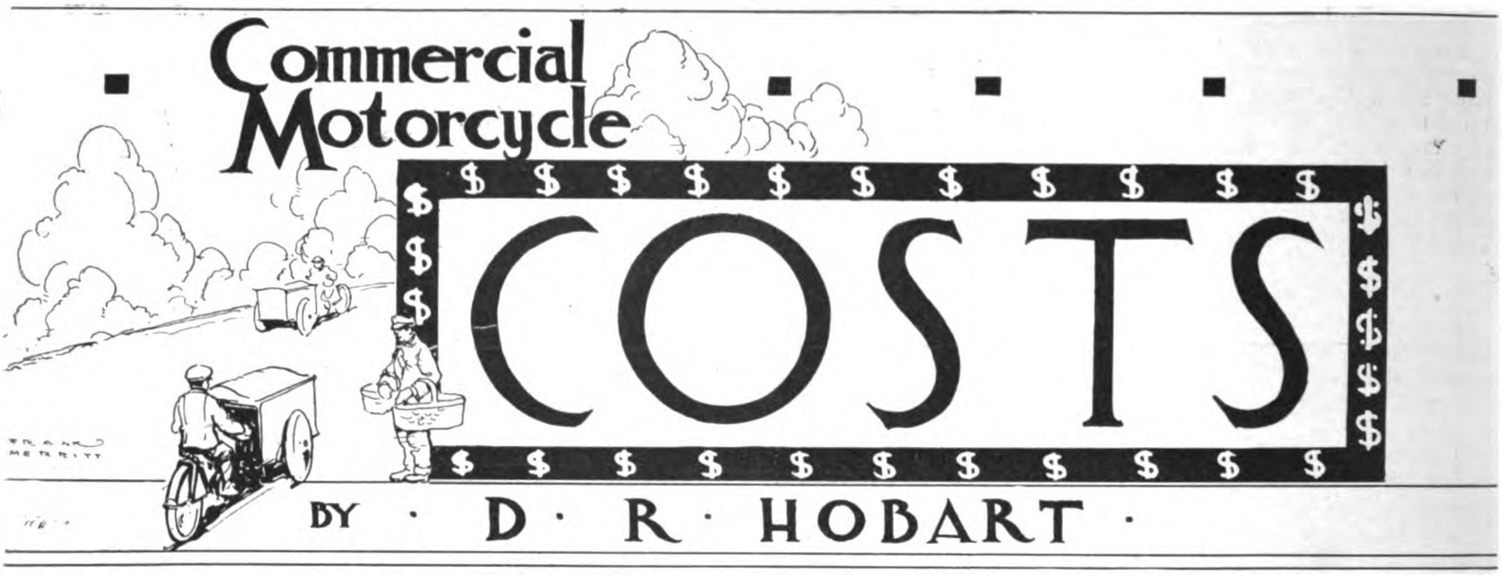
"I could afford a motor car, but I prefer a motorcycle," declared President Johnston. "I can get around more quickly on a motorcycle, the expense is far less, and what particularly appeals to me is that I do not have to put my machine in a garage when I come downtown to my office."

A NOVEL CONTEST.

A NOVEL race has been suggested for the Olympic try-outs at Toronto, Canada, on June 1. It is proposed to have a handicap race for a pedestrian, runner, bike rider and motorcyclist, allowances to be made for different speeds.

PLEA FOR SEPARATE CLASS.

RECENTLY the Hendee Mfg. Co. approached the Department of Commerce at Washington with the suggestion that motorcycles be classed as a separate item on the schedule of export statistics, and pointed out that such an arrangement would provide a readier and clearer means of reference and comparison, thus benefiting the motorcycle trade. In replying to the company's letter the Washington authorities stated that the Department of Commerce is now revising its export schedule for the coming fiscal year, and that it will be glad to consider the advisability of providing a separate class for the single-trackers. As a result of the Hendee company's action it is quite likely that this desirable action will be brought about.



Commercial Motorcycle COSTS

BY · D · R · HOBART ·

IN all fields in which the commercial motor vehicle competes with the horse-drawn or even with motor vehicles which run on rails, considerable misunderstanding and dissatisfaction have been created between the manufacturer and user by incorrect estimates of the cost of the motor vehicle per annum or during its useful life. This is due on the part of the manufacturer or his agent to considering only operative costs in making up his estimate for the user, and on the part of the user in believing what the manufacturer states until his accounts at the end of the year show expenditures which have to be covered from some outside source (sinking fund, profits, etc.). A general impression seems to prevail that after the motor vehicle is purchased it costs nothing as long as it is not operated, and this impression, which always turned out to be wrong, has been the cause of the tardy adoption of commercial automobiles up to the present time. The salesmen, badly instructed by the factory in most cases, neglected the standing costs of interest, depreciation, storage, etc., in their estimates and vehicles that were figured to cost $18 per week actually cost $20 or $21. Again, the user in comparing the motor vehicle with horse and wagon neglected the depreciation of the wagon, harness, and animal, and veterinary bills, so that the comparison was unfair. This neglect in too many cases is one of the chief reasons a small tradesman runs behind at the end of each year, whether he uses horses or motor vehicles. To cover this, credit customers are generally charged higher prices for the same goods as other patrons.

Unavoidable Costs.

No matter what the vehicle, the following are the costs which must be figured, if any correct accounting of the conduct of business is to be arrived at. The costs come under two heads, *standing* and *operating*. The standing costs begin immediately upon the purchase of the vehicle and continues during its useful life, irrespective of whether it is operated or not. The operating costs begin and continue only while the vehicle is being operated. It is therefore readily to be understood that the more work that can be got from the vehicle without unnecessarily depreciating it, the better these costs will be covered and the better the profit. The latter, in the case of any motor vehicle, includes an advertising value in presenting the user's name and business before the public by the appearance of the vehicle on the streets, etc.

Standing Costs.

No sane business man would purchase a piece of property and not figure interest on the money invested, and following the general practice of business in this country, 6 per cent. interest per annum should be figured on the value of the motorcycle, tricar or side-van outfit. In the same manner all property depreciates according to the wear and tear to which it is subjected and, in addition, to physical action (fatiguing of the metal, rusting, etc., on the part of a motor vehicle). This must be counted in also, as well as any charges for garaging, if the user does not keep the vehicle on his own premises. In the latter case, there will be maintenance charges if the driver washes down, etc., but these can generally be figured in the driver's wages. In many communities a tax is imposed on all commercial vehicles (independent of the city or State license), and this, too, figures in the standing costs. Lastly, insurance, while not necessary, is desirable, and this forms the last of these costs.

Depreciation of Machine.

It is next to impossible for anyone, no matter how experienced, to closely calculate the total costs per annum of a motorcycle, tricar, etc., but figuring the average life of an outfit used strictly for commercial purposes on average roads, five years is the limit. At or before that time, the machine will have arrived at what users of machinery call its "scrap value," i. e., its monetary value as scrap metal only. From a number of motor vehicle statistics an excellent average depreciation for the five-year period was 18½ per cent. per year, whence the scrap value would be less than 10 per cent. (7½ per cent. exactly) which is the usual figure at the end of the period.

Thus are included in the standing costs:
Interest at 6 per cent. per annum.
Depreciation, 18½ per cent. per annum.
Garaging (maintenance).
Tax.
Insurance.
